Anna Morpurgo Davies
Christiane Sourvinou-Inwood

PREFACE

This book has been a long time in the making and has incurred numerous debts, some to friends no longer here to be thanked.

At various stages Alison Pollard, Nigel Pollard, Ellen Poteet, Liz Potter, and David van Amburg worked as research assistants. Charles Crowther, Stephen Lambert, and Angelos Matthaïou have given help with inscriptions; Angelos Chaniotis supplied advance copies of *SEG*; Hans Goette kindly spent a day showing me deme sites; Robert Pitt has helped me to keep up with archaeological news from Attika. The libraries of the BSA and ASCS in Athens have been a particularly valuable resource. Helpful comments on chapter drafts, at various stages, have been made by Mike Jameson, Stephen Lambert, David Lewis, Anna Morpurgo Davies, Robert Parker, Rosalind Thomas, Hans van Wees, and seminar participants in too many universities to list.

I am especially grateful to Alison Adams for typing over such a long period, and to Toby Matthews for designing the tables.

CONTENTS

VOLUME I

List of Tables	xiii
List of Abbreviations	xvii
Key to Reading Tables	xxiii

Introduction	1
--------------	---

Part One: Legal and Economic Interaction

1. Drakon and Solon	7
2. Adoption	63
3. Guardianship	95
4. Marriage with Kin	107
5. Property	135
6. Economic Cooperation	171
7. Disputes	185

Part Two: Ritual

8. Names	263
9. Rites de passage	293
10. Funerals and Burials	319
11. Commemoration	361
12. Festivals, Associations, Dedications	383

Part Three: Politics, Informal

- | | |
|--|-----|
| 13. Young Men's Social Groupings | 425 |
| 14. Political Marriages, Lawsuits, Curse Tablets | 447 |

Part Four: Politics, Formal

- | | |
|---|-----|
| 15. <i>Paredroi</i> , Epidosis Lists, Ostracism, the Thirty | 481 |
| 16. Ambassadors, Generals, Military Commands | 497 |
| 17. Council and Assembly | 521 |

VOLUME II

Part Five: Corporate Groups

- | | |
|---|-----|
| 18. The Pre-Kleisthenic Tribes and Trittyes | 537 |
| 19. The Phratries | 569 |
| 20. The <i>Genê</i> | 627 |
| 21. The Kleisthenic Tribes and Trittyes | 721 |

Part Six: The Demes

- | | |
|-----------------------------|------|
| 22. The Demes: Introduction | 773 |
| 23. I Erechtheis | 813 |
| 24. II Aigeis | 847 |
| 25. III Pandionis | 891 |
| 26. IV Leontis | 921 |
| 27. V Akamantis | 965 |
| 28. VI Oineis | 1001 |
| 29. VII Kekropis | 1037 |

30. VIII Hippothontis	1099
31. IX Aiantis	1135
32. X Antiochis	1179

Appendices

1. Lists	1215
2. The <i>Hekatostai</i> records	1221
3. <i>IG</i> ii ³ 4. 435	1225
4. Lykourgos' sons	1227
5. <i>POxy</i> 2464	1229

Bibliography	1231
Subject Index	1369
Index of Names (persons and deities)	1386
Index of Sources:	
Texts	1392
Papyri	1417
Inscriptions (selective)	1418
Index of Monuments	1454

LIST OF TABLES

1.1	Rights of succession	38
2.1	Isaios 7	74
2.2	Demosthenes 44	75
2.3	Dionysios of Kollytos	79
2.4	Miltiades	84
2.5	Menander, <i>Dyskolos</i>	85
2.6	Menander, <i>Aspis</i>	86
2.7	Menander, <i>Phasma</i>	86
2.8	Isokrates 19	87
3.1	Guardianship of orphans	98
3.2	Sostratos of Acharnai	101
4.1	Marriage frequencies	109
4.2	Daughters of Epilykos	111
4.3	Aristotle	112
4.4	Apollodoros of Acharnai	113
4.5	Euripides, <i>Orestes</i>	113
4.6	Lykourgos of Boutadai	115
4.7	Demosthenes	120
4.8	Kallias and Alkibiades	126
4.9	Kleon	129
4.10	The 'Meidonidai'	129
5.1	Deme endogamy	141
5.2	<i>SEMA</i> 469	142
5.3	Plato	146
5.4	Kallaischros of Siphnos	152
5.5	Xenophon	160
5.6	Kephisodoros of Kydathenaion	161
5.7	Theoxenos of Euonymon	162
6.1	Pamphilos of Leukonoion	181
6.2	Kin as guarantors	181
7.1	Isaios 6	187
7.2A	Isaios 5	201
7.2B	Polyaratos of Cholargos	202
7.3	Isaios 8	206
7.4	Isaios 3	209
7.5	Isaios 10	212
7.6	Lysias 32	213
7.7	Remarriage at Athens	214
7.8	Isaios 9	217
7.9	Isaios 11, [Demosthenes] 43	220

7.10	Isaios 1	229
7.11	Isaios 2	237
7.12	Demosthenes 57	244
7.13	Isaios 12	246
7.14	Kin in lawsuits	254
8.1	Alkibiades	272
8.2	Onetor of Melite	277
8.3	Hegesias of Sounion	277
8.4	[Demosthenes] 38	279
8.5	Athenodoros of Myrrhinous	280
8.6	Angele and Myrrhinous	280
8.7	Agyrrhios	281
12.1	Myron of Potamos	416
12.2	Niketes of Pergase	418
12.3	Philotera	419
12.4	Daochos	421
13.1	Platonic Society	428
13.2	Kin of Andokides	443
14.1	Selinous	475
14.2	Smikythos of Aigilia	476
15.1	Epidosis in Hellenistic Phokis	487
15.2	Ostracism, Alkmeonidai	492
16.1	Euonymon: Strombichos	507
16.2	Pithos: Kiron	519
17.1	The priestess of Aglauros	531
19.1	<i>IG ii² 2344</i>	599
20.1	<i>SEG 36.548</i> : the ‘four families’	635
20.2	Epigenes and Metagenes	690
20.3	Hierophants	700
20.4	Priestesses of Athena Polias	709
23.1	Euonymon: Alexias	817
23.2	Lamptrai: Amoibichos and Geisias	837
23.3	Lamptrai: Timokles	839
23.4	Lamptrai: Thallos	841
24.1	Ikarion: Charidemos	860
24.2	Ikarion: Gorgiades	861
24.3	Ikarion: Akrotimos	862
24.4	Erchia: Isaios 12	871
24.5	Erchia: Euainon	873
24.6	Kydantidai: Prokleides	877
24.7	Halai Araphenides: Mnesippos	882
25.1	Probalinthos: Gyles	897
25.2	Paiania: Aresandros	901
25.3	Paiania: Philodemos	904

25.4	Kytheros: Meritai	915
25.5	Prasiai: Demochares	919
26.1	Skambonidai: Xanthippides	924
26.2	Halimous: Peithias	928
26.3	Leukonoion: Phoryskos	932
26.4	Aithalidai: Kephisodotos	940
26.5	Oion Kerameikon: Lysiades	942
26.6	Phrearrhioi: Sostratos	948
26.7	Sounion: Sosistratos	955
26.8	Sounion: Charias	956
26.9	Sounion: Timesios	957
26.10	Sounion: Stratokles	958
26.11	Deiradiotai: Polystratos	960
26.12	Potamos Deiradiotes: Pankles	962
27.1	Kerameis: Euthyphron	968
27.2	Kerameis: [Eu?]xenos	968
27.3	Prospalta: Euphanes	983
27.4	Prospalta: Sotairos	984
27.5	Kephale: Lysimachos	990
27.6A–D	Thorikos: Lysanias, Atarbos, Attabos, Chares	994–6
28.1	Kothokidai: Exekestides	1003
28.2	Heroes of Oineis	1008
28.3	Acharnai: Mnesarchos	1016
28.4	Acharnai: Asteios	1017
28.5	Acharnai: Kephisodotos	1019
28.6	Acharnai: Lysimachides	1022
28.7	Acharnai: Echestratos	1023
28.8	Acharnai: Sostratos	1024
28.9	Acharnai: Naukydes I, Hieronymos I	1025
28.10	Acharnai: Eukles	1026
28.11	Acharnai: Antimachos	1028
28.12	Phyle: Aristoteles	1034
29.1	Melite: Euthydomos	1038
29.2	Melite: Hegesippos	1042
29.3	Xypete: Philon	1046
29.4	Xypete: Euktaios	1047
29.5	Xypete: Antigenes	1048
29.6	Xypete: Diaitos	1049
29.7	Sypalettos: Automedes	1054
29.8	Athmonon: Theodoros	1059
29.9	Athmonon: Aischylos	1060
29.10	Athmonon: Adeistos	1061
29.11	Athmonon: Smikrias	1061
29.12	Athmonon: Pistokles	1063

29.13	Athmonon: Lysias	1064
29.14	Athmonon: Pantakles and Archedemos	1065
29.15	Athmonon: Chairokles	1066
29.16	Aixone: Laches	1073
29.17	Aixone: Kallippos	1074
29.18	Aixone: Lysis	1075
29.19	Aixone: Eukleides	1083
29.20	Halai Aixonides: Diokles	1087
29.21	Halai Aixonides: Eupolis	1089
29.22	Halai Aixonides: Theodotos	1093
29.23	Halai Aixonides: Kallaischros	1095
29.24	Halai Aixonides: Diodoros	1096
30.1	Peiraioi: Sophilos	1105
30.2	Acherdous: Phayllos	1117
30.3	Eleusis: Moirokles	1123
30.4	Eleusis: Timokedes	1124
30.5	Hamaxanteia: Teisias	1132
31.1	Phaleron: Philon	1139
31.2	Aphidnai: Charixenos	1144
31.3	Aphidnai: Philochares	1145
31.4	Aphidnai: Diodoros	1150
31.5	Trikorynthos: Adeimantos	1158
31.6	Rhamnous: Timotheos	1164
31.7	Rhamnous: Hieron	1166
31.8	Rhamnous: Phanokrates	1168
31.9	Rhamnous: Protarchos	1169
31.10	Rhamnous: Oikopheles	1170
31.11	Rhamnous: Theophilos and Kleodorides	1172
31.12	Rhamnous: Epandrides	1174
31.13	Rhamnous: Kallias	1175
31.14	Rhamnous: Euphron	1176
31.15	Rhamnous: Philostratos	1177
32.1	Alopeke: Pythodoros	1187
32.2	Aigilia: Sonautides	1196
32.3	Thorai: Gniphon	1198
32.4	Anaphlystos: Olympichos	1203
32.5	Anaphlystos: Alexiades	1204
32.6	Anaphlystos: Leokrates	1204

KEY TO READING TABLES

A line of dots and dashes = adoption.

A line of small dashes indicates an uncertain or indefinite number of generations.

Where a name appears in a text only as patronymic, the reference is bracketed.

Δ = male, O = female, □ = unknown gender.

Introduction

It is difficult to write an introduction to a book that has been cooking (growing, unpruned? working to windward?) for about thirty-five years. Disciplines (history, anthropology, archaeology) have changed; imagined readerships have changed and, more sadly, ideal (and actual) readers have died; parts of the analysis published earlier have entered into dialogue with the work of others.¹

One of the book's beginnings was a sail in a ship's lifeboat, in the 1950s, with Penny Hughes and other friends, from Malta to Greece and round the Aegean.² This encouraged me to apply for research grants on the basis that our *Crab* had 'all the disadvantages of an ancient merchant ship' (she was also smaller). Research on ancient merchant ships³ raised questions about trade in premodern economies; I discovered that economic anthropologists were asking similar questions,⁴ and Mary Douglas encouraged me to attend anthropology seminars at UCL. Here I rapidly found (we are in the 1960s) that the core of social anthropology was kinship studies. Kinship had been common ground between anthropology and ancient history earlier (Maine, Fustel, Morgan);⁵ but anthropology had changed, leaving ancient historians still in the nineteenth century. I formed the idea of writing 'a new *Cité antique*', and gave three lectures on ancient Greek kinship at the University of Chicago in the 1970s. Edward Shils advised me to turn them into something longer; and so I have.

My aim was to see how far a historian working with ancient sources, using prosopography as a substitute for fieldwork, could go in reconstructing the patterns of behaviour observed by anthropologists in the field—starting with the discovery of W. H. R. Rivers, collecting genealogies in the Torres Straits islands in the 1890s in order to see whether colour blindness was hereditary (1901), that his data allowed him to understand village life: gifts of food from household to household, marriage, and much more. For this purpose it obviously made sense to concentrate on Athens, from the seventh century to the end of the fourth; the

¹ Humphreys 1980, 1983*b*, 1985*b*, 1986*a*.

² Hughes 1984, Minney 2016.

³ This brought me into the beginning of underwater archaeology in the Aegean (as an observer), through Virginia Grace and Peter Throckmorton.

⁴ Moses Finley's work was already familiar, and led to Karl Polanyi (Humphreys 1978, ch. 2, originally 1969).

⁵ 1860, 1864, 1877; Bachofen (1861) attracted attention mainly later, through feminists.

sources for Athens are much richer and more varied in genre than those for any other Greek city (in the Hellenistic period this changes). I hope that among other functions this analysis may serve as a pilot study which can suggest questions to historians working on other periods.

Structurally, it moves after an initial chapter on the Athens of Drakon and Solon to interactions shaped by legal and economic constraints, and thence to the conflicts between kin that arose in those fields (chs. 2–7). Part Two deals with more optional relationships in the field of ritual (naming ceremonies and names, rites de passage, sectarian groupings and dedications); Parts Three to Four move first to the fringes of the public sphere and then to relationships in formal public contexts. Volume II deals with corporate groups recruited by patrification: tribes and trittyes, phratries, *genê*, demes.

Since I started serious work on this book (in the 1980s) other ancient historians have been stimulated to work on kinship, partly by the development of women's studies (see especially works by V. Hunter).⁶ F. Bourriot and D. Roussel in 1976 made a determined attack on the nineteenth-century 'genos' model (cf. T. Schneider 1991); Keith Hopkins' use of model life tables encouraged work on demography, especially for Ptolemaic and Roman Egypt.⁷ The general shift in historians' attention away from politico-military 'histoire événementielle' to the social and economic 'longue durée' promoted by the *Annales* school (with a Marxist background) became prominent in ancient history through the work of de Ste. Croix (and, for the Roman period, A. H. M. Jones), Finley, and J.-P. Vernant. This has encouraged (i.a.) a swing of interest from political to forensic speeches, closer collaboration between historians and archaeologists; it has given epigraphy a much more central position in the field,⁸ and has led epigraphists to work in new areas (e.g. Chaniotis 2012*b* on emotions). More use of epigraphic and archaeological data has also generated more work on cities other than Athens and Sparta (led by M. H. Hansen), and on the Hellenistic period.

There has, however, been rather little serious engagement with social theory or use of comparative material. Ancient historians read recent work in social anthropology and sociology, if at all, very selectively; there are some comparisons between the Roman Empire and ancient China,⁹ but almost no attempt to think about the Hellenistic world in terms of comparison with modern colonial societies, despite the wealth of historical studies of these. Use of comparative material from historical studies of kinship in the modern period is still largely restricted

⁸ Revised volumes of *IG* ii³ appeared only while the book was in its later stages; I hope I have managed to update all inscription numbers.

⁹ Scheidel 2015.

(like use of ethnography) to work on modern Greece—without much critical argument to justify that choice.

The place of kinship in social anthropology and the questions asked about it have changed radically since the 1960s; students are no longer taught to draw diagrams showing how a native Australian woman can marry her MMB. Recent work has been more concerned with postmodern features such as sperm donation and surrogate motherhood, same-sex partnerships and marriage, or the search by adopted/fostered children for genetic parents and siblings.¹⁰ Such work casts light on the role of male homosexual affairs in building personal networks in ancient Greece and on the dialogic relationships between legislation and the social imagination; it is also linked to a general rise of interest in conceptions of childhood.¹¹ On the whole, however, whereas in the nineteenth and early twentieth centuries there seemed to be an obvious connection between social anthropology and ancient history, the linkage of ancient history to colonial and postcolonial studies is now much stronger.

Two of OUP's readers felt that my analysis was strongly imprinted by the environment of the 1980s in which the book was conceived, and that this made it seem 'outdated'. This is certainly true of the structure of the argument in chs. 2–17—moving from 'harder' to 'softer' sets of social relationships in chs. 2–12, and from 'private' to 'public' interactions in chs. 13–17. It is also true that (as noted above) I was adapting to historical data a concept of anthropological fieldwork that has since been rightly criticized for ignoring the modern and (mostly) colonial frameworks within which its practitioners worked. But I am not clear that these changes in anthropological focus seriously affect the utility of my analysis. Athens' empire and (in the fourth century) lingering imperial ambitions were certainly a major element in the history of classical Greece; but we do not have enough evidence to assess the impact on kinship of this wider framework, apart from the increased opportunities for financial independence for young men provided by the transformed economy. Historians of premodern societies continue to base their analyses of kinship on structural-functional models.¹²

The publication of Paulin Ismard's *Cité des réseaux* in 2010 might have raised the question of the relevance of network analysis for ancient historians, but in fact the book does not analyse social networks; it deals with the social groupings within and between which networks would have functioned. Its questions about the changing environments for social interaction in Athens from the Classical to the Hellenistic period are important and interesting, but it does not provide the prosopographical detail that a network analysis would have required. Still less does

¹⁰ Carsten 2000, 2004; Franklin and McKinnon 2001; M. Strathern 1995.

¹¹ Steedman 1990, 1995; e.g. Beaumont 2012.

¹² See e.g. Thonemann 2017, where perhaps some engagement with Latour could have been productive.

it draw on Bruno Latour's actor-network theory, in which the concept of 'network' includes aspects of the material environments of interaction. Latour's work could certainly be of interest to ancient historians, especially perhaps his work on 'making things public',¹³ but so far no one has made use of it for ancient societies.

Even more promising, perhaps—and equally unnoticed by ancient historians¹⁴—is Niklas Luhmann's conception of society as composed of communication systems, obviously valuable to historians who have to rely mostly on written sources (or interviews); it should prompt us to rethink the relationships between 'fact' and fiction and between law, 'rhetoric', and behaviour. Luhmann's work also provides a model for thinking about the overlaps and disjunctions between communicative subsystems (elite and commoners; demes, phratries, residential groupings, age-sets, cult groups; public and private contexts), and how these change over time.

Luhmann himself admits (1986, 1) that 'the wealth of historical facts which historians are able to dig up from their sources never fails to dash all attempts at theoretical treatment . . .'; and while ancient historians have relatively fewer facts, we are more often hampered by problems in interpretation (and addiction to puzzle-solving).

If I were embarking on an analysis of Athenian kinship today, I would make a serious attempt to use the ideas of Latour and Luhmann. The structure of the resulting book might well have been different. It would still, however, have needed the spadework on data that I have provided here.

At this stage I can only launch the book and wish it bon voyage. It will no doubt meet some squalls of disagreement, and no historian today can feel as optimistic as Thucydides about long-term validity. I hope at least that some readers will feel that their unexamined assumptions have run into fresh breezes and rough water.

¹³ Latour 2005; cf. Manoukian 2012, 64.

¹⁴ Luhmann 1984, 1986: not much read by non-sociologists, even social historians working on Germany.

PART ONE

Legal and Economic Interaction

Drakon and Solon

GREECE AND ATTIKA

Elsewhere I shall explore, on a panhellenic scale, our evidence for the prehistory of Greek kinship, with the aim both of questioning assumptions derived from earlier anthropological theory and of asking whether we can still speak meaningfully of kinship patterns inherited by the societies of archaic Greece from previous ages. Here, since the evidence for Athens and its territory is richer for the archaic and classical periods than that from other parts of Greece, I shall concentrate on the Athenians, beginning with the legislation of Drakon (*c.*620) and ending (*c.*300) with the plays of Menander.¹ While there have recently been justifiable complaints that historians concentrate too exclusively on the ‘atypical’ cases of Athens and Sparta, Athens remains the ideal case study for an analysis focusing on practice and process, due to its wide variety of types of source material.

One may, in my view, legitimately speak of a common Greek kinship system, with minor local variations. Kinship is traced through both men and women but with preference for the male line, especially in questions of group affiliation. Inheritance is divided equally among sons; whether a daughter’s share is conceptualized solely as dowry, or as a share in inheritance that can be transferred on marriage, varies from one city to another (and dowries are not necessarily equalized). Arrangements for the transmission through daughters of the estate of a man with no sons, and for adoption by the childless, are fairly uniform. The same is true, by and large, of the terms used in address and reference to kin and affines, and the use of patronymics. The scope of the incest taboo is narrow, and the choice of marriage partners is otherwise free, with the exception of rules governing unions between free persons and slaves, and (in some cases) between citizens and non-citizens, and regulating the marriage of inheriting daughters who are not already married or betrothed when their father dies.

The ‘shared’ Greek culture of the archaic period, however, must have owed more to interaction than to cultural continuity. The end of the Mycenaean palaces represented—though with considerable local variation in degree—major changes

¹ The end of effective democracy in Athens after 322, the legislation of Demetrius of Phaleron restricting tomb monuments, the modification of the ephebic system of military training for young men, and the decline of activity in most demes after the end of the fourth century all combine to make this a watershed in terms of evidence for kinship.

in settlement patterns and ecology, and in the range and forms of interaction between communities, as well as in political institutions and the organization of production and taxation. The crystallization during the 'Dark Age' of the dialects subsequently spoken and written in the various Greek regions indicates that this was a period of reduced and less institutionalized communication, and hence of cultural differentiation; material culture was simple, and styles of pottery locally specific. The number and size of settlements appears to have been greatly reduced. Economic and social differentiation perhaps mainly took the form of the provision by community leaders of sacrificial victims for local festivals; the importance of animal sacrifice as a mode of communication with the gods appears to have increased considerably in this period.

The stagnation and closure of 'Dark Age' Greek communities should not be exaggerated. We can see that people moved. But we need to ask how structured and predictable their movements were, how degrees of institutionalization (in trading ventures, seasonal or life-stage migration, organized emigration by groups, etc.) affected the amount and kinds of information gained or lost in circulation, and how movement affected the communities from which it started.

Moreover, the darkness and duration of the Dark Age varied from one area to another. In Attika the gap was brief between the decline and abandonment *c.*1100 of the LH III C settlement at Perati on the east coast, which in its florescence in the early twelfth century was still in contact with the near east, and the beginning *c.*1050 of a new pottery style, Protogeometric, through the influence of which we can trace contacts with other parts of the Aegean. Lefkandi on Euboia, a short distance north of Attika, also had a brief Dark Age.

The period of recovery that followed was characterized, from the institutional point of view, by two somewhat conflicting trends. On the one hand migrations and risk-taking continued, opportunities increased, and this meant fluid institutions. Though Hesiod's ideal world is one in which seasons cycle predictably, proverbs remain true, children resemble their parents, and hard work brings rewards, he is the son of an immigrant, warns his hearers about the dangers of sea trade, and does his own adventuring in poetry. On the other hand there was also, partly due to these movements and partly through the periodic encounters of members of the elite at regional and interregional sanctuaries, a drift towards the standardization of a cultural *koinê*. It was a period alert for new information about the etiquette for dealing with gods and men, whether it came from within Greece or abroad. No one had a monopoly of authority: myths and modes of sacrifice circulated as widely as women, gifts, poems, innovations in armour and fighting tactics, political institutions, or fashions in dress, ornament, and dining.²

² Cf. ch. 18 nn. 9, 26 on tribal names; C. Morgan 1993, 1996, Polignac 1996 on regional sanctuaries. Behind Homer and Hesiod lies a culture of historical and theological speculation—about ruins in the

EARLY LAW

For knowledge of kinship in the Early Iron Age we have to move from poetry to written law, which by modern standards might seem a radical change; but in archaic Greece the two were not so far apart. It was not an accident that Solon was both a poet and a lawgiver. Both poetry and laws concern themselves with social ideals and with acts of transgression; both poets and lawgivers perform creative acts of setting-in-order, in contexts hard for us to reconstruct. Laws as well as poems could be recited or sung in public; poems as well as laws could be used to sanction improper behaviour. Both are ‘theoretical’; they provide an overview of behaviour that reaches beyond choices made in specific contexts (and this theoretical bias may be a pitfall for the historian). But both also affected practice.³

Just as it is now clear that classifying societies as either ‘oral’ or ‘literate’ obscures most of the interesting questions about the relations between ephemeral communication, live performance, formulaic speech, and texts preserved in writing or in memory,⁴ so we need to be wary of the lingering influence of models of evolution from myth to reason, custom to law, poetry to politics. Such models have encouraged historians to modernize early written law, looking for systematic ‘codes’,⁵ and to underrate the prevalence in societies without written law of conflicting norms, disputes, and the public sanctioning of offenders.

In the tradition of anthropological analysis of early Greek society inaugurated by Fustel de Coulanges’ *La cité antique* (1864), and elaborated in Glotz’ *La solidarité de la famille dans le droit criminel grec* (1904), the rise of the city-state was portrayed as a gradual liberation of the individual from the bonds of the corporate descent group (*genos*) which had previously dominated its members’ actions. In the extreme version of this model (Bonfante 1888, 1915), the *genos* was a miniature state and relations between *genê* could only be seen as interstate relations (including warfare). Eduard Meyer pointed out the absurdity of this

landscape, characters in stories, powers of sky, sea, and underworld, variations in the nature and behaviour of immortal beings and the customs of mortals, and much else.

³ See Redfield 1975 on setting-in-order; Hölskeskamp 1999, 108–9 on ‘sung laws’; Bourdieu 1972 on the difference between theory and practice. On the influence of epic poetry on practice see Kistler 1998; on social censure in poetry, Dover 1963.

⁴ See R. Thomas 1992, 2005; Johnson and Parker (eds.) 2009; Tambiah 1986 for the significance of oral transmission of memorized texts; Humphreys 2013 for comparative material.

⁵ Codification was retrospectively credited to early lawgivers already by the fourth century. The idea that historically existing sets of laws can be judged by their approximation to a hypothetical ideal of completeness is a persistent form of mystification of law and of legislation, which is in this view presented as a process of adjustment to this ideal and not as a response to historical circumstances. See below, n. 127, on ‘follow-on’ legislation for more modest forms of supplementary lawmaking; Laks 2000, 261 on Plato’s recognition of the difference between utopian codification and legislation in specific historical situations.

view in 1907, but its influence lingered in conceptions of ‘self-help’ in early law as unregulated, and in the misleading antithesis between kin-group and individual, which obscures the role of the *dêmos* or *laos* as public in the early stages of consolidation and conceptualization of the state.

In the eighth to sixth centuries communities were stratified: there were *basileis* and commoners in the poems of Homer and Hesiod. Commoners turn to *basileis* for solutions to intractable disputes; they may also call on *basileis* to deal with transgressive behaviour, if less formal sanctions have no effect. On the other hand, there is a lack of effective mechanisms for resolving disputes between *basileis*, or for preventing *basileis* from oppressing commoners. The ambitions and problems of commoners differ from those of *basileis*, and this produces some variation in norms as well as behaviour. Norms cited in public dispute settlement may be those of commoners more often than those of the elite.

By the late seventh century Athens had annually elected magistrates, with judicial responsibilities. This raised new questions. Did their decisions have a different authority from those of an experienced local notable? Was each new office-holder obliged to uphold his predecessors’ judgments? How consistent and how equitable were office-holders’ decisions? Through what channels could public opinion be brought to bear on them?⁶

It is in this context—not of tension between kin groups and individuals, but (among the elite) of the contradictions between norms of office and ambition for power, and more generally between the interests evoked by a specific situation and the social control exerted by gossip—that law came to be recorded in writing. Writing symbolized fixity and helped to crystallize ideas of a *res publica* (Solon uses the term *dêmosion*), in relation to which the individual might have, or lack, rights. Lawmaking, along with office-holding, became a field for experiments in the use of power to produce social order.⁷

⁶ Kaser 1984 points out that the consultation by Roman magistrates of a council of legal experts contributed to confidence in the continuity and consistency of praetorian rulings. In the trial scene on Achilles’ shield (*Iliad* 18. 497–508) both elders and public are present, and early magistrates may have judged in similar circumstances; but in Greece the elders became *mnêmones* (Carawan 2008) or *paredroi*, associates chosen by the office-holder (at least in Athens; ch. 15). See Humphreys 1983b on the absence of images of the wise judge in Greek culture. As we shall see (n. 129) the role of the public is formalized in Athens in the institution of *epheisis*. Note that Darius gave orders in 519, shortly after he had established control over Egypt, for a written collection of laws (in Demotic and Aramaic) to be produced in the province (Briant 1996, 490; cf. 567–70 on the accession inscriptions of Darius and Xerxes).

⁷ Plato was still preoccupied with this question some 2½ centuries later. Although *kosmeô* (from which the Cretan term for magistrates is derived) is often used of marshalling armies as well as of civic and ritual order (and the adornment of women), and the hoplite phalanx provided an image of the citizen body, Greek views of the nexus between power, office, and order seem less military than those implied by the Roman term *imperium*. Moreover, in Greece there was a significant association between the (re)imposition of social order and arbitration (cf. Hölkeskamp 1999).

Before we turn to Drakon and Solon, something should be said about the oral sources on which they could draw. Rules will frequently have been cited in situations of conflict or transgression (Bourdieu 1972). When disputants appeared before basileis or elected officials, each would support his case with reference to norms, and these norms would be re-echoed in the buzz of comment from the listening public. The role of the judge—*dikazein*—was not to decide between norms but to propose an illuminating and equitable solution to the dispute. Norms might be cited by the judge, but fact finding and testing the strength of each litigant's determination and the balance of community support were also part of the process.⁸ Norms would also frequently be cited in gossip. Severe disapproval by a local community could make its target *atimos*, completely lacking in honour. Already by Solon's time magistrates had begun to appropriate this sanction and pronounce *atimia* as a sentence; this meant that the offender was publicly labelled as devoid of honour and thus as a man (or woman) who could be insulted with impunity, particularly if he or she ventured to appear in public places. This was a severe sanction and made life intolerable for the victim, who might well decide to emigrate and start afresh elsewhere; hence *atimia* became associated with exile (in Sparta the honourless *tresas*, the man who had shown cowardice in battle, in exemplary stories committed suicide).⁹

One of the mechanisms linking the informal and formal uses of *atimia* as a sanction was presumably the denunciation to magistrates of obdurate offenders. Attic law had a number of terms for such denunciations, associated especially with the summary arrest and punishment of 'criminal types' (*kakourgoi*): *ephêgêsis* when a magistrate was fetched to the scene of the offence, *apagôgê* when the offender was taken to him, *phasis* when transgressive behaviour (e.g., perhaps, using false weights in the market) was pointed out to him, *eisangelia* when information was laid about less visible offences (mistreatment of orphans). Attic tradition credited Solon with the introduction of written complaints, *graphai*; this exerted control over both

⁸ Cf. especially Thür 1970, 1989, 1990 (using the term *Beweisurteil*); Humphreys 1983*b* on the judgment of Solomon.

⁹ See the argument in Humphreys 1991, 33–35, 40 against the interpretation of the *atimos* as outlaw (based on medieval models). The man who can be killed with impunity (who is a political threat, and not without honour) is in Andok. 1. 96–8 and *Syll.*³ 194 (Amphipolis) called *polemios* (foe), not *atimos*; here it is the concept of a justifiable homicide developed initially for some forms of flagrant offence that is extended into the public sphere (the evidence is collected, not without inaccuracies, in Velissaropoulos-Karakostas 1991). See also Maffi 1983, Van t'Wout 2011; below, n. 138, on *moicheia* and dishonour. The offender who was cursed was also excluded from normal life, in a different way; it would be unlucky to associate with him. Here, magistrates (cf. n. 60) were again taking over a pre-existing sanction, associated in myth with relations between parents and children (cf. L. Watson 1991). These forms of exclusion from the public sphere in turn contributed to conceptions of the rights of the included, the *epitimos* (Manville 1990).

informers and magistrates, and led to a proliferation of the offences subject to denunciation, but the principle of action by ‘whoever wishes’ was not new.¹⁰

DRAKON: THE KINDRED IN HOMICIDE CASES

Written law and written treaties between states appeared during the same period and in similar form; the arrangements made in the process of founding colonies share features of both.¹¹ Drakon’s law on homicide could be seen as a form of peace treaty. I have argued in detail elsewhere that his legislation was confined to cases of justifiable and hence pardonable homicide, and that it was provoked by serious conflict within the Athenian elite. Some fifteen years earlier Kylon had attempted to seize power as tyrant; he was defeated, and some of his supporters had been massacred after (allegedly) having been promised a fair trial. There will have been arguments about the responsibility for the killings (magistrates, perpetrators, or both?) and probably about other deaths that had occurred in the fighting (paying off old scores under cover of civil war? accidental killing of men on one’s own side?).¹²

¹⁰ See the important treatment of these procedures in Ruschenbusch 1968; M. H. Hansen 1975, 1976; Humphreys 1985*a* on the use of *eisangelia* by Lykourgos; Humphreys 1988, 469; Todd 1993, s.v. MacDowell 1991, though he cites Ruschenbusch, does not consider the history of *phasis* and is therefore puzzled by its use in prosecution for not leasing an orphan’s estate (Dem. 38. 23; see now Thür 2008) and for fraudulent initiation. *Pha[i]nên* also occurs in *IG* i³ 4 b 24, on which see Humphreys 1988 n. 13, and in religious contexts in Kos; the distribution of these early summary procedures outside Athens should be studied. It is not clear whether Greek law had procedures similar to the Roman *flagitatio*, designed to bring the pressure of public opinion to bear on recalcitrant debtors (Usener 1900).

¹¹ If the inscribed oath of the founders of Cyrene (M/L 5; *Nomima* 41) is a genuine copy it represents a text more or less contemporary with Drakon’s laws. See also M/L 13 (*IGT* 47–8, *Nomima* 44); M/L 20 (*IGT* 49, *Nomima* 43); *IGT* 37 on the Eleian decree for Patrias (*Nomima* 23) as a form of treaty; Scharff 2016. What we call *leges sacrae* (Carbon and Pirenne-Delforge 2012) are in a sense agreements made with the gods. On the use of writing to embody public commitment (often in combination with rituals of oath taking) see R. Thomas 1996, 2005; Hölkeskamp 1992, 1999; on Gortyn, P. Perlman 2000*a*. The material representation of commitment may be what law-writing in Greece mainly has in common with earlier law-writing in Mesopotamia, where the crisis that provides motivation may be the transition from one king to the next, and ‘codes’ may therefore be orientated more towards the comprehensive representation of order, and less to historically specific problems and grievances, than in Greece or at Rome (the interpretation of Solon’s legislation put forward in this chapter is more historically orientated than that in Humphreys 1988 n. 9). However, as we shall see (n. 45), the question of succession in elected office is very relevant to the development of formal legislation (written or oral: cf. the ‘Teian curses’ M/L 30, with R. Thomas 1996) in city-states.

¹² Humphreys 1991 (pp. 20–1) on the association of *bouleusis* with office-holding. It is assumed that kin will not accept compensation in cases of deliberate non-justifiable homicide (if they did it would be kept very quiet). The regulations on accusation cover all homicides, as (by implication) does the protection for killers who leave Attika and stay away from the border markets, games, and regional festivals (*IG* i³ 104. 26–9; it may be a mistake in translating a 7th-c. text to write ‘amphiktyonic’ with a capital), though the protection was presumably afforded especially to killers in process of negotiating compensation. Gagarin

Kylon himself is said to have escaped, and some of his supporters may have fled with him; others who had been involved in the affair, on one side or the other, may have judged it prudent to leave Attika. When tempers began to cool, mediators would begin to open negotiations for compensation and/or return; but the situation was exceptional, and therefore delicate.

Sources call Drakon a *thesmothetês*, but we probably should not conclude that he held the office of that title. I am tempted to think that he legislated as *archon basileus*.¹³ The basileus' original sphere of office seems to centre round disputes between members of the elite (whereas the *epônymos* dealt especially with the Athenians as *dêmos*, and the polemarch with the army). He presided over the four *phylobasileis* (ch. 18 n. 91) and dealt with disputes over homicide and succession to priesthoods. Homicide of course was not confined to the elite, but it was their disputes that might lead to civil war (cf. *Odyssey* 24)—or, in the case of priesthoods, the disfavour of the gods. It is anachronistic to think of the responsibilities of the seventh-century basileus as primarily 'religious'; all office-holders had cultic duties, and concern with pollution is notably absent from Drakon's regulations on homicide. The basileus may have begun to acquire additional ritual responsibilities only under the Peisistratids.¹⁴

Drakon's law is partly preserved in a copy made in 409/8 (supplemented by quotations in the orators),¹⁵ and the initial section, covering the rights and duties of the victim's kin, can be translated as follows:

Even if someone kills a man non-intentionally ('not by plan') he is to leave. The basileis are to proclaim responsibility for death [whether the accused killed with his own hands or] by giving orders (*bouleusis*), and the ephetai are to judge controversial cases. Compensation may be accepted by father or brothers or sons, unanimously; any member of this group can exercise a veto. If there are no kin in these categories, kin up to cousinhood and cousin may accept

(2005, 2007) rejects and misunderstands my argument. Even if the dates were certain, it might take 15 years to build up pressure from a substantial number of controversial cases. Cf also Riess 2008. The association of a recently excavated mass grave of shackled skeletons with this affair (Killgrove 2016) is as yet unproven.

¹³ In which case his influence on Solon would extend beyond the use of writing: see below at nn. 43–50.

¹⁴ Thus the position of archon basileus would be a continuation of that of the Homeric 'king' not—as later imagined—in terms of hereditary succession, but as *primus inter pares*, an elected *princeps senatus* (if he presided regularly over the Areiopagos, and not only when it was dealing with homicide, this would fit the conception of the role proposed here, as would the sacred marriage of the *basilinna* with Dionysos, which will have contributed to the later theory of specialization in religion). On the basileus in the Peisistratid period see J. K. Davies 1988. Ideas about the supernatural dangers related to unavenged death of course existed already (see the account of the Kylonian affair in Seaford 1994, 92–9, about which I have some reservations; below, nn. 65–6, on pollution and burial rites), but it belonged to the discourse of refusal of compensation, not to that of pragmatic regulation of agreement to pay and accept payment.

¹⁵ IG i³ 104; see Stroud 1968, M/L 86, IGT 11, *Nomima* 2.

compensation if unanimous, but any one of them can veto. If there are no such kin, and the killing was non-volitional, and the Fifty-one, the ephetai, have so ruled, ten phratores can agree to the killer's return; the Fifty-one are to select these by rank. Also those who killed in the past are covered by this law. Kin up to (the) cousinhood and cousin should formally accuse the killer in the agora; cousins and cousins' children and gambroi and pentheroi and phratores should support them . . .

The emphatic position of the ruling that all those who have killed, either physically or by giving orders, are to leave Attika should be taken seriously. Flight (*pheugein*) was not a penalty but a precaution. Previously, whether a killer who felt he had a legitimate defence would flee may very well have been a question of the relative power of the persons involved and their supporters, and the swing of public opinion. Drakon may be taking a stand against the continued presence in Attika of powerful men who were considered by some to have killed by *bouleusis*. Henceforth, agreements about compensation and pardon can only be negotiated on behalf of killers who have left Attika.¹⁶

'The basileis' are probably the archon basileus and the four phylobasileis, and *dikazein* here (distinguished from the role of the ephetai, *diagnónai*, to decide between conflicting claims) presumably refers to public proclamation of the names of killers, once the basileis had satisfied themselves that the accuser had a substantive case.¹⁷

Drakon drew on a model of the kindred, no doubt already familiar in broad outlines, as a set of concentric circles, with (in the case of homicide) the victim at the centre.¹⁸ The inmost circle contained only the victim's father, brothers,

¹⁶ The reference to killing with one's own hands is restored, but the sense is not in doubt. Athenian territory would be places where people sounded Attic and not Boiotian or Megarian; some of these people were less closely integrated into city institutions than others (see below, n. 70, on *agroikoi*; ch. 20 n. 43). To see 'exile' as a precaution and not a penalty removes the basis for Tsantsanoglou's emendation (1972) [*phonô pheug*][*ēn*] (followed by Phillips 2008) in l. 11. I cannot here go into the question of Epimenides' purification measures. See Scharff 2016, Appendix II, for parallels (*SEG* 57. 576).

¹⁷ The alternative view that the plural *basileis* refers to successive holders of the archonship is unsatisfactory, and the importance of the phylobasileis at this period should not be underestimated (ch. 18 nn. 91–2). Thür 1990 interprets *dikazein* as the formulation of oaths to be sworn by the parties, but in my view it may well refer to the last of the three proclamations known in the classical period as *prodikasiai*, in which the accused was solemnly told to stay away from the mysteries and other public places (A. R. W. Harrison 1971, 9; unnamed killers were warned in the same form. Cf. Gagarin 2000). In the classical period the basileus and phylobasileis made a final determination—after the three proclamations at monthly intervals, allowing time for further information to emerge—in the case of unknown killers and death caused by non-human entities. See also Thür 2006, 48–55.

¹⁸ Cf. Pembroke 1971 for later use of a similar model. My attention was drawn to the differences between Drakon's and Solon's models of the kindred by Bianchetti 1982, although my interpretation differs considerably from hers.

and sons; the next, all descendants of his grandfathers.¹⁹ The outer circle consisted of descendants of the victim's great-grandfathers (i.e. those who stood in the relation of *anepsiôn paides*, second cousins to him), his affines (*pentheroi* and *gambroi*, wife-givers and wife-takers), and members of his phratry.²⁰ The intention in defining this outer circle of kin and connections seems to be to include as wide a range of the victim's associates as possible, rather than to impose limits; the term *anepsiôn paides* does not yet mark the boundary of the kindred as defined and limited for jural purposes, but is merely the term used by Athenians for the most distant genealogical link commonly recognized. More distant agnates would be regarded simply as fellow-*phrateres*; non-local cognatic kin, if not members of the same phratry—for example, in the case of the aristocracy, whose alliances and kin networks might be far-flung—would fall into the category of hereditary guest-friends, *xenoi*, if the relationship were kept up.

Drakon used these distinctions between closer and more distant kin to limit the range of kin who could take on a leading role in bringing homicide charges or agreeing to accept compensation, while at the same time prescribing that kin and allies in the wider circle had a duty to support homicide charges. This implied that the principal accuser had to consult them, and enabled them to exercise a restraining influence on accusations that had no solid basis. Only kin within the circle of *anepsiioi*, descendants of the victim's grandfathers, could make a formal accusation of homicide.²¹ If the accused claimed that the killing was excusable (accident, self-defence, mistaken identity in war, acting under orders, etc.) kin could agree to make peace with him (*aidesis*) in return for a compensation

¹⁹ *Mechri anephsiotétos kai anephsiou*; I take *anephsiotés* as expressing the range of kinship covered by common descent from a parent's parent or the group of kin comprised within this range, and thus including the victim's uncles (FB and MB) in the circle. It is not clear whether the term should be taken as abstract, denoting a relationship, or collective (Pind. *Isthm.* 8. 68 has *neotés* as collective). Abstract nouns of this form (which is early: Chantraine 1933) seem to be based on adjectives and denote states—youth, gaucherie, courage—rather than relationships; however, *anepsios* is adjectival in form. The term occurs later only in legal contexts ([Dem.] 43. 63, Plat. *Laws* 871b), where it is understood as abstract. I assume that matrilineal as well as patrilineal cousins are included (contra: Hedrick 1984, 210), since there is no evidence that *anepsios* in Greek had ever been restricted to patrikin. (Rice 1986, 213–16 shows that in Hellenistic Rhodes *anepsios* could be used to denote the son of a cousin.) Cf. Heitsch 1984a.

²⁰ On *anepsiôn paides* see W. Thompson 1970a and below, n. 62. *Pentheroi* and *gambroi* may be used here in a classificatory sense to include affines of the victim's kin (e.g. ZH, BWB, SWF) as well as his own WF, WB, and DH.

²¹ *Prociépēn tōi ktēnanti en agorái*; *agora* here presumably denotes the public open space where basileis and others gathered, rather than a formal assembly meeting (Humphreys 1991). The accuser could probably be chosen either as the victim's closest kinsman or for his seniority and prestige; a son or younger brother of the victim might ask an uncle to act with or for him. A single individual has to take the leading role here; this is why Drakon specifies that all *anepsiioi* are obliged to support an accusation (*syndiôkein*), together with the outer circle of kin and allies.

(*poinê*).²² Such an agreement could be made by the kin of the inner circle (fathers, brothers, and sons), provided they were unanimous; if there were no kin in the inner circle, those in the second circle (*anepsioi*) could take their place and agree to *aidesis*, again with the provision that the decision must be unanimous. The stress on unanimity is clearly a protection for the killer, whose safety had to be guaranteed if he was to return to Attika. If there were no kin in the second circle and the court of the fifty-one *ephetai* decided that the killing was non-intentional, the *ephetai* could select ten members of the victim's phratry, by rank and reputation,²³ to agree to the killer's return.

Aidesis payments may have been shared out among the circle of those who took part in the rite of reconciliation.²⁴ This division would have provided some motivation for Athenians to accept a somewhat stricter limitation of the right to take part in decisions on *aidesis*. Defining kin entitled to a place in the outer circle, mobilizing them to take a decision, and arriving at a unanimous verdict would be problematic. It is, however, noteworthy that affines play a very marginal role in homicide affairs in Drakon's law. In the classical period, as we shall see (ch. 7), they were often closely involved in legal disputes. Various explanations of this discrepancy between Drakon's law and later practice might be suggested. Drakon will have been mainly concerned with cases involving aristocratic families, whose affines might live too far away to provide support on such occasions; Athenians who married locally may have tended to marry within their phratry, if not also within the kindred; there may have been a feeling that the judgment of affines was too apt to be biased by the influence of the women through whom

²² The law does not expressly prohibit kin from agreeing to *aidesis* in cases where the killer could produce no defence, but public opinion would be against it (cf. Heitsch 1984a; Maffi 1988, 114–15). That compensation is normally paid is implied by the classification of certain types of justifiable homicide as *nêpoinê*, scot-free (*IG* i³ 104. 38). The distinction between cases of homicide in which the killer could produce a defence and those in which no *poinê* was due was further elaborated in later law (Humphreys 1991).

²³ *Aristindên*; no doubt the *ephetai* would look first to the leading aristocratic members of the phratry, but the term is not a synonym for *ex Eupatridôn*, and it was important above all to choose 'good men and true' whose judgment would be respected. It is unclear whether these provisions for re-admitting the killers of victims who had no kin in Attika correspond to a real need or were included merely for the sake of completeness. The victims might be immigrants with powerful patrons or affines, or men whose kin had all fled after the Kylonian affair. On the *ephetai* see Humphreys 1991, n. 43; Gagliardi 2012.

²⁴ The term for the phratores is *esesthôn*, 'allow in', rather than *aidesasthai*, which may imply that compensation was not paid in such cases, although I see no reason in principle why a phratry should not accept a *poinê*, which could be used in celebrating a phratry festival. *Il.* 18. 498–500 suggests that acceptance of the *poinê* was an essential component of *aidesis*, without which the killer could not safely rejoin the community. Division of such payments among those concerned in avenging homicide seems to be a very widespread phenomenon: cf. e.g. Chelod 1980; D. H. Green 1998; Charles-Edwards 1993, pp. 181–200. However, it should be noted that reliable ethnographic analyses of vengeance and compensation are hard to find, due to changes imposed by modern states and the tendency of both western and non-western sources to construct simplistic stereotypes of the violence of earlier times.

they were linked to the victim's family; or perhaps the responsibility for such weighty decisions had to be grounded in a biological tie.

The association of a wide circle of kin and other allies in the pursuit of the killer, expressed by the term *syndiôkein* (where the prefix has its full force), corresponded to Homeric practice, in which a killer could be hounded by the *kasignêtoi* and *etai* of his victim (Humphreys in preparation *a*). But by explicitly specifying their role Drakon gave a warning to accusers that if they brought a charge without securing the backing of their kin their claims would not be taken seriously. The strength of a case was to be assessed, at least in part, by the support it could muster—not only on the day when the accusation was first made, but on the two subsequent occasions, at monthly intervals, when the preliminary hearings (*prodikasiai*) were held in the *agora*. Reconciliation after a killing could not be imposed by fiat; public opinion had to swing solidly behind it, and the more distant kin and allies of the victim, who might also have ties to his killer, and whose emotions were less deeply involved, had an important role to play. Solon's law prohibiting neutrality and detachment in situations of civil strife (*stasis*) may stem from the same way of thinking (Humphreys 1991).²⁵

In Drakon's law, for the first time, rights and obligations were formally attached in writing to degrees of relationship, instead of being distributed among more fluid coalitions as they crystallized out in each situation.²⁶

The formulation of law in writing inevitably involves a simplification and rationalization of current practice; even if the rules laid down have all been voiced many times in disputes and hearings, to take them out of context transforms their status. From being part of practice and speech they move to a transcendent level as *langue*, as standards by which practice is to be measured.²⁷ We thus have

²⁵ The procedure involving three *prodikasiai* may be a post-Draconian innovation, but it conforms to the spirit of his law in that the concern is still to allow tempers to cool and public opinion to crystallize (cf. mediation by kin in *Il.* 9. 447–73). On Solon's neutrality law see Van r'Wout 2010; Humphreys 1991, n. 26; Ulf 1990, 143–4 on cultural censure of men who avoid battle. Ampolo 1996, 317–18 refers to the Kylon affair. Gabba (1994) suggested that the law was invented by extremists (cf. *Thuc.* 3. 82. 4–5) in the period 404–399; but *Lys.* 31. 27 seems to be unaware of it, and the Thirty relied on terrorizing the citizenry into quietism. The reference to arms may fit with Solon's explicit recognition of the hoplites (*zeugitai*) as a census class (below, n. 68), and the penalty of *atimia* with the implication of that status that hoplites were *epitimoi* and should value their rights.

²⁶ Both the fact that phratries were not exogamous and the absence of any trace of lineages in Homer warn us against assuming that rights and obligations were clearly tied to a genealogical structure before the beginning of written law. Recording homicide law in writing also formalized the insistence that all killers must leave and that *aidesis* decisions must (within the specified limits) be unanimous, and fixed the list of forms of non-culpable homicide (cf. Heitsch 1984*a* on Drakon's innovations; Faraguna 2006).

²⁷ See Bourdieu 1972. The contrast between oral and written law must not be over-stressed, since selective citation of written laws continues as part of practice and some orally cited norms achieve quasi-legal status, but nevertheless there is a difference. The legislator may also attempt, in the interests of consistency and completeness, to provide for situations that rarely arise in practice (cf. R. Thomas 1989, ch. 3, especially 184–5, on the effects of writing on genealogies). This however is comparatively rare in

to ask not only what conceptions of the structure and functions of the kindred were incorporated into Drakon's and Solon's laws, but also how their formalized models of kin networks influenced subsequent behaviour, and through what mechanisms the influence worked.

The model of the kindred represented in Drakon's law was simple and corresponded fairly closely to common experience, as we find it represented both in epic and, later, in the Attic orators. The individual was surrounded by circles of kin and quasi-kin of varying degrees of closeness which corresponded to the confidence he could feel in calling on them for support. By and large, *anepsioi* were more distant than brothers, and *anepsion paides* were more distant still. But these distinctions were still rough and ready. The next step, a much more precise ranking of degrees of kinship, was to be taken by Solon.

SOLON: RESOURCES, PROBLEMS, POWERS

Drakon's legislation will have restructured the field of expectations within which the idea of law-making was situated. The historical coincidence that Athens' first written law dealt with homicide heightened the aura of solemnity surrounding written law, and the connotations of Drakon's name must soon have been exploited for the same purpose.²⁸ Passing laws and writing them will have been more clearly available as a means of dealing with social crisis, even if alternatives were not yet excluded.²⁹ An original form, the revolving wooden beam (*axôn*) had been found for storing substantial legal texts in a public space.³⁰ The link between mediation

Greece; the effects of such theoretical problem solving on early Roman law are much more significant (cf. Crook 1967).

²⁸ See Humphreys 1991 on reflection about homicide in sixth-century Athenian myths, which also added to the distance between law and the situations in which it was applied. Some have concluded from Drakon's name that he was himself mythical, but the name and other names formed from it exist also outside Attika (*LPGNI*, IIIA). There was no doubt a good deal of follow-up legislation (see below, at nn. 127–8; Humphreys 1991; Carawan 1998) on homicide after Drakon's initial regulations, some of it perhaps added to his axones (there were at least two), some probably post-Solonian. Stroud 1968, 54–6 shows that the law cited in Dem. 23. 28 cannot be fitted into the text on Drakon's first axon. Its terminology is peculiar: *eispherein* where we would expect (at least after Ephialtes) *eisagein* (Wolff 1961, 76 n. 198 rejects Schelling's emendation), and the odd formula *tous archontas, hôn hekastoi dikastai eisi*, which occurs also in the law of [Dem.] 43. 71 on uprooting olive trees. If these problems are not due to editorial interference at the end of the 5th c. the combination of trial by the Heliia (cf. Humphreys 1983b, 245–6) and the archaic term *dikastai* for the archon's function (cf. n. 8 above) with an apparently rather fluid division of labour between archons might suggest a date in the 470s–450s.

²⁹ For example, appeal to ritual experts (Epimenides).

³⁰ *IG* i³ 233, 243 have been cited as examples of texts on stone from the early fifth century that may be influenced in form by Drakon's and Solon's axones. Hölkeskamp 1999 collects evidence for the positioning of laws in other Greek cities, but we do not seem to have a comprehensive study of the material aspects of early Greek monumental/public writing (as for Egypt in Assmann 1991). The late 5th c. copy

(arbitration) and law-making had been reconfigured: the mediator not only cited rules of law to support his recommendations, thus classifying a specific conflict in terms of general legal categories, but he gave permanent form in writing to these general rules. Reasoning that might have remained at the level of analogy ('disputes over killings in civil war should be dealt with by the procedures established for non-intentional—and, where appropriate, intentional—homicide in times of peace') led to a resystematization of the procedural norms on which the analogy drew. Drakon's law also provided a model for the association of law-making with clarification of the status of Athenians who had left Attika, and for the precise specification of the rights and obligations of various categories of kin, affines, and associates. If he legislated as archon basileus, his laws also provided a model for the use of elective office as a base for a regulation of current problems within the office-holder's remit that was designed to last after his term ended. The question whether quietism in situations of political conflict was to be encouraged or penalized may also have been in the air.³¹

Like Drakon's law on homicide, Solon's legislation was a response to a situation of crisis, as his poems clearly show. Drakon, however, had been motivated by conflict within the elite; Solon had to deal with trouble from below, and regulate relations between classes.³² Peasants seem to have been affected by obligations in two ways: some had to make sharecropping payments of one-sixth³³ of their crops, while others had been sold into slavery. Solon's measures combined 'freeing' the land by removing property markers (*horoi*) and freeing the enslaved, some of whom had been sold outside Attika.³⁴ He did not make a general redistribution of 'fat' land in equal shares to all (F 34). His action was known as the *Seisachtheia*, 'removal of burdens', and this term (which seems to have referred to 'burdens' attached to land as well as to persons) was interpreted in later Athenian tradition as denoting a cancellation of debts, 'both private and public' (*A.P.* 6. 1). Scholars have for the most part concluded that the *horoi* were erected on land farmed by the *hektēmoroi*, and that removal left the land in their ownership.

of Drakon's laws, *IG* i³ 104, preserves the headings 'first axon' and 'second axon'; the text of the first contained 45 lines of 50 letters each. See further below, n. 48; G. Davis 2011.

³¹ Cf. Hdt. 5. 28–9 (Hölkeskamp 1999, 214–17) where Parian arbitrators rewarded quietists; Raaflaub 1996 on Hesiod as a quietist; n. 25 above.

³² Cf. R. G. Osborne 1996a, Raaflaub 1997 on early written law as mainly concerned with relations among the elite. Contra, Hölkeskamp 1999 (267 n. 20), rightly stressing the situationality of early law (262–9 on Solon); cf. id. 2005.

³³ It has been argued that a *hektē-moros* should keep rather than pay one-sixth (cf. Gallant 1982, Van Wees 1999). See however P. J. Rhodes 1981a, 91; Sancisi-Weerdenberg 1993. Survey in Faraguna 2012c; see also Zurbach 2013.

³⁴ F 36 West. Those sold into slavery may have been defaulting hektemoroi (see n. 42 below); the reference to 'slavery' in Attika in lines 13–15 may be metaphorical and denote the hektemoroi.

There has also been a tendency to assume that those sold into slavery were sharecroppers unable to meet their obligations.

Recently some of the weak points in this interpretation³⁵ have been addressed by the suggestion that the *hektémoroi* were bringing new land under cultivation.³⁶ In this case they would be young men whose fathers did not have enough land to support them (*aklérois*); they might need hired labour to help them in clearing the land of trees and rocks, and in terracing, or they may themselves have been hired by richer men to do such work; they would need vine and olive stocks to plant.³⁷ Wealthier men could have helped them with these initial expenses, in anticipation of later repayment, and there may well have been some ambiguity as to whether the subsequent sharecropping obligation was to be regarded as loan repayment or rent, and what rights the *horoi* marking the land represented.³⁸ It is doubtful if there was any clear concept of rent in Greece at this period,³⁹ and the type of loan envisaged here will also have been unprecedented; clarity

³⁵ A sharecropping rent of 1/6 should not have been impossibly onerous.

³⁶ The suggestion is not entirely new (see Link 1991). I follow Sancisi-Weerdenburg 1993, with minor modifications (Link 1991 takes a similar view except that he follows Gallant 1982 in thinking that the *hektémoroi* paid 5/6 of the crop and had other land of their own; the view of Welwei 2005, 39 n. 29, is not entirely clear). However, I am less persuaded of the association suggested by Sancisi-Weerdenburg between the *hekté*-payments and the *dekaté* collected by Peisistratos (perhaps a misunderstanding of the parasite system: see ch. 20 n. 56; another view in Spahn 1998; on early taxation, *IEph* 1a, no. 1, 6th c. Ephesos; Descat 1990; Van Wees 2013a). Rihl 1991 assumes that the payments of 1/6 were made to the state, partly because she feels a need to explain Solon's cancellation of public as well as private debts. But if the inclusion of public debts was not mainly formulaic it probably referred to fines imposed by magistrates (cf. below at nn. 44–6 on the archon's proclamation).

³⁷ The land would be hillside. Solon F 13. 47–8 West appears to be a reference to hired labour; cf. perhaps *Od.* 11. 489–91, where the lowest status in life is that of a hired man (*thés*) working for a landless (*aklérōs*) farmer; Link 1991; Bravo 1993, 1996b. Bravo is right to insist that *hektémoroi* are not day labourers, but the status of *hektémoroi* should not be explained by the association of the term with *pelatai*, which may be a gloss of the classical period. Early uses of the latter term are (lyric) Doric, and it may have originated in colonial contexts; in classical Athens it may have referred to dispossessed residents of *kleruchized* areas who continued to farm as tenants for Athenian owners. (In Plat. *Euthyphro* 4c Euthyphro calls his father's employee 'my' *pelatés* because he is justifying a prosecution for homicide and has to state his relationship to the victim.)

³⁸ At this period the transition from *horoi* marking ownership, via *prasis epi lusei* (mortgage conceived as temporary sale) to *horoi* marking encumbrances can hardly have begun (the attempt of Bravo 1990 to find the latter in Theognis 825–30 is unpersuasive). De Ste. Croix 2004, 110–11, argues that, in farming, rent and debt were not yet clearly distinguished. My suspicion is that rich landowners were marking out holdings on hitherto unclaimed land in advance of any clearing work: see below n. 41 on the *nomos argias*, and the suggestion of Link 1991 that the public property (*démosion*) stolen by the rich (Solon F 4. 12–13) was such land. On the meaning of *démosion* see Rousset 2013, 121.

³⁹ If *phratries* and temples owned land at this date it would presumably have been farmed (or stocked) by wealthy men who undertook to provide sacrificial victims in return; such arrangements will not yet have been formalized. On early uses of *misthos* see Scheid-Tissinier 1994, 263–7; Bravo 1993; Van Wees 2013a, 23–8. The notion of interest on loans was probably also not yet formulated (the term *tokos* suggests an origin in herding arrangements).

was not in the interest of the creditors, who wanted both to claim that the obligation was perpetual and the land was theirs, and to penalize ‘tenants’ who failed to establish viable farms by selling them into slavery.

On this interpretation, the crisis would have been caused by a combination of population growth with interest on the part of the elite in intensified production for trade, especially of oil and wine. Marginal land, which had hitherto become the property of the man who cleared it, would have become subject to new arrangements, about which only vague traditions survived later, partly because their institutionalization had been aborted by Solon’s reforms, but also because they had been deliberately left ill-defined.⁴⁰

Such a view might explain the tradition that Solon had restricted the size of land holdings (Aristotle *Politics* 1266b 14–18), on the assumption that the restriction only applied to newly cleared land; however, this tradition may be based only on philosophical speculation. A more interesting possibility is reinterpretation of Solon’s ‘law against idleness’, the *nomos argias*. It was already suggested by Wilamowitz (1893 I, 255) that *argia* here should be given its primary meaning, ‘uncultivated land’; this suggestion was argued in more detail by Dreizehnter 1978. However, Wilamowitz associated the law with the procedure for *paranoia*, by which an insane head of household could be deprived of control of his estate (the *argia* procedure would be used against a farmer who failed to support his family), while Dreizehnter (following Theophrastos) attributed the law to Peisistratos and saw it as part of the characteristic tyrant policy of discouraging migration to the city. I suggest that the aim of the law was to penalize men who appropriated tracts of uncultivated land, marking them with horoi, and then failed to cultivate.⁴¹

Solon, then, on this interpretation, gained public support for acting in a situation in which wealthy men were extending their holdings, marking newly or controversially appropriated land with horoi, helping or employing landless men

⁴⁰ On trade in wine and oil see Pratt 2015. The extent of cultivation and the size of the population in Attika at this period are disputed. Foxhall 1997 argues that there could have been no shortage of land; but ‘shortage’ is always a question of perceptions; the survey data for Attika are problematic (cf. ch. 10 at nn. 36–50), and the dearth of ‘luxury’ finds from the countryside in the 7th c. may be due to a greater concentration of display in the city (Ampolo 1996). Even an exploitation of eschatiai by the rich that left very modest archaeological traces might have produced intense resentment. The 7th c. was the period of most intense use of Attic peak sanctuaries (Langdon 1976; cf. Ismard 2010, 63–6); this may be mainly related to upper-class patterns of hunting, but these may have been affected by an expansion of agriculture. The theory of L’Homme-Wéry 1996 (following Van Effenterre), that the horoi marked land in the Eleusinian plain recently recovered from Megara, is not well supported by evidence (cf. Clinton 2001).

⁴¹ Note also the association of well-farmed land with responsible citizenship in Hdt. 5. 28–9. Todd 1993, s.v., suggests that the law targeted men who did not work their land (cf. Schmitz 2004, 190–202; Gallo’s attempt to link *argia* to clientship, 1994, is implausible). The MS text of Bekker’s rhetorical lexicon (1814. I, 310. 1–5) gives *epidikasia* as the procedure for *paranoia*, *argia*, and claims for epikleroi; if correct, this information might confirm that land was in question.

to bring it into cultivation in return for sharecropping payments, and (perhaps) getting rid of those who failed to establish viable farms by selling them as slaves. These activities, if their scale was increased, might well be classified as ‘greed’ and as ‘enslaving’ the land and the employees, the terms we find in Solon’s poems. We need not assume that sale into slavery was widespread; Solon admits that he mobilized (*xynégagon*) the *dêmos*, presumably by using his poems, and we should accept that he was capable of exaggeration.⁴²

Solon was probably elected for the year 594/3⁴³ to the most powerful position in Athens, the eponymous archonship, on the reputation of his poems. He had called on his fellow-Athenians to fight for control of the island of Salamis (F 1–3 West), and he may already have recited poems criticizing the greed (*koros*) of the rich (F 4 West, especially 4c). As archon he perhaps already had implicit legislative powers in his hands. The archon proclaimed, when he took office, that he would respect the current distribution of property (*A.P.* 56. 2); this parallels the proclamation of cancellation of public debts by Spartan and Persian kings at their succession (Herodotus 6. 59),⁴⁴ and the early Athenian provisions ensuring that lawsuits did not run on from the tenure of one magistrate to that of his successor.⁴⁵ The notion of office was not yet strongly elaborated; the incoming office-

⁴² F. 36. 1–2 (cf. R. G. Osborne 1996, 219). If Solon carried out his reforms as archon (see below), this passage should refer to his election campaign and not to summoning the Assembly, which was part of the archon’s regular duties. Welwei 1992 and Van Wees 1999 emphasize the absence of other evidence for debt slavery (e.g. in Hesiod). It remains unclear how ‘just’ and ‘unjust’ sale (F. 36. 12–13) were differentiated.

⁴³ Arguments for dating Solon’s legislation in the 570s, well after his archonship, depended on the chronological implications of Herodotus’ stories about his travels (Hignett 1952, 316–21) and on the dating of Athenian coinage (on the theory of a legislative commission in 592/1 see P. J. Rhodes 1981*a*, 120–2; on coinage, G. Davis 2012, 2014).

⁴⁴ See Briant 1996, 538–40, 588, 608–9 on the Persian kingship; Hdt. 6. 59 on Xerxes’ remission of tribute debts. Similar proclamations at the beginning of a period of office (or a religious cycle, as in the case of the Jewish sabbatical year) take on various connotations in different societies, orientated towards the relation between predecessor and successor in office or presented as an act of grace by the latter. I am not interpreting these institutions as survivals of age-old tradition, but as a spectrum of innovative attempts at rationalizing succession to office in conditions of insecurity. Cf. the Persian rationalization of the King’s arbitrary power to grant gifts and favours by representing these as a reward for benefactions—evaluation of which remained a royal prerogative (Briant, 315–37). The Greek belief that treaties with a Persian king had to be renewed with his successor (Hdt. 7. 151; cf. Badian 1993) may have been influenced by Greek perceptions of the Persian monarchy as arbitrary despotism. Treaties between Greek cities were made ‘forever’ (M/L 10) or for a fixed number of years (M/L 17, *Staatsverträge* 111; Knoepfler 1995*b*).

⁴⁵ The archon did not accept *epidikasiai* for *klêroi* and *epiklêroi* in his last month of office ([Dem.] 46. 22), presumably because the applications had to be announced in the Assembly, which will not have met more than once a month at this date (*A.P.* 43. 4; the archon’s responsibilities in this field may derive from his presidency of the Assembly). The *archon basileus* did not accept charges of homicide during his last two months of office, because he had to conduct three *prodikasiai* at monthly intervals in the *agora* before passing a case to the *ephetai* for trial (Antiphon 6. 38–42; above, n. 25). These rules may have been formalized in post-Solonian times, but they precede Kleisthenes’ new civic calendar and reflect early attitudes. It has been suggested that the archon’s undertaking to respect property may also be post-Solonian

holder had to make it clear that he was not accepting responsibility for any delinquencies of his predecessor (failure to collect fines, dues, etc.), but also that he would not allow disappointed litigants to reopen cases. The eponymous archon, through his position as president of the Assembly and control over its herald, had become responsible for disputes concerning inheritance and epikleroi (heiresses), and thence might well have come to deal with other disputes over property. Solon, as archon, was thus in a position not only to proclaim that he would not collect debts to the state incurred under his predecessors, but also to lay down the conditions under which he was prepared to recognize private claims; i.e., he could make a proclamation similar to that out of which the praetor's edict developed, later, in Rome.⁴⁶ The references to his own period of office (*archê*) in his amnesty law (Plutarch *Solon* 19. 4) and in his law on testamentary dispositions ([Demosthenes] 46. 14) can also be directly related to the archon's powers. Solon was announcing that as archon he would (with some exceptions) respect the rights of men who had been treated as *atimoi*—i.e., he would admit them to the Assembly and allow them to take part in legal proceedings⁴⁷—

(see P. J. Rhodes 1981*a*, 622); it seems however to be separate from, and in my view earlier than, the general oath sworn by all nine archons that they would obey the laws, which the Athenians not unreasonably associated with Solon (*A.P.* 7. 1). (In Mycenaean society public debts were carried over from one year to the next: Killen 1984.)

⁴⁶ Cf. Wilamowitz 1893 II, 62 n. 35, though the parallel with the praetor's edict is used there in a more restricted sense. Even in the classical period the *traditio* of debts from one board of magistrates to another was strictly regulated; if Solon as incoming archon was faced with unpaid debts to the state, he had to state publicly whether he intended to collect them or not. On the development of the praetor's edict see J. M. Kelly 1966, A. Watson 1970, Kaser 1984, Selb 1986. Kaser, in a stimulating comparison of early Roman and Greek law, notes (1) that in Rome private law is made by praetors, in Greece by lawgivers; (2) Greek legislation is more systematic in character, Roman law more openly context-related (political); (3) in Rome *iurisconsulti* provide continuity from one term of office to the next; Greek *mnêmones* (and perhaps Athenian thesmothetai and, later, paredroi) remember decisions in individual cases but do not develop legal expertise. However, we do not really know how Cretan enthusiasm for written law arose; J. K. Davies 1996*b* suggests that boards of *kosmoi* may have developed a quasi-praetorian tradition of legislation. The relation between the Roman praetor's instructions to *iudices* and the Athenian *anakrisis* might also be explored; note Thür's view that early Greek magistrates instructed courts on the conduct of hearings (1987, 1989, 1990; cf. Humphreys 1991, n. 15). If the Roman magisterial edict developed from powers of regulating public occasions (markets, festivals, etc.), leading to the issue of edicts and interdicts and thence, via procedural rulings, eventually (in the 2nd c. BCE) to substantive law, this would supply a further contrast with Greece, where the place of the edict was taken by assembly decrees.

⁴⁷ *Atimia* in my view was complete loss of honour and respect rather than outlawry: see above n. 9. What was involved in making men who had suffered it *epitimoi* again may not have been thought out in concrete detail, but the proclamation implied a concept of a sphere of public interaction for which Solon and his fellow-magistrates were responsible. It is quite possible that magistrates had been appropriating *atimia*, originally an informal community sanction, and imposing it by judicial sentence; it would be the victims of such sentences who were to benefit from Solon's amnesty.

and was specifying the conditions to be met in claims for *kleroi* and *epikleroi*.⁴⁸

Thus Solon's cancellation of debts and uprooting of *horoi* may have been his first act in office, taking the form of the customary undertaking to respect existing property rights, with additional explicit assurances that he would not enforce payment of any debts incurred under his predecessors, that the sharecropping obligations of the *hektemoroi* were covered by this cancellation of debts, and that he considered the land worked by the *hektemoroi* to be their property. The archon's proclamation, which was probably regarded by rich landowners as a safeguard against redistribution of land (De Sanctis 1898, 122) was used to settle a class struggle over rights to land by categorizing it as a question of debt. Removal of markers from the land under dispute was described by Solon (F 36. 3–7) as 'freeing' the land, rather than redistributing it.⁴⁹ There is a fairly strong tradition in the sources that the cancellation of debts was Solon's first act, and I suggest that he did it by making use of the archon's traditional proclamation on entry into office; the proclamation, made in the Assembly, would have been greeted with acclamation by supporters, and in this way ratified by the *demos*.⁵⁰

⁴⁸ I am not suggesting that either the amnesty or the law on wills was part of the archon's proclamation, but that the reference to his term of office in them must be taken as referring to the archonship (the fact that *archein* can be used in a rather general way of military commands does not justify the extension of the term to lawgivers at this early date), and that the dating was especially appropriate in these texts because they dealt with matters for which the archon was traditionally responsible. One might have expected the amnesty to figure as an early measure, but Plut. *Sol.* 19. 4 says that the thirteenth axon 'has it as the eighth of the laws'; the Greek is ambiguous here (I am grateful to Nigel Wilson for consultation on this point), but should be taken to mean that this was the eighth of the laws on that axon (cf. Ruschenbusch 1966, 25). The 409/8 copy of Drakon's first axon (*IG* i³ 104. 11–55) contained 2250 letters. Demosthenes 23 quotes short passages from it as separate 'laws'. Although he probably had no authority for the division (i³ 104 is not divided into 'laws', the cutter was instructed to copy 'the' law of Drakon, and to judge from i³ 1 any punctuation in the original text would have occurred within as well as between sentences), this analogy suggests that Plutarch's source (the Aristotelian work on Solon's axones?) would have divided up the text of each axon into a number of laws rather than thinking of a single law as covering more than one axon. On this basis, if each change of topic was taken as a new law, a single axon might have held as many as 20 laws. On the availability of Solon's axones in the 4th c. see Stroud 1993; Polemon saw them in the early 2nd c. (F 87 Preller 1838), and Plutarch saw fragments in the imperial period (*Solon* 25. 1–2). The highest axon number quoted is 21 (Harp. *hoti hoi poiêtoi*; see n. 128 below). See now Leão and Rhodes 2015.

⁴⁹ Connor 1987, 49 suggests a ceremonial destruction (uprooting?) of the *horoi*, which might have been a good way of restraining the *demos*.

⁵⁰ If the *Seisachtheia* was enacted through the archon's proclamation, would it have been inscribed on an axon? Harpokration s.v. *sitos* says that the term appeared on Solon's first axon; he explains it as denoting maintenance payments due to orphans (and their mothers, [Dem.] 46. 20) and to women separated from their dowries, but this explanation relates to Demosthenes' use of the term in his case against his guardians. If the *seisachtheia* did figure on the first axon, one might imagine that *sitos* payments were exempted from the cancellation of debts, or postulate a connection with the prohibition of food exports other than olive oil (on which see n. 60 below).

Measures would have been taken at an early date after the cancellation of debts to ensure that genuine Athenians who had been sold into slavery or had fled abroad were reintegrated into the community without controversy, but that news of the cancellation did not encourage landless men from elsewhere to present themselves as returning Athenians.⁵¹ Solon's law permitting the incorporation into the body of Athenians of men in permanent exile from their city of origin and craftsmen who came with their families may belong in this context.⁵² As archon, he could guarantee the main civic rights of the period: entry to Assembly meetings, legal capacity in cases heard by him. However, the permanent immigrant would also need to be accepted by the phratry among whose members he lived, in order to take part in local sacrifices and celebrate rites de passage for his family.

It was, in my view, Solon who formally integrated phratry membership into the developing conception of citizenship; but the question is controversial. Philochoros, in a fragment once attributed to the fourth book of his history of Attika, which perhaps covered the period from 461–403, quoted a law that 'Phratries must accept as members not only *orgeônes* but also *homogalaktes*', and glossed the latter term as equivalent to *gennêtai*. Andrewes (1961), on the basis of this apparent Philochoran date, suggested that the law was associated with Perikles' restriction in 451 of citizenship to those born of two Athenian parents, and that it exempted two types of privileged phratry subgroup from scrutiny by the phratry as a whole. However, the book number is uncertain, and such an exemption would be surprising in the context of Perikles' law;⁵³ moreover, the term *homogalaktes* seems too archaic for the mid-fifth century.⁵⁴ It is also far from clear that phratry subgroups would have had their own procedures for admission in 451. Even in the fourth century the procedure in many phratries was probably that the father or other sponsor of the candidate led the *koureion* lamb to the altar and took an

⁵¹ The remark on dialect in F 36. 14–15 West indicates a generous policy (cf. Dem. 57. 18 for problems in the reintegration of men enslaved as prisoners in the Peloponnesian War, again with reference to 'foreign accents'). We cannot tell how the ransoming (if any) of slaves was negotiated; I imagine a number just ran away from their masters.

⁵² The law (Plut. *Sol.* 24) cannot be later than Kleisthenes. Exiles would presumably be sponsored by upper-class allies in Athens; this might speak against a date in the period of tyranny, and in any case tyrants perhaps would not secure the status of their hangers-on by law.

⁵³ See ch. 19 n. 3. Bourriot 1976, 600–3 provides a history of interpretations. Ogden 1996 takes the law to be pre-Periklean but thinks that it defends the right of *genê* to accept *mêtroxenoi* (children of foreign mothers), which was being questioned by commoners. This seems to me improbable; it is also most unlikely that (as Ogden claims) Philochoros' gloss covers both *orgeônes* and *homogalaktes*, since *orgeônes* existed in his day (*IG* ii² 1259, 1284).

⁵⁴ The prefix *homo-* seems more productive in terms for social groups in the early period than later: see LSJ s.v. *homêlix*, *homestios*, *homogastrios*, *homoerkês*, *homokapoi*, *homoklêros*, *homosipuos*, *homosporos*. One could I suppose claim that an archaic term had been retained as part of phratry terminology, and that it had only been replaced by *gennêtai* in the fourth century (cf. Bourriot 1976). Ismard 2010, 104–6, attributes this regulation to Kleisthenes, with little justification.

oath: if there were no objections, the lamb was sacrificed and this constituted admission. Separate admission procedures would require separate altars, and we know in one case that phratry and *genos* shared altars.⁵⁵

In normal phratry procedure, what needed regulating was not the possibility that a candidate whose victim had been sacrificed would somehow be rejected by a later vote, but the procedure of appeal for a candidate whose victim was rejected. It seems to me that looking at the law in early sixth-century terms, and seeing it in connection with Solon's repatriation exercise, provides an easier reading. *Orgeónes*, at this period, was probably used as a general term for any cult-sharing group;⁵⁶ an *orgeon* would be a person who regularly attended phratry sacrifices. *Homogalaktes*, on the other hand, seems to denote fellow-members of a household.⁵⁷ Solon's law, then, would direct phratries not only to accept those returning Athenians who were vouched for by members as having attended phratry sacrifices in the past, but also to accept candidates known to members and their kin as having belonged to members' households.⁵⁸

RESTRAINING THE RICH

Since we have Solon's own testimony that he blamed the greed of the rich for the crisis, we may move from the cancellation of debts to other measures directed

⁵⁵ Aisch. 2. 147; the plural 'altars' here probably refers to different deities rather than phratry subgroups, though there is a possible case of subgroup altars in Thasos. On phratry admission procedures, the influence of demes, and the new tightening-up in the phratry *Demotionidai* after the Peloponnesian War see ch. 19.

⁵⁶ Cf. *orgeónas* in *H. Ap.* 389; Attic *orgeónes* probably from **orgeónes*, by metathesis. While there are difficulties in relating the two forms to each other (and to *orgia*; see Chantraine 1933, 159–65), they can hardly be separated semantically. *Hierón orgiôn* [*synthytai*] may appear as one of the types of group whose decisions are legitimized in Solon's law on associations (*Digest* 47. 22. 4), though unfortunately the text is corrupt: the best solution is either to change *é nautai* into *synthytai* (Guarducci 1935) or to change the order in the list of types of association to: *dēmos é phratores é hierón orgiôn synsítōi é homotaphoi é thiasôtai é nautai épi leian oichomenoi é eis emporian*. N. F. Jones 1999, 311–20, with discussion of earlier emendations, suggests changing *nautai* to *naukrariai* (chs. 19 n. 3; 22 n. 11). Ismard 2010, 44–57 accepts the MS reading without noting its syntactical problem (*hierón orgeón*). J. K. Davies 1996a, 635 suspects some editing in the 5th c. or later. Seleukos (*FGH* 341 F 1) quoted the term *orgeónes* as appearing on Solon's axones. See also W. S. Ferguson 1944; S. D. Lambert 1993, 250–1.

⁵⁷ Ar. *Pol.* 1252 b 12–18, tracing a process of evolution from the household (*homosipuoí*, meat-sharing; *homokápoi* or *homokapnoi*, garden- or hearth-sharers) to the village community derived from the extended family, uses *homogalaktes* for the latter, indicating that it implies shared descent. This passage may be the basis for Philochoros' gloss (it is not at all obvious how he would have interpreted the law). *Homosepuoi* appear in the new sacred law from Selinus (A 3, Jameson a.o. 1993, 20; *SEG* 43. 630), but the context is lost. On *sipuis* see Triantaphyllopoulos 1974, 335.

⁵⁸ On *kai* ... *kai* see ch. 19 n. 3. Cf. perhaps *Iliad* 22. 491–8 for the exclusion from a meat-sharing group of an orphan whose father is no longer among the adults present.

towards controlling the acquisition and display of wealth. There was henceforth to be no slavery for debt.⁵⁹ Food, apart from olive oil, was not to be exported.⁶⁰ Conspicuous displays of wealth and power at weddings and funerals were forbidden. The *phernê* (trousseau) brought by a bride to her husband's home was not to consist of more than three robes and a modest amount of jewellery.⁶¹ Similar restrictions were placed on grave-goods and funerals. The dead were to be laid out within the *oikos* only, for one day after death. Funeral processions were to take place in the small hours of the morning, before dawn; women under sixty who were not kin might not take part in them, women were not to wail or lacerate themselves; funerary rites were not to include commemorative visits to the tombs of kin and ancestors; sacrifice of cattle at the graveside was forbidden. Visits to the tombs of non-kin, except on the occasion of a funeral, were also banned; powerful men were prevented from inviting a crowd of allies and dependants to take part in commemorative rites.⁶²

⁵⁹ A father could still sell a daughter who had lost her honour and could not be given in marriage: see below, n. 137, on *moicheia*; Sissa 1987, 110–16. E. M. Harris 2002 argues, questionably, that ‘debt-bondage’ continued.

⁶⁰ Plut. *Sol.* 24. 1. The penalty was to be cursed by the archon (cf. the curse on those who prevent imports of food at Teos, M/L 30. 6–12) and a fine of 100 dr. (as for *argia*). The crisis may have been exacerbated by a run of bad harvests and export by the rich of surplus grain to the islands. Cf. Jameson 1983, 11–12; Bravo 1983 on early trade in grain. Descat 1993 argues that Solon insisted on sale in Athenian markets rather than forbidding export entirely (cf. Dem. 57. 31). The measure may still have been prompted by a period of acute shortages.

⁶¹ The question whether Solon also banned dowries in land or precious metals is discussed below at nn. 120–2. Wedding processions take place at night, by torchlight, already in *Il.* 18. 491–6 (cf. Sissa 1987, 120 ff.). The London *Times* 21.1.91 p. 10 reported plans in India to pass ‘Guest control laws’ restricting the number of guests and expenditure on food at ‘crudely boastful’ weddings (held in marquees erected in public spaces); the worst offenders are the ‘New Maharajas’, and the wealth is categorized as ‘ill-gotten’. Cf. Theognis on marrying for money; important discussion of the trousseau in 18th–20th c. Greece, Sant Cassia and Bada 1992, 98–137.

⁶² [Dem.] 43. 62; Plut. *Sol.* 21. 6; Cic. *de Leg.* 2. 23/59; cf. Humphreys 1983a/1993, 85–7; Blok 2006; Engels 1998 for a general discussion of sumptuary restrictions on funerals; Frisone 2000. *Il.* 24. 707–14 describes the *prothesis* in public of Hector's corpse; we can imagine similar situations when Athenian dead of leading families were brought back from the battlefield. Women had to be *entos anepsiadôn* ([Dem.] 43. 62), to be taken as a synonym of *mechri anepsiôn paidôn*, as far as second cousins (cf. n. 20 above; the fact that the orator glosses the phrase in § 63 with *entos anepsiotêtos* is not a reason for changing the text in § 62). This rule excluded female affines; the funerary law of the Labyadae at Delphi (*CID* 1, no. 9; Jacquemin a. o. 2012 no. 30; R/O no. 1; ch. 10 at nn. 13–14) allows affines to participate but excludes matrikin. On the Sappho painter's funerary plaque representing a *prothesis* see ch. 10 n. 15. Commemorative visits to tombs were probably largely confined to those of well-known persons and to a relatively short period after their death. It is unlikely that before Solon the *Genesia* were celebrated by each family on its own date, as suggested by Jacoby 1944b: see Humphreys 1983a/1993, 87–8; Georgoudi 1988a. At the *Genesia* the city sacrificed to Gê (Hsch. s.v. *Genesia*) and, if Dow's reading of *IG* ii² 1357a is correct, to Erechtheus (Mikalson 1975, 49). These may well have appeared as traditional sacrifices in Solon's calendar, from which *FGH* 328 F 168 presumably derives (cf. below, n. 133).

These laws seem to be directed at conspicuous displays of wealth in public. To send a daughter to her new home or a member of the family to the grave accompanied by large quantities of richly decorated cloth, especially imported cloth (Van Wees 2005), demonstrated a man's confidence that he could part with stored treasure without decreasing the power of his *oikos*. In addition, such displays were probably occasions for leading families to receive contributions from their allies and hangers-on; they created a disturbance in the city, and drew crowds. They may have been particularly resented by old aristocratic families who were no longer able to compete with the super-rich.⁶³

In the case of funerals, Solon's law followed a period of change and experiment in funerary ritual, in which no doubt conceptions of death and of the presentation of self in public spaces were interrelated in complex ways. The public expression of passionate grief, which if we can trust Homer had once been shared by men and women, came to be left to women (cf. Cordano 1980 on the stylization of mourning gestures). Cremation in the grave had replaced the use of a separate pyre from which the bones were collected and subsequently interred. In the late eighth century there had been a shift from the use of large vases as grave markers to the display and subsequent burning, at the funeral, of symposium vases and, probably, textiles in offering-trenches (*Opferrinne*) near the grave (ch. 10 n. 101); by Solon's day this custom seems to have been on the decline in the city area, though not yet in rural Attika. The first Athenian use of the marble kouros statue as a grave marker must closely have followed Solon's reforms, if it did not antedate them.

This experimentation was no doubt related to competition within the elite, in which (I assume) public processions at weddings and funerals played a conspicuous role.⁶⁴ However, it will have been accompanied by speculation and discussion about the needs of the dead, the afterlife, etc.; this situation of interest, experiment, and discussion may have favoured the emergence into greater prominence of ideas that had hitherto played only a minor role in funerary practice, such as

⁶³ Solon specified that the dead were not to be buried with more than three *himatia* (Plut. *Sol.* 21). For textiles as wealth cf. *Od.* 8. 392; Eur. *Ion* 1158–66. Trade in the archaic period: Van Wees 2013a. Seaford 1994 thinks that mobilization of kin for funerals and public expressions of grief were seen as a threat to civic *homonoia*. This view, though not entirely to be rejected, rests on a very uncritical use of anthropological texts of widely different dates, and is still influenced by the Fustelian model of evolution from kin group to polis. A better treatment in Toher 1991.

⁶⁴ Hdt.'s account (6. 58) of the funerals of Spartan kings—who monopolized this type of display—represents the archaic aristocrat's ideal. Note that before Solon not only men but also women who were not kin might attend (the question of the grouping of tombs according to kinship, discussed in chs. 10–11, is quite separate from that of participation in funerals). There will also have been processions at religious festivals, at which sacrificial victims were provided by holders of *genos* priesthoods or of elected office, and presumably when victors came home from panhellenic games. Symposia were also an occasion for lavish expenditure (Kistler 1998), but were less public, though on occasion they might end in informal processions (*kômoi*) of drunken revellers (O. Murray 1990a).

the belief that contact with the dead was polluting.⁶⁵ Christiane Sourvinou-Inwood's arguments for a reconfiguration of funerary practices and beliefs, which resulted in greater distance between the living and the physical remains of the dead, would fit into this context.⁶⁶

These measures may thus have had some appeal even to the class against which they were directed. Escalation in conspicuous consumption may be a problem even for the consumers; by imposing sumptuary laws on its richest and most powerful citizens a community may produce a striking image of social control without seriously threatening the bases of the power and wealth of the ruling class. Though the Athenian elite were not asked to go as far as the Spartan elite in committing themselves to equality in consumption (*homoiotês*), the sumptuary laws demonstrated that the upper class (*agathoi*) as well as the poor and delinquent (*kakoi*) were subject to law.⁶⁷

STATUS AND OFFICE

Though the rich must have been indignant at the cancellation of debts and the loss of their claims to land worked by the hektemoroi, Solon's most controversial measure may have been his redefinition of rights to stand for office in terms of wealth. The principle that an office-holder had to have resources to support his position was of course neither new nor disputed. The state's revenues were still very small, and though many religious festivals were funded by genê it would be the archon's responsibility to see that victims were available for the sacrifices that preceded Assembly meetings, the polemarch's responsibility to provide for sacrifices on campaign, and so forth. Even the terms used for three of Solon's classes, *hippeis*, *zeugitai*, and *thêtes*, were not new.⁶⁸ What Solon introduced was the idea

⁶⁵ Cordano 1980; Parker 1983; Frisone 1994; Humphreys 1991 on the role of this belief in the development of homicide law after Drakon; ch. 10 n. 7. It is likely enough that funerals and mourning had always been followed by purification rites, marking a return to normal life, but such rites do not necessarily imply any cultural elaboration of the notion of pollution.

⁶⁶ Sourvinou-Inwood 1981, 1983; cf. 1995, 413–44. She also adduces the shift away from intramural burial.

⁶⁷ Solon F 36. 18–20 West. On Sparta see Redfield 1978; on sumptuary laws generally, Ampolo 1984a, 1984b. For resentment of nouveaux riches cf. Theognis 28–32, 53–8, 149–50, 183–92, 661–6; Van Wees 2000b. For shifts to other forms of conspicuous consumption (funerary monuments, dedications) cf. chs. 9–12.

⁶⁸ It is possible that *pentakosiomedimnoi* was also a pre-existing term for the very rich (cf. 'millionaire'), and that the correlative measures of wealth for *hippeis* and *zeugitai* (hoplites rather than possessors of plough-oxen? Whitehead 1981, but see Van Wees 2006a, 2013b), were calculated by some later historian (cf. P. J. Rhodes 2006; ch. 20 n. 43 on Duploux 2014). In any case, Solon did not carry out a 'census'; people knew their place. Connor 1987 suggests that they brought offerings to a festival of a quantity appropriate to their class; this is not impossible, for the annual Panathenaia or the Eleusinia, but may be

that a change in wealth implied a change in social rank, and, with this innovation, a formal distinction between the average *hippeus* (knight), capable of supporting a horse and allegedly producing 300 measures of crops per year, and an inner elite, the *pentakosiomedimnoi*, who produced almost twice as much, 500 measures per year. *Tamiai*, treasurers, were to be appointed by lot from the members of this top class, and possibly the three major archonships were also initially reserved for them.⁶⁹ Previously the line of discrimination among the wealthier members of the community had distinguished members of priesthood-holding *genê* from commoners; now it was to be used to encourage the richest Athenians, both noble and non-noble, to use their wealth for the common good. Poor descendants of once elite families would be bitter. The status of new families whose sources of wealth were non-agricultural was at least unclear, if not unchanged. The reform produced conflict: in 590/89 and 586/5 elections had to be cancelled; in 579/8, after thirty months of continuous tenure of the eponymous archonship by Damasias, a temporary compromise produced a board of ten archons: five from the old Eupatrid families, three from the new landowning rich based outside Athens (*agroikoi*), and two *dêmiourgoi*, probably urban specialists who were becoming increasingly independent of landed patrons.⁷⁰ Opposition

unnecessary. However, the role of forms of taxation in the early polis has probably been underestimated (Fehr 1996a; Faraguna 1999a; Van Wees 2013a), and a physical demonstration in procession of the numerical weakness of the *pentakosiomedimnoi* and strength of the *zeugitai* might have encouraged moderation, by suggesting that most citizens were neither outrageously wealthy nor destitute. *Thês* was a derogatory term (cf. Chantraine 1933; other nouns formed in the same way are *penês*, *chernês*, *goês*, *planês*, *herpês*), and in principle referred to a temporary situation rather than a permanent status (n. 37 above); a man might own some land and supplement his income from farming by taking on periodic contracts as a *thês* (cf. Foxhall 1997, who also calculates the number of persons that a household at each of the higher census levels could support; Bravo 1993. However, I do not think the term originally covered slaves as well as hired hands.) It is unlikely that Solon used the term *thêtes* in assigning rights and responsibilities, though he recognized them as *epitimoi*.

⁶⁹ On Solon's *pentakosiomedimnoi* see also Moreno 2007, 104–12 (with the criticisms in Magnetto, Erdas, and Carusi (eds), 2010, 96 n. 74). Dem. Phal.'s opinion carries little weight (Hignett 1952, 101–2), but I doubt if Solon would have formalized the distinction between *pentakosiomedimnoi* and *hippeis* merely to ensure that treasurers had adequate resources. Those who accept the statement of *A.P.* 8. 2 that Solon introduced *klêrôsis ek prokritôn* for the nine archonships, but assume that elections were resumed after a short period (P. J. Rhodes 1981a, 146–50; *AO* 2) might improve their case by holding that Solon restricted the archonships to *pentakosiomedimnoi* and that popular elections were restored (or introduced) when *hippeis* were allowed to compete. Excluding *hippeis* (and *zeugitai*?) for a lengthy period (until 487/6 for Welwei 1992, 185) might be demographically problematic. I do not think we have solid evidence for any method of appointment other than popular election before 487; the use of the lot to select treasurers of sacred property (*A.P.* 8. 2) does not prove that it was also used for the archonship. In any case the development of regional factions between Solon's reforms and Peisistratos' first bid for tyranny (Hdt. 1. 59. 3; *A.P.* 13. 3–4; P. J. Rhodes 1981a, 184–8) indicates a search for electoral support. Though the introduction of *klêrôsis* in 487 may not have produced results immediately visible to us (Badian 1971), it fits with the adoption of ostracism at the same date as a form of election in reverse.

⁷⁰ *A.P.* 13. 1–2; P. J. Rhodes 1981a, 182–4. Damasias may have been a peacemaker rather than a would-be tyrant. There seems to be a trend away from belief in a formal 'order' of Eupatridai (Welwei

was developing along several different lines of cleavage: between Eupatridai and commoners, between landowners and those who lived by ritual or secular expertise, and between families with a base in the city and the local squirearchy.⁷¹ The third opposition proved to be the most serious. The resentment of poorer Eupatrid families excluded from power faded with time, and many of them may have been mollified, probably soon after these troubles, by the extension of the right to hold the main offices to *hippeis*; the demoiourgoi could be accommodated, if Solon had defined census qualifications on the basis of revenue in kind, by prescribing a monetary equivalent; but regional conflict persisted until Peisistratus' tyranny was solidly established in the 540s, and threatened to re-emerge after the expulsion of his son Hippias.

LAWS FOR ALL CLASSES

By the time he had taken the steps that seemed to him needed to avert open conflict, the poet was on the way to becoming a lawgiver. He was still, in my view, basing his measures on his understanding of the causes of the crisis and on the traditional responsibilities of the archon, but his time scale changed: he began to legislate more as a writer, addressing unborn generations, and less as an

1992, 108–9; Bravo 1996a; ch. 20 n. 43), but use of the term in the Leipsydion skolion shows that it was current in the 6th c. *Agroikos* may not yet have had strong pejorative connotations, but it would imply a family without a city residence and thus without a tradition of regular participation in public affairs. *Demiourgoi* would include heralds, seers, poets, and doctors as well as craftsmen (*Od.* 17. 382–7); they had always had a share in the social life of the upper class and those who succeeded in establishing financial independence would expect to be treated as political equals, a demand the landed aristocracy may have been reluctant to satisfy. I assume the information on this board came from a list of archons (a dedication is not a very likely alternative) and thus referred to the eponymous archonship (but see Gernet 1938 for the difficulties of this view). Thasos had an archon list cut in the 360s (Pouilloux 1954a, nos. 28–33; Salviat 1984; *SEG* 33. 702) which began in the second quarter of the 6th c., if not earlier, included information on months of *anarchia*, and preserved punctuation characteristic of the late 5th c. (Pouilloux 1954a, p. 123). Miletos' list of *aisymnêtai*, cut in 335/4, began in 525/4 (Sherk 1990, 250–6). A reconstruction at Athens of the list of early archons (from 683/2) in the late 6th or early 5th c. (possibly stimulated by Kleisthenes' introduction of the system of 42 named age-classes, which began a new cycle when the class enrolled in the demes at 18 in year 1 reached the age of 60: see Humphreys 1983b) does not seem impossible, and at that date some memories of troubles in the 580s could have been preserved.

⁷¹ Cf. the emphasis in A. D. Momigliano 1967 on the multiplicity of opposed categories in early Rome (ch. 18 n. 106). Note also the variable categories used in early references to citizenship: *Athenaioi* in Drakon's law (*IG* i³ 104. 28), *astos/xenos* in i³ 1194 *bis*, *epitimos/atimos*, etc. An interpretation of *Eupatridai*, *agroikoi*, and *demiourgoi* in terms of 6th-c. labels for sections of the elite seems to me more probable than a late 5th-c. reconstruction in which rights to office were claimed by peasants and artisans (Gernet 1938: see P. J. Rhodes 1981a, 182–4. Rhodes' own, implausibly complicated solution depends on the attribution of *klérōsis ek prokritōn* to Solon, on which see n. 69 above, and Welwei 1992, 112 ff.).

archon addressing the Assembly. Legislation may have become a somewhat addictive activity both for the lawgiver and for the Assembly.⁷²

His proclamation (F 36. 19–21W) that he had established laws for both *kakoi* and *agathoi* alike had several nuances. The rich and powerful, the *agathoi*, had been subjected to public control of their behaviour; it was no longer only the *kakoi* who was the target of legal regulations (though we have no idea how breach of the sumptuary laws was to be handled—*endeixis*?—and may doubt whether any prosecutions were ever made). The non-nobles, *kakoi* from the Eupatrid point of view, had been given rights to office; even thetes were assured of a place in the assembly. But as lawgiver Solon was faced by a more deep-seated, though less immediately controversial problem: the norms governing behaviour in and relations between the *oikoi* of the powerful and between those of the peasant farmers were not always the same. This could not be openly recognized; the legitimacy of the rulings formulated by the elite when settling disputes between members of the *demos* had always depended on a concept of universally valid law, backed by divine authority, and Solon's own conception of law was a rationalistic one.⁷³ But in order to arrive at a unitary system of rules he had to make choices and compromises.

Although Solon does not mention it in his poems, there seem to be solid reasons for thinking that problems of peasant debt were associated in archaic Greek thought not only with extortionate profit making by the rich but also with the reduction of peasant holdings to a non-viable size by the subdivision of land between sons. Hesiod advises his brother and his audience not only to work hard so that they may be able to acquire more land rather than losing what they have, but also to restrict the family to a single son.⁷⁴ The transfer of the model of division of booty to the division of newly conquered land, both in colonial settlements and in Messenia after the Spartan conquest, had provided a powerful model of the ideal society, as one in which every household owned the same amount of

⁷² Welwei 1992 and Raaflaub 1996 also think in terms of crisis-solving and 'flanking measures', but do not go as far as I do in treating Solon's legislation as context-orientated.

⁷³ Although current opinion is against attributing any regulation or even introduction of coinage to Solon (see now G. Davis 2012, 2014; Van Wees 2013*a*), quantification clearly plays an important role in his laws. It remains possible that he established uniformity in weights and measures, which would be needed if there was any metric content to his 'census law' (Kim 2001; above, n. 68). In systems of weights and measures that have not been centrally regulated, while there is widespread uniformity in the relations between units, there is often local variation in the content of each unit, consonant with variation in the productivity of land (Baxandall 1972; Mira-Smith 1985, 73–101; Ilievski 1987). The tradition that Solon introduced 'lighter' measures might suggest that he based his system on the quantities in use on marginal land (*eschatai*) rather than those used in the plains. See Descat 1990, 1993 for other suggestions.

⁷⁴ The man who lives to old age and sees a further son added to the workforce (*WD* 376–8) is a grandfather (Humphreys in preparation *a*).

land.⁷⁵ Although expansion of territory must have been normal for colonial settlements (Asheri 1971), the image that stuck in Greek minds, at least in the culture of the mainland, was that of a society containing a fixed and finite number of places, in which members of the new generation could only establish themselves when their elders made way for them.⁷⁶ The utopian discussions we find in Plato and Aristotle were preceded by early lawgivers' attempts to deal with the problem of maintaining equality at the practical level. Pheidon of Corinth thought that the number of *kleroi* should be kept constant even if they were not equal in size; Philolaos of Thebes regulated adoption in a distinctive manner in order to maintain a constant number of *kleroi*. In a utopian text probably of the fifth century, Phaleas of Chalkedon recommended that *kleroi* should be equal in size; this would be easy to achieve in a new colony but difficult in an established city. In order to arrive at equality in the latter case he proposed that the rich should give dowries with their daughters and the poor should not.⁷⁷ We are reminded of Herodotus' description (1. 196) of the auctions of village girls in Babylonia, where the high prices paid for the prettiest girls are used to dower the plain ones. Herodotus (*ibid.*) attributes the same custom to the Illyrian Enetoi; the idea was evidently attractive.⁷⁸ It is not clear whether Solon's restriction on trousseaux, and his prescription that a richer kinsman who did not wish to marry a poor *epikleros* was obliged to dower her (discussed further below in section 'The Long Term: kinship and inheritance'), indicate that the idea of manipulating

⁷⁵ Cf. Asheri 1966. A privileged person might be given a special allocation of land, a *temenos*, just as he might be given a special *geras* in the allocation of booty; this did not interfere with the general principle of equal division. *Temené* for individuals appear in Homer; it is not clear whether they were ever allocated in colonies.

⁷⁶ The fact that one-son families would produce a falling population (Goody 1973) is not perceived (cf. Lape 2003, 132). Evidently the population of mainland Greece in the 8th c. was not falling, but we are hardly in a position to calculate rates of reproduction; colonization must have generated a great deal of internal migration, and some migrants (like Hesiod's father?) may have found marginal land in a new part of Greece rather than seeking it further afield. On Greek ethnodemographic theory see Gallo 1980 (a different view in Persia, Briant 1987, 21–2); on the fixed-number model in other peasant societies, Schofield 1976. A phratry in Tenos did not admit members' sons until the father was dead or over 50 (*IG* xii *suppl.* 303 = R/O 61).

⁷⁷ Ar. *Pol.* 1265b12–16, 1274a31–b5, 1266a39–b6; cf. Spahn 1980b and E. Will 1955, 317–19 for the relation between such ideas and the experience of colonization. Aristotle seems to have had a text by Phaleas, who precedes Hippodamos in his analysis. Phaleas' recommendation that all artisans should be public slaves (*Pol.* 1267b14–17) may even suggest a 4th-c. date, and in any case his ideas on dowry may derive from Herodotus and Solon. Even the tradition on Pheidon and Philolaos had no doubt passed through sources of the classical period (cf. Szegedy-Maszak 1978; Asheri 1969), but there are no obvious signs of deformation.

⁷⁸ Hdt.'s account (see R. Thomas 2000, 129) presumably also influenced Aristophanes' *Ekklesiazousai*. Folk tales in which a younger son wins the hand of a princess rest on the same idea, and probably most Greeks knew of cases where a marginal man had nevertheless succeeded in making a good marriage (*Od.* 14. 199–213; for a modern example see Just 1989a, 327).

dowry payments to level out discrepancies in wealth was already in the air in the early sixth century; at least these measures will have contributed to the development of such theories.

This model of the equality and continuity of *oikoi* and *kleroi* belonged to a peasant milieu. Though fields may well have been dispersed, a lifetime spent working the same land could generate a sense of the unity of a *kleros*; although land was divided among sons, for *chêrôstai* to divide up fields after an owner's death was an attack on his identity.⁷⁹ Sentiment aside, an ageing man without sons needed help. Practices such as the adoption of a single heir or selection of a son-in-law who would live uxorilocally and transmit the holding of his father-in-law to his sons must have been current before Solon's day. But they would be subject to the approval of the local community; hence, the man without sons would look for an heir in a household of close kin that had a son to spare.⁸⁰

Adoption and uxorilocal marriage had however functioned in a very different way in the households of the rich and powerful. Here the incorporation of strangers was not a last resort, but a source and demonstration of strength. A man with sons might welcome an immigrant into his household, treat a bastard (*nothos*) as a full member of his family, keep his daughters at home and add their husbands to his household (cf. Priam in the *Iliad*). At least at the level of the imagination, the aim of the household was expansion in numbers. Furthermore, since the new members incorporated into an aristocratic household might be strangers to the community,⁸¹ and its members benefited from the prestige of its head, the incorporation of a new member into the *oikos* of a powerful man implied more significant changes of status than the movement of a working peasant from one household to another. Solon's legislation privileged the peasant

⁷⁹ *Chêrôstai*: *Il.* 5. 152–8, Hes. *Theog.* 603–7, Kamps 1948. Scattered holdings: R. G. Osborne 1985*a* ch. 3, 1985*d*; Halstead 1987; Forbes 1989. Where dowry is given in land (as seems probable in early Attika, see below at nn. 120–2), holdings in some societies are reconstituted by exchange of fields (ch. 5 n. 25). The classical practice of *antidosis* challenges, and the use of land as security for dowries and lease of orphans' estates, imply a well-developed practice of comparing the value of fields, but there is no explicit testimony of exchange in relation to dowry in Attika. Even where land has been distributed in compact blocks (cf. Boyd and Jameson 1981), partible inheritance and dowry can produce scattered holdings within a few generations (M. G. Smith 1962). Exchange is provided for in the colony law M/L 13 (*Nomima* I 44; *IGT* 47).

⁸⁰ On a holding too small to divide, presumably only one sibling would marry and the inheritance would remain nominally undivided (cf. Hodkinson 1986, 1989, 2000, on Sparta). But colonization implies that the ideal was for each family head to have a separate establishment. Hesiod and Perses had divided their father's estate when he died. A colonial estate, if there were no sons or *epiklêroi*, would be inherited by a single kinsman (M/L 20, 16–19; *Nomima* I. 43, *IGT* 49) or, presumably, re-allocated.

⁸¹ Lape 2003 also notes the differences between elite and peasant norms. On the personal relations of the immigrant in early times see Sealey 1983*a*, 116; Baslez 1984, ch. 3. In *Od.* 7. 311–16, Alkinoos invites Odysseus to join his household and marry Nausikaa (who has brothers). In Homer marriage with kin is rare, though Arete marries her FB (*Od.* 7. 63–8; in the case of Iphidamas, *Il.* 11. 221–6, a fostered grandson, DS, marries in the household into which he has been incorporated).

model of family relationships by encouraging the view that families should incorporate outsiders only if there were no sons; and by regulating questions of adoption, inheritance, and the epiklerate in written law he opened the way towards conferring on peasant practices an authority in reshaping social relationships equivalent to that enjoyed by the head of an aristocratic *oikos*.⁸²

THE LONG TERM: KINSHIP AND INHERITANCE

Relying then on peasant practice for the substance of his laws but drawing, in a sense, on elite practice in the freedom of decision he allowed to men without sons, Solon addressed the diachronic problem of rights to land in two ways. He limited the right of phratryies to coopt new members, which made it difficult for immigrants and *nothoi*⁸³ to acquire land (cf. above, at nn. 52–8), and he regulated succession.

We are still in the domain of the traditional responsibilities of the archon. Not only did he preside over the Assembly; he also played the leading role in expelling the *pharmakos* (scapegoat) from Attika at the phratry festival of the Thargelia, and in organizing the embassy that went annually to Delos. During its absence the city was purified, and public business stopped (Plato *Phaedo* 58b).⁸⁴ Connections were gradually being made explicit between the manifestations of the polis as a social entity in assemblies, in rituals and in war, the recognition by the city's officials of individuals as *epitimoi* and thus entitled to take part in such activities, and the admission of individuals by phratryies to full membership in the local community and hence in a tribe and in the polis (cf. Manville 1990).

⁸² There was a substantial overlap between elite and peasant norms (cf. Starr 1986, ch. 2), especially in linguistic terms (which created exploitable ambiguities). Popular law recognized the significance of *oikos* boundaries in the treatment of theft and interference with women; see below at n. 135. On adoption and wills see Humphreys 2002*a*.

⁸³ Although legitimacy was defined by reference to *engué* ([Demosthenes] 46. 18), it was socially recognized by the phratry's acceptance of sacrifices celebrating marriage, the birth of children, and finally the introduction of adolescent sons as phratry members. Possibly the upper class laid more stress on *engué* (a panhellenically recognized practice: Hdt. 6. 130), the lower class on *gamélia* (but cf. *Od* 4. 3). By excluding *nothoi* (bastards) from inheritance, Solon implies that they were not to be presented to phratryies. He may not have stated this explicitly, and phratryies may often have been willing to admit *nothoi* in cases where there were no legitimate sons and kin made no objection; but in principle marriage, legitimacy, and citizenship were firmly interlinked.

⁸⁴ *A.P.* 56. 3, with P. J. Rhodes 1981*a* ad loc. The evidence concerning Lemnos and the stopping of public business rather suggest that this annual embassy to Delos (Rhodes 626) may once have brought back new fire (see N. D. Robertson 1985. Plut. *Numa* 9 does not, as Burkert 1970*b* claims, say that Athens got new fire from Delphi; by his day both cities used the sun and mirrors to relight their fires). By Plato's time the embassy was associated with the myth of Theseus. On its calendar date see Robertson 1992, 128–31.

As we have seen, Solon is said to have restricted admission to citizenship—we cannot tell what term he used—to those permanently banished from their city of origin and to craftsmen migrating with their whole families (*panhestiái*). Immigrants in the former category will have been few and presumably of high rank; the Homeric pattern of incorporation by the elite of refugees, by uxorial marriage, clientship, or adoption, was left in place.⁸⁵ With this exception rural communities, probably already concerned to restrict competition for land, were not encouraged to admit newcomers to phratry membership; urban neighbourhoods could continue to be more generous in their attitude to immigrants, but were urged to distinguish the well-established craftsman with a family from the floating population of young bachelors who were trying to scratch together some additional resources before returning to inherit land elsewhere from their fathers.⁸⁶

Solon may also have legislated on adoption, *eispoiêsis*, in the context of phratry membership. Whereas in Rome, Gortyn, and Sparta adoption had to take place in a central public context where the groups of both *genitor* and *pater* were represented—at Rome in the *comitia calata*, at Gortyn in the *agora*, and at Sparta before the kings⁸⁷—in Athens only the local public context of the phratry into which the adopted son was being admitted was concerned. The adopted son accepted by the phratry of his pater during the lifetime of the latter did not have to appear before the archon to claim his inheritance by *epidikasia*; his status was entirely parallel to that of a legitimate biological son. He could not desert the *oikos* of his pater unless he left a son of his own begetting to take his place ([Demosthenes] 44. 64). This rule is parallel to the law of the Lokrian colony at Naupaktos that a colonist may not return to his mother-city without paying fees

⁸⁵ See Whitehead 1977, 141–2; on the ranking of craftsmen, Chankowski, Massar, and Viviers 1998. An exile who sought refuge in another city had to find a patron; if he wanted land, he had to be incorporated into a family. Upper-class exiles were more likely to achieve this. Lane Fox 1985, 226–7 thinks that Solon was concerned to prevent competition by foreign suitors for the daughters of elite Athenian families; but foreign suitors could still take Attic wives home with them, as Megakles brought Agariste (presumably not an *epikleros*) from Sikyon to Attika. It is doubtful whether Solon was worried about the inclusion of temporary migrants in phratries as a means of securing votes.

⁸⁶ Cf. Humphreys 1978, 164–8. Many of these young men will have served as mercenaries or ships' crews for part of the time, but will have gravitated to areas of agricultural intensification or to growing cities in the off-season to look for work and new employment. Cf. ch. 26 n. 3 on attitudes to metic incorporation in 5th-c. demes.

⁸⁷ At Rome the fact that *adrogatio* took place in the *comitia calata* may imply a particular concern with cases in which the adopted son was to change his *gens*, but the situation is complicated by the Roman theory of *patria potestas* (see A. Watson 1971b, 30–3; Wolff 1978). Gortyn code X 34 ff., XI 14 f. (Maffi 1997a, ch. 9); Sparta, Hdt. 6. 57. For comparison of Gortyn and Athens see Gernet 1920 (1955, 139–40). The adoption law on axon 21 (Harp. s.v. *boti hoi poiêtoi*) may be post-Solonian, as may the law in [Dem.] 44. 64 (cf. below, n. 128). On Kos adoptions are registered with *chreophylakes*, IG xii 4. 104. 643–7.

unless he leaves a son or brother in possession of his landholding.⁸⁸ Introduction of heirs by will was subjected to control by the archon, but phratries were still allowed considerable freedom in accepting or rejecting outsiders introduced by living members; the phratry continued, though within narrower limits, to function as a local community taking its own steps to maintain a balance between landholdings and manpower.

Nevertheless, officials had responsibilities for oikoi as landholding units, as well as for controlling admission to the community. The custom that heirs who found their possession contested could appeal to the archon for judgment will have arisen partly from his position as head of the community and president of the Assembly, and partly from his engagement to respect property rights.⁸⁹ Solon strengthened this trend by his legislation on intestate succession, epikleroi, and testamentary disposition.

Whereas in Drakon's model of the kindred closer and more distant kin appeared as circles or arcs with the homicide victim as their centre, each circle containing a group of kin with defined rights and functions, Solon's law on intestate succession and the marriage of epikleroi aimed at ranking kin individually in order of their degree of closeness to the deceased whose estate was to be awarded (*d.c.*). Like Drakon, Solon no doubt drew on distinctions that had always been made in a rough and ready fashion, but singled out genealogical position as the only standard by which closeness (*anchisteia*)⁹⁰ was to be measured. Earlier, families,

⁸⁸ M/L 20, 6–8. We do not know whether the fees (*enetéria*) were collected only on re-entry or annually as a tax on resident aliens. The Theran colony at Kyrene recruited one son per household (M/L 5. 27–9, cf. 38–40, a rare testimony of the existence of households of brothers); similar practices occur when an heir is to be found for a single estate and when a city founds a new settlement. Adoption or emigration are the alternative choices offered to superfluous sons in Plato's *Laws* (740b–c). The laws in [Dem.] 46. 14 and 64 were interpreted in the classical period as prohibiting adopted sons from adopting in their turn, but the interpretation of § 14 is problematic (Humphreys 2002a) and, as one can see from the speaker's commentary, the law quoted in § 64 did not specify that the legitimate (*gnésios*) son left in the *pater's* *oikos* had to be a biological son. It cannot in any case have been common for a newcomer to a phratry to be allowed to introduce further outsiders.

⁸⁹ Claims to *klérois* and *epiklérois* were read out by him in the Assembly (A.P. 43. 4); cf. the responsibility of the Spartan kings for adoption and *epiklérois*, Hdt. 6. 57. The Athenian archon also dealt with disputes over the division of estates (*dikai eis daitétôn haireisin, eis emphanôn katastasin*, A.P. 56. 6; the former, presumably earlier in date, is noteworthy as evidence for the delegation of the decision to arbitrators).

⁹⁰ *Anchisteia* is an abstract noun denoting the relationship of next-of-kin. The modern practice (e.g. C. B. Patterson 1998, 88; Lape 2003, 124, and elsewhere) of using it to denote the set of kin within the limits set by law to the calculation of *anchisteia* has no ancient basis, and there was no specific designation for this kin set in archaic and classical Attika (Is. 11. 11 has *anchisteuein*, but M. Edwards 2009 suggests *anchisteia* <*én*>; Dindorf suggested <*anchisteu*>ontes in [Dem.] 44. 62; *anchisteus* is post-classical). Lepri 1959 has a useful collection of passages in which *anchisteia* and related terms are used (add D. S. 12. 15. 2). Hsch. cites *anchistindên omnunai* from Solon's laws, interpreting it (wrongly?) as meaning 'next to the altar': possibly a reference to oaths in disputes over legitimacy and admission to phratries?

△ = male

○ = female

= = marriage

All rights descend indefinitely (hence dashed lines).

TABLE 1.1. Rights of succession

communities, and judges had probably used a variety of criteria in deciding contested cases, especially if none of the claimants was very closely related to *d.c.*: genealogical position, need, affective quality of relationship with *d.c.*, etc.⁹¹ Solon also imposed a single limit for the recognition of jurally significant kinship in all contexts—descent from *d.c.*'s great-grandfathers—where Drakon had given varying rights and responsibilities to different circles of kin.⁹²

Solon's system did not always produce a single claimant qualified as next-of-kin, but it graded degrees of kinship more precisely than that of Drakon. Like Drakon, Solon used a generational model, distinguishing the descendants of *d.c.*'s father, of his grandfathers, and of his great-grandfathers; but he also ranked patrikin before matrikin and, within each generation, sons and their descendants before the descendants of daughters. The principle of his classification was summed up in the maxim, 'Males and those descended from males are to have precedence, if they come from the same parents, even if they belong to a remoter

⁹¹ These justifications continue to be cited in the classical period in court cases, see ch. 7.

⁹² Solon's limit governs the right of women to attend funerals, [Dem.] 43. 62; admittedly funerals and inheritance are closely connected (cf. chs. 9–10 on commemorative rites). The Drakon model is closer to the patterns of interaction observed in the classical courts (Humphreys 1986a). Homer thinks only in terms of sets of kin: *kasignētoi*, *etai*, *pēoi*, *chērōstai*.

[i.e. younger] generation.⁹³ Thus the rules that governed inheritance by sons or, failing sons, daughters within a single *oikos* were repeated in each generation (including the rule that same-sex siblings received equal shares). If *d.c.* left sons, they inherited; if a son died before his father, leaving heirs (male or female), those heirs took his share, inheritance rights being transmitted *per stirpes*. Not only *d.c.*'s SS but also his SD took precedence over *d.c.*'s daughters. If *d.c.* (the head of *oikos* A in Table 1.1) had no lineal descendants, his estate was treated as if it belonged to his father (*oikos* B), and the same rules applied: *d.c.*'s brothers and their descendants took precedence over his sisters. If there was no heir in the father's *oikos*, the estate was regarded as belonging to *d.c.*'s paternal grandfather (FF, *oikos* C); if there was no descendant of the FF to claim, the estate was treated as belonging to FFF (*oikos* D). The heirs in *d.c.*'s own generation, in this lineage, were his second cousins; he and they stood in the relationship of *anepsión paides* to one another. The way in which relationships were conceptualized is well set out in Isaios 11. 8: the grandfathers of *d.c.* and the speaker were brothers, their fathers were cousins born of brothers, *anepsioi ek patradelphôn*, and they are therefore *anepsión paides*. At this point the regression of the calculation to more remote ancestors on the father's side ceased, and the search for the next-of-kin passed to the descendants of *d.c.*'s maternal grandfather (MF, *oikos* E), and thence to his *anepsión paides* on the mother's side, descendants of his MFF (*oikos* F).

This way of understanding the construction of Solon's model seems to me to provide answers to some of the questions to which his law has given rise.⁹⁴ It seems clear that those of *d.c.*'s lineal ancestors who could be treated as heads of *oikoi* in calculating closeness of kinship must have had rights of succession themselves if still living. However, the question would hardly present itself in these terms to Athenians, since any concession of property by a father to sons during his lifetime was precarious.⁹⁵ On the other hand it is highly doubtful whether

⁹³ *Kratein tous arrhénas kai tous ek tôn arrhénôn, ean ek tôn autôn eisi, kai ean apôterô genei*, [Dem.] 43. 51. It is not entirely certain whether this maxim actually appeared in the text of a law, as stated in [Dem.] 43. 78; it may be merely an interpretative rule popularly associated with the law. It could be tendentiously interpreted in court: see Is. 7. 20; A. R. W. Harrison 1968, 147 n. 2. *Genos* here means 'generation': cf. Is. 11. 2 (*tritôi genei*: descendants of F, FF, FFF, i.e. siblings, *anepsioi*, *anepsión paides*; in the following sentence, read *ean de kai tout' eklipei, eis to genos palin epanerchetai*: W. Thompson 1982b).

⁹⁴ However, many of my predecessors have recognized the structure of the model without drawing the same conclusions: e.g. Lipsius 1905–15 II, 559; Paoli 1936; Biscardi 1989.

⁹⁵ See ch. 5 and the discussion of Is. 6 in ch. 7 Case 1; Schömann 1842; Wolff 1978. Attic law had no provisions covering advances on inheritance given during a father's lifetime, and did not make any strict distinction between inherited and acquired property (Rabel 1907). The maxim cited in [Dem.] 43. 51 makes better sense with infinite succession. This way of analysing the structure of the kindred also eliminates the question whether a woman could be the epikleros of her brother's estate (she becomes epikleros to her father on the death of her brother). See further ch. 7 Case 5. In the Tegean law on the return of

Solon gave a mother any right to succeed as a parent. A strict application of Solon's model would suggest that she (and her descendants by another marriage, *d.c.*'s uterine half-siblings) had rights only through her status as a daughter of *d.c.*'s maternal grandfather, i.e., they would be excluded by *d.c.*'s maternal uncle (MB) and his descendants, and would share with his MZ and her descendants.

It is unlikely that Athenians followed the logic of Solon's law to this length. Very probably his law did not enumerate in detail the sequence in which matrikin were ranked, but merely stated that it was to follow the principles used in ranking patrikin.⁹⁶ There was probably a tendency to think that *d.c.*'s mother and uterine half-siblings should be ranked first among his matrikin;⁹⁷ in practice, as we shall see (ch. 7), even this did not satisfy uterine half-brothers, who tended to look for ways of claiming estates that would give them precedence over *d.c.*'s collateral patrikin. Solon was probably responsible for formalizing the Attic prohibition on marriage between uterine half-siblings and thus is unlikely to have given them any privileged position as potential heirs.⁹⁸ There were presumably already in Solon's day widows with young children who remarried and reared two families together in the *oikos* of the second husband; this created close and affectionate relationships between half-siblings, who at law belonged to separate *oikoi* and kindreds. To allow them to intermarry was a threat to the inheritance rights of their respective patrikin, and allowed the mother too much influence.

The most problematic aspect of Solon's law, for modern interpreters, has been the question whether he intended inheritance rights to descend *in infinitum* within the boundaries of the jural kindred, i.e., from *d.c.*'s *anepsión paides* and *anepsioi*. Most commentators have decided that he did not, either because they

exiles (R/O 101) an exile recovers *matroía* if his mother had no brothers or if her brother(s) died without issue after her marriage (but claims do not go *anóteron*, i.e. an exile cannot recover property that might have descended to his mother from her FF). For an example of recovery of property from deceased children in Roman Egypt see Wilcken 1908.

⁹⁶ Cf. the formulation in Plato *Laws* 924e 9–925a 2; [Dem.] 43. 51. Is. 11. 17 states that the mother was not mentioned in the law; later rhetorical exercises were inspired by this omission (Theon *Progymn.* 13. 10, cf. Wyse 1904, 692–4).

⁹⁷ Plato in *Laws* 924e ranks uterine half-siblings after half-siblings on the father's side. This shows a trend which is confirmed by later Greek law (Montevicchi 1935, 105), but is evidently an innovation in relation to Solon's rules (cf. Humphreys 1988). Some modern scholars have followed Plato (A. R. W. Harrison 1968, 146). Apollodoros' suggestion in [Dem.] 45. 74 that his uterine half-brothers would be able to claim his daughters as epikleroi is irrelevant both because it ignores the existence of Apollodoros' full brother Pasikles and because Apollodoros as the son of a slave had no other kin.

⁹⁸ Philo *de spec. leg.* 3. 4, confirmed by Dem. 57. 20, and Plut. *Them.* 32. It has been suggested that this prohibition indicates the weight attached to matrilineal descent in early Attic thought (cf. A. E. Hanson 2013 on 'incest' in dog breeding); but Sparta allowed such marriages, and Greek theories of procreation seem either to recognize an equal contribution from both parents or to privilege the father (Lloyd 1983, 86–94). I take the prohibition to be closely associated with the rules for claiming epikleroi and thus to be a refusal to recognize kinship between uterine half-siblings in this context. See also Leduc 2011.

erroneously translate *mechri anepsiôn paidôn* as ‘up to and including the children of *d.c.*’s cousins’, or because they think the court must have been right in accepting the argument of Theopompos of Oion Kerameikon in Isaios 11 that he was not obliged to share the estate of Hagnias, his second cousin, with his nephew, one generation further from Hagnias.⁹⁹ In my view *mechri anepsiôn paidôn*, ‘up to and including second cousins’, defines only the lateral spread of the kindred in *d.c.*’s generation, and says nothing about the transmission of rights to later generations. We should not be over-impressed by the fact that Theopompos got the jury to accept his interpretation of the law, in a case which was unusual in involving kin so distant from *d.c.* Apart from Theopompos’ arguments, the only evidence we have for a limit on the transmission of rights is in Plato’s *Laws* (925a), where the right to marry an epikleros is not to pass beyond her father’s brothers’ grandsons, i.e., her first cousins once removed (FBSS, FBDS).¹⁰⁰ Here, however, Plato is concerned to find a husband of a suitable age, a difficulty peculiar to the epiklerate. Inheritance by second cousins was not likely to be frequent; if Solon considered them entitled to inheritance rights, it is hard to see why he should have wanted to exclude their descendants. There was no concept of *bona caduca* in Attic law, and it was normal for all a man’s rights and obligations to pass to his heirs. A limit on generational transmission would always be in danger of creating difficult cases in practice, where the death of a father at an inopportune moment deprived a son of the right to claim an estate that would have come to him if it had passed through his father’s hands.¹⁰¹

Illegitimate children, nothoi, could not enter automatically into an inheritance and could not claim it as next-of-kin: they did not ‘have *anchisteia*’. They were not entitled to phratry membership.¹⁰² Solon did not explicitly prohibit a man

⁹⁹ See ch. 7, Case 9. The nephew was Hagnias’ FFBSS. Scholars who believe in a generational limit also exclude FBSS, but assume that children of *d.c.*’s siblings had rights *in infinitum*. I take the clause in [Dem.] 43. 51, *kai can paides ex adelphôn gnésioi, tén tou patros moiran lanchanein*, to cover the case in Is. 11, entitling the nephew to his father’s share, but this was certainly not the only possible interpretation. I am surprised that Wesley Thompson, after correctly insisting on the interpretation of *anepsiôn paides* as second cousins (1970*a*), accepted Theopompos’ claim without seriously arguing the case against infinite succession (1976, 9–10).

¹⁰⁰ A limit was also set at the children of *d.c.*’s grandfather, i.e. the epikleros’ FFBs. Plato gives no rights to *d.c.*’s matrikin (except his uterine half-brothers), so these rules cannot be taken as representing his interpretation of Attic law (his interest in preserving the size and number of estates is relevant here).

¹⁰¹ This must have been part of the case of Theopompos’ opponent in Is. 11; Theopompos’ brother had died while they were preparing to put in a joint claim for Hagnias’ estate. On *ho[s] an éi engutata genos* in IG i³ 131 see Humphreys 2017*b*.

¹⁰² Cf. Humphreys 1989, forthcoming *a*, on Dem. 39–40; Bertazzoli 2005. The controversy over Theozotides’ proposal, in the late 5th c., that the children of victims of oligarchy should count as war orphans (*SEG* 37. 65; cf. 28. 46, 33. 67; ch. 2 n. 75), implies that the status of nothoi was not settled until the question of phratry and (after 507) deme membership came up (rejection of the *meion* sacrifice by a genos or, presumably, phratry, was not final: Andok. 1. 125–7, [Dem.] 59. 55–61). When in New

without sons from making testamentary dispositions in favour of a *nothos*, but he cut the *nothos* off from any basis that might have allowed him to compete with legitimate brothers. Any surviving tendency towards polygamy among the elite was discouraged; the *oikos* was to be a monogamous unit.¹⁰³

The rules for claiming *epikleroi*, girls in families with no male heir who were unmarried and not betrothed at their father's death, followed the model used for calculating *anchisteia*. If the girl's father died without making arrangements for her marriage, his next-of-kin could present a claim to the archon when she reached the age of fourteen. The archon thus acted temporarily *in loco parentis*; his decision at the *epidikasia* took the place of the formal betrothal (*engue*) made in other cases by a girl's father or legal guardian.¹⁰⁴ But there were further rules, surprisingly detailed. The husband was obliged to sleep with the *epikleros* at least three times a month, and could be charged before the archon for failure to do so, or for other misconduct.¹⁰⁵ If the property of the *epikleros*' father placed her in

Comedy a child is legitimized by the subsequent marriage of its parents (cf. Ogden 1996, 125) it is a baby, or possibly (in Men. *Georgos* and ? *Kitharista*, cf. Arnott 1978, 26–32) a *parthenos*.

¹⁰³ Ar. *Birds* 1660–6 probably accurately represents Solon's laws as containing two separate provisions which, taken together, effectively excluded *nothoi* from inheritance: 'A *nothos* does not have *anchisteia* if there are legitimate sons ... If there are no legitimate sons, the property passes to the next-of-kin' (A. R. W. Harrison's view, 1968, 66, that *tois engutatô genous meteinaî tôn chrêmatôn* means that the *nothos* is to share with the next-of-kin seems to me untenable). There is a formal parallel in the law of Gortyn (VI 56–VII 10): 'If from the same mother both free and slave children are born, if the mother dies, if she leaves property, the free children take it. If there are no free children, the next-of-kin (*epiballontes*) inherit.' Aristophanes' quotation may not be verbally accurate. I suspect *huiôn ontôn gnesiôn* to be his own addition; the actual form of the law may be that quoted in [Dem.] 43. 51, '*nothoi* and *nothai* have no *anchisteia* in either sacred or civil affairs', to which a reference to Eukleides' archonship has been added to prevent disputes over irregularities that had crept in during the Peloponnesian War; see Humphreys 1974, 89 n. 5. The rule that a father could leave 1000 or 500 dr. as a legacy to a *nothos* (*notheia*) may be post-Solonian; the variation in the sum given by sources (Harp. s.v. *notheia*, Sud. s.v. *epiklêros*, cited in schol. Ar. *Birds* 1655–6) may derive from the use of case material. 500 dr. was the dowry to be given by a *pentakosiomedimnos* to an *epiklêros* of thetic census; in the classical period this was the value of a small plot and house (Lewis 1973a), like the *chôrion* offered to a *nothos* in Is. 6. 23. It would not be easy for fathers to circumvent the law by gifts *inter vivos*, since these were not protected by law (contrast Gortyn IV 48–V 8) and heirs might well claim that the property transferred was a loan (cf. Dem. 41. 8–11).

¹⁰⁴ A.P. 56. 7, cf. P. J. Rhodes 1981a ad loc. and APF 8429 IV. The girl's matrikin had no claim (on Dem. 41, where marriage with MB is reinforced by adoption, see ch. 2 case V 5). There were no special arrangements for the guardianship of *epikleroi* who had not reached the age of marriage. The wedding rites of the *epikleros* will also have differed from those of other brides: the groom would presumably in early times have moved to the bride's home, and originally the sacrifice of *gamêlia* may have been made in the phratry of the bride's father.

¹⁰⁵ Plut. *Sol.* 20. The *eisangelia kakôseôs epiklêrou*, which presumably also covered misconduct in managing the *epikleros*' property, should be Solonian or indeed even earlier, since if Solon had created a new institution for this purpose one might have expected him to use the *graphê* (cf. A. R. W. Harrison 1968, 117–9; Van Wees 2011a). The specification of the husband's sexual duties may be later, if Plutarch's information does not come from philosophical speculation or case material. The danger envisaged seems

the lowest census class, the thetes, and the next-of-kin was richer and did not want to marry her, he was obliged to dower her according to his own census level.¹⁰⁶

Another law states, 'If a son is born of an epikleros, and he has passed the age of puberty (*hēbē*) by two years [i.e. is eighteen], he takes possession of the estate, but he is responsible for his mother's maintenance.'¹⁰⁷ The estate is clearly that of the boy's maternal grandfather, but this law does not tell us whether the epikleros' son entered the phratry of his MF, nor whether all her sons had equal rights to his status and property.

In the classical period it seems to have been normal for one of the epikleros' sons to inherit the status of his MF, to whom he was adopted either *inter vivos* or posthumously, while any other children took the status (i.e. phratry and deme affiliation) of their father. In practice the division of property and the separation between the two oikoi may well have been less clear-cut than the use of adoption suggests; and wherever there was more than one epikleros in a family their sons were not adopted.¹⁰⁸ When adoption is used to consolidate the position of an heir, the heir is always a single individual.

It seems probable, however, that the rules governing the epiklerate were originally inspired by the practice of uxorilocal marriage, where the son-in-law had been absorbed into the oikos of his wife's father and all the children of the marriage had been considered as belonging to that oikos. Both the attitudes associated with the ideal aristocratic oikos portrayed by Homer and the situation

to be that a rich widower or divorcé (perhaps *d.c.*'s brother), who already has an heir, hopes to combine the epikleric property with his own and pass the whole estate to his son.

¹⁰⁶ [Dem.] 43. 54. This law is remarkably detailed, providing also for cases in which there is more than one kinsman in the next-of-kin relationship (they divide the cost of the dowry), or more than one epikleros (it is not certain that K. F. Hermann's conjecture *tōi g' hēni* for *tōi genei* should be adopted; a rule that a single sibling group, *genos*, was not obliged to dower more than one epikleros is conceivable). This may be a case of post-Solonian refinement and clarification, and so may the specification of dowry amounts (cf. the doubts expressed above, n. 68, about the attribution to Solon of precise census criteria; below, n. 128). However, the low level of the dowries and of the fine to be paid by an archon who fails to enforce the law (1000 dr.) suggest a 6th-c. date, as does the specification that the fine is to be paid to Hera, not a prominent deity in Attika; she is still expected to play an active role in protecting marriage. The clause *apographētō de ton mē poiounta tauta ho boulomenos pros ton archonta*, which follows the entrenchment clause, may have been added at the end of the 5th c.; the original procedure was *eisangelia*.

¹⁰⁷ [Dem.] 46. 20: *kai ean ex epiklērou tis genētai kai hama hēbēsēi epi dietes, kratain tōn chrēmātōn, ton de siton metrein tēi mētri*. The context is unclear; did preceding clauses specify the obligations of the epikleros' husband? This does not seem to be a law directly concerned with the right of the epikleros' son(s) to succeed, and therefore does not tell us whether all or only one took possession of the MF's estate at 18 (ch. 19 n. 47). It may have applied only to epikleroi who had been claimed by *epidikasia*: Beauchet 1897 I, 436. In the laws of Manu the eldest son of an 'appointed daughter' becomes the son of his MF at birth.

¹⁰⁸ On adoption of the husband of a brotherless daughter see ch. 2, II B 1, V 5 (on the use of the term *epiklēros* during the father's lifetime see n. 112).

of the in-marrying peasant son-in-law (modern Greek *sôgambros*) point in this direction.¹⁰⁹

It is hard to see where Solon stands in this development. The ideal situation, in his day, may have been for the husband of the epikleros to renounce his right to inherit and to procreate sons in his *oikos* of origin, and to transfer himself entirely to the *oikos* of his wife's father.¹¹⁰ However, it would presumably be open to the epikleros' husband—like the adopted son, whose position was in some respects similar—to return to his *oikos* of origin once he had produced an heir for the *oikos* of his wife's father. In practice, because the status and rights of the epikleros' husband were not clearly defined, he came to retain his position in his father's *oikos* and transmit it to all but one of his children. The working of the epiklerate in the archaic period is difficult to understand because although on the one hand we have some very precise specifications in written law governing some aspects of epikleric marriage, on the other hand it is clear that questions remained that were not explicitly regulated, and that room was left for flexible arrangements to suit individual circumstances.¹¹¹ In fact, since Solon allowed fathers who had no sons to select husbands for their daughters both *inter vivos* and by testament, and since girls married in their teens, the whole of the law on epikleroi represented a regulation of marginal cases. In practice Athenians came to feel that the regulations prescribing marriage by the next-of-kin should govern the marriage of all heiresses,¹¹² but it is far from certain that Solon either foresaw or intended this development.

We should perhaps rather connect the mixture of precision in regulating marginal cases and vagueness on more central issues that we find in Solon's law on the epiklerate to other indications in his legislation of a wish to legitimize the authority of magistrates, and especially of the eponymous archon, by emphasizing their quasi-parental role as protectors of the weak—orphans, epikleroi, widows

¹⁰⁹ Material from elsewhere in Greece does not help to decide this question. On the modern *sôgambros* see Peristiany and Handman (eds.) 1989 s.v. (more care needs to be taken in distinguishing permanent and temporary uxori-local residence), and for historical parallels see e.g. Segalen 1980, 77–8.

¹¹⁰ Gernet (1921 = 1955, 137, following Beauchet 1897 I, 470–3) thinks that all sons of the epikleros inherited from their MF even if one was adopted. A. R. W. Harrison (1968, 135) and Lane-Fox (1985, 227, a useful discussion) opt for the view that only one son succeeded to the status and property of the MF. This was also the view of De Sanctis 1898 (= 1975, 275), who noted that the law did not work very effectively.

¹¹¹ In particular, there were no clear rules for marriage and inheritance if a man left more than one daughter in the situation of epikleros. This question was regulated at Gortyn (Link 1994b; Maffi 1997a).

¹¹² Technically a girl was not epikleros until her father (or brother) died, but the term could be used when it became unlikely that a male heir would be born (e.g. *IG* ii² 1165). Note that in Sophokles' *Antigone* the heroine, who became an epikleros on the death of her brothers (though this is not mentioned in the play), and is perhaps portrayed as epikleric in character, was already betrothed to her (not her father's) next-of-kin, her MBS Haimon (in Euripides' *Antigone* she seems to have married him, before her brothers' death).

pregnant at the time of the husband's death,¹¹³ 'empty' oikoi, aged parents, victims of *hybris*. Solon of course did not invent the idea that the strong had a moral duty to protect the weak (cf. Adkins 1960). Consciously or unconsciously, however, he focused on the empty oikos as a domain where the power of law and of the state could be given free rein. The Athenian citizen could be invited to contemplate the state's powers of regulation, deployed in minute detail, in a context where he would not feel that his own right of control over his affairs was directly threatened.¹¹⁴

The other question invariably discussed in modern treatments of the epiklerate is whether a woman already married during her father's lifetime to a husband who was not her next-of-kin could be claimed by the next-of-kin on her father's death, if she was the sole remaining heir in his oikos. Solon's law did not provide any explicit basis for such claims; on the contrary, he clearly stated that a man who had daughters but no sons could dispose of his property as he wished, provided that the daughter(s) went with the property.¹¹⁵ The effect of formulating in writing the rules for marriage of an epikleros whose father had made no such arrangement was, however, to encourage kin to feel that they had a right to potential epikleroi as soon as the girls reached the age of marriage (cf. Humphreys 1989); and in the classical period there are allegations that kin had threatened to claim married women as epikleroi. But there is no attested case of such a claim being formally presented, and we cannot tell how a court would have decided.¹¹⁶

¹¹³ [Dem.] 43. 75 (the use of the term *paranomōn* does not prove a late date: Humphreys 1988, n. 15). Earlier, this protective function (cf. Van Wees 2011a) will have been shared by local *basileis*, whose performance no doubt varied considerably. The law did not specify whether the archon could act without an *eisangelia*; in any case he could arrange that an *eisangelia* was made. A childless widow returned to her family of origin, and the interests of a widow with children who stayed in her husband's *oikos* were covered by provisions for protection of orphans. In the classical period (and presumably earlier) even a widow with children normally remarried, if still of child-bearing age (Hunter 1989).

¹¹⁴ See the interesting discussion of Solon and the oikos in Spahn 1980b. More work needs to be done on the contexts selected for regulation in early written law, both in the individual case and comparatively (the 'empty oikos' is already problematic in the *Odyssey*). Another domain in which early Attic law is very detailed is the regulation of planting close to land boundaries. There is a certain preference for matters amenable to quantitative treatment, but also for marginal or interstitial areas of social life; perhaps Gagarin's ideas on the role of procedural regulations in early law (for which, he admits, the Solonian case presents some difficulties: 1986, 71–2) may be set in this wider framework. Hölkeskamp 1999, ch. IV 1–2, does not address this question.

¹¹⁵ Is. 3. 68. De Ste. Croix' suggestion (1970; cf. Lane Fox 1985) that Solon wanted to prevent competition for heiresses overlooks the father's right to dispose of his daughter during his lifetime.

¹¹⁶ Cf. Maffi 1990. No doubt, if a claim came to court, the court would have been less ready to break the marriage of an epikleros with children than of one without children, but the speaker of Is. 10 (§ 19) rather implies that his opponents had threatened to claim his mother as epikleros after she had borne children, and it is improbable that there was any legal ruling on this point. Is. 6. 46, 51, 57–8 refers to threats to claim a widow, who had a daughter, as epikleros; on the other hand, Is. 8. 31 argues that although a married woman with children who became an epikleros on her father's death could be claimed by his next of kin, her sons would still inherit the estate when they came of age. Is. 3. 64 asserts that many

LAW AND THE OIKOS: (I) FREEDOM OF ACTION

In analysing laws attributed to Solon, it is important to remember that Attic family law does not seem to have undergone any systematic revision (for example c.400), and that written law influenced behaviour in ways that might subsequently generate changes in interpretation. Interpretations that seemed obvious to the orators and their contemporaries, against the background of institutions familiar to them, are not necessarily valid for earlier periods. Meaning is contextual, and contexts change through historical process; cf. Luhmann 1986. The law on testamentary dispositions is a case in point.

I have argued elsewhere (Humphreys 2002*a*) that the law on testamentary dispositions cited in [Demosthenes] 46. 14 should be translated: ‘Whoever has not adopted a son for himself, on conditions such that there is to be neither repudiation [by the adopter] nor *epidikasia*, at the date when Solon became archon, may dispose of his property (*diathesthai*) as he wishes.’ Like the further provision cited in Isaios 3. 68, this law applies only to men without sons.

We have no evidence that the noun *diathékē*, will, was already used in Solon’s day.¹¹⁷ There were, however, situations in which a man might wish to ‘make arrangements’ (*diathesthai*)—especially, perhaps, a man who as yet had no children, or only young children, who was about to leave home on a dangerous expedition. Such arrangements might include appointment of guardians, designation of future husbands for young daughters, or designation of an heir to be adopted when he was old enough for presentation to the phratry, or if a son died before reaching maturity. The law was primarily framed to protect the rights of already-adopted sons and epikleric daughters rather than those of the testator, whose freedom was further limited by specification of the conditions that would invalidate his dispositions.

According to the nineteenth-century conception of the oikos-genos as a primordial property-owning unit, perpetuating itself by agnatic succession, adoption was an essential part of the inheritance mechanism. Conversely, if the ‘oikos’, in this sense, was not primordial, neither was adoption. Indeed, there is no sign of it in Homer or Hesiod. If a man has no sons, *chêrôstai* divide his property (n. 79).

marriages have been broken up, and that the law authorized claims to married epikleroi, but this statement does not prove either that disputes concerning married epikleroi had actually come to court, or that a legal text could be cited which explicitly authorized such claims. Maffi 1989*a* argues that there was no dissolution of the marriage of a woman who became a *patrôioškos* (epikleros) at Gortyn. The analogy of Is. 2, where *d.c.*’s next-of-kin try to claim his estate from a son adopted *inter vivos*, suggests that a litigant claiming a married epikleros would need to argue that her father had been mentally deranged when the marriage was arranged, citing the law in [Dem.] 46. 14. Even the right of a wife’s father to remove her from her husband (*aphairesis*) was doubtful (hence the interest of comic writers, cf. Rosivach 1984; Scafuro 1997; Arnott 2004; Furley 2009).

¹¹⁷ The first evidence is Ar. *Wasps* 583–6, *Birds* 84, 589.

An elite household may incorporate immigrants (as it may recognize *nothoi*), but these hangers-on (Patroklos, Phoinix) do not become sons. Hence we have to ask how adoption became institutionalized.

This means asking what phratry procedure was like in Solon's day. If, as I have argued above (at nn. 53–5), he linked phratry membership to an embryonic conception of citizenship, the sponsor of an immigrant would have to testify that he was either permanently exiled from his own community or a craftsman intending to settle in Attika with his family. The numbers would be small; exiles (*xenoi*) would be sponsored by upper-class patrons, craftsmen might also have elite patrons, or might have contacts with traders or the owners of small independent workshops. An Athenian who moved from the locality of his phratry (probably to the city or the Piraeus area) might also find a sponsor in a phratry based near his new home. Many Athenians, however, would continue to present their sons to their own phratries. In that case, it might matter little whether a boy was presented as son of his genitor or of a pater who had chosen him as heir, provided that his kindred accepted the arrangement. Only in controversial cases—where the kindred objected, or where the designated heir did not come from a phratry family—would it be necessary to secure the arrangement for the future by explicit, formal action (a vote of the phratry?). The references in the law to *epidikasia* and to Solon's archonship indicate that as archon Solon had announced that he would not accept *epidikasia* cases where such formalities had been carried out.

The law, then, was not an exhaustive statement of norms concerning 'adoption', but a ruling for a small body of potentially controversial situations. Over time, however, it would have an effect on the norms it had left untouched. The ring-fencing of exceptional situations by formal means would come to look like a desirable precaution in all cases, and eventually take on the contours of a norm, especially when conditional testamentary arrangements came to be fixed in a written will (*diathêkê*).¹¹⁸ Phratries might take to voting on all cases of adoption *inter vivos*, and adoption on the basis of a will (though still apt to provoke controversy) would seem a more normal procedure.

Apollodoros' argument in [Demosthenes] 46. 14 was in any case specious, since he was claiming that his father as a naturalized citizen was an adoptee. It was probably equally dubious to interpret the law as ruling that adoptees could not make wills. By the fourth century Athenians with legitimate sons, whose testamentary freedom was limited (i.a. they could not adopt), were regularly making wills, and there is no reason to suppose that adoptees (who might also need to arrange for repayment of debts, appoint guardians, etc.) could not do the same. What adopted sons could not do, according to general opinion, was to

¹¹⁸ Cf. the reference in *PGrVindob* 29816 F 5 (Carey 2004) to frequent arguments setting genealogy (*genos*) against wills; Wohl 2010, 257–68.

adopt in their turn. Apollodoros was thus playing on the ambiguity both of the middle-passive form *epepoiênto* and of *diathesthai*, which could be used by this time either of adoption or of will making.

Thus a strong connection grew up between adoption and the designation of an heir by testament. This also affected the marriage of epikleroi. Normally in this case it was a son of the epikleros who was formally adopted into the oikos of his maternal grandfather, but occasionally it is the husband. Solon's law evidently did not prescribe adoption in either case; if there was more than one epikleros their sons were never adopted, and it is in such circumstances that we find one case of the adoption of a son-in-law and two cases of the adoption of sons who did not marry any of their adoptive sisters. In the former case ([Demosthenes] 41. 3–4) the marriage ended in divorce and the adoption was annulled; in the latter (Isaios 5, 8) the question of dividing the estate between the adopted son and the epikleroi led to protracted disputes.

The only formal law regulating the rights of an epikleros' husband and of her sons to control the property to which she was attached would on this view be the rule that the son(s) gained control at the age of eighteen ([Demosthenes] 46. 20). This seems indeed somewhat puzzling: if the epikleros' husband was incorporated into the house of his father-in-law in uxorilocal marriage and/or was in any case her next-of-kin, why was he not allowed to retain control of the property during his lifetime? Is this due to the strength of the feeling that each oikos should produce its own heirs, to fear of the merging of estates, to fear that the epikleros herself would retain too much influence? I have no answer to this question.

It should be noted that the law obliging the kinsman who does not wish to marry a poor epikleros to dower her, if he belongs to a higher census class ([Demosthenes] 43. 54), implies that the epikleros whose next-of-kin did not claim her could be adjudicated to another claimant. Whereas the law code of Gortyn and biblical regulations for the levirate make specific provision for the case of the *patrôiochos* or widow whose legally designated husband does not claim her,¹¹⁹ Solon apparently thought it unnecessary to do more than provide a dowry for the epikleros whose inheritance was not sufficient to make her an attractive marriage prospect.

This law seems to provide the answer to the last question we have to consider concerning Solon's regulations on the devolution of property: whether in his period land circulated as dowry. The obligation of a richer kinsman to dower a poor epikleros if he did not intend to marry her seems to imply that it was normal for men to dower the women of their family when giving them in marriage. The

¹¹⁹ Gortyn code VII 36–VIII 8; Deut. 25. 5–10 (Cassin 1987 304–15; cf. also Bourdieu 1972, 46–8).

term used in the law is *proix*,¹²⁰ and the payment envisaged is clearly different from the *phernê* which had been restricted by Solon's sumptuary laws. The level of dowry demanded from members of each Solonian census class is expressed in drachmas, but it is hard to believe that in the early sixth century all Athenians were able to make their dowry payments in silver or valuables. Furthermore, the use of the term *sitos*, grain, to denote financial obligations arising from possession of a dowry suggests that in early times dowry was normally transferred in the form of rights over land. Even in the classical period, when most dowries were paid over in cash, they were secured by a mortgage on land (*apotiméma*).¹²¹ The dowry was conceptualized as a fund for the woman's maintenance, and was therefore controlled by the man with whom she was residing. A husband who had not received all the dowry promised with his wife, or the kin of a divorced woman whose dowry had not been returned, could bring a *dikê siton* against the withholder of the dowry; in the classical period he was entitled to interest at 18% of its value.¹²²

All these indications seem to me to point to the conclusion that Solon was legislating in a context where dowry in land was well established. Fathers and brothers may well have preferred to substitute cash, animals, and/or valuables when they could do so, but this option in practice will largely have been restricted to the elite; to some extent Solon's limitation of the goods that could be carried in wedding processions as *phernê* may have encouraged a shift towards dowries

¹²⁰ Etymologically the term *proix* seems to refer to a free gift that did not form part of a series of exchanges (cf. *Od.* 13. 15, *proikos*, and the adverb *proika*, 'for free'). It seems that the gift of *hedna* by the groom (Humphreys in preparation *a*) had already become insignificant by Solon's day. The view of Piccirilli 1978 that *phernê* included land transfers seems to me untenable. Cf. the limit on *komistra* (chattels and cash) in the Gortyn code, III 38–41. D. O. Hughes 1978 has useful data on transitions from one (medieval) form of marriage-prestation to another. Important analysis of the relation between transfers of land, cash, and valuables at marriage in Sant Cassia and Bada 1992, ch. 4.

¹²¹ A. R. W. Harrison 1968, 296–303. The use of stone markers, *horoi*, to indicate such liens on land was probably introduced after the disruption caused by the Peloponnesian War; earlier, it would have been sufficient to call neighbours to witness the agreement. A *horos* is a stone marker carrying information about property rights; *pace* Finley 1952, 5–6, it seems to me misleading to speak of it as 'marking an encumbrance', and thus to distinguish 'mortgage' *horoi* from boundary markers (cf. above, n. 38). Dowry in land at Sparta, *Ar. Pol.* 1270a25 (Plut. *Lys.* 30. 5 is hardly reliable). See Hunter 1994, 25–6 on possible cases of dowry in land in classical Athens.

¹²² Cf. above, n. 50 on *sitos* on Solon's first axon. The interest rate was 9 obols per mina (100 dr.) per month, [Dem.] 59. 52. It is not entirely certain that the husband who had not received the full dowry could use the *dikê siton* (A. R. W. Harrison 1968, 50–2), but it seems likely. It was also available against a guardian or tenant who held an orphan's estate and failed to pay over the revenue from it; the archon was responsible for such cases (*A.P.* 56. 7), which in early times could also have been brought under the procedure of *eisangelia kakoseôs orphanou*. The *dikê proikos* (Harrison 1968, 49–60), for return of the whole dowry, belonged to the class of 'one-month suits' (*emménōi dikai*) handled by the *eisagôgeis*, probably introduced in the late 340s or later (Gernet 1938), and is therefore irrelevant here.

in land even at the elite level, until monetarization made it easy to make dowry payments in cash.

LAW AND THE OIKOS: (II) INTERVENTIONS

It has been suggested that to transfer land from one oikos to another on the occasion of the transfer of a woman was not in accordance with the male ideology of Solon's society and with Solon's interest in stabilizing the size of landholdings;¹²³ but the ideological situation is more complex. Early Attic law was shaped at least as much by conceptions of the role of law and of the state's officials as by conceptions of gender and property. Women were considered incapable of managing property and, for that reason, dangerous—Solon may have been responsible for the Attic law limiting the value of business transactions a woman could undertake to one medimnos (about 1½ bushels) of barley, and a will made under the influence of a woman could be challenged—but their weakness also made them a suitable subject for legal regulation. The situation of the orphaned epikleros whose father had not arranged for her marriage either during his lifetime or by *diatheke*, which must in practice have been very rare,¹²⁴ inspired an extraordinary proliferation of legal detail, especially focused on the yet rarer cases where the epikleros' inheritance placed her in the lowest property class but her next-of-kin was richer ([Demosthenes] 43. 54, cf. n. 106). Rather than pre-

¹²³ Cf. Leduc 1991. But the sequence of developments that has to be postulated is improbably complex. We have to believe that Solon's law on *pherné* forbade all marriage-prestations and that dowry in land and/or cash subsequently crept in, concealed under the different term *proix*, at a date early enough for 500 dr. to seem a reasonable value to set on the dowry that had to be paid to a poor epikleros by a rich *pentakosiomedimnos* kinsman. In the classical period trousseau items are included in the *proix* (A. R. W. Harrison 1968, 46–7; Is. 1. 8, Dem. 41. 27). *Pherné* is used twice to denote land in classical prose texts: in Aisch. 2. 31 the context is mythical and Aisch. probably regards *pherné* as a poetic synonym for *proix*; in Xen. *Kyrop.* 8. 5. 19–20 the choice is influenced by Greek ideas about the role of gifts in Persian culture, and since the fiancée is an only daughter *proix* would not be appropriate (*pherné* is also used by Hdt. 1. 93 of the dowries earned for themselves by Lydian prostitutes).

¹²⁴ Cf. Ruschenbusch 1990; ch. 7 n. 106. The daughters of Epilykos, whose father seems to have died while they were in infancy, were claimed by their next-of-kin when they came of age, and no mention is made of a will (Andokides 1. 117–21, *APF* 8429 IV; Table 4.2, ch. 4 n. 8). Sositheos, speaker of [Dem.] 43, had claimed his wife by *epidikasia*, but he refers to his WF's *episképsis* that a son of the marriage should be adopted posthumously to him, so the *epidikasia* may have been made on the basis of a will (cf. ch. 7, case 9). *POxy* 2464 refers to an epikleros claimed by *epidikasia*, but the situation is hard to reconstruct; see Appendix 5. Lys. F XI Thalheim 1913, XII Carey 2007 (and perhaps LXVI/50, LXXVII Carey), from an *epidikasia* by a Kallaischros for a girl whose father Antiphon was killed by the Thirty, may provide a parallel to the case of the daughters of Epilykos. The father's freedom to betroth a potential epikleros as he wishes is attested for Sparta (Hdt. 6. 57), and probably (*pace* Maffi 1997a) for Gortyn, where however the woman married or betrothed by her father or brother had the right to free herself on becoming an heiress if she wished.

sending itself as the strong arm ready to decide disputes between independent male householders, who might see such pretensions as infringing on their own autarky, the law seems to stress its role in protecting the weak, the woman and children of the *oikos* without a head. While Solon did provide ongoing legal protection as well as immediate relief for the lower classes (ban on debt slavery; perhaps law on *hybris*, but see below, n. 143), he also introduced a significant gender (and age) dimension into the functions of law. The belief that women are incapable of managing their own affairs does not lead simply to their total exclusion from the public sphere, but instead makes the woman who lacks a male protector a peculiarly proper subject for the exercise of public authority.¹²⁵ The same combination of mistrust of women and paternalism is seen, in my opinion, in the classification of dowry as provision for a woman's maintenance (*sitos*). Whereas the law of Gortyn recognized that dowry represented a form of inheritance for daughters,¹²⁶ Attic law denied this, but made careful provision to ensure that maintenance payments were made.

LAW AND THE OIKOS: THE BALANCE

In trying to assess the general character of early Attic written law and its effects on patterns of interaction between kin, it is obviously necessary to recognize that later legislators may have added to the core of laws provided by Solon. Indeed, comparison with what we know of the legislation of the years following the reforms of Kleisthenes and Ephialtes rather suggests that Solon's activities would have created an interest in legislation which would have produced a trickle of minor measures and adjustments in subsequent years (cf. Humbert 1990, 284).¹²⁷ It is also very possible that laws passed by Peisistratos were subsequently attributed to Solon.¹²⁸ Some of the more pedantic details in archaic Athenian law—even the law on the dowry to be given to poor *epikleroi*—may well belong to this epigonic

¹²⁵ The *Odyssey* shows how problematic this situation could be felt to be, as does (later) Aisch. 1. 170–1. Cf. Humphreys 1988 n. 15.

¹²⁶ IV 31–V 10. While the Attic classification no doubt represents a refusal to confer property rights on women, it should also be noted that there is no recognized category of gifts in anticipation of inheritance in Attic law.

¹²⁷ After Kleisthenes: oath of council, *stratēgoi*, ostracism, introduction of lot for selection of archons. After Ephialtes: archonship open to *zeugitai*, jury pay, Perikles' citizenship law.

¹²⁸ The tyrants seem to have innovated in ritual, acting through the office of the *archon basileus* (J. K. Davies 1988; cf. n. 14 above, and n. 36 on Peisistratid taxation). I take it that *axones* continued to be used in the sixth century (but see G. Davis 2011), and thus quotation from an *axôn* does not prove that a law is Solonian. The law forbidding an adoptee to return to his *oikos* of origin without leaving a son in that of his pater (cf. colonial parallels, n. 88), cited from axon 21, may belong to this trickle-on legislation. Axon 16 specified prices of sacrificial victims, and may therefore have contained (part of) Solon's festival calendar (cf. n. 133).

legislation. Nevertheless, it seems to me both possible and useful, at least as a basis for further discussion, to pull together some of the characteristics of early Athenian legislation, as we see it before the city began to draft regulations for an empire.

Sweeping measures and swingeing penalties could be proposed to remedy a situation of crisis such as that in which Solon took office, or to deter magistrates from misconduct in office, but in other contexts the legislator had to proceed with caution. Intensive and detailed regulation of marginal situations is combined with considerable freedom for the individual to make any arrangements that his kin and peers will accept. The order of intestate succession to a man who leaves no lineal heirs is precisely specified, yet the man who sees his death approaching can make what arrangements he chooses, for his property and for his potentially epikleric daughters. Nothoi were not entitled to claim an estate before the archon, nor to claim the right to phratry membership, but if a man without legitimate sons could persuade his kin and community to accept a diatheke in favour of a nothos, the law had no powers to stop him. Magistrates were given little chance to act on their own initiative; they could only react to a complaint from a member of the public, and the level of fines and penalties they could impose was restricted.¹²⁹ Written law enhanced the authority of elected magistrates in relation to that of other members of the political elite, by specifying that complaints about illegal behaviour (*eisangeliai*, *graphai*, *phaseis*, etc.) were to be brought to them; but written law also represented an effort to detach the law from the individual office-holders responsible for enforcing it. The law was given this air of independent consistency partly by the physical reality of the wooden blocks on which it was inscribed,¹³⁰ but also by the mass of detail concentrated on a few topics: intestate succession, the protection of the epikleros,

¹²⁹ A thief could be sentenced to 5 days in the stocks only with the authorization of the *hēliaia*, Lys. 10. 15, Dem. 24. 105 (see Humphreys 1983b, 238; 1997, 550). The archon could fine those guilty of *hybris* against orphans and others for whom he had responsibility *kata to telos* ([Dem.] 43. 75; *telos* probably here refers not to his office, but to their census class, Kahrstedt 1936, 215–19), but had to ask the *hēliaia* for authority to impose a heavier penalty. The formula, ‘let the *hēliaia* decide what he is to pay or suffer’ belongs to the archaic period of Athenian law. Whether the *hēliaia* was ‘the assembly sitting as a court’ (P. J. Rhodes 1981a; Humphreys 1983b; Ostwald 1986) or a separate institution (M. H. Hansen 1982; 1987a, 104–5) is perhaps an academic question. I see no reason to assume a differentiation in meeting place or membership at this period. The question to be asked about *epheisis* is not (*pace* MacDowell 1978), whether the term meant ‘appeal’ or ‘referral’, but under what circumstances litigants could oblige a magistrate to refer a case to the *Heliaia* (Van Wees 2011a). Comments by bystanders, who will have been present at magistrates’ hearings (n. 6 above) may well have exerted an influence.

¹³⁰ Of course Solon’s *axones* (and/or *kurbeis*) were not as imposing physically as the wall on which the Gortyn code was inscribed, but the length of the text must at the time have been very impressive for a public announcement (n. 48 above). I suggested in Humphreys 1991 that they were kept indoors and that the choice of revolving wooden beams was partly due to a need to save space (cf. N. D. Robertson 1986; but I am not yet convinced by his suggestion that the *kurbeis* were Peisistratean).

abuse in public places (with a list of specifically prohibited terms), behaviour likely to lead to disputes with neighbours. The distance to be left between the boundary of one's property and a wall, house, ditch, pit, well, beehive, olive tree, fig tree, or other trees, is precisely laid down.¹³¹

I am not suggesting that Solon or his successors in the archonship consciously set out to enhance the dignity of the law by elaborate regulations in these areas. Rather, they worked with experience of the kind of problems that were likely to come to magistrates for settlement,¹³² and a sense of the 'soft' areas of social behaviour where public opinion would tolerate regulation by authority, and the 'harder' areas where resistance would be encountered. Although Solon's legislation touched on many different aspects of social interaction, it still has a somewhat interstitial quality. Adumbrations of what law might one day become are sketched out in obscure corners of social practice.¹³³

Solon's concern with matters for which the archon had special responsibility, the connection of his legislation to the economic crisis of the time, and the view of law and the state as the protectors of the weak are all illustrated by the regulations on *paranoia*, designed for use against a father who had become incapable of managing his oikos; in correlation, Solon also specified that sons were obliged to support their aged parents, provided that the son was legitimate and had been given the means of making a living, either land or a training in trade.¹³⁴

¹³¹ Ruschenbusch 1966, nos. 32–3, 60–2, cf. 63–4; cf. R. W. Wallace 1994 on slander. Gagarin 2005 (cf. 2007) links written law to detail, but in my view this is not yet 'codification'.

¹³² In the modern Cretan disputes resulting in charges of homicide or attempted homicide analysed by Astrinaki 1986, land boundaries and abuse figure prominently.

¹³³ It must of course be remembered that parts of the legislation of the 6th c. will have been lost. I am here partly modifying what I said in Humphreys 1988, n. 9 about the tendency of lawgivers to legitimate their own position and their laws by presenting their legislation as a code designed to impose order systematically on all forms of social interaction. The scope of such systematic ordering may depend on the ambitions of the ruler/lawgiver and the source of his authority. Solon's position was more circumscribed than that of a Hammurabi or—since he lacked divine authorization—of a Moses. Apart from the festival calendar, which belonged to the genre of the list, and in which precise regulation of sacrifice was a proof of piety, early Athenian law thus shows a tendency to systematic coverage only in dealing with a few, rather interstitial, areas of behaviour. See n. 114 above; Maffi 1989*a*; Cartledge a. o. 1990, 7. The next major development in Athenian law was in regulation of the empire (cf. the influence of colonialism on the development of the modern state).

¹³⁴ On *epidikasia* in Bekker 1814 I 310 see above, n. 41; *A.P.* 56. 6 refers to *graphai* and *dikai paranoias*, Plat. *Laws* 929d–e has *graphé*. There may be a reference to a paranoia case in Is. 6. 35–7, where an attempt to have Euktemon's estate leased during his lifetime is reported (on *Vita Soph.* 13 see ch. 9 n. 54). The law stated in Plut. *Sol.* 22 cannot have said that every Athenian had to teach his son a craft; rather, if the father had no land to leave, he had to train his son to get a living by other means. (The distinction between farmers and craftsmen appears again in Solon's regulations on citizenship, Plut. *Sol.* 24.) I assume this provision was related to the procedure for protection of parents (*eisangelia* or *graphé goneôn kakoseôs*, cf. P. J. Rhodes 1981*a*, 618, 629); Ruschenbusch 1966 F 111–14 doubted the attribution to Solon, but it can hardly be much later.

These provisions also illustrate another aspect of Solon's laws: it was clearly established that the effects of law could reach inside the *oikos*. It was not that the community had previously lacked interest in the internal affairs of *oikoi*, or had no way of making its disapproval known if it sensed irregularity; but nevertheless the *oikos* wall had marked an important boundary in legal thinking. An intruder caught inside the *oikos* in the act of stealing or interfering with a woman under the control of the *oikos* head could be killed with impunity; the status of a *nothos* in the community was markedly influenced by the attitude to him of his father or his legitimate brothers; a child born in an *oikos* became a member of the family, or a slave, of the *oikos* head; a woman was under the control of the head of the *oikos* in which she resided, and if it had no effective head there was no rule to determine who should take responsibility for her.¹³⁵ The Athenian legislators of the sixth century tended to override the *oikos* boundary. There were general laws on theft, rape, and adultery; laws on the criteria for admission to *phratry* membership were offered, in place of conventions based on *oikos* membership, as the basis for determining personal status; the archon was charged with responsibility for 'empty' *oikoi*, and for dealing with the widow who claimed to be pregnant by her deceased husband. Safeguards were added for the man wrongfully imprisoned as an adulterer or accused of seducing or raping a woman who is behaving as a prostitute.¹³⁶

It is misleading to think of these developments in terms of an evolution from 'self-help' to written law, or of encroachment by the state on 'private' affairs. Rather, written law began to appropriate some of the functions of popular justice. The sanctions in the laws dealing with *moicheia* indicate this origin: the cuckolded husband who continues to live with his wife, and the adulterous wife, are subject to forms of *atimia*, i.e., public dishonouring; the successful defendant in an entrapment case may do anything he wishes, in court, to his prosecutor, short of using a knife (i.e. short of publicly castrating him).¹³⁷ The law stating that a

¹³⁵ D. Cohen 1991; Ogden 1996, 265–71 on Gortyn; Bourdieu 1972, 16–17 on the category-structure of customary law; Todd 1993, 204–10. The boundedness of *oikoi* of course varied with social status.

¹³⁶ Ruschenbusch 1966, nos. 23, 26, 28–30. If there is any basis in law for the tradition that Solon legalized brothels (perhaps derived only from comedy, cf. Rosivach 1995), the law protecting the clients of prostitutes against prosecution for *moicheia* ([Dem.] 59. 67, cf. Lys. 10. 19) may have supplied it. Cf. McGinn 1992 on Rome.

¹³⁷ Cf. above, n. 9. Cuckold and adulteress, [Dem.] 59. 87 (cf. Aisch. 1. 183, but the laws in this text are later additions). An entrapment case, settled out of court, in [Dem.] 59. 64–71; in Lys. 1 the prosecution clearly accused Euphiletos of entrapment as well as homicide (cf. ch. 14 n. 47). Cf. Scafuro 1997, C. B. Patterson 1998, Omitowaju 2002. In claiming that death was the penalty for *moicheia*, while the rapist only paid compensation, Euphiletos (Lys. 1. 32) was tendentiously comparing the *oikos*-based provisions in Dracon's law on justifiable homicide with offence-based provisions in the law on assault (*biaia*; cf. Patterson, op. cit.). The only evidence for death as the penalty for a court conviction for *moicheia* is Lys. 13. 68, where the orator claims that the defendant (who survived his conviction) was of slave origin. Court cases will have been rare (Foxhall 1991).

man convicted of homicide, if found on Athenian territory, could be killed but not mutilated or held to ransom, belongs to the same context.¹³⁸

Before we turn to consider the effects of this archaic legislation, it is worth asking what the legislators did *not* try to regulate, in the field of interactions involving kin and affines. Guardianship, *apokêryxis*, and divorce receive attention in Plato's *Laws*, in the Gortyn code, and in some other texts, which they do not seem to have attracted in archaic Athens. Law did not prescribe the choice of guardians for orphans; provision was made for the removal of guardians who mistreated their wards, through the *eisangelia kakôseôs orphanôn*, but the idea that the state should regulate the selection of guardians emerges only later (cf. ch. 3 at n. 33). The right to make testamentary arrangements extends to the appointment of guardians. The lack of legal interest in relations between a father and his adult son(s) contrasts strikingly with the elaboration of this issue in Roman law. Athenian law had nothing to say about gifts of property to sons during the father's lifetime, or about the son's capacity to make a will while his father was alive.¹³⁹ The right of a father to disown and disinherit his son by *apokêryxis* was recognized in Attika, but there is no evidence that it was in any way regulated by or referred to in law; Plato's apology for dealing with the question in the *Laws* (928d–929c) suggests that it was not. Plato's idea that the father should be obliged to discuss the matter first with a council of kin, composed of the son's patri- and matrilineal relatives up to and including first cousins (*mechri anepsiôn*) may be inspired by Phoenix' story in *Iliad* 9. 447–77; it is doubtful whether *apokêryxis* was frequent enough in real life to generate any customary rules. Divorce in Athenian law was dealt with only under the provisions for returning dowry (*dikê sitou*); the wife was not considered to have contributed anything else to the household during her residence in it.¹⁴⁰ Not only were women considered,

¹³⁸ Imprisonment and holding to ransom, often no doubt with some rough treatment, were the normal response for a cuckolded husband; *Od.* 8. 266–366; Gortyn code II 20–45; in *Lys.* 1. 25, 29 the adulterer, who was probably killed accidentally by his captors, had offered to pay a ransom. D. Cohen's claim (1991) that the *moichos* was treated as a *kakourgos* is justified in the sense that in both cases written law took over popular procedures for dealing with known offenders; and no doubt *moichoi* who could not afford to pay ransom money, or had no reputation to lose, would get summary treatment. However, his argument rests on very conjectural restorations of legal texts (p. 121), and disregards the underclass connotations of *kakourgos* in the classical period (A. R. W. Harrison 1971 aptly translates 'felon'). The typical penalty for a *kakourgos* was *apotympanismos*, the Athenian equivalent of crucifixion (Keramopoulos 1923; cf. Todd 1993, 141; Todd 2000; *Lys.* 13. 64–8, where the condemned were allegedly of slave origin); on the mass burial of handcuffed bodies at Phaleron, see Killgrove 2016.

¹³⁹ Cf. Wolff 1978 on Athens and Rome; Herzfeld 1980 on the importance of analysing the devolution process as a whole; Maffi 1983 on the regulation of father/son relations at Gortyn; n. 95 above.

¹⁴⁰ At Gortyn the woman could take half the crop from land she had contributed to the marriage, as well as the land itself, plus half the cloth she had woven (II 45–55). On the (mistaken) modern view that a wife who left her husband, at Athens, had to register her divorce with the archon see ch. 9 n. 50.

at law, incapable of managing property, they were also considered incapable of producing it.

LAW AND THE KINDRED

Nevertheless, it would be a mistake to conclude too hastily that written law decreased the rights and influence of women. Attic culture, in its conceptions of gender, descent, and property, offered conflicting ideals and categorizations. Women, considered solely from the gender angle, were classed as incapable of concluding legally valid transactions; yet daughters, viewed as descendants, could transmit property to their heirs. Women could not own property, but they could be attached to it; the heiress was *epikleros*, attached to the inheritance, the wife was *epiproikos*, attached to her dowry. In a family with both sons and daughters, parts of the property were detached to serve as dowry for the daughters and pass into the control of other households; where there were only daughters, the *epikleros* was considered to remain with the whole property in her father's *oikos*, her husband residing there with her. This situation, however, was unstable, since the position of uxorilocally married son-in-law was only likely to attract men of lower status than the bride's father, yet a wealthy father could attract a prestigious bridegroom for his daughter. Written law may have facilitated the transition to a view of the uxorilocality of *epikleric* marriage as legal fiction rather than residential fact.

Solon not only confirmed the rights of daughters to remain attached to the whole of their fathers' estate in the absence of male descendants, he also generalized the rules for inheritance in the individual *oikos* to form the basis for his ranking of kin in the law on intestate succession. This must imply that—as Drakon's law on homicide and Greek kinship terminology also indicate—the bilateral kindred was already strongly established. Drakon had regarded all cousins (*anepsioi*) as equivalent; Solon ranked FBD before FZD, MBD before MZD, and patrikin before matrikin, but although if a man died intestate and his next-of-kin was an aunt, a niece, or a female cousin, her attachment to the *kleros* would not be as physically self-evident as that of a daughter, it does not seem to have occurred to Solon to restrict rights of intestate succession to agnates. His conception of the kindred was less symmetrical than that of Drakon—a sister's son (ZS) was much more likely to inherit from his MB than MB from ZS—but his law nevertheless provided strong motives for kin to remain in close association with each other. Relationships in which the connecting link was a woman remained important and this allowed women to play an influential role in kindreds. Indeed, fixing the rules for intestate succession in written law must have had the effect of strengthening ties with cognatic kin who did not live in the same community. Without

the authority of written law, it is unlikely that an outsider could have imposed himself as heir, even if he was the next-of-kin.

Written law privileged the calculation of genealogical relationship over other claims. Physical division of the estate of a childless man among his *chêrôstai* was probably not the only form of succession available in pre-Solonian times, but merely the worst possible scenario, the outcome dreaded because it seemed to threaten the complete destruction of the personality of the dying owner, identified with the integrity of his estate. The childless man would hope to select an individual heir, to join him in his *oikos* during his old age or to be solemnly instated by *episkepsis* on his deathbed. Kin and neighbours, in considering whether such a choice was fair and deserved the approval and support of the community, would consider a number of factors: not only genealogical closeness but also the number of sons in the family from which the heir was chosen and in other families that might have provided heirs, the personal relations between the parties concerned, the ages of potential heirs (particularly important where the marriage of an *epikleros* was concerned), and so forth. Solon's law could not incorporate all these variables, which continued to serve as justifications in court when an heir who was not *d.c.*'s next-of-kin had to defend his position. Written law encouraged next-of-kin to feel that they had a claim to inherit regardless of *d.c.*'s wishes.

FORMAL LEGISLATION AND WRITTEN LAW: EFFECTS

It cannot have been easy for Solon to foresee the effects of his laws. He was legislating in a society in which outlying villages had little contact with the elected authorities in the city, and nobles were more ready to impose judgment on others than to submit to it themselves. He had the vision of a law that applied equally to all—rich and poor, centre and periphery—but it would take time for this vision to translate itself into reality.

The growth of the control of elected magistrates, rather than local leaders, over dispute settlement is likely to have come about through the decisions of litigants dissatisfied with local judgments to appeal to the city authorities. The reverse process—attempt to get local support for overturning a judgment given in the city—is by no means unthinkable, but disputants are more likely to have tried to settle matters locally in the first place. Appeal to local leaders to act as arbitrators was always permitted—any dispute could be submitted to private arbitration—but the alternative possibility of a more formal hearing in the city would make it more difficult to get disputants to accept a local ruling as final. Nevertheless, there was still enough judicial activity by local leaders some fifty years later for Peisistratos to appoint travelling arbitrators, *dikastai kata dêmous*, perhaps to ensure that the rules applied in the countryside were the same as those

of the city. The first step, taken by Solon, was to emphasize the superior authority of judgments delivered by city officials; only when the authority of magistrates, the *Heliaia* and written law were more firmly established could the city appoint its own travelling commission of arbitrators.¹⁴¹

Apart from the emphasis laid on the judicial role of the eponymous archon both by his own tenure of the post and by his legislation on inheritance and *epikleroi*, Solon reinforced the authority of elected magistrates by specifying the officials to whom complaints about various forms of flagrant wrongdoing were to be made. A number of forms of popular complaint, vaguely differentiated as involving taking the offender to a person in authority or the authority to the scene of the offence, making a verbal report, pointing out an offending object or person, etc., acquired the authority of mention in written law and started on a slow (and never fully completed) journey towards more precise legal definition. In addition, several laws now provided for a written indictment to be made.¹⁴²

Stress on the authority of the city's elected officials and institutions went hand-in-hand with the admission of rich non-Eupatridai to office. Rich country landowners from the old towns or villages of Attika, *agroikoi*, were encouraged to spend more time in the city; the tradition that Solon regulated the right to dine at the office-holders' table in the Prytaneion may indicate that this was one mechanism used to increase the integration of the new political elite, and one of the purposes of introducing sanctions against *hybris* and *kakégoria*, insults to honour, may have been to protect non-Eupatridai from the resentment of some members of the old nobility.¹⁴³

The impact of Solon's legislation must have been affected by the fact that it was passed in a period of intense politicization. Provision for public arrest or denunciation of malefactors, announcement of estates and *epikleroi* open to be claimed, by herald and in the Assembly, hearings by magistrates in the public centre of the city or, for especially notorious or controversial cases, in the Assembly (above, n. 129), brought the new laws and legal institutions to the attention

¹⁴¹ See Humphreys 1983*b*, 239–40. The competence of the travelling *dikastai* was probably limited to minor affairs, but they would send more important cases to the city.

¹⁴² *Apagôgê*, *endeixis*, *eisangelia*, *phasis*, *graphê*; above, n. 10. Solon himself may have specified the use of a *graphê* in only a few laws (Gagarin 1986, 69), but the procedure was widely generalized. The use of writing provided a safeguard both against malicious and irresponsible accusations and against inaction on the part of magistrates (cf. Humbert 1990). In my view, Athenian law never provided an exhaustive list of offences for which each of these procedures was appropriate, still less an authoritative definition of each offence (*contra*, Rudhardt 1960; cf. P. J. Rhodes 1979. Hyp. 4 *Eux.* 7–8 does not prove that there was a law defining all offences in respect of which an *eisangelia* could be brought).

¹⁴³ On *sitêsis* in the Prytaneion see Ruschenbusch 1966, F 87–8; Schmitt-Pantel 1992; Humphreys 2017*b*; on *hybris*, Humphreys 1988 n. 15; O. Murray 1990*b*; Van Wees 2011*a*. Murray perhaps lays too much stress on the drunken pranks of young symposiasts documented in the classical period; in Solon's day neither symposia nor contumacious behaviour were so clearly associated with the young or so clearly separated from the public sphere (cf. Schmitt-Pantel 1990).

of citizens and gave their perception of law a bias towards the type of case that was likely to give rise to disputes. The ample space left by Solon for informal, amicable agreement over the choice of an heir or son-in-law tended to escape notice, as the public became used to hearing claims based on closeness of kinship to *d.c.* As I have suggested, the frequency of disputes over cases where the chosen heir had to be introduced to *d.c.*'s phratry by adoption also generated a tendency to secure the position of all heirs by adoption, an ideology that stressed the importance of 'continuing the oikos' and of the adopted son's religious obligations, and a belief that Solon's law on testamentary arrangements was essentially concerned with regulating adoption. We cannot however date these developments with any precision, or assess the role in them of the introduction of jury courts.

Solon's laws by no means provided complete coverage even for the hereditary transmission of property, one of his best-attested concerns. The programme was ambitious in its announcement of a single law for all classes, and in the firm and minute detail with which it regulated some rather marginal areas of behaviour, yet timid in the latitude it left for powerful household heads to continue to order their own affairs as they pleased. The situation of the woman left alone in an 'empty' oikos was made the focus of detailed public regulation, yet the right to dowry of the woman in an oikos with a head was neither protected nor quantified. Some additions must have been made to Solon's laws during the period before the late fifth century, when we start to have evidence from forensic speeches, yet there was a tendency to sacralize and mystify early written law, to turn its authors into quasi-mythical figures and distance it and them from current political activity, which inhibited constant revisions. Early written law became part of traditional *nomos*, custom; Assembly decrees came to be known as *psêphismata*, and it was not until the later fifth century that *nomos* came to be accepted as a term for recent legislative activity by the demos.¹⁴⁴ The story that Solon left the city for ten years after his term of office, persuading the Athenians to swear not to alter his laws until he returned, gives expression to an attitude that lasted throughout the classical period.

In assessing the effects of Solon's legislation in the sixth century, it is almost impossible to disentangle the effects of the laws themselves from the effects of the political crisis in which they were passed and the heightened political consciousness and interaction between city and countryside that it must have

¹⁴⁴ Humphreys 1987*b*, 1991; R. Thomas 1994 on the 4th c. constructions of Solon. The poems call his laws *thesmoi*, which put them in the same category as oral rulings delivered by community leaders. I do not know whether the six annually elected *thesmothetai* existed before Solon's archonship or were created by him; they were responsible for some of the *graphai* attributed to him (*hybris*, adultery). Changes consequent on Kleisthenes' and Perikles' modifications of the law of citizenship are discussed in chs. 19/22.

generated. Solon's laws encouraged and favoured those who were ready to involve themselves in the growing activity of the city and the public sphere. On the economic side, the abolition of debt slavery and of the rent obligations of hektemoroi would only have provided short-term relief, but they may have stimulated alternative forms of economic activity. The prohibition of food exports (above, n. 60) may have stimulated the market in food in the city, as may increased building activity; the rich may have organized more trading expeditions in search of slaves to work their land, and this may have increased demand for luxury items produced by urban artisans; more maritime activity meant more information about the opportunities for acquiring wealth abroad open to young men. Athenian colonization of the Sigeion area and the Chersonese, on the route to the Black Sea, will be part of this process, and will have helped to absorb surplus sons from Attic smallholdings. The balance began to tip from exploitation of peasant labour by larger landowners to cooperation between rich and poor in exploiting other areas. Increased travel by the young will have had its own influence, too, on the use made of Solon's laws on succession; it would presumably be the young man who had gone abroad to seek wealth and had detached himself from village society who would be the most ready to acquire land by insisting on his legal rights as next-of-kin even if the family and neighbours favoured another candidate.

For the elite, changes in behaviour may have come about mainly as a result of the growing importance of the public sphere, although the experience of administering written law may also have had some impact. The importance of having an *oikos* full of fighting men was decreasing. Armies were recruited by tribes and phratries rather than through individual ties; power passed from one officeholder to another, widespread alliances became more important than the concentration of followers under personal control. Homosexual ties with younger men partly replaced marriage as a means of acquiring allies; the male *symposion* was becoming more clearly separated from the domain of the respectable women of the household, the *gymnasion* began to develop as another space for male socializing. A law forbidding slaves to have erotic relations with boys and exercise in the gymnasium is attributed to Solon, and should belong in any case to the sixth century.¹⁴⁵ The relation between Achilles and Patroklos, presented by

¹⁴⁵ Quite a lot of the development described here may have taken place before Solon (cf. Weinsanto 1983). Homosexual courtship was incorporated into the institutions of the city in Crete, where it was used in coopting new members into the *andreion*, a group with some of the functions of the Attic phratry (Ephoros *FGH* 70 F 149 = Str. 10. 4. 21/C 482–3; Schmitt-Pantel 1992). For homosexuality in Solon's period see Dover 1978, 195; the problem of dating the laws has not been seriously discussed, and is complicated by the introduction of laws and documents into Aisch. 1 in the Hellenistic period (prosopographical inaccuracies in §§ 50, 68, and perhaps also 66; nothing in the 'laws' that is not directly derived from Aischines' text can be regarded as trustworthy), which means that we do not know how much

Homer in terms of adoption by Achilles' father, had by the early fifth century come to be interpreted as homoerotic, despite the difficulty of classifying a partnership in which the younger man, Achilles, was of higher status than and extravagantly attached to the older.¹⁴⁶ (Normally, extravagant devotion on the part of the older *erastês* and arrogant resistance—or at least modest reluctance—on the side of the younger *erômenos* helped to mask the element of domination implied in the *erastês*' age and in sexual penetration.) Thus the motives that had sustained different forms of household, marriage, and adoption at elite level from those in use among peasants disappeared, and conformity to Solon's laws became less problematic for the elite.

In the classical period, when we can see the laws working in practice in the courts, there is some evidence that a rich man might still try to use his influence to introduce an illegitimate son to a phratry and deme and thus confer citizenship and an inheritance on him. Disputes often arise from a compromise arrangement, with no backing in law, made in the hope of averting an open family struggle in the courts, which then provides the beneficiary with a basis for court action. Wills and even adoptions *inter vivos* are contested by next-of-kin of the testator, though there is less evidence of conflict over the marriage of epikleroi. Disputes arose not so much over the interpretation of the laws as over the conflict between closeness at law and closeness in affection, between the exercise of choice in selecting an heir and the rules laid down in the law on intestate succession. The existence of written rules gave rise to claims based on them, even where a man had exercised his right to make a choice in due form; but court decisions were never predictable enough to mould behaviour entirely into the pattern prescribed in the law on intestate succession. Space for choice remained. In the following chapters we will first study in more detail three relationships in which Athenians chose to reinforce ties of kinship through legal forms (adoption, guardianship, and marriage within the kindred), then consider relations with kin in the economic sphere, and subsequently look at some of the more interesting court cases and the general patterns of dispute that can be deduced from the forensic speeches.

Aischines embroidered the laws that he cited. Dover seems to me to be right in concentrating on the elaboration of homosexual courtship as a key element in high culture (cf. Algazi and Drory 2000 for medieval parallels; Žižek 1994, ch. 4; ch. 13 n. 25); too many discussions still wander off into anthropological exotica, animal behaviour, and popular psychology.

¹⁴⁶ Dover 1978, 197–9; sources differ in deciding which was *erastês* and which *erômenos*.

Adoption

It was argued in ch.1 that in the early archaic period (8th–7th centuries) powerful men might incorporate immigrants or sons-in-law into their households without formalities; the children of an uxori locally married daughter would automatically derive their social position from her father. A powerful man whose marriage was infertile would presumably try to have sons by a concubine, and hope that they would be accepted as heirs to his status.¹

In a case more like the epikleric adoptions to be discussed below, Kisseus of Thrace married his daughter to Antenor, a leading Trojan, but took one of the sons of this marriage, Iphidamas, back into his own household. Though we meet Iphidamas fighting beside his patrikin at Troy (*Iliad* 11. 221–8), he had married a sister (or half-sister?) of his mother and was now clearly expected to settle in the household of Kisseus. Adoption is mentioned only once as a mechanism for incorporating new members into the Homeric *oikos*, and here it is the newcomer who adopts: Phoenix adopted the child Achilles (*Iliad* 9. 480–95: *se paida... poieumên* 494–5). This clearly does not alter Achilles' relationship to his *genitor* Peleus; it seems to be a way of incorporating the refugee Phoenix into Peleus' household without loss of honour and dignity for him.

It can also be assumed that a farmer who had no sons of his own would look for a son-in-law or adoptive son to work beside him as he grew older, support him in old age, and eventually inherit his property. Whereas Homeric heroes are presented as preferring to incorporate strangers of their own class but from another community, in these quasi- or proto-adoptive relationships men lower in the social scale were apparently expected to look first among their own kin.² Formal adoption would have begun, perhaps, in cases where the adoptee's father

¹ Cf. *Od.* 4. 3–14 on Menelaos' son by a slave mother.

² Adoption of this kind arises from fosterage and in early stages is not clearly distinguishable from it. In the classical period the only attested cases of fostering are those in which a child grows up in the household of a guardian or of his mother's second husband; these are discussed below in ch. 3 (see also Bremmer 1996a). Fostering probably remained common among the poor, who have left no record; exposed infants who are taken up and reared in a quasi-servile status appear frequently in New Comedy (where their formal status as slaves has to be played down) and must have existed—in less romantic circumstances—in reality. For comparative perspectives on adoption, fosterage and related institutions see Donner 1969; J. R. Goody 1969; Carsten 2000; on post-classical antiquity, n. 83 below.

belonged to a different phratry. However, by Solon's time the eponymous archon had acquired responsibility for judging inheritance disputes, and it was accepted that a publicly recognized adoption dispensed the adoptee from having to claim his inheritance by *epidikasia*; this will have encouraged the formalization of adoptions through presentation to the phratry.³ Solon's law did not specify that a childless man had to adopt a kinsman; the aim of coming as close as possible to the ideal situation in which each *oikos* had a single heir made it desirable to allow free choice. Practice clearly shows, however, that Athenians were expected to adopt kin—preferably from the sibling group that would have been entitled to succeed if the adopter had died intestate—and that other changes were more likely to be contested at law (Gernet 1920).

I have argued (Humphreys 2002*a*) that Solon did not forbid adopted sons to adopt in their turn; his law on *diathékai*, wills, only limited the freedom of a man who had formally adopted a son to make arbitrary testamentary arrangements. Conditional testamentary adoption in wills made by men about to leave on dangerous enterprises may already have been a familiar practice, but such a will would need the backing of the kin and associates who witnessed it. Although Solon's law on wills was later interpreted as giving too much freedom to testators, an equally important effect of his legislation was to encourage next-of-kin to challenge wills which the community might well have accepted, but which passed over next-of-kin in favour of candidates closer to the adopter in terms of association and affection.⁴

Most of our evidence on adoption for the period between Solon and Menander comes from forensic speeches in which adoption has been contested, or in which conflict has later arisen over the transmission of property through an adopted heir. Hence, what litigants say about adoption and its functions has to be treated with caution. Contested adoptions were in most cases testamentary, and a litigant defending a will in which he has been adopted as heir would naturally make much of the needs of the dead, while also claiming to have been close to the

³ Rubinstein 1993 argues the case for presentation to phratry and deme being a necessary part of the adoption process. Maffi's claim (1997*b*) that this presentation is merely a mechanism of proof seems to be based on too narrowly legal a view (cf. Vernant 1973 on marriage); in the case of biological sons too, presentation to phratry and deme was part of the process of legitimization.

⁴ The law cited (irrelevantly, in the context of testamentary adoption) in Is. 6. 63, that if natural sons are subsequently born to a man who has adopted *inter vivos* all should share equally, should be relatively early in date; on the law restraining an adoptee from returning to his family of origin unless he left a son in his place see n. 70 below. Ruschenbusch 1962 insists that there was no legal regulation of adoption *inter vivos*; in my view there was also little regulation of testamentary adoption. Posthumous adoption (not based on any statement of intention by the adopter) is attested for the end of the 5th or beginning of the 4th c. in Is. 10 (n. 27). Deaths in the plague must have caused considerable disorder in the 420s.

testator during his lifetime.⁵ We get a diametrically opposite and probably equally unrepresentative view of adoption in Menander, where the adoption takes place when the adoptee is a small boy, there is no family opposition (in Terence's *Adelphoe*, based on a Menandrian original, Micio adopts one of his brother's two sons with the brother's full agreement; nothing is said about Moschion's family of origin in the *Samia*), and the emphasis is on the indulgence of the *pater* and the gratitude and affection of the adopted son, contrasted in *Adelphoe* with the strictness of the biological father and the distance between him and the son he retains. Adopters are unmarried in comedy, and the subtext on adoption is that they have not attained full adult manhood; their indulgence and sympathy for the wild-oat-sowing of the young bachelor is linked to their inability to sire their own offspring.⁶ Curiously, comedy did not as far as we know exploit the tension between the adoptee's feelings for his family of adoption and those he retained for his original kin, although this played a role in the courts, and the contrast between natural affection and legally defined relationship is probably what attracted comic writers to the theme of the *epikleros*.⁷

Since it became the custom that only men without sons adopted,⁸ some discussion of the concept of childlessness is needed here. Adopters from this point of view fall into three categories: married men who are childless or (much more commonly) have a daughter but no sons; men past the age of marriage who have decided not to marry; and young men, unmarried or married but so far childless, who make wills when going on campaign adopting heirs in case they fail to return.

Childlessness is a social rather than a biological concept. The case of Menekles (Isaios 2), who after his second wife has failed to produce children divorces her, on the grounds that he himself is evidently infertile, and adopts one of her brothers,

⁵ Rubinstein 1993 seems to me to give too little weight to this point, though I agree with her that tomb cult was probably increasing rather than decreasing in the 4th c., and that adoption continued in the Hellenistic period.

⁶ Detailed discussion of the *Samia* in Lape 2004. Cf. the comments in Konstan 1983 on Plautus' *Asinaria*, where an indulgent biological father is dominated by his rich wife (possibly an *epikleros* in the Greek original: see Scafuro 1997, 294 on other cases of Greek *epikleroi* becoming richly-dowered wives in Roman comedy); here the father has failed to achieve economic adulthood.

⁷ Foundlings feature prominently in comedy, but at Athens formal adoption was only possible where the adoptee was of proven citizen origin on both sides; the adoptee who does not know his or her origin is an unknown figure, and foundlings are reared in a quasi-servile status (in comedy, usually as prostitutes) until their real parentage is discovered. Cf. below, at nn. 80–3, on Hellenistic developments.

⁸ There are no cases in which a man with a single daughter adopts his son-in-law. In Dem. 41 a man with two daughters adopts the husband of one of them; Diokles of Phlya (*APF* 8443) claimed to have been adopted in the will of his mother's second husband, who had three daughters (Is. 8. 40). Dikaiogenes III was adopted by the will of Dikaiogenes II, who had four sisters. Cf. below, #V 5 2; III 1.

is unique in our sources.⁹ In Menander's *Samia* the only concern of the adopter, Demeas, when he is told that his Samian mistress has had a child, is to have it exposed so that his liaison does not become known. On the other hand, one of the reasons why men with daughters prefer to adopt a daughter's son rather than a son-in-law may be that they wish to be satisfied that the daughter's marriage is fertile, though questions of lineage are also involved.

Adopters in comedy, as we have seen, are represented as unmarried. This is also the case of Archiades in [Demosthenes] 44, who refused the offer of his niece (BD) as wife, saying that he did not wish to marry, and allowed his brother to continue to manage the family farm undivided, while he himself went to live on the island of Salamis (§ 10), eventually adopting the grandson (DS) of his sister. If a childless man had brothers, they would make a strong claim to keep his share of the property in the family, by adoption, in-marriage, or merely keeping the property undivided.¹⁰

The case of Apollodoros, the adopter in Is. 7, forms an interesting transition from the topic of definitive to that of temporary childlessness. He had grown up in the household of his mother's second husband, in which he had a matrilinear half-sister. In his youth, when going on campaign, he had made a will leaving his property to this sister and arranging a prestigious marriage for her into a Eumolpid family. However, he returned alive and well, cancelled the will,¹¹ married, and had a son. But when this son died, and he was already elderly, he adopted his half-sister's son.

Athenians tended to have close relations with their sisters and, as we shall see, with matrilinear stepkin. But the frequency of adoptions of sisters' children is also due to the difference in age of marriage between men and women. Women married in their mid- to late teens, men in their thirties or later. Archiades' great-nephew (ZDS) was about the age his son would have been had he fathered one. A young man engaged in active military service in his thirties might well have sisters' sons who were already in their teens, while he and his brothers were still childless.

⁹ Table 7.11. Her elder sister had produced two children in the time that had elapsed since they were both married: Is. 2. 6. A husband who suspected his wife of infertility will have been in a difficult position. Her kin would presumably strongly have opposed divorce on these grounds, since if the reason for divorce became known they would be unable to find her another husband; on the other hand a charge of adultery was also shaming both for the guilty wife and for the cuckolded husband. This may explain why it was thought better to persuade the wife's family to initiate divorce (Rosivach 1984).

¹⁰ On adoptive fathers in comedy see Fantham 1971. Cf. below on Is. 2 and 9; ch. 4 at nn. 9–11 on BD marriage; ch. 5 at nn. 67–75 on indivision. It was rare in Athens for a man to commit himself to an exclusive, lifelong homosexual relationship (Dover 1978), and adoption in such a case would have been extremely problematic.

¹¹ The prospective husband Lakrateidas (see ch. 20 n. 99) perhaps lost interest in the girl when she was no longer heiress to Apollodoros' estate.

Inter vivos adoptions are comparatively rare in our sources, partly at least because testamentary adoptions were more likely to be contested. Any heir who claimed an estate on the basis of a will had to claim by *epidikasia*, which gave rivals a chance to put in counter-claims. Adoption of the sons of inheriting daughters, which in any case is one of the most frequent forms in the dossier, and was in principle noncontroversial,¹² will normally have taken place when the chosen adoptee reached the age of presentation to the phratry (sixteen), and this will quite frequently have happened during the adopter's lifetime.¹³ On the other hand, the late age of marriage for men meant that a young man in his late twenties or early thirties might well inherit while still unmarried or childless, and there were substantial risks of death at that age from war, injury, or illness. Thus in considering the cultural profile of adoption at Athens we must take into account a very high number¹⁴ of provisional testamentary adoptions made by young men who thought of their childlessness as temporary. Most of these provisional arrangements will have been cancelled when the testator returned safely home, but not all.

According to Solon's law, then, and in conformity with its aim of producing one heir for each *oikos*, the adopted son or daughter¹⁵ was definitively transferred into a new kinship status as child of his adopter, and lost all kin ties with his genitor (except such ties as might be attached to his new status). An adopted son could not adopt in his turn, but could return to his *oikos* of origin if he had produced a son to take his place in his adoptive *oikos*. A man who adopted an heir during his lifetime would introduce the boy, or young man, to his phratry and deme; the term for this was *eispoiein* or *eispoieisthai*, to make a newcomer a member, whereas a father presenting his own son was said to *eisagein*, to 'present' a boy whose existence had already been announced by the sacrifice of the *meion* on his behalf when he was a small child.

A man who still hoped to have heirs but wished to provide for his estate if he died on campaign or on a journey would make a will naming an heir who was to

¹² Controversy might arise if a posthumous adoption to MF was part of an attempt to claim a contested estate ([Dem.] 43), or if the adoptee was trying to keep hold of two estates (Is. 10, [Dem.] 44).

¹³ Probably he would be in his early to mid sixties. A man who reached the age of 60 in robust health was quite likely to live another 10 or more years. Statistically, low life expectancy at birth does not imply that no Athenians reached 60 or 70.

¹⁴ Will-making in such circumstances seems to be the norm. Only in Is. 4 and in Menander's *Aspis* do we hear of a soldier who died without leaving a will in Athens. However, Is. 9. 14 asserts that Astyphilos had not made a will before previous campaigns. See ch. 5 pp. 155–61 for data on age of inheritance and of marriage.

¹⁵ Two cases of adoption of girls are known from the 4th c., both among the descendants of Bouselos (APF 2921). There is also one case in which a man makes a will providing for inheritance by his matrilateral half-sister, and later adopts her son (Is. 7, APF 1395). Solon probably did not envisage the possibility of adopting daughters and the practice is likely to have remained rare.

be adopted as his successor. Alternatively, a childless man might give instructions in old age or illness, or on his deathbed,¹⁶ that he wished to adopt an heir. There is at least one example, outside Athens, of instructions that a daughter is to adopt her as yet unborn child to be her father's heir.¹⁷ In these cases kin would present the heir to phratry and deme, producing witnesses and in some cases a written will to prove that this was the testator's wish.

By the late fourth century we also find some cases where kin 'adopt' an heir posthumously to a dead man without apparently producing any firm evidence that he had left them instructions to do so, sometimes well after his death. In some instances this might be merely a harmless expression of sentiment, a way of perpetuating the dead man's line without altering the disposition of his property, or a way of redistributing property from different sources (F and MF) among heirs that provoked no controversy. In other cases however ([Demosthenes] 43; [Demosthenes] 44; Isaios 10: see #II 2) it was a conscious move to capture a contested estate. We should not allow ourselves to be misled by the rhetoric of speakers engaged in such manoeuvres. Not all childless Athenians were pre-occupied with the need to secure an heir by adoption; indeed, as we shall see later (ch. 5 at nn. 67–70), some childless men never formally divided their own share of their father's estate from that of their siblings.

As has been noted, most of our evidence comes from forensic speeches, and therefore the attested cases of adoption in which the relationship of adopter to adoptee is precisely known contain a high proportion of controversial adoptions. Adoptions can only be detected in the epigraphic record if a change of deme was involved,¹⁸ and then only in some cases; and even here it is not usually possible to reconstruct the relationship. Not all the adoptions mentioned in forensic speeches, however, were originally controversial. It was often the attempt to assert ties of kinship formally broken by adoption, rather than the adoption itself, that brought families into court.

Attested adoptions in which the relation between the parties is known will be discussed according to the sequence of relationships laid down in Solon's laws (Table 1.1), beginning with the adopter's own *oikos* and that of his father, moving then to links traceable through more remote ascendants on the father's side,

¹⁶ Old age: Is. 7. 14; the adopter died between the presentation to the phratry and that to the deme. Deathbed (*apothnēskōn*): Is. 11. 41.

¹⁷ Maier 1959, no. 51. 6–10 (? 201 BCE, Chios). See A. R. W. Harrison 1968, 92 n.1. Is. 3. 73 also mentions this as a hypothetical possibility: *exōn...epi hapanti tōi klēroi katalipein autēn* (Pyrrhos' daughter Phile) *kai episkēpsai tōn gignomenōn <ek> tēs thugatros paidōn eisagagein huon heautōi* (note the verb).

¹⁸ The practice of giving the names of both genitor and pater as patronymics does not begin until after our period, at least in Athens (Rubinstein a. o. 1991). Reconstruction of adoptions from the epigraphic record depends either on naming patterns or on some continued recognition of the tie between genitor and son: see below at nn. 66–7 on Klearchos son of Nausikles of Aigilia, and Timarchos son of Praxiteles of Eiresidai.

then turning to kin related through the adopter's mother, her father and her agnatic ascendants, and finally to affines, who had no place in Solon's sequence of next-of-kin but nevertheless were sometimes adopted. Genealogical closeness was not of course the only standard considered by adopters.

However, given the authority conferred on the genealogical scale by written law, and the expectations that next-of-kin derived from it, adopters had to take the genealogical standard into consideration even if they decided to base their choice on the criteria of affection, cooperation, or frequent interaction. The discourse on adoption—whether we read Menander on the additional love associated with optional relationships or litigants measuring their own claims against those of genealogical next-of-kin—is concerned with comparing forms of closeness.

Distinctions will be made between *inter vivos*, testamentary, and posthumous adoptions; between uncontested and contested adoptions; between adoptions of only children and of one child from a sibling group, where this can be ascertained; and between historically attested adoptions and cases in which adoption is conjectural, was planned but not carried out, is mentioned as a hypothetical possibility, or is represented in fiction. The ages of the parties concerned, when known, will also be noted.

CASES

I. Adopter's oikos

In Attic law a man could not adopt his own illegitimate child. To be eligible for adoption by a citizen a child had to be the legitimate offspring of Athenian parents. Adoption was not therefore available as a mechanism for legitimating illegitimate children (cf. Maffi 1985 on Demosthenes 39–40). When Apollodoros alleges that Phrastor of Aigilia had tried to introduce his illegitimate son by Neaira's daughter to his *genos* ([Demosthenes] 59. 59ff.),¹⁹ using the term *eisēgen*, he means that Phrastor was trying to claim the boy as his own legitimate offspring.

The common form of adoption deriving from the adopter's own *oikos* was the adoption of the son of an inheriting daughter. It is possible that in Solon's time the marriage of a brotherless girl to her next-of-kin was thought of as incorporating him into her father's *oikos* in uxorilocal marriage, with the result that all the children of the marriage would have inherited the status and property of their

¹⁹ And therefore probably to his phratry: ch. 20 n. 113.

MF. In the classical period however only one son was adopted, this being normally, presumably, the eldest.²⁰

I 1. Lykophron II, oldest son of the Athenian statesman Lykourgos of Boutadai, adopted his DS Lykophron IV, son of Kleombrotos of Acharnai, possibly *inter vivos*. The adoption was uncontroversial. We do not know if Lykophron IV had any siblings by birth.²¹

I 2. Euboulides III, son of Sositheos and Phylomache ([Demosthenes] 43, *APF* 9291) was posthumously adopted to Phylomache's father Euboulides II some time after the death of the latter. The adoption, which followed an epikleric marriage by epidikasia, was only feebly contested,²² but the associated attempt to reclaim the estate of the boy's MFMBS Hagnias II, won and then lost again in court by Phylomache some sixteen years earlier, was highly controversial. Euboulides III had three brothers, one older than himself, and a sister. Sositheos and Phylomache may only have taken the decision to introduce a son into her father's oikos after their oldest boy had already been introduced to his father's phratry and deme, when they saw a chance of regaining Hagnias' estate.²³

²⁰ Lane-Fox, 1985, thinks that from the beginning only one son would have been adopted. Elite and folk practice may conceivably have differed. Cf. ch. 1 at nn. 81–2. However, to judge from modern practice, a man who agreed to marry the daughter of a small farmer without sons (the modern *sogambros*) would be unlikely to have resources of his own which some of his children could inherit (cf. Friedl 1962, 65; Boulay 1974, 126–8; *POxy* 281, 20–50 CE). Epikleric inheritance by second son, Eur. *Herakles* 467–9.

²¹ *APF* 9251; Table 4.6; for the birth order of Lykourgos' sons see Humphreys 1985*b*, n. 3. [Plut.] *Mor.* 843a, *ho pappos eisepoiēsen*, implies *inter vivos* adoption if based on reliable evidence. Lykophron II was born c.350 (his younger brother Habron was ephebe c.330), and was alive in 307/6 ([Plut.] *Mor.* 843c); that we do not hear of him later means little (he was priest of Poseidon Erechtheus but does not seem to have had a political career). However, the brothers had difficulties after their father's death in 325/4, and may not have married before the restoration of democracy in 307/6. Lykophron IV died childless; his mother remarried after his death, and had a son, but there was no further adoption, although descendants later boasted of their tie with Lykourgos. Posthumous adoption may not have been considered respectable in these circles. We now know that Lykophron II had cousins (FBS; ch. 20 n. 132, Table 4.6); this might support my tentative suggestion that his epikleros daughter Kallisto had married a kinsman, her FZS (ch. 4 n. 13), except that legal disputes were perhaps also not in their style.

²² [Dem.] 43. 14; Makartatos asked the *phrateres* to refuse to admit the boy, but did not take the formal step of leading the sacrifice away from the altar. See W. Thompson 1976, 71. It seems clear from § 12 that there was no will. Phylomache II, the boy's mother, was still unmarried when her father died. See Table 7.9.

²³ Sositheos' statement in [Dem.] 43. 81 that Euboulides III was introduced to the *phrateres* of Euboulides II, Hagnias, and Makartatos, and not to those of his father, has been taken (and was doubtless intended) to imply that Sositheos belonged to another phratry, but it is possible that he merely belonged to another meat-sharing group (*thiasos*) in the same phratry. He had presumably sacrificed the *meion* for Euboulides II in his own group (ch. 19 n. 34). The latter's name does not indicate that his parents had destined him for adoption to his MF from birth, since second sons were normally named for MF (ch. 8). However, this norm may have generated a feeling that it was appropriate for MF's adopted son to be his namesake rather than his daughter's eldest son, normally named after FF.

In the cases which follow we do not know whether the adoption was *inter vivos*, testamentary, or posthumous.

I 3. In Isaeus 10, Kyronides son of Aristarchos I was adopted (§ 4) by or to his MF Xenainetos I.²⁴ The adoption was uncontroversial and Kyronides had a brother and two sisters. It was the early deaths of his brother and (later) one of his sons that led to conflicts over inheritance rights.

I 4. According to Plutarch (*Them.* 32), Themistokles' son Diokles was adopted by his MF Lysandros of Alopeke. We do not know whether Lysandros' daughter Archippe was an epikleros²⁵ or whether she had had brothers who died after she had married and produced sons; since her marriage and child-bearing years fell in the period of the Persian wars the latter alternative seems quite probable. The adoption was so far as we know uncontroversial. Diokles had four brothers, one of whom (the oldest son) died as a child, and five sisters, at least three of them by another mother (*APF* 6669).

I 5. Phainippos, opponent of the speaker of [Demosthenes] 42 (§ 21), had been adopted by his MF, Philostratos of Kolonai, apparently without controversy. Since he had also inherited from his genitor he was probably an only child, and may have been adopted after his genitor's death (*APF* 14734; ch. 25 n. 66).

I 6. The son of Kallistratos son of Euboulides I of Oion Kerameikon had been adopted by or to his MF Archimachos, who was also probably his FBS ([Demosthenes] 43. 13, 37). He had a sister who might technically have been considered an epikleros as a result of this adoption, but as far as we know her husband Sosias was not a kinsman (*APF* 2921; Humphreys 1986*a*, 63–6; Table 7.9).

Two further cases of DS adoption are more doubtful.²⁶

I 7. Xenokrateia, who dedicated *IG* ii² 4548 to the river-god Kephisos, describes herself as 'daughter and mother of Xeniadēs of Cholleidai', which might suggest that her son had been adopted by or to her father (cf. A. Williams 2015).

I 8. [Demosthenes] 58. 30–2 refers to a dispute over the adoption of Charidemos son of an Ischomachos to a man called Aischylos (*APF* 436). Charidemos' stepfather Polyuktos was accused of trying to gain control of Aischylos' property

²⁴ Table 7.5. The *hypothesis* to Is. 10 says that Aristarchos I adopted (*eisepoiēsen*) Kyronides to the estate of his MF Xenainetos I, implying posthumous (perhaps testamentary) adoption. However, there is no statement to this effect in the speech, and the adoption may have been *inter vivos*. The only classical bearer of the rare name Xenainetos apart from those mentioned in this speech is the eponymous archon of 401/0, who may well be Xenainetos I. Since the speaker of Is. 10 was old enough to serve in the Corinthian War (394–386), his mother's marriage, which took place after the adoption and marriage of Kyronides (§§ 4–6), should have been concluded by c.405 at the very latest, and probably much earlier.

²⁵ Themistokles' deme was Phrearrhioi, but in a period so soon after Kleisthenes' reforms difference of deme does not preclude agnatic kinship between him and Lysander.

²⁶ The suggestion of *APF* 4549 (p. 172) that Polyuktos son of Xanthippos of Erchia had been adopted by his MF is extremely speculative (Table 20.4). See ch. 6 n. 10 for the possibility that Timarchos son of Praxiteles (*APF* 8334) was adopted by an MF in Eiresidai.

by persuading the boy to return to the oikos of his genitor, in order to claim a hereditary right to dine at the public hearth (*sitêsis en prytaneîôi*). If Charidemos' mother was the daughter of Aischylos and had other children by Polyeuktos he could have claimed Aischylos' estate on their behalf.²⁷

As we shall see later in the analysis of marriages between kin, the legal rules governing the marriage of epikleroi were much less likely to be respected by fathers who had no sons but had two or more daughters.²⁸ Adoption of grandsons is very unlikely to have taken place in these cases; however, there are some cases of adoption of others in such circumstances. Polyeuktos of Teithras, who had two daughters, adopted his wife's brother and married him to one of the potential epikleroi, but the arrangement broke up (Demosthenes 41; below, no. V 5). Dikaiogenes II, by whose death his four sisters became epikleroi to their father's estate, was said to have left a will adopting his FZS or FZSS (below, no. III 1). Diokles (no. V 2) claimed to have been adopted by his mother's second husband, who left three daughters. It would be rash to assume that even in cases where there was only one daughter one of her sons was invariably adopted to his MF, and there are three possible examples (two in the same family) of transmission of rights through a single daughter without adoption. Hipparete daughter of Alkibiades IV of Skambonidai (*APF* 600 X) married Phanokles of Kettos and had a daughter, Kritolea, who married Andromachos of Leukonoion. The descendants of this latter marriage shared a peribolos in the Kerameikos (Humphreys 1983a/1993, 117; Bergemann

²⁷ *APF* and R. G. Osborne (1985e, 48–9) misunderstood this episode. Charidemos' genitor and his pater had both died while he was a minor (it is conceivable that his genitor's death had preceded the adoption), and his mother had been remarried to a Polyeuktos, perhaps of Sphettos (*APF* 436; ch. 27 n. 29; or Kydantidai, ch. 24 n. 97). The father of the speaker of [Dem.] 58 had proposed a decree granting him *sitêsis* (§ 30) as son of his genitor Ischomachos (cf. MacDowell 2007). The proposer may have been unaware of the adoption, or may have thought it irrelevant. *Pace* MacDowell 2007, *sitêsis* here may be a synonym for *trophê* (Gabrielsen 1981, 67–81 with *FGH* 124 F 48); possibly the decree proposed a grant of war orphans' rights to boys whose fathers had not so far been classified as killed in action. However, Theokrines of Hybadai attacked the decree as illegal, on the grounds that it would nullify the adoption and cause the estate of the adopter, Aischylos of (?) Athmonon (ch. 29 n. 71) to fall into the hands of Polyeuktos. The proposal was voted down and Charidemos remained in the oikos of Aischylos (*IG* ii³ 550). If Aischylos was his MF, his 'return' to the oikos of Ischomachos could have left his mother as epikleros to Aischylos' estate, which Polyeuktos could then control as her husband and legal guardian and, perhaps, as father of further children with claims to inherit from her father. It should be noted that if Aischylos belonged to Athmonon he probably had a brother, [Andre]as son of Andron A., councillor c.350 (*SEG* 28. 150) and a nephew (BS), Andron II son of Andreas, *IG* ii² 5323 (Table 29.9).

²⁸ Is. 7. 11: Eupolis had two daughters but did not marry either of them to his nephew (BS) and next-of-kin Apollodoros, with whom he was on bad terms as a result of their dispute over the estate of Eupolis' brother Mneson (*APF* 1395). However, Eupolis also had a son; by the time this son died (childless), both sisters may have been already married, with children. No one was adopted into the brother's oikos (7. 31). Demosthenes' MF Gylon seems to have left his two daughters as heirs, but there was no adoption; it is not clear whether Gylon ever returned to Athens from the Crimean Bosphoros (*APF* 3597 VII). For the Hellenistic development of the epiklerate see ch. 4 at nn. 21–2.

1997 A19) and perpetuated the name Alkibiades, but there were no adoptions into Skambonidai or Kettos. Timostratē daughter of Pandaites of Prospalta married Pasikles son of Myron of Potamos. From the large commemorative dedication *IG ii² 3829* Timostratē seems to have been an only child, but their sons Myron II and Pandaites II both remained in Potamos (*APF* 643, Table 12.1).

Arguments from silence, especially when based only on epigraphic data, are of course problematic. However, since it is clear from the case histories of plural epikleroi and the law cited in [Demosthenes] 46. 20 that adoption was not a necessary condition for transmission of inheritance, it is likely enough that property was sometimes also transmitted by sisterless epikleroi to their unadopted sons. While a father whose daughter produced children during his lifetime could adopt *inter vivos* or by will, a father who left an immature daughter would principally be concerned to arrange her marriage. Any wish he might express in his will concerning her as yet unborn children would have little legal force. Posthumous adoption at a long interval after the death of MF, and without the support of a will, may have been regarded as a dubious practice.²⁹

IB 1. Another form of adoption of a grandchild, only attested once, was to adopt the child of a son who had been adopted out into another oikos. The normal move was for an adopted-out son who wanted to inherit from his genitor to 'return' to his oikos of origin leaving a son in his place in the oikos into which he had been adopted. Kyronides, son of Aristarchos I of Sypalettos, who had been adopted by his maternal grandfather (#I 3), died before making this move, and his son Aristarchos II was posthumously adopted into the oikos of Aristarchos I instead (Isaios 10. 6; Table 7.5).

II. Oikos of adopter's father

The first type of adoption to consider here is that of a brother, and there are four cases attested. All of these, however, were controversial; to confuse the egalitarian relation between brothers with the hierarchic relation of father to son may have seemed deviant to Athenians, and in normal circumstances brothers who wished to merge their shares of their father's estate could do so by remaining in indivision. Adoption by a brother had almost no effect on the adoptee's civil status in normal circumstances (it merely changed his patronymic).

II 1. In Isaios 7. 6 we are told that Apollodoros II son of Thrasylos of Leukonoion (*APF* 1395), whose estate the speaker is claiming, had in his youth been defrauded of property by his uncle (FB) Eupolis. Thrasylos and Eupolis had another brother, Mneson. When he died childless, after the death of Thrasylos,

²⁹ Cf. Rubinstein 1993, 105–12.

Eupolis claimed to have been named as sole heir³⁰ and refused to share the estate with Apollodoros II, his ward, who by the rules of intestate succession should have received half of it (Table 2.1).

TABLE 2.1. Isaios 7

II 2. Aristarchos II, with whose estate Isaios 10 is concerned, left a will appointing his natural brother Xenainetos II as his heir. Aristarchos II had been adopted to Aristarchos I (genitor of the boy's father Kyronides and FB of his mother), and by the calculation of kinship from his new position as adopted son of Aristarchos I, Xenainetos II was his FBDS (Table 7.5). Strictly speaking, the appointment of Xenainetos II as heir cannot have been presented as an adoption, since it was generally agreed in the fourth century that adopted sons were not permitted to adopt.³¹ However, since they were not permitted to dispose of their estates by will in any other way either, there is some justification in treating this as *de facto* an attempt at testamentary adoption. The speaker of Isaios 10 contested it, claiming to be Aristarchos II's next-of-kin, son of a patrilineal half-sister. He also claimed that the adoption of Aristarchos II to Aristarchos I was invalid because Aristarchos I had a living child, the speaker's mother. He alleges that his opponents had threatened to claim his mother as *epikleros* and break up her marriage if her husband opposed this adoption. This claim is not worth much. From the speaker's point of view, Aristomenes, the maternal grandfather (MF) of Aristarchos II and Xenainetos II, and brother of Aristarchos I whose estate was in dispute, was

³⁰ Eupolis claimed, we are told, that Mneson had 'given' him the whole estate. Thrasyllus had died in Sicily and it may not have been clear whether he or Mneson died earlier. Apollodoros succeeded in recovering half Mneson's property in the courts (Is. 7. 7). This was not technically an adoption but achieved the same result of excluding a competing heir with an equal claim in genealogical terms. (There is an error in *APF*'s table, but the correct information is given in the text.)

³¹ Cf. Humphreys 2002*a*. It is difficult to tell, when the speech refers to adoption by Aristarchos, whether Aristarchos I or Aristarchos II is intended. Wyse (1904) takes §§ 14–15 to refer to Aristarchos II. § 23 speaks only of a will by him.

trying to keep control over two estates, those of Xenainetos I and Aristarchos I, through a series of adoptions. From the point of view of Aristomenes and Xenainetos II, the speaker was trying to insert a claim as a distant kinsman into a process of succession which was following the close natural ties between genitor and sons and between brother and brother.³²

II 3. [Demosthenes] 44 presents a similar situation (Table 2.2).³³ Leokrates I was adopted into the oikos of Archiades, his great-uncle (MMB) (below, #II B 6). Meidylides, Archiades' surviving brother, apparently made no objection, although the speaker asserts that there had never been a formal division of Euthymachos' estate between Archiades and Meidylides.³⁴ After the birth of Leostratos II, Leokrates 'returned' to the deme of Eleusis; after the birth of Leokrates II Leostratos II followed suit. Leokrates II died unmarried. Leostratos II first tried to reclaim Archiades' estate in his own name and then,

Notes: Aristoteles diaitetes in 371/0 or 363/2, *IG* ii³ 4. 24. Archiades of Otryne in Ziebarth 1934 now of Thorikos, *SEG* 58.265.

TABLE 2.2. Demosthenes 44

³² Table 7.5. On the principle that adoption did not nullify the relation between child and mother (Is. 7. 25) Xenainetos II could have claimed to be the matrilinear half-brother of Aristarchos II, but this claim would not have given him precedence over the speaker and does not seem to have been made.

³³ *APF* 5638. There is an error in *APF*'s table: the disputed estate belonged to Archiades and not to Archippos.

³⁴ See ch. 7 Case 12. Meidylides may have retained his share of the original estate, and therefore have been in no position to claim a share of whatever Archiades had added to his inheritance. Add to *APF*: the inscription which records Aristoteles of Pallene is discussed in Ruschenbusch 1984. *IG* ii² 7016 appears to be the grave monument of Leokrates II (ch. 24 n. 17); note the speaker's concession, [Dem.] 44. 32, that it was appropriate for Leokrates II's genitor to bury him.

when Aristodemos protested³⁵ and the deme Otryne refused to reaccept him, got the deme to accept his son Leochares instead. The legal situation here is as unclear as in the previous case. Technically Leochares must have been presented as the adoptive son of Archiades, who will have been dead for some 50 years by this time. De facto Leostratos II clearly regarded the property as his own, himself as the father of Leokrates II (cf. [Demosthenes] 44. 32), and Leochares as Leokrates II's brother.³⁶

II 4. After the death of Euktemon of Kephisia (Isaios 6; *APF* 15164; Table 7.1) the kinsmen who were trying to claim his estate for two boys of doubtful parentage alleged at one point that the boys had been posthumously adopted to two of Euktemon's dead sons. Since they also alleged that the boys were themselves sons of Euktemon by a second marriage (6. 36, 44), this could be regarded as adoption by patrilateral half-brothers. But clearly this is an extreme case of jiggery-pokery. The claim was of course contested.

In Athenian minds the ideal type of adoption was probably that of one of a pair of nephews by their FB. Such an adoption forms the basis of the plot of Terence's *Adelphoe*, based on an original by Menander,³⁷ but is not attested historically, perhaps because such adoptions were non-controversial (and are hard to detect epigraphically). In Isaios 2 the speaker, adopted son of his brother-in-law (ZH) Menekles, disingenuously claims that Menekles could not adopt his brother's son because the boy was the brother's sole heir. The adoption of the wife's brother however led to very bad relations with Menekles' own brother, who clearly felt that his son had been deprived of an inheritance to which he had a right, even after Menekles had ceded some property to compensate them for this loss.

II B Adoption of a sister's child is more commonly attested.

II B 1. Pyrrhos, whose estate was the subject of dispute in Isaios 3, adopted Endios, one of the two sons of his sister, by will (3. 56); in § 72 the speaker emphasizes that Endios was Pyrrhos' next-of-kin, *engista genous*. Pyrrhos was a young man at the time and left a daughter. The adoption was uncontested; it was only after the death of Endios that conflict arose over the succession.³⁸

³⁵ The speaker of [Dem.] 44 was the son of Aristodemos, the claimant, speaking on behalf of his father because of the latter's inexperience in public affairs (§ 3–4).

³⁶ As Sir J. Miles (1952) pointed out, we do not know whether Leostratos II returned to Eleusis before or after the birth of Leochares; he may have persuaded the demesmen of Otryne to accept the boy on the grounds that he (Leostratos II) was still in Otryne when the boy was born. Such situations are not likely to have been clearly regulated by law. The Archiades of *SEG* 58. 265 A 16 is now attributed to Thorikos and not Otryne.

³⁷ For further bibliography see Gratwick 1987.

³⁸ Table 7.4; Carey 2012, IX. Pyrrhos' will may have been oral (3. 56) and we do not know whether he was mortally ill or merely leaving for a campaign. About 12 years elapsed between his death and his daughter's marriage, so she must have been a young child when he died. Endios too, since he was still unmarried 20 years later, may have been a minor when adopted (§§ 31, 57). It seems likely that Pyrrhos' sister and her

II B 2. Hagnias son of Polemon of Oion Kerameikon (*APF* 2921) made a will adopting the daughter of a sibling.³⁹ This adoption was not contested but the girl—who would have become an epikleros—died before reaching marriageable age.

II B 3. In the same family group Theophon adopted one of the four daughters of his sister, the wife of Stratokles of Oion Kerameikon, apparently by an oral will (*apothnêskôn*, ‘as he was dying’, Isaios 11. 41). The adoption was uncontested. This girl, who seems to have been about five years old when adopted, may have been claimed when she reached the age of marriage by a patrilateral kinsman of Theophon as epikleros, if not betrothed in his will.⁴⁰ Note that the adoption of a girl not yet old enough for marriage has the effect of delaying disputes over an estate.

II B 4. Still among the descendants of Bouselos, Makartatos II son of Theopompos of Oion Kerameikon was adopted into the *oikos* of his mother’s brother Makartatos I son of Apolexis of Prospalta. It is unclear whether this was a testamentary adoption or an unsolicited initiative on the part of Theopompos, but the adoption seems to have been uncontested and Makartatos II was probably his uncle’s next-of-kin.⁴¹ He had a brother.

husband (and his patrikin?) disapproved of his relationship with the girl’s mother, and that the will represented a compromise by which he agreed to adopt his nephew (ZS) and his sister’s family agreed to take responsibility for the child. Whatever Pyrrhos may have hoped, Endios did not marry the girl, but he found her a husband and gave her a dowry of 3000 dr. (The best solution to the inconsistency between §§ 49 and 51 seems to be to emend *dekaton* in § 51 to *tetarton*; see Wyse 1904, xlvii, on letter-numerals in the MS tradition.) The compromise collapsed when Endios died; Pyrrhos’ daughter claimed the estate and Endios’ mother counter-claimed as Pyrrhos’ next-of-kin (sister), alleging that the girl was illegitimate.

³⁹ Daughter either of a full sister of Hagnias who does not otherwise appear in the dossier or of one of his uterine half-brothers. See below, section IV 3, and Table 7.9 on the chronological problems of this dispute.

⁴⁰ Stratokles eventually had four daughters and two sons but we do not know how many had been born by the time of Theophon’s death; it is unlikely that a son would have been passed over in favour of a daughter. Theophon was unmarried when he died, though old enough to have served as phylarch (perhaps recently, since his horse was still of high value: Is. 11. 41, cf. Spence 1993, 279 on value and depreciation of cavalry mounts; ch. 16 n. 50 on age of phylarchs). Is. 11. 41–2 seems to imply that after managing the estate left to his daughter for 9 years her genitor Stratokles gave her in marriage. As an epikleros she should have married at 14 (*A.P.* 56. 7).

⁴¹ [Dem.] 43. 77 *eisepoiéthē eis ton oikon* is ambiguous. The speaker implies that Makartatos changed his name because of the adoption, but is not necessarily to be believed. Davies (*APF* 2921) thinks that there must have been another claimant, since otherwise Theopompos would not have arranged the adoption. W. Thompson 1976, 57–8 suggests that Makartatos of Prospalta had another sister whose children also had a claim. However, the adoption may have been prescribed in a genuine will; once Makartatos had been adopted he had to leave a son in his place if he wanted to retain the estate. Lysias’ lost speech ‘on half Makartatos’ estate’ (F. LXXXVII Thalheim 1913, XCVIII Carey 2007) is best left out of the question since it may have concerned the estate of the earlier cavalryman who died c.410 (*IG* i³ 1288, *CEG* 90; I think we have to assume that Pausanias 1. 29. 6 got the wrong battle. Discussion in Clairmont 1983, 140 no. 21e). It is probably a mistake to try to connect all bearers of the name Makartatos (cf. also *CAT* 2. 861) to a single family. Euripides had used Makaria as the name of his heroine in the *Herakleidae*, and it is found in two demes in the 4th–3rd c.; Makareus occurs in five demes (5th–4th c). The adjective *makar*, ‘blest’, and its derivatives belonged to popular speech as well as to literary language, and the choice of Makartatos as a name may belong to the sphere of popular belief.

II B 5. According to the speaker of *Isaios* 6, Philoktemon son of Euktemon of Kephisia left a will in which he adopted his sister's son Chairestratos son of Phanostratos, also of Kephisia (*APF* 15164). Philoktemon died before his father, and no steps seem to have been taken about the adoption until Euktemon died. Since both families belonged to the same deme the adoption did not affect Chairestratos' civic status, and Philoktemon had been co-resident with his father up to the time of his death (on active service).⁴² He thus did not have a separate estate to bequeath, and the whole family property remained in Euktemon's increasingly shaky hands until his death. Philoktemon however was aware before he died that Euktemon wanted to leave property to the two boys whom the family regarded as sons of the freedwoman Alke (Table 7.1); his will (if genuine) was presumably an attempt to prevent this. Chairestratos had a younger brother,⁴³ and they were Philoktemon's next-of-kin.

II B 6. The adoptions which gave rise to the dispute recorded in [Demosthenes] 44, although involving a long chain of filiations, ultimately rested on the relationship of Archiades of Otryne and his sister Archedike. The first heir to be adopted into Archiades' oikos was his great-nephew (ZDS) Leokrates I, followed by his son, Leostratos (ZDSS to Archiades), and by Leostratos' son (ZDSSS). The adoption *inter vivos* of Leokrates I (who was as far as we know an only child) was not contested.⁴⁴ Leostratos and Leokrates II were born in the oikos of Archiades and therefore were not strictly adopted sons; the opposition to the introduction of Leochares son of Leostratos after the death of his brother Leokrates II has been discussed above (#II 3).

Six other more doubtful or marginal cases may be added.

II B 7. Demosthenes (18. 312) asserts that Aischines had inherited (*ek ekléronomêkeis*) five talents (30,000 drachmas) from his wife's brother Philon. He may well have exaggerated the sum (*APF* 14625 I), but the term used and the size of the bequest indicate that Aischines or, more probably, one of his sons,

⁴² Ch. 7 Case 1.

⁴³ One of Chairestratos' sons was called Philoktemon, the other being called after his FF Phanostratos. *IG* ii³ 4. 63, in which Chairestratos is called 'son of Phanostratos', may precede the settlement of the case, or indicate that Chairestratos returned to his father's oikos after the birth of a son (cf. *APF* 15164; Table 7.1).

⁴⁴ Table 2.2; ch. 7 Case 12. Although [Dem.] 44. 19, 21 says that Leokrates 'adopted himself' to Archiades, it also uses the term *enebateusen*, which implies adoption *inter vivos*. Meidylides' daughter had a better claim, as BD of Archiades. Leokrates I however could have claimed her as epikleros ([Dem.] 44. 10 vaguely suggests she already had children when Archiades died, but this may be *suggestio falsi*. Her husband does not seem to have been a kinsman). Cf. n. 37 above.

was Philon's principal heir.⁴⁵ Aischines defends the reputation of Philon (attacked under the pseudonym 'Nikias' in Demosthenes 19. 287) in 2. 150–1.

II B 8. It seems likely that Alkiades of Anagyrous (*IEleus* 159. 48) was the biological son of Demochares II son of Alkiades of Prasiai, adopted into the family of his mother Demokrateia, daughter of Archedamas of Anagyrous, perhaps (since she was not an epikleros) by her brother Archenomides (*IG ii²* 7277; [Dem.] 35. 14; Table 25.5).

II B 9. Dionysios II son of Alphinous of Kollytos, attested as treasurer of the kleruchs on Samos in 346/5, was buried in the Kerameikos in an impressive tomb complex that included a marble sarcophagus, a naiskos apparently representing him with his mother and carrying two poems of a quality praised by Wilamowitz, and a bull sculpted in the round on a pillar.⁴⁶ Dionysios, who was a cousin (FBS) of the orator Hypereides, left only his mother and sisters to mourn him; the Alphinous II who took charge of the orator's funeral in 321 should have been a nephew (ZS) of Dionysios, possibly adopted by will or posthumously (he is variously described as a grandson or *anepsios*, cousin, of Hypereides but the adoption suggested here would not change their relationship) (Table 2.3).

TABLE 2.3.
Dionysios of Kollytos

II B 10. A suggestion is made in [Demosthenes] 40. 10 that Boiotos and Pamphilos, sons of Plangon daughter of Pamphilos of Keiriadai, might have been adopted by two of Plangon's brothers. However, as has been explained above, adoption was not recognised at law as a means of legitimizing children of doubtful parentage. Adopted children had to be born in wedlock, of Athenian parentage on both sides, and a father who swore to the legitimacy of sons he did not wish to recognize, in order to get them adopted by someone else, would have been asking for trouble (*APF* 9667; cf. Humphreys 1989).

⁴⁵ It is not useful here to make a sharp distinction between adopted heirs and heirs appointed by will without adoption. If, as suggested here, Philon had adopted one of Aischines' children, it seems not to have been the eldest son Atrometos, attested as ephebos with patronymic in *IEleus* 82. 7. Cf. ch. 25 n. 35.

⁴⁶ *CAT* 2. 408b, *IG ii²* 11169, *CEG* II 593, *APF* 13912. Cf. ch. 24 n. 7.

II B 11. It is relevant to note here that while Plato left his property to his great-nephew (BSS) Adeimantos II—apparently the sole agnatic heir left by Plato and his two brothers—the headship of the Academy went to his sister’s son Speusippos. Speusippos could not be adopted, but became Plato’s spiritual heir. He may have had a brother (*APF* 8792 X–XI).⁴⁷

II B 12. Aristotle, not an Athenian but perhaps influenced by Athenian ideas, adopted his sister’s son and foster-brother Nikanor, who was to marry Aristotle’s daughter Pythias and act as guardian to the philosopher’s illegitimate son Nikomachos.⁴⁸

III. Oikoi of more remote ancestors on the father’s side

III 1. Dikaiogenes II of Kydathenaion allegedly adopted (by will) Dikaiogenes III, the villain of the story told in *Isaios* 5, who was probably his FZSS (Table 7.2). The adoptee had a brother. Dikaiogenes II had four sisters with sons, who were closer to him by the rules of intestate succession and who made several attempts to contest this adoption (*APF* 3773). While *Isaios* succeeds in making us feel that this choice of heir was deplorable, it must be recognized that choosing an heir among the sons of the sisters would have created just as much ill-feeling; if Dikaiogenes II wanted a single heir who would keep his property together and preserve his name his choice may have been astute. Dikaiogenes III was able to play off his opponents against each other, and put them off by promising concessions of property which he then failed to hand over, for a considerable time.

III 2. Another contested will appears in *Isaios* 9 (Table 7.8). The speaker’s opponents produced a will by which, they claimed, Astyphilos of Araphen (*d.c.*) had adopted a patrilateral cousin (FBSS), son of Kleon I. The speaker, Astyphilos’ matrilinear half-brother (cf. below IV 4), asserts that Kleon’s father Thoudippos had killed Astyphilos’ father in a fight (17ff.) and since that time had had no relations with Astyphilos; furthermore, Thoudippos had been adopted into another *oikos* (below, III 4), and consequently his descendants could no longer

⁴⁷ D. L. 3. 41–3; Table 5.3. Plato did not mention the Academy, or the library it may have owned, in his will, and we do not know whether he had expressed any view on the headship. The tradition that Thales adopted his ZS (Plut. *Solon* 7) may be influenced by the cases of Plato and/or Aristotle.

⁴⁸ The adoption of Nikanor is proved by a grant of honorary citizenship of Ephesos, naming him as ‘son of Aristotle of Stageira’ c.318; *IEph* VI 2011 (Table 4.3). Chroust (1967; 1973 ch. xv) believes that Aristotle also adopted Nikomachos, but clause xv in the Arabic version of the will, ‘As to my estate and my son, there is no need to make a last will and testament’ seems to me to support the view taken here, as does its position between provisions for Herpyllis and for other freedmen, freedwomen, and slaves. In the event both Nikomachos and Nikanor died relatively soon, and childless. Pythias married again, twice (Sext. Emp. *Adv. Math.* 1. 258), first to the Spartan Prokles, descendant of the exiled Demaratos, who insisted on Spartan royal family names for their two sons, and then to a doctor, Metrodoros, who finally produced an heir to be named after Aristotle.

claim to be Astyphilos' kin. Astyphilos had a sister, who presumably predeceased him leaving no heirs. The adoptee may have had a brother (*APF* 7252).

In two other adoptions the relationship cannot be precisely reconstructed, but seems to be patrilateral:

III 3. Thrasyboulos son of Aischines of Lousia was adopted by Hippolochides son of Thrasymedes of Lousia; the common element Thrasy- in the names, and the deme affiliation, make it highly probable that they were agnatic kin. Thrasyboulos seems to have changed his name to Hippolochides, the name of his adoptive father, an uncommon practice in Attika as far as we know.⁴⁹

III 4. As already noted, we are told in *Isaios* 9 (2, 33) that Thoudippos of Araphen had been adopted. He does not seem to have changed his deme affiliation,⁵⁰ and may therefore have been adopted by a patrilateral kinsman (*APF* 7252). The adoption apparently took place after Thoudippos had inherited from his own father, and perhaps after the death of his brother Euthykrates.

In two further cases in which claims to inheritance were involved, there was no formal adoption:

III 5. In the family of Bouselos of Oion Kerameikon, the estate of Hagnias II had been awarded to Theopompos, and was claimed at his death by his son Makartatos (*APF* 2921; [Demosthenes] 43). Other kin contested the claim, and we do not know who won. At the time of the lawsuit Makartatos was childless ([Demosthenes] 43. 26), but he later had a son whom he named Hagnias (III), attested as ephebe in ? 330/29/8 (*IOrop* 353 = Reinmuth 1971 no. 15, cf. Lewis 1973*b*, Humphreys 2009). The name suggests that Makartatos contemplated adopting the boy posthumously to Hagnias II, but since the ephebic list records him as son of Makartatos this plan evidently came to nothing. Hagnias III

⁴⁹ *APF* 1395, Is. 7. 23; Table 2.1. A son destined for epikleric adoption would probably have been named after his maternal grandfather (MF) at birth, and Hagnias III (below, #III 5) may have been so named at birth also. Another possible change of name on adoption, in the same family, #IV 2 below (Thrasyllus II). Cf. also n. 26 above. There may have been cases in which coincidence of names, though probably not due to any prospect of adoption at the time of naming, later influenced the choice of heir: for example Dikaiogenes III (#III 1). Thoutimos son of Androkles of Poros was named on the tombstone of Thoutimos III son of Aristogeiton II of Aphidnai, probably his MF or MB; if the latter (so *APF* 12267 III–IV), if he was named with the possibility of adoption in view, it did not take place. It is not certain that Thoutimos III had no heirs, and he had another sister, Eukoline, who married Dikaiogenes IV of Kydathenaion (SS of #III 1). The suggested identifications of descendants of Spoudias of Aphidnai (Dem. 41) in Cox 1995 are dubious. Cf. ch. 31 n. 41.

⁵⁰ See *APF* 7252; ch. 7 n. 85, Table 7.8; ch. 24 nn. 114–15. The statement in § 33 that members of Astyphilos' meat-sharing group have refused to admit the son of Kleon, thus implying that they rejected the claim that he had been adopted by Astyphilos, does not prove that the boy's FF Thoudippos had been adopted into another phratry, since it may refer to a phratry subgroup (thiasos: ch. 19 n. 34). Since Araphen was a small deme (2 councillors) and the family had probably owned land there for some generations, adoption into another phratry is relatively unlikely.

was distantly related to Hagnias II both agnatically and matrilaterally, being Hagnias II's FFBSSSS and MFBSSS.⁵¹

III 6. The speaker of Isaios I (Table 7.10) was contesting a will in which his MB Kleonymos had left property to more distant kin. However, we do not know the relationship, and since there seems to have been more than one heir, and kin had suggested that the two parties should compromise and split the estate (§ 2), the will evidently did not contain formal provisions for adoption.

IV. *Matrikin*

Adoption of matrikin other than half-brothers is virtually unknown, although one very doubtful case will be noted below; while mothers' brothers quite frequently adopt their sisters' sons, sisters' sons do not adopt the descendants of their mothers' brothers. Adoption of half-siblings or their children, however, appears relatively frequently in our sources, usually as a controversial measure by which property that by the rules of intestate succession could have been claimed by patrikin is claimed instead by half-brothers, who evidently felt that their relation to the deceased was stronger and closer, in terms of 'natural' kinship and affection, than that of a patrilateral cousin.

IV 1–2. The story of Apollodoros son of Thrasylllos of Leukonoe (*APF* 1395) provides an excellent illustration of the structural factors involved. His father Thrasylllos had died when he was a child and his mother had remarried. Apollodoros had grown up in his stepfather's household and had been aided by him in two

⁵¹ Table 7.9. If rights of inheritance within the jural kindred descended *in infinitum*, Hagnias III's claim as FFBSSSS of Hagnias II was stronger than his claim as MFBSS. The case illustrates the reasons for and against the view that rights descended *in infinitum*. Makartatos obviously felt that property awarded to his father by a court should descend to him and to his heirs. Other branches of the family, who had never accepted the legitimacy of the court's decision, wanted to reopen the case. Since there are very few cases in which such remote relationships come into question in an inheritance dispute, it is unlikely that jurors had any strong views about the correct interpretation of the law. Is. 3 also involves a claim to an estate which had already been adjudicated more than 20 years earlier (§ 1; cf. also [Dem.] 44). Here however the adopted son who had inherited Pyrrhos' estate had died childless. §58, with [Dem.] 43. 16, have been interpreted as meaning that an heir's right to his inheritance could be challenged at any time in his life and for five years after his death. I suspect, however, that when Isaios—who is not likely to be quoting verbatim—says 'The law rules that claims to an inheritance must be made within five years from the death of the inheritance-holder' (*pente etôn dikasasthai tou klêrou epeidan teleutêsei ho klêronomos*), he is playing on the ambiguity of the term *klêronomos*, inheritance-holder, and that the period was intended to run from the death of *d.c.* and not of his heir. [Dem.] 43. 16, *ean de mê zêi ho epidikasamenos tou klêrou, proskaleisthō kata tauta, hōi an hē prothesmia mēpō exêkei*, does not contradict this interpretation. *Pace* A. R. W. Harrison (1971, 120, cf. Wolff 1963), the 'law of prothesmia' (statute of limitations, Dem. 36. 25) may well have been a simple rule, stated possibly in Solon's law of inheritance, generalized by analogy to other types of case by litigants when it suited them. It may have been more often referred to than used; formal use could only be made of it through the procedures of *diamartyria* or *paragraphe*.

lawsuits against his uncle (FB) and guardian Eupolis (§§ 7–13). By her second marriage his mother had a daughter. Apollodoros could not marry her; Attic law forbade such marriages, presumably because they would have facilitated the transfer of estates from patrikin to matrikin in just the circumstances now being described. There were however ways of circumventing the prohibition. While young and unmarried Apollodoros made a will naming his half-sister as his heir if he should die childless (§ 9).⁵² Later, after marrying and producing a son who died young (§ 14), he adopted Thrasyllus II, the speaker of Isaïos 7, his half-sister's son (*inter vivos*). The adoption was contested by one of Eupolis' two daughters.⁵³ The adopted heir does not seem to have had siblings.

IV 3. We have seen already that Hagnias II son of Polemon of Oion Kerameikon made a will adopting a sibling's daughter (#II B 2). When this girl died before reaching adulthood, the will produced had an additional clause providing for this contingency: the next heir was to be Glaukon (son of Glauketes), also of Oion, one of Hagnias' two half-brothers.⁵⁴ The will was initially accepted by Hagnias' mother's brother Stratios and by her first cousins (FBS) Theopompos and Stratokles. However, when it had been successfully contested by Phylomache, Hagnias' FZSD, these three put in claims on their own account, Theopompos ultimately winning the estate.⁵⁵

IV 4. The speaker of Isaïos 9 did not claim to be the adopted son of *d.c.*, Astyphilos, because this claim had been preempted by his opponent (cf. above #III 2), but would clearly have liked to do so. Like Apollodoros (#1), Astyphilos was an orphan who had grown up in the household of his mother's second husband and had a close and affectionate relationship with his half-brother. Astyphilos' intentions about the disposal of his estate, however, remain unclear.

⁵² Table 2.1; ch. 26 at section 'Leukonoion'. In this will Apollodoros 'gave' (*didous*, § 9)—i.e., promised—his half-sister to Lakrateidas (of Ikarion? Paiania? ch. 20 n. 99), who later became hierophant; this may have been an attempt to prevent her kin from claiming her as epikleros. In the event this marriage did not take place (n. 14 above). Note that the arrangements for Thrasyllus II's adoption were made between Apollodoros and the boy's mother, Apollodoros' half-sister (§ 14,); women played an important role in such matters (cf. Humphreys 1986a, 90; ch. 5 n. 50 on Lys. F 23 Gernet/Bizos 1926, XXXIII/71 Carey 2007, for another case of close relations in stepfamilies).

⁵³ Apollodoros presented Thrasyllus II to his phratry at the Thargelia (May–June) in 355 (7. 15) but died before he could present him to his deme in July (§§ 27–8). The deme nevertheless voted to accept him, although objections were made on behalf of Eupolis' daughter (ch. 26 n. 34). Thrasyllus may have changed his name on adoption. Thrasyboulos son of Hippolochides of Lousia (#III 3), son of another daughter of Eupolis, took no part in the dispute, although under the maxim that adoption did not nullify ties of matrilineal kinship he could have claimed.

⁵⁴ APF 2921; Is. 11. 8–9; [Dem.] 43. 43; Table 7.9. Isaïos says Hagnias *epoiēsato* (adopted) his niece and uses the phrase *ta onta edidou*, 'tried to give his property' in the case of Glaukon, but the variation probably reflects the speaker's bias rather than a difference in the will. Cf. Plat. *Laws* 923e–924a for the possibility of two conditional adoptions in a single will.

⁵⁵ Ch. 7 Case 9. There is no particular reason to suppose that the will was not genuine.

IV 5 (Table 2.4). Miltiades III, who left Attika under the Peisistratid tyranny to rule over the Dolonkoi in the Thracian Chersonese, at some date before 528 brought out Stesagoras II, son of his half-brother Kimon I Koalemos, to be his heir. He apparently had no sons, or none from a woman he considered of sufficient status to provide a successor to the tyranny. Stesagoras II died childless and his younger brother Miltiades IV (later to lead the Athenian forces at Marathon), who had originally been left in Attika with his father (Herodotus 6. 103), moved also to the Chersonese at some date between his archonship in 524/3 and c.515 (Herodotus 6. 40. 1). This was presumably ‘adoption’ in the Homeric rather than the classical pattern, with no legal formalities being observed. The adoption was not contested, although Miltiades III probably had patrikin, descendants of his FB Teisandros (*APF* 8429 IV);⁵⁶ Akestorides I, archon in 504/3, may belong to another line of patrikin (*ibid.* II–III with Addenda p. 599).

TABLE 2.4. Miltiades

⁵⁶ *APF* 8429 III–IV. Davies suggests (*ibid.* IX, followed by Piccirilli 1986) that Miltiades IV married and then divorced a daughter of Hippias; I cannot see that this idea gets us very far. Herodotus (6. 103) implies that Miltiades IV left Athens immediately after his father’s death, suspecting that Hippias had been responsible for it, but his tenure of the eponymous archonship disproves this. On the unreliability of such traditions see R. Thomas 1989. The suggestion reported in *APF* 8429 VII that this adoption implies kinship between Kypselos and Stesagoras I should be disregarded.

V. Affines

Affines—under which heading I include stepsons—were not included in the jural kindred and therefore from the legal standpoint were dubious candidates for adoption. Nevertheless men were often fond of their wives' children⁵⁷—especially if they had none of their own—or of their wives' brothers, who would usually be a decade or so younger (since women married much younger than men) and could therefore fit into a filial relationship without strain.

V 1. Isokrates adopted the youngest of his three stepsons, Aphareus, *inter vivos*. Isokrates' three brothers and his sister apparently raised no objections (APF 7716; Humphreys 1983a/1993, 116).

V 2. Diokles of Phlya claimed to have been adopted by the will of his mother's second husband; this marriage however had produced three daughters who contested Diokles' claim. As in the case of Apollodoros of Leukonoe (#IV 1–2), Diokles could not marry his half-sisters,⁵⁸ but from his mother's point of view this adoption had the same effect, allowing a child by one husband to inherit the estate of another. Though the speaker of Isaios 8 (§ 41) paints a very black picture of Diokles, it should be recognized that his half-sisters had already been dowered from their father's estate and that their mother probably connived at Diokles' claim (APF 8443; Humphreys 1988; Table 7.3).

V 3. Knemon (Old Grumpy), the eponymous character in Menander's *Dyskolos*, at the end of the play when he feels at death's door (729–60) adopts his stepson Gorgias, born to his wife after she had left him and remarried (Table 2.5). This adoption makes Gorgias the full brother of his half-sister: these two siblings then marry another sibling pair, Sostratos and his sister.⁵⁹ In

⁵⁷ Patrilateral half-siblings were not expected to be on such good terms, and stepchildren were not expected to get on well with stepmothers (cf. Humphreys 1986a, 69–70, 75–6; 1988). I have not made a systematic survey of data from other parts of Greece, but note that Agoranax of Kalymnos c.280 asked the city to give citizenship to his *huion proggonon*; it seems likely that his wife had had a son by a previous marriage to a non-Kalymnian and Agoranax was at least as far as civic status goes, adopting him (Segre 1952, 56–7 no. 21). Calder 1930 was mistaken in supposing the adoption of stepsons to be peculiarly Anatolian.

⁵⁸ Cf. n. 11 above. A law that if a man with daughters adopted a son he had to marry one of the daughters, if genuine, would have made adoption of Diokles illegal (Is. 3 *Pyrrh.* 68; cf. A. R. W. Harrison 1968, 85 n. 2). It might have been held that an adopted son who dowered his half-sisters adequately from the estate had fulfilled his obligations towards them (cf. MacDowell 1982a).

⁵⁹ Cf. Paoli 1961. Pace MacDowell 1982a, there is no need to see an intention to adopt in *Aspis* (cf. P. G. M. Brown 1983).

TABLE 2.6. *Aspis*TABLE 2.7. *Phasma*

Menander's *Aspis* Chaireas is incorporated into the family of his mother's second husband and finally marries his stepfather's niece (BD), sister of Kleostratos, who in turn marries his FBD, the daughter of Chairestratos and half-sister of Chaireas (Table 2.6). In the *Phasma* Pheidias falls in love with his stepmother's daughter by a previous marriage, the 'ghost-girl'; we do not know if they married at the end of the play (Table 2.7).

Thus in fiction the affection between half-siblings could lead to a neat and happy pairing off, as in a country dance; but in real life the fact that they belonged to different patriline, while it lessened the potentiality for conflict over property, meant that any attempt to pool resources generated opposition from their respective patrikin.

Two men adopted brothers-in-law (WB):

V 4. Menekles, whose estate was the subject of *Isaios* 2, had adopted one of his wife's two brothers twenty-three years before his death. This lengthy period did not prevent Menekles' brother's son from claiming, when Menekles died, that the adoption was invalid because made 'under the influence of a woman' (§ 1, cf. [Demosthenes] 46. 14). Previous attempts to reconcile Menekles' brother to the adoption, which had included handing over property on the advice of private arbitrators,⁶⁰ had been unsuccessful. Menekles had divorced his second wife because their marriage was childless (above, at n. 12) and he believed himself responsible for this; she married again. The two families were on friendly terms before the marriage; since his wife's father seems to have died early, Menekles probably stood in a quasi-paternal relationship to his brothers-in-law before the adoption.

V 5. Polyuktos of Teithras also adopted one of his wife's brothers, Leokrates, and married him to one of his two daughters. Later, however, they quarrelled; the marriage was broken off and there were contentious negotiations, at the end

⁶⁰ Table 7.11, Is. 2. 30: the arbitrators say that their solution is not just, but is 'to the advantage of all'.

of which Leokrates ‘took back what he had contributed to the property’ and the adoption was annulled.⁶¹ Both Polyeuktos’ daughters seem in the end to have married non-kin, and we do not hear that the adoption was contested at the time when it was made; this suggests that Polyeuktos did not have close kin of marriageable age.

V 6. In Isocrates 19, Thrasylochos son of Thrasyllus of Siphnos, whose estate was in dispute, had adopted the son of a brother of his stepmother and betrothed him to his (Thrasylochos’) sister by an oral will (§ 12) (Table 2.8).⁶² Both families came from Siphnos and they had travelled together in exile, finally settling in Aigina. The adoption was contested by a woman who claimed to be Thrasylochos’ half-sister by an early marriage of his father, a wandering seer (*mantis*; § 5–6).

TABLE 2.8. Isocrates 19

VI. Cognatic kin or affines

There are two cases of certain or probable adoption in which we know that the beneficiary changed his deme, and therefore was not being adopted by an agnate, but cannot reconstruct the relationship further.

⁶¹ Dem. 41. 3–5, 9 (§ 9 for Leokrates’ brother or brothers). The phrase is vague and the arrangements unclear; adopted sons did not usually contribute property, and Leokrates might have expected to get some compensation for the loss of the inheritance he had been led to expect. In fact we learn in § 27 that he had been paid 1000 dr. to compensate him for giving up the jewellery and clothes his wife had brought as her trousseau. This was not a common arrangement in divorce. Possibly Leokrates’ ‘contribution’ was somehow connected with the dowry brought by his sister, Polyeuktos’ wife, or the security put up for it? In any case it appears that Polyeuktos had some economic motive for the adoption.

⁶² The speaker and *d.c.* originally came from Siphnos and the case was tried on Aigina, but by the 4th c. practice in the smaller islands is not likely to have differed very significantly from that of Athens; islanders had served in the Athenian fleet throughout the 5th c. and were probably still doing so, though in smaller numbers; many island families will have had kin who lived, or had lived, in Piraeus as metics; Aigina had been an Athenian kleruchy in the 5th c. Thrasyllus’ third wife (by whom he had no children) was a cousin (*anepsia*) of the speaker’s father and of wife no. 2. Wives 2 and 3 had died childless and Thrasyllus had remained on friendly terms with their kin; the speaker, probably born some fifteen years after Thrasyllus’ second marriage, had grown up as a friend of Thrasylochos, son of the fourth marriage. Cf. ch. 4 p. 130.

VI 1. The sculptor Praxiteles, whose deme was Sybridai, seems to have had a son called Timarchos whose deme was Eiresidai,⁶³ presumably because he had been adopted into another family (*APF* 8334). Adoption did not prevent Timarchos from following in his genitor's footsteps. He had a brother.

VI 2. Nausikles son of Klearchos of Oe seems to have been adopted into a family of Aigilia and returned to Oe after producing a son to take his place; his debts were paid when he died by Klearchos, son of Nausikles, of Aigilia (*APF* 10552). Klearchos seems to have succeeded in inheriting two estates, though this may have been more of a liability than an advantage. At least he did not—or could not—claim that adoption freed him from the obligation to pay his genitor's debts.⁶⁴

We only hear of one case in which a man claimed to have been instituted as heir by a non-kinsman:⁶⁵ in *Isaios* 4 the speaker's opponent claimed to have been 'given' by will the property of a fellow-soldier, Nikostratos, who died on campaign when they were serving as mercenaries (*APF* 7291). The speaker alleges that the opponent, Chariades, originally presented the child of a prostitute (*hetaira*) to be adopted posthumously to Nikostratos' estate, but later changed his mind and claimed that the property had been bequeathed to him (§ 10). Nikostratos had been abroad for eleven years (§ 8) and his title to citizenship may not have been above question (§ 9). Chariades only knew Nikostratos' father's name as Smikros, 'Titch' (§§ 3f.); they evidently came from a milieu in which official nomenclature, legitimate kinship, citizenship, and law meant little. Indeed the most surprising aspect of the whole story is that the two-talent fortune Nikostratos left (12,000 drachmas) was brought back to Athens and handed over to the archon for adjudication.

CONCLUSION

Most of our evidence on adoption, as noted above, comes from controversial cases and may not provide a reliable guide to normal practice. Nevertheless controversial cases reveal contradictions in the institution, which throw light on long-term changes. While the idea of the fictive creation of kinship ties as a way of incorporating

⁶³ Possibly a son-in-law, *APF* suggests, but the sources say 'son'. See above, n. 29.

⁶⁴ If Goette 1989 is right in attributing *IG* ii² 3206 to Klearchos, there was no shortage of funds (but see ch. 12 n. 25). If Klearchos had been the adoptee, as suggested by E. M. Harris 1994, 1996, his patronymic would not have been Nausikleous.

⁶⁵ We have no details about the adoption of a Theodoros by an Archephon (perhaps A. of Erchia, attested as a goldsmith in the 320s), contested in a case for which Deinarchos wrote a speech (F LXXIX–LXXX Conomis 1975; the Archephon of Machon F V, if there is any reference to a real person, should be later, cf. Gow 1965). On *Is.* F III Thalheim 1903 see ch. 7 n. 23. On *IG* ii² 3850 see ch. 12 at n. 96.

a stranger into a new status in the *oikos* may have come from the practice of upper-class households, adoption in its Solonian form appears to be essentially an attempt to compromise between contradictory tendencies in ethno-demographic theory and in practice at the level of the small-scale farmer. On the one hand, as the distribution of individual lots of land when a colony was founded strikingly demonstrates, a community was thought of as made up of individual households, each consisting of a peasant-proprietor with his wife and children. Ideally, each household should be transmitted to a single heir. On the other hand, inheritance was partible, divided equally between brothers; what any man owned had thus come from ancestors shared with his kin, and if he left no sons it seemed reasonable that his property should return to this common stock for redistribution.⁶⁶

Adoption, then, allowed the selection of a single heir from the group to which the estate of a childless man would otherwise revert. It may have had a clear physical basis in practice, childless elderly men taking in a younger kinsman to work on their land when they came to need full-time help. Within a village community, choice of a suitable heir had to satisfy local members of the kindred and the general sense of what was fair in each particular case, the circumstances of which would be well known. This would have limited conflict.

When the same law was transferred to the city, used for diversified and scattered estates where neither re-creation of an original holding nor provision of supplementary labour was in question, and administered by courts, the contradictions implicit in the law began to show themselves. The rule that an adopted son completely severed his ties with his genitor and lost his status in the kindred into which he had been born, unproblematic as a statement of the concrete logic of a move from one farm to another, could not be applied abstractly to all rights and obligations associated with kinship without coming into conflict with moral sentiments and emotional ties.⁶⁷ Selection of an adoptive heir from a kinsman's *oikos* was in personal terms obviously not equivalent to breaking off relations. On the contrary, it both implied pre-existing ties and reinforced them by the creation of a further, quasi-affinal link. The adopted son retained personal emotional ties with his family of origin; the maxim 'No one is adopted away from his mother' (Isaios 7. 25) reflected this.

⁶⁶ Note that it is quite unnecessary to believe in communal ownership by joint families or some other type of kin group at an earlier period. The residual inheritance rights of the kindred are sufficiently explained by partible inheritance. (The rights of *matrikin* may derive from the practice of giving land as dowry or from analogy with their relevance in other spheres). Sharp distinctions between 'individual' and 'joint' systems may be misleading.

⁶⁷ For similar problems in Indian law see Venkataramiah 1982. The provision that an adopted son could return to his father's *oikos* if heirs failed there, and if he left a son in his place, was probably made in Athens from the beginning; cf. the parallel provision in the East Lokrian colony law M/L 20. 6–8, cf. 29–31, 35–37; ch. 1 n. 88.

Solon's law thus created a split between jural and folk definitions of kinship, repercussions of which can be traced in the classical period. By this time considerably more was involved in jural kinship than the practical question of arranging a neat fit between farmers and farms, and any spatial constraints that may once have favoured the adoption of close patrikin would have become less significant.⁶⁸ The rules had become detached from their physical base. Three situations were particularly likely to be problematic. In the first place, any adoption that was followed by the development of further opportunities for collateral inheritance within the adopted son's kindred of origin, or by the death of his father's expected heir, was likely to inspire attempts to reassert the kinship ties which had in theory been broken by adoption ([Demosthenes] 44; cf. Isaïos 9. 2, 33, [Demosthenes] 43. 77–8, [Demosthenes] 58. 31). Secondly, with more scattered estates and greater discrepancies in wealth between kin, the selection of one of a set of equally qualified heirs for adoption might conflict with the principle of equal division of inheritance between brothers. We do actually hear of several cases in which the adopted heir had same-sex siblings;⁶⁹ on the other hand where two cousins (MZS) had equal claims to an estate there was no adoption; the property was sold and equally divided.⁷⁰ Thirdly, however, in the alternate case where the next-of-kin was an only son, he would be unwilling to lose his patrimony or forego any other inheritance to which he might be entitled by birth (Isaïos 2. 10). Hence, in both of the two latter cases, there may have been a certain tendency not to use adoption where the chosen heir could inherit as next-of-kin under the law of intestate succession—and thus to associate adoption particularly with the selection of an heir from kin (or affines) who would not otherwise have succeeded. Such a choice would fit in well with the affective warmth associated with adoption (Isaïos 9. 78); precisely because of the structure of the jural kindred, there were more occasions for friction between agnates than between cognatic kin or affines. Plutarch, then, in stressing that adoption allowed a free choice of heir guided only by considerations of affection (*Solon* 21), may not have been too far from the viewpoint of the classical period—although in that period free choice was still only exercised within a limited circle of close kin and affines.

Conflicts in court produced by these problematic situations generated both a negative and a positive rhetorical discourse about adoption. Negatively, adoption could be presented as an inferior form of kinship, exploited by fortune-hunters

⁶⁸ Given the tendency to nucleated settlement and the bilateral structure of the kindred, there is little reason to suppose that there had ever been a pronounced patrilineal bias.

⁶⁹ Above, nos. I 2–4, IB 1, II 3, IIB 1, 3–5, 7, III 1–2, IV 3, 5, V 1, 4–5.

⁷⁰ Is. 7. 19, 31, *APF* 1395. The statement of the law in §§ 19–20 is extremely tendentious.

who lacked any real feeling for the adoptive father.⁷¹ Cases of posthumous adoption and the ‘return’ of adopted sons to their families of origin would reinforce this view, which is perhaps echoed in a debate of the late fifth century. Theozotides proposed that the sons of men who had fallen in the fighting between oligarchs and democrats should receive the same subsidies as war orphans. He specified that the subsidy was only to go to legitimate sons, and laid down a procedure for scrutiny. A client of Lysias attacked him for excluding bastards and adopted sons. Adopted sons in this case could only claim on the basis of a will or a posthumous decision by their parents to adopt them to the deceased, since the formalities of adoption *inter vivos* could only be completed at the age of eighteen, when the subsidy ceased.⁷²

On the other hand, adopted sons defended their position by stressing affection and filial devotion. Though many speakers in court had no occasion to contrast adoptive filiation with the often strained relation between natural fathers and sons (Humphreys 1983*a*/1993, 66–7, 77–8 n. 23), the comparison is made in New Comedy.⁷³ The stress in philosophical circles on friendship and the choice of like-minded associates (Humphreys, *ibid.* 65–8; 1978, 234) presumably contributed to this discussion, and adoptive or quasi-adoptive relationships seem to occur with some frequency among philosophers in the late fourth and early third centuries. Indeed, the process by which philosophical schools came to be regarded as a kind of sacred property passed from one ‘head’ to another, rather than as personal property, is a result of the need to distinguish spiritual from jural heirs.⁷⁴ Plato’s Academy, as noted above, passed to his sister’s son Speusippos, although he bequeathed the rest of his property to his next-of-kin Adeimantos II, probably the grandson (SS) of his brother Adeimantos I (*APF* 8792 X–XI). Lykon, from the Troad (c.300–226), left most of his estate to the younger of his two brothers, who had the same name, had lived with him and was ‘like a son’ to him (Diogenes Laertios 5. 69ff.).⁷⁵ Aristotle, as already mentioned (#II B 12), adopted by will his sister’s son Nikanor, who was also his younger foster-brother. Nikanor was to

⁷¹ It is interesting that Plato, for his own rhetorical ends, assumes in the *Republic* (537c–538c) that a foster-child (*hypobolimaïos*) reared in ignorance of his origins will lose all attachment to his foster-parents when he discovers the truth (cf. Hdt. 1. 137).

⁷² Lysias fr. VI Gernet Bizon 1926 with pp. 235–6 (LXIV Carey 2007). Theozotides’ decree—which may have been modified in response to the objections raised by Lysias’ client—is partially preserved: Stroud 1971, *SEG* 28. 46/32. 37/33. 67. Scrutiny of war orphans was not new, but Theozotides may have suggested some modifications in the procedure of scrutiny and/or payment (Stroud, *ibid.*). There is no need to suppose that illegitimate sons (*nothoi*) had previously had an openly recognized right to subsidy.

⁷³ Terence’s *Adelphoe*, based on Menander; Menander’s *Samia*. See Fantham 1971; Keuls 1973; Lord 1977; Lape 2004; above, at n. 40.

⁷⁴ Ismard 2010, 186–204. Wills usually name a group of heirs to the school, rather than a single successor, but the practice of regulating succession to a school by will implies that the testator has been acting as head of the school.

⁷⁵ I take it that Pylades, heir of Arkesilas of Pitane (316/5–241/0; D. L. 4. 28–9) was his full brother.

marry Aristotle's daughter Pythias, and both were to act as guardians to Aristotle's son by Herpyllis, Nikomachos. Herpyllis may have been a freedwoman; her social status was certainly lower than that of Pythias' mother, although Aristotle's frequent changes of residence make it difficult to speak conclusively of legitimate or illegitimate filiation. Nikomachos was named after Aristotle's father and his paternity must have been recognized, but Pythias seems to be being treated like an epikleros. Since philosophers made a point of relying on the moral sense of their kin and friends rather than on law (Plato *Phaedo* 115b–c, *Krito* 54a–b), the question of Nikomachos' legal standing could be left vague (cf. n. 51 above).

Where the philosophers had led, Hellenistic cities were to follow. The resemblance is partly due to the fact that philosophers provide unusually well-documented early examples of the life of the travelling professional man (cf. Isocrates 19), which was to become a widespread phenomenon in the Hellenistic period. But the philosophers also represent a tendency to assert the rights of the individual to dispose of his private affairs according to his own moral judgment, rather than by strict rule of law, which appears to gain ground in the Hellenistic period. Status boundaries between citizens and foreigners, legitimate and illegitimate children seem to become less rigidly defined and more permeable, and adoption is used in new ways.⁷⁶

In Hellenistic Athens adoptions involving a change of deme continued, but kinship with the adopted son's family of origin is publicly acknowledged. In 183/2 BCE Aristokles of Perithoidai is recorded as paying *epidosis* contributions for himself, his son Eukles, and his (natural) brother Amynomachos son of Eukles of Halai. Both Aristokles and Amynomachos held office in the genos Eumolpidai as hierophant of the Mysteries.⁷⁷ Presumably Aristokles was born son of Eukles of Halai and adopted out into a family in Perithoidai.

Elsewhere, men are regularly identified in public documents by the name of both pater and genitor;⁷⁸ in Rhodes, where adoption seems especially common, more than one person may be adopted and there is one known case in which two

⁷⁶ Grants of citizenship: *Milet* I iii nos. 41, 45–6, 51, 64–5, 67, 70, 72, 74, 76–9, 87, 89; see Brulé 1990a. Cf. Van Bremen 1983, 230–3 on the use of the rhetoric of private relationships in the Hellenistic city (mixed marriages; see Diller 1935; *IG* ix 2. 1228). The evidence here comes from cities that may never have drawn the boundary between public and private spheres as sharply as classical Athens. But we still know too little about the influence of Athenian law on the cities of the empire (Gofas 1979 and D. M. Lewis 1984a have made a small beginning on this topic, but much remains to be done). *IErythrae* I 2 appears to be the remains of a citizenship law similar to that of Perikles, and approximately contemporary.

⁷⁷ Ch. 20 n. 116, *IG* ii² 2332/*SEG* 32. 218. 49–52. On the tendency to disregard strict rules of agnatic succession in Hellenistic and Roman genè see also ch. 20 n. 133.

⁷⁸ Either pater or genitor may be named first. See Wentzel 1930 (arguing that the practice begins c.200 BCE, perhaps under Roman influence); M. S. Smith 1967; Rubinstein a. o. 1991. For an early 3rd c. example from Erythrai, *SEG* 32. 1243, (*LSAM* no. 25, *IErythrae* II no. 201. 7–8; a highly probable restoration). For evidence from papyri see M. Kuryłowicz 1983.

brothers seem to adopt each other.⁷⁹ Hellenistic fathers also ask cities to grant citizenship to their illegitimate sons and daughters (*nothoi* and *nothai*), and grants of citizenship or partial citizenship to the sons of citizens by foreign mothers (*matroxenoi*), either individually or collectively, are not uncommon (cf. Ogden 1996). All these phenomena seem to imply an increasing readiness to recognize ties of 'natural' kinship where the law would earlier have imposed barriers (Humphreys 1988). Ultimately—by a development which is not yet well understood—adoption came to be assimilated to fosterage. The ideal of the single heir seems to be entirely forgotten; fictive kinship—if foster-relations can be so described—is used to widen the circle of close associates, and often to cover inequalities of status.⁸⁰ In Christianity the fictive ties of god-parenthood created the same bar to marriage as ties of biological kinship—a new imposition of strict legal rules with a quite different orientation.

The structure of the Greek kindred lent itself to such developments because of its bilateral extension and the possibilities it offered of free choice of associates and helpers within the ego-centred kin network. The absence of a clear hierarchy of differentiation distinguishing relations with patrikin from those with matrikin, or agnates from cognatic kin, meant that the slight preference for agnatic relations in law was easily counterbalanced by complementary ties with non-agnatic kin, which might well be strengthened by the search for allies in cases of conflict with agnates. The structure of the system does not predict the functions which adoption and other forms of fictive kinship will assume in different periods and circumstances, but it generates the underlying contradictions and tendencies to instability which help to create new institutions and new attitudes towards, or uses of, old ones.

⁷⁹ Rhodes: Poma 1972, 175, 180. Naming patterns repeat names from both pater's and genitor's families (Bresson 1981). In Bresson's no. 4 (Blinkenberg 1941, Stemma 13) it is unclear whether Lysistratos is adopted by MF or FB. See ch. 4 nn. 21–2 on the later epiklerate. Rhodian adoption badly needs studying. Can the mutual adoption of brothers (*Lindos* I, nos 229, 338) be a rite of reconciliation? In the third of the Entella decrees (Nakone, 3rd c. BCE: SEG 30. 1119/43. 619/51. 1185; Alessandri 1982, Ampolo a. o. 2001) a ritual of adoption into brotherhood (*adelphothetia*) is devised to promote concord after an episode of *stasis*. Cf. Wilhelm 1947, 20–5 for incorporation into a clan (*syngeneia*) at Sinuri as adoptive brotherhood. I do not think it is particularly necessary or helpful to look for Italic or Phoenician cultural roots (Amiotti 1985). An adelphic adoption in Pantikapaion, Christophilopoulos 1979, 77.

⁸⁰ A. Cameron 1939 is still useful; see also Nani 1943; Sacco 1980, Riel 2009. *Threptoí* occur already in Boeotian manumissions of the late 3rd c. BCE, Roesch and Fossey 1978. If systems of adoption and fosterage are mapped onto a scale of distribution of parenting functions (E. N. Goody 1982) running from total retention by biological parents to total transfer, Greek adoption is in any case closer to what we call fosterage than modern (but perhaps not postmodern) western adoption (for later periods see Sant Cassia and Bada 1992).

Guardianship

As we have seen, *threptos* and cognate terms, with the relationships they denote, are widespread in texts from later periods and other areas. In classical Athens, however, foster-relationships are not institutionalized to the same extent. Foundlings reared as dependants occur in New Comedy,¹ and orphans who did not live with their guardians were often brought up in the household of a stepfather,² but the legal bias in the sources means that we hear much more about guardians than about foster-parents.

A woman, in Attika, was under guardianship throughout her life. A law quoted in [Demosthenes] 46. 18 lists, as possible guardians: father, brother by the same father, grandfather (FF), or next-of-kin. A married woman came under the guardianship of her husband; a widow under that of her son, once he came of age. Women are discussed below only when under the guardianship of someone other than father, brother, husband, or son.³

A man threatened with death while he had children who were still minors would normally appoint guardians to take care of the estate. A woman could not

¹ Men. *Epitrep.*, *Hero*; strictly speaking they are probably always of slave status, but in Men. *Perikeir.* Glykera is ‘married as a freewoman’ (Moschion passes as a legitimate son of his foster-mother).

² In *POxy* 664, a philosophical dialogue on tyranny, the narrator is represented as guardian of young Thrasyboulos son of Philomelos, who has fallen in love with the daughter of the tyrant Peisistratos. Thrasyboulos has been brought up by his grandfather (MF?) Hagnotheos. The other attested speakers in the dialogue are called Ariphton and Adeimantos; this suggests that the text belongs to the literature on Alkibiades of the late 5th or early 4th c. Cf. *APF* 14667, 14670 for bearers of the name Philomelos at this time; 11793 V proposes a 4th c. date for the story. On fosterage in Homer and in myth see Gernet 1932. Hyp. *Against Timandros* claims that guardians were obliged by law to bring up siblings in the same household, but see Rubinstein 2009*b*.

³ For further discussion of widows see V. J. Hunter 1989; Cudjoe 2010; ch. 5 n. 33. I have not systematically collected evidence for brothers as guardians, but see Is. 2, 3–6, Dem. 57. 41 (marriages arranged by brothers); *IG* i³ 1136, *horos sēmatos Glykēs Marathōnothen en astei oikósēs, adelphē Eschatiōnos Kalliō;* *IG* ii² 2765 = Finley 1952 no. 176, *horos oikias kai choriō Timostratēs Anakainthen tēs Boōnos adelphēs Anakaiōs, mētro[s de —]Kēphē[seōs]*, marked land attributed to a widow, who may or may not have been remarrying (cf. Schaps 1979, 113 n. 20). In [Dem.] 59. 58 the wife of Phrastor of Aigilia is identified by the names of both her father and her brother. Sons as guardians: ch. 20 n. 101, dedication by priestess of Demeter, before c.350, identified by reference to her son, *IG* ii³ 1002. For non-Attic data see E. Weiss 1908*a*, 86–8; Christophilopoulos 1977, ch. 4; Babakos 1962; Vial 1984, 80–4 (Delos); useful material in *IG* xii 5. 872 (Tenos).

act as guardian,⁴ and though a widow could apparently stay in her ex-husband's house with her children it seems commoner for the widow to remarry. If she did, her children might be reared in the house of her new husband, but he would not be their guardian unless the father had arranged both marriage and guardianship by will. The banker Pasion of Acharnai arranged that his widow should marry his ex-slave Phormion, who was to be one of the guardians of his younger son Pasikles; Demosthenes' father directed in his will that his children's guardians Aphobos and Demophon should marry his widow and (when she came of age) his daughter, although the guardians in this case did not respect his wishes. Diogenes Laertios' statement (1. 56) that Solon forbade marriage between a guardian and the mother of his ward is completely erroneous.⁵

There are, however, other signs in Attic culture of suspicion of guardians. Plato in the *Laws* (924b) prescribes that if a man dies without appointing guardians by will, the state is to appoint the orphans' two nearest patrikin, their two nearest matrikin, and a friend of the deceased to act as guardians. A law ascribed to the legendary Charondas of Katane (Diodorus Siculus 12. 15) rules that the next-of-kin on the father's side are to look after the property—being next in line to inherit if the orphan dies, they will take good care of it—and the next-of-kin on the mother's side, who have no interest in the estate, are to take care of the orphans.⁶ Of the twenty-eight cases of guardianship attested in Athens, ten wards sued their guardians and another three complained without suing. Of course the evidence comes mainly from forensic speeches and therefore includes a disproportionate number of controversial cases. Procedures for protecting the ward's interests during minority seem not to have been very effective. In theory anyone could bring an *eisangelia* for 'ill-treatment of an orphan', or declare that an orphan's estate had been misappropriated (*phasis*), but there is little solid evidence.⁷

Testators as well as philosophers realized that the best protection lay in numbers. Xenopeithes II and Nausimachos of Paiania ([Demosthenes] 38, *APF* 11263) were left in the care of their FB Xenopeithes II and another (?) kinsman,

⁴ On women as guardians in Greco-Roman Egypt see Taubenschlag 1955, 157–62; Montevocchi 1981; cf. also below, n. 26.

⁵ Cf. Jolowicz 1947; Wyse 1904, 499. The alleged marriage of Euktemon of Kephisia to a ward born on Lemnos (Is. 6. 13) was however probably fictitious (*APF* 15164; cf. ch. 7 n. 23).

⁶ Cf. the law code of Gortyn VIII 50ff., XII 25ff. A Tswana parallel is provided by Comaroff and Roberts 1981, 74. P. J. Rhodes' suggestion (1981*a*, 632) that all appointments of guardians had to be approved by the archon eponymos is unwarranted; however, *POxy* 2464 may show that there could be assembly debate on the topic in association with an *epidikasia* (see Appendix 5). Saller 1994, ch. 8 deals with the law and practice of guardianship in Rome, emphasizing demographic arguments for its frequency.

⁷ See Humphreys forthcoming *a* n. 14; Thür 2008.

Aristaichmos of Cholleidai.⁸ Demosthenes and his sister had three guardians: their FBS Demophon, their FZS Aphobos, and a friend, business associate, and fellow-demesman of their father, Therippides of Paiania.⁹ Pasikles son of Pasion of Acharnai had a second guardian, Nikokles (of whom nothing else is known), in addition to his stepfather Phormion.

The range of kin identified as such, when guardianship is discussed, is narrow; it does not extend beyond parents' siblings and their children. Therippides of Paiania may have been a distant kinsman of Demosthenes' family, but if so the fact was not considered relevant. In the only case where we can see a distant kinsman being preferred to closer kin, the motivation seems to have been at least partly political. Alkibiades' father Kleinias left him and his brother in the care of Perikles rather than of their FB Axiochos or their MB Megakles V; the result was certainly that Alkibiades got an excellent start in political life. The uncles may have been too young or too frivolous in their interests; or Kleinias, like Perikles himself, may have preferred to concentrate his attention on relationships useful in the public sphere of politics.¹⁰

As with adoption, in looking at guardianships we will follow the order in which *oikoi* and their members were ranked in the law of intestate succession (Table 1.1). Possible guardians whose relationship to the orphan derived from membership of his father's *oikos* are the father himself, in cases where the tie between father and child had been broken by adoption, or an older brother or patrilineal half-brother. The son of a brother or sister was not likely to be old enough to act as guardian, but a sister's husband, though not strictly kin, might be called upon to do so (Table 3.1).

A natural father (*genitor*) was not a kinsman, at law, but a child who was adopted by will when a minor would presumably remain under the guardianship of his or her natural father until old enough to claim the estate of the adoptive

⁸ [Dem.] 38. 23 rules out the view of *APF* 11263 that Aristaichmos became guardian only after the death of Xenopeithes I. It is unlikely that Aristaichmos was the wards' MB (Humphreys forthcoming *a*); we know only that he belonged to another deme and therefore was not an agnate.

⁹ Therippides is perhaps now attested as a mine lessee, *SEG* 29. 155.

¹⁰ Plut. *Alk.* 1 says that Perikles and his brother Ariphron were both appointed guardians, but may be misrepresenting Plato *Alk.* I 122a, where we are only told that Perikles sent Kleinias IV to the house of Ariphron to detach him from his brother's influence. Perikles was the boys' first cousin once removed (MFZS; *APF* 600 VII, cf. W. Thompson 1970*b*); conceivably there may have been a closer affinal relationship through his wife, an unidentified kinswoman, but by 447/6 she must have been divorced (see ch. 4 n. 52). The boys' FB Axiochos was involved in the profanation of the Mysteries in 415 and is generally represented as companion in his nephew's escapades (*APF* 600 VI, Lys. F V 4 Thalheim 1913, V 8 Carey 2007); Megakles V is known mainly as a racehorse owner. It has been suggested that their father Kleinias II proposed the decree on tribute-collecting procedures assigned to 448/7 (*IG* i³ 34 = M/L 46) and was a close political associate of Perikles, but the decree is now dated in 426 (Papazarkadas 2009*b*, 72–3), after his death.

TABLE 3.1.
Guardianship of orphans

father.¹¹ One of the four daughters of Stratokles of the Bouselid family (*APF* 2921) adopted by her MB Theophon, returned to her father's *oikos* and guardianship when Theophon died (Isaios 11. 41–2). Sositheos, father of the speaker of [Demosthenes] 43, wishing to emphasize the legality of the adoption, arranges for Sosias II, his eldest son, to act in court as *kyrios* of his second son, still a minor, who has been presented to the phratry as posthumously adopted son of his MF Euboulides II.

Sosias II was presumably being presented in court—if the situation had been thought out in such detail—as the matrilineal half-brother of Euboulides III. Matrilineal half-brothers however derived their relationship from the *oikos* of their mother's father. Guardianship by brothers is more commonly found where both (or all) have the same father and thus share property interests. One brother speaks for all in the courts in *Lysias* 18, *Isaios* 1 and 8, probably in the first speech in the case for which *Isaios* 4 was written, and in [Demosthenes] 38; but we cannot tell whether more extensive duties as guardian were involved. *Lysias* seems to have been under the guardianship of his eldest brother after their F's death (*APF* C 9). Diogeiton, the wicked guardian of *Lysias* 32, took the sons of his deceased brother into his own household when their mother (Diogeiton's daughter) remarried, but as soon as the oldest came of age he told him to leave with his younger brother and take responsibility for him.¹² Guardianship by an older brother is also mentioned in *Lysias* 10. 5 (perhaps a

¹¹ This would be the situation of the niece of Hagnias II (*APF* 2921, Table 7.9), who was adopted by his will and died before reaching the age of marriage. Natural rather than adoptive relationships seem also to determine the choice of Aristomenes as guardian of his nephew (BS) Kyronides, who had been adopted into the *oikos* of his MF Xenainetos (*Is.* 10. 4–5; Table 7.5).

¹² *Lys.* 32. 8–9, *APF* 3885. Their sister was presumably married by this time.

patrilateral half-brother) and possibly in *POxy* 2537.¹³ In both these cases the relationship led to conflict.

The known cases of guardianship by a sister's husband led to conflict only in two cases, one of these in peculiar circumstances; normally one would expect the relationship to be a supportive one (cf. Humphreys 1986*a*, 76–8). Kallias III son of Hipponikos of Alopeke was married to the sister of his wards, the sons of Ischomachos, before he married their mother Chrysilla (*APF* 7826 XI–XIV); how far, if at all, these arrangements had been authorized by Ischomachos is unclear.¹⁴ A guardian who is ZH to his wards, son of a Hippokrates, is mentioned in Lysias F LXXI Carey 2007, LXII/43 Thalheim 1913; (*APF* p. 457; D. H. *Isaios* 8. 3; Wyse 1904, p. 599); the wards sued him. Phrasikles, guardian of Themistokles' daughter Asia, was married to her sister and was also a cousin (FBS or FZS).¹⁵ As we have seen (ch. 2, II B 12; cf. Table 4.3), Aristotle left directions in his will that his foster-brother and adopted son Nikanor should marry his daughter Pythias and they should look after Aristotle's son by Herpyllis, Nikomachos II. Aristotle himself had been brought up by his elder sister and her husband, Nikanor's parents.

In the *oikos* of the orphan's paternal grandfather the next-of-kin was his father's brother, and this is in fact the most frequently attested relationship between guardian and ward.¹⁶ Xenopeithes I died before his wards came of age, but was apparently still alive when Nikides—whose relationship to the orphans, if any, is unknown—unsuccessfully denounced the guardians for failing to lease the orphans' estate ([Demosthenes] 38. 23). Deinias, guardian of the speaker of *Isaios* 1 and of his siblings, was their FB; he was allegedly on bad terms with their MB Kleonymos, who took them in after Deinias' death, but no other complaint is made against him (ch. 7 Case 11, Table 7.10). In general, however, the father's brother gets a bad

¹³ See *Agora* XXI, 15 no. C 31 for the possibility that the guardian of Lys. 10. 5, Pantaleon, became notorious for his slipperiness and gave his name to pantaloons. On *POxy* 2537 see p. 103. Elder brother as guardian in Boiotia, Plut. *Mor.* 484a; elder patrilineal half-brother in Pitane, late 4th c. (on bad terms), D. L. 4. 28–9, 43, an elder full brother de facto taking charge.

¹⁴ *APF*, loc. cit., suggests that Kallias married Ischomachos' daughter before her father's death, and divorced her to marry her mother when Ischomachos died (cf. ch. 4 n. 8 and Table 4.2). References to an Ischomachos who was a prey to flatterers and parasites (*APF* 7826 XIII E–F) may belong to Kallias' father-in-law and to the friend of Sokrates (Sokrates himself would have been classed as a parasite by some Athenians). Vanity is an ingredient in Xenophon's portrait (*Econ.*); his Ischomachos should not be interpreted too naively as a Greek Benjamin Franklin.

¹⁵ See ch. 4 at n. 35; *APF* 6669 VI.

¹⁶ Table 3.2: 6 certain cases, 1 conjectured, 1 fictional. If the paternal grandfather (FF) was still alive control of the orphans and their property would at law automatically revert to him (ch. 1 at n. 95); but it would be rare for a father to outlive a son who left orphan children, and no cases are known in Athens. FF as guardian of a nubile girl in Mykonos, *Syll*³ 1215. 25–8. I have assumed above (n. 2) that the *pappos* in *POxy* 664 was MF.

press.¹⁷ Diogeiton (*APF* 3885, Lysias 32, ch. 7 Case 6, Table 7.6), who was his wards' FB and MF, allegedly diverted much of their property to the children of his second marriage. Eupolis son of Apollodoros I of Leukonoion was successfully sued for depriving his BS and ward Apollodoros II of half the estate of Mneson, brother of Eupolis and FB of the ward, which should have been shared between them (Table 2.1). Aristomenes of Sypalettos is alleged to have diverted the estate of his brother Aristarchos from his ward, mother of the speaker of Isaios 10, to her brother, his son-in-law Kyronides, who had been adopted out of Aristarchos' *oikos* into that of his MF.¹⁸ Theopompos, the speaker of Isaios 11 (*APF* 2921; ch. 7 Case 9, Table 7.9), is defending himself against a charge that he has defrauded his BS and ward of the share of the estate of Hagnias to which the boy was entitled.¹⁹ The suit was brought by a fellow-guardian. In Isaios F 22–3 Thalheim 1903 wards sue a guardian who is either FB or MB.²⁰

Guardianship by the son of a paternal uncle (FBS) is seldom attested in Athenian sources. Kritias' relationship with his cousin and ward Charmides son of Glaukon is portrayed as affectionate by Plato (*Charm.* 155a, 156a) and developed into close political association; when Kritias was playing a leading role in the Thirty in 404/3 Charmides was one of the commission of ten in charge of Peiraios (*APF* 8792 IX). It is not clear whether Kritias was also for a time guardian of Charmides' sister Periktione, the mother of Plato, or whether she was already married when her father died. The siblings' maternal uncle (MB) presumably remained on close terms with them, since he married Periktione c.425.²¹ For once, owing to Plato's connection with the family, we catch a glimpse of guardianship working amicably.

¹⁷ See ch. 5 n. 69 for the possibility that in [Dem.] 38 (Table 8.4) the wards' father and his brother had not definitively divided their inheritance. We do not know whether Sopolis son of Smikythos of Kydathenaion paid his brother's debts as guardian of his children or as his heir (*IG* ii² 1631. 350–403, *APF* 15380; Table 5.6, ch. 14 n. 42, 25 n. 11). *IG* ii² 5768 is probably the tombstone of a boy and his FB; guardianship is a possible but not imperative explanation (Humphreys 1983a/1993, 112). A generous FB/guardian in Men. *Aspis*, who plans to dower his niece from his own estate while her brother is away on military service; in Sparta (where fraternal indivision may have been commoner) Lykourgos is represented as the FB and guardian of Leobotes (Hdt. 1. 65) or of Charilaos (Plut. *Lyk.* 3).

¹⁸ However, the ward may have been adequately dowered and it appears that resentment did not develop until well after the end of Aristomenes' guardianship; see ch. 2 I 3; ch. 7 Case 5, Table 7.5.

¹⁹ In my view the law should have been interpreted in the ward's favour (ch. 1 at nn. 100–1), but the court may well have found for Theopompos.

²⁰ A. R. W. Harrison 1968, 97–8 n. 1. The guardian in *POxy* 2537 may also have been FB. Ps-Deinarchos XCV Conomis 1975 (dated 341/0) was the defence of a guardian named Satyros sued by a ward named Charidemos. A Charidemos son of Satyros of Lakiadai appears in a probably ephebic tribal list of c.330 (*IEleus* 82. 9). If this is the same family, the ward was perhaps a homonymous cousin (FBS; see ch. 8 at n. 35) of the ephebe, about 10 years older, suing the ephebe's father, his FB.

²¹ See ch. 4 n. 27. As already noted, Phrasikles, guardian of Themistokles' daughter Asia, was her FBS or MBS as well as her ZH.

Note: The Demophilos A. of Ziebarth 1934 no. 1 is now Phylasios, *SEG* 58.265 B 93.

TABLE 3.2. Sostratos of Acharnai

Sostratos II son of Euxitheos of Acharnai paid the trierarchic debts of his uncle (FB) Demophilos I in the 350s; since we know that Demophilos had a son, Sostratos was probably acting as guardian of this boy, his FBS (Table 3.2).²²

Demosthenes' relationship with his FBS and guardian Demophon, as is well known, was a different matter. Probably the youngest of the three guardians and about 25 when appointed (*APF* 3597 III), he was expected to marry Demosthenes' younger sister when she reached the age of 15 but instead found himself in court, being sued by Demosthenes. Demophon's father Demon was still alive when he was appointed guardian, and Demomeles II may have been the

²² The reconstruction of this family in *APF* 13346 needs modification to take account of S. G. Brandon's attribution to it of *IG* ii² 11130 (*LGN*). This tombstone, dated *c.* mid 4th c., represents a seated Sostratos (I) with two standing men, Demophilos (I) and Euxitheos, presumably his sons. Sostratos II, the guardian, will be the son of Euxitheos. Kirchhoff's conjecture that the son of Demophilos I who proposed *IG* ii³ 419 in the 320s was also called Demophilos has little basis; he might well have been Sostratos (III), attested as trierarch later in the 350s (*IG* ii² 1616. 120). Demophilos II, attested (without patronymic) as councillor in 329/8 and politician in the 320s (*LGN* 22) could be a son of Sostratos III, who as an orphan was in a position to marry young (ch. 5 at nn. 49–50), or of a daughter of Demophilos I who married within the deme (the frequent transmission of names from MF to DS should be more seriously considered in prosopographical reconstructions). Demophilos III and Sostratos IV, who appear together on an ephebic list of *c.* 330 (Reinmuth no. 12), cannot be precisely placed and need not have been brothers. The Lysikles of Acharnai cursed in *SEG* 58. 265 A 4 is perhaps unlikely to be Lysikles son of Euxitheos, whose tombstone *IG* ii² 5812 is dated to mid-century.

older brother; it seems to have been the decision to combine guardianship with marriage which led Demosthenes' father to select Demophon as a guardian.²³

The leading villain among the guardians, by Demosthenes' account, was the oldest (Humphreys forthcoming *a*), another cousin, his FZS Aphobos. According to the will of Demosthenes senior he was to marry the dying man's widow; presumably it was hoped that this would give her more influence over her children's affairs. But with the brazenness suggested by his name he disregarded this stipulation.

Speusippos was probably the FFZS of Plato's heir Adeimantos II and acted as his guardian by virtue of his membership of a board of *epitropoi* appointed to look after the Academy as well as the boy and his property. Eurymedon (II) of Myrrhinous, another member of the board, may have been Speusippos' brother.²⁴

On the mother's side the nearest kinsman would have been a matrilineal half-brother; in this relationship Apollodoros of Leukonoion acted as guardian to his half-sister, daughter of Archedamos of Oion. Apollodoros had been brought up in his stepfather's oikos and eventually adopted his half-sister's son (Isaios 7, *APF* 1395). Diokles of Phlya (Isaios 8. 41f., *APF* 8443) claimed to have been adopted by his mother's second husband and took it upon himself to act as guardian of his half-sisters whose husbands, after they married, made various attempts to dispute his possession of his stepfather's estate.²⁵

In some cases where a boy was apparently under the sole care of his mother's second husband we do not know whether the marriage and guardianship were arranged by the will of the first husband, nor whether the guardian was also a

²³ *Pace* *APF* 3597 III, if Demomeles II was old enough and independent enough to borrow 1600 dr. from Demosthenes' father (his FB) before the latter's death (Dem. 27. 11) he may well have been the elder brother, as his name suggests, perhaps already married when Demosthenes senior died (cf. Humphreys forthcoming *a*. The statements in [Dem.] 29 that Demon, father of Demomeles and Demophon, helped Aphobos to misappropriate the orphans' estate and yet appeared as a witness for Demosthenes in 366 should be ignored: cf. Humphreys *ibid.*). Demosthenes' MF Gylon may have been alive but still in debt to the state when the boy's father died; he does not seem to have had sons. The husband of Gylon's other daughter, Demochares of Leukonoion (Demosthenes' MZH) supported Demosthenes in his suits against his guardians but had no official standing vis-à-vis the orphans. His son Laches eventually married Demosthenes' sister (below, ch. 4 with Table 4.7). On *POxy* 2464 see Appendix 5.

²⁴ Table 5.3. *APF* 8792 XI D has Eurymedon as 'son or brother' of Speusippos, but son seems to me less likely. Lucian *Navicula* 1. 10 has an Adeimantos of Myrrhinous. We do not know at what stage a female descendant of Speusippos married into the family of Amphichares of Azenia (Habicht 1982, 185–8). Philosophers move towards a more public conception of guardianship: Aristotle (D. L. 5. 11–12) names Antipater as *epitropos* of his will.

²⁵ Ch. 7 Case 3, Table 7.3. The situation is not unlike that of Dikaiogenes III in Is. 5 (ch. 7 Case 2, Table 7.2), and Diokles' half-sisters may have been well dowered.

kinsman.²⁶ Astyphilos (Isaios 9, *APF* 7252) appears to have had no guardian other than his stepfather. The boy's father had allegedly been killed in a brawl with his brother Thoudippos, so it is understandable that patrikin were not involved, but Astyphilos' father's sister and her husband were friendly to him and his mother had a brother (ch. 7 Case 8, Table 7.8). Kallias III son of Hipponikos of Alopeke, as we have seen, married first the daughter and then the widow of Ischomachos, and acted as guardian to Ischomachos' sons (*APF* 7826 XI–XIV). *POxy* 2537 verso 8–11 preserves the hypothesis of a speech by Lysias concerning the orphans' estate, but there seems to be no suggestion in this text that Kallias was at fault (Lysias F 89 cf. 308. 10–11 Carey 2007, F XXXVI/32, XXXVII? Thalheim 1913).

The mother's brother, representing MF's oikos, had a more secure claim to consideration as a potential guardian, from the legal point of view, and in fact guardianship by MB is relatively frequent.²⁷ Kleonymos (Isaios 1) took in his sister's sons after the death of their FB and guardian Deinias, but left his property to more distant heirs.²⁸ Leogoras II son of Andokides III of Kydathenaion brought up his sister's son Charmides son of Aristoteles with his own children and was presumably the boy's guardian; relations were good (*APF* 828 VI). The speaker of Lysias 19 describes himself as 'compelled' to bring up his sister's children after the death of their father Aristophanes (§ 9); she had returned to her own father's oikos shortly before the death of the latter. Her brother was defending himself on a charge of being in control of property left by Aristophanes, which should have been confiscated (*APF* 5951).

In Terence's *Adelphoe* Hegio has been made guardian of Sostrata's daughter by her dying father (455–7), with whom he had served on campaign (495–6).

²⁶ In Hellenistic cities a woman could act as guardian in her own right (by *c.* 277/6 in Erythrai, *SEG* 32. 1144 = *IErythrae* 201 d 10); see Van Bremen 1996, 228–30; above, nn. 3–4. Guardianship by the woman's husband is the nearest Attic equivalent. Isokrates presumably acted as guardian to his stepsons, adopting the youngest (*APF* 7716); Phormion was guardian to his stepson Pasikles, son of Pasion of Acharnai, who was so loyal to his stepfather that his brother Apollodoros accused him of being Phormion's son ([Dem.] 45. 83–4, *APF* 11672; cf. Humphreys 1986*a*; Table 4.4). On Polyuktos and Charidemios ([Dem.] 58. 31–2) cf. above, ch. 2 n. 30. We do not know if Polyuktos was officially the boy's guardian. Cf. chs. 4 n. 15, 5 n. 50 on Lys. F XXIII Gernet/Bizos 1926, XXXIII Carey 2007.

²⁷ For arguments against the view that Aristaichmos ([Dem.] 38) was his wards' MB, see Humphreys forthcoming *a*. I cannot discuss the arguments of Bremmer 1983 on the MB/ZS relationship (cf. also Bremmer 1996*a*) in detail here, but hope that this book will convince classicists of the need to look at the whole range of interactions between kindred instead of singling out one relationship a priori. In Is. F. 22–3 Thal. 1903 we do not know whether the guardian, Kalydon of (?) Steiria, sued by his wards, was FB or MB.

²⁸ Ch. 7 Case 11, Table 7.10. As Jolowicz 1947 points out, he may not have been officially appointed as guardian.

Donatus (on line 351) says that in the Menandrian original of Terence's play Hegio was the girl's MB, but in Terence he is her father's *cognatus proximus*.²⁹

Guardianship by more remote matrikin is rare. Dikaiogenes III of Kydathenaion was by adoption the MBS of Kephisodotos son of Theopompos, and seems to have acted as his guardian. Perikles' distant matrilinear relationship to his wards Alkibiades and Kleinias IV (MFZS) has already been discussed. According to some Arabic versions of Aristotle's will Theophrastos, who became guardian of Aristotle's son Nikomachos after Nikanor's death in 317, was the boy's FMZS (Chroust 1973, 205).³⁰

Leodikos of Siphnos, guardian in 324/3 of the heirs of Stesileides of Siphnos, living in Attika, was presumably a kinsman, but the relationship cannot be reconstructed.³¹ The speaker of Isaios 11, co-guardian with Theopompos of Oion Kerameikon to the son of Theopompos' brother Stratokles, may have been a matrikinsman of the boy.³² Alternatively he may have been a family friend, like Demosthenes' guardian Therippides of Paiania and Pasikles' guardian Nikokles. Lysias F 279 Carey 2007, 75 Thalheim 1913, refers to a guardian and ward (male) who were lovers; this of course does not preclude kinship. In the wills of the philosophers the number of *epitropoi* and the proportion of non-kin among them increase. *Epitropoi* become more like trustees of a will than substitute parents; a king may be asked to ensure that the provisions of a will are carried out. The use of fellow-philosophers as executors is in part a function of the general tendency of philosophers to gather groups of like-minded friends around them and invest them with the functions performed for others by kin; but the multiplication of guardians and the inclusion of non-kin among them are found elsewhere, though perhaps in smaller numbers.³³

²⁹ *Ad.* 947; see Scafuro 1997, 461–3. Fantham's suggestion, 1975 n. 30, that Hegio was entitled to marry the girl himself would probably be incorrect for Attic law if Donatus were right, since calculations of genealogical proximity were based on kinship to the father and not to the girl herself—though many Athenians may have been unclear on this point. Gaiser (*ap. Rieth* 1964, 72–3, 145) suggests that in Menander Hegio was the girl's FB.

³⁰ Is. 5. 9–10; ch. 7 Case 2, Table 7.2. The speaker of Is. 5, to whom Dikaiogenes III was also MBS by adoption, uses the term *epitropos* rather loosely, probably covering some women who had living husbands or brothers (*APF* 3773 C–D), but Theopompos' children do seem to have been fatherless. Relations were very bad. Aristotle brought up Kallisthenes son of Demonikos of Olynthos, whose mother was a female cousin (*anepsia*, Plut. *Alex.* 55) of the philosopher, but we do not know the exact relationship. On a possible case of guardianship by MFB in *POxy* 2464 see Appendix 5.

³¹ Table 5.4. *IG* ii² 1631. 430–41, *APFC* 12. For arguments against *APF*'s view that Stesileides' oldest son was of age by ? 338/7 and had died by 323/2 see ch. 5 n. 39.

³² *APF* 2921. The boy's MB Theophon had died childless, having adopted one of his nieces (ZS, sister of Theopompos' ward).

³³ Note also the assumption of guardianship by a tribe in *IG* ii² 1165 (300–250 BCE; ch. 21 n. 84), and the use of a priestess as temporary guardian in Men. *Sikyoniōs*.

Roughly half the known cases of guardianship are known to us because they provoked lawsuits or informal complaints that the ward had been ill treated.³⁴ This bias means that warm relations between wards and their guardians figure rather rarely in our sources. Wards often did not live with their guardians; some remained with their mothers in property that they would later inherit, others moved with mothers who remarried, and grew up in the households of their stepfathers. More rarely, an orphan might perhaps return with his or her mother to the mother's family of origin. The case of Charmides, son of Glaukon, whose cousin (FBS) and guardian Kritias was still of an age to frequent the same palaistra³⁵ and play the role of father-substitute in the homosocial milieu of young upper-class males that in other cases was part of the function of the *erastês*, seems to have been unusual. As children, wards will have been strongly influenced by the attitude to their guardian(s) of their mothers, which may often have been one of suspicion, since Greek men were under no obligation to explain financial affairs to women. Orphans would turn for help to the men their mothers trusted: their stepfathers, half-brothers, sisters' husbands, or matrikin.

The cases are too few for any very firm conclusions, but such details as we have suggest that widows and orphans in a position of relative isolation were particularly vulnerable. Diogeiton was the father of Diodotos' widow as well as the FB of her orphan children; her second husband, presumably selected by Diogeiton, took no steps to protect her sons' interests. When the boys eventually came of age their main supporter was their sister's husband. Demosthenes' mother had one sister and their father had been condemned for treason; anyone connected with him had to act circumspectly for fear of having old scandals raked up or being accused of holding property belonging to the state (*APF* 3597 VII–VIII). The mother of the speaker of *POxy* 2464 (not formally a ward?) was probably a widowed epikleros (see Appendix 5). Apollodoros of Leukonoion seems to have had no active matrikin; Theophon, the mother's brother of Theopompos' ward, the son of Stratokles, was dead. The wards of Deinias (Isaios 1) had been kept away from their mother's brother Kleonymos during Deinias' lifetime by the bad relations between the two men. Dikaiogenes III came into a family of four sisters, whose husbands seem to have been incapable of combining against him; one had apparently been involved with the oligarchy of 404/3, another was dead by 399. The confused circumstances of the later stages of the Peloponnesian War and its immediate aftermath may have discouraged any early attempt at a showdown. Diokles of Phlya had three half-sisters; by the time we hear of the family's

³⁴ The proportion of delinquent guardians would be higher if all lost forensic speeches were taken into account. Plato tells us in the *Theaitetos* (144c) that Theaitetos' guardians had dissipated his property; their relationship to him is not stated.

³⁵ Plat. *Charm.*, dated c.430 by the reference to fighting in Potidaia, 153a–c. *APF* 8792 suggests that Kritias was about 10 years older than his ward.

affairs from Isaios 8 two were widowed and the husband of the third was *atimos* and unable to plead in court. In the family with which Isaios 10 is concerned the guardian, Aristomenes, had married his daughter to one of his wards, Kyronides, by birth his nephew (BS) but adopted out of the family; Kyronides' sister felt that she had been ill-used. Her other brother had died in childhood, and her mother's father had adopted Kyronides and presumably took his side, if still alive (ch. 2 at nn. 27, 34–5; 7 Case 5, Table 7.5). In such cases the kindred was not large or close-knit enough to offer any protection. Women and orphans who did not even have property to attract attention from rapacious kin must have been still more isolated.³⁶ The money supplied by the state for the support of war orphans must in some cases have been badly needed.

³⁶ Cf. V. J. Hunter 1989. In texts from Egypt (e.g. *POxy* 2133, late 3rd c. CE) women complain of kinsmen who have constituted themselves guardians without authority and appropriated the inheritance of their 'wards'. The guardian is FFZH in one case, FB in the other though, as the petitioner says, hardly deserving the name.

Marriage with Kin

Like adoption and the choice of a guardian, marriage could be used to strengthen links in an Athenian's kin network (cf. Isaios 7. 12). From the point of view of the bride's father, to marry a daughter to a kinsman might give him more claim on the estates of kin, or permit more flexible arrangements over the payment of dowry; from the groom's point of view, a wife who already had a position of her own in his kindred could play a valuable role in familial negotiations (cf. Humphreys 1986*a*, 90). On the other hand, endogamous marriage meant giving up the chance of a new alliance.

An Athenian could marry any kinswoman except a direct ascendant, a direct descendant, a full sibling, or a matrilateral half-sibling. Plato in the *Republic*, having abolished family life for the Guardian class, devises a Hawaiian kinship terminology to ensure that no one can be involved in a collective mating ceremony with a parent or child; mating between classificatory siblings (who might be biological siblings) is to be allowed, subject to the approval of the Delphic oracle.¹ There was no strong belief that the incest taboo was universal (Xenophon *Mem.* 4. 4. 19–23; Humphreys 1988). The Athenian rule against marriage between matrilateral half-siblings should not therefore be interpreted strictly as an incest taboo and thus as evidence for a matrilateral bias in folk theories of procreation; these seem to have tended to favour the male contribution, although there was some disagreement (Lloyd 1983, 86–94, but see ch. 1 n. 97–8). It seems to have been intended to prevent the marriage of girls with claims on property to matrilateral half-brothers rather than to patrikin (a different view in Wilgaux 2000). Since divorce was easy and since women married considerably earlier than men—women from fourteen or fifteen, men between thirty and forty—it was quite common for a woman to bring up the children of two husbands together, and ties between matrilateral half-siblings were close and affectionate.²

¹ *Rep.* 461d–e. All those participating in the mating ceremony preceding Ego's birth are called father or mother; all those born a result of this ceremony are called brother or sister; all born after ceremonies in which Ego participates are called son or daughter. Cf. Sissa 1990. Mating partners are to be assigned by lot; for lot-drawing in athletic contests, perhaps Plato's model, see Gaebler 1929; warriors in Aesch. *Sept.* paired by lot, Demont 2000. See also Ponetti 2001.

² Age of marriage: girls, Ingalls 2007; young men, ch. 5 at nn. 48–59. Marriage with a matrilateral half-sister was allowed at Sparta, perhaps because fraternal polyandry and wife-lending were also practised

Marriages within the kindred were in some cases dictated by the law governing the disposal of brotherless girls, *epikleroi*, who were not yet married or betrothed at the time of their father's death; marriages of brotherless girls during the father's lifetime were also likely to be influenced by these rules. In other cases, choice of a spouse might be determined by the wish to keep family estates together, to provide reliable guardians for orphans (in the case of widow remarriage), to re-establish ties of kinship broken in law by adoption, to cultivate close relations with kin whose support was needed in legal or other disputes, or by discrepancies between a family's own assessment of its status and its standing in the eyes of others, which might make it difficult to find acceptable brides outside the kin group.

Such considerations weighed more with fathers than with sons or daughters; but it should be noted that sons who hoped to find their own brides had very few opportunities of seeing eligible girls except in the houses of kin.

There were, of course, countervailing influences. Quarrels with kin were frequent enough.³ Ambitious men might wish to use marriage to cement new political alliances, although the use of this strategy had its drawbacks (ch. 14). During and after the Peloponnesian War Athenians moved from villages into the city in large numbers, and also (more rarely) from one rural area to another; such moves split kindreds and may have favoured marriages with new neighbours.

Much of the evidence, as usual, is doubtful or controversial; data on relationships are incomplete or have to be inferred from names, we do not always know whether a girl was brotherless, or whether her marriage took place before or after her father's death. A few references to proposed marriages which for one reason or another never took place, to claims on *epikleroi* which might have been made but were not, to marriages of non-Athenians and of characters in drama, have been added to round out the picture of the range of unions that in some circumstances could be considered acceptable or proper; these will be clearly distinguished from marriages that actually took place between Athenian citizens.

In Table 4.1 marriages with kin are tabulated according to the structure of the kindred. In the text below, however, the data will be grouped into four broad categories defined by motive: marriages of actual or potential *epikleroi*, marriages probably motivated by considerations of property or kin solidarity, marriages that can be ascribed to anomalies of status, and unions in which prior familiarity

there; cf. Hodkinson 1986, 393; 2000, 123, 406–7; Perentidis 2006, 135. It is not necessary to believe that Sparta prohibited marriage between patrilineal half-siblings. Dream interpretation (Konstan 1997*b*) classes mother/father with brother's wife/sister's husband as sinister intercourse partners; mother's sister is also inauspicious.

³ In Is. 7. 11–12 the fact that Eupolis of Leukonoion did not marry either of his two daughters to his nephew (BS) Apollodoros is cited as evidence of bad relations (Apollodoros had sued Eupolis for misconduct as his guardian; the girls were not *epikleroi*).

TABLE 4.1. (a) Firmly attested marriages
Marriage frequencies

(b) Hypothetical references, plans, conjectured marriages, etc.

with a prospective spouse seems particularly likely to have played a part. This separation of motives is of course purely analytical; in practice, actors might well prefer to think of a marriage as combining duty, advantage, and affection.

EPIKLEROI

A brotherless girl, or girls, whose father died leaving them unmarried could be claimed at the age of fourteen (*A.P.* 56. 7) through the *epidikasia* process by the father's next-of-kin as defined by Solon's law of intestate succession, starting with the father's brother. Rights extended *per stirpes*, so the actual claimant might well be a cousin of suitable age rather than a man of an older generation; however, we do hear of men divorcing their wives in order to marry epikleroi.⁴

⁴ Dem. 57. 41; *hyp.* Dem. 30 asserts that Timokrates divorced Onetor's sister to claim an epikleros. The information does not come from the text of the speech, but might have been given in a lost witness testimony, e.g. in § 9. Cf. also Cohn-Haft 1995. On epikleroi see A. R. W. Harrison 1968, 132–8. The order of succession (in terms of the relation of the prospective husband to the girl) is FB, FZS, FFB,

A will made by the father that provided for marriage of the epikleros to someone other than the next-of-kin was legally valid but would very possibly have been contested in court, as wills often were.⁵ According to two passages in Isaïos (3. 64, 10. 19) an epikleros married during her father's lifetime could still be claimed at his death by her next-of-kin; it is generally agreed that this applied, if at all, only to epikleroi who had no living children, and there are no firmly attested cases (cf. ch. 1 n. 116). The epikleros' (eldest) son succeeded to her father's estate at eighteen (Hyperides fr. LXIII Jensen 1917, 192 Blass 1894), her husband managing it only while he was a minor.⁶ If a man died leaving two or more daughters but no sons, at law they all became epikleroi and should be claimed by their next-of-kin in order of age, the oldest going to the closest kinsman and so on, and divided their father's estate equally; in practice however this situation was likely to give rise to complications.⁷

We do not have many attested cases of the claiming of epikleroi by epidikasia; many daughters will have married and produced children during their father's lifetime. The two daughters of Epilykos son of Teisandros, perhaps orphaned in infancy, were claimed in 399/8 by their father's sisters' sons (FZS) Leagros son of Glaukon of Kerameis and the orator Andokides, who seem to have been their next-of-kin (Table 4.2).⁸ Phylomache II of the Bouselidai (Table 7.9)

FFZS, FMB, FMZS, FMBZ, FMFZS, *per stirpes* in each case, Table 1.1. The calculation started from the epikleros' father, not from the girl herself; this makes a considerable difference when the claims of matrikin are considered, but in practice it must have been rare to have no claimant from the patrilateral side. Plato considers the rights of half-brothers; he still does not permit the epikleros' matrilinear half-brother to marry her (though in his inheritance law a matrilinear half-sibling ranked before collateral patrikin), but ranks the father's matrilinear half-brother after his full brothers (and so before FZS), *Laws* 924e. He thus calculates from *d.c.* Note that a girl whose FF was alive would not, strictly speaking, become an epikleros on the death of her F. Cf. ch. 1 at n. 112.

⁵ Cf. Ar. *Wasps* 583–6. Gernet 1918 stresses that a father leaving unmarried daughters would usually attempt to provide for them by will. Demosthenes' father, who died when his daughter was about five, directed in his will that she should be married to her cousin (FBS) Demophon. Plat. *Laws* 923e expects a husband for the epikleros to be adopted by will. But no cases are historically attested and, as we have seen, adoption might be used precisely in the case where marriage was prohibited, between uterine half-siblings (ch. 2 #IV 1–3, V 2–3).

⁶ By the 4th c. the practice was to adopt one son to his MF's estate and leave other sons to inherit from their F; whether Solon's law provided for this or regarded all sons as successors of their MF is controversial (cf. chs. 1 n. 110; 2 n. 23). Married epikleros: A. R. W. Harrison 1968, 11–12, 309–11; Karabelias 1970, 383; Schaps 1979, 28–9. The rule that the epikleros' son succeeded to her father's property at 18 would lend point to Nausistrata's appeal to her son to arbitrate between his parents in Terence's *Phormio*, if Scauro (1997, 463–5) is right in suggesting that in the Greek original she was an epikleros (cf. R. Maltby 2012).

⁷ Cf. below, at n. 20. Harrison 1968, 23 suggests that a father with more than one daughter and no sons could adopt a son to marry each of his daughters, but this view is speculative and not supported by the evidence on practice. If a young man died after his father, leaving sisters but no other heirs, the estate would be treated as the father's (ibid. 137–8).

⁸ *APF* 8429 IV. Claims to both girls were presumably put in when the elder reached marriageable age; Andokides' girl died before the marriage could take place. Leagros then agreed to cede the second girl to (a son of?) Kallias III of Alopeke (*APF* 7826 X–XI). Kallias had married the widowed mother of the

TABLE 4.2. Daughters of Epilykos *APF* 8429

was claimed through *epidikasia* by her second cousin (FFBDS) Sositheos, probably a valid claim unless her father's half-brother Menestheus was still alive ([Demosthenes] 43. 13; *APF* 2921 VI B).

A father could also adopt a son and marry him to an *epikleros*. Polyeuktos of Teithras (Demosthenes 41) adopted his brother-in-law (WB) and married him to one of two daughters; the marriage later broke up, and both daughters eventually seem to have married non-kin. Aristotle, a citizen of Stageira in the northern Aegean who lived for some time in Athens and died in Chalkis, left a will directing that his only daughter Pythias should marry her cousin (FZS) Nikanor, whom Aristotle may already have adopted (Table 4.3). Aristotle had been brought up by his sister and her husband, Nikanor's parents, and evidently felt very close to them. He also left an illegitimate son, Nikomachos, whom Nikanor and Pythias were requested to look after (ch. 2 at n. 51).

epikleroi and subsequently, by c.412, their grandmother (MM) Chrysilla. Andokides (1. 117–127) alleges that Kallias claimed this *epikleros* for his son by Chrysilla (ch. 7 Case 7), who must have been a year or two younger than the girl, and whose links to her father Epilykos were solely affinal (the boy's father Kallias was Epilykos' ZDH, his mother Chrysilla was Epilykos' mother-in-law, WM). It is commonly assumed (e.g. MacDowell 1962, *APF*) that Andokides is here lying and that Kallias planned to marry the girl to Hipponikos III, Epilykos' ZDS. However, the procedural situation is unclear: apparently Andokides, before the formal *epidikasia* (to be announced at a *kyria ekklēsia*, the main assembly meeting of the prytany: *A.P.* 43. 4 with P. J. Rhodes 1981a ad loc.), filed a request for a *diadikasia* (?) between himself and Leagros to settle which of them should claim the surviving girl, whereupon Kallias, on Boedromion 10, put in a counter-claim on behalf of his son (also for *diadikasia*? the term used in both cases is *lanthanein* and not *epidikazesthai*; see A. R. W. Harrison 1971, 79–80 on *diadikasiai*). Kallias' claim was not necessarily based on kinship; he may have intended to argue that Leagros was entitled to dispose of the girl as they had agreed. In any case (still according to Andokides) he hoped to avoid a court hearing. W. Thompson 1971a doubts the identification of Leagros' father with the general Glaukon son of Leagros of Kerameis (*APF* 3027), and suggests that he may have been a brother of Epilykos. However, the assumption that the general married in his late 40s or his 50s is not really problematic (ch. 5 at nn. 60–5), and Andokides' language in 1. 117–21 seems to imply that he and Leagros stood on an equal footing. *Epidikasia* in Lys. F XII Carey 2007, see Carey 2004, but the details are unclear (ch. 14 n. 39).

TABLE 4.3.

Aristotle

In two cases a father with a single daughter offered her to his brother while still alive. The daughter of Diogeiton married her uncle Diodotos; when he died she had difficulty in claiming her sons' inheritance from her father, who by this time had sons of his own by a second marriage (Lysias 32, *APF* 3885). Archiades of Otryne preferred to remain single and declined the offer; his niece was then apparently married to a non-kinsman ([Demosthenes] 44, *APF* 5638; see Table 2.2, ch. 7 Case 12).

It is possible that Praxo, daughter of Nikippos of Xypete, commemorated on *IG* ii² 6929 with Epigenes son of Diaitos of Xypete and his son Nikippos II, was not (as is usually assumed) the daughter of Nikippos II, but of Epigenes' brother Nikippos I, whose wife was called Praxilla. In this case she will have made a quasi-epikleric marriage with her FB (see Bergemann 1997 L 13 for a different reconstruction; Table 29.6).

Marriage between uncle and niece (FB/BD) is also discussed as a hypothetical possibility in the case of an epikleros in two speeches of Isaios (8. 31; 10. 5, 12); in Menander's comedy *The Shield* (Table 2.6) Smikrines' claim to marry his niece (BD), whom he believes to be an epikleros, is condemned as avarice. Other passages in New Comedy and in Euripides express disapproval of marked discrepancy in age between spouses, and of marriage for money.⁹

Outside Athens, the only daughter of Kleomenes of Sparta, Gorgo, married her father's patrilateral half-brother and successor, Leonidas.¹⁰ Arete, queen of Phaiakia in Homer's *Odyssey*, was married to her FB Alkinoos.¹¹

⁹ Age: Eur. F 807 *TGF*; cf. perhaps *P.Koln* VI 243. 7–8. Greek eugenic theory advised that both spouses should be in the prime of life; men were believed to become infertile in old age (Lesky 1950). Eur. F 24 *TGF* (*Aiolos*) says that husbands should be older than wives because men live longer. See also frs. 319, 801, 804. Money: Men. F 402–3 Kock = 333–4 Sandbach 1972; 582–3, 585 Koerte 1938 = 805–6, 808 *PCG*; Eur. *Androm.* 1279–82, *El.* 1097. Lane Fox 1985, 213; Scafuro 1997, 294; Walcott 1987 on dominating wives in general. P. G. M. Brown 1983 doubts whether Men. *Aspis* attacks the law on epikleroi (cf. Scafuro, 281–305). Gaiser's reconstruction of an attempt by FB to claim an epikleros in Men. *Hydria* (1977) is conjectural.

¹⁰ Hdt. 5. 41, 48; 7. 204–5. Pace Hodkinson 1986, 395–6, Hdt. 7. 205 implies that the marriage took place before Kleomenes' death.

¹¹ *Od.* 7. 63–7. Later writers, starting with Hesiod F 222 M–W, perhaps misunderstanding the statement in 7. 54–5 that Alkinoos and Arete came of the same stock, made them siblings.

TABLE 4.4. Apollodoros of Acharnai (*APF* 11672)

Apollodoros son of Pasion of Acharnai had two daughters who might have been claimed by their FB Pasikles, but as far as we know were not; one of them married her MB Theomnestos III son of Deinias of Athmonon, an example of repeated alliance in a situation of status anomaly (Table 4.4).¹² Pasikles and Apollodoros were not on good terms, and being the sons of a freedman will have had no citizen kin. Mantitheos son of Mantias of Thorikos had a single daughter and by 347 was perhaps under some pressure to marry her to one of his patrilateral half-brothers; it seems unlikely that he did so ([Demosthenes] 40. 57; Humphreys 1989). Philostratos son of Dionysios I of Kolonai, whose daughter was his only child, may have had a brother, Dionysios II, to whom he did not marry her (*APF* 14734).

Despite Athenian tolerance of a considerable age gap between husband and wife, one might expect that a father's brother would cede his rights to his son, FBS to the epikleros, if the boy was old enough. There is however no attested historical case of such an epikleric marriage. It is mentioned as a hypothetical possibility, together with marriage to FB, in *Isaios* 8. 31 and 10. 5, 12, 19; possible case in *Halai Aixonides*, *APF* 5791 with *SEMA* 76. At the end of Euripides' *Orestes* Apollo announces that Hermione, Menelaos' only legitimate child, is to marry Orestes, who was both FBS and MZS to her (1653–4; Table 4.5).

TABLE 4.5.
Euripides, *Orestes*

¹² [Dem.] 59. 2–3, 8; *APF* 11672 X. Pasikles had a son, Pasion II. Pasikles was born in 380, his nieces before 362. Apollodoros also had matrilineal half-brothers, born probably in the early 360s ([Dem.] 45. 75, *APF* 11672 IX); here too relations were bad. On the status of their mother see Whitehead 1986*b* in preference to Carey 1991. The attempt of Cox 1988*b* to connect Apollodoros' marriage with that of his WFZ to Menekles of Acharnai is not persuasive. Cf. ch. 5 n. 29 for another epikleros who apparently did not marry her FB.

A father's sister's son (FZS) would be more likely to be of appropriate age to claim an epikleros, but here too we have only hypothetical references or conjectural cases. The speaker of Isaios 3 argues that if Pyrrhos' daughter Phile had been legitimate her kin should have seen to it that she was married by her FZS Endios, Pyrrhos' adopted son (§§ 69–70; ch. 7 Case 4). Aristarchos of Sypalettos, who married the epikleros daughter of Xenainetos I of Acharnai (Isaios 10; Table 7. 5), could have been her FZS, but the relationship is not stated in the speech. Kleombrotos son of Deinokrates of Acharnai, who married Kallisto daughter of Lykophron II of Boutadai, may have been her FZS (Table 4.6).¹³

Kallistratos of Oion Kerameikon, one of the descendants of Bouselos, married a first cousin once removed, being the FBS of one of her parents; since she has no recorded siblings the marriage may well have been epikleric, although as we shall see intermarriage was rather common among the 'Bouselidai' (Table 7.9).¹⁴

There seems to be no certain historical case in which an epikleros was claimed by a matrilateral kinsman of her father, and matrilateral kin of the girl herself were not entitled to claim.¹⁵ In Sophocles' *Antigone* the heroine is betrothed to her MBS Haimon. In tragedy the question whether Oedipus had remote patrikin with a better claim could of course be shelved; and the betrothal took place before the deaths of Antigone's brothers (ch. 1 n. 112).

For an understanding of Athenian feelings about epikleric marriage in the classical period it is more rewarding to turn to Aeschylus' *Suppliants*. Danaos and his fifty daughters are being pursued, in this play, by the fifty sons of Danaos' brother Aigyptos, who want to marry their cousins. The girls view the prospect with horror, and their father supports them. Commentators have been perplexed; the claim of Aigyptos' sons would have been valid in Athenian law if Danaos had been dead, while FBS/FBD marriage was quite

¹³ *APF* 9251; cf. ch. 2 n. 24. This suggestion is based partly on the prominence of the family in the Lykourgan era—Kleombrotos' father Deinokrates was probably general in 338/7 and 336/5 and was voted honours by the demos (ch. 28 n. 54)—and partly on a feeling that a son of Lykourgos would not blatantly disregard the law. Lykophron's brothers Habron and Lykourgos V may have been dead by the time Kallisto reached marriageable age—we do not hear of Habron after 307/6—or may have waived their claims. Kleombrotos, if he was Lykophron's ZS, had a better claim than the descendants of Lykeias I. For the epikleric marriage and adoption in the Eteoboutadai suggested in *APF* 4549 with Humphreys 1994, 38 see now ch. 20 n. 132, Table 20.4.

¹⁴ [Dem.] 43. 73, *APF* 2921 VI ('niece' is inaccurate); Table 7.9.

¹⁵ In Lys. F XXIII Gernet/Bizos 1926 (23–4, ?29–31 Thalheim 1913, XXXIII Carey 2007) the speaker(s) may have claimed the estate and the daughters of their matrilateral half-brother Dikaiogenes, perhaps on the basis of a will (ch. 5 n. 50). A similar claim would no doubt have been made by one of the half-brothers of Hagnias of the Bouselidai if his adopted daughter had lived long enough. If in the Menandrian original of Ter. *Adelphoe* the heroine's MB (Donatus on line 351, cf. ch. 3 n. 29) was said to be claiming her in marriage for himself, the legal grounds for this move were shaky.

TABLE 4.6. Lykourgos of Boutadai APF9246

common in Athens and was certainly not considered incestuous either in Greece or in Egypt. The claim that the myth preserves a memory of prehistoric rules of clan exogamy would be far-fetched even if we had any reason to suppose that Indo-Europeans had once had exogamous patrilines (Humphreys 2017a). When asked if their cousins have a valid legal claim on them, the girls avoid any explicit denial (*Suppliants* 387–96). Yet according to the rules of the Athenian epiklerate they are not yet technically epikleroi, because their father is still alive. Aigyptos' sons are acting hubristically, presuming on a legal right which they do not yet have: *thèreuontes ou thérasisimous gamous* (*Prometheus* 858–9), hunting out of season. The situation must have been a common one in Athens. Any father with daughters and no sons—and with property—would find himself under pressure, as the girls neared marriageable age, to betroth them to their next-of-kin. It is understandable that such pressure might irritate a father who felt that his right to choose a son-in-law was being pre-empted, and might also resent the implication that he was no longer capable of begetting a son. In such circumstances relations with kin could easily become soured; girls of thirteen or fourteen, for whom marriage might be an alarming

prospect, would be upset and tearful; a vicious circle would develop in which each attempt by the suitor to press his case made him appear more clearly an enemy. Tensions which were liable to be felt at every betrothal and wedding—the girl reluctant or nervous, her mother's sympathies divided, the groom appearing impatient or, if he distracted himself with bachelor pleasures, uncaring—could in this situation, where the groom was designated by law and not chosen by the father, find more open expression. It could be conceded that a girl should have some right to refuse a marriage distasteful to her.¹⁶ A girl's fear of marriage could be fostered, instead of being discounted. The contrast between persuasion and force, which was perhaps never far from the surface in Greek thoughts about sex, could be rhetorically elaborated. Only in the situation of a claim to a potential epikleros could women's resentment of arranged marriage be fully released with the support of the male head of the household.

This dramatic incarnation of emotional pressures which in an ordinary marriage one hoped to disregard—the fifty hysterical girls describing their suitors as violent hunters—did not carry the main weight of the trilogy. To violence, hysteria, and an appeal to religious sanctions which is sheer blackmail Aeschylus counterposes the citizens of Argos deciding by due process in their assembly; deciding under timid and ineffectual leadership, and taking a decision which will prove disastrous for them. If there is a reference here to the parallel between the public and private roles of Aphrodite, goddess of persuasion, there is no guarantee that her guidance will always be beneficial. Since the second and third plays of the trilogy are lost, we cannot be sure where Aeschylus was leading his audience. It is clear, however, that they were expected to feel some emotional sympathy with the situation of the Danaidai. There is distance: the girls are foreigners, their lack of emotional control is patterned by song and dance, and if one's own daughter threatened to hang herself one might have little patience with her; but in the theatre one expected to have one's imagination and sympathies engaged at many levels.¹⁷

As David Asheri (1977) astutely pointed out, Greek historians tell stories of collective quasi-epiklerate marriage which reflect some of the other tensions that the epiklerate generated. In these tales a whole city loses its male citizen

¹⁶ The law code of Gortyn (VII 52–VIII 7) allowed the epikleros to refuse the next-of-kin if he was not yet of age or the relationship was distant; it is not certain that she had a right of refusal in all cases, and it must be remembered that in practice the decision would have depended more on her guardians than on her own feelings.

¹⁷ Friis Johansen and Whittle 1980 give a good survey of earlier interpretations of the marital situation in *Suppl.*; cf. also Ferrari 1977, Sissa 1987, 147–98. Seaford 1987, 110–19 stresses that every young Greek girl was expected to be reluctant to marry (cf. Zeitlin 1996, ch. 4; Avagiannou 1991); on the political aspects of the play see Chr. Meier 1988; for the emphasis on formal process Humphreys 1988, n. 35. The representation of the suitors as barbarians (Calame 2000) does not imply ethnographic knowledge. The Danaidai incidentally make the point (336–9) that a woman married within her own kindred might find no one to support her if the marriage went badly; this is interesting (cf. Plut. *Q.R.* 108) but does not seem to have had much effect on Athenian practice. I hope it is no longer necessary to argue that Attic tragedians did not slavishly follow early versions of myth in details that had no meaning for their audience. Note that the murder of 49 of the grooms by their brides transforms Hypermestra, the surviving Danaid, into a sole epikleros.

population, and in order to preserve the polis the women of citizen descent must mate with outsiders—slaves or foreigners. These husbands are of lower status than their wives, and when their sons grow up they repudiate and expel their fathers. There are analogies here both with the uxorilocal son-in-law (*sôgambros*) who may have been found in some early peasant households (ch. 1 at n. 109–10) and with the husband of the epikleros. The latter, as a kinsman, of course had the same social status as his wife, but economically he merely acted as curator of the estate of his wife's father until his sons came of age, whereupon they took possession. In the classical period, at least, the husband would almost invariably also have some property of his own which he could pass to the sons left to him after one had been adopted into the oikos of the maternal grandfather. Nevertheless, a feeling persisted that a rich epikleros had too much ascendancy over her husband (cf. n. 9); it must be remembered also that in many cases a potential epikleros would be married during her father's lifetime, so that the husband would be subject to pressures from his father-in-law as well as his wife.¹⁸

Societies in which marriage with kin is imposed and regulated by law in specific circumstances, while in all other cases there is a free choice of partners, have not figured prominently in the anthropological literature on endogamy. It is hard to find a close parallel to the Greek¹⁹ epiklerate. Hindu law permits daughters to inherit in the absence of sons, and pass the estate to their own heirs, but as far as I am aware there are no special rules governing the marriage of daughters in these circumstances. The closest structural parallel to the epiklerate is perhaps to be found in rules for widow inheritance and the levirate, which are widely distributed. There are however significant differences: the widow has already been given to her husband's group as a wife, is residing with them, in most cases has children who belong to the group, and is not bringing in new property by her remarriage. Detailed case studies of the working of widow inheritance seem to be rare.

Anomalous in the praxis of Athenian relations with kin, the epiklerate was also inherently problematic in several ways from a more formal point of view. It combined two solutions to the problem of the absence of male heirs which more commonly appear as alternatives: inheritance by the next-of-kin, found in the

¹⁸ This is perhaps a cause of the break-up of the marriage and adoption of Leokrates in Dem. 41 (ch. 2 no. V 5). It is also possible that Leokrates was trying to use his adoption as a basis for reducing his sister-in-law's share of her father's estate.

¹⁹ The detailed rules are known only from Athens and Gortyn, but there were special procedures for claiming epikleroi in Sparta (Hodkinson 1986, 394–8; 2000, 94–8), Mytilene, and Phokis (Ar. *Pol.* 1304a 4–13; cf. Schaps 1979, 42–7); it seems that the institution was widely distributed in archaic and classical Greece. However, use of *epiklêros* and related terms does not necessarily imply special rules for marriage. The absence of any reference from Ptolemaic Egypt (Karabelias 1982) may indicate that the norms governing the marriage of epikleroi had in many societies never achieved the status of written law.

Attic rules on intestate succession and adoption, and inheritance by the sons of an in-marrying son-in-law. Furthermore, a girl did not become an epikleros until her father died, and he was under no obligation to recognize the presumptive rights of the next-of-kin during his lifetime. Monogamy, small families, and the discrepancy in age of marriage between men and women might quite frequently produce a situation in which the next-of-kin was either markedly older than the epikleros and already married, or under marriageable age. Finally, while the epiklerate became closely associated with the practice of adopting the epikleros' son posthumously to his MF, it was far from clear what should be done in cases where a father left more than one epikleric daughter, since it was not normal to adopt more than one son.²⁰

Despite these drawbacks it may be premature to conclude (with Karabelias 1982) that the epiklerate disappeared in the Hellenistic period. Strict adherence to the legal rules governing the epiklerate was already rare in Athens in the fourth century and may indeed always have been so, while we do not know how many other Greek cities had ever codified their legal norms on this point. Apart from New Comedy, which often based its plots on unusual situations, our evidence for the epiklerate comes only from forensic speeches, a type of evidence which dies out in the late fourth century. Hellenistic family law is still largely terra incognita, except in Egypt. There is some scattered evidence that epikleric adoption continued.²¹ It is likely enough that men with epikleric daughters would have tried to settle the question of their marriage by will; to claim that the epiklerate disappeared implies either formal changes in family law, or an increasing readiness on the part of courts to uphold wills that ran counter to written law, and either of these assumptions would be rash in the present state of knowledge.²²

²⁰ A variety of solutions to this problem is attested: to divide the estate between the epikleroi with no adoption (Is. 7. 31, and eventually Dem. 41); to adopt the husband of one of the epikleroi (Dem. 41); to adopt an heir who did not marry any of the epikleroi (Is. 5); for the next-of-kin to dower the epikleroi and marry them to others (Dein. F LX Conomis 1975). On *POxy* 2464 see Appendix 5.

²¹ In *IG* ii² 1165 (early 3rd c.) the tribe Erechtheis undertakes to watch over the interests of the epikleros daughter of Antisthenes son of Nikandros of Lamptraí, an elderly benefactor (ch. 21 n. 84). See also Maier 1959, no. 51. 6–10 (Chios, ? 201 BCE); *IG* xii 5. 199 (Paros, from Melos?, 1st c. CE); Calder 1930 (Galatia, Roman). The testament of Epikteta, *IG* xii 3. 330 (Thera, 3rd c. BCE; cf. Van Bremen 1996, 214–15) classes descendants of epikleroi with patrilineal descendants. *IKnidos* I 627 (*CEG* 2. 703) is an early Hellenistic epitaph from the territory of Knidos set up by the DSs of the deceased. Epikleric adoption does not seem to have been practised on Delos (Vial 1984, 63). In *IOrop.* 424–5 a woman dedicates statues of her father Theodoros son of Archilochos and her son Theodoros son of Demainetos to Amphiaraios at Oropos (late 3rd c. BCE); she may have been an epikleros, but there is no adoption.

²² *IG* ii² 4513, epikleric adoption of DH in the Roman period. On the absence of discourse and practice directed towards modifying family law in Greece see Humphreys 1988, 479.

KEEPING THE KINDRED TOGETHER

When fathers could choose freely, several motives might prompt the choice of a kinsman or affine as son-in-law. The distinctions made here between marriages motivated by the wish to knit kindred closer together or consolidate property, marriages that solved problems of status anomaly, and marriages based on ties of affection between the potential spouses created by association with kin, are artificial; in discourse they would not be clearly distinguished, and problems of status anomaly might not be openly acknowledged. There may also be some instances in the material presented below of epikleroi or potential epikleroi who are not identified as such by the sources. Nevertheless, the cases presented here can be taken as typifying in a simplified way—since we are never able to reconstruct the circumstances of choice completely enough to perceive all the factors involved—some of the main considerations that generated marriages within the kindred.

Although it seems likely that interests in property may sometimes have been the motive for marriages within the kindred, there is no definite evidence on this point from Athens.²³ In some families there seems to have been something of a tradition of kin marriage; other cases seem to be connected with the wish to provide guardianship for women and children, or to reassert ties of kinship broken by adoption; there are some conjectural instances in which considerations of political alliance may have been at work.²⁴ In several cases no motive can be suggested.

The descendants of the five sons of Bouselos of Oion Kerameikon (Table 7.9) are particularly well known to us from the genealogical information given in speeches by Isaïos and [Demosthenes] written for lawsuits concerning the estate of Bouselos' great-grandson (SSS) Hagnias II.²⁵

²³ Cox 1988*b* (1998, 25–6) is mistaken about the marriage of Plato's sister, which must have taken place well before Plato acquired land adjoining that of her husband (ch. 5 n. 27). Hopkins 1980 discusses the role of property interests in brother–sister marriage in Roman Egypt, but even in this case it is hard to get precise evidence. He suggests a connection with the dynamics of the extended household, which fits in also with the late age of marriage (?) for women in Roman Egypt (no evidence for the Hellenistic period, Clarysse and Thompson 2006 II, 293–300). Hobson 1985 suggests that in Roman Egypt in some cases brother–sister marriages allowed couples to consolidate shares in houses. See also Scheidel 1995, arguing that the groom in such marriages tends to be relatively young; Gonis 2000; Bussi 2002; Ager 2005; Remijns and Clarysse 2008; Rowlandson and Takahashi 2009. Marriage with sister or patrilineal half-sister in Cyprus, 3rd c. BCE, Masson 1972*a*, no. 2. Hellenistic Rhodes, Rice 1986; Hellenistic Anatolia, Van Bremen 1996, 257–9.

²⁴ The use of marriage as a way of affirming a political alliance is discussed more fully in ch. 14. Here we are only concerned with politically motivated marriages to women who were already kin. Dionysodoros, a victim of the Thirty, married a cousin (Lys. 13 .1, 40), whose brother took an active role in pursuing his killer after the restoration of democracy. Since the wife was pregnant when Dionysodoros died, the marriage may have been influenced by shared anxieties during the junta period.

²⁵ Is. 11, [Dem.] 43, *APF* 2921, Humphreys 1983*d*, 1986*a*.

Sositheos, the speaker of [Demosthenes] 43, seems to have made great efforts to get support from as many of his kinsmen as possible in his claim for Hagnias' estate, and it is no surprise to find that he had married his daughter to his nephew (her FBS). His sons were still unmarried when the speech was delivered; we should like to have known what brides he found for them. Endogamy, in any case, was an established pattern in the family before the competition for Hagnias' estate started. Sositheos himself had married an epikleros, his second cousin (FFBDS/MFBSD), by epidikasia. The wife of Kallistratos, his maternal grandfather, was apparently also an epikleros, a first cousin once removed (MFBS/FBDD). Hagnias' father Polemon stood in a similar relationship (FFBS/FBSD) to his wife, the daughter of Phanostratos I, although in this case the marriage was not epikleric. Phylomache I, alleged by her descendants to be the sister of Polemon, father of Hagnias, had if their story was correct married her first cousin (FBS/FBD). This makes five endogamous marriages in a kindred of twenty-nine attested males spread over six generations.²⁶

Demosthenes' father, dying when his son and daughter were aged about seven and five, tried to secure generous treatment for them from their guardians by providing in his will that Aphobos, his nephew (ZS), should marry his widow and that Demophon (BS) should marry the daughter when she came of age (Table 4.7). Neither of the guardians respected his wishes, and Demosthenes' sister eventually married a different cousin, her MZS Laches son of Demochares of Leukonoë (*APF* 3716); this marriage will be discussed below under the heading of status anomaly.

TABLE 4.7. Demosthenes (*APF* 3597)

²⁶ I omit Hagnias II, who died unmarried, and the sons of Sositheos, unmarried when [Dem.] 43 was delivered. Sositheos' opponents seem to have argued that Phylomache was an illegitimate daughter or a stepdaughter of Hagnias I, an allegation to which he does not produce any convincing reply; cf. Humphreys 1986*a*; ch. 7 Case 9. Sositheos was presumably younger than his brother, to judge from the ages of their sons.

Plato's mother Periktione married her uncle (MB) Pylilampes, the second marriage for both partners. Plato's father Ariston according to Diogenes Laertios (3. 3) had settled on Aigina as a kleruch, and he either died there or returned to Athens only in 404. Plato seems to have been on friendly terms with his half-brother Antiphon son of Pylilampes, and there cannot have been a large gap in age between them; it appears that Periktione was divorced or widowed when her children were still small and returned to her own family with them, Pylilampes taking charge of the whole household.²⁷ In the same family, one of the letters attributed to Plato (361e) says that his nephew (ZS) Speusippos is about to marry his own niece (ZD), but it is impossible to say whether this assertion is based on solid evidence.

An Alkmeonid woman named Agariste married Alkmeonides of Aphidnai, who from his name should have been some form of kinsman, after an earlier marriage to a Damon, probably the friend of Perikles who was ostracized in the 440s.²⁸ Since a widow or divorcée needed a male guardian and was expected to remarry, at least if she was still able to bear children, one might perhaps have expected a higher incidence of second marriages among endogamous unions and of endogamy in second marriages. It may be, however, that endogamous second marriages were less likely to generate disputes than remarriage to non-kin.²⁹

The analysis of adoption (ch. 2) has already shown that adopted sons continued to feel themselves linked to their families of origin; these ties were in some cases reinforced and reasserted by marriage. Kyronides son of Aristarchos I of Sypalettos, who was adopted into the oikos of his maternal grandfather Xenainetos I of Acharnai, married the daughter of his genitor's brother Aristomenes. This marriage put his sons in a strong position for claiming two estates, those of Xenainetos I and Aristarchos I. Their attempts to do so form the subject of Isaios 10.³⁰

Fathers may sometimes have tried to secure citizen marriages for daughters whose legitimacy was dubious by marrying them to kin who were prepared to accept them without question; in Terence's *Phormio* Chremes plans to marry the daughter of his bigamous Lemnian marriage to the son of his brother.³¹ Conceivably

²⁷ APF 8792 VIII, IX B. It is usually assumed (e.g. by Walcot 1987) that Periktione remarried as a widow, but though Ariston seems to have been dead by the time of Sokrates' trial in 399 (Plat. *Apol.* 33d–34a), we do not know that he died before 404 (Proklos' statement that Periktione remarried as a widow, comm. Plat. *Parm.* 126b, col. 668 Cousin 1864, was presumably mere conjecture); cf. ch. 24 n. 4. We hear nothing of Ariston's kin.

²⁸ APF 9688 XIII C; Andoc. 1. 16. Ch. 13 n. 34.

²⁹ Evidence for second and third marriages is collected by W. Thompson 1972; see Stavrianopoulou 1994 on Kos; Table 7.7. For widows and divorcées living with their children and not remarried see V. J. Hunter 1989; ch. 5 n. 33; Clarysse and Thompson 2006 II 296, 304–7.

³⁰ Ch. 7 Case 5, Table 7.5. Aristomenes' estate is not mentioned; he had a son, Apollodoros I.

³¹ Lemnians were always suspect (on the history of the kleruchy see Salomon 1997; Faraguna 1999a; ASAA 88, 2010; Clinton 2014): cf. Is. 6. 13 and [Dem.] 25. 79. Athens lost control of Lemnos between 318 and 307, from 301 to 281, and from the beginning of the Chremonidean War c.268, but Salomon

the marriage of Phylomache I of the Bouselidai, discussed above, came into this category; another possible case is the marriage of Thoukritides of Halimous to his patrilateral half-sister Lysarete (Demosthenes 57. 20, *APF* 3126; ch. 7 Case 14, Table 7.12). In the latter case, however, since Thoukritides had two or three brothers, their father may have wanted to save the expense of a dowry.

In other cases no explanation of the endogamous marriage can be offered. Kiron, whose estate was the subject of dispute in Isaios 8 (*APF* 8443), according to the speaker married his cousin (MZD). The speaker of [Demosthenes] 48 conspired with his brother-in-law (WB) Olympiodoros to claim an estate to which both of them (and the speaker's patrilateral half-brother) had rights; he must therefore have married a kinswoman, but the relationship cannot be reconstructed. The speaker of Lysias 13 was a cousin (*anepsios*) of the man whose death he was avenging, who was also his brother-in-law (WB). The poet Euripides may have married a kinswoman (FBD??), since his father was Mnesarchides (I) of Phlya and his wife's father was Mnesilochos (I) of Phlya. A surprising fourth-century tombstone appears to record the marriages of a father and his son to a pair of sisters, but it is perhaps more likely that the son married his MBD.³²

is clearly right to argue that its Athenian settlers need not have returned to Athens on that account. The *Epidikazomenos* of Apollodoros of Karystos, original of Terence's *Phormio*, in which Antipho marries an FBD of questionable legitimacy, fruit of a Lemnian union, may belong to the 270s or 260s (Lefèvre 1978; R. Maltby 2012). Konstan's discussion of the legal situation of Phanium in the *Phormio* (1983, 123 n. 10; cf. 106 n. 15) is confused, as is that of Ogden (1996, 176–9); provided her father was willing to establish her legitimacy, her citizen status was not in doubt. (Scafuro 1997, 463–5, suggests that in Apollodoros' play Chremes' Athenian wife Nausistrata, whose property on Lemnos was the excuse for Chremes' travels, was a rich epikleros.) In Menander's *Synaristôsai*, original of Plautus' *Cistellaria*, Demipho disappeared to Lemnos after raping Phanostrata, and reappeared to marry her and legitimize her daughter after a childless marriage on Lemnos had ended with the wife's death; presumably Menander's play was set in Athens and not, as *Cist.*, in Sikyon. Lemnos is also a place to which respectable rentiers may disappear on non-professional business travel, e.g. Men. *Heros*. Marriages of this type could also be regarded as cases of status anomaly. The same situation occurs in Plaut. *Epidicus*; cf. n. 37 below. *PSI* 1176. 28–9 (C. Austin 1972, no. 255) has been thought to refer to a similar situation, but in my view a father is here complaining to his friend Laches that he cannot offer his daughter in marriage to Laches' son unless Laches is present.

³² For a possible case of FZS/MBD marriage in Acharnai see Table 28.9. *IG* ii² 5811 (Bergemann 1997, 217 no. 49): trapeza, second half of 4th c., listing Kleostrate daughter of Deximenes of Acharnai, wife of Sostratos of Daidalidai; Sostratos son of Eratokles of Daidalidai; Sostrate daughter of Deximenes of Acharnai, wife of Eratokles of Daidalidai; Eratokles son of Sostratos of Daidalidai. *PA* 13348, followed by Cox 1988*a* and *LGN*, suggests that Eratokles II and Sostratos were cousins (FBS), sons of a pair of brothers also called Eratokles and Sostratos, but this is not the most economical solution. It is not unthinkable that a father's second wife could be the sister of his son's wife; it is also possible that Deximenes I of Acharnai, father of Kleostrate, had a homonymous son Deximenes II, who called his daughter Sostrate in reference to the names of his sister and her husband (names in -strate may also have run in the family), and married her to her FZS. Whoever drafted the inscription clearly took pleasure in setting readers a puzzle. A later [Sos]tratos of Daidalidai, perhaps son of Eratokles II, *Agora* XVIII C 163 (*Hesp.* page number in *LGN* needs correction). Cf. *IG* ii² 7188–9 (Table 30.1, ch. 30 n. 62), where if [Acherdousios] is restored in 7188 (*LGN* Chairedemos 13–14) a father (Sophilos, *LGN* 23) and son

Cases where endogamous marriage may have been associated with political alliance are rare, and there is a danger of circular argument. According to one reconstruction Oloros, father of the historian Thucydides, may have married his cousin (MZD) Hegesipyle, daughter of the politician Thoukydides son of Melesias (*APF* 7268 III–IV). Thoukydides might already have been showing signs of promise as a political leader at the time of the marriage, and *ex hypothesi* the two families shared interests in Thrace. It has also been proposed that in marrying Agariste, daughter of Megakles IV, Perikles' father Xanthippos was reinforcing an existing alliance by marrying his FZD.³³ However, it should be pointed out that FZD marriage implies either abnormal ages of marriage or a very long interval between the births of the groom's father and his sister, the bride's mother. Where practicable such a marriage would have been an ideal means of reinforcing alliances between families after a rather short interval of fifteen or twenty years; but the demographic odds are against it. Marriage between FZS and MBD after an interval of thirty to thirty-five years was much more likely to be feasible.

STATUS ANOMALY

Close kin marriage is found in royal families in many cultures, the brother–sister marriages of the Ptolemies being the obvious Greek case.³⁴ The assumption

(Sostratos) from Peiraios might appear to have married two sisters. However, 7188 (*CAT* 187) is lost, and Fourmont read Chairedemos' demotic as Eupogo...os (ii² 7188 restored <X>yp<etaion>os; the name is not so far attested in X, but is common). In *IG* ii² 6351 (1st c. CE) a woman appears to have married her (adoptive?) father.

³³ *APF* 11811 I with p. 600; the suggestion is based on a single ostrakon naming Xanthippos son of Hippokrates, Brenne 2001 no. 267, which may be a spoiled vote. On T. L. Shear Jr's theory (1963, cf. Bicknell 1972*a*; rejected in *APF* 9688 X) that Megakles IV married his FBD, a daughter of Kleisthenes called Koisyra (III), cf. ch. 15 n. 18. Age may explain the failure of Endios (Is. 3) to marry his FZD Phile, if she was legitimate (see ch. 2 n. 41; below, ch. 7 Case 4, Table 7.4). Hiller von Gaertringen restored *IG* i³ 1324 (c.450, Piraeus) as the tombstone of a woman who had married her MBS, but the restorations are highly questionable. For an FZD marriage in Phaleron (*CAT* 4. 330) see ch. 31 with Table 31.1.

³⁴ Schapera 1950, 1963; Kuper 1975; on Hellenistic dynastic marriages in general see Seibert 1967. Ptolemaic brother–sister marriage perhaps provided a model for commoners, but the frequency of BZ marriage among commoners in the Roman period is hard to explain (see n. 23 above). Endogamy in the Persian royal family (e.g. Cambyses and his sister, Hdt. 3. 89) may have been largely responsible for Greek belief in the classical period that some peoples married their mothers and daughters (Xen. *Mem.* 4. 4. 19–23), though they may also have heard of Zoroastrian doctrine (cf. Nörr 1974, 44 n. 209; see also Herrenschildt 1994, which supersedes Herrenschildt 1987). Epikleric BD marriage Hdt. 7. 224; repeated alliances with same affines, D. M. Lewis 1985. See now Briant 1996, 606–7 on royal endogamy and exchange marriages in Persia. For Sicilian tyrants see Gernet 1953*b*; for Sparta, Hodgkinson 2000 s.v. *close-kin marriage*. Arkesilas of Kyrene married the daughter of his *pentheros* (WB? Hdt. 4. 164). Hornblower 1982*a*, Appendix 2 discussed brother–sister marriage in the Hekatomnid dynasty in Caria

behind such marriages is that inferiors who marry royal women will consider their status enhanced by the marriage and may become dangerous competitors for power, or produce sons who will compete. Hence royal women should marry only equals or superiors. Qualified husbands may be found in the royal families of other states; but some dynasties may be unwilling to recognize others as their peers. These, like the Ptolemies, have to provide husbands for their daughters and sisters from within their own ranks.

Similar pressures can be seen at work in several prominent Athenian families. Themistokles had five sons and five daughters by two or three wives, Mnesiptolema (Remember-war) being presumably born in the 480s when her father was urging the Athenians to prepare for a new Persian attack and Nikomache (Battle-victory) shortly after the victories of 480 that marked the climax of her father's political career. Ten years later he was in exile and in disgrace. It is no surprise to learn that Mnesiptolema married her half-brother Archeptolis (perhaps born in or soon after her father's tenure of the office of eponymous archon in 493/2), and that Nikomache married a patrilineal cousin (FBS or FZS), Phrasikles, who fostered and presumably acted as guardian to her younger sister Asia.³⁵ Phrasikles had presumably maintained close contact with Themistokles in the early period of his exile, and may well have followed him to Anatolia; he may have been one of those who preserved some of Themistokles' property for him and sent funds to him at Ephesos. Whenever a man was condemned to exile and confiscation of property his kin or friends would try to preserve some of it by claiming that it was their own; if they were unlucky accusers might argue that some of their property should be confiscated as belonging to the exile.³⁶ Condemnation of a kinsman threatened dangers which it might be hard to avoid; there might be little to lose by loyal support, and perhaps something to gain.

Although marriage between patrilineal half-siblings was permitted at Athens, it may not have been common.³⁷ The only other firmly attested case is the marriage

and comparative data from other ancient near eastern societies, citing Frazer as anthropological authority for the view that such marriages are associated with 'matriarchy'. Anthropologists' ideas have changed. Cf. Lévi-Strauss 1983*b*, 107–10 on endogamy and status anomaly. I do not know of any satisfactory comparative study of patterns of endogamy in royal families; my concern here is not with royalty but with pointing out that the factors that generate royal endogamy also operate, *mutatis mutandis*, among commoners. Cf. Stavrianopoulou 1994 on Hellenistic Kos; Brulé 1990*a*; Burguière 1997 on 18th c. France.

³⁵ APF 6669 III, VI. *Tritos apogonos* in Paus. 1. 37. 1 probably means great-grandson, Poliarchos perhaps being the son of Archeptolis (cf. ch. 8 pp. 276–9 on name variation).

³⁶ Money sent to Ephesos: Thuc. 1. 137. 3. The chronology is discussed by Milton 1979. On manoeuvres to salvage the property of condemned kin and accusations that this had been done (Lys. 17–18) see ch. 14 at nn. 38–9.

³⁷ The father of the hero in Menander's *Farmer* (*Georgos*) plans to marry his son to his daughter but the hero, who is in love with another girl, ultimately avoids this. The surviving fragments of the *Georgos* give no indication that objection was made to the closeness of the relationship. Diggle 1970, 155–60 suggests that in Eur. *Phaethon* the hero's supposed father Merops planned to marry him to a daughter of

of Thoukритides of Halimous, discussed above (Demosthenes 57. 20). Some sources say that Kimon son of Miltiades married his sister Elpinike, and it has been suggested that she was a patrilateral half-sister; other sources however accuse the pair of committing incest. In any case there was gossip about them; an ostrakon in the large find from the Kerameikos tells Kimon to 'Get out and take your sister with you!' Their father Miltiades, hero of the victory at Marathon in 490, had been condemned shortly after the battle for 'misleading the people' and had died leaving his heirs burdened with debt. In these circumstances Kimon would have found it hard to betroth his sister to a husband worthy of her in the family's eyes; gossip about this dilemma, jokes that he would have to keep her satisfied himself, are enough to account for the traditions in the sources.³⁸ Eventually, probably in the late 480s, when it was clear that Persia was planning another attack and the political climate had changed, Elpinike married Kallias of Alopeke, a man whose reputation had its own shadows but who came of good aristocratic lineage, being a member of the Eleusinian *genos* Kerykes, and was rich enough to clear any outstanding debts.³⁹ He made a good investment; in the 470s Kimon rose rapidly to become Athens' most popular and successful general.

Other cases of marriage in which status anomaly probably played a role come from the circle of Sokrates. Phaidros of Myrrhinous, eponym of Plato's *Phaidros*, married a cousin (FBD or MBD), probably after his condemnation in 415 for mutilating statues of Hermes and parodying the Eleusinian Mysteries, which resulted in exile and confiscation of property. The bride's father, who perhaps belonged to the same social circle, may have helped Phaidros to preserve some of his assets; the marriage shows sympathy with a plight which might have made

Helios, who would have been a patrilateral half-sister. Phaethon objects to the high status of the bride, and perhaps to marriage in general (158f. = F 775 *TGF*). Presumably at this point he does not know his true parentage. There were also plays in which marriage between full siblings was narrowly averted (Men. *Epitrep.* 341–2). Fantham 1975, n. 40 suggests that the Greek original of Plaut. *Epidicus* may have ended with a marriage between half-siblings (cf. Pierce 1997, 168–9 on Men. *Heros*; Arnott 1998 on *Phasma*); see however Keyes 1940. Ogden 1996, 179–80 argues that half-sibling marriage is never carried out in comedy.

³⁸ Marriage: Plut. *Kim.* 4. 7, *Nepos Cim.* 1. 2; incest, Plut. *Kim.* 4. 5; ostrakon, Brenne 2002, T 1/67; Table 2.4. There is still a joke about the incest in Eupolis' *Cities* (*PCG* 5 F 221) in 422. Davies (*APF* 8429 X) points out that Miltiades' second marriage seems to take place before 513 (Hdt. 6. 39. 2–40. 1); Elpinike can scarcely have been born so early.

³⁹ *APF* 7826 IV–VII, 8429 X. The marriage is probably to be dated c.482. Stories circulated that Kallias had acquired vast wealth in a mysterious way just after Marathon, and Herakleides (F 58 Wehrli, 42 Schütrumpf 2008) links the family with Eretria, which may imply suspicions of treachery (*APF* 7826 VII C). Plut. *Arist.* 25. 4–8 has a story that Kallias was on trial in the 480s. Even if the family nickname *Lakkoploutoi* ('pit-rich'; Plut. *Arist.* 5. 7–8) originally referred to mining, as *APF* suggests, it still implies resentment of Kallias' riches. Kimon himself married an Alkmeonid; that family was also in difficulties in the 480s, but the marriage probably took place in the early 470s. I doubt if it is useful to speak of 'deme endogamy' (Cox 1988b, 1998) in the case of the marriages of prominent politicians, who presumably had town houses.

a non-kinsman hesitate to link himself with the victim (*APF* 5951). The point that a man in such a position can only marry a kinswoman is made in Euripides *Andromache* 972–6.

Hipponikos III son of Kallias III of Alopeke married his FZD, daughter of the famous Alkibiades (Table 4.8). Since Hipponikos was probably born *c.*416, this marriage must have taken place after Alkibiades' death *c.*404. It did not last; by *c.*395 Hipponikos had divorced his cousin, accusing her of incest with her brother Alkibiades IV. When they married, both bride and groom must have been in their late teens or early twenties.⁴⁰ Hipponikos' father Kallias took his sister, Alkibiades' wife Hipparete I, back into his own household when she left her husband (Plut. *Alk.* 8), and presumably looked after her children after her death and Alkibiades' exile (Isokrates 16. 45–6); earlier quarrels with Alkibiades over the dowry and over his flagrant infidelities gave all the more reason for securing any property that could be salvaged, and Alkibiades' own kin were in no position to make counter-claims.⁴¹ Hipponikos may have become

⁴⁰ *APF* 600 VIII, 7826 XV; ch. 5 n. 51. *Pace APF*, I suspect that Hipparete II was younger than her brother Alkibiades IV, being born perhaps *c.*416 after Alkibiades III had forced her mother to return to him. If this is so, Hipponikos III must have been younger than A. IV, since A. III's attempt to extort a further dowry payment after the birth of his first child prompted Kallias III (Hipponikos' father) to make a will leaving his property to the state if he died childless (if he had died intestate A. IV, as his sister's son, would have inherited). A. IV may have been born *c.*419; the statement in Isokr. 16. 45–6 that he was orphaned 'at birth' by his father's exile and his mother's death is not to be trusted, and the more precise notice that his life was in danger when he was four should refer to Athenian reaction to the news that his father had gone to Sparta. According to the gossip reported in Lys. 14. 25–6, by the time his father summoned him to Thrace (*c.*407/6), the boy was nearing puberty. Hipponikos III and Hipparete II may thus have been almost the same age, both born *c.*416. Kallias may have claimed an epikleros *c.*399 on behalf of Hipponikos, which might imply that H. was not yet 18 (*A.P.* 42. 1: Andok. 1. 118–21; above, n. 8, Table 4.2). The second speaker in Eupolis *Kolakes* F 171 *PCG* 5 cannot have been addressing Kallias, who was clearly still unmarried at the date of the play (422).

⁴¹ Plut. *Alk.* 8 implies that Hipparete died before Alkibiades' departure for Sicily. Note that accusations of incest are again made against a brother and sister whose father had fallen abruptly from glory into disgrace. Alkibiades' brother was worse than A. as an adolescent (Plat. *Protag.* 320a; the assertion in *Alk.* 1118e that he was crazy, *mainomenos*, can hardly be taken as a medical diagnosis), and we do not hear of him as an adult; their uncle (FB) Axiochos had been condemned with A. for parodying the Mysteries. Euryptolemos III, a cousin (see ch. 16 n. 60), was also closely associated with his fortunes.

fond of his cousin while they were under the same roof, and Kallias may have seen opportunities for profit in the marriage; few other suitors would want the girl, and to marry her to an outsider might have provoked awkward questions about her father's property.

Still in the Sokratic circle, the orator Lysias married his niece (ZD). We do not know whether the girl had any brothers; Lysias was the youngest of her three uncles. The family were metics, very wealthy in the later years of the Peloponnesian War, who associated freely with upper-class Athenians; Plato's *Republic* is set in their house. However, one of the brothers was killed during the oligarchic tyranny of the Thirty in 404, and much of their property was confiscated. Lysias acquired the privileged status of *isotelés* after the restoration of democracy, which allowed him to pay taxes at the citizen instead of the metic rate, but he was still barred from marriage with women of Athenian birth; the grant merely confirmed his isolated position in the top rank of metics. Family solidarity, intensified by the terrors and losses suffered under the Thirty, and status anomaly combined to make marriage with a kinswoman attractive.⁴²

Another orator, Demosthenes, began his career as we have seen under the handicap of a struggle against his guardians to recover his inheritance. His younger sister, born c.380, had been betrothed by her father's will to her cousin (FBS) and guardian Demophon, who had not yet married her when Demosthenes took him to court. Eventually, at some date after 364/3, she married another cousin, her MZS Laches son of Demochares of Leukonoion (Table 4.7). The orator Demochares II, who to judge by his name should have been their oldest son, was still politically active in 280/79 and died during the 270s, so she may have married rather late.⁴³ There may have been fears that Demophon would reassert his claim; in addition, the maternal grandfather of both Demosthenes and Laches, Gylon, had been condemned for losing control of an Athenian fort at Nymphaion in the Crimea, had spent some time in exile at the court of the rulers of the Crimean Bosphoros, and had been listed as a public debtor. This was a stigma shared by the two young men. Demosthenes in his early twenties had demonstrated ability as a speaker and speechwriter in his suits against his guardians and Onetor, but may well have appeared to most observers as a brash youngster who had made some powerful enemies and was heading for trouble rather than for fame. He does not seem to have made friends easily;⁴⁴ after his

⁴² *APF* p. 589, C 9 C, [Dem.] 59. 22; the marriage took place by 380 rather than in that year.

⁴³ *APF* 3716, 3597. VIII; Laches' birthdate is unknown. If the marriage had to be delayed until he reached a suitable age, this still implies that Demosthenes was unable to find other acceptable suitors. We should not automatically believe Demosthenes' accusations that Demophon was unwilling to marry his sister.

⁴⁴ One of Demosthenes' more endearing characteristics is his skilful portrayal of the character of young clients as prickly as himself (39, 54).

father's death he and his mother, when they found themselves mistreated by his patrikin, will naturally have turned to her sister and Demochares for sympathy and help (cf. Demosthenes 27. 14–15). As he grew up, Demochares' household could well have been the only place where Demosthenes felt he could be off his guard. He had powerful motives for perpetuating that secure relationship by marrying his sister to Laches.

We have already noted that another insecure Athenian, Apollodoros son of Pasion, married his only daughter to her mother's brother (*APF* 11672; Table 4.4). He exemplifies status anomaly in extreme form, being of slave descent yet one of the richest men in Athens (citizenship had been granted to his father).⁴⁵ He was also ambitious, humourless, insensitive to public opinion, and over-ostentatious in his performance of liturgies. We do not know why Deinias of Athmonon chose him as a son-in-law; once the alliance had been made, however, there was every reason to perpetuate it and ensure that Apollodoros' fortune remained in the family.

It has been suggested that Kleomedon, son of the demagogue Kleon, also married back into the family of his mother when he married the daughter of Polyaratos of Cholargos, perhaps his MBDD (Table 4.9). The reconstruction is controversial;⁴⁶ if it is correct, this marriage too would be understandable as a response to Kleomedon's difficulty in finding any other prominent family willing to be allied with him after his father's death. Kleon had aroused plenty of resentment during his political career.

A less pronounced case of status anomaly can perhaps be discerned in the record of the 'Meidonidai', a family of *manteis* (diviners) in Myrrhinous commemorated by an unusually extensive set of tomb monuments grouped in a family peribolos. Meidon's grandson (SS) Kalliteles, who followed his father's profession as mantis, married a woman called Mnesiptoleme, and his son married Mnesistrate daughter of Kallias of Myrrhinous; their names suggested that the two women were related, Mnesistrate perhaps being her husband's MBD (Table 4.10).⁴⁷

The marriages of Themistokles' daughters and of Lysias raise the question of the marriage choices open to those who had left their city of origin—voluntarily or involuntarily, temporarily or permanently. I cannot here pursue the topic of kinship among metics in Athens, for which some material exists in tomb inscriptions; data on exiles are rare before the Hellenistic period. It is, however,

⁴⁵ On the civic status of his mother see n. 12 above.

⁴⁶ *APF* 3773, 8674, 11907. Kleomedon's wife was still able to bear two children to her second husband, whom she married c.380 (Humphreys 1989), so Kleomedon must have married well after his father's death in 422. On the view that Kleon married a daughter of Dikaiogenes of Kydathenaion see ch. 8 n. 56.

⁴⁷ *SEG* 23. 137–8, 155–8, 160–1, 166; Humphreys 1983a/1993, 109–10.

TABLE 4.9.
Kleon (*APF* 8674,
11905, 3773)

TABLE 4.10.
The ‘Meidonidai’

worth noting the information about the Siphnian diviner Thrasylos preserved in Isokrates' *Aiginetikos* (19) as evidence for the effect of travel and political exile in drawing kin close together. As a professional religious expert Thrasylos travelled widely; according to the speaker of Isokrates 19, he had fathered illegitimate children in several cities in his youth (§ 6), and at different times lived in Siphnos, Troizen, and Aigina, as well as depositing money on Paros and visiting Melos. He needed reliable kin or affines to take care of his family and affairs when he was away. He took two wives successively from the same Siphnian family, the second being a cousin (*anepsia*, §§ 7–8) of the first; the nephew (BS) of the first wife, speaker of Isokrates 19, helped the second wife and her children when they had to go into exile, and eventually married the daughter. The speech was written for his claim to inherit the estate of his brother-in-law (WB), Thrasylos' son Thrasyboulos (Table 2.8).

PROPINQUITY AND ROMANTIC LOVE

The last few cases discussed have already indicated that misfortunes might throw kin into close association and create bonds resulting in marriage. Yet even in a family without peculiarities of status arranging a marriage must have been an anxious business. The male social world was competitive, and the choice of allies who would prove reliable had to be made with care. Moreover, the question of marriage could easily provoke conflict between fathers and sons. A son in the leisured class would be dependent on his father to provide him with some financial independence before he could marry. In many cases, by the time a father had made up his mind to part with some property, and had identified a suitable bride, the son would be in his thirties, frustrated by lack of independence, and might well have his own ideas on the subject. Young men married late; they spent their twenties as playboys if they were rich and perhaps as mercenaries if they were not, in a marginal social milieu in which romantic attachments to boys or to prostitutes (*hetairai*) or camp-followers absorbed much of their attention. Some fathers may have had to urge marriage on sons who showed no inclination to settle down to the responsibilities of adult life.⁴⁸ It seems consistent with these circumstances that the idea of a marriage also founded on romantic love should become popular in drama, though it is hard to find clear evidence of such unions in real life, where citizen families kept their daughters in seclusion, and young men had few chances of seeing marriageable girls outside their own kindred.

⁴⁸ On age of marriage, sons who inherited before marriage, and neolocal residence see below, ch. 5 at nn. 31–48, 52–7. We have almost no direct evidence on the role of mothers in marriage decisions, or on the reactions of prospective brides, but see Humphreys forthcoming *a* on the advantages for women of marriage within their own kindred, and ch. 12 pp. 391–5 on women's social life. Reasons for choice of spouse are discussed in Verilhac and Vial 1998.

The young man who objects to an arranged marriage and wants to choose his own bride may already appear in the fragments of Euripides' *Phaethon*, and is a stock character in New Comedy by the end of the fourth century.⁴⁹ *POxy* 664 (cf. Raubitschek 1963), which introduces this theme into historiography, may go back to the classical period; it tells the story of a young man who fell in love with the daughter of the tyrant Peisistratos when he saw her in the ritual role of *arrhéphoros*.⁵⁰ In Menander's *Shield* Chaireas falls in love with the sister of Kleostratos because they grew up together as *syntrophoi* (262–3); she was the ward of his stepfather Chairestratos (Table 2.6). Kleostratos is in love with Chaireas' half-sister, his FBD, presumably for the same reason. Another marriage of two sibling pairs occurs in the *Dyskolos*, where at the end of the play the daughter of the eponymous 'Grumpy' marries the rich young Sostratos and her half-brother marries Sostratos' sister (Table 2.5); in the *Priestess* (*Hiereia*) the priestess's son married his foster-sister, and this girl's brother married the priestess's daughter (*POxy* 1235, Sandbach 1972 305–6, *PCG* VI 1 p. 137). No actual marriages of this type are yet attested for classical Athens; they seem to have been rather common in rural England in the late Victorian and Edwardian periods, which may suggest that they are likely to occur in societies where the young wish to choose their own spouses but have limited opportunities for meeting prospective partners except through channels of kinship and affinity.⁵¹

One Athenian who married a girl from a household to which he presumably had ready access as a boy is Alkibiades III. His wife was Hipparete, daughter of Hipponikos II of Alopeke by the mother of Alkibiades' foster-brothers Xanthippos

⁴⁹ *Phaethon*: F 775 *TGF*; Diggle 1970. Cf. Achilles' initial reaction to the arranged marriage in Eur. *IA* 1411; there seem to have been debates about marriage also in the *Aiolos* (F 20–2, 24) and *Andromeda* (141–2). Electra, due to marry Pylades, is in Eur. *EL* marrying her brother's best friend, but in *IT* 913–9 and *Or.* 1233 he is a cousin (FZS). Young men (25–35) are to choose their own brides in Plato's *Laws* (772d). Cf. Konstan 1983; id. 1993 on sympathy for the woman (hetaira/concubine) who makes her own choice.

⁵⁰ In Polyain. 5. 14 he becomes Peisistratos' son-in-law (cf. Plut. *Mor.* 189c).

⁵¹ See Richards and Robin 1975; M. Strathern 1981, 192–6; Davidoff 2012, ch. 9. This marriage pattern is found in my father's Yorkshire family at the same period. Strathern sees marriage with kin as especially a strategy of newcomers who need to establish themselves in the community through solidly constructed alliances; the two explanations are compatible if we assume that incomers' children had less opportunity to visit neighbours' homes. Nineteenth-century kin marriage, sibling exchange, and marriage with deceased wife's sister are discussed in several papers in Sabean, Teuscher, and Mathieu 2007, but the emphasis is mainly on socio-economic affinities; see however C. H. Johnson 2007, 275–6, on 'a kind of guided love'. Cf. also Piddlington 1965, 152–3; Sklar 1984; Stavrianopoulou 1994; Burguière 1997. Respectable Athenian girls could be sighted at religious festivals (a useful collection of references in Post 1940, cf. Fantham 1975, F. D. Harvey 1988, D. Cohen 1989; P. R. L. Brown 1981, 43 for Christian parallels), but there were few opportunities to talk to them. Cf. P. G. M. Brown 1993. Since Philokrates II son of Deinias I of Oa in 356/5 paid a debt on behalf of Deinias of Halai Aixonides (*IG* ii² 1622. 513–19), the debtor may have been his WF and his FFZS (first cousin once removed). Cf. ch. 24 n. 111; Kroll 1972, no. 62.

and Paralos, the sons of his guardian Perikles. Alkibiades' father died in 447/6 when the boy was under four years old; he seems to have moved into Perikles' household at that time, which may have been also the date of the transfer of Perikles' wife to Hipponikos.⁵² There must have been frequent comings-and-goings between the two households, which increased when Hipponikos died c.422 and the household of his son Kallias III became a centre for all the rich young men about town, including Kallias' half-brothers and Alkibiades. Hipparete would have been secluded from most of these junketings, but kin would still have penetrated to the women's quarters on some occasions. After Perikles' death in 429 Alkibiades had no one to restrain him, and Hipparete after the death of Hipponikos had only her irresponsible brother as guardian. Romance—if that was the basis of the match—did not last long.

Another case of marriage arising from propinquity, perhaps rather shocking to Athenian ideas, was the third marriage of Hipparete's brother Kallias III, who divorced his second wife, daughter of the rich Ischomachos, in order to marry her mother. Property interests may well have been involved, although it is hard to reconstruct the situation precisely.⁵³

CONCLUDING REMARKS

As elsewhere in this book, we have been dealing with problematic data: marriages in families whose status was anomalous, marriages that led to controversy, conjectural prosopographical reconstructions, stories told by litigants in

⁵² *APF* 600 VI–VIII, 7826 IX, 11811 III. *APF* puts the divorce and remarriage earlier, c.455, but Kallias III, son of the second marriage, was still young and foolish in the late 420s, and Perikles II, son of Perikles and Aspasia, need not have been born before 447/6. Hipponikos had an illegitimate son, Hermogenes; had he been forced to divorce a foreign wife in 451 (cf. Humphreys 1974)? Plutarch's statement (*Per.* 24. 8) that the marriage with Hipponikos preceded that with Perikles is defended by Cromey 1982, but the chronological difficulties are overwhelming. Since Perikles' wife is said to have been a kinswoman of her husband (we do not know how), she may have been related to Alkibiades' mother Deinomache, daughter of Megakles IV (erroneously III in *APF* 600 VI A; the relationship is correctly stated elsewhere). If not, Hipparete was Alkibiades' MFBSDBHSD, but they are unlikely to have thought of the relationship in that way. There is nothing to be said for the suggestion in Cromey 1984 that Deinomache married Hipponikos II after the death of Alkibiades' father Kleinias, and subsequently married Perikles, which would have made Hipparete I Alkibiades' stepsister (by a second marriage of Hipponikos) and Kallias III, Xanthippos, and Paralos his half-brothers.

⁵³ *APF* 7826. XI–XIV. Cf. Heritier 1995 for comparative material on this type of union. Menedemos of Eretria and his close associate Asklepiades married a mother and her daughter; when the daughter died Menedemos passed the mother over to Asklepiades, but she continued to keep house for both of them (D. L. 2. 137; late 4th/early 3rd c.). The speaker of Lys. F.8/X Th. 1913, X Gernet/Bizos 1926, XI Carey 2007, alleges that Antigenes, who is prosecuting his wife for homicide (abortion), hopes subsequently to marry his stepdaughter. Seleukos I gave his wife Stratonike to his son Antiochos I (Plut. *Demetrius* 38).

court, dramatic plots. The problem for the interpreter, however, is not to make calculated allowances for the distance between ‘abnormal’ data and an imagined normality, but to use the abnormal as a basis for questioning her own conceptions of the normal.

This is perhaps most necessary in the case of ‘epikleric’ marriage, round which the imagination has circled both in antiquity and in modern times. I have argued above that the rules governing the allocation of epikleroi were only intended for cases in which a father had made no provision, and that epidikasia disputes will have been rather rare.⁵⁴ I have also suggested, however, that the law encouraged a certain predisposition to consider next-of-kin marriage appropriate (though not mandatory) for brotherless girls, especially those whose fathers were wealthy.⁵⁵ Hence there will have been cases of quasi-epikleric marriage, in which a brotherless girl was married to her next-of-kin during her father’s lifetime.⁵⁶ It would perhaps be useful to distinguish such marriages from epikleric marriage in the strict sense, by epidikasia (though a groom named in a father’s will would have to claim by epidikasia).

Epikleric marriage seemed anomalous in antiquity on the one hand because in it the groom’s legal right to the bride seemed to override her father’s right to dispose of her, and on the other hand because it gave the epikleros and her eighteen-year-old son rights over property that were usually held by husbands and fathers. Dramatic poets were attracted to these reversals. In modern times, epikleric marriage has seemed anomalous because ‘the law’ is identified with the state and with the public sphere, while marriage is associated with love, women, domesticity, and private life; due to this anomaly, it was thought to represent an evolutionary stage in which familial interests and identities prevailed over those of ‘the individual’.⁵⁷ Although historians are becoming less comfortable with such evolutionist stories, the cumulative effect of this history of associating kin marriage with otherness and constraint has probably encouraged us to hypothesize epikleric marriages too freely in prosopographic reconstructions.⁵⁸

⁵⁴ Ch. 1 n. 124; in addition to the cases mentioned there, Lys. F CXVIII, CXLI Carey 2007, Is. F 24–5 = xxvi, xxxix Th. 1903, and Dein F. LVII–LVIII, LX Conomis 1975 may have arisen from epidikasiai for epikleroi (A. R. W. Harrison 1968, 122 n. 1). Sissa 1990 emphasizes that the law was intended to prevent the next-of-kin from taking the estate without the girl(s), and provides a valuable analysis of earlier interpretations.

⁵⁵ Cf. Humphreys 1989 / forthcoming *a*, on Dem. 39–40. Similarly, there was an expectation that adopters would choose close kin, though they were not legally required to do so.

⁵⁶ Cf. above, pp. 112, on Lys. 32 and [Dem.] 44, and ch. 2 pp. 69–72 on *inter vivos* adoption by MF. In many cases we do not know when adoption took place.

⁵⁷ See Humphreys 2002*b* for a critique of the concept of the individual in sociology.

⁵⁸ Some hypothetical marriages of this type included in Humphreys 1994 have been removed from this revised version of that article. I cannot here go into the association between kin marriage and otherness that until rather recently dominated anthropological analyses of kinship (cf. e.g. Carsten 2004, 10–15).

Historians are also, as I have suggested above, too free in attributing ‘strategies’ to actors without asking themselves how strategizing is refracted through practice. How does a particular choice of marriage partner come to seem right or even inevitable? Patterns of association shape perceptions. One does not have to be a Hindu or a Jew to feel that eating with people and marrying with them are in some ways analogous. Affines, in Greek terminology, counted as *oikeioi*, household associates; and one had to feel ‘at home’ with them even before making the affinal connection.

Marriage is a public ratification of the imagining of private communities (networks). It involves conceptions of identity and difference, the familiar and the unknown. The plots of New Comedy were about conflicting conceptions of the future and mistaken identities, and ended in marriage when the exotic stranger turned out to be, in a metaphorical if not literal sense, the girl next door, uniting romance and reassurance.⁵⁹

Outside the theatre, marriage is not an end but a beginning. In the following chapters we move from the poetry of law to the prose of practice, to law in context and in use.

⁵⁹ Under the conventions of the day, the girl living literally next door was an erotic stranger to a young man; this is neatly expressed in Menander’s *Phasma*, where the hero initially takes the heroine for a ghost. A useful discussion of the historical background to comic plots in Ogden 1996, 174–80. Cf. Lévi-Strauss 1983a, 107–10 on medieval Japanese attitudes to exoticism versus security in arranging marriages.

Property

RESIDENCE AND LANDHOLDING

Clearly the options open to Athenians in choosing their associates, among kin or others, were affected by residence. We should therefore like to know how common it was for an Athenian family to have kin as neighbours or living in the same village, street, or city quarter. In a society in which many people still derived their income from land, and inheritance was partible, we might expect to find considerable continuity in residence, and many people with kin living close to them.

Arguments can be made on the other side. It is generally assumed that during the archaic period men with political ambitions tended to acquire property in or near the city, in some cases moving from outlying demes to do so, and there is no reason to suppose that this centripetal drift ceased in the classical period.¹ The Peloponnesian War constituted, by any standards, a major upheaval; inhabitants of the area west and south of Hymettos and Pentelikon had to evacuate their villages because of frequent Spartan invasions in 431–425, and after 413/12 the whole of Attika had to be abandoned.² A daily wage could be had in the fleet for most of this period, and some at least of the refugees must have adapted to city life in Athens or Piraeus—or acquired market gardens in the five-mile corridor between city and port protected by the Long Walls—and remained at the end of the war. Xenophon's Ischomachos and his father, who bought up deserted land, brought it under cultivation and resold at a profit (Xenophon *Oikon.* 20. 24 ff.),

¹ The father of the speaker of Dem. 55 had acquired land in a hilly rural area from a previous owner who disliked the area and preferred city life. The purchase cannot be dated, but was perhaps sometime between 390 and 370. Cf. ch. 20 n. 57 for members of Eleusinian priestly genê acquiring land elsewhere in Attika before 507.

² The invasions of 430 and perhaps 427 penetrated east of Hymettos. V. D. Hanson 1983 argues that the capacity of ancient armies to cause long-term damage to farms has been overestimated (*contra*, P. D. Harvey 1986). Nevertheless some families will not have wanted to move back to a perhaps marginal rural existence after a generation in the city. Deaths in war also have to be taken into account. R. G. Osborne 1985*a*, 27–34 and Appendix A, lists isolated farmhouses; the two which have been fully excavated seem to have been occupied only for short periods (Dema house, Vari farm near cave of Pan). Osborne is probably rather too anxious to explain away all possible evidence for isolated farms, and further surveys have changed the picture somewhat (ch. 22 n. 2), but his general conclusion that many countrymen lived in villages or hamlets is well established.

should have been operating during the period of the war.³ Property was confiscated from those condemned in the courts, and sold; creditors will have taken possession of land mortgaged to them. Some of the rich shifted most of their resources into workshops in Athens, mining land, or land in the territory of subject allies. Kleruchs moved to take up holdings overseas, and we can hardly imagine that all of them were welcomed back to a share of the ancestral lands when they were expelled at the end of the war—in some cases after three or four generations of separation.⁴ Grants to privileged foreigners of the right to own land in Attika, attested from the 420s,⁵ must have meant something; and if such men usually bought houses in Athens or Piraeus, this implies that Athenians could do so too. The *novus homo* Apollodoros of Acharnai, whose father had come to Athens as a slave, had land by 362 in three demes ([Demosthenes] 50. 8), including at least one estate which could be described as ‘in the country’ (*en agrôî*, 53. 4; *APF* 11672 V).

By the fourth century, from which most of our evidence comes, Attic society was far from ‘traditional’. Any pattern of landholding that emerges from the sources must be seen as the product not of inertia but of a mixture of centrifugal and centripetal forces. The factors involved, and the scale of operations, vary with wealth, but gradations in wealth, among citizens, are likely to have been fairly continuous rather than sharply separated into different strata. Citizens were not divided into landlords and tenants, or owners and labourers. *Philotimia*—the ambition to cut a dash in the community—motivated men at many different levels (Whitehead 1983; 1986*a*).

At the highest level of wealth, the normal Athenian would probably have both a town house and at least one country estate. Xenophon advises the cavalry

³ Perhaps already before the war in the father’s case (*APF* 7826 XIII–XIV). Add to *APF*’s list of Ischomachoi I. Hippomachou Lamptreus, a kleruch buried at Potidaea (*IG* i³ 1511); the text cited under (K) and (L), identified as ephebic in Traill 1986, may be a list of epilektoi (Humphreys 2010*a*, *SEG* 36. 155/60. 142).

⁴ There is still dispute about the character of kleruchic settlements: see e.g. Faraguna 1999*a*; *ASAA* 88, 2010 (*IG* xii 8. 666, Defner 1923, must surely be a *pierrre errante*); Magnetto a. o. (eds) 2010; Clinton 2014. Kleruchs who settled on the land allocated to them will often presumably have been youngish men—the system was apparently designed to provide Athenian manpower at key points in the Aegean which could be drawn on in a crisis—and in some cases may have returned to Athens to take up inherited property in later life, leaving a son behind. It may not have been easy, in some kleruchies, to distinguish kleruchic holdings from land acquired subsequently by purchase or as security for debts that were never repaid. The father of the *mantis* Euthyphron still owned land on Naxos c.399 (Plat. *Euthyphro* 4c); this did not prevent his son from taking up a professional career in the city. Some kleruchic families therefore may have become sufficiently integrated into local society to retain their land and place at the end of the war. Many however will have returned to Athens under the immunity (*asphaleia*) promised by Lysander in 405 (Xen. *Hell.* 2. 2. 2). The whole subject of the return of propertyless citizens—well attested in later decrees from other cities covering regulations for the return of exiles—needs study. Cf. ch. 2 no. II B 9 for a Samian kleruch buried in Athens; ch. 24 n. 7.

⁵ *IG* i³ 227 II 19–22 (424/3?), 81. 23 (421/0); cf. Henry 1983, ch. V.

commander regularly to put his horse through its paces while riding out from the city to his rural property (*Hipparchikos* 18: *hotan eis chōran elaunōsi*). In addition, a rich man might well have non-agricultural property of some kind: an apartment block (*synoikia*) in town, land in the mining district, a slave-staffed workshop, or capital lent out at interest. He or his ancestors might have acquired rural property in more than one area, through dowry, inheritance from collaterals,⁶ or by possessing land given as security for loans. If his main residence was in town, there was no compelling reason to try to consolidate his rural properties in a single area. Small slave labour teams might be easier to control than larger ones,⁷ variety in making visits of inspection could be agreeable, different estates might have their own particular excellences; the ambitious could display their generosity over a wider front, while the mean hoped to avoid taxation by concealing the extent of their wealth.

Analogous considerations operated at a lower level. *Philotimia*, the desire for company, and the wish to have a say in local affairs drew most men to live in villages rather than isolated farms. Variations in micro-climate can make it advantageous, in such circumstances, to have holdings scattered over the neighbourhood in small plots, rather than concentrated in a single block (Mira-Smith 1985 Part I 2; Forbes 1989; Rowlandson 1996, 124–38, 171–5).

So much for general considerations. Kleisthenes' registration of citizens in the demes where they had their principal residence in 507 provides a fixed point from which we can try to measure mobility, both backwards and forwards in time.

⁶ Scattered holdings: Forbes 1989; J. K. Davies 1981, 52–5; 55–60 on 5th c. holdings overseas. We do not hear of dowries in land in the sources we have, but it is hard to believe that no father had ever had to give his daughter land as her dowry (cf. Foxhall 1989, n. 58). Two women are listed as owners of adjacent holdings in the mining area (*Agora XIX* P 5. 67–71; 'the wife of Charmylos' seems to be a widow, but 'the wife of Alypetos' is not, cf. l. 48); they may be sisters who acquired the land either as *epiklēroi* or because their father had divided it between them as dowry (n. 83). 'The daughter of [Ais]chylos' is named also as an owner (*Agora XIX* P 7. 13); either she is an *epikleros* or the land is her dowry, or security for it. In a few cases a woman is named as owner on a *horos* which does not explicitly state that the property is security (*apotimēma*) for her dowry: among these Finley 1952/1985 nos. 146, 146A, 175 mention dowry, nos. 174 and 176 do not (nos. 179–80 come from Syros; no. 10, from Lemnos, 3rd. c., records hypothecation to a woman, cf. *IG* xii 7. 412). I see no obstacle to believing that all the classical stones from Athens derive from agreements about dowry, which could be of three kinds: (1) designation of land as *apotimēma* for a cash dowry (the commonest proceeding); (2) *horos* on land which had itself been transferred as dowry (cf. Wolff 1954, 306); and perhaps (3) *horos* on land designated by will to serve as dowry for an unmarried daughter (cf. *Syll.*³ 364, *IEph.* Ia 4 A 55–9, early 3rd c. BCE). On Solon's law on *phernē* and its implications for the use of land as dowry in the archaic period see ch. 1 at nn. 120–3. The question whether a woman's dowry was her own property or was owned by her husband or her family of origin was not very clearly answered in Attic law (cf. Foxhall 1989); some variation of wording on *horoi* is to be expected. In *Is.* 5. 26–7 a house is given to a woman on marriage, but the standing of the transaction is obscure in the speech, and may always have been so.

⁷ Free farm labourers are rarely mentioned, but see Men. *Georg.* 46–7; the labourer is a young unmarried man, the owner lives on the farm.

It is generally assumed that the family of Miltiades and Kimon, registered in Lakiadai on the western side of the city, had a connection in pre-Kleisthenic times with the deme Philaidai, since Pherekydes and Hellanikos trace Miltiades back to Philaios son of Ajax, and it is hard to explain the introduction of this piece of implausible etymology on any other grounds.⁸ However, the family seems to show no interest in the area of Philaidai later; if there was ever a priestly *genos* Philaidai it seems to have lapsed into obscurity already in the archaic period.

More conjecturally it has been claimed that the *kouros* of c.540 from the Anavyssos area (ancient Anaphlystos) with the name Kroisos on its base (*IG* i³ 1240, *CEG* 27; cf. Thonemann 2016) must belong to a member of the Alkmeonid family, which is said to have derived its wealth from Lydia—although most known Alkmeonidai belonged to city demes. Since the story about Alkmeon I and his Lydian gold-dust, if true, must refer to Alyattes and not Kroisos (*APF* 9688 II, Herodotus 6. 125. 5), and since other sixth-century Athenians may well have had contacts with Kroisos of Lydia, this conjecture will not bear much weight. We do not know on what basis *A.P.* 13. 4 states that in the 560s Lykourgos (descendants in Boutadai) led the faction of the ‘plain’ (*Pedion*), the Alkmeonid Megakles (descendants in Alopeke) that of the ‘shore’ (*Paralia*) and Peisistratos (descendants in exile) that of the people from (beyond?) the hills (*Diakrrioi/Hyperakrrioi*). However, since Lykourgos’ family were prominent in the *genos* Eteoboutadai which held the two major Akropolis priesthoods, and both the other two had ancestors who were archons before Solon’s reforms, all three families should have had bases in or near the city well before 560.

D. M. Lewis (1963*a*) argued from the way in which demes were grouped in trittyes and tribes, in the Kleisthenic system, that a conscious effort had been made to split up the constituent communities of long-established cultic units such as the Marathonian Tetropolis in order to weaken the grass-roots community support on which some powerful political families relied in elections. My own view reduces the scope for manipulation from the centre, but recognizes that wealthy families will have influenced registration patterns. However, local grass-roots power may have been a phenomenon of quite recent origin. In the period before Solon, if candidature for office was restricted to Eupatridai, popular support may have been much less important. By opening office to a wider group defined by wealth rather than birth Solon made elections more competitive; by defining the concept of citizen and attaching citizenship to phratry membership, he may well have ‘enfranchised’ large groups of rural Athenians who had not

⁸ Philaios: *FGH* 3 F 2, 4 F 22. On the question whether the Miltiades of the genealogy should be III or IV see *APF* 8429 I. Men with houses in more than one deme were presumably allowed to choose where to register, a point that should be kept in mind when discussing Kleisthenes’ motives. Descent from Ajax was also claimed by the Salaminioi, based in Sounion.

previously asked themselves whether they had the right to vote in elections—and who had now been politicized by the revolutionary situation in which Solon's laws were framed and passed. I am inclined to think that there was a sudden upsurge of the manipulation of local ties and local cults by ambitious politicians after Solon's reforms; this situation was remembered in Kleisthenes' day—even though Peisistratid rule from c.546 to 511/10 will have offered less scope for such initiatives—and steps were taken to prevent or at least delay its recurrence.

DEME AFFILIATION AND RESIDENCE

When we turn to the post-Kleisthenic period, four types of evidence are available. Literary sources give some details of residence and property holdings; gravestones in rural areas indicate that either those named on them, their kin, or their recent ancestors lived in the area; some leases and sale records identify property by the names and demotics of neighbouring landowners; leases and sales also tell us where the lessors or purchasers were acquiring new land; mortgage *horoi* identify owners and/or creditors.⁹ All this evidence of course comes from the wealthier layers of Attic society and tells us nothing about the poorest citizens, let alone slaves.¹⁰ However, poverty is more likely to have been a stimulus than a bar to mobility. One of the informers who claimed to have witnessed preparations for the mutilation of the Hermes statues in 415 said that he was setting out in the small hours to walk to Sounion and collect the week's takings from a single slave employed in the mines (Andokides 1. 38). Poor Athenians rowed in the fleet, and most landless men probably moved to the city to pick up a living as best they could.

The extent of mobility must not be exaggerated. A large number of rural deme sites have been confidently identified on the basis of a solid cluster of demesmen's tombstones found in the area (Traill 1975*a*, 37–54; see chs. 23–32 for details). Of the rural demes which sent eight or more councillors to the *boulê*, Acharnai, Aixone, Eleusis, Kephale, Paiania, and Rhamnous all show a solid cluster of demesmen's tombstones from the deme site even on the basis of the evidence in *IG* ii². Lamptrai and Phaleron, however, have only a few, while Anaphlystos, Aphidnai, Marathon, and Phrearrhioi have none in the classical period. Rhamnous is the only

⁹ Much richer documentation is available from other areas. From the archive of Mibtaniah daughter of Mahseiah, from Elephantine in Egypt (5th c. BCE), we can see that her father bought a house adjoining land owned by her husband and then ceded it to her (Cowley 1923, nos. 6 and 8); a later document (Cowley 25) implies that her husband's land adjoined a plot owned by his brother Hosea. See also Rowlandson 1981; E. C. Stone 1987, 17.

¹⁰ Metics and slaves in any case could not own land. We do not seem to have any recent study of the evidence on metic residence (Whitehead 1977, 72–4 deals only with the legal aspects). On the evidence for slave families see ch. 6 at nn. 14–16.

rural deme which in *IG* ii² has more stones for demesmen buried in the deme (6) than for those buried in Athens and Piraeus (4).¹¹ Allowance must be made for the tendency of stones to drift to Athens and Piraeus in modern times, but it is clear that people drifted in antiquity also.

Osborne (1985*a*, 128–40) suggests that marriage patterns may be associated with residence, and therefore that marriage between two members of the same deme is likely to result, in a significant proportion of cases, from co-residence. The situation however is more complicated than he admits. Marriage between kin may not reveal itself in the evidence from gravestones that he uses, and there is little doubt that demesmen continued to associate with each other and form friendships even when they no longer lived in the ancestral deme. Among the stelai which give demotics and provenance in *IG* ii², analysing only the cases where both husband's and wife's ancestors came from rural demes, I find little sign that continued residence in the deme of origin influenced the rate of deme endogamy (Table 5.1).

It should be noted that not all burials in the city imply total severance from the ancestral deme. Burial in the cemeteries outside the city gates, especially in the Kerameikos area, was prestigious and a family that had both a town house and a rural estate might well choose it, even if the rural estate had been handed down from pre-Kleisthenic times. The kin of Lykourgos, who were buried near the Academy (ch. 20 n. 132), perhaps compromised by siting their tombs in a prestigious area along the road from the city to their deme Boutadai. Rhamnous had its own Appian Way of monumental *periboloi* lining the road which led to the temple of Nemesis and down from it to the deme centre and fortress, and similar phenomena, perhaps on a smaller scale, may have characterized other Attic deme sites.¹²

¹¹ Two Rhamnousian stones in *IG* were also found at nearby sites, Vrana and Kato Souli; the remaining two were found on Salamis and at Kephisia (*SEMA* 589 has no provenance). Discoveries over the last fifty years, especially at Rhamnous, have substantially increased the number of stones securely attributed to rural sites. We are not told whether the figures for grave stelai as evidence for in-deme marriage in R. G. Osborne 1985*a*, 130–4 are based on *IG* or include other stones; he is far too apt to write as if a demotic were evidence of residence in the deme. I have not made a systematic study of stones not in *IG*, but note among recent discoveries *SEMA* 50, Lysis of Aixone and son buried c.350 at Moschato (Xypete); *SEMA* 255, in-deme marriage and burial at Thorikos, 350–300; *SEMA* 527 (*CEG* 594), Diognetos son of Euadetos of Paionidai at Brauron (Philaidai). It would be useful to have a rigorous study of the quality and probable expense of funerary monuments known to have come from rural sites, comparing the archaic and classical periods.

¹² See e.g. ch. 29 n. 129 on Halai Aixonides. Timarchos' mother, who presumably lived in the city, according to Aisch. 1. 99 wanted to be buried at Alopeke; the statement was intended to be plausible, though not necessarily true. It would be rash to assume that all those buried in family plots lived nearby; Meidoteles II of Myrrhinous and his son Kalliteles II, buried in the deme, may have carried on their activities as *manteis* in the city. However, family plots did not continue in use for long, and may always have been tied to local residence by some members of the group (Humphreys 1983*a*/1993, ch. 5).

TABLE 5.1.

A. i.	Same deme, burial in deme: 10 stones
ii.	Same deme, stone from nearby site: 3
iii.	Same deme, stone from Athens: 6 + ?
iv.	Same deme, stone from Piraeus: 4
v.	(Same deme, location of stone unknown: 7 rather problematic references)
vi.	Same deme, stone from different rural deme: 3
vii.	I note that a husband and wife from Koile (city: <i>IG</i> ii ² 6491) were buried on Salamis.
B. i.	Different demes, stone from husband's deme: 23
ii.	Different demes, stone from wife's deme: 4
iii.	Different demes, stone from a third rural deme: 12
iv.	Different demes, stone from Athens: 19
v.	Different demes, stone from Piraeus: 2
vi.	Different demes, stone from Salamis: 1
vii.	Three Peiraios husbands were buried, with their wives, in the wife's deme, and one Peiraios wife with her husband; there are no endogamous burials in Peiraios.

While examples of in-deme marriage by couples living in a rural deme different from that of their ancestors may well be due to kinship, a closer look at some of the evidence from tombstones suggests patterns of residence which do not reach back to Kleisthenes but have nevertheless remained stable over several generations. A stone from Markopoulo, *SEMA* 469, published by Etienne (1975, cf. Humphreys 1983*a*/1993, 116) records the marriage of four generations of the same family, Themyllos of Oe and his descendants. Either Themyllos or his son Antiphanes seems to have moved into the Markopoulo area, since Antiphanes married the daughter of a demesman of Angele (Angelisi, near Markopoulo) and his son and, probably, grandson married into the same deme (Table 5.2).¹³

Most of our evidence for leases and sale of rural property concerns land owned by sanctuaries, tribes, demes, and other small corporate groups concerned with cult (phratries, *orgeônes*; see Papazarkadas 2011). There is hardly any evidence for leasing of private land, with the exception of estates belonging to orphans.¹⁴

¹³ Cf. R. G. Osborne 1985*a*, 131. Ties of kinship between the wives are conceivable but cannot be reconstructed. The other inter-deme marriages discussed *ibid.*, 132–3, are not particularly likely to have arisen from residence in the same area: on *IG* ii² 5867 and 6569 see ch. 24 n. 79. Deme residence in Erchia may account for the marriage of Phrasisthenes son of Eualkides of Erchia (*APF* 10807) to the daughter of Hierokles of Erchia, and for the marriage or betrothal of Antikrates son of Kallikrates of Erchia to Aristaichme daughter of Lysis of Erchia.

¹⁴ R. G. Osborne 1988 argues that private leasing was common, but can only cite two examples of private leasing of rural land in Attika, Is. 11. 42 (Thria), where the land was at the time of report part of an orphan's estate (we do not know how long the lease had run), and Lys. 7. 4, 9. In the latter case, the land had been confiscated from the oligarch Peisander in 410 and when the *polêtai* had been unable to find a buyer for three years (§ 6) was bestowed on Apollodoros of Megara, one of the assassins of

TABLE 5.2. *SEMA* 469 Themyllos I of Oe Lykiskos of Hybadai

Demes presumably acquired land either through donation by generous demesmen or by taking possession of property owned by debtors, the debt arising either from a lease or loan made by the deme or a fine imposed by it.¹⁵ Leases in perpetuity were not uncommon, and rents were not always collected with great regularity; Euxitheos of Halimous made himself unpopular by dunning his fellow-demesmen for arrears of rent when he was demarch (Demosthenes 57. 63), and the deme Teithras in about the middle of the fourth century decided to make a record on stone of property leased in perpetuity (*kathapax*), to ensure that the deme's rights would be well known and respected (*SEG* 24. 151). Lessees of deme property were taking on an obligation to provide the deme with regular revenue and thus acting as public benefactors. Similarly, when in the late fourth century a number of demes and similar bodies decided to sell off plots of

Phrynichos (*HCT* V 309–10); he sold it to an Antikles just before the rise of the Thirty; the speaker (*APF* D 15) bought it from Antikles after the restoration of democracy. He has bad relations with some of his neighbours (§ 18), and his accusers are probably claiming that he was associated with the oligarchs (§ 27). Two of his tenants were sufficiently under his influence to testify for him (§§ 9–10); one (another man's freedman) was dead. It seems to me likely that both Antikles and the speaker had connections with Peisander and were trying to keep his property in friendly hands in case he returned to Attika; if they were acting *de facto* as trustees leasing made the accounting position clear, as well as enabling them to avoid direct confrontations with neighbours hostile to Peisander and his friends. It should also be noted that it was in the speaker's interest in the circumstances to describe as 'leasing' an arrangement which if freedmen and/or clients were involved might well in other contexts have been presented in less formal terms. Other evidence cited by Osborne relates to private leasing of houses, a well-attested practice, and of land outside Attika. One would think that at more modest social levels hoplites and rowers must sometimes have had to get their land worked in their absence; but 'leasing' may be too formal a term for such arrangements. See Foxhall 1990 for later periods.

¹⁵ Security and loans: Whitehead 1986*a*, 130, 158–60; fines, *ibid.* 150. See now Papazarkadas 2011, 131–2.

publicly owned land, apparently with some prompting by the state, purchasers were providing capital for the selling bodies and were no doubt expected to pay a fair or even generous price. It is not surprising that in both cases the majority of purchasers were members of the deme or other body concerned. Deme leases in any case seem to have been granted at deme assemblies, when outsiders would not be present—though they might possibly sometimes pass by inheritance to heirs outside the deme.¹⁶

The only non-demesman who leases deme property alone is Eukrates of Aphidnai, leasing three buildings in Peiraios from the deme Kytherros.¹⁷ Kytherros is an unlocated inland deme (cf. ch. 25 at n. 63) and there may not have been a demesman living in Peiraios interested in taking on this substantial obligation. The theatre in Peiraios is leased to two demesmen with two partners from outside the deme (*IG* ii² 1176+, 324/3; *Agora* XVI 93, XIX L13, *SEG* 57. 130); we can hardly be surprised by this. Euthynos of Oa leases land jointly with a demesman from the deme of Teithras, about the middle of the fourth century (*SEG* 24. 152, Whitehead 1986a, 390 no. 124); both demes are in the Mesogaia and there may have been an affinal connection between the two men.

In contrast, in the leases of sacred property by the city in (?) 343/2 and 333/2, *Agora* XIX L 6, L 9–12, only one lease definitely goes to a tenant from the deme in which the property is sited (Phaleron). However, most of the property that can be located lies in the area in and around the city and Piraeus.¹⁸

In the *hekatostê* sale records, the demotic of the purchaser and location of the property are preserved for 52 sales; 31 purchasers come from the deme in which the property is located, five belong to neighbouring or nearby demes and 16 to more distant ones. Demes for which only in-deme purchasers are attested are Kydantidai and Thorikos (3 each); Athmonon, Kothokidai, Oenoe, Pallene and Rhamnous (2 each); Cholargos (?), Halai Aixonides, and Xypete (1 each). The Halai purchaser was the demarch and one purchaser from Kothokidai was acting as deme *epimélêtes*; these posts are perhaps more likely to have been held by demesmen resident in the deme. Purchasers of land in Aphidnai come from the deme or, in one case, the neighbouring deme Kolonos.¹⁹

¹⁶ On leasing by demes and other corporate bodies see Papazarkadas 2011; ch. 22 n. 115. Such leasing anticipates the practice which becomes common in the Hellenistic period, both for states and for individuals (Laum 1914), of designating plots of land as endowments, the revenue from which is to be used for specified purposes. Maier 1959, no. 51 is a particularly interesting text which deserves further study. On the *hekatostai* texts see Appendix 2.

¹⁷ *IG* ii² 2496; Papazarkadas 2011, 124–5.

¹⁸ See also A. Williams 2011. Walbank 1983 thinks some of the property is located in NE Attika, but his assumption that lessees and guarantors are likely to be concerned with land near their ancestral demes is far from secure, and in the present context would involve a *petitio principii*.

¹⁹ The only men in Whitehead's list of demarchs who may come from families known to have been active politically at the state level (excluding Council membership, on which see ch. 17) are Gnathis son of Timokedes (no. 11) and Euthydemos son of Moirokles (no. 10; see Table 30.4) in Eleusis, Euboulides

In a list recording sales of property confiscated from members of the oligarchic junta of thirty who ruled Athens in 404/3 (*Agora XIX P 2*) only a few lots are sufficiently well preserved to provide useful data. The son of Euthymachos of Agryle bought land in the deme, adjacent to his father's holding, a rare example of the consolidation of estates;²⁰ the previous owner, however, was a demesman of Sphettos. Property at Sphettos was bought by a demesman (owner's name lost). But property at Thria, owned by a demesman of Daidalidai, was bought by a man of Euonymon. Property at Phaleron was owned by a demesman, but the purchaser's name is lost. From another record of the sale of confiscated property we see that Philokrates of Hagnous (*Agora XIX P 26*) owned land in his own deme and perhaps in Myrrhinous (*P 26. 372*; cf. ch. 27 n. 41), but he also had *ergastêria* in the city; to describe his property as 'an estate made up largely of fragmented holdings within a small area' (R. G. Osborne 1985*a*, 61) is going beyond what the evidence will allow us to say.

Mortgage markers (*horoi*) might also provide evidence of landowning by demesmen, or loans made to deme residents (*horoi* record the name of the creditor, but not normally of the owner of the land; no stone gives an owner's demotic). *Horoi* were set up to record three main types of transaction: provision of security by a man to his father-in-law for the return of the wife's dowry if the marriage broke up or she died childless, registration of security with the eponymous archon by lessees of the estates of orphans, and 'conditional sale' (*prasis epi lysei*) in which a man borrowed money against land, normally continuing to work the land himself and paying interest on the loan. There may be a bias in the evidence here; it seems likely that non-local creditors would be more likely to insist on a marker than locals. I can find only two cases, out of 30, in which both stone and creditor can confidently be assigned to the same rural deme. *Apotimêma* *horoi*, recording land put up as security for dowry or the leasing of orphans' estates, are mainly found at a considerable distance from the deme of the creditor. It must be remembered however that the creditor's deme was not necessarily where he resided.

Most of the evidence on ownership that comes from identifications of plots by reference to neighbours' holdings concerns land in the mining area, which almost certainly passed into the hands of non-demesmen more frequently than land in

(no. 19) in Halimous, and perhaps Euthydomos (no. 34) in Melite. It is not certain that Euxitheos of Halimous (no. 20) lived in the deme, but he certainly owned property there. No. 6 was buried in his deme (Aixone), as was the son of no. 42 (Rhamnous); the identification of no. 15 (Halai Aixonides) with a man buried at Spata is very conjectural. The *epimelêtai* mentioned in the *hekatostê* texts may have been special commissioners, for whom residence in the deme would have been less essential, but men with no interests in questions of land ownership in the deme would hardly be appointed.

²⁰ *IG ii² 1579*; *Agora XIX P 2 d 5f*. The identification of this Euthymachos with the secretary of the Council in 402/1, perhaps the year of sale, is far from certain.

other rural areas.²¹ One confiscation record gives evidence of a group of neighbours in Peiraios all from the deme Myrrhinous (below, at n. 87). In another, property in Aphidnai, owned by a demesman of Oenoe, was bordered on one side by the holding of a local demesman, on the other side by an owner from Euonymon; it was denounced by a demesman of Aphidnai but bought by a Rhamnousian (*Agora XIX* P 26. 498–530). Philippos of Agryle owned land in Alopeke, near the city.²²

Plato, whose father belonged to the city deme Kollytos but had moved to Aigina as a kleruch, owned land in Iphistiadai, in the plain north of Athens, bordered by the holdings of Philippos of Cholleidai and Archestratos of Phrearrhioi; he had bought another plot at Eiresidai, probably nearer the city, bordered on two sides by the estate of Eurymedon of Myrrhinous, who may have been his nephew (ZS) (Table 5.3). The other neighbour was Demonstratos of Xypete.²³

Timarchos of Sphettos had, and sold, property in his deme, but also owned an *agros* at Amphitrope, *chória* at Alopeke and Kephisia, two mining *ergastéria* at Laureion, and a house in the city (Aischines I. 97f.).

More complete records would surely show that some areas were more open to new settlement, or more apt to send out migrants, than others, and might perhaps reveal a stabler class of small farmers between the city-focused political elite and the mobile poor. But military service took all able-bodied men away from

²¹ Cases where kin own adjacent plots in the mining area are discussed below (at section ‘Kin as neighbours’). Land in this region may not all have been appropriated before intensive exploitation of the mines started in the later 6th c.; the description of Nikias of Kydantidai (*APF* 10808), heavily involved in mining, in Ar. *Knights* 132–9 as a sheep-seller perhaps suggests that parts were also used for pasture. Landowners installed ore-washing facilities which they presumably leased to mine lessees; see Kakavogiannes 2001 for excavation of washeries. R. G. Osborne’s statement (1985a p. 113) that there is no case where different owners appear on all four sides of a plot is somewhat misleading, since mines are normally identified as bordered by a road on at least one side. See Kalcyk 1982, Kakavogiannes 2009, on road locations. A high proportion of the owners of property in the mining area who belong to local demes are Sounians; Sounion (ch. 26) seems to have attracted the registration of the inhabitants of a number of scattered hamlets near the end of the promontory.

²² Philippos: *Agora XIX* P 5. 12–13, 22–23, 367/6 BCE. In the record of property confiscated from the Thirty (*Agora XIX* P 2) a house at Ph[aleron] belonging to Eumathes of Phaleron is adjacent to land owned by a Boethos. A Boethos of Phaleron is attested as councillor c.330 (*Agora XV* 46. 35), but the name is also attested in a different tribe at about the same date (*AO* no. 538). The Hermokopidai (*IG* i³ 421–430), perhaps atypical due to wartime conditions, had much of their property either in the city or abroad. Euphiletos son of Timotheos of Kydathenaion, however, had property in four rural demes (Aphidnai and Semachidai in the north, Gargettos and Myrrhinous in the Mesogaia); Polystratos son of Diodoros of Ankyle had a *chôrion* in his deme, with other property in the city and Peiraios; Phaidros of Myrrhinous had land in the deme (*APF* 5951); Alkibiades (Skambonidai, *APF* 600) had property in Thria and Athmonon.

²³ Plato would have been little if at all over 18 when his sister married (*APF* 8792 XI C–D) and (*pace* Cox 1988b) must have bought the land considerably later. It is unlikely that her husband Eurymedon I of Myrrhinous outlived Plato; the property owner Eurymedon II, also named as a trustee of Plato’s will, would have been either a son or grandson of Eurymedon I, brother, son, or nephew (BS) to Speusippos.

TABLE 5.3. Plato
(cf. 13.1) *APF* 8792
IX–XI

home at some time, service in the Council gave many an experience of city life at least once;²⁴ no area of Attika was isolated.

HOUSEHOLD COMPOSITION

With the type of evidence we have, however, general considerations about the mobility of Athenians are not going to tell us very much about the likelihood that Athenians had kin living near them. An alternative approach is to look at what we know about patterns of residence and the process of division of property among heirs, which was often gradual and complex in practice. Essentially we should like to know whether, in a situation where almost every family would have had scattered holdings—in both city and country if rich, in different parts of their locality if more modest—division perpetuated fragmentation by further subdividing each holding so that each heir got a share of every kind of property, or whether an attempt was made to diminish fragmentation by assigning different pieces of property to different heirs. We shall not be able to get any very definite answer to this question, and practice may well have lain somewhere between the two extremes: but it is useful to formulate the alternatives clearly.²⁵

²⁴ In my view all 60-year-olds were also expected to serve as *diakritai*.

²⁵ In some modern Greek villages plots are exchanged, when women bring land as dowry, to produce more concentrated holdings; but there is considerable variation in practice (Friedl 1962; Herzfeld 1980). In Dem. 55. 32 exchange is offered in a quarrel over land, in a case where the speaker's neighbours seem anxious to add his plot to theirs. Fractions of houses are exchanged in Roman Egypt: Hobson 1985, 224. There is also a reference to exchange in the early Lokrian colony (?) law M/L 13, B 4–5; it must be carried out in the presence of a magistrate. This may be a provision peculiar to recently divided land (*pace* Vatin 1963, 15, I do not think it proves that lots were inalienable. I do not understand Asheri's reference, 1971, 80 n. 13, to exchange in *Staatsverträge* II no. 297). In other periods and areas cadastral listings could be used for work on this problem; there are some relevant data in *IJuvrid*. VII (*IG* xii 5. 872,

A father was by law entitled to retain control of his estate until he died.²⁶ De facto divisions of property were sometimes made earlier, as we shall see, but sons did not achieve complete independence while their fathers were alive. The process of division might indeed drag on for a good many years after the father's death. It was rare, however, for indivision between brothers to be regarded as a permanent arrangement.

Unmarried sons often lived with their fathers; this was perhaps even the norm, although there are exceptions. In the opening scene of Aristophanes' *Clouds*, father and son are sleeping in the same room; presumably this was a conceivable arrangement in the eyes of the audience (cf. Plato *Symposium* 219d). Father and son also live together in the *Wasps*. In Plato's *Republic* the sons of Kephalos, all unmarried, live with their father; the two elder sons, Polemarchos and Euthydemos, are probably thought of as being in their twenties. Lysias, the youngest, lived with his eldest brother in Thourioi after their father's death (*APFC* 9). Andokides was still living with his father in 415, aged 25 and unmarried (*APF* 828). From Lysias 20. 35 it seems possible, though far from certain, that three adult sons are living with Polystratos, who is over seventy; the eldest, Philopolis, must have been married.²⁷ Apollodoros son of Pasion of Acharnai went to live in the country (*en agrôî*, [Demosthenes] 53. 4) when his father died, being presumably unwilling to live with his stepfather Phormion; he did not marry until some six years later (*APF* 11672). His younger brother Pasikles, not yet of age at the time of their father's death, stayed with his mother and Phormion.

Friction between fathers and sons is regarded as natural; it is the basis of the plot in many New Comedy plays (cf. also [Demosthenes] 40. 47). No money-lender will lend to a son whose father is alive (Terence, *Phormio* 302–3). Plutarch preserves gossip about quarrels between Perikles and his sons.²⁸ A Hellenistic epitaph (*GVII* 1815, Naxos, 2nd c. BCE) tells us that twenty-three is an early age for a young man to leave his father's *oikos* to earn a living.

Tenos). See M. G. Smith 1962 for an anthropological example; Bowman 1985 for references to evidence from Roman Egypt; Champlin 1981.

²⁶ The Gortyn lawcode (IV 25ff.) states this explicitly. If a son incurs a debt to the state he should be given his share of the inheritance to pay it. A daughter may get her share (half that of a son), but not more, when she marries. A son during his father's life only owns what he has personally acquired. (The mother owns and divides her own property.)

²⁷ *APF* 12076; ch. 11 n. 16. Philopolis had a son, Polystratos III, who died in the early 4th c., perhaps in the Corinthian War (*IG* ii² 12967, 12658). Polystratos I's younger sons were perhaps in their late 20s in 410/9, the date of Lys. 20 (§§ 4, 28–9). Kirchner suggests that one of these younger sons was another Polystratos, commemorated on *IG* ii² 12499, but this may be a posthumous commemoration of Polystratos I with Philopolis (both men are bearded). See Bergemann 1997, V 4; ch. 26 n. 110. There is no serious case for attributing *CAT* 3. 364c to this family.

²⁸ Plut. *Per.* 16. 4–6, 36. 2–13. It is implied that Xanthippos remained economically dependent on his father even after marriage; co-residence seems likely, although this is not explicitly stated. Cf. Strauss 1993, 68–71.

There are however some young bachelors who live on their own. Philostratos of Kolonai, living alone and unmarried (*éitheos*) c.380 when he was probably about twenty, may have been an orphan.²⁹ But Theophemos of Euonymon, the chief offender in the affair which gave rise to [Demosthenes] 47, was living alone and unmarried although his parents were still alive, his brother Euergos living with them.³⁰ Kallikles, opponent of the speaker of Demosthenes 55, is said to have lived in the city while his father was alive, returning only after the father's death to their hill farm (§ 11); we are not told where his brother had been living. In Menander's *Kitharistes* father and son play Box and Cox, son moving to the country when father comes to the city and vice versa.³¹

Not every son left his father's *oikos* when he married. Philoktemon son of Euktemon of Kephisia continued to live in his parents' home even after marriage (Isaios 6. 5). Friction between his parents, his father's frequent absences from home and claim to have sired other heirs by a second wife, the deaths of two brothers, and Philoktemon's own frequent departures on military service (*ibid.*) may all have contributed to this choice. Any formal division of property would only have left Euktemon more freedom to dispose as he wished of what he had kept for his own use. The fact that Philoktemon was serving as trierarch is no proof that property had been formally ceded to him; since Athenians could contract with strangers to perform trierarchies for them, an elderly man could surely send his son in his place.³² The speaker of Isaios 2 continued to live with his adoptive father after marrying (§§ 18, 36).

²⁹ APF 14734, [Dem.] 59. 22. Philostratos had a daughter born c.370. The Dionysios of Kolone who was a member of the same naval symmory between 356 and 346 is probably a brother; note that Philostratos' daughter, his only known child, did not marry her FB.

³⁰ [Dem.] 47. 38, 80. APF 7094 fails to note that Theophemos was unmarried; his *kédēstes* Mnesiboulos must be his ZH. He had become liable for service as trierarch, but there was probably some exaggeration in the claim made to his creditor (47. 34–5)—useful in the circumstances—that the brothers had divided the family estate. See Dixon 1988, ch. 7 for Roman data.

³¹ Men. *Kitharistes* 53–5 OCT (cf. C. Austin 2013). Similar arrangements are portrayed in Terence's *Eunuch* (187, 611, 629–33, 967) and *Hecyra* (175, cf. 216–26); in the latter play the son is married, his father stays on the farm but his mother lives in town with the young couple and gets on badly with her daughter-in-law, until at the end of the play she is persuaded to retire to the country with her husband (184, 201, 586–8). The son was earlier sent off to Lemnos to collect an inheritance from an elderly kinsman (171–5; on Lemnos in comedy see ch. 4 n. 31). In Plato's *Laws* (745e, 776a) each citizen is to have two houses, one of which will be occupied by the son when he marries. Similar arrangements in the Roman world are discussed in Saller 1986, 17; cf. Dixon 1988, ch.7. In Terence's *Adelphoe* Demea lives on the farm, his brother Micio in town. Cf. *Heaut.* 144–6: Menedemos leases his town house and buys a farm. In Menander's *Hydria* (Gaiser 1977) the brothers Kephalos and Nikophemos lived in town in adjacent houses, a third brother Demeas lived in the country. When Kephalos married Nikophemos' widow he moved in with her, leaving his house free for the unmarried Kleinias, son of his first marriage.

³² It seems that the ideal arrangement for a young couple, if the groom's father was still alive, was for him to provide them with a house of their own. We have no way of assessing how many marriages conformed to this ideal. Some brides may have brought a house as dowry; the terminology of *apotimēma*

These cases however may well be unusual. Multiple households much more commonly consisted of a single adult male with his wife and children and various female or minor dependants. Widows often live with their sons, married or unmarried. Lysias' mother was living with him and his wife (her granddaughter, DD) in 380 (*APFC* 9); the widowed mother of the speaker of Lysias 7 lived with her son (*APFD* 15); the disabled speaker of Lysias 24 had supported his widowed mother for three years after his father's death, presumably in a single household (§ 6); Ariston, the unmarried speaker of Demosthenes 54, lived with his mother (§§ 9, 20). In Plautus' *Aulularia* Lykonides' mother Eunomia is a widow living with her unmarried son, who is presumably in his twenties.³³ The speaker of Demosthenes 55 and his opponent both lived with their widowed mothers (§§ 23–4),³⁴ and the same is true of the two parties in [Demosthenes] 42 (§ 27).

Multiple households might include a variety of female dependants. The bachelor speaker of Lysias 3 lived with his widowed sister and her daughters (§ 6); the speaker of Lysias 19 also lived with a widowed sister and her three children, who had returned to her father's house (§§ 8, 33). Pantainetos, opponent of the speaker of Demosthenes 37, had his mother and some *epikleroi*, presumably his wards, living in his house (§ 45).³⁵ Xenophon, *Memorabilia* 2. 7, tells us that Sokrates'

(above, n. 6) makes it hard to tell. Philoktemon (*APF* 15164) need not have been married long; W. Thompson 1970*e* has shown that the events narrated in Is. 6, beginning with the confrontation between Euktemon and Philoktemon in their phratry, only took about two years. Cf. ch. 7 Case 1. On sons' trierarchies during their fathers' lifetime see n. 47 below.

³³ Eunomia has a bachelor brother, Megadorus, whom she is urging to marry; on the basis of the normal Greek age of marriage for women he need not be more than about 40. In Men. *Dyskolos* Gorgias lives with his divorced mother and has probably done so since childhood. A widow with children could choose to live with them, whereas a childless widow was expected to take her dowry and return to her family of origin (A. R. W. Harrison 1968, 38–9). It is not clear how many widows with young children, in the propertied classes, remained unmarried; it was presumably commoner for a widow of childbearing age to remarry and bring up the children of her first marriage in the *oikos* of her second husband (cf. V. J. Hunter 1989; Foxhall 1989). Aisch. 1. 170 implies that widows living with youthful sons in rich households were not uncommon. Bremmer 1985 collects evidence for the 'freedom of movement' of elderly women in Greece, but does not consider the question of residence; many poor widows may have had no male relative able to shelter them. In [Dem.] 47. 55–6 a widowed freedwoman returns to quasi-slavery in the *oikos* of her former owner. Respectable but poor widows with daughters live alone in Terence *Adelphoe* (with male slave and nurse, 288–354), and *Heauton* (96–7, cf. 276–91), but this may be a question of plot. Hetairai (in comedy) live alone. Cf. ch. 26, section 'Potamos' for the possibility that Euphrosyne, sister of Eubios son of Phainippos of Potamos, brought up his children after their mother's death; ch. 27, Table 27.6C on *IG* ii² 6218, which may suggest that after the death of Demochares (II) of Thorikos his widow Myrte and her children lived with (or close to) his two sisters (one widowed, with children, the other apparently unmarried) and Myrte's widowed father. For Roman widows see Treggiari 1991, 498–502; Pudsey 2012.

³⁴ R. G. Osborne 1985*a*, 17–18 thinks that the speaker and his opponent in this case did not live on their holdings, the opponent's building being only a grain store, but § 24 seems to prove residence; it is understandable that damage to stored grain was the most serious complaint for a rural householder.

³⁵ In Eur. *Phoinissai* we are told that Kreon's son Menestheus was suckled by the boy's FZ Jokasta, Kreon's wife and Jokasta's husband Laios both being dead. Some information on residence in other parts of Greece could be gleaned from the Hippocratic corpus. Hobson 1985 discusses household size in

friend Aristarchos (*APF* 1663?) took in so many sisters, nieces, and female cousins whose husbands had fled from the city during the rule of the Thirty in 404/3 that he had fourteen free persons in his household; the story however implies that a household of this size was exceptional. The speaker of [Demosthenes] 47 had taken in a widowed freedwoman, his old nurse (§§ 55–6).

ECONOMIC ACTIVITY OF SONS DURING THE FATHER'S LIFETIME

If sons normally set up separate establishments when they married, this should imply that at least the use of some property was ceded to them at this time. It is very doubtful, however, whether any formal recognition of this practice existed in law. The absence of any reference to fathers or grandfathers in the law of intestate succession implies, to my mind, that if a son died during the lifetime of his father or grandfather (FF) any property he had controlled would revert automatically to them; his children would succeed in his place when their grandfather died. There is no attested example of a collateral inheriting immediately from a son who died during his father's lifetime.³⁶

We have only two explicit references to division of property during the lifetime of the father. The speaker of [Demosthenes] 43 asserts that his ancestor Bouselos had divided his property among his five sons while still alive (§ 19; *APF* 2921); he seems to present this as admirable behaviour, but it is extremely doubtful whether he had any evidence to go on. The speaker of Lysias 19, referring to two cases in which fathers who had acquired property abroad, and were living outside Attika, had ceded property in the city to their sons, remarks that fathers who divide property among their sons during their lifetime always keep plenty for themselves, 'for all fathers want to have their sons tied to them, because they have money, rather than being dependent on their sons, because they are poor' (§§ 36–7).³⁷ Fathers did help their sons economically in various ways, as we shall

Roman Egypt, but not household composition, on which see Calderini 1925; Bagnall and Frier 1994, 57–74; Pomeroy 1997*a*; Clarysse and Thompson 2006 II, ch. 7 for Hellenistic data (below, n. 61). L.-M. Günther 1993 uses Hellenistic listings of new citizens from Miletos and Ilion (cf. Brulé 1990*a*) as evidence for household composition. See Netting *a. o.* 1984 for the problematic character of the concept 'household'; Nevett 2010 on domestic space.

³⁶ Cf. ch. 1 at n. 95. The main text is Is. 6 (*APF* 15164 ch. 7 Case 1). In *SEG* 24. 197 the deme Athmonon seems to treat two grandsons (SS) of Thougeiton Theodoro(u) as financially independent during his lifetime, their father being presumably dead: see Whitehead 1986*a*, 425 nos. 147–8; Table 29.8.

³⁷ Solon's provisions for the prosecution of sons who neglect their parents (by *kakôsis goneôn*) comes from a period when elderly fathers were normally dependent on their sons for farm labour; there is no reason to assume that Solon envisaged formal cession of property.

see, but apparently without making any very clear legal distinction between gifts made in anticipation of inheritance, loans, and other forms of joint enterprise.

In a few cases sons are named as property owners in official documents³⁸ during the lifetime of the father. A mine lease records Stesileides (III) of Siphnos as owning a washery or similar installation, and a plot of land, adjacent to a mine in land owned by his father Kallaischros II (Table 5.4).³⁹ In another lease Lysikrates son of Lysitheides of Kikynna is recorded ‘about the middle of the fourth century’ as owning land at Laureion, although his father was still recorded as a landowner in 339/8. Autokles son of Chairippos of Pithos and Chairippos son of Autokles of Pithos—we cannot tell which was father and which son—separately freed slaves (a potter and a woman) about 330.⁴⁰ Chairippos had been married for some 25 years at this point; his son Autokles II was an ephebe in 334/3/2 (*IG* ii² 1156. 25). Euthymachos of Agryle buys land in his father’s lifetime.⁴¹

In other cases we see a son leasing land or mines during his father’s lifetime, backed on at least one occasion by a guarantee from the father; this suggests some degree of economic independence. Nausias son of Nikostratos leases sacred land in 343/2, his father acting as guarantor; another lot of sacred land is leased by a young man whose father, Mys of Phaleron, was still active *c.*333/2 (?) as a building contractor. A son of Tlepolemos of Euonymon buys confiscated land in

³⁸ These texts have no legal force as proof of ownership; they merely show acceptance by the community of private arrangements between father and son. Cf. n. 6 above on texts naming women as owners.

³⁹ *Agora XIX* P 29. 3–5, *c.*340/39. *APFC* 12 takes the Kallaischros named in this text to be Stesileides’ son, but since we have earlier references to the father as landowner (P 9. 8, P 18. 63) it seems to me more likely that the father has the tract of (unworked?) *edaphé* and the son has the *chôrion* and *ergastêrion*. The family’s ties with Athens apparently went back to the Persian wars or the early years of the Delian league; Polypeithes son of Stesileides I was honoured in 422/1 (*SEG* 41. 9, *IG* i³ 227 *bis*), with reference to honours previously given to his F and FF. Their mining interests in Attika may well go back to the 5th c.; Siphnos had mines, although the island’s nine-talent tribute assessment in 425/4 (*IG* i³ 71) does not suggest a very high level of production (cf. Hopper 1979, 169–70). Kallaischros III (?) need not have been more than 66 in 338/7 and may be the Kallaischros son of Stesileides (II) who paid Stesileides (III)’s debts as heir (*kléronomos*) in 330/29 (*IG* ii² 1627. 194–9), his son having predeceased him. Further debts were paid in 324/3 by Leodikos of Siphnos (their FB?) as guardian of Stesileides’ orphan children (*IG* ii² 1631. 430–41). *APF* loc.cit. has a different reconstruction.

⁴⁰ Lysitheides as owner, *Agora XIX* P 28. 6–7, 339/8; Lysikrates as owner, P 13. 47 (cf. Tracy 1995, 100–1 on the date of this text) and perhaps P 15. 11 (*APF* 9461). References to the children (*paides*) of Lysitheides as owners in P 27. 98–9 and (restored) 102–3, dated 341/0, and perhaps in P 35. 4, 7 (*c.*330/29), should imply that Lysitheides was dead by the date of these texts (possibly the terminology in P 28 was loose). Heirs can be described as *paides* (sons) even when adult—the language of these texts is not formal—and it is possible that part of Lysitheides’ estate was still held in indivision by some of his sons at this point. Autokles and Chairippos: ch. 29 n. 46. D. M. Lewis (1968) thought Autokles’ manumission earlier than that of Chairippos, but the latter’s father Autokles I should have been born *c.*410.

⁴¹ *Agora XIX* P 2d 5f., *c.*403/2. *APF* 7826 XV (followed by R. G. Osborne 1985a, 53) takes the Hipponikos son of Kallias of Alopeke who buys two workshops in Melite in 342/1 (*Agora XIX* P 26. 455) to be Hipponikos III, aged about 80, but he could be Hipponikos IV son of Kallias IV (*Agora XV* 55. 44) in his 20s; see Appendix 1.

TABLE 5.4. Kallaischros of Siphnos, *APF* C 12 (revised)

402/1, and his father appears in a diadikasia list of c.381.⁴² Aisimides son of Diophanes of Gargettos registered and leased a mine in a year in which his father is probably still attested as owner of a workshop in the mining area; he was re-opening an old working, which only required an investment of dr. 20.⁴³ Diodoros son of Pherekles of Themakos leases a mine in land owned by his father (*Agora* XIX P 28. 13–18). Meidias' brother Thrasylochos son of Kephisodoros of Anagyrous leased two working mines in 367/6, when his father was probably still alive; the son is thought to have been born before 400, lived into the 330s (*APF* 9719), and may have been renewing the lease, in which case he would have been engaged in mining already for at least three years. His capital outlay for the two mines was 1700 dr. (*Agora* XIX P 5. 49, 51–2). Simos son of Diodoros I of Paiania had one son who leased a mine, and perhaps another who owned property in the mining area, at a period when their father is still recorded as lessee and owner of property in the area himself. The two sons of Pheidippos son of Phayllos I of Pithos (who owned land in the mining district and continued to lease mines until

⁴² Nausias, *Agora* XIX L 6. 125; [M]ys, L 11. 9; *IG* ii² 1673. 6 with *SEG* 34. 122 (Mys). Tlepolemos and son, *APF* 12888: *SEG* 32. 171 c 13, *Agora* XIX P 2 g 10. Walbank (1983, 225) suggests that young men from well-off families may have been encouraged and aided by their fathers to lease land, which would avoid splitting family holdings and might provide access to further land near the family's base; on leasing of publicly owned land see Papazarkadas 2011. Comparative data on guarantors, Hennig 1987. The hekateoste texts do not provide firm data because their dating is controversial: see Appendix 2.

⁴³ *APF* 1413, ? 342/1; *Agora* XIX P 26. 175, 279–84. See Bissa 2008 on patterns of investment in mining.

? 338/7) were both active in their father's lifetime, Phayllos II perhaps leasing in the early 340s, while Diphilos appears as a landowner in ? 342/1.⁴⁴

In other cases father and son act together, at least ostensibly; but the son would perhaps be the more active partner. Mantitheos of Thorikos and his father jointly borrowed 20 minas for a mining venture apparently shortly after the son reached the age of eighteen. The son was married but perhaps not yet legally entitled to take on a lease himself (Humphreys 1989). Kephisodotos of Aithalidai and his son perhaps lease a mine together in the 350s; they appear separately also, the father in 367/6 and the son in the 340s. Autokles of Aixone and his son Auteas jointly leased land from the deme for forty years in 345/4; in this case it may be the length of the lease which explains the son's appearance.⁴⁵

In *SEG* 24. 197, which appears to be a list of contributors to a deme liturgy, found at Amarousi (Athmonon) and dated c.400 on prosopographical grounds (ch. 29), two names have the rubric 'these men were assessed' (or 'assessed themselves') 'instead of him'. In one case the payment for Isotimides son of Smikrios was made by Isokles, Smikrion, and Philistides, presumably his sons; in the other case payment for a man whose name is lost was made by Thrasykles son of Thrasyllon and by Euthydikos son of Akesandros, who appears again on the list in his own right (as does his brother Euthydemos). Isotimides and the other beneficiary were presumably elderly men whose heirs were already managing their property, Thrasykles and Euthydikos being perhaps the husbands of daughters.

A good many sons are recorded as acting as trierarchs during their fathers' lifetime, but as already noted (above, at n. 32), it is doubtful whether this can be taken as evidence of any division of property. Trierarchs could appoint substitutes (Gabrielsen 1994, 95–102); Eupeithes (?) son of Derketes of Sphettos is explicitly stated to be serving on his father's behalf in *IG* ii² 1624. 77–8 (330s; *APF* p. 199). Voluntary trierarchies might be undertaken simultaneously by several members of an ambitious family, while other families may have preferred to divide an estate if by so doing their members could drop below the liturgy threshold.⁴⁶ Against the

⁴⁴ Simos (*APF* 3953) was still active in the 340s: *Agora* XIX P 23. 7, P 26. 164–5, Simos; P 13. 27 (see n. 40), son —ides; P 20. 45?, son Diodoros II. Diodoros II was trierarch c.334/3 and later. Diodoros I is attested as councillor, *IG* ii³ 4. 48. Further evidence for Simos' activities in *SEG* 32. 233, 236. Ch. 25 n. 38. Pheidippos, *Agora* XIX P 5. 46–7, 81; P 9. 29; P 20. 101–2; P 25. 42–5; P 27. 70–2; P 28. 8; P 29. 25–8. Phayllos II, P 20. 63? 70? Diphilos, P 26. 292–3 (*APF* 14164). The speaker of [Dem.] 42, whose father left little money, began his career by personally working leased mines (§§ 20, 22).

⁴⁵ Kephisodotos and Apolexis, ch. 26 n. 66. Autokles and Auteas, *IG* ii² 2492 (ch. 29 n. 94). However, in *IG* ii² 2501 (late 4th c.) the *orgeônes* of Hypodektes grant a lease in perpetuity to Diopeithes son of Diopeithes of Sphettos and his descendants ([*ekgo*] *no[is]*; *APF* 4328 missed this text).

⁴⁶ See B. Jordan 1975, 79–80, Gabrielsen 1994, 95–102 on substitution (Dem. 21. 155, 50. 2, 51. 7); the question of sons serving as trierarchs in the father's lifetime is addressed on pp. 63–7. Isokr. 15. 145 seems to imply that for both father and son to serve was voluntary (cf. MacDowell 1986, 442–4), but in the later part of the 4th c. a rich estate might have more than one trierarchy a year imposed on it. Demosthenes' FB Demon of Paiania and Demon's son Demomeles were both trierarchs in ? 366/5, this

18–21 fathers whose sons are recorded as performing liturgies in their lifetime can be set at least ten men who were still recorded as trierarchs or syntrierarchs when over 60,⁴⁷ one perhaps in his eighties (*APF* 14670). Only five at most of these

being probably the year in which Demosthenes began his suit against Demomeles' brother Demophon (*APF* 3597 II, III B, XI; *IG* ii² 1609. 13, 62, 91); ostentatious generosity to the demos may well have seemed advisable. On *APF* 11473 (Onetor of Melite) see ch. 29 n. 8. Cf. Men. *Samia* 13, a generous *pater* allows his adopted son to act as choregos during his lifetime; *CEG* 773 (ch. 23 n. 53); *APF* 13964 (agonothesia). P. Wilson 2000 has some remarks on family tradition in the choregia but does not deal with this point.

⁴⁷ Sons trierarchs in father's lifetime: *APF* 1194?, 2108 (father had *ateleia*), 2308, 3597 II–III ? (Demon and Demomeles), 5604, 7094 ([Dem.] 47), 7716 (Isokrates and Aphareus), 7737? (n. 48), 7865 + 8210?, 8065?, 9437, 10552 (different households, due to adoption: ch. 2 VI 2), 11672 IX? (Phormion and Archippos of Peiraios), 11988 (doubts at *IG* i³ 1048 are perhaps unnecessary), 12413, 12444, 12938, 13700 (Timotheus II and Konon III of Anaphlystos), 13772, 14164?, 14670, 15164 (Philoktemon and Euktemon, *and* Phanostratos and Chairestratos, all of Kephisia: Is. 6). Charisios (II of Halimous?) is another possible case (*SEG* 45. 147 II 6). Onomakles of Hekale, heir of Leptines of Koile, was trierarch during Leptines' lifetime, but presumably from a different oikos. Ar. *Rhet.* 1399a 35f. says that Menestheus son of Iphikrates was compelled to undertake a trierarchy during his father's lifetime; *pace APF* 7737, Timotheos' threat to prosecute Iphikrates for *xenia* ([Dem.] 49. 66) may well be distinct from the story in Aristotle; and may be related to the adoption of Iphikrates by Amyntas of Macedon (Aisch. 2. 28, cf. Kallet 1983). The *graphê xenias* seems to have been designed to prosecute those who cohabited with foreign women living in Athens (A. R. W. Harrison 1968, 26–8). Gabrielsen 1994, 247 n. 29 lists 17 men serving as trierarchs when over 60. Ten of these cases, however, are doubtful or erroneous; on the other hand 3 fairly secure and 2 doubtful cases can be added to the list. One should in this context distinguish men serving as (in principle) active trierarchs or syntrierarchs from *synteleis* (Gabrielsen p. 168), whose obligations were purely financial, and from men recorded as debtors as a result of undatable earlier service (see Gabrielsen ch. 7 on such debts). Agapaios (*APF* 90) may have had a homonymous son, as did Antisthenes of Kytherros (*APF* 1194) and Charidemos of Paiania (*APF* 15392 misses Charidemos II, proxenos at Delphi c.324, *BCH* 75, 1951, 305–6; there is now also a Charidemos P. at Samos c.350, *IG* xii 6. 262 III 6); in these cases the later trierarch is probably the son (ch. 25 n. 36). Aischylos of Paionidai, *APF* 450, need not have been more than 48 when recorded as *syntelês*, and Lykinos of Pallene (9207) was not necessarily over 60 at the time of his last known trierarchy. Demades (3263), and Telesias of Probalinthos (13519) were *synteleis*, Euetion of Sphettos (5463) a debtor. Ktesippos of Aixone (15086) should be deleted (see ch. 29 n. 119), but Chabrias served at 64. To the remaining trierarchs on Gabrielsen's list (*APF* 5951, 7716, 7865, 9719, 11907, 13964, 14670) we can add Chabrias, Pythodoros II of Kedoi if he arbitrated in 356 as one of the city diaitetai (*APF* 12444), and Stephanos of Acharnai (11672 X B; Table 4.4); possibly also Polykrates of Anagyrus (11988; ch. 23 n. 55), Euthykles of Deiradiotai (5580), and 8210 if he was the father of 7865 (*SEG* 41. 173/44. 135; n. 51). Aristides of Kephisia (6067), listed by Gabrielsen, is a very doubtful case. Elderly men certainly did serve as trierarchs, but service by sons in the lifetime of elderly fathers may have been more common. The provision of the 'Themistokles decree' (M/L 23. 21–2) that trierarchs should have legitimate sons and be over fifty (Lougovaya 2008) seems to be utopian. It is worth noting the case of Melesandros of Angele (*APF* 9804; Table 8.5), who in his year of service used rigging 'introduced' by his father (see Gabrielsen p. 154). Son and father both serving: *APF* 3597. II–III, 5951, 11988, 12938 (as syntrierarchs), 15164 (see however ch. 7 Case 1); 10552 (see above, in this note). The speaker of Lys. 19 (§ 62) probably took over his father's ship on the latter's death (cf. *IG* ii² 1628. 373f., 1629. 892f., 906f., *APF* 14670). It is perhaps even less surprising that in the deme liturgy list discussed above (*SEG* 24. 197) Pistokles son of Pistias subscribes in addition to his father, and the brothers Ameinias and Theugeiton II, sons of Theodoros, appear separately from their (?) FF Theugeiton I (ch. 29, Tables 29.12, 29.8).

(*APF* 3597 II–III?, 7716, 7865 + 8210, 12444, and 14670) have sons recorded as trierarchs during their lifetime.

Gabrielsen 1994, 175, suggests that the system of syntrierarchies (perhaps introduced *c.*408/7, extended from 358/7) allowed for choice, and that trierarchs preferred to serve with kin or associates. The situation is far from clear, especially for the later period; one would have to distinguish cases where the obligation fell on jointly held property (father/son, perhaps business partners), and perhaps cases where men who had previously served together had jointly retained equipment, from choice for other reasons.

In *Lysias* 19. 29 the speaker claims that Aristophanes son of Nikophemos performed trierarchies in his own name and that of his father, probably in 392–390; Nikophemos was serving under Konon overseas and was believed to have amassed great wealth (*APF* 5951). Aristophanes had married in 393. Stratokles I and his son Euthydemos of Diomeia serve jointly as trierarchs before 356; the son was born by 382 (*APF* 12938). Arrheneides son of Charikles of Paiania was still alive in 325/4; one of his sons was newly married in 324 and trierarch in 322, but we do not know if the father was still alive in that year (*APF* 2254, with Hedrick 1989; ch. 19 n. 121). Sosistratos son of Kerykion and his son, Kerykion II, are both named in a *diadikasia* list of *c.*380, *IG* ii² 1928. 6–7 (D. M. Lewis 1954, 37).

AGE OF MARRIAGE

As already indicated, the marriage of a son during his father's lifetime suggests some degree of financial independence, though it is not at all clear what proportion of young married couples set up independent households immediately, nor what role the wife's dowry played in this. Mantitheos son of Mantias of Thorikos, married at eighteen, had not left his father's household when Mantias died; but the death probably took place less than two years after the marriage, and Mantias may have been spending a lot of his time with his mistress Plangon (cf. Humphreys 1989). Philoktemon's decision to remain in the household of his father Euktemon of Kephisia (who also had a mistress elsewhere) has already been discussed (*APF* 15164).

Hipponikos III son of Kallias III of Alopeke, who seems to have married in his early twenties (*APF* 7826 XV; ch. 4 n. 8), may like Mantitheos have been objecting to his father's marital manoeuvres. His marriage rapidly broke up. Early marriages in the families of political leaders are scarcely surprising. Hippias, son of the tyrant Peisistratos, married in his early twenties (*APF* 11793 III, VII), and the marriage of Iphikrates' son Menestheus to the daughter of his father's political rival Timotheos perhaps took place when Menestheus was 24 (*APF* 7737). Iphikrates

also married young; he married a Thracian princess, and Athenian conventions obviously did not apply.

Others known to have married during their fathers' lifetime are Xanthippos son of Perikles, Kritoboulos son of Sokrates' friend Kriton, and the speaker of Lysias 19, who was under thirty when he married (§ 55) and was the only son in a very well-to-do family (*APF* 5951).⁴⁸

The shortness of this list is of course partly due to scarcity of data. The evidence however, such as it is, suggests that Athenian males rarely married before the age of thirty and relatively often married later. This pattern of marriage was presumably related to the Athenian father's wish to maintain control over his own property as long as he could.⁴⁹ Of those Athenians known to have married while under thirty, seven had already lost their fathers and so were economically independent:

Nikias son of Nikeratos of Kydantidai married at 23 (*APF* 10808)

Alkibiades IV married at about 25 (*APF* 600 VIII)

Kallias III son of Hipponikos II of Alopeke married aged about 27–30 (*APF* 7826 IX–XI; ch. 4 nn. 8, 40, ch. 13 n. 12. His father had perhaps died shortly before Eupolis' *Kolakes* (421).

The speaker of Lysias 21 probably married under 30; his 'liturgical career of an intensity and expensiveness unparalleled in Athenian history' (*APF* D 7) seems to imply that his father was dead when he came of age.

Kyronides, in the family whose affairs form the subject of Isaios 10, seems to have married before either of his sisters and while his brother Demochares was still a minor (§§ 5–7). He married the daughter of his genitor's brother; his genitor was dead although his pater may still have been alive (chs. 2 n. 27; 7 Case 5, Table 7.5).

⁴⁸ The date for [Dem.] 49 proposed by E. M. Harris 1988*a*, 369/8 or 367/6, might make Menestheus' marriage even earlier. See however Trevett 1992, 35–6. Xanthippos: *APF* 11811 III, Plut. *Per.* 16. 4–6, 36. 2–6; age unknown. Kritoboulos: *APF* 8823. Plat. *Apol.* 38b names both Kriton and his son among those offering to pay any fine imposed on Sokrates, but this cannot be pressed to imply that Kritoboulos was financially independent. In Xen. *Symp.* 1. 4. 28 (set in 422) Kritoboulos is newly married, but his beard is not fully grown and he is still in love with Kleinias son of Axiochos. Theozotides of Athmonon (*APF* 6915, cf. Stroud 1971, Raubitschek 1982) also had sons who were attached to the Sokratic group by 399, but we do not know when he was born. If Kleinias II (father of Alkibiades), who had two sons by 447/6, was the SS of the Kleinias who fought at Artemision (Hdt. 8. 17) there must have been an early marriage in this family.

⁴⁹ Given the late age of marriage for men, it would be relatively common for a son to lose his father before he was 30. However, a well-to-do Athenian who survived childhood and did not live in a period of heavy military casualties might well live on into his 60s or longer. See Saller 1987 on men's age at marriage in the western Roman provinces and the proportion of men whose fathers would be dead before they married; Treggiari 1991, 398–403; Roth 1987 for comparative material; E. Clark 1987 for some medieval data. The underlying ethno-demographic model assumes a fixed number of places in society; a son must wait to succeed to the place vacated by his father (Schofield 1976). A phratry on Tenos does not admit members' sons until the father is dead or is over 50 (*LSS* 48, R/O no. 61); since the normal age of admission to the Greek phratry is 15–20 this implies that men should not marry until over 30.

Another orphan, Periandros, youngest son of Polyaratos I of Cholargos (*APF* 11907), must have married by his late twenties, since he was not yet of age when his sister married Mantias of Thorikos *c.*380 (Humphreys, 1989; ch. 4 n. 46) and his son was born by 371.

The Dikaiogenes whose estate was the subject of one of Lysias' lost speeches married at 18; he seems to have been an orphan.⁵⁰

In other cases of early marriage the dates and circumstances are more doubtful. Philomelos II son of Philippides I of Paiania (*APF* 14670) was married by 388 and lived until 336/5, which suggests that he married before he was 30. His wife, the sister of the speaker of Lysias 19, could well have been marriageable by *c.*400. Euetion son of Autokleides I of Sphettos, born in 388/7, is usually taken to be the father of Autokleides II son of Euetion, councillor in 336/5 and therefore born by 366/5; it is also possible that the councillor of 336/5 is Autokleides I, but on either assumption there was an early marriage in the family. Sokrates' friend Kriton may have married early; he was born *c.*470 and his son was married by 422. The son, Kritoboulos, was a contemporary and lover of Kleinias son of Axiochos of Skambonidai, perhaps born *c.*440 (*APF* 8833; 600 VI B). Nikeratos II of Kydantidai may also have married relatively young, but perhaps after his father's death.⁵¹

Even orphans did not necessarily marry very young. Apollodoros son of Pasion of Acharnai, whose father died when he was 24, did not marry until he was about 30 (*APF* 11672 X A). His younger brother Pasikles may have done the same.⁵² Perikles was probably over 30 when he married, although he acted as choregos when in his twenties and this is normally assumed—perhaps wrongly—to imply that his father was dead (*APF* 11811 III).⁵³ Philostratos son of Dionysios of

⁵⁰ Lys. F XXXIII Carey 2007 (23 Gernet/Bizos 1926, XXXI Thalheim 1913). This Dikaiogenes lived with the speaker's family until he reached maturity, and married after his *dokimasia* (at 18), continuing to stay with the speaker's family whenever he came to town from his rural property. If F XXXV Thalheim, XXXVIII Carey, belongs to the same speech (doubtful), he would be the speaker's half-brother, his mother having remarried when he was 16. He had been in some kind of political or legal trouble, perhaps due to association with the oligarch Molpis, but had died of sickness, leaving daughters whom the speaker and his brother (?) had claimed by *epidikasia*, presumably on the basis of a will. At this time his patrikin had not contested the claim, but later a legal dispute had developed, which had been going on for 10 years at the date of Lysias' speech.

⁵¹ D. M. Lewis 1955, 30; contra, *APF* 10808. Kallias IV of Alopeke, born *c.*390 (?), may have had a son adult by 342/1, if the purchaser of a workshop in Melite in that year is Hipponikos IV and not his grandfather (*APF* 7826 XV with n. 41 above). Kallias of Thorikos, *APF* 7865, married early if Thoukritides is his son (*SEG* 44. 135; ch. 27 n. 86).

⁵² *APF* 11672 X A, XIII. Pasikles had a son who manumitted a slave (living on Salamis) in (?) the late 320s or soon after (*IG* ii² 1570. 42–4) and may possibly be named on a curse tablet of *c.*323/2 (Wünsch 103 a 6, Wilhelm 1904, Πα<σ>ι[όν]), which might suggest that he had reached a certain prominence by that time.

⁵³ We do not hear of Perikles' father Xanthippos after 479, but in principle it is a mistake to assume that sons do not perform liturgies while their fathers are alive.

Kolonai, perhaps orphaned by *c.*380 ([Demosthenes] 59. 22, see above, n. 29), when he was probably in his twenties, need not have married before the late 370s (*APF* 14734).

Late marriages, at well over thirty, are by no means uncommon. Isokrates was born in 436 and married after the birth of his youngest stepson *c.*388, at about fifty (*APF* 7716). Sokrates was born in 469 and his eldest surviving son Lamprokles was still a *neanias* in 399, so born probably in the late 420s.⁵⁴ Glaukon II son of Leagros I of Kerameis seems to have been born *c.*490 when his father was about 35;⁵⁵ he probably married in the late 440s, when he was in his forties, although Leagros had died in 465/4; his son Leagros II was still unmarried *c.*400. Demosthenes' cousin Aphobos may have been about thirty in 376/5 when he was expected to marry Demosthenes' widowed mother, but did not in fact marry until nine years later.⁵⁶ Demosthenes himself, born in 385/4 or 384/3, was still childless in 347 and was perhaps in his late thirties when he married, before 343 (*APF* 3597 IX–XII, XXIV; he had one daughter, who died young). Plato's sister Potone, who is unlikely to have been nubile before 420, married a man called Eurymedon, presumably in commemoration of the famous battle in the early 460s.⁵⁷ Their son Speusippos lived to 339/8. Lysias probably married in his late thirties, the delay in his case being partly attributable to the difficult situation in the last years of the Peloponnesian War (*APF* C 9). Timotheos II son of Konon, the general, perhaps married at about 34 (*APF* 13700).

Though some family reconstructions work out plausibly on the assumption that a (male) generation lasts 30–33 years,⁵⁸ this is probably in general rather too

⁵⁴ Sokrates may have had an earlier son who died young (below, ch. 8 n. 33), but would still have married fairly late. Fitton 1970 and Woodbury 1973 argue that he only married once.

⁵⁵ *APF* 3027. W. Thompson 1971*a* doubts whether the Glaukon who was general in the Periklean period was the father of Leagros II (cf. ch. 4 n. 8; Mannack 2014).

⁵⁶ Presumably Aphobos was about the same age as, or a little older than, his prospective bride, who must have been born by *c.*400 (*APF* 3597 V, VII–VIII). Humphreys forthcoming *a*.

⁵⁷ The suggestion that Potone's husband was Eurymedon Theokleous, *PA* 5973, who held a command in 427/6 and died in Sicily in 413, is very tenuously based. The general may well have been born in the 460s, while Potone's husband should be a decade or so younger (*APF* 8792 XI D). The name is attested in 4 demes (any of which, from the tribal point of view, could have produced the general of 427/6), and may have been commoner in the 5th c. than later.

⁵⁸ E.g. Hypereides was born in 389/8 and his son Glaukippos by 359 (*APF* 13912); cf. *APF* 643, 4386, 6882 with Table 29.2 (cousins all serve as ephebes together), 7268. But in the family of Timasitheos I son of Demainetos of Kerameis (*APF* 3273), born in 431 (Ruschenbusch 1984), generations average 36 years, his great-grandson being born *c.*323. In the family of Phaidros I son of Kallias I of Sphettos sons succeed fathers at approximately regular 30-year intervals for three generations (Thymochares I, Phaidros II, Thymochares II), but Phaidros III was not born until his father Thymochares II was at least in his late 50s (*APF* 13964). The generations may also be long in the family of Kritias and Kallaischros, *APF* 8792. Euktemon of Kephisia was born *c.*460; his son Philoktemon was married, but still childless and living in his father's house, *c.*368 (*APF* 15164 with W. Thompson 1970*e*). Cf. also *APF* 1695, 3716, 5638, 8429. IV, 9719 (Meidias), and the family of Metagenes of Koile (*PA* 4805), where we now have Metagenes II

short a period to allow, given that not all Athenians married promptly at thirty and that those who did would not necessarily at once produce sons who survived to maturity. Aeschylus' son Euaion was *kalos* c.440, so born c.460 when on the traditional dates his father was in his mid-sixties; Megakles IV (*APF* 9688 X) was probably about the same age when his children were born (the hypotheses of Cromey 1984 are implausible). Amphilides II of Kettos was born when his father Philokrates was 53 or more. Aischines' father was about 30–39 when the oldest of his sons who would live to maturity was born (absences on mercenary service may have some bearing here), and Aischines himself was probably 44 when his oldest known son was born (*APF* 14625). The orator Lykourgos IV was born about 384 and his second son Habron c.348 (Humphreys 1985*a*, *APF* 9251). Chabrias (often away from home) was over 40 when his son Ktesippos was born (*APF* 15086). The speaker of Lysias 19 was born when his father was about 40; Polystratos of Deiradiotai, born by 480, had three sons born between c.445 and 435 (*APF* 12076); Makartatos II son of Theopompos of Oion was probably born in the later 380s and his sons were born in the 340s (*APF* 2921 X II). Two men who were *diaitêtai*, aged sixty, in 325/4, had sons who were *ephêboi* (aged 18) in 331/0/29.⁵⁹ Glaukon son of Kritias III, uncle (FB) of the

as *diaitêtês* in ? 330/29 (*IG* ii³ 4. 33, Table 20.2). See also Table 30.4 for the Moirokles family of Eleusis. The family of Deinias of Athmonon, father-in-law of the egregious Apollodoros son of Pasion of Acharnai (Table 4.4), provides some data on female as well as male generations. Apollodoros was born in 395/4 and married c.365; he had two daughters, both still very young, in 362. His WB Theomnestos had married one of them by 349. Deinias, father of Theomnestos and of Apollodoros' wife, was still alive in 349; he and his sister were probably born c.410, Deinias marrying c.380 and his sister c.395. Her son Stephanos had a married daughter by 349, so he must have married by c.365. He was still alive and serving as trierarch in 322 (n. 47). Due to the practice of repeating names in alternate and even adjacent generations (ch. 8), intermediate generations may in some cases be missing from the record. The Nikodemos of Elaious who was *diaitetes* in 330/29 (*IG* ii³ 4. 33) was probably SSS of Nikoboulos I, born before 451 (*IG* i³ 472. 10). Additional generations should probably be postulated also in *APF* 3567 and in the family of Mnesimachos and Mnesistratos of Athmonon (ch. 29 n. 76).

⁵⁹ *IG* ii³ 4. 35. 57 Gnathon of Cholleidai; *ibid.* 66 Philokedes of Phrearrhioi (his brother Philokrates *diaitetes* in 329/8, ii³ 4. 34. 5–6); *IOrop.* 353/Reinmuth 1971 no. 15 col. I 29, 14, their sons Nausis Gnathonos and Sostratos III Philokedou (*APF* 13374 confuses Philokedes with Philokrates; for the date of *IOrop.* 353 see Humphreys 2009). Athenodoros of Acharnai, *diaitetes* in 325/4 (*IG* ii³ 4. 35. 98) may be the father of the (?) ephebe [Th]eopompos Athenodorou of Acharnai (*IG* ii² 2408, c. 330?; D. M. Lewis 1959, 233; Tracy 1995, 100). If the son of –]nokles of Cholargos, ephebe in 305/4 (Reinmuth 1971, 17. 124) is son of the Xenokles of Cholargos who was *diaitetes* in ? 330/29 (*IG* ii³ 4. 33. 60–1), he was born when his father was 75. Lysikrates son of Chionides of Melite was perhaps an *epilektos* in the 330s (*SEG* 36. 155. 114, Humphreys 2010*a*); his father testifies in [Dem.] 59. 33–4 to events of 374/3, and so was probably in his mid-40s or older when the son was born. Phrynaios son of Phrynichos of Hybadai (*APF* 14997) won a victory with a boys' chorus in 352/1 (Koumanoudes 1970, no. 7) and had a son who was ephebe in 331/0/29 (*IOrop.* 353), born when his father was about 45. I have not systematically collected evidence for gaps in age between brothers, but note Tharsynon and Tharreas sons of Satyros of Leukonoion, ephebes in 333/2/1 and 331/0/29 (Reinmuth 1971 no. 9. 35, 15 col. II 39); fourteen years between Apollodoros and Pasikles sons of Pasion, and more than ten years between

oligarch, seems to have had his first known son when in his fifties (*APF* 8792 VII B), as did Thymochares II of Sphettos (*APF* 13964). Remarriage of course produced more cases. Plato's half-brother Antiphon, son of Pylilampes' second marriage (*APF* 8792.VIII), was born when his father was 55, and was 15 years younger than his patrilateral half-brother Demos (see Table 5.3).

In cases where we may be able to trace a family over several generations: if all three attestations of the name Archeboulos at Athens belong to the same family (*APF* 2817 with Habicht 1979, 149) and are spaced at two-generation intervals, there is an average of *c.*45 years per generation between Bathyllos I, born *ex hypothesi* by 409, and his SS Archeboulos III; *APF* 8674 has an average of *c.*36 years per generation between Kleon I and his SSSS Kleainetos II. An interesting approximate comparison of generation lengths—and illustration of the problems of family reconstruction—is provided by the grant of honorary citizenship at Ephesos in 306 to three Athenians from well-attested families, all presumably middle-aged or older (*SEG* 33. 932). Xenophon III son of Diodoros of Erchia was a grandson (SS) of the historian (Table 5.5). The latter was perhaps born *c.*430 and apparently married, with sons, before his exile in 394 (Diogenes Laertius 2. 52), perhaps before his departure to join Cyrus in 401. His elder son Gryllos II already had a son, Xenophon II, when he died as a cavalryman at Mantinea in 362 (Deinarchos F xxvii Conomis 1975). Kephisodoros I, FF of the honorand Kephisodoros III son of Hippeus of Kydathenaion, had three sons (Habicht 1987; Table 5.6). Sopolis I served as councillor *c.*360 (*IG* ii³ 4. 55) and was therefore born by *c.*390; Smikythos had two sons, Kephisodoros II, who leased public property in 343/2 (*Agora* XIX L 6. 14–15), and whose property was confiscated to pay a debt incurred in office as treasurer of the dockyards, and Sopolis II, who was helping to pay off this debt in 323/2 (*IG* ii² 1631. 350–403, cf. Gabrielsen 1993; 1994, 163–4; ch. 25 n. 11); Hippeus, father of the honorand,

TABLE 5.5.

Pasikles and his younger half-brothers (*APF* 11672); 15 years between Pylilampes' sons by two marriages, as noted above; a considerable interval between Sokrates' oldest son and his younger brothers; Philokrates of Phrearrhioi diaitetes in 329/8 and his brother Philokedes in 325/4 (*APF* 13374, Table 26.6); Menexenos son of Polyaratos of Cholargos born *c.*420, his brother Periandros (youngest of five children reaching adulthood) *c.*400 (*APF* 11907).

TABLE 5.6. Kephisodoros of Kydathenaion

who guarantees a lease of property in 343/2 (*Agora XIX* L 6. 144), served as councillor in 336/5 (*Agora XV* 42. 155), and perhaps died while Hypercides (F xxv–xxvi Jensen 1917) was still active as a speechwriter in Athens, i.e., by 322 at the latest. The third honorand was Arkesilas (II?) son of Theoxenos (II?) of Euonymon (Table 5.7). It used to be assumed that [Theox]enos I served as diaitetes in 330/29 and that the honorand was his son Arkesilas I, already attested as guarantor of ships for Chalkis in 341/0 (*APF* 6990). However, since an Anti[x]enos of Euonymon is now attested in the mining records for (?) 342/1 (*Agora XIX* P 26. 247), it seems preferable to restore [Antix]enos in the catalogue of diaitetai (*IG* ii³ 4. 33. 3–4). In this case Theoxenos I, trierarch in (?) 366/5, may have had three sons: Arkesilas II, Theokles (whose son Theoxenos II served as syntrierarch before 325/4), and Antixenos; the honorand will perhaps have been son of Theoxenos II or III, or of an otherwise unattested son of Arkesilas I. Theoxenos I cannot have been born much earlier than Xenophon I, so generations in his family were shorter than in that of the historian (see ch. 23 n. 12).

BROTHERS IN INDIVISION

It seems then that while there is some slight evidence for young men taking up leases of land or mines in order to acquire an independent income during their fathers' lifetimes, on the whole men married relatively late and families in which fathers survived for a long time after the marriage of their sons would be rare.⁶⁰

⁶⁰ Statements about the proper age of marriage for men are collected in Mulder 1920, ch. 1; Golden 1990; ch. 4 n. 9; the range runs from 25–35 in Plato's *Laws* and 28–35 in Solon to 37 in Aristotle, who is explicitly concerned with the proper length for a generation as well as the best physical conditions for procreation. The fact that a man of 40–41 was still childless can be considered worth remark (Andokides IV, *APF* 828, Nikeratos III, *APF* 10808; both men may have died without producing heirs). There is little hard evidence on the actual age of marriage of women. Hesiod *WD* 698 recommends 16–17; Xen. *Econ.* 3. 13, 7. 5 regards under 15 as early, but epikleroi were claimed at 14 (*A.P.* 56. 7 with P. J. Rhodes 1981a *ad loc.*); Demosthenes' sister was expected to marry at 15, but actually married when 18 or older. *CEG* 584 commemorates a girl who died unwed at 20. See also Brulé 1987, 363–7; Verilhac and Vial

Note: The diatetes of *IG ii³ 4.33.3–4* (330/29) was perhaps [Antix]enos.

TABLE 5.7. Theoxenos of Euonymon (*APF* 6990)

Co-residence and co-ownership of property, therefore, would only have been structurally significant if a substantial number of brothers continued to hold property in indivision after the death of their father.

In fact, however, evidence for indivision of the whole patrimony over a long period is extremely rare. In the one clearly attested case, one of the brothers (Arignotos) was blind; his sighted brother Arizelos managed their joint property and paid him an allowance.⁶¹ When Arizelos died his son's guardians continued this arrangement, but the son, Timarchos, is said to have left his uncle destitute when he took control of the property. Arignotos seems to have lived in a separate establishment, presumably with a slave staff (Aischines 1. 102–3).

The speaker of [Demosthenes] 44 claims that the brothers Archiades and Meidylides of Otryne had not divided their father's estate (§§ 10, 18), but since he also says that they lived apart—Archiades on Salamis and Meidylides in the city—and that 'each had a sufficiency' (18, *hekateros echôn ta hikana*), it seems that there must have been some de facto division; his claim should be treated with reserve. The nub of the argument was that Archiades had not married and had not made a will; consequently, on his death his property would have been treated as if it had belonged to his father Euthymachos, if his sister's descendants had not introduced an heir by (?) posthumous adoption.⁶²

1998; for comparative data from Mesopotamia, with similar patterns, Roth 1987; for Rome, Treggiari 1991, 398–403. Some marriage contracts from Hellenistic Egypt give the ages of groom and bride and a parent (*Sammelbuch* 20, 14470–93, 160–158 BCE); see also Clarysse and Thompson 2006, and for Roman census data Bagnall and Frier 1994.

⁶¹ Aisch. 1. 102 *kai ti kai eis trophên syntaxamenos edidou tōi Arignôtōi* seems to imply separate households. Biscardi 1956 overestimates the amount of evidence for indivision in classical Attika. On Greco-Roman Egypt see E. Weiss 1908*b*; Calderini 1925; Montevicchi 1943, 46–54; Bagnall and Frier 1994, 57–74; Rowlandson 1998, index s.v. *household composition*; Clarysse and Thompson 2006.

⁶² Table 2.2, *APF* 5638; the claim that Archiades' holding 'must have represented most if not all of Euthymachos' original estate' is dubious (ch. 7 Case 12). Meidylides' share had to be divided between

The brothers Diogeiton and Diodotos had allegedly divided their ‘invisible’ property, mainly cash invested in loans, but held their real estate in common; Diodotos was married to Diogeiton’s only daughter by his first marriage, and was perhaps dead before Diogeiton’s second wife produced sons. The brothers apparently lived separately during Diodotos’ lifetime, Diodotos in Peiraios and Diogeiton in the city, in Kollytos. Subsequently Diodotos’ widow and her children lived on their own for about a year; then the mother and her daughter were married off and the sons lived with Diogeiton until the elder came of age (Lysias 32. 8–9). The claim that the brothers’ invisible property was divided may be an exaggeration, allowing Diodotos’ heirs to claim cash lent by him out of a common fund. While Diodotos’ wife was still her father’s only child there was little motivation for a formal division (*APF* 3885; ch. 7 Case 6, Table 7.6).⁶³

The brothers Misgolas and Naukles, sons of Naukrates, of Kollytos jointly freed a slave (details lost) and a slave girl in the late 320s when Misgolas may well have been over seventy (ch. 24 n. 6, *SEG* 18. 36 B 335–342); since he was notorious as an elderly homosexual (Aischines 1. 41–53) he very probably had not married, although the brothers presumably lived apart. However, joint ownership of slaves is found in cases where the partners are not even related (cf. Biscardi 1956). When we find the brothers Theodoros and Athenodoros sons of Theodoros of Melite jointly freeing a female *kithara*-player some years after their father’s death, we are probably not dealing with a shared inheritance but with joint purchase of a *hetaira* (*SEG* 18. 36 A 507–9; *APF* 6882). Other sibling groups who free slaves jointly may well do so shortly after the father’s death and in some cases no doubt on his instructions.⁶⁴

When a father died leaving young children it was probably normal for his estate to remain undivided until the youngest son came of age. The guardians of Pasikles, younger son of Pasion of Acharnai, divided all Pasion’s estate except his bank and shield factory (which were both leased to Phormion) before Pasikles reached maturity, allegedly because of the extravagance of his elder brother Apollodoros; the way in which the division is presented in Demosthenes 36. 8

three grandsons (DS), and may have suffered more damage during the Peloponnesian War than property on Salamis. *APF*’s suggestion that Archiades had formally adopted his great-nephew (ZDS), either *inter vivos* or by will, would make it even harder to believe in indivision.

⁶³ There may also have been some ambiguity about the status of the division of property between the childless Menekles and his brother, Is. 2. 28–9; Nausikrates and Xenopeithes I ([Dem.] 38) perhaps had not divided.

⁶⁴ On Misgolas’ date of birth (not later than 390 in any case) see ch. 24 n. 6. In the texts published by D. M. Lewis 1959 (*SEG* 18. 36) there are 35 slaves in multiple ownership; five are manumitted by brothers, two by a father with his son, and three more by men belonging to the same deme. Slaves freed by sons on death of father (?): three sons of Demon of Phrearrhioi, *APF* 3738, *SEG* 18. 36 A 187–93; two sons of Antisthenes of Kytherros, who made separate payments for their father’s trierarchic debts in 325/4, B 328–31 (*APF* 1194; slave is *chôris oikôn*; the father’s choregic victory is dated 360/59 by Koumanoudes 1970, 143ff. no. 4; one of the sons, Antisthenes son of Antisthenes, is named in a tribal decree of Pandionis of the first half of the 4th c., *SEG* 34. 101); two sons of Lysis of Erchia, *IG* ii² 1563. 1–3 (*APF* 9576). The sons of Pamphilos of Phyle and Zophilos (i.e. Sophilos) of Phyle who manumit a slave jointly (*SEG* 18. 36 B 346–8) could well be kin, and so may Sostratos and Mnesistratos of Alopeke (*IG* ii² 1553. 16–18).

suggests that this was unusual. Apollodoros was 24 when his father died and clearly wanted to be independent of Phormion, who became Pasikles' guardian and married their mother. In any case the bank and shield-factory seem to have been the most substantial items in the estate (*APF* 11672). 'The children of Charmylos' are listed as property owners in the mining district on two separate records, one of 367/6 and the second dated to the middle of the fourth century or later; nothing further is known about them.⁶⁵

The three sons of Kephalos probably still owned the family shield-factory in common in 404/3 but lived in separate households; the eldest, Polemarchos, was married and the youngest, the orator Lysias, was probably living in what had been his father's house, next to the workshop, with his mother (*APF* C 9). The shield-works had apparently continued in operation for about 11 years while the brothers were in Thourioi in southern Italy after their father's death; it was very probably run by a freedman paying a fixed annual rent (as Phormion did for Pasion's bank and shield-factory, *APF* 11672 VI), which would be divided between the brothers. Joint management of the enterprise need not have been involved.

Sons less fortunately placed inherited debts which they are often recorded as paying off jointly, perhaps before division of the property that remained. The three sons of Eraton I perhaps had not yet divided their father's estate c.397, when a client of Lysias tried to collect a debt from it.⁶⁶ Three brothers are named jointly in *SEG* 24. 197. 13 making a payment in place of their father to their deme (Athmonon). There are however cases where debt payments are made separately. Two of the sons of Charidemos, who died between 335 and 330/29, make a joint payment against his debts, while the third son (perhaps married?) pays separately. Antisthenes of Kytheros pays half his father's debt in 325/4.⁶⁷

⁶⁵ For the possibility that Chairephilos II son of Pheidon II of Paiania (*APF* 15187) manumitted a slave while his younger brother was still a minor see ch. 25 n. 37. Children of Charmylos *Aggora* XIX P 5. 44–7, 79–81, P 13. 4–5. XIX P 34. 8–9, mine in property of children of [D]i[o]timos of ?Thria; XIX P 35. 4, perhaps children of Lysitheides of Kikynna (but see above, n. 40, *APF* 9461). A daughter of an Aischylos is named as owning land in XIX P 7. 13, and her brother perhaps in XIX P 13. 15. The situation in the family of Euthykrates I of Amphitrope (*APF* 2419) seems to be as follows. A Euthykrates (I or II?) is recorded as owning a workshop in (?)342/1 (XIX P 26. 240). One or both of the sons of Euthykrates I, acting independently, perhaps leased mines in 341/0 and 339/8 (P 27. 3, P 28. 31); in the latter year the sons are perhaps recorded as landowners (P 28. 12). Restoration of missing letters is involved, but the mixture of joint ownership and independent action is not surprising. However, the sons of Euthykrates I would on this reconstruction be adults by the late 340s. The orphan sons of —krates of Amphitrope whose estate was leased during their minority by a tenant who owned land at Eleusis (*IG* ii² 2647, Finley 1952 no. 125) should be the children either of Euthykrates I, at some date before c.345, or of Euthykrates II, after his unsuccessful prosecution (if he was the defendant) by Teisis in the late 330s (Hyp. 4 *Eux.* 34). Cf. ch. 32 n. 105.

⁶⁶ Lys. 17. Gernet and Bizos 1926, 15–19, argues for indivision, but deliberate ambiguity on the point may be involved.

⁶⁷ Charidemos: *APF* 15380, *IG* ii² 1627. 207–22. Antisthenes: *APF* 1194, *IG* ii² 1629. 569. Cf. *IG* ii² 1631. 203, 205, 430, 601.

The three sons of Mantias of Thorikos, who finally paid $c.342/1$ a debt incurred by their father in (?) 377/6 (*IG* ii² 1622. 440), had kept his house and domestic slaves undivided for twelve years while quarrelling over the dowries contributed by their mothers to the estate (*APF* 9667; Humphreys 1989). They lived together in the disputed house for much of this period, and it is likely enough that Boiotos, Euthydemos, and Hedylos of Keiriadai, mother's brothers of two of Mantias' sons, lived together with their sister Plangon in another house to which the title was not entirely clear (Humphreys *ibid.*). It may have been not uncommon for unmarried brothers to live together. Plato's friend Dion, when he came to Athens from Syracuse, stayed with Kallippos and his brother.⁶⁸ In Plato *Protagoras* 310 it appears that Hippokrates and Phrason, sons of Apollodoros, live together; but Hippokrates, who seems to be the younger, has a slave of his own and can contemplate paying for lessons from Protagoras (ch. 13 at nn. 18–19).

Other possible cases of indivision rest on evidence for joint trierarchies, which may be of doubtful value; it is probably never wise to rely too heavily on statements of ownership made for purposes of taxation.⁶⁹ Philonides II and Onetor IV (Demosthenes' opponent), sons of Onetor III, were perhaps syntrierarchs at some time between 356 and 346/5, but by 341 were serving separately (see however ch. 29 n. 8). Possibly their brother Philon was not yet of age at the time of the joint trierarchy (*APF* 11473). The speaker of Isokrates 18 and his brother acted as co-trierarchs at the battle of Aigospotamoi in 405 and then operated as privateers together (§§ 59–61, *APF* D 18–19), but this is evidence of the disturbed situation of the times rather than normal practice. The claim of the speaker of Lysias 18 that he, his brother, and his cousin (FBS) Diomnestos all serve as trierarchs 'out of one *oikia*' (§ 21) is rhetorical and need not imply undivided property (*APF* 10808). Pythodoros II son of Nikostratos of Acharnai and Menon of Acharnai, who served together as trierarchs in 356, may have been related,⁷⁰

⁶⁸ *Ep.* 7. 333e; Plut. *Dion* 17. 2. We do not know if their father was alive. However, Sokrates' friends Chairephon and Chairekrates of Sphettos (Xen. *Mem.* 2. 3) live separately, though there is no evidence that either of them had children.

⁶⁹ Derkylos and Kallias sons of Autokles of Haginous (*APF* 3248) appear together in the list of guarantors of the ships sent to Chalkis in 341/0, which may possibly be an indication of indivision. Derkylos was old enough to be an ambassador in 346. Brothers also make joint claims to disputed estates (e.g. *Is.* 1, 5) but this does not imply indivision with regard to other property. The twins Nausimachos and Xenopeithes II of Paiania (*APF* 11263) came of age $c.369/8$ and had divided their inheritance by (?) 366/5, but combined to sue the heirs of one of their guardians in the 340s (Dem. 38).

⁷⁰ One of Pythodoros' sons was also called Menon. *APF* 12413 argues that Pythodoros and Menon are nephew and uncle (BS/FB) in indivision (which would be unique), on the grounds that Pythodoros, born in 384/3 and named for his FF, should have been his father's eldest son, yet Menon had a son old enough to appear as a purchaser in the *hekatostê* texts (ch. 28 n. 54) and therefore cannot be a younger brother. However, these texts may be later than 330 (Appendix 2), and a younger brother of Pythodoros might have married relatively early; the trierarchic record suggests that their father was dead by 356. The fact that the brothers Philostratos and Dionysios of Kolone (*APF* 14734) were members of the same naval symmory between 356 and 346 (*IG* ii² 1622. 772–3) presumably need not imply indivision.

but need not have held property in indivision. Menon was syntrierarch also with Apollodoros of Acharnai, Pasion's son (*APF* 11672), in the same year.

The reference to *koinônika*, 'common property', in a discussion of liturgy regulations in Demosthenes 14. 16 was taken by Harpokration⁷¹ to refer to undivided estates, but more probably designates land held by corporations such as demes, phratries, or groups of *eranistai* (cf. *IG* ii² 1583. 32f.). The other categories mentioned—land of epikleroi, orphans, kleruchs, and the disabled—all appear to be types of land that would normally be leased; and it seems most unlikely that land held in indivision by brothers would be exempt from liturgy obligations.

Accounts of formal division of property come from literary texts or from forensic speeches. They represent norms considered fitting for gods and heroes, to which ordinary families might resort also in situations of conflict and crisis; they may be a less reliable guide to the untidy informality of friendlier relationships. The term for inheritance, *kléronomia*, suggests the use of the lot to allocate shares; we find references to the use of lots in *Iliad* 15. 187–93 (Zeus, Poseidon and Hades),⁷² *Odyssey* 14. 207–9, *P. Lille* 76, Pindar *Olympian* 7. 120–5 (and perhaps 135–40), and Plutarch *Moralia* 483d,⁷³ but not in any reference to specific historical situations. Another practice was apparently for one heir to divide the inheritance into two equal portions and offer first choice to the other ([Demosthenes] 48. 12–13; cf. the choice between bank and shield-factory offered to Apollodoros son of Pasion, and the choice offered to Zeus by Prometheus in Hesiod *Theogony* 535 ff.). Polyneikes, according to Hellanikos (*FGH* 4 F 98), offered Eteokles a choice of either the kingship or the family treasures, the necklace and chiton of Harmonia given to her by Aphrodite and Athena.⁷⁴ A father might prescribe the

⁷¹ S.v. *koinónikon*, followed by Beauchet 1897 III, 641 and Biscardi 1956. D. M. Lewis' suggestion that *koinônika* should be read in *A.P.* 56. 6 (P. J. Rhodes 1981a, 631) is unpersuasive; as far as I can see *koinônika* was only used in the classical period of property belonging to formally constituted groups (*koína*), and not for family holdings (cf. Salomon 1995).

⁷² The *Iliad* may perhaps be influenced by the division of sky, earth, and water between three gods who cast lots in *Atrahasis* (W. G. Lambert and Millard 1969 I i 11–16; cf. Gysembergh 2013); on modern Greece see H. L. Levy 1956; Herzfeld 1980. Wyse (1904) thought that *Is.* 5. 6–7 implied use of the lot, but this is far from certain. Lots are used to select a son to go to war in *Il.* 24. 397–400 (cf. Demont 2000); perhaps for colonization in *M/L* 5. 28–30, but not explicitly specified. Hesiod and Perses did not draw lots; they quarrelled and appealed to outside authority (*WD* 37–9). Lane Fox 1985, 212–13 thinks use of the lot was frequent, but cites no new evidence. It is used to divide plots fairly between debtors and creditors in *IEph.* 4 A 10–11 (early 3rd c. BCE) and is well attested in early medieval Coptic texts, e. g. *KRU* 39–43, 45–6, *ST* 109, cited in Till 1954 (cf. MacCoull 2011). *POxy.* 503 (118 CE) records division of a house plot between three cousins and their aunt; the terminology of drawing lots is used but it is not clear that they actually did so. Cf. Wyse 1904, 414.

⁷³ Plutarch's general context is the propensity of brothers to quarrel over inheritance; note 483e on disputes over the right to inherit a slave—nurse or foster-brother—for whom particular affection was felt.

⁷⁴ *P.Lille* 76 (Stesichoros?) says they drew lots; cf. Bollack a. o. 1977; *FGH* 4 F 36 (*elache* does not necessarily imply lots); Aesch. *Seven* 789–90.

share which each son was to get, as Pandion is represented as doing in Sophokles' *Aigeus* (F 24 *TGF* IV); cf. Rabel 1907, Montevicchi 1935. An eldest son might get a better share or an extra piece of property as *presbeia* (Sophokles, *ibid.*; Montevicchi, *loc. cit.*; Apollodoros, *APF* 11672). If all else failed, one heir could bring a suit *eis datêton hairesin* (A. R. W. Harrison 1968, 243) to compel the other(s) to submit the question of division to agreed arbitrators. But we have no reference to this procedure actually being used.⁷⁵

As a collection of evidence on the procedure by which Athenians took a crucial decision about property, this looks suspiciously meagre. There seems to be a reluctance to address the topic directly. While it can confidently be said that indivision between brothers, and fraternal joint families, were not openly recognized or advocated as normal or desirable patterns of property holding in Athens,⁷⁶ I think we also have to face the possibility that it was often hard for outsiders to discover whether brothers owned property separately or in common, and that brothers themselves sometimes preferred not to think too clearly about the question.⁷⁷ The speaker of [Demosthenes] 47 (34–5) enquired whether the brothers Theophemos and Euergos had divided their property and was told that they had; but this answer was convenient in the circumstances. Their father was still alive, and they might have answered differently on another occasion. When Arethousios of Pelex⁷⁸ became a state debtor his mother and brothers, according to Apollodoros ([Demosthenes] 53. 10), immediately started to claim that property denounced as his was really theirs. Menekles' brother claimed to have rights in land that Menekles wished to sell (Isaios 2. 28).⁷⁹ In a situation where the lack of clarity arose from other causes Hermogenes the Sokratic, illegitimate son of Hipponikos II of Alopeke, politely referred to by his friends as 'without authority over his father's estate',⁸⁰ lived by sponging off his legitimate brother Kallias III and other friends.

⁷⁵ Thoudippos of Araphen and his brother Euthykrates came to blows in the fields over their division, leading to the death of Euthykrates and a permanent breach in the family because his heirs blamed Thoudippos for his death (Is. 9. 17, c.410? *APF* 7252). Ch. 7, Case 8, Table 7.8.

⁷⁶ E. Will 1955, 316ff. points out that concern over division producing holdings too small to be viable is already evident in the early archaic period. Hesiod takes the principle of division for granted. Aristotle with his usual common sense remarks that people who own property in common quarrel more than those who divide it (*Pol.* 1263b 23–5; a more idealistic view in Plut. *Mor.* 483d–484b). Reformers (e.g. Plato *Laws*) dream of one-child families (ch. 1 at n. 77).

⁷⁷ Cf. Blass 1893 III i 233–4 on the lack of any clear distinction between the property of Demophon and of his father Demon, in Demosthenes' suit against his guardians; Vial 1984, 57–9.

⁷⁸ *APF* p. 481 n. 1; Whitehead 1986a, 445 no. 308 (for the date of *IG* ii² 1176+ = *Agora* XVI 93, XIX L 13, *SEG* 57. 130, in 324/3 see Stroud 1974, 290–8; Whitehead p. 385).

⁷⁹ *IG* ii² 2680 (Finley 1952/1985 no. 177), *horos chôriou apo tou meros tou chôri*: 5103 (dr.), may arise from a similar situation or, as suggested by Germain 1968, from indivision.

⁸⁰ *Ouk enkratês tôn patrôion*, Plat. *Krat.* 391c; cf. Humphreys 1974, 93, *APF* 7826 XVI.

The frequency of joint manumission, noticeable even in Athens though more striking elsewhere, may be partly due to this tendency to leave it unclear whether divisions of property were provisional or final. The freedman or freedwoman would prefer to be sure that all possible claimants had committed themselves to the manumission.⁸¹ Sentimental factors may also have played a role in some cases.

The preponderance of evidence from speeches made in lawcourts tends to give us too clear-cut a picture of Athenian conceptions of property rights. If a dispute over property came to court, the question asked was: is this land mine or his? In other contexts a certain fuzziness might seem desirable, either to provide room for manoeuvre in dealing with claims made by the state or others (cf. Humphreys 1989) or to avoid or postpone family conflicts. The forensic speeches themselves make it clear that many Athenians, in addition to their rights over the property from which they drew income, cherished more tenuous claims to other items, which they would try to assert if the opportunity arose.

KIN AS NEIGHBOURS

Nevertheless we can see an overall process by which, as sons grew up, the parental estate was gradually divided between them along lines which, if they all produced heirs in their turn, would eventually harden into immutable factuality. It is more difficult to discover to what extent this process would leave kin still living as neighbours in the same community.⁸² Only a few epigraphic texts give information on neighbouring plots of land, and unfortunately most of these relate either to the mining district or to urban areas, in both of which land may have been particularly prone to change hands by sale.

⁸¹ For the same reasons kin appear as witnesses to sales of land in old Babylonian texts (examples in Cassin 1955) and elsewhere; see ch. 6 n. 26 on guarantors of land sales. Malowist 1968 discusses joint ownership of slaves in Greco-Roman Egypt by heirs who have divided other property. In Athens Nikostratos II son of Pythodoros II of Acharnai jointly manumits a slave tanner with his father probably in the late 330s, when he would not have been much over 20 (*IG* ii² 1576. 8–12, *APF* 12413). See Babakos 1961, 1963 for evidence for other parts of Greece; most manumitting groups are nuclear families, but there are cases where married brothers manumit with the children of one or of both. In Egypt it seems quite common for heirs to divide property formally but continue to reside together; see Hobson 1985. Indivision is suggested in the decree supposedly recording the foundation of Cyrene c.600, set up in the 4th c. (M/L 5); one son is to go from each *oikos* in Thera and fathers or *brothers* who help anyone to evade this rule are to be penalized. Two texts from Olbia grant *ateleia* to honorands and brothers sharing property in indivision with them (Dubois 1996, 21 and 19; cf. ch. 6 n. 17). In an oracular text of the 3rd c. from Kos (Pugliese Carratelli 1957, 442) it looks to me possible that the questioner is asking whether he should divide the *patrôion* [*klêro*]_n (cf. Christophilopoulos 1977, 71; ch. 12 n. 100). See Laiou 1977, 198–202 for Byzantine data.

⁸² It is even harder to discover counter-instances. Archiades of Otryne left his brothers, to go and live on Salamis ([Dem.] 44); the brothers Theophemos and Euergos of Euonymon seem to have lived at some distance from each other ([Dem.] 47. 34–5).

Mine leases provide three examples of members of the same deme owning adjacent plots: Diokles and Kimon of Sounion at ? Sounion, Nikias and Smikythos of Thorikos at ? Thorikos, and Kleokritos and Pyrrhakos of Aigilia at Nape. These may or may not be kinsmen; all three demes are in the mining area. The adjacent holdings of Kallaischros and Stesileides of Siphnos, father and son (*APF* C 12) have already been mentioned (n. 39). Charmylos' children and his wife (widow) are both listed in 367/6 as owning property in Nape in the Sounion area, but with different neighbours; if the property attributed to the wife had been put up by Charmylos as security for the return of her dowry (cf. Schaps 1979, 5), both holdings had come from a single estate.⁸³

A series of rock-cut inscriptions, also from the mining area (Langdon and Watrous 1977), seems to provide evidence of kin living close together at Agrileza. Timesios the son of Antipatros receives land in payment of a debt; Timesios son of Lysistratos and Doros son of Timesios make a joint dedication.⁸⁴ Here, perhaps, we catch a glimpse of a situation similar to that recorded in Demosthenes 55, where the speaker, whose father had bought land in a hill area perhaps north of Eleusis,⁸⁵ has been involved in a series of lawsuits against his neighbour Kallikles, Kallikles' brother Kallikrates, and their cousin. The cousin, allegedly, had tried to claim the speaker's land on the basis of a forged contract (§ 31), and presumably had land of his own in the neighbourhood (§§ 1–2). An exchange of plots had also been proposed (§ 32); apparently the opponents wanted to consolidate their holding. But although for once we seem to have example of a small rural lineage tenaciously attached to its plots,⁸⁶ it should be noted that Kallikles as a young man had moved to the city—where presumably he learnt something about the working of the courts—and had returned to the countryside only when his father died (§ 3).

⁸³ Sounians: *Agora XIX* P 13. 17–18, c.350 (or 330s? n. 44 above). Thorikos: P 16. 12–13, c.350 (or later: Tracy 1995, 107). Aigilians: P 5. 45–6, 79–80, 367/6. Family of Charmylos, *ibid.* ll. 45, 67–8, 79. I assume here that the references to land owned by the children of Charmylos bordered by Pyrrhakos of Aigilia and Leukios of Sounion, and to land owned by them bordered by Kleokritos of Aigilia and Leukios of Sounion, refer to the same estate (*ibid.* ll. 79ff.). Charmylos' wife's property is next to that of the wife of Alypetos, which is noteworthy since references to land owned by women are very rare (cf. n. 6 above); they may have been sisters who inherited land in the absence of male heirs and divided it. Alypetos' wife was priestess of Aphrodite Pandemos, *IG ii² 4596/CEG 775*; ch. 12 n. 92.

⁸⁴ Waelkens 1982 has Timesios II and Doros as FBS. Another inscription from the same estate (40 m. from the first) marks the tomb (*soros*) of Deinias and his descendants (Waelkens 1982, Wickens 1983; *SEG* 32. 234, *SEMA* 1672). The land had earlier been used for quarrying and had the entries to two mines in it. See ch. 26 n. 91 and Table 26.9.

⁸⁵ The land is in the speaker's deme (§ 35); it is surrounded by a mountain, and shepherds take their flocks through it (10–11). The reference to Eleusis in § 28 suggests that this is the nearest town.

⁸⁶ I have not searched systematically for evidence of kin owning adjacent rural holdings in other parts of the Greek world, but note that the land of Epikrates son of Epikrates, whose testament from the Manisa area (Lydia), of the 1st c. CE, was published by Herrmann and Polatkan 1969 (*BE* 2013, 399), adjoined land owned by Epikrates son of Diophantos, probably his FBS or BS. Study of *IG xii 5. 872* (Tenos, late 4th/early 3rd c.) would be fruitful. *IG ii² 2776* lists properties in Attika in the Hadrianic period (S. G. Miller 1972a, *SEG* 29. 160). Ar. *Clouds* 1322–3 assumes that kin may live within earshot.

As mentioned earlier, Plato bought land at Eiresidai adjoining land owned by his sister's husband Eurymedon of Myrrhinous (or his heirs; *APF* 8792 XI, Diogenes Laertios 3. 42). The son of Euthymachos of Agryle bought land at Agryle adjacent to that of his father in the sale of land confiscated from members of the Thirty (Walbank 1982*b*).

In the city, a record of denunciation and confiscation of property owned by debtors to the state in 342/1 (*Agora* XIX P 26) reveals three members of the deme Myrrhinous owning adjacent houses in Peiraios: the apartment block (*syn-oikia*) owned by the debtor Meixidemos of Myrrhinous is bordered on one side by a house owned by Euthykles son of Euthymenides of Myrrhinous, who made the denunciation (*apographê*),⁸⁷ and on another side by the house of Euthymachos of Myrrhinous. It seems quite likely that all three were kin. The purchaser however was a demesman of Acharnai.

Proximity might of course create relationships as well as resulting from them. One of the daughters of Menexenos of Kydathenaion married a man called Theopompos who owned a house next door to that of her adoptive nephew (BS) Dikaiogenes III (Isaios 5.11; *APF* 3773). He may have been a kinsman, but it seems more likely that the families became acquainted as neighbours.

More thorough exploration of the Attic countryside will still, in all probability, produce a sprinkling of new evidence like the rock-cut inscriptions from the farm of Timesios and his family. We may discover a few more stably rooted local squires in the demes. But I doubt if the basic pattern of a high degree of circulation, the city pulling in men from all levels of society and later sending some of them back, often to a different area from that in which their families were originally at home, will change. Though many Athenians may have had some kin among their neighbours, their kin networks would have spread widely across Attica, as their property interests often did.

⁸⁷ On the relations between denouncers and those whose property they register, and on this affair see ch. 14 n. 42. Names suggest that Euthykles and Euthymachos were kin; whether Meixidemos was related to them is more doubtful. Euthykles had a brother Eupolemos, amphiktyon in Delos in 341/0 (*ID* 104–28. 4, cf. *ID* 42. 5, *IG* xii 5. 113), and *tamias triëtopoiikôn* in some year before 330/29 (*IG* ii² 1627. 73–4). Cf. ch. 25 n. 58.

Economic Cooperation

Landowning was by no means the only basis for economic cooperation between kin; indeed, though at first it may seem surprising, the evidence for cooperation is rather better among the urban population than it is for those who lived in the rural demes. Possibly the inelasticity of landholdings created sources of conflict which did not exist in occupations where it was easier to expand operations. Since there was no labour market or institutionalized system of apprenticeship (see however n. 14 below), a young man who lacked land and wanted work would be as ready to join a kinsman who could teach him a craft as the kinsman would be to employ him. Slaves of course were always available, and in some occupations we see slave trainees supplanting sons who did not want to work their way up from the foundations of the business. Pasion's bank went to his freedman Phormion, because the reputation for trustworthiness on which a bank depended could only be earned by a long period of dealings with clients.¹ Apollodoros, Pasion's elder son, had neither the patience nor, one suspects, the shrewdness which the job required.

Another profession which depended heavily on personal reputation, built up slowly over the years, was medicine. The medical student was instructed in principle to regard his teacher as a father; but it was also apparently common for the profession to be literally hereditary. A fourth-century dedication by five doctors from the shrine of Asklepios at Athens (*IG* ii² 4359) names the brothers Diakritos and Epeuches, sons of Dieuches of Phrearrhioi; their father was also a doctor. The Diakritos named in 415 as one of those who parodied the Eleusinian mysteries (Andokides 1. 52, 67) may have been their grandfather; we do not know that this Diakritos was a doctor, but the mockery of the parodists fits with the polemical attitude to religion found in early medical texts, and another doctor, Eryximachos, is named among the accused (Andokides 1. 35; *APF* 11907). Eryximachos' father Akoumenos was also a doctor, and Eryxias of Peiraios, who practised as a doctor in the late fourth century ([Demosthenes] 33. 18) may be

¹ Bourriot 1987 (following *APF* 11672 II) suggests that Pasion's owners had inherited the bank from their father. Bogaert 1968 collects evidence for banks passing to freedmen. On the Solonian law obliging a father to teach his son a trade see ch. 1 n. 134. The sons of very successful self-made men tended to distance themselves from their fathers' business origins: see ch. 25 n. 37 on Chairephilos the saltfish-merchant.

a descendant.² The dedication from the Asklepieion also names a Mnesitheos son of Mnesitheos, whose father may be the Mnesitheos named by Galen, with Dieuches, as a doctor of the classical period.³

Expertise in religious matters was also often handed down in families. Aischines' mother, involved in Orphic initiations, had a brother who was a *mantis* (*SEG* 16. 193, 21. 838). Meidoteles I of Myrrhinous and his son Kalliteles I practised the same profession. Isokrates (19. 5f.) says that the *mantis* Polemainetos handed on his books and specialist knowledge (*technê*) to a disciple because he had no son. An edict probably issued by Ptolemy Philopator requires those who perform Dionysiac initiations to declare their source of knowledge, tracing the transmission back for three generations, i.e., to the declarant's grandfather.⁴

Doctors and—at least in their own estimation—diviners stood midway between intellectuals and mere technicians or craftsmen; the same hereditary pattern is found on both sides. As already noted, Plato chose his sister's son Speusippos to succeed him as head of the Academy, and Thales earlier had supposedly adopted his sister's son Kybisthos (ch. 2 n. 50; Table 5.3). Zeno became the lover or, in one version, the adoptive father of the son of Parmenides.⁵ Isokrates' stepson and adopted son Aphareus became a speechwriter and poet; Phanodemos, who wrote a history of Attika, had a son who was also an historian, Diyllos (*FGH* 325 and 73; on the remote possibility of an affinal link between Kleidemos and Philochoros see ch. 20 n. 102). Antiphon's father, according to [Plutarch] (*Moralia* 832c) was a sophist.

The phenomenon is even commoner among dramatic poets, perhaps because personal contacts with *choregoi*, chorus trainers, and actors were important for

² On Eryxias of Peiraios see ch. 25 n. 7. On present evidence we cannot assign a deme to Akoumenos and Eryximachos. The name Eryxias also occurs in Steiria (*APF* 8792 VI, a kinsman of the oligarch Kritias), and Eryximachos in Kydathenaion (with a son who could be [Alex]ias just as well as [Eryx]ias; the physician had a nephew called Alexippos).

³ Aleshire 1991, no. 3748. See D. M. Lewis 1955 and Charitonides 1961 (*Agora* XV 42. 212) for other members of the family. The dedication probably belongs to the Lykourgan period. Cf. ch. 26 nn. 84–5. Bertier 1972 discusses the relation between the Mnesitheos and Dieuches of *IG* ii² 4359 and those named in later medical texts. Schwenk 1985, no. 14 (*IG* ii² 304 + 604, perhaps post-Lykourgan) records honours awarded to two (?) doctors whose forefathers (*progonoi*) had followed the same occupation. One was Ep—son of Theopha[nes] of Ach[arnai]; *IG* ii² 5804 may commemorate Theophanes and his wife. On doctors outside Athens see Samama 2003. W. D. Smith 1979 is sceptical about the attribution of works in the Hippocratic corpus to sons, grandsons, and a son-in-law of Hippokrates. Hdt. 3. 131 says that Demokedes of Kroton became a travelling doctor because of bad relations with his father; this may suggest that the father also practised medicine.

⁴ Meidoteles, *SEG* 23. 161, Table 4.10; cf. *RE* s.v. *Theoris*. Edict, *BGU* 1211 (*Sammelbuch* 7266); cf. Fraser 1972 I, 204, II, 345–7 (nn. 114–16); Burkert 1982, 6–8. On heredity in genos priesthoods see ch. 20. Comic writers play on the assumption that professions are hereditary, extending it to sycophants (Ar. *Birds* 1451–2); cf. Herodas *Mim.* 2. 77 with Cunningham 1971, 97; Plaut. *Pers.* 53ff.

⁵ *Paidika*, Plat. *Parm.* 127b (cf. Kerkidas *Meliamb.* 6. 11 ff.); adopted son, D. L. 11. 5, 25 (*FGH* 244 F 30 II 1028). On the Academy see Watts 2007.

success.⁶ The tragic poet and dancer Karkinos (Crab) of Thorikos had three little crablet sons who also danced and wrote tragedies (Aristophanes *Wasps* 1500ff.); one of these, Xenokles, had a son Karkinos II, and perhaps also a grandson Xenokles II, who followed the family profession. Aeschylus' sons Euphorion and Euaion both wrote tragedies, as did his nephew (ZS) Philokles I. Morsimos and Melanthios, sons of Philokles, wrote very bad tragedies (if we can trust Aristophanes *Peace* 799–804, with scholia) but prided themselves on being great-nephews (ZSS) of Aeschylus. The tradition was continued by Morsimos' son Astydamos I and his sons Philokles II and Astydamos II. Kinesias the dithyramb writer was son of the kithara player Melas (Plato *Gorgias* 501e 10–502a). Sophokles' son Iophon wrote tragedies and so did his two grandsons, both named Sophokles, sons of Iophon and of the illegitimate Ariston. Aristophanes had three sons who acted and wrote comedies. Pratinas and his son Aristion were both dramatic poets.⁷

Writing, producing, and acting were for a long time closely linked, and even when the profession of actor became more distinctly identified it continued to run in families. Euripides is said to have had a son who was an actor, Mnesilochos II of Phlya. Kleandros, the victorious actor of 388/7, may have been a descendant of the Kleandros who acted for Aeschylus. Kallippos I son of Kallias of Sounion was still working in 313/12 when Kallippos II, probably his son, won the prize. Kallias II, active in the early third century, may be either brother or

⁶ Choregoi drew lots for the order in which they picked poets and, for the competition in dithyramb, flute players. Choruses and chorus trainers (*didaskaloi*) were chosen by *chorēgoi*, presumably with advice from the poet; poets themselves played an active role in production, but used specialists to help in training the chorus in dancing and singing as early as Aeschylus. Actors were chosen by poets until the middle of the 5th c., after which protagonists were allocated by lot; protagonists may have recruited their own supporting players (Pickard-Cambridge 1968, 75–6, 90–5). Young poets sometimes produced their first plays under the name of more experienced writers, at least in comedy; reputation carried weight, but contacts may have counted for something too (ibid. 84–6). Welsh 1983, 54 suggests that this custom may have begun with Aristophanes, who was writing plays for production before he was 20.

⁷ Playwright families: G. Murray 1940, 11–13; D. F. Sutton 1987; Easterling 1993; Csapo 2004, 2010*b*. Tragedy: Karkinos, *APF* 8254 (ch. 27 n. 84); *TGF* 2nd ed. I nos. 21, 33, 70, Stephanes 1988 nos. 1903–4. Pratinas of Phlious had a son, Aristias, who also wrote tragedies, *TGF* 2nd ed. I no. 4 T. 2, 7; no. 9. Aeschylus, ibid. nos. 5, 12–13, 23–4, 29, 59–61; Astydamos III, no. 96, was perhaps SS of Astydamos II (but the early 3rd c. actor Aischyl[os], Stephanes no. 93, need not be connected). See chs. 29 n. 66, 30 n. 102, 32 n. 24. Sophocles, *TGF* 2nd ed. I nos. 22, 62, 147, cf. *TGF* 2nd ed. IV. Comedy: for Aristophanes' sons see *PCG* 2. 524–31, 7. 74–92, 322–32, 353–5; ch. 25 n. 6. Hermippos and Myrtilos, Athenian comic poets of the late 5th c., were brothers, sons of Lysis: *PCG* 5. 561–604, 7. 29–32. Philonides of Kydathenaion, producing at the same date, was followed by his son Nikocharēs: *PCG* 7. 363–9, 39–49. Antiphanes I, an East Greek, was succeeded by his son Stephanos, 2. 312–481, 7. 614–15. Diphilos and Diodoros of Sinope were brothers, *PCG* 5. 25–30, 47–123; *IG* ii² 10321 may be their tombstone, although there was a tradition that Diphilos died in Smyrna (5 T. I, p. 47). The Diodoros (II) of this stone, who acquired citizenship and became a demesman of Semachidai, is missing from *LGN*. In a related profession, the Theban flautist Potamon was taught by his father, who perhaps claimed to have been taught by Pindar, *IG* ii² 8883 (*CAT* 2. 235, *CEG* 509); P. Wilson 2007*c*; 2010*b*, 185–6, 196–7. On playwrights' and actors' names see P. Wilson 2007*c*, 372–4. Roman playwright families, Feeney 2016, 229–30.

son of the younger Kallippos (II); the Kallippos (III) recorded as an actor at Delos in 268 may be another son of Kallippos II. Ischandros son of Neoptolemos, mentioned by Demosthenes (9. 10) as an actor, may be a son of Neoptolemos of Skyros, known as an actor in Athens c.360–340, and father of the tragic and comic actor(s) called Neoptolemos who played in the Soteria at Delphi in 259. Dynasties can also be traced in later centuries.⁸

In a related profession an immigrant family, Eukles I and his descendants in Trinemeia, held the office of public herald to the Council and Assembly in Athens for three generations between c.400 and the end of the fourth century, and continued to hold it frequently, perhaps even uninterruptedly, from 305/4 to 140/39.⁹

In general, according to Plato (*Protagoras* 328a), ‘people who work with their hands’ learn their skills from their fathers and their fathers’ friends in the same trade, without taking formal lessons (however, *Protagoras* 311b–c, 318b–c envisage payment to doctors, sculptors, painters, or flautists for training; cf. Griffith 2001). The famous Praxiteles may have been son, son-in-law, or younger brother to another sculptor, Kephisodotos; at least he named his son after Kephisodotos, and the boy followed in their footsteps, as did a second son, or a son-in-law, Timarchos, who worked with Kephisodotos II (*IG* ii² 3455, 3777), and a younger Praxiteles, son of Kephisodotos II or of Timarchos (*APF* 8334).¹⁰ Sthennis and Herodoros, father and son, both worked for the Amphiareion at Oropos in the late fourth/third century. Much earlier, the sixth-century sculptors Archermos and Philerm[os] of Chios may have been related; Archermos was succeeded by his sons Boupalos and Athenis. Myron, in the fifth century, was succeeded by his son

⁸ Stephanes 1988, nos. 1727 Mnesilochos, 1412–13 Kleandros, 1352 Kallippos I, 1350 + 1353 Kallippos II, 1323 Kallias II, 1349 Kallippos III, 1797 Neoptolemos of Skyros, 1303 Ischandros, 1796 Neoptolemos of Athens. D. F. Sutton 1987 and Pomeroy 1997, 147–8 depend on Ghiron-Bistagne 1976 and contain inaccuracies. Two brothers win prizes as actors at Thorikos, 4th c., *SEG* 40. 167 (cf. *IG* i³ 258b *bis*). On later periods see Chaniotis 1990.

⁹ *SEG* 33. 69, M. J. Osborne 1983, 39–40; cf. D. M. Lewis 1954, 36–7; *IG* ii³ 4. 54–5; Piérart 1976; Whitehead 1983, 71 nn. 22, 38. Eukles I, already serving at or shortly after the restoration of democracy in 403, was succeeded in office by his son Philokles I c.360 (*IG* ii² 145; for the date at which the family acquired citizenship, and problems in reconstructing its genealogy, see ch. 29 n. 60). A herald from another family is attested for 335/4 (*Agora* XV 43. 234). Eukles II son of Philokles (II?) served from 305/4 to 303/2 (*ibid.* 58. 34–5, 61. 106, 62. 296), and had been succeeded by his brother Philokles (III?) by 281/0 (72 + *SEG* 36. 217, 98). See Wilhelm 1909, 83–6 on their descendants. Diaitos II son of Dion of Phrearrhioi, recorded as *kéryx epi to* [c.6–7] in 303/2 (62. 346–7), held a different office. He came from a trierarchic family (*APF* 4521), and it may be of interest that his father owned a slave flautist who kept time for rowers. Cf. possibly, in another line of public office, Mechanion, *grammateus* c.470 (*IG* i³ 841) and his (?) son Teisamenos, *hypogrammateus* and reviser of laws at the end of the century (Lys. 30. 28, emended in *LGP*N Mechanion 2).

¹⁰ See the discussion in *APF* 8334; Schultz 2003; ch. 2 VI 1. The most plausible solution to this question is perhaps that Timarchos, son of Praxiteles, was adopted into Eiresidai by his MF but continued to use his patronymic of origin when working with his brother. A DH of Praxiteles should have been born c.380, perhaps too early for Timarchos’ career.

Lykios.¹¹ Pheidias' brother and nephew (BS) were painters. Aglaophon of Thasos and his sons Aristophon and Polygnotos were all painters; both sons worked in Athens (Plato *Gorgias* 448b 11). Parrhasios was the son of another painter, Euenor.

Vase painters had family links with potters and with sculptors and painters (sculptures were also painted). The archaic black-figure vase painter Nearchos had two sons, Tleson who worked both as potter and as painter and the potter Ergoteles. Ergotimos, his son Eucheiros, and his grandson all potted (*ABV* 162–3). The red-figure painter Euthymides was probably son of a sculptor, Pollias, while the sculptor Antenor may have been son of a painter. The potter Kleophrades may have been the son of the vase painter Amasis (Boardman 1975, 92, 1988; D. Williams 1995, 144–5). In the fourth century the brothers Bakchios and Kittos both worked as potters, and Bakchios' sons Bakchios II and Kittos II emigrated to Ephesos to work there after their father's death (*IG* ii² 6320 = *CEG* 567, with vase on top? Wilhelm 1909, 40 n. 20); *IEph* 1420; Beazley 1943, 456–7; Valavanis 1996, 2011*b*). Cf. Bodel 2000.

The accounts for work on the Erechtheion in 408/7 (*IG* i³ 476) show what look like two family teams of stonemasons at work on the columns. Phalakros and Philostratos of Paiania, perhaps father and son, work with three slaves belonging to Phalakros (Thargelios, Philorgos, 'Work-lover', and Gerys, 'the Voice'); Theugenes and Kephisogenes of Peiraios work with two metics (one called Kephisodoros, a freedman of the family?), Nikostratos (a slave?), and Theugeiton of Peiraios. Perhaps Theugenes and Kephisogenes are brothers and Theugeiton is Theugenes' son.¹² Later we find Antimachos of Kephisia and his (?) son Neokleides working successively as stonemasons at Eleusis, the former in (?) 354/3 and the latter in 329/8.

¹¹ Daux 1968, 255 for the reading Philerm[os]; cf. also *IG* i³ 830 *bis*. Vatin 1982 imagines that the sculptors of the archaic 'Kleobis and Biton' group at Delphi were twins. Kritios and Nesiotes, active in the 470s, may have been father and son (*DAA* 120–3, 160–1; *IG* i³ 846–51; cf. Viviers 1995, 213). Where not otherwise noted, references will be found in *DAA* 479ff.; for later dynasties of sculptors see the excellent analysis in Stewart 1979, 102–14; id. 2012; Despines 1995; Habicht 1998 on Sthenis; *IOrop* 371–2, 383; *SEG* 56. 544/59. 506. Knoepfler 1984 (*non vidi*) discusses dynasties of architects. Further references in Burford 1972, 84–7; Vial 1984, 350. D. R. Jordan 2000*a* publishes a letter written by a boy working for a bronzesmith which, if he is not a slave, may be the first evidence from Athens of an apprenticeship under non-kin (*SEG* 50. 276); he appeals to his mother and Xenokles (her male protector, presumably) to intervene on his behalf.

¹² Phalakros' team *IG* i³ 476. 79–83, 227–31, 310–14; Theugenes' team, *ibid.* 92–100, 212–18, 321–6. All are paid equally; the names are always listed in the same order, which suggests to me that Theugeiton is a boy. A [Ke]phisoge[nes] appears on his own in line 444. The only other team which includes more than one Athenian citizen is that of Laossos of Alopeke and Philon of Erchia, with two slaves owned by Laossos and a worker referred to simply as (h)Ikaros (476. 75–8, 224–6, 307–10). Kanon ('Straight-edge') son of Dionysodoros of Thespias, who contracted to quarry stones for building on Delos while it was under Athenian control in the late 4th c. (*IG* ii² 1678. 29–30 = *ID* 104–4), was presumably named by a father in the building trade, and the same may be true of Euthydomos ('Straight-builder') of Melite, who appears in the Erechtheion accounts as a carpenter (*IG* i³ 475. 247–8; see Whitehead 1986*a*, 412–13 no. 34; Table 29.1).

The brothers —teles and Lysias, sons of Demophanes of Eitea, were both involved in building work at Eleusis *c.*330, probably on the columns of Philon's portico. *SEMA* 2320 may possibly record a slave family in which father and son were *neókoroi* at Eleusis (*IEleus* 177. 59, 185).¹³

This may be an appropriate place to collect the evidence for slave families in classical Athens. At law slaves could not marry and were not recognized as having kin. But those who worked as craftsmen or in the service industries—as entertainers, innkeepers, or prostitutes, categories that frequently overlapped—often lived apart from their owners and paid them a set daily fee, keeping whatever profits they cleared above this level (cf. E. E. Cohen 2003, 2015). Records from the late 330s–320s, relating to a manumission procedure which is not yet fully understood (see Kränzlein 1975; E. A. Meyer 2010 with *BE* 2010, 244), list freed slaves with the owner's name and date of manumission, and in several cases an owner appears to free a family group of slaves at the same time.¹⁴

¹³ For potters and vase painters see also Sapirstein 2014. Antimachos and Neokleides, *IEleus* 141. 17; 177. 51–4, 78. On the date of 141 (354/3 or 285/4) see Clinton 2003. Prosopography somewhat favours the later date: Aresias III son of Lamprokles II of Peiraios, councillor in the 250s (*IG* ii³ 983. 4), would be the BS of Nikostratos son of Aresias II, guarantor in *IEleus* 141; Antimachos (II) son of Philokles of Kephisia and Antimachos (III) son of Antikles of Kephisia, also councillors in the 250s (*IG* ii³ 922), might be grandsons (SS) of Antimachos (I) son of Neokleides (*IEleus* 141). See also Table 6.1 on Krates and Epikrates of Leukonoion. [—]teles appears as a contractor in *IEleus* 159. 28; in *IEleus* 151. 75 it is possible (though not very likely) that his brother acts as guarantor. They may have been related to Demokrates of Eitea, *tamias triēropoikōn* in 332/1 (ii 1628. 3–6; references in 1627. 22–3, 374–5, 390–7 may also refer to this year, and *PA* 3525 requires correction); the main reason for Demokrates' appearance in the dockyard records is that he was authorized to take some old masts, yardarms, and oars for use (as scaffolding?) by public slaves working on the theatre (?) and stadium. These had not yet been returned in 323/2 (1631. 237–46); there was perhaps not much left to return, and the continued entries provide a nice example of the over-bureaucratic features of Athenian administration, yet one may suspect that the family building yard had profited to some extent. There seems to be a tendency for building contractors to be prominent in the Lykourgan age. Wilhelm 1904 suggests that Demokrates is named in the curse tablet Wunsch (1897) 103. 9, which he dates *c.*323/2; but the name is common, there are no demotics, and Demokrates was not *tamias* in that year. Workgroup dedication of Autophylos of Phlya with his sons and (DS) grandsons, *IG* ii² 4327.

¹⁴ See now C. P. Jones 2008; Schmitz 2012; Zelnick-Abramovitz 2005. Parker and Obbink 2000, 441–2, cite evidence from elsewhere for freed slaves paying for public registration. Cf. Jameson 1978, 134–5 n. 63. Note also Dein. F XVI 4 Conomis 1975, a son succeeds his father as *prometrêtês*, a post held by a public slave. *SEG* 25. 180 is Agora Inv. I 5656, *c.*330–322 (D. M. Lewis 1968). There is no evidence from Athens of the obligation for a freed slave to remain with his or her ex-owner in *paramoné*, until the owner dies, and sometimes also to produce a child or children to take the parent's place, which becomes common in Greek manumission records of the late Hellenistic and early Roman periods (cf. Babakos 1961, 1963; Hopkins 1978, ch. 3). Freedmen in Athens might well continue to work for their ex-owners but do not seem to have been under any formal obligation to do so. The wills of the philosophers preserved by D. L. do not recognize any slave families. Delphic inscriptions explicitly recognize only the relation between mother and child, and simultaneous manumission there of slave families is uncommon (Hopkins, loc. cit.). For evidence from papyri see Montevicchi 1935, 96–9, Adams 1964; for Roman slave families Rawson 1966, Bradley 1984, Geroussi-Bendermacher 2005, Harper 2011. Cf. Rosivach 1989 on the manumission of woolworkers/housewives and children; Riel 2009 on threptoi.

For example, in *SEG* 25. 180. 29–37 Hippokrates, a metik living in Peiraios, simultaneously frees a male and a female myrrh seller and a child; in ll. 62–7 Kallikrates son of Tim— frees woolworkers, very probably a couple, together. In *SEG* 18. 36 side A, a record from about the same date, Dionysios the *isotelês* frees Kittos, a bronzesmith, and Mnesitheia, a woolworker, both living in Peiraios (100–5); Aristophon son of Aristion of Aphidnai frees two child-nurses living in Skambonidai, probably mother and daughter (255–62); Pherekleides son of Pherekles of Perithoidai frees Philon, a secretary, Rhodia, a woolworker, and the child Kordype, all living at Thorikos (464–75); Menedemos, a metik living in Melite in the city, frees Herakleides and Thraitta, male and female innkeepers or shopkeepers (*kapêloi*), also living in Melite (489–96); on face B of the same stone —machos son of Kallimachos of Marathon frees a fish smoker and a girl living in Peiraios, perhaps with other slaves (34–40); Thersippos son of Antiphanes frees a slave muleteer living in Peiraios and a slave boy (93–6); Menites son of Menon of Kydathenaion frees Atta (‘Dad’), a lentil seller, Malthake, a woolworker, and three children, all probably living in Keiriadai just outside the city wall (112–22); Autokrates frees Ariste and two children (perhaps also a father), 232–9; Nikeratos son of Nikeratos of Melite and Pheidippos son of Sosidemnos of Xypete free a ringmaker, a child, and two female woolworkers (253–66); Misgolas and his brother free two slaves, one a child (335–42). On *IG* ii² 1553 Sostratos of Hermos and Timarchides of Euonymon free Sosias, who lives in Alopeke, and the [*kapêl*]is Soteris, living in the same area (4–7, 13–16); on ii² 1561 Midas and Soteris, sesame sellers living in Melite, are both freed by Hipparchides son of Kallippos of Kephale (22–30); on ii² 1563 Lykis son of Bion of Acharnai frees three slaves living in Peiraios, two male and one female (4–11); on ii² 1564 Lykiskos son of Smikyliion of Athmonon frees an analogous group (2–14); on ii² 1568 an *eranos*-group, i.e., a set of friends joining together to help a slave buy freedom, is involved in the joint manumission of two male cobblers (18–23); another two males, living in Peiraios, are freed by Euthippos of Lamptrai (1569. 9–15); a man and woman living in Melite are freed by Neoptolemos of Melite (1569. 53–60); a man and woman and a second woman described as a woolworker, living in Melite, are freed by Kallikrates son of Demokrates of Gargettos (1570. 10–17); two slaves living in Keiriadai are freed by a son of Euxippos of Eleusis (1570. 27–32). The woolworker Hellas, living in Kydathenaion, is freed with Demeas, living in the same place, by Aristopolis son of Aristopolis of Lamptrai; it is unusual to find the woman listed first (1570. 51–6; are they mother and son?). Daos and Lykinos, two males living on Salamis, are freed by Meidon son of Euthykritos and his two sons (1574. 4–12). Bion of Acharnai, father or brother of the Lykis mentioned above, freed Philotheros, his boy (*paidion*) Philokrates, and Menestrate, a woolworker, all living in Peiraios (1576. 57–64).¹⁵ In most cases it seems reasonable to assume that the group freed is a slave couple or family or, where two slaves are of the same sex, perhaps a parent and child or siblings. But in some cases where same-sex slaves are freed it may be that they work together without being related; and in *IG* ii² 1567. 9–12 Lysanias of Phrearrhioi at the same time frees two male slaves who live in different demes, Skambonidai and Thymaitadai, the former in the city and the latter on the coast at Skaramanga.

¹⁵ Philotheros, Philokrates, and Menestrate all have names quite commonly given to citizens; note also the goldsmith Pheidestratos, freed by [–]ostratos son of Polycharmides (*SEG* 18. 36 B 101–3); some of these slaves may be houseborn, perhaps even illegitimate children of their masters.

Literary references to support the epigraphic data are rare, but Timarchos of Sphettos owned a pair of slave weavers who lived on their own (Aischines 1. 102–4), and the client for whom Hyperides wrote his speech *Against Athenogenes* had fallen in love with a slave boy and had been persuaded to buy the perfume shop in which he worked with his father and brother (3. 4–5). In Terence's *Adelphoe* 972–3 a freed slave asks for a wet nurse to be freed also so that he can marry her.¹⁶ Andokides 1. 12 mentions two slave brothers, perhaps entertainers (ch. 13 n. 31), who were present at the parodying of the Mysteries.

Kin might join together as partners in ventures of other kinds. Lakritos' two brothers were both involved in trading voyages ([Demosthenes] 35. 7–8); Megakleides and Thrasylllos of Eleusis, brothers ([Demosthenes] 52. 20), borrow money together for a trading voyage to Acre. The brothers Diogeiton and Diodotos (*APF* 3885, Lysias 32) were both engaged in financing trading voyages, and Lysias' efforts to represent their operations as entirely separate are hardly convincing. The city of Olbia in the Black Sea, in the fourth century, granted freedom from dues (*ateleia*) to Xanthippos the son of Aristophon of Erchia and Philopolis son of Philopolis of Deiradiotai, their descendants, brothers sharing property in indivision, and servants.¹⁷ Two brothers, sons of Ischyrius of Upper Lamprai, emigrated together as *kleruchs* in the fourth century (*IG* ii² 1952. 9–10; cf. ch. 23 at nn. 18–19 on the sons of Kallias of Euonymon).

Mantitheos and his father Mantias of Thorikos borrowed money together from the banker Blepaios in order to lease a mine ([Demosthenes] 40. 52); Mantitheos was only eighteen, but had just got married, and his father may have had to join in the enterprise because the son was still under age (ch. 5 p. 153). In other cases where more than one member of a family is involved in mining it is usually through the ownership of land. There are cases where both father and son lease mines, but they are not recorded as doing so together.¹⁸

¹⁶ The scene in the *Adelphoe* represents generosity beyond a slave's wildest dreams. There are references to famous lines of slave *hetairai*, daughter succeeding mother: Wilhelm 1904, 112.

¹⁷ Cf. Reed 2003. Dubois 1996 no. 21; for Xanthippos see Table 20.4; for Philopolis ch. 26 n. 110, Table 26.11). The formula (which occurs also in the 4th c. in Dubois no. 19, but not in nos. 20, a grant to 2 brothers, or 15) suggests that the Olbians knew they were dealing with men who used agents; we do not have enough texts to judge how far they were concerned about the precise arrangements. *Therapontes* are regularly mentioned in 4th c. texts. The speaker of [Dem.] 34, who has lent money for a trading voyage to the Bosphoros, sends a letter with the borrower to his boy (*paidi*, a slave?) and to a partner (*koinônōi tini*), who are in the Bosporan kingdom, asking them to supervise arrangements at that end of the voyage (§ 8).

¹⁸ In addition to the examples cited in ch. 5 nn. 44, 65, Diophanes of Gargettos (*APF* 1413) is recorded as a landowner in *Agora* XIX P 24. 7, P 26. 175; in the latter record (?342/1) his son Aisimides registers and leases a mine (P 26. 279–84). Isandros of Sypalettos registers and leases a mine in the same year (P 26. 259–66), his son Stratokles leases in 341/0, P 27. 17–18. Kephisodoros of Athmonon leases in mid-century, P 16. 9 (perhaps later, Tracy 1995, 107), his son Euphemides registers and leases c.320/19, P 38. 17–19. Cf. Ito 1986. R. G. Osborne 1985a, 2–3 suggests a connection between Pausistratos son of Philistides, lessee in *Agora* XIX P 24. 15, who appears in a list of Kekropis (*IG* ii² 2385 col. I 10), and Philistides son of Philistides of Aixone, farmer of the 5-dr. tax in the mining area (*Agora* XIX P 26. 470), but Pausistratos probably belongs to Athmonon (see *APF* pp. 62–3, nos. 12699, 12762, and ? p. 490, Stephanos son of Hermogenes). Xenokles and Androkles sons of Xenis of Sphettos both appear as (?) tax-farmers in *IG* ii² 1593 (n. 27), but they act independently.

It is not uncommon for kin to lend money together. Diogeiton and Diodotos (Lysias 32) have already been discussed. The brothers Thrasymedes and Melanopos sons of Diophantos of Sphettos, who introduced the speaker of [Demosthenes] 35, their fellow-demesman Androkles, to the brothers of the sophist Lakritos who wanted to borrow money for a trading voyage, may themselves have been involved in similar ventures. Ergophilos and Ergochares of Atene, who jointly lent 2300 drachmas on the security of land, should be kin to judge from their names.¹⁹ Mneson, Mnesiboulos, and Charinos of Halai Araphenides (?), who lent money in 315/14 against land in the Vari area and a house in the city, may all have belonged to a family known from tomb inscriptions found at Vraona in the area of that deme.²⁰

Kin could also help each other by providing loans, helping to negotiate loans from others, acting as guarantors or giving commissions. Lending was presumably common. Theophrastos characterizes the mean man as one who will turn aside out of the street to avoid a *philos* (friend or kinsman) who is raising a collective loan, *eranos* (*Characters* 22). Unfortunately the stone markers which recorded loans secured on land almost never give the names of both creditor and debtor, so our only evidence for loans comes from lawcourt speeches. Demosthenes' cousin (FBS) Demomeles II had borrowed 1600 drachmas from the elder Demosthenes, his FB, before 376 (Demosthenes 27. 11; *APF* 3597 III B). Aristophanes, a friend of Konon, borrowed 700 drachmas from his wife's father when collecting money to finance an expedition to help King Euagoras of Cyprus in 390/89, and also used 4000 drachmas deposited with him by his patrilateral half-brother (whose mother may have been Cypriote).²¹ Demos son of Pylilampes asked the speaker of Lysias 19, brother of Aristophanes' wife, to help him persuade Aristophanes to lend him money (19. 25–6). When the stepfather of Apollodoros of Leukonoion was taken prisoner, Apollodoros contributed to the payment of his ransom and acted as hostage for him while he collected the rest of the sum he needed;²² and when the stepfather, Archedamos, became poor Apollodoros (the speaker claims) helped him to manage his property and shared his own resources with him (§ 9; a rather vague statement). Polyeuktos of Kydantidai, accused in 324 of having associated with Athenian exiles in Megara

¹⁹ *IG* ii² 2705, Finley 1952 no. 46. Another 500 dr. was lent by Autodikos of Oion.

²⁰ Finley no. 14, *APF* 10242 (we do not know that *IG* ii² 5505 came from Vraona); Table 24.7. However, the horos does not specify that the deme is Halai Araphenides, and its provenance suggests Halai Aixonides. In Finley 22 two men from Athmonon lend money on security of land, but the names give no indication of relationship. In *SEG* 21. 656 (Finley, 2nd ed. no. 95A) two Rhamnousians lend money together, but one seems to be paid off before the other.

²¹ Lys. 19. 22, *APF* 5921. See Millett 1990 on the social aspects of lending; Shipton 2000 on its economic significance.

²² Is. 7. 8, *APF* 1395. Apollodoros son of Pasion of Acharnai lent money to his neighbour Nikostratos to pay his ransom when he had been captured and sold into slavery in Aigina in 369/8; he claims that Nikostratos' own kin were unable or unwilling to help him ([Dem.] 53. 6–7).

who were plotting a coup, achieved acquittal by pleading that he had gone to help his mother's second husband, who was in financial difficulties in exile there.²³ Leokrates of (?) Pallene, who left Athens after the battle of Chaironeia and settled for a time in Megara, asked his elder sister's husband to buy his house and slaves in Athens from him, pay his debts, and bring the remaining cash to Megara.²⁴

Guarantors were needed for leases of public land and for major public works and tax-farming contracts. Metics had to have citizen guarantors, which meant that they could not look to kin. Citizens however might do so, and in some cases demonstrably did; though our reliance on epigraphic records of names (with patronymics and demotics) means that only agnatic relationships can be recovered.²⁵

From 37 records, all of the mid to late fourth century, in which the names and/or demotics of both the lessee or contractor and the guarantor(s) are preserved, there are nine cases in which the guarantor seems to be a kinsman. In 4–5 cases a father acts as guarantor for his son; in 4–5 cases one brother perhaps guarantees another. In a further case the guarantor is a fellow-demesman (Tables 6.1 and 6.2).²⁶

In addition, there are two texts in which kin are listed together but it is not clear whether a guarantee is involved and if so who the guarantor is. Two sons of Demophanes of Eitea are listed in a record of contracts for building works at Eleusis (*IEleus* 159. 75ff.); it is not clear whether both are contractors or one is guarantor for the other (cf. above, n. 13). In a fragmentary document probably recording tax-farming contracts (Papazarkadas 2011, 285–90) four men of Halai Aixonides are perhaps listed successively, as lessees and/or guarantors: The[o]pe[i]thes, Aristomachos, Phil[ip]pos, and A[sty]an[a]x. Astyanax is the son of Aristomachos.²⁷ Furthermore, two men who act as guarantors for each other—the son of Charias of Paiania and the son of Charidemios of Prospalta or

²³ Dein. 1. 58, 94; cf. M. H. Hansen 1975, no. 129, H. Schaefer 1952*a*.

²⁴ Lyk. 1. 22–3, *APF* 9437; for the demotic see Humphreys 1985*a*, n. 40. The transaction may have been a *prasis epi lysei* (ead. 1986*a*, 78); the slaves were resold to the husband of Leokrates' younger sister in a transaction discussed below.

²⁵ See Partsch 1909. On Meixidemos of Myrrhinous and the men for whom he acted as guarantor see ch. 25 n. 58; Ampolo 1982, 259 n. 27.

²⁶ Vial 1984, 292–3, 298–300 discusses economic cooperation between kin on Delos: guarantees for leases and loans, joint ventures, etc.; see also Hennig 1983. In a surprising number of cases sons act as guarantors for fathers. In Sicily land sale documents list the names of *ampochoi*, who seem to combine the functions of witnesses and guarantors. In Cordano 1984 no. 1 (*SEG* 34. 940, Camarina, late 4th/early 3rd c.), one of the 8 guarantors of the sale of a house and *kapêleia* is the seller's brother, though for the others no relationship can be traced; in *SEG* 4. 62, a *prasis epi lysei* from Morgantina, there seem to be a pair of cousins (FBS) and a small lineage among the guarantors (see Manganaro 1977, 1980; Ampolo 1985). There are several 4th c. contracts from the Chalkidike area in which a brother acts as guarantor for the seller (son as guarantor in *SEG* 24. 574, Torone); owners of adjoining plots act as witnesses (Hennig 1987).

²⁷ *IG* ii² 1593 = *SEG* 52. 142; Walbank 1995; Lambert 2001; Table 29.20; ch. 29 n. 136. Astyanax I, father of Aristomachos, does not appear in *IG* ii³ 4. 223 and must therefore have been dead by the date of that text.

Notes: Spacing supports restoring [Epi]krates in *IG ii²* 4674. For the date of *IEleus* 141 see n. 13.

TABLE 6.2. Kin as guarantors

Probalinthos—might be related, perhaps affinally, although at present nothing further is known of them.

One building contractor from Perithoidai is guaranteed by a kinsman (brother?) and by a father and son from Acharnai; we do not know whether these two were related to him as well as to each other.

More complete prosopographical data would undoubtedly reveal some cognatic or affinal relationships which we cannot detect at present. On the other hand, the fact that metics could find Athenian guarantors shows that Athenians were prepared to act as sureties for non-kin. When the politician Kephisophon son of Kephalion of Aphidnai (*APF* 8410) acts as guarantor for the banker Blepaios son of Sokles of Lamptrai, for a substantial Eleusinian contract, and

when Philophron son of Philokles of Peiraios and Pausistratos son of Lysimachos of Peiraios act as guarantors for Kephisophon, leasing a valuable house in Kollytos, there is no reason to suppose that kinship is involved.²⁸

These guarantees or transactions with the state provide a rare occasion on which economic support from kinsmen was recorded in writing. The great mass of friendly transactions gave rise neither to lawsuits nor to written records. The wife of Polyeuktos of Teithras reminded the family when she was dying that she had ‘lent’ 1800 drachmas to one of her sons-in-law; he was not expected to return it but it was to be counted as part of his wife’s inheritance. The mother left a written record of this debt, but it was hardly a formal contract (Demosthenes 41. 8–9). Scenes in New Comedy suggest that in all but the most lavishly equipped households a sacrifice or wedding feast would involve borrowing pots, pans, and dishes, and co-opting slaves, from neighbouring households (cf. [Demosthenes] 49. 22). Application for friendly loans could also be made to phratries, demes, *genê*, and other such associations, presumably with the support of kin; or the borrower’s friends could club together to form a temporary *eranos* association and make a collective loan (ch. 12 n. 48).

A rich kinsman could also help a poorer one by employing him as an agent or even as a servant. The element of dependence and subservience in such relationships was apt to create resentment, and the sources are circumspect in describing them, but at least a few cases can be discerned. The speaker of Isaios 5 (§ 11) relates indignantly that Dikaiogenes III had sent his ward, son of his adoptive sister, to Corinth as batman to the guardian’s brother. Less controversially—both because of the large sums involved and because they were not in Attika—Konon left his brother’s son in charge of his property in Cyprus, bequeathing 10,000 drachmas and 3 talents (18,000 dr.) to the nephew and to his father when he died (Lysias 19. 40; *APF* 13700). As we have already seen, when Leokrates of Pallene left Athens after Chaironeia he ‘sold’ a slave workgroup to his sister’s husband Amyntas. Amyntas re-‘sold’ the slaves to Timochares, husband of Leokrates’ younger sister (Amyntas’ WZH). The slaves were valued at 3500 dr., and Timochares paid ‘interest’ at 100 drachmas a month, which would be a very high rate of interest for a loan. De facto Amyntas seems to have been employing Timochares to manage a small business for him, the capital value of the slaves being specified in case Leokrates returned to Athens and wished to redeem the slaves, as indeed he may have done.²⁹

²⁸ *IEleus* 157. 32–4; Walbank 1983, stele I e col. ii 12–17 (*SEG* 33. 167). (The contributions to payment of trierarchic debts in 328/7, *IG* ii² 1628. 339–452 = 1629. 859–975, were from the social and political point of view more like an *epidosis*, and are considered in ch. 15.)

²⁹ Lyk. 1. 22–4 (ch. 14 n. 41). Blass 1877 emended the text to *mian tês mnâs* (approximately 12.5% p.a.). Pringsheim 1950, 245–6 regards the transaction as a sale on credit. Timochares acted as witness for Lykourgos in his prosecution of Leokrates, which suggests to me that there had been conflict between them when Leokrates returned to Athens (Humphreys 1986a, 78).

Rich men were expected to devote time to serving as trierarchs and to leading an active political life. There was no officially recognized class of citizen business-managers or foremen in Athens; farms or workshops were run by slaves or freedmen. The owner's wife would presumably supervise work carried on where she lived, but might find it more difficult to travel from one estate or enterprise to another, and could not act in any legal capacity. A man who was abroad needed a trustworthy citizen to keep an eye on his affairs, and must often have turned to kin (cf. [Dem.] 49. 40–1). Apollodoros son of Pasion, who was on bad terms with his stepfather and brother, turned to his neighbour Nikostratos; in recompense he had given him two slave farm labourers ([Demosthenes] 53. 6), and he paid his ransom when he was captured. Nikostratos' brother was sent to Aigina with the money to negotiate his release (§§ 6–7). Apollodoros' wife's father Deinias was also called in to help and advise ([Demosthenes] 50. 24–8). The speaker of Isaios 2, adopted out of his family of origin, administered the affairs of his brother while the latter was away on mercenary service (§ 12).³⁰

Both the egalitarian ethos of the democracy and the prevalence of slavery discouraged the development of patron–client relationships in Athens. Dependence was demeaning, and regular work on another man's behalf was a slave's life. Xenophon, whose travels had no doubt given him experience of societies in which patron–client ties were openly recognized, presents Sokrates as recommending the relationship as a solution to the problems of the elderly working man, the upper-class bastard, or the rising sycophant in search of respectability (*Memorabilia* 2 §§ 8, 10, 9). But he has to stress the importance of tact; the client must be treated as a friend and equal. This was particularly important if the dependent partner in the relationship was a kinsman, since kinship had its own ethos of equality, founded on the equal division of estates between brothers (cf. Plutarch *Lykourgos* 8). Thus while there was pressure to choose kin as helpers, because kinship made it easier to disguise the element of clientship in the relationship, there was a countervailing pressure not to draw too heavily on the services of kin who were unable to reciprocate and so could not maintain a balance of equality. Athenians, at least in the upper social strata, were more likely to maintain a widespread network of kin and friends who could be called on for short-term assistance than to build up large interconnected chains of economic activity which relied on regular economic cooperation between kin over a long period. Athens produces

³⁰ Possibly, despite the adoption, there had been no formal division of property. The fact that both brothers went to serve as mercenaries after dowering their sisters (§§ 3–6) suggests that there was little to divide. Although we mostly hear of guardians when they are accused of misbehaviour (ch. 3), some may have improved their wards' estates (cf. Is. 9. 28).

no 'House of Murashu' or Strozzi.³¹ It may not be entirely accidental that the best evidence for long-term heredity in occupations comes from occupations in which men used their specialist skills independently—medicine, playwriting, sculpture. It may also be no accident that we hear relatively frequently of fathers helping sons to set themselves up in economic independence, by acting as guarantors for them. Comparative evidence from other periods and other parts of the Greek world, where the political system was less egalitarian or slavery less prevalent, may help us to see how much of this picture is due to peculiarities of the sources, how much to the specific character of Athenian society, and how much to the general structural characteristics of Greek kinship.

³¹ Cardascia 1951; Stolper 1985; Goldthwaite 1968; Heers 1977, 226–36. More detailed comparisons of the ways in which the rich diversified their economic base and activities in ancient Mesopotamia, the classical world, and medieval and renaissance Europe, relating this diversification to directions of economic growth, political contexts, residence patterns, inheritance rules, and other functions of kinship, would be useful.

Disputes

INTRODUCTION

After Solon's legislation no further formal steps were taken to define the kindred, though there are some changes in terminology: the introduction of a single term for all affines, *kêdestês*, in place of *gambros* and *pentheros*, and of the 'descriptive' *theios pros patros* and *theios pros mêtros* in place of *patrôs* and *mêtrôs* for FB and MB, may belong to the sixth century.¹

Evidence from the sixth and early fifth centuries is scanty and restricted to a few leading families. Detailed analysis of Athenians' interactions with their kin becomes possible only from c.430, when inscriptions become more plentiful and speech-writers—or their clients—begin to put forensic speeches into circulation in written form.

By that time, Athens was a highly law-conscious society. The term *philodikos*, 'litigious', was introduced in this period (Lys. 10. 2, cf. Thuc. 1. 77). Six thousand jurors were empanelled every year; comic poets wrote for an audience familiar with court procedure and family law. But this high level of legal competence (Boltanski 1990) was accompanied by a rather low level of legal authority. There were no judges and no legal experts to rule on interpretation; the procedures for ensuring that upper-class transgressors were brought to court did not always function effectively; there was no public machinery for enforcing court decisions, and no mechanism for ensuring consistency between one court decision and another. While one would not wish to claim that modern legal systems are entirely free from such problems, presenting a case in an Athenian court was perhaps in modern terms closer to appealing for justice in the correspondence columns of a national newspaper,² or on television, than to engaging with the much more professionalized procedures of modern law. The formalities of a court appearance were those of public performance rather than legitimate authority. The construction of identity was central to this performance (cf. Wohl 2010).

¹ *Têthis pros patros* for FZ occurs on a funerary plaque by the Sappho Painter c.500 (ch. 10 n. 15).

² Boltanski's study of justice as cultural competence (1990) is based on letters to *Le Monde*.

A court in session, judged as theatre, was dauntingly formal even in early times. Eighth-century *basileis* gathered, sceptres in hand, to pronounce judgment on their inferiors; in classical Athens it was the size of the jury, never less than two hundred strong, that litigants might find intimidating. Only a small proportion would be personally known to either party.³ Athenians shrank from exposing family quarrels to an audience of strangers, and felt that it should be possible for kin to settle their disputes peaceably, in private, without recourse to the courts. Most cases, especially those concerning familial matters, were preceded and accompanied by attempts to negotiate settlements out of court; this meant, however, that before attempting to construct a strong and clear-cut position to be held in court, litigants had often made compromises and concessions that could later be used against them. As a dispute deepened, however, the focus shifted from private negotiation to the assumption of an identity and the internalization of a narrative that could be presented to strangers. Professional speech-writers helped in this process, and jurors became accustomed to participation in courtroom dramas that gave them the illusion of being ‘invited into the living-room’ and allowed them to take on the role of senior relatives arbitrating in a family council; forensic speeches became popular reading matter.

We normally do not know how the jury voted,⁴ and have to read speeches closely both to reconstruct the outlines of the opponent’s case—from the points the speaker tries to counter and the weaknesses he tries to camouflage—and to sense the dynamics of the development of conflict. Analysis of the weak points in the speaker’s argument was already developed to a fine art by the time of Wyse’s commentary on Isaios (1904); in the case studies that follow I have tried to supplement this with a closer focus on reconstructing the rhetorical strategies of litigants whose speeches have not been preserved. I have also tried to reconstruct the often quite long and tortuous process by which deviations from normal patterns of family structure and relationships developed into antagonisms of almost tragic dimensions, and the successive choices of strategy which finally left the disputants feeling that they had no other option than to appeal to the courts. I have also stressed, in reconstructing the options open to disputants, their need to recruit kin to support them in court with witness testimony, and their experience of the case which to us is represented by an

³ No attempt was made in Athenian courts to screen out jurors who knew litigants personally (for such a move see the Nakone text in Ampolo a.o. 2000). We do not know when it became standard practice to have odd-numbered juries. On the development of relations between formal and informal dispute settlement mechanisms see Humphreys 1983*b*.

⁴ We know the result of Is. 11 from [Dem.] 43, and of Dem. 36 from [Dem.] 45. 6; cf. also [Dem.] 59. 10. Occasionally the results of cases involving adoption may be deduced from epigraphic evidence, but we shall see that such deductions are not entirely reliable. On forensic speeches and the process by which they came to be published see Humphreys 1985*b*, 316–21.

isolated speech as only one episode in an ongoing struggle to hold on to a position of advantage in family affairs.⁵

*

An example will illustrate this method and will also serve to introduce some of the ways in which Athenians made use of ambiguities both in law and in social relationships to stave off open conflict in the short term, thereby however sometimes paving the way for more serious clashes later.

*

Case 1: Euktemon of Kephisia, Isaios 6, APF 15164 (Table 7.1)

The title given by ancient editors to Isaios 6, *On the Estate of Philoktemon*, is in itself problematic. Philoktemon of Kephisia died before his father Euktemon, but it was not until Euktemon's death that Chairestratos son of Phanostratos of Kephisia put in a claim to inherit the family property, on the grounds that Philoktemon (his MB) had left a will adopting him. As we have seen (ch. 1 n. 95), it was far from clear whether in Attic law a son could bequeath property during his father's lifetime, especially if he was childless and still living in the parental home, as Philoktemon was. In any case, it was not in the interests of Phanostratos and his son to antagonize Euktemon by putting this point to the test. The speech we have was delivered by a family friend of Phanostratos and Chairestratos, acting as supporting speaker (*synēgoros*) for the young man; by handing over the

TABLE 7.1. Isaios 6
(APF 15164)

⁵ I began to develop this approach in Humphreys 1989, an analysis of the strategic choices open to the various parties concerned in the family dispute represented for us by Dem. 39–40, traced over some 30 years. For reconstruction of the opponent's case see also Thür 2008, 128.

main presentation of the case to a respectable ally Phanostratos and Chairestratos probably hoped to avoid some of the hostility that might be aroused both by washing the family's dirty linen in public and by their own exceptional wealth.⁶

Euktemon and his wife, who was the daughter of a fellow-demesman, Meixiades, had three sons and two daughters. By the point in time at which the narrative of the speech starts, two of the sons had died without producing offspring; Philoktemon, the third, was married but still childless (§ 7); both daughters were married, one to Phanostratos of Kephisia, with two sons, the other to a Chaireas, with a single daughter. Euktemon had taken to spending much of his time at a tavern he owned near the Kerameikos gate, managed by a slave woman, Alke, who according to the speaker had been a prostitute in her youth;⁷ this doubtless led to quarrels with his family, which in turn confirmed his preference for less critical company. Worse followed: at a phratry meeting, probably in autumn 367,⁸ he presented a candidate for admission, claiming that the boy was his legitimate son. Philoktemon objected, and the phratry refused admission. Euktemon countered by threatening to take a new wife and start a second family;⁹ kin and friends (*anankaioi* § 23, cf. *oikeioi* § 26), including, no doubt, his two sons-in-law, mediated between father and son, 'knowing that Euktemon, already in his nineties, was unable to beget sons, but that they would be produced somehow or other',

⁶ Cf. Wyse 1904, 486. A litigant had to present the opening part of his case in person, but could hand over to a *synégoros* almost immediately (cf. Rubinstein 2000). The speaker here may be Aristomenes of Poros (*IG* ii² 1609. 81–2, *APF* pp. 62, 564; but see n. 12 below on the date of this record).

⁷ The building was a *synoikia*, in multiple occupancy, and though the speaker identifies it for the jury as 'the one where they sell wine', it may also have been a brothel. Lind 1988 (followed by Schmitz 2000) suggests that the building has been found, but there must have been several *synoikiai* in this part of the Kerameikos (though Reiske's reasons for reading <*syn*>*oikia* in Is. 5. 26 are not compelling). Wohl 2010, 271–8 analyses the rhetorical construction of Alke as villainess.

⁸ The chronology is reconstructed by W. Thompson 1970*e* (cf. Labarbe 1953): first presentation of 'Lemnian' boy at the Apatouria in autumn 367, second presentation and admission apparently during winter 367/6; death of Philoktemon early summer 366; will put in writing summer 366, revoked after 'almost two years' (§ 29; it is in the speaker's interest to exaggerate the length of time) late winter/early spring 364; claim that the 'Lemnian' boys are orphans, death of Euktemon, and court hearing at the beginning of 364/3 (§ 37 seems to refer to the beginning of the civil year; this is compatible with the date given in § 14). The boy admitted to Euktemon's phratry in winter 367/6 should have been presented to his deme at the beginning of 364/3 (Wyse 1904, 500 thinks he had already been admitted to the deme, but this is incompatible with the formal registration of the boys as orphans, § 36).

⁹ Demokrates of Aphidnai, whose sister Euktemon was proposing to marry, was a colourful figure well known some 25 years later, as an elderly man, for his caustic comments on the Athenian political system and his position as representative of the family of Aristogeiton at public dinners (parasites were expected to make jokes). At this date he was probably in his 30s, re-betrothing a sister who had been widowed or divorced; Euktemon probably knew him as a client of Alke's wine bar (the implication in *APF* 12267 that the two were of similar age is quite unnecessary). For what it is worth, Demokrates may have had Lemnian connections. (The appearance of his son Demokles II as *klētēr* in 343/2 in an affair involving property in Aphidnai, *Agora* XIX P 26. 512 does not prove that the family had lived continuously in the deme; he may have been chosen merely as a well-known demesman, cf. ch. 31 n. 24).

and a compromise was patched up. Philoktemon promised not to oppose the boy's candidacy for phratry membership, on condition that he would only receive a small piece of land (*chôrion*) from Euktemon's estate, and would not be entitled to the full share of a legitimate son; and when the objection was withdrawn the *phratêres* insouciantly admitted the boy. Euktemon and Philoktemon were rich (§ 38) and capable of contributing generously to phratry festivals and funds, and they probably had many kin and affines in the phratry; if the whole group presented a united front, non-kin would not venture to object. As we shall see, this somewhat casual attitude towards qualification for phratry membership and thus, by implication, citizenship, was not uncommon.¹⁰ A blind eye could generously be turned to doubtful birth, provided that the distribution of property was not seriously affected.

Matters might perhaps have rested there, if Philoktemon had not died on active service in the following summer.¹¹ The speaker of Isaios 6 presents Euktemon as making a last-minute decision, when Phanostratos was about to leave to serve as trierarch and his brother-in-law (WZH) Chaireas was in Piraeus seeing him off, to record his agreement about the boy's inheritance rights in a written will (§ 27). This story is hardly convincing; the sons-in-law must have become concerned about the succession to Euktemon's estate as soon as they heard of Philoktemon's death, and the insistence on a written will must surely have come from them. The heavy investment of Phanostratos' family in liturgies in 366/5/4 may have been made in anticipation that the dispute would eventually arrive in court. Phanostratos, as a member of the deme Kephisia, to which the boy would have to seek admission, was in a position to exert some pressure; however, he could not immediately claim a share of the estate for his son Chairestratos on the strength of the will left by Philoktemon, since it was not clear that Philoktemon had anything to pass to his heir other than his eventual rights in Euktemon's estate.¹²

¹⁰ Euktemon and one of his daughters had both married within the deme Kephisia, and the family may have belonged to the core of deme members also affiliated to a phratry with its headquarters in the deme. On the relation between phratry membership and citizenship see ch. 19 n. 37.

¹¹ There would however have been further trouble when the boy became old enough to be presented to Euktemon's deme, the final step which was necessary to give him citizen status. Philoktemon may have expected his father to die before the two years between presentation to phratry and presentation to deme had elapsed.

¹² That Philoktemon had made a will, deposited with his second brother-in-law (ZH) Chaireas, who had only a single daughter, seems well attested by witnesses (§ 7). Though the opponents may have tried to raise doubts of its genuineness, their main argument was probably that Philoktemon could not make a valid will during his father's lifetime. The speaker counters by showing that this limitation was not mentioned in Solon's law on testaments (§§ 8–10). The date of IG ii² 1609, in which Phanostratos is recorded as syntrierarch on two ships (42, 92), and the name of his son [Chairestr]atos has been very rashly restored as also serving (81–2), remains uncertain. M. Clark 1990 argues for 379/8 (Gabrielsen's defence, 1993, of 378/7 or 377/6 is weak), and Cargill 1995 (85–6) suggests that the kleruchs of this

Euktemon, then, was forced to make a written will, which was deposited with a kinsman (*prosêkôn*), Pythodoros of Kephisia. We have to deduce the provisions it contained from the next developments in the story.

This brush with his sons-in-law cannot have improved Euktemon's relations with his family, and he now found sympathizers and allies in another kinsman (*syngenês*, § 55), Androkles, and a neighbour who had rented part of the Kerameikos *synoikia* where the old man was now living, Antidoros. They persuaded him (the speaker claims) to annul the will, on the grounds that the only way to ensure that his younger 'sons' inherited his property was to convert it into cash (§ 30). Euktemon asked Pythodoros to produce the will, and when he was reluctant to do so summonsed him to appear before the eponymous archon with the document (§ 31). Phanostratos was present, but the other son-in-law, Chaireas, was dead, and his daughter was not represented, perhaps because a dispute was currently in progress between claimants to her hand and Chaireas' estate, to which she was *epikleros*.¹³ Pythodoros declared that he would recognize that the will had been annulled as far as Phanostratos was concerned, but would not destroy it unless a representative of Chaireas' daughter was present; and the archon gave his authority to this decision. Euktemon insisted, in the presence of the archon and his *paredroi*, and others whom he called on to act as witnesses, that Phanostratos and Pythodoros had agreed to the annulling of the will.¹⁴ He then proceeded to start selling off his real estate.

There was no standard procedure in Attic law for annulling a will (cf. Case 11 below). The normal reason for annulment was that heirs had been born to the testator, which automatically invalidated a will in favour of a substitute heir.¹⁵ In other circumstances, the will had to be treated like any other contract, and could only be annulled if all those concerned agreed to cancel and destroy it. By forcing Euktemon to summons them to appear before the archon with the document (*dikê eis emphanôn katastasin*), Phanostratos and Pythodoros obtained additional evidence that the will had existed and had not recognized the alleged son(s) as entitled to the full share of a legitimate heir; on the other hand, Euktemon also had witnesses that the will was no longer acknowledged.

year went to Lemnos or Imbros. However, we have at present no solid evidence for a formalized return of *kleruchs* to these islands after the Peloponnesian War, and a connection of ii² 1609 with the *kleruchy* on Samos c.366/5/4 (cf. J. K. Davies 1969) does not yet seem to be totally excluded. Chairestratos' younger brother served as *choregos* shortly before the case came to court (Is. 6. 60); see ch. 21 at n. 73 on the timing of *choregiai*.

¹³ This seems to me the most likely interpretation of the decision that the will could only be annulled when a *kyrios* had been appointed for Chaireas' daughter (§ 32, *epeidê kyrios katastaiê*). Chaireas may have left a will betrothing her, which was contested by his next-of-kin.

¹⁴ This seems to be the force of *diomologêsamenos*, § 32.

¹⁵ Cf. e.g. Is. 7. 9, where the betrothal of the daughter adopted by will, to Lakrateidas, seems also to have been annulled (ch. 2 n. 55). For detailed discussion of the law in [Dem.] 46. 14 see Humphreys 2002*a*.

It is hard to see what provisions this will had contained. Kamps (1938) suggested that Euktemon had specified precisely which pieces of property were to go to each of his five heirs—Chairestratos and his brother (sons of Phanostratos), Chaireas' daughter, and the two boys he was seeking to legitimate—but such specific assignments are not otherwise attested in Attic practice,¹⁶ and the attempt to make sense of the MS reading *pempton* in § 46 by postulating equal division between these five heirs is not convincing. On the other hand, the fact that Euktemon felt it necessary to annul the will before selling off his property might suggest that it contained a detailed list of the items included in the estate. It evidently also allocated a share of the estate to Chaireas' daughter, which means that Chairestratos' claim to inherit the whole estate as adopted son of Philoktemon was not recognized.

Whatever the contents of the will, its legal status was now dubious, as was that of the will made by Philoktemon. One begins to sympathize with the suspicious attitude to wills of Athenian courts (W. Thompson 1981). The lines of conflict in the family had hardened, and Euktemon's time was running out.¹⁷ Androkles and Antidoros seem to have decided to concentrate on extracting cash from the estate rather than acquiring citizenship for Euktemon's two protégés, which required the co-operation of Phanostratos. They made an attempt to pre-empt the decision on the disposal of the estate by claiming that the boy who had been presented to Euktemon's phratry, and his younger brother, had been adopted as heirs by Philoktemon and by one of his brothers, Ergamenes, and that since they were orphans their property should be leased. This rather ingenious move probably implied a claim that Euktemon was now senile and incapable of managing his own property; the hope was perhaps that Phanostratos, in opposing it, would be forced either to argue that Euktemon was still competent to manage his own affairs, or that his sons had not been entitled to dispose of his property by will.¹⁸ The speaker tells us only that Phanostratos' objections to the leasing were successful.

Soon afterwards, Euktemon died. Claims to the estate were put in by Chairestratos, on the basis of Philoktemon's will, and by Chaireas' widow, who presumably claimed a half share as one of two surviving daughters.¹⁹

¹⁶ Such allocations are sometimes credited to mythical kings: see ch. 5 n. 72.

¹⁷ Euktemon is said to have been 96 when he died, senile and bedridden (§ 35), but no evidence is produced, and the figure may be exaggerated. His son Philoktemon was still childless in 366 and his granddaughter (DD) apparently unmarried in early 364, which suggests that his children were born between c.410 and 390; possibly his own birthdate should be brought down to c.455–445.

¹⁸ This move is clearly related to Phanostratos' hopes of basing a claim on Philoktemon's will, and Sauppe's emendation of Philoktemon to Hegemon in § 44 should be rejected (cf. Wyse *ad loc.*). It is perhaps hardly worth spending time on the speaker's allegation that Androkles and Antidoros intended to lease the orphans' property to themselves (§ 36).

¹⁹ *Pempton merous* in § 46 has to be emended.

Androkles met these claims by a *diamartyria* affirming that Euktemon had left legitimate sons;²⁰ our speech comes from the case in which Chairestratos prosecuted him for false witness. According to the speaker, Androkles was also acting for Chaireas' widow, on the grounds that as her next-of-kin he was entitled to claim her as epikleros.

The speaker's strategy was to stress the repeated shifts in his opponents' tactics and persuade the jury that Euktemon in old age had fallen into the hands of an unscrupulous female slave who had 'destroyed his judgment' (§ 48), had persuaded him to recognize her sons by a freedman (§§ 19–20) as his own, and had recruited the equally unscrupulous Androkles and Antidoros to defend the boys' interests in court.²¹ He is well supported by members of Euktemon's phratry and deme (§§ 10–11), probably kin and/or friends of Phanostratos, and perhaps also of Euktemon's wife; he cannot, however, produce kin of Euktemon to testify that they knew nothing of Euktemon's alleged second marriage to a woman called Kallippe (§ 16). He makes the most of the compromise over the boy's admission to the phratry, the will and Euktemon's attempt to annul it, the fact that the boys now presented as Euktemon's heirs had earlier been put forward as the orphan adopted sons of Philoktemon and Ergamenes, the inconsistency between the boys' claim and that of Chaireas' widow, and the lack of evidence that Euktemon had contracted a second marriage.

Divorce was a matter for private settlement between the husband and the kin of the wife, who were entitled to recover her dowry if she returned to her family of origin. Since Euktemon had moved out of his family house leaving his wife in residence there, and since his wife was elderly and had surviving children who would claim to inherit her dowry when she died, there was little call in this case for a divorce settlement; on the other hand, cohabitation certainly entered into the Athenian concept of marriage (cf. Vernant 1973), and the speaker does not attempt to argue that since Euktemon had taken no formal steps to divorce his wife he could not have remarried.²² Instead, he stresses that his opponents had first claimed that the second wife was of Lemnian origin—always ground for suspicion—and that they needed time in order to collect information about her family; subsequently they had announced that her father was called Pistoxenos, a name no doubt pronounced by the speaker in a heavily

²⁰ Whether any of Androkles' other arguments against the validity of Philoktemon's will could be considered to be part of his *diamartyria* may not even have been clear at the time, and the speaker of Is. 6 is doing his best to increase the confusion (§§ 5, 43, 52, etc.).

²¹ The speaker claims that property had been smuggled from Euktemon's rooms into those occupied by Antidoros after the old man's death (§ 39); Antidoros probably figured also as one of the boys' guardians.

²² On occasional moves to 'register' divorce with the archon in order to legitimize a problematic situation see ch. 9 at n. 50. It is not clear whether specific claims to have remarried had ever been made by Euktemon himself.

ironic tone, and that he had died in Sicily leaving her to be brought up as Euktemon's ward. The speaker argues that a girl whose father had died in 415–13 could hardly have been available for marriage to her guardian in the 380s, when the boys whose parentage was disputed must have been born; he may have been oversimplifying his opponents' case here, but it does seem to have been a weak one.²³

So much for Chairestratos' side of the case. Its weak point, glossed over by his *synēgoros* with references to the family's generous performance of liturgies (§§ 59–60), was that he and his father were already extremely rich, and could be presented as greedily claiming the whole of Euktemon's estate at the expense of poorer members of the family. From this point of view Androkles' championship of the cause of Chaireas' widow as well as that of the two 'Lemnian' boys could be presented in a positive light; he was protecting the weaker members of the family, widows and orphans, against powerful opponents who were trying to take advantage of Philoktemon's premature death and Euktemon's old age to divert the whole estate into their own already well-lined pockets. Chaireas' widow and her kin may well have shared this point of view; if Androkles was indeed prepared to marry her, this was probably her best chance of enjoying part of her father's estate.

The outcome of the case is unknown. *IG* ii³ 4. 63 records Chairestratos as son of Phanostratos of Kephisia, but (a) it may predate the settlement of the case, (b) he could (just?) have returned to Phanostratos' oikos after producing a son to inherit from Philoktemon, or (c) he might have discredited the opposition so thoroughly that it seemed unnecessary to go through the formalities of adoption, which in any case did not require a change of deme. [Phil]oktemon of Kephisia, secretary for the eighth prytany in 319/18 (*IG* ii² 388. 4) may be either a son of Chairestratos or one of the two 'Lemnian' boys, if they won the case.²⁴

*

²³ On suspect Lemnians see Wyse 1904, 499; ch. 4 n. 31; Carawan 2008; a dubious Lemnian will in Is. F III 1 Thalheim 1903. The speaker repeats the name Pistoxenos ('trustworthy foreigner') with relish (§ 13, cf. 15). The expression in § 13, 'Pistoxenos—as if all they had to do was to drop the name', may suggest that the alleged father was the mid-5th-c. *kalos*, son of Aresandros (BArch 213946). *LGP*N s.v. Pistoxenos 4 may be wrong in associating the P. of this speech with Lemnos (according to the speaker, his opponents inconsistently switched from their Lemnian story to a new one). However, the name may have been commoner in the 5th c. than later. The reason for claiming that the girl was Euktemon's ward was presumably that Androkles could produce no witnesses to her betrothal (§§ 15–16); she could have returned to marry Euktemon after being widowed or divorced by another husband, and her father could have been a Lemnian who died in Sicily, but all that would be a lot to ask the jury to believe. Hypereides' *Against Timandros* (see Thür 2008) perhaps also plays on the dubious reputation of the kleruchy.

²⁴ 'Adoption' that did not involve a change of deme or phratry was problematical; see Case 8 below. Philoktemon II is now attested on a horos of perhaps the 320s, Malouchou 2013*a*.

This case provides insights into the problems that arose from applying Solon's laws in the very different conditions of fourth-century Athens, the continuing vulnerability of the 'empty' oikos, which his legislation had not really succeeded in protecting, and some of the areas of ambiguity that remained in family law; it also illustrates the dynamics of disputes between kin.

The typical situation envisaged by Solon, I have argued, was that of the peasant smallholding whose owner, if he had no sons, needed to introduce an heir or in-marriage son-in-law into his household to supplement his own labour and provide for him in his old age. Euktemon's property, however, was not in agricultural land but, for the most part, in city housing.²⁵ He did not need an able-bodied young man to get his crops in, after the death of his sons. Philoktemon and his father had been living in the same house without basing their co-residence on economic cooperation, which may have caused some friction between them (cf. ch. 5 at nn. 26–8). After Philoktemon's death, the proposal to transfer one of Phanostratos' two sons to Euktemon's oikos to take his place might have seemed obviously equitable if the two men had been sixth-century peasant farmers, but in fourth-century conditions could easily be represented—and resented—as mere greed. The presentation of the 'Lemnian' boy to Euktemon's phratry was no longer a question of ensuring that he would be recognized as a member of the local community; phratry membership could be detached from rights to Euktemon's estate—or so Philoktemon had hoped—and treated as a concession to the old man's folly that could be made at low cost.

In such circumstances, where rights to inherit were not directly related to labour obligations and acceptance by a close-knit local community, the 'empty' oikos became even more problematic. The rights of a legitimate son, known as such to his father's kin, friends, phrateres, and fellow-demesmen, were solidly established; at the worst he might have to share his inheritance with claimants whom he regarded as *nothoi*.²⁶ Philoktemon could afford to make concessions. His death significantly changed the situation. The 'Lemnian' boys and their protectors now had more to gain from claiming that they were Euktemon's legitimate sons; the two sons-in-law had to try to maintain a united strategy against this threat in a situation in which they themselves were potential rivals, and their collaboration was therefore precarious. Other kin could try to take advantage of the situation. Solon's law on epikleroi, focused on the oikos in which a father leaves an unmarried daughter or daughters at his death, did not provide any very clear guidance for a case in which two daughters who were both married, with children, became heirs to their father as the result of a brother's death.

²⁵ See *APF* 15164. He had a farm at Athmonon and a *chôrion* somewhere else, four urban properties, and some slave craftsmen.

²⁶ Cf. Dem. 39–40 (Humphreys 1989) and Case 7 below.

It was also not entirely clear whether a son who was already adult and taking an active part in the city's military life was debarred from making a will before his father's death;²⁷ this was arguably Solon's intention, but it very probably was not stated in writing. It was also unclear whether a husband who had not cohabited with his wife for several years, but had not taken any formal steps to divorce her, was obliged to consider himself still married to her, or not.

The death of Philoktemon gives this dispute a particularly clear and interesting dramatic shape. While he is alive a real effort is made to find a peaceful solution, even at a cost of some financial sacrifice and embarrassment in the phratry. After his death, Euktemon's sons-in-law at first make only the relatively moderate demand that the compromise made with Philoktemon should be recorded in writing, but the pressure they have to exert to achieve this, and, probably, Euktemon's knowledge of Philoktemon's will in favour of Chairestratos, must have created considerable tension. Chaireas may have played the role of mediator between Euktemon and Phanostratos; at any rate, when he died, the situation rapidly deteriorated. Euktemon's attempt to annul his will led to a confrontation before the archon; Phanostratos may have tried to prevent him from selling his properties, although without success; he succeeded in frustrating the scheme of presenting the two 'Lemnian' boys as orphan sons of Philoktemon and Ergamenes. By this time intransigence on both sides had led to the construction of completely negative stereotypes adapted only to the inevitable eventual confrontation in court: Phanostratos and his supporters see Euktemon as a senile, dirty old man manipulated by an unscrupulous slavewoman and a crooked kinsman, while their opponents will no doubt have presented him as hounded out of his home in old age by a vindictive wife and daughters who have taken offence at perfectly normal behaviour, egged on by a rich and litigious son-in-law who is exploiting the situation for his own ends. This process of construction of the opponent as an out-and-out villain enabled litigants to overcome inhibitions against taking family disputes to court; it was absorbed into forensic rhetoric, where the ambitions of speechwriters, and the tastes of jurors and readers, added their own contributions to its elaboration. A court dispute was a shadow-puppet drama; a litigant who allowed himself to become wholly encapsulated in this illusory scene could forget that when the case ended he would have to return to a real world inhabited also by his opponents.

*

²⁷ Philoktemon could of course make a will before going on campaign to cater for the possibility that first his father and then he himself died during his absence; cf. the rule that a father with young sons could make a will that came into effect only if they died before reaching maturity ([Dem.] 46. 24). There was evidently no automatic *epidikasia* of the estate of a son who predeceased his father. The fact that Philoktemon served as trierarch does not imply any separation of his property from his father's (ch. 5 n. 47).

Sources refer occasionally to cold-shouldering at deme and phratry festivals, and lines of cleavage within these groups must often have been reinforced by hostility between sets of kin. Other Athenians, however, managed to live for long periods in close association punctuated by periodic forays into the courts: Mantitheos son of Mantias of Thorikos and his half-brothers lived in the same house over a period of some twelve years, during which they took each other to court on at least three occasions.²⁸

It was especially the function of kin of the principals in a family quarrel to mediate between them and attempt to restore amicable relations. In the Euktemon case, conflict in the phratry over the candidacy of the first 'Lemnian' boy made the family quarrel a matter of public knowledge, and it was followed by mediation from kin, who persuaded Philoktemon to compromise. These kin presumably committed themselves to supporting Euktemon when the boy re-applied for phratry membership, and were witnesses to the agreement limiting his rights of inheritance. Phanostratos, Chaireas, Androkles, and Pythodoros may all have been present at this family council. Pythodoros, trusted by all parties, was chosen to hold Euktemon's will; Chaireas may have mediated between Euktemon and Phanostratos; Androkles cast himself in the role of defender of the 'Lemnian' boys and, eventually, of Chaireas' widow. In court, Chairestratos was able to produce kin, phrateres, and fellow-demesmen to testify that they had never heard of a second marriage of Euktemon; these witnesses may well have been kin of Chairestratos and his father, whose membership of Euktemon's deme (and perhaps also of his phratry) gave them an advantage in recruiting supporters. Androkles, however, will have had his own witnesses, including perhaps kin of Chaireas.

The decision rendered in court in 364/3 will not have been the end of the story. If Euktemon's estate was adjudged to the 'Lemnian' boys, they will have had to fight Phanostratos again in order to gain entry to the deme Kephisia. If Chairestratos won the case, he will have had difficulty in recovering property from Androkles and Antidoros.

KIN AS PROTECTORS OF THE WEAK

I have suggested that in the Euktemon case Androkles will have presented himself as the champion of orphans and defenceless women against the rapacity of Phanostratos and Chairestratos. In doing so he would be conforming to a pattern established by Drakon and Solon, who seem to have expected kin to appeal to the judicial authorities of the city for help in regulating disputes that had gone

²⁸ Cold-shouldering: Is. 9. 21, 33, see ch. 19 at n. 73. Mantitheos: Dem. 39–40 with Humphreys 1989; cf E. M. Harris 2000, though the term 'feud' seems to me inappropriate.

beyond the point of peaceful informal negotiation. But it is not so very common, in the classical period, to find Athenians taking on active roles as principals in court cases in defence of kin who are not members of their immediate nuclear family.²⁹ How effectively did Drakon's provisions for the participation of kin in homicide cases and Solon's mechanisms for the protection of orphans and epikleroi work in the fifth and fourth centuries?

*

Our information on homicide is patchy. It is the topic of all the preserved speeches of Antiphon, and figures significantly, with the closely related category of accusations of wounding with intent to kill, in the Lysianic corpus, but thereafter disappears from the record, apart from a few references to cases that never came to court. Development in writers' narrative skills and a corresponding shift in readers' interests may partly explain this distribution. Isaïos' speeches for inheritance suits tell a longer and more complex story than Antiphon's or Lysias' homicide narratives, just as Thucydides tells his story in a more complex way than Herodotus. Writers had to learn how to present such narratives, jurors and readers had to learn to follow and appreciate them. The developing art of constructing character (*êthos*) allowed hearers and readers to get from contemplating villainy the thrills that earlier had been supplied by acts of violence.³⁰

Changes in writing and reading do not, however, provide the whole answer. Homicide cases that came to court may have been rare, except in the aftermath of civil war. Muggers and other low-class criminals, if they killed their victims, would have been summarily dealt with if caught.³¹ The deaths of freedmen and freedwomen, who probably formed quite a high proportion of the urban underclass, could not be avenged at law unless they left adult sons, since as ex-slaves they had no kin; metics also might not have kin in Athens.³² The client of Lysias who took

²⁹ Androkles was acting as guardian of the 'Lemnian' boys (perhaps self-appointed), and using the mechanism of the *diamartyria*; he was acting for Chaireas' widow as her next-of-kin. Action by a guardian in Is. 11; *diamartyria* by WF in Is. 2, where however the main defence speech in the resulting perjury suit is made by the claimant himself, acting as *synégoros*. For court action by nuclear family members see Table 7.14.

³⁰ On the reasons for circulation and purchase of court speeches see Humphreys 1985*b*, 318–21; ead. forthcoming *a*. We need a study of the history of narrative that looks at historiography, rhetoric, and drama together. The shift in forensic oratory from homicide to inheritance cases to some extent parallels the shift in drama from tragic myth to the intrigues of New Comedy, but unfortunately we cannot trace the development of dramatic plots between the late 5th c. and the end of the 4th c. Useful list of attested homicides in Riess 2007.

³¹ In Is. 6. 20 we hear of a freedman who leaves Attika to avoid the consequences of having caused damage (*zêmia*). The sources are not very clear on summary justice (*apagôgê*), and modern discussions have made matters worse by trying to impose over-rigid definitions (cf. Gagarin 1979); I am only concerned here to point out that Athens had a two-tier judicial system, in which most of what we would think of as typical criminal activity was beneath the attention of the courts, let alone of speechwriters.

³² Athenians were not very clear whether a *prostatês* could bring an action against the killer of a freed slave or other client ([Dem.] 47. 68–72, Plat. *Euthyphro* 4b, cf. Grace 1973, 1975); it was accepted, and

advantage of the law that a *moichos* caught in the act, in one's own house, could be legally killed, was a rarity, and may have gone farther than he intended.³³ Furthermore, it was not a simple matter to decide whether a death should be classed as homicide or not, if the victim died some time after a fight or a stomach upset. Kin had some latitude in deciding whether to prosecute for homicide or not, in such cases; if the dispute was a family affair, as may quite often have been the case, it might never come to court. The speaker of Isaios 9 claims that his mother's first husband Euthykrates of Araphen had been killed in a fight with his brother Thoudippos over the division of their father's estate, but it seems that no homicide charge was ever brought.³⁴ Because the victim of a fight might die some time later as a result of injuries, 'wounding with intent to kill' was handled by the same procedure as intentional homicide at Athens; this however opened the door to charges of wounding with intent by victims who had survived, and were prepared to negotiate. Demosthenes brought such a charge against his cousin (FBS) Demomeles, but dropped it before the Areiopagos hearing; to drop such a case—or even, sometimes, to bring it—laid one open to charges that the wounds were self-inflicted, but he may have been persuaded by kin to settle the matter out of court. Mantitheos of Thorikos claims that his half-brother Boiotos sued him before the Areiopagos for wounding, but lost the case.³⁵ There are indeed signs of a general suspicion of the motives of homicide prosecutors. The speaker of Antiphon 6 asserts that his opponent's charge that, as *chorégos*, he was responsible for the death of a boy singer, was only brought to paralyse his attempts to fight corruption in public affairs; the speaker of Lysias F X Gernet/Bizos 1926, XI Carey 2007 (8 Thalheim 1913) claims that his opponent Antigenes, who was prosecuting the speaker's mother for aborting his child, was prepared to drop the case if her sons agreed to let him marry their sister.³⁶ The defendant in the case for which Antiphon 1 was

indeed laid down in law ([Dem.] 47. 72) that a slave's owner could prosecute if his slave was killed, but prosecution was not obligatory (Antiph. 5. 48), and might be regarded by the defendants as harassment (Isokr. 18. 52–4; in [Dem.] 59. 10 the Athenian accuser claimed that the victim was a Kyrenian and produced alleged kin to support his case; the MS reading *drachmón* should be kept).

³³ He describes how he hit the adulterer, threw him to the ground, tied him up, and questioned him, but does not say how he killed him; he may have intended only to give him a sound beating like that administered by Teisis in Lys. F CXXIX Carey 2007, XVII Gernet/Bizos 1926, 75 Thalheim 1913. Even W. V. Harris 1997 and Manthe 2000, in excellent discussions of this incident, fail to consider the possibility that homicide was not originally intended. Conceivably Lys. F. CXXIII Th., CXXXIX Carey, came from a similar case (but see Carey's comment).

³⁴ Case 8. Euthykrates 'became ill as a result of his injuries and died not many days later', Is. 9. 17. Something similar may be involved in the case mentioned in Dem. 22. 2, i.e. the speaker's contention will have been that his father had died a natural death rather than that he was killed by someone other than the speaker.

³⁵ Aisch. 2. 93, 3. 51; cf. [Dem.] 58. 28–9, Harp. s.v. *hypophonia*. Politicians frequently accused each other of dropping charges (cf. [Dem.] 58. 42–4). Lys. 3 and 4 were written for cases of wounding with intent that came to court; the speaker of Lys. 3 claims that the charge was only brought 4 years after the fight, when he was involved in a difficult case resulting from an *antidos* challenge (§§ 19–20).

³⁶ The charge in Antiph. 6 was that the defendant was responsible for the death because of his official position (*bouleusas*). Cf. Heitsch 1980, Gagarin 1997; Humphreys 1991 on indirect responsibility for

written, who had to defend his mother against his half-brother's charge that she had conspired to poison their father, will no doubt have claimed that his half-brother wanted to force him to give up some of his inheritance.³⁷

The female defendants in the last two cases had adult sons to defend them. The brother or father of a childless woman accused of poisoning might prefer to hush the matter up, take her back without her dowry or with only part of it, and marry her elsewhere.³⁸

We certainly do not get the impression, from this handful of cases, that large numbers of kin were mobilized to assist in prosecutions for homicide in the classical period. The speaker of Lysias 13 was supporting the victim's brother, his own brother-in-law (WB), a younger man, in a charge against Agoratos for causing death during the rule of the Thirty; otherwise accusations are presented by members of the victim's nuclear family.³⁹

*

There is also room for doubt about the efficacy, in the classical period, of Solon's provisions for the protection of epikleroi and orphans. We have no preserved

homicide and public office. On Lys. F. XI Carey 2007 (X Gernet/Bizos 1926, 8/X Thalheim 1913) see the collection of sources in Nardi 1971; S. N. Adam 1984; Todd 2003 (not noticed by Carey); Pepe 2014. Gernet's view that the opponent Antigenes was a kinsman of the father of the foetus, the father being dead, and that the girl A. wanted to marry was an epikleros, matrilinear half-sister of the speaker, is unnecessarily complex. It is simpler to suppose that Antigenes was the second husband of the woman he accused of homicide (i.e. abortion, in this case), and that his stepsons alleged that he had designs on their (full) sister (F 19 Carey does not explicitly call her an epikleros). The title *kat' Antigenous* might be explained by assuming that the speaker (Antigenes' stepson) was using a *graphé paranómōn*, at a date before the *paragraphe* procedure became established; but there are worse confusions in the tradition, and the title may not be worth defending. It is also possible that the speech is a rhetorical exercise.

³⁷ Cf. Gagarin 1998, 40f. The victim did not die until 20 days after drinking the 'poison' (line 20), and the evidence against his wife was weak. The prosecutor emphasizes his own youth in a way that suggests that he was younger than his half-brothers; if so, and if the speech comes from a genuine case and is not a demonstration piece, he may have been the son of another woman, legitimized during the Peloponnesian War when such irregularities were more easily tolerated (see Heitsch 1984*b*). This would provide all the more reason for hostility to his stepmother and her sons. Sir John Miles' copy of the Loeb edition of Antiphon and Andokides (Maidment 1941), now in my possession, has a pencilled note pointing out that the speaker probably could not have prosecuted for homicide unless he had been formally recognized as a legitimate son of the victim.

³⁸ Reference to another poisoning case, in which the woman was successfully defended, in Ar. *MM*. 1188b 31–7; the same motif in Soph. *Trach.* In Is. 8. 41 the husband of Diokles' half-sister dies and Diokles threatens to accuse her of poisoning; perhaps the speaker's invention, but women could have reason to fear such manoeuvres. See Case 3 below.

³⁹ Antiph. 1, Lys. 10. 31, sons; Antiph. 6, Lys. 12, brothers. Lykourgos' story in 1. 112–13 that the killers of Phrynichos were arrested by his *philoi* and imprisoned, after the restoration of democracy, does not inspire much confidence. In Lys. F. CIII/232 Carey 2007, XIII 2 Gernet/Bizos 1926 (XC/64 Thalheim 1913), from a homicide case, we hear of *syngeneis* assembling, but the reference may be to the victim's funeral rather than the prosecution of his killer.

speeches from legal action to protect an epikleros;⁴⁰ one of the two known cases of *eisangelia* for mistreatment of an orphan seems to have been a political manoeuvre, and the other was unsuccessful, as were two attempts to insist that orphans' estates should be leased. In all other cases wards with complaints against their guardians sue in person when they come of age. Kin and affines may well help them at this stage, but do not take legal action earlier to put a stop to the depredations of guardians they consider dishonest.⁴¹

PROTECTION FOR WOMEN

Male orphans were at least able to sue their guardians when they came of age, and could perhaps count on some inclination among jurors to sympathize with their youth. Women never arrived at a status that allowed them to defend their own interests in court. They were always dependent on mobilizing male kin to fight their battles for them.⁴² Their ability to do so must clearly have varied with the personalities of the individuals involved, but some structural regularities can be observed. A woman with ties of kinship or affinity to men in various households might be able to influence their disposal of property in the interests of her children; but a number of sisters with the same rights to inherit property, dispersed by marriage into separate households, would have considerable difficulty in mobilizing their husbands or sons to take united action on their behalf.

Case 2: the sisters of Dikaiogenes II, Isaïos 5, APF 3773 (Tables 7.2A and 7.2B)

Menexenos of Kydathenaion had four daughters and one son, Dikaiogenes II. The father died in battle in 429, while the children were still minors, and they must have come under the care of guardians, one of whom was probably Menexenos'

⁴⁰ See however Carey 2004 (Lysias F XII). [*Nomos epiklêrô*]*n kakôseô*[*s*] is restored in the list of contents of SEG 32. 329/36. 296, but it is not clear that the alternative [*orphanô*]*n* is impossible. The case appears to have been a prosecution for false witness after a *diamartyria* (Soritz-Hadler 1986); possibly a claim by a collateral had been met by a *diamartyria* asserting that *d.c.* had left legitimate offspring, but the restorations are far from certain.

⁴¹ See ch. 3 at n. 7 and R. G. Osborne 1985*e*, 48–9. The *eisangelia* of [Dem.] 58. 1, 30–4, 70 (APF 436) was a protest against the transfer of an orphan from one *oikos* to another (ch. 2 n. 30); that of Is. 11 (Case 9) was a claim that the guardian, Theopompos, had defrauded his ward of a half share in Hagnias' estate; neither case was concerned with management of the ward's own property. Another *eisangelia*, for which no details are available, Dein. F 61 Conomis 1975. Demands that orphans' estates should be leased in [Dem.] 38. 23, Dem. 27. 15 (informal, by MZH), Is. 6. 36 (Case 1); cf. Lys. F CXIX Carey 2007, CV Thalheim 1913 (81, 85 Blass 1868), where the outcome is unknown. Suit at the end of guardianship may have seemed to promise a more clear-cut settlement, but probably left many wards feeling that they had not recovered their full due.

⁴² On women's representatives in court see Humphreys 1986*a*; Gagarin 1998. Only Phile (Is. 3, case 4 below) has support from collaterals, her MB and FMBs.

Notes. *Agora* XIX H 95. [—]dios of Aphidnai one of 2 creditors on loan of 500 dr., restoration as [Harmo]dios dubious. *IG* ii² 2235 misdated s. Harmodios 5 Demokles' widow may have married Protarchides of Potamos; see Wyse's note on §§ 26–7 (1904).

TABLE 7.2A. Isaios 5 *APF* 3773

TABLE 7.2B. Polyaratos of Cholargos *APF* 11907

brother-in-law (ZH) or (more probably) nephew (ZS) Proxenos of Aphidnai,⁴³ who dined in the Prytaneion as representative of the family of the ‘tyrannicide’ Harmodios. Good marriages were arranged for the daughters by their brother and his guardians; one received a dowry of 4000 drachmas.⁴⁴

Dikaiogenes II and his sisters had grown up in anxious times, and after the disaster of 413 in Sicily the dangers became even greater. Dikaiogenes was still childless, perhaps even unmarried, and it is easy to imagine that his sisters were apt to express concern for his safety, urge him to set his affairs in order

⁴³ ZS according to *APF* (3773, 12267), where Dikaiogenes III is misleadingly referred to as the nephew (for FZSS) of Dikaiogenes II (p. 146). On this view, which must be right, the daughter of Dikaiogenes I married Harmodios II. Their son Proxenos I should have been born c.460 (and thus cannot be the *kalos* of the 470s–460s), and his cousin (MBS) Dikaiogenes II perhaps in the 440s. Proxenos’ children, Hegeso (? cf. ch. 11 n. 29), Harmodios III, and Dikaiogenes III, seem to have been born in the 420s, although it is not necessary to assume that Dikaiogenes III was technically a minor when he became the adopted heir of Dikaiogenes II. It remains surprising that Dikaiogenes III should have been given the name of his FMF; if he did not change his name on adoption (chs. 2 n. 52, 8 n. 59), perhaps Proxenos I had a brother called Dikaiogenes who died young.

⁴⁴ § 26: the Dikaiogenes referred to here appears to be Dikaiogenes II. The apparent contradiction with § 9, where the same woman is called ‘the ex-wife of Demokles’ in the context of 399, need not disturb us, since the whole passage is designed to present the adoptive kin of Dikaiogenes III, quite misleadingly, as a group of defenceless women and orphans; the speaker implies that Kephisophon’s daughter was alone in the world, when in fact she had a father and two brothers. It is possible however that the arrangements for her second marriage were made under Dikaiogenes II’s will rather than during his lifetime. Polyaratos of Cholargos (*APF* 11907), who married another of Dikaiogenes II’s sisters, gave his own daughter a dowry of dr. 6000. Wyse’s suggestion (1904, 417–18) that another husband, Theopompos, was a kinsman of Proxenos is not compelling.

before he set out on the next campaign by making a will, and hint at the suitability of adopting one or other of the nephews now growing up in their own households.⁴⁵

To choose one and reject the others, however, would have caused a great deal of bad blood, and Dikaiogenes found another solution: he made a will conditionally adopting Proxenos' son Dikaiogenes III as heir to one-third of his estate, leaving the other two-thirds to be divided between his sisters. This will, presumably witnessed by Dikaiogenes II's brothers-in-law as well as by Proxenos, was recognized as valid when Dikaiogenes II died in 412/11. The arrangement, giving the adopted heir only part of the estate, was unusual and could not be justified by reference to Solon's laws; but Solon's laws did not provide very satisfactorily for an *oikos* containing four daughters and no son. The sisters may have grumbled at the compromise proposed, but if the will was well authenticated they were hardly in a position to contest it. Proxenos was probably still alive at this time, and continued to deal fairly with the family, duly handing over the shares to which the sisters were entitled.

The situation changed after the end of the Peloponnesian War. Dikaiogenes III had by this time come of age, and his father Proxenos had evidently died. The wealthy upper-class husbands of Dikaiogenes II's sisters were vulnerable to accusations of having stayed quietly in the city under the Thirty instead of taking an active role in resistance, or to more serious charges. Kephisophon of Paiania was one of the men who played a key role in the reconciliation between oligarchs and democrats in 403, trusted by both sides at the time but open to attack as soon as the demos began to feel more secure politically, and to chafe under the impact of economic depression. Polyaratos of Cholorgos had married one daughter to the son of the demagogue Kleon, but his other son-in-law Eryximachos may have faced a charge of 'staying in the city' in these years. A third son-in-law, Theopompos, had died.⁴⁶

⁴⁵ If the eldest son of Kephisophon of Paiania was given the name of his MF Menexenos (ch. 8 n. 40), hopes of succession to Menexenos' estate may have been responsible. It is unlikely that Dikaiogenes II was old enough to have made his will before any of his sisters had produced heirs.

⁴⁶ *APF* 3773, 11907; see ch. 19 n. 121 on Rhinon of Paiania, and Roberts 1938, 105–6 (*PRyl* III 489) on accusations of 'staying in the city'. It might be particularly dangerous for those suspected of oligarchic sympathies to combine together in court. The identification of Polyaratos' son-in-law with the defendant in *PRyl* 489 is based only on the relative rarity of the name and the comparable status of the two families; the other well-known Eryximachos of the period, the doctor, would also have been open to attack, for his ties with Sokrates and Alkibiades. Names with the root Eryx- are perhaps in any case less uncommon than *APF* suggests: an Eryxis of Kephisia was councillor in 408/7 (*Agora* XV 1; *IG* i³ 515), an Eryxias of Peiraios practised as a doctor in the 4th c. ([Dem.] 33. 18), and the eponym of [Plato] *Eryxias* is attributed to Steiria. The choregos of *IG* i³ 966, son of an Eryximachos of Kydathenaion, may have been called [Eryx]ias, but there are other possibilities (ch. 6 n. 2). On the name of Kallibios son of Kephisophon of Paiania see ch. 8 n. 27.

Dikaiogenes III—put up to it, his opponents claimed, by ‘Melas the Egyptian’ (§ 7)—filed a claim in 399 for the whole estate, presumably arguing that in 412/11 the wealthy and oligarchic husbands of Dikaiogenes II’s sisters had intimidated his father Proxenos into giving up two-thirds of it.⁴⁷ Polyaratos of Cholargos gave notice that he intended to prosecute one of Dikaiogenes’ witnesses for false testimony, but according to his son died before he could bring the case (§ 9). Dikaiogenes’ claim was accepted; there may have been some scandalized talk about his behaviour,⁴⁸ but the sisters and their families were not in a position to fight back effectively. One of the sisters’ sons, Menexenos III son of Kephisophon of Paiania, successfully prosecuted one of Dikaiogenes’ witnesses for false testimony, but was persuaded to settle privately, dropping his accusations against other witnesses and leaving his cousins in the lurch (§§ 12–13). The speaker of Isaios 5, Menexenos IV son of Polyaratos of Cholargos (see chs. 8 n. 40, 27 n. 17), implies that Menexenos III was motivated solely by greed, but threats to rake up oligarchic associations may also have been involved.

According to Menexenos IV the traitor was cheated of his promised reward (§ 14), and in 389 the cousins mounted another campaign, this time claiming the whole estate of Dikaiogenes II on the ground that he had died intestate.⁴⁹ Leochares, the defendant in the suit in which Isaios 5 was delivered, attested by *diamartyria* that the estate was not adjudicable; the cousins prosecuted him for perjury, but were persuaded in court to settle before the votes were counted, on the understanding that Dikaiogenes III would restore two-thirds of the estate to them, with Leochares, and Mnesiptolemos of Plotheia, acting as guarantors (§§ 17–18). Further disputes and attempts at private arbitration followed (§§ 31–4); eventually the cousins took Leochares to court, in the suit from which our speech comes, on the grounds that the bargain had not been fulfilled, since most of the property handed over by Dikaiogenes was mortgaged.⁵⁰

Leochares apparently argued that the written agreement drawn up in court at the time of the earlier suit had not specified that the property was to be handed over free of all claims (*anamphisbêta*); this part of the story is instructive for the light it throws on Athenian attitudes both to writing and to property. It is likely

⁴⁷ The speaker of Is. 5 stresses in § 7 that plenty of time had passed under democratic rule since 412/11. Andok. 1. 88 shows that after the upheavals of 412 to 403 attempts to reopen even cases settled under a democratic regime were expected; for interference with justice under the Thirty see Lys. 25. 16, *PRyl* 489 col. iv. 114–6. Loening’s study (1987) does not deal with the extensive problem of intrusion of the issue of oligarchy into suits on every kind of topic. Plato’s decision not to venture on a political career belongs to these years (*Ep.* 7 324b–326b). See ch. 14 at n. 40.

⁴⁸ On the Dikaiogenes of Lysias F XXXIII Carey 2007 (XXXI Thalheim 1913) see ch. 5 n. 50.

⁴⁹ §§ 14–16. Dikaiogenes III had discredited the will produced in 412/11, and Menexenos III’s prosecution for false witness had cast doubt on that produced in 399.

⁵⁰ Mortgaging or otherwise transferring property ostensibly into other ownership was a common device for avoiding paying penalties imposed by courts, see ch. 14 at nn. 38–42. Wyse’s sympathy for Dikaiogenes III’s financial straits seems to me misplaced.

enough that the cousins did not think of the written document drawn up in court as an exact record of the agreement made orally, but as a supplement to it. At this period witnesses were still much more important than writing as proof of the existence of a legal obligation, in the view of most Athenians. The cousins also clearly thought of the estate of Dikaiogenes II not as a certain monetary value that Dikaiogenes III was obliged to restore to them, but as a collection of specific pieces of property that had been valued and divided up in 412/11 and now had to be reassembled, revalued, and redivided; this is why Protarchides, husband of one of the sisters, is required to return into hotchpotch the house in the Kerameikos that he had received in lieu of his wife's dowry. The document drawn up in court therefore probably contained a list of properties with valuations, regarded by the cousins as an inventory rather than a contract (cf. § 3). They had to think of their future negotiations with each other over the division of the property once it was secured, as well as the immediate agreement with Dikaiogenes III and Leochares.⁵¹

The latter, however, were taking advantage of a situation that allowed them to base their case on the letter of the law and of the document drawn up in court.⁵² The ambiguity of the relation between written document and verbal agreement in the Leochares case paralleled the ambiguity of the relation between written law and private agreement in the will of Dikaiogenes II. Solon's law did not envisage a situation in which an adopted heir got only part of his *pater's* estate, and Dikaiogenes III's position was indeed anomalous in terms of written law, though such anomalies were always liable to occur when there was more than one potential epikleros in an *oikos*.⁵³

Like the Euktemon case, the case of the sisters of Dikaiogenes II shows how an initial step undertaken to provide an amicable compromise in a family dispute leads later to confrontation in court because the compromise arrangement has no support in law. Both cases also show the tensions that arose when daughters who had been dowered, and at the time of their marriage had no further expectations

⁵¹ I assume that the sisters' representatives had divided the property into four equal parcels and drawn lots in 412/11, and intended to do the same in 389 (ch. 5 at nn. 72–4); possibly some account would be taken of improvements, deterioration, or other changes in value that had taken place in the interim. The speaker claims that they now allowed Dikaiogenes III to keep his town house (which he had evidently improved, but had also mortgaged, §§ 11, 29) in addition to his one-third share of the estate; this is a further indication of the cousins' tendency to think of property in highly specific and concrete terms. See Hart 2004 on the entanglement of thinginess and imagination in conceptions of property.

⁵² See R. G. Osborne 1990*b* on quibbling as the defining characteristic of sycophancy. Assessing the cultural significance of figs for Athenians is difficult because in the principal text (Athen. 74c–80e) the interests of urban gourmets are mingled with older ideas, but there is some evidence that figs are cheap food eaten when nothing else is available, which suggests that the sycophant pounces on the trivial and insignificant (LSJ s.v. *sykinos* may be wrong to derive the metaphorical sense 'worthless' from figwood rather than figs).

⁵³ It was the growth of the association between adoption and testation—not prominent in Solon's day (Humphreys 2002*a*)—that made the family with several daughters and no sons especially problematic.

treated him insultingly (a prosecution for *hybris* eventually followed);⁵⁷ the husband of the younger died in circumstances that—again according to the speaker of Isaios 8—allowed Diokles to threaten her with a prosecution for homicide. She gave up her claims on her father’s estate and Diokles became the guardian of her son, the best part of whose land he is said to have appropriated.

These accusations are tendentious and highly coloured, and the speaker has to make the best of his lack of witnesses by claiming that Diokles’ victims are too scared to come forward.⁵⁸ The basic facts seem to be that Diokles had succeeded to at least part of his stepfather’s estate, that he had been involved in a fight with the husband of one of his half-sisters, and that he had become guardian of the son of another sister. He was apparently on good terms with the third sister and her husband, the Kiron whose estate the speaker of Isaios 8 was claiming.

According to this claimant, Kiron had had one daughter, the speaker’s mother, by his first wife, a cousin (MZD) who had died after four years of marriage; by Diokles’ sister he had two sons, who died before their father. One can understand that the relation between grandfather and grandsons of which the speaker paints a touching picture (§§ 15–16) may have been experienced by Diokles’ sister as a brash insistence on the part of her stepdaughter on thrusting her sons upon their

imply that all were still unmarried; the term is often used loosely, cf. Karnezis 1972.) *Eisepratteto* in § 41 presumably refers to informal demands rather than court proceedings.

⁵⁷ The history of interpretations of this passage is instructive: one has to go back to Meier-Schoemann 1824 (320 n. 82) to find a scholar ready to recognize that Athenians could be as crude and cruel in their treatment of peers as they were in dealing with slaves. Whether we should accept Schoemann’s later emendation of *étimôse* to *étimase* in § 41 (1831) is a fine point, but Diokles’ behaviour has nothing to do with loss of citizen rights. It is similar to that of Teisis in Lys. F CXXIX Carey 2007, XVII Gernet/Bizos 1926 (75 Thalheim 1913), of Hegesandros and his friends in Aisch. 1. 57–87 (the victim here is a public slave), and of the speaker in Lys. 1 (cf. also Hyp. F 200 Blass 1894, n. 35 above, and *epibouleusas* in [Dem.] 59. 66). Diokles is presented as a violent, manic young man who liked to take the law into his own hands—the popular conception of Orestes (§§ 3, 44, with Wyse 1904, 590–1) does not seem to have owed much to Aeschylus—who had been involved in night brawls and had been taken in adultery (§§ 44, 46). All this may have been past history by the time Is. 8 was delivered (between 383 and 363); by this date Diokles was *lampros* in the performance of liturgies (§ 40), and some 35 years had elapsed between his sister’s marriage to Kiron and the latter’s death. His son Polemon, who leased sacred property in 343/2 (*Agora* XIX L 6 col 1 A 9), must have been born by 363. The prosecution for *hybris* (the best collection of fragments is in Baier-Sauppe 1850) apparently claimed that the victim had died as a result of his injuries (Harp. s.v. *katôikodomêse*), but evidently the link between cause and effect was not strong enough for a homicide charge. (Harp. s.v. *ekplinthēusas*, however, does not necessarily imply that the victim freed himself.) The *hybris* charge may have been filed by the speaker of Is. 8 as a way of putting pressure on Diokles and influencing public opinion against him at the time of the dispute over Kiron’s estate. It is better not to connect the account in 8. 41–2 of the second sister’s troubles with Is. *Pros Dioklea peri chōriou* (F IX/6 Thalheim 1903, 20 Blass 1874), since § 42 does not suggest that court proceedings were taken, and it is doubtful whether she would be called ‘the *epiklēros*’ in quite this way.

⁵⁸ Presumably there were some witnesses for the *hybris* charge, who will have testified in 8. 42, but apparently the speaker got no support from the second sister and her son. See Humphreys 2010*b* for the possibility that Diokles was responsible for SEG 58. 265.

grandfather on every possible occasion, in order to remind him of their rights as heirs. Suspicions about the stepdaughter's legitimacy were nurtured, and when Kiron died a nephew (BS) put in a claim to the estate with the support of Diokles, alleging that his opponents' mother was not really Kiron's daughter. The speaker of *Isaios* 8 produces testimony from his own patrikin and the kin of his mother's first husband that she was given in marriage in due form, with a dowry, by Kiron, but Kiron's own kin evidently supported his rival; for evidence that his mother grew up as a daughter in Kiron's household he has to fall back on hearsay evidence from Kiron's associates (§ 14) and complaints that his opponents will not let him torture the family slaves. We do not know the outcome of the case.⁵⁹

It should be pointed out that Diokles could claim to be a protector rather than a robber of widows. His mother and the widow of Kiron may well have been better off with him as guardian than in the hands of sons-in-law or the sons of a stepdaughter.⁶⁰ A woman who married twice, as we shall see, had her own game to play in family disputes over property, and some of them could play their cards with skill.

This skill, however, had to be learned, and the male support without which it could not succeed had to be built up over time. The teenage girl whose guardian gave her in marriage on the understanding that her dowry was the only share of her father's estate to which she was entitled had very little chance of asserting her rights. As we have seen, this was particularly likely to happen if an *oikos* contained several daughters and no sons, but it might happen also to a single daughter.

Case 4: Kleitaretē-Phile, Isaios 3 (Table 7.4)

Here again a man with no sons adopts an heir who does not marry his daughter.⁶¹ Pyrrhos adopted his nephew (ZS) Endios by a will that was not contested,⁶²

⁵⁹ The fact that the *hybris* case against Diokles came to court suggests that conflict between the speaker and Diokles did not end with the hearing for which *Is.* 8 was written, but even if the speaker won he would probably have had difficulty in recovering Kiron's property. For her second marriage his mother had only 1000 dr. dowry (§ 8), a figure perhaps cited in *Is.* 3 as evidence that the bride is illegitimate (see below, n. 69); here the excuse is that part of the 2500 dr. given with her to her first husband had not been recovered. No witnesses support the assertion that Kiron was married briefly to his MZD before marrying Diokles' sister; perhaps the similar claim in [Dem.] 59. 119 may suggest that litigants hoped to lend respectability to obscure and doubtful marriages if they claimed that the bride was a kinswoman. Conversely, in *Ter. Phorm.* FBD marriage is used to legitimize a bride whose status is dubious (cf. ch. 4 at n. 31).

⁶⁰ The speaker's opponent in *Is.* 8 could present a pathetic picture of Diokles' sister, pushed aside after the death of her own sons by an unscrupulous woman who played on the elderly Kiron's desire for heirs (cf. *Is.* 6).

⁶¹ Paoli 1961 points out that the same situation exists in *Men. Dysk.*, where the adopted son cannot marry the daughter because she is his uterine half-sister (Table 2.5; cf. ch. 4 at n. 51).

⁶² Xenokles and Nikodemos had announced that they would prosecute the witnesses to Endios' adoption for false testimony (§ 56, cf. 66–7), but this happened after Endios' death. Their claim that the estate

TABLE 7.4. Isaios 3
 Note: On *Agora* XIX H
 81 see n. 70.

and Endios held the estate for twenty years. However, when he died without leaving an heir and his brother claimed the estate on behalf of their mother, Pyrrhos' sister and next-of-kin,⁶³ a *diamartyria* was made by Xenokles of Kopros (§ 3) to the effect that Pyrrhos had left a legitimate daughter, Xenokles' wife Phile. Endios' brother successfully prosecuted him for perjury and then, in Isaios' speech, attacked the supporting testimony of Nikodemos, who had testified that his sister was Pyrrhos' lawful wife and Phile's mother. The speaker's case was that Nikodemos' sister was a notorious *hetaira* and Phile's parentage could not be proved.

About the marriage of Pyrrhos and Nikodemos' sister there was certainly room for doubt, since Nikodemos could not prove that he had dowered her,⁶⁴ had only one witness to the betrothal from his own circle of intimates, who did not appear in court to support his testimony,⁶⁵ and could produce no evidence

under adjudication was that of Pyrrhos and not of Endios did not require them to show that the adoption of Endios was invalid, since by law if an adopted son left no biological heirs the property reverted to the *oikos* of his *pater* and not of his *genitor* (cf. Is. 10, [Dem.] 44, and for a parallel without adoption Is. 6, Case 1, where the estate is treated as Euktemon's); but the adoption cast doubt on Phile's legitimacy. Nikodemos and his sister may have been in too weak a position to protest when Pyrrhos died, or they may have been pacified by promises that Endios would marry Phile (cf. Lotze 1981; ch. 2 n. 41); the child must have been very small when Pyrrhos died (she reached marriageable age 12 years later, § 31).

⁶³ Though the speaker protests in § 67 against the classification of the estate as that of Pyrrhos, it suited him to stress his mother's relationship to Pyrrhos rather than his own relation to his brother; courts were familiar with attempts to transfer estates from one brother to another when the relationship had been broken off by adoption (Is. 10, [Dem.] 44, cf. ch. 2 at nn. 34–5). Did Endios fail to make a will because he thought that as an adopted son he was not entitled to do so (Humphreys 2002a), or from negligence? The rule that an *epikleros*' son took control of the property transmitted by his mother as soon as he came of age apparently was not felt to operate in cases such as this (the claimant in Is. 10 does not distinguish very clearly between his mother's rights and his own, Wyse 1904, 650).

⁶⁴ § 49. Maffi 1989 suggests that clothes and jewellery had been provided. However, it seems possible that although there was a betrothal Pyrrhos never went through with the marriage, due to family opposition and/or illness.

⁶⁵ § 18; the reasons for the witness's absence may however have been perfectly legitimate; cf. n. 153 below. Pyrrhos' MBs were (Nikodemos claimed) present at the betrothal as representatives of the groom's family.

that Pyrrhos had presented his wife to his phrateres or fellow-demesmen. Nikodemos' own entitlement to citizenship had been questioned.⁶⁶ The speaker had found witnesses to testify that they had been the woman's clients, or had met her at dinner parties (no place for a wife), or had been disturbed by rowdy parties in Pyrrhos' house when she was present (§§ 10–14); the reliability of all this must have been open to question, but the aim was to present Pyrrhos to the jury as a wild young bachelor rather than a respectable husband and father. The relationship with Nikodemos' sister need not have lasted very long, whatever its character. On the other hand, Nikodemos evidently had no difficulty in showing that both Pyrrhos and Endios had recognized Phile as a child towards whom they had some responsibilities. The testimony of Pyrrhos' three maternal uncles (MBs) that he had celebrated the *dekatê* for her and given her the name of his mother, Kleitarete, is not likely to have been false,⁶⁷ and Endios had formally betrothed her to a citizen, Xenokles of Kopros,⁶⁸ with a dowry of 1000 (or 3000) drachmas. The fact that Pyrrhos remained on good terms with his sister and his maternal uncles (the latter only half a generation older than himself, cf. Humphreys 1986a, 76–9), but not with other kin, is consistent with the supposition that he had made a rash marriage disapproved of by older and soberer members of the family; his nephew concedes that it has been known for young men to fall in love with women like Nikodemos' sister, lose their heads, and in their madness agree to arrangements against their own interests (§ 17). His argument that the small dowry given to Phile shows that she was betrothed 'as the daughter of a *hetaira*' (§ 45, etc.) has no legal standing, since betrothal (*engûê*) should have implied that the fiancée was of legitimate citizen birth, but it may well have been true that Endios and Xenokles had come to an understanding.⁶⁹

⁶⁶ He had been accused in court by one of his fellow-phrateres and had got off by only 4 votes, § 37. We are given to understand that this had taken place before Pyrrhos' marriage (perhaps in the 390s, when phratries took steps to eliminate irregularities that had occurred during the Peloponnesian War, cf. ch. 19 n. 114); but the accusation might have been part of the speaker's own campaign.

⁶⁷ The discrepancy between the uncles' evidence that she was named Kleitarete and her husband's reference to her as Phile speaks for, rather than against, the testimony: see ch. 8 at nn. 17–18 and C. B. Patterson 1990, n. 111. The uncles also testified that they were present at Phile's betrothal, §§ 26, 69–71. The *dekatê* did not give a child any legal right to claim recognition as legitimate (Maffi 1985). *Agora* XIX H 81 has been taken as a horos marking security for the dowry of Pyrrhos' mother, but women's names in Kleit- are not uncommon in classical Attika (Kleita, Kleitagora, Kleitaichme, Kleitomache, Kleitotime, Kleito).

⁶⁸ Xenokles had taken pains to show that he had influential friends and was not the kind of man who would marry a girl of doubtful status (Wyse 1904, 304); his witnesses when he went to check the contents of Pyrrhos' mining works at Besa were the *rhêtôr* Diophantos of Sphetos (ch. 27 n. 36), who had also acted as his *synêgoros* in the perjury case, the brothers Dorotheos and Philochares of Eleusis (*APF* 4610; ch. 30 n. 103), and many others (§ 22).

⁶⁹ Cf. Maffi 1989; C. B. Patterson 1990, 72. The law that made such betrothals illegal may not yet have existed at this time (Gernet 1960, 67 n. 3). On dowry size in relation to the estate from which the woman is dowered see Leduc 1991, 302–3. The MS tradition in § 49 gives the dowry as 3000 dr., but

Xenokles does not seem to have complained during Endios' lifetime about the share in Pyrrhos' estate given to his wife. As the speaker points out, Pyrrhos' uncles (MBs), who had testified that Pyrrhos when dying had adjured them to look after Phile (§ 69), do not seem to have made any objection to the marriage; indeed, the argument that Endios had cheated her of her inheritance and possibly ignored Pyrrhos' wishes by failing to marry her himself was hardly one that could be brought by Xenokles and his allies.⁷⁰

As in the first two cases (Isaios 6 and 5), a legally dubious compromise—admission of the 'Lemnian' boy to Euktemon's phratry, division of the estate of Dikaiogenes II between his adopted heir and his sisters, betrothal of Phile—allows the beneficiary later to make claims which the compromise had been designed to forestall. It was easier to make equivocal arrangements where girls were involved, since no formal control was exercised by the city over a girl's entitlement to be classed as Athenian.⁷¹ Phano, whom Apollodoros of Acharnai regarded as the daughter of the *hetaira* Neaira ([Demosthenes] 59), had twice been given in marriage by Neaira's protector Stephanos as his daughter by marriage to a kinswoman, though in both cases gossip had led to divorce.

Case 5: the daughter of Aristarchos, Isaios 10 (Table 7.5)

Another young woman who was given in marriage with a dowry when she might have been entitled to claim her father's whole estate was the mother of the speaker of Isaios 10. She had had two brothers and a sister, but one brother, Kyronides, had been adopted into the oikos of his maternal grandfather (MF), and the other two siblings had died without issue. Aristomenes, brother of her father Aristarchos, had married his own daughter to Kyronides and married Aristarchos' daughter to a non-kinsman. Her son alleges that she urged her husband to claim her rights, but whenever he approached Aristomenes and Kyronides about the matter they threatened to break up his marriage by filing a demand to marry her as epikleros; both her husband and her son were also hampered by

this is normally emended to 1000 ([*tris*]chilias) because § 51 says that the dowry was not even 1/10 (*dekaton*) of Pyrrhos' fortune of 18,000 dr. The suggestion in Paoli 1961, 61–2, of emending *dekaton* to *dikaion* is unconvincing, but possibly in § 51 the numeral *d* was wrongly expanded to *dekaton*; see Wyse 1904, xlv–xlvi on such errors in the Isaios tradition. Since both engue and the dekate were private affairs, it was always possible to carry them out in questionable circumstances, of which both the principal parties and the witnesses were aware. However, if one of the principals then died, the other could try to insist on the legal implications of the ceremony, as happens here.

⁷⁰ Neither Pyrrhos' intentions nor his will can be reconstructed, but it should be pointed out that there is little foundation for the modern idea that a father who made arrangements by will for the future marriage of an epikleros was expected to adopt his prospective son-in-law. In the only attested case of adoption of a son-in-law (Dem. 41), the adoption takes place *inter vivos* and turns out badly. Cf. ch. 2 n. 64.

⁷¹ P. J. Rhodes 1978, 90–1.

Notes: Since the name is otherwise unattested, Xenainetos I may be the eponymous archon of 401/0. On the date of IG ii² 4442 see Byrne 2008, 128–9.

TABLE 7.5. Isaios 10

service in the Corinthian War, and by a condemnation for debt to the state. The story of the threats, designed to appeal to sentimental jurors, is extremely thin,⁷² and apparently no objection was made when, after the death of Kyronides, one of his two sons was introduced into the *oikos* as Aristarchos' adoptive heir.⁷³ I suspect that Aristomenes and Kyronides had disembarassed themselves of the *epikleros* by offering her with a generous dowry to a friend who was in need of cash. She must indeed have resented this, but her husband had accepted the bargain (§§ 5–6, 19–20) and there was little she could do about it during his lifetime. However, when the young man who had been adopted into Aristarchos' *oikos* (Aristarchos II) died without leaving an heir, she saw her chance and urged her son into action. We do not know whether he succeeded.

A somewhat similar compromise is proposed in Menander's *Aspis* (260–73): Chairestratos suggests that Smikrines should take the *epikleros*' property but allow the girl to marry a younger man. Smikrines rejects the idea because, he says, when she has a son he will claim that the property is his. A man who agreed to a compromise might stand by it, but his heirs would not feel themselves bound in the same way.

⁷² Maffi 1990 argues convincingly that the next-of-kin had no right to claim a married heiress; see ch. 1 n. 116.

⁷³ The speaker glosses over the fact that Kyronides himself must have recovered control of Aristarchos' estate for a time. See also the discussions of this family in chs. 2 n. 27, 3 n. 18, 29 at n. 56. If IG ii² 10754 (CAT 3. 351c), a lekythos dated c.370 (?) representing Kallistomache (seated) shaking hands with Aristarchos, Apollodoros behind her (both men standing, bearded) belongs to this family, it must represent Kyronides' widow with her brother Apollodoros and her son Aristarchos II; but in that case the family must have bought a somewhat inappropriate stock lekythos, since Aristarchos died young. Note however the conjunction of the same men's names in SEG 20. 504 a 1 (271 BCE), if genuine.

Case 6: The daughter of Diogeiton, Lysias 32, APF 3885 (Table 7.6)

TABLE 7.6. Lysias 32

A woman who felt herself wronged might thus have to wait some time before she could mobilize a man to champion her cause; but Attic women could be tenacious. The daughter of Diogeiton had married her uncle (FB) Diodotos, by whom she had a daughter and two sons. When Diodotos died her father remarried her, evidently to a man who was prepared to remain content with the dowry he was given and not enquire too closely into Diogeiton's management of his brother's estate on behalf of his wards. It probably was not easy for an outsider to discover how far Diodotos and Diogeiton had proceeded in dividing the property they had inherited from their father; the question did not become of practical importance until Diogeiton himself remarried and had sons by his second wife.⁷⁴ Diogeiton's daughter had to wait until her own daughter was married in order to find, in her son-in-law, an ally willing to help her sons claim their rights.

*

As in the Diokles case, the stepdaughter's loss here was the stepmother's gain. Remarriage was common in Athens; where a woman married twice she was often in a position to exert influence over the disposal of property. When a man married twice there might be friction between his two sets of children; when a woman married twice her two sets of children often felt a closer kinship with each other than the law recognized.

HALF-SIBLINGS

The orators' speeches provide information on 52 second marriages, 22 for men and 30 for women. Thirteen remarriages followed on divorce, 20 on widowhood; the antecedents in the remaining cases are unknown. As one might expect, in a society where women married in their teens and men only in their thirties (ch. 5 at nn. 58–60), we know of 15 widows who remarried, and only three or

⁷⁴ W. Thompson 1972 suggests that Diodotos' property was being diverted to stepsons of Diogeiton, sons of his second wife by an earlier marriage.

TABLE 7.7. Remarriage at Athens (adapted from W. Thompson 1972)

four widowers. Nineteen second marriages produced children, and only four are known not to have done so (Table 7.7).⁷⁵

The chorus in Euripides' *Andromache* (465–70) thinks it a bad thing for a man to have two female partners; the reference is to concubines rather than second wives, but conflict between children by different mothers was likely in either case. Half-brothers by the same father might come into conflict over the division of his estate, over the conduct of an older brother as guardian of younger siblings (Lysias 10. 5?), or over the dowries brought by their respective mothers; sons by one marriage might question the legitimacy of their half-siblings. Mantitheos of Thorikos tried to persuade his father Mantias not to legitimize his sons by Plangon, and quarrels between the half-brothers over property, dowry, and other matters continued, in and out of court, for at least twelve years after Mantias' death.⁷⁶ The sons of the daughter of Kiron by his first marriage found their mother's legitimacy questioned by rival heirs supported by Diokles of Phlya, brother of Kiron's second wife (Case 3); Euktemon tried to introduce an alleged half-brother to share his

⁷⁵ We are more likely to hear when women are left widowed than when men are, because of the property settlements involved. Information on reasons for divorce is scanty. One or perhaps two men divorce their wives in order to marry epikleroi (Dem. 57. 41; Libanios, *hyp.* Dem. 30); Kallias of Alopeke divorced the daughter of Ischomachos in order to marry her mother (APF7826 XII), Perikles divorced his wife in order to live with the metic woman Aspasia, and perhaps to pacify Hipponikos II of Alopeke whose son by his first wife, Hermogenes, may have been disenfranchized by Perikles' citizenship law (ibid. IX, XVI B; ch. 4 at n. 52); Menekles (Case 13 below, Is. 2. 7–8) allegedly divorced his wife because he believed himself to be sterile; Plato's parents may have divorced when the husband, Ariston of Kollytos, decided to settle on Aigina as a kleruch (ch. 4 at n. 27); the daughter of Polyeuktos of Teithras was probably divorced from her uncle (MB) and adopted brother Leokrates as a result of family quarrels (Dem. 41, ch. 2 at n. 64); Phrastor and Theogenes both divorced Neaira's daughter Phano because they had discovered that she was not of citizen birth. Alkibiades' wife tried to leave him because of his infidelities (ch. 9 at n. 50); Euktemon (Case 1) left his wife for other company, but may never formally have divorced her. The divorces of Onetor's sister (Dem. 30. 7–11) are also somewhat suspect. List of widows in V. J. Hunter 1989.

⁷⁶ APF9667; see Maffi 1985; Humphreys 1989 and forthcoming *a*. I do not think Mantias was ever unambiguously married to Plangon. In Antiph. 1 a son whose position may have been particularly insecure (n. 37 above) accuses his stepmother of poisoning his father.

estate with his son Philoktemon (Case 1). It was particularly in such situations that litigants claimed that a man's judgment had been corrupted by a woman's influence. Even where there were no children, the brother of Menekles (Isaios 2, Case 13 below) contested his adoption of his second wife's brother on these grounds. Menekles had married her on the death of his first wife, when she was probably still in her teens; he divorced her after a short period but adopted her brother, and his kin clearly felt that she had exploited the situation.

Case 7: 'Kallias' nothos' (Tables 4.2, 4.4, Andokides 1. 124–7, APF 7826 XI–XII)

Kallias III son of Hipponikos of Alopeke had a son, Hipponikos III, by his first wife; he married a second time, with the daughter of Ischomachos, and then apparently set up a relationship with her mother Chrysilla, as a result of which Chrysilla's kin presented a baby boy to the genos Kerykes as Kallias' son. Kallias repudiated it, but was later persuaded to change his mind; by 399 the boy had been accepted by the genos on the strength of Kallias' oath that this was his legitimate son. There was gossip about the affair, and jokes could be made in comedy about the citizen body becoming full of people like 'Kallias' *nothos*' (Metagenes F 14 *PCG*), but in polite company he was referred to as one of 'the two sons of Kallias' (Plato, *Apology* 20a). However, it is doubtful whether he ever acquired full citizen rights, and when his father died in the 360s there was a new scandal, Athens' equivalent of the Martin Guerre story: Hipponikos III alleged that the claimant who presented himself as entitled to a half-share in the estate, after a long absence as a prisoner (or perhaps mercenary) in Thrace, was not his half-brother but a family groom who had gone north with the boy and happened to resemble him. The story implies that Hipponikos won his case.⁷⁷

*

There are, however, some cases in which patrilateral half-brothers are supportive. Two defendants charged with having obtained citizenship on false

⁷⁷ Dio Chrys. 15. 15 (missed by *APF*; another impostor case, P. Chatterjee 2002). The boy cannot have been born before c.412, and the process of full acceptance by phratry and deme would not therefore begin until c.396; Andokides' speech will have created obstacles (Metagenes' reference should be contemporary with the oath described in Andok. 1. 127, which apparently took place at a late celebration of the *meion*, see ch. 19 n. 80, 138). The boy may have gone north with Iphikrates in 389 or 388 (Xen. *Hell.* 4. 8. 34–9); if we take Dio's story seriously, we learn from it that an Athenian force was defeated at some time in the 380s at or near Akanthos. This might be the defeat by Kotys which was followed by reconciliation and Iphikrates' marriage to Kotys' daughter, c.386 (*APF* 7737). It is also possible, however, that Athenians fought as mercenaries in the encounters between Sparta and the Chalkidian league in 382–79, in which Akanthos was certainly involved.

pretences can produce their half-brothers as witnesses in their favour (Isaios 12, *POxy* 2538).⁷⁸

The speaker in the Isaios case remarks that it is unusual for stepdaughters to support their stepmothers (§ 5); the cases of Diokles' sister and Diogeiton's daughter (Cases 3 and 6) illustrate this. The Diokles case also indicates, however, that a woman with sons by one husband might sacrifice to them the interests of her daughters by another husband.

It is likely enough that a woman tended to think of her children as a single group, in which sons had a right to take precedence over daughters even when they had different fathers. Similarly, the legal ruling that uterine half-brothers were only related to each other as matrikin and had no right to succeed to each other's property if there were patrikin within the degree of second cousin seemed unnatural to mothers and to boys who had grown up in the same household on close and affectionate terms. It is particularly in cases involving the remarriage of women that we can detect wives and mothers exerting their influence behind the scenes.

Diokles, as we have seen (Case 3), claimed to have been adopted by his stepfather, as was Aphareus, the youngest of the three stepsons of Isokrates.⁷⁹ Apollodoros of Leukonoion, whose estate was the subject of Isaios 7, was brought up in the home of his stepfather, who helped him in a successful suit against his guardian (FB) when he came of age; when still unmarried, Apollodoros made a will provisionally adopting the daughter of his uterine half-sister, and later in life when he had had, but lost, a son, he adopted her son, his nephew. The adoption, which had not yet been approved by the deme when Apollodoros died, was contested by his next-of-kin on the father's side, a female cousin (FBD).⁸⁰ Thus, though forbidden at law to marry his uterine half-sister, he ended his life with a son produced by her.

⁷⁸ Kallias himself had an illegitimate half-brother, Hermogenes the Socratic. W. Thompson 1968 suggests that the charge in *POxy* 2538 ([Lysias] F A 3a Carey) was that the speaker was his mother's child by an earlier marriage to a non-Athenian (the speaker says that his father met and married her in Selymbria, in the Sea of Marmora). The speaker is supported by kin (*syngeneis*), *phratêres*, and fellow-students and teachers who testify that he and his brother were educated together. The brother who was to prove that Pankleon was not a slave (Lys. 23. 9) may be fictitious. The defendant in Is. 12 (Table 7.13) was also supported by his stepmother's brother, by the husbands of his half-sisters, by other kin not precisely identified, and by *phratêres* (§§ 6, 8; Humphreys 1986a, 62–3). He was defended by an older half-brother. The case seems to arise from local deme politics.

⁷⁹ *APF* 7716, cf. ch. 2, no. V i. Pasion's younger son Pasikles was on very good terms with his stepfather Phormion; Polyuktos of Kydantidai helps his stepfather, Dein. 1. 58. In *POxy* 443, if the restorations are correct, a *synégoros* appears to be creating a favourable picture of the defendant by describing his generosity to destitute uterine half-siblings (whose mother is evidently dead).

⁸⁰ *APF* 1395; chs. 2 at nn. 55–6; 3 at n. 18. The opponent probably argued that the adoption was made under the influence of a woman (Wyse 1904, 549).

Apollodoros' mother was able to drive a wedge between her son and his patrikin. Another woman who in principle was in an excellent position to employ this tactic met with more determined resistance from the kin of her first husband, and perhaps less cooperation from her son.

Case 8: Astyphilos and his half-brother (Table 7.8, Isaïos 9, APF 7252)

The mother of Astyphilos of Araphen believed that her first husband Euthykrates had died as a result of a fight (n. 34) with his brother Thoudippos over the division of their father's farm (*chôrion*). Astyphilos was brought up in the home of her second husband, by whom she also had a son. No charge for homicide or wounding with intent was brought against Thoudippos, and we do not hear of further disputes about Euthykrates' share of the family property; apparently Astyphilos did not pursue the matter when he came of age. He had died on a military expedition to Mytilene, having allegedly made when he was on the point of departure, and deposited with his MB Hierokles of Iphistiadai, a will in which he adopted a son of his cousin (FBS) and next-of-kin Kleon, son of Thoudippos. His half-brother, speaker of Isaïos 9 (Table 7.8), contended that the will was a forgery: relations between Kleon and Astyphilos had always been bad, whereas he and his father had been very close to the young man; in addition, Kleon and his sons were not Astyphilos' next-of-kin, because Kleon's father Thoudippos had been adopted into another *oikos*.⁸¹

Note: Myronides son of Kleon A. was councillor in (?) 343/2, IG ii³ 4.75.16; a Kleon A. (no patronymic) in (?) 336/5, *Agora* XV 42.74.

TABLE 7.8. Isaïos 9

⁸¹ § 33 is usually taken to imply that Thoudippos' adoption had involved a change of phratry, and that Kleon had made several unsuccessful attempts to introduce his son into Astyphilos' phratry as the latter's adopted heir. However, the boy was clearly not yet old enough for formal admission, and the phrase *pollakis eléluthoti autói oudepópote kekreanomékasi* could equally well refer to informal movement between groups within the phratry. On this view Kleon's son will have hung about with the sons of the members

Araphen was a smallish village—the deme returned only two councillors—and there were not enough local resources to keep either Astyphilos or the speaker at home. Astyphilos was a professional soldier (§ 14), and the speaker may well have followed in his footsteps; he was away on campaign when his half-brother's bones were brought home for burial (§ 3). It seems likely, however, that both fathers were local men. The speaker claims that members of the deme saw the fight between Thoudippos and Euthykrates, although he does not seem to have been able to persuade anyone to come forward as a witness to this (§ 18); he has witnesses from the deme that when Astyphilos visited the village he did not associate with Kleon at deme sacrifices (§ 21), and other witnesses probably from Astyphilos' phratry to testify that Kleon's son was not given a share of sacrificial meat by Astyphilos' *thiasos*.⁸² The speaker's father had taken care of Astyphilos' inherited property during his boyhood (§ 28). Whether Kleon also resided in the deme is less certain. His failure to play any role in Astyphilos' funeral (§ 4) may simply mean that, like the speaker, he was absent on military service; on the other hand Thoudippos' branch of the family seems to have been wealthier than that of Euthykrates.⁸³ The speaker was well supported by local witnesses, but most of them were probably kin and friends of his father; he was also supported, however, by the husband of the sister of Thoudippos and Euthykrates, Kleon's aunt (FZ), who held Thoudippos responsible for Euthykrates' death. No doubt Kleon too had his own friends in the deme.

Astyphilos, however, lived elsewhere, presumably in Athens or Piraeus. This may explain, at least in part, why no kin except his uncle (MB) Hierokles were present as witnesses when he decided, apparently on the spur of the moment, to make a will before sailing for Mytilene on what was to be his last campaign.⁸⁴ That the will was supported by the speaker's own MB Hierokles, who can scarcely

of Astyphilos' *thiasos* at phratry sacrifices, but will have been sent back to his own father's group. Thoudippos' adoption certainly had not required a change of deme, and it is likely that there had been no formal change of status of any kind: this would both justify Kleon in claiming that he was Astyphilos' next-of-kin (§ 32, *anepsios pros patros*, FBS) and allow the speaker to protest that Kleon and his father had never 'returned' from the adoptive *oikos* to that of Thoudippos' genitor (§§ 2, 33). Cf. ch. 2 n. 53; Griffith-Williams 2008, 2012.

⁸² § 33, see n. 85. The *thiasos* of Herakles to which Astyphilos was introduced by his stepfather (§ 30) may be a voluntary association unconnected with the phratry.

⁸³ On the view that Thoudippos of Araphen married the daughter of the demagogue Kleon of Kydathenaion see ch. 4 at n. 46. His sons Kleon I and Anaxippos served as treasurer of Athena in 377/6 and supervisor of the docks in 356/5, and a grandson, Thoudippos II, is attested as trierarch (*APF* 7252); Anaxippos appears, perhaps as *diaitetes*, in *IG ii²* 2388. 11, mid 4th c.

⁸⁴ §§ 7–15; § 12 suggests that the opponents are claiming that Astyphilos kept his decision secret in order to avoid recriminations from his stepkin. The 'bystander' witnesses may have been men of some reputation and authority (cf. Humphreys 1985*b*, 330–1; above, n. 68). Wills made on the eve of departure may not have been uncommon (cf. Is. 6. 27). The witness testimonies in this speech are discussed in Avramović 1990.

have been kin to Kleon, though the speaker claims that they are cronies (*epitêdeios*, § 5), was a strong point against the speaker's case, hardly countered adequately by accusations of corruption (§§ 24–5). On the other hand, his feeling of moral justification, and the local support for his claims, will have rested not only on close association and affection, but also on the fact that his father had worked and managed Astyphilos' land as part of his own holding for some thirty-five years,⁸⁵ first during Astyphilos' boyhood and then while he was absent on campaign. Kleon's claim thus threatened to deprive the speaker not only of whatever cash Astyphilos had accumulated during his military career, but also of land he had come to regard as part of the family farm. Astyphilos' perspective, however, may well have been different.

Case 9: the estate of Hagnias (1) (Table 7.9, Isaios 11 [Demosthenes] 43, APF 2129)

Here again it is uterine half-brothers who claim the property. The fact that Hagnias' mother was a cousin (FBSD) of his father put her in a particularly strong position in this case to influence the course of events by persuading her own close kin to support her. Her son by her intra-kindred marriage, Hagnias son of Polemon of Oion Kerameikon, died as a young, unmarried man, allegedly leaving a will in which he adopted a niece (*adelphidên*), and further specified that if this girl died before producing heirs the estate was to pass to Glaukon son of Glauketes of Oion, one of his two uterine half-brothers. The niece was probably the daughter of either Glaukon⁸⁶ or his brother Glaukos. One of Hagnias' cousins, his FZS Euboulides II, contested the will, but unsuccessfully;⁸⁷ however, when Hagnias' niece died in 361/0 and Glaukon had to re-claim the estate on his own behalf, the will was successfully challenged by Euboulides' daughter Phylomache II. At this point the brother and the two first cousins (FBS) of Hagnias' mother, who had previously supported Glaukon, decided to put in claims on their own behalf. Her brother and one of the cousins, Stratokles, died

⁸⁵ It is not necessary to conclude from §§ 20, 27 that Euthykrates must have died c.410; a date in the years immediately following the Peloponnesian War seems more likely (Bourriot 1982).

⁸⁶ We know of no other will naming a second heir to succeed if the first does not reach maturity, although such arrangements are provided for in Plat. *Laws* 923e–924a. In Humphreys 1986a, following APF, I took the niece to be the child of a full sister of Hagnias, but I have come round to the view, originally suggested by Grasshoff (1877, 39 n. 133), that she was the daughter of Glaukon (or of Glaukos); cf. Is. 7 (n. 80). The statement in Is. 11. 8 that Hagnias left his property to his niece and not to his next-of-kin would be odd if she had been the daughter of a full sibling.

⁸⁷ [Dem.] 43. 43–5. I find it easier to believe that Theopompos passed over Euboulides' attempt in Is. 11. 8–9 than that these witness testimonies refer to a claim that was dropped because Euboulides died before it came to court.

TABLE 7.9. Isaios 11, [Dem.] 43, *APF* 2921

before the claims were filed (Isaios 11. 10); the other cousin, Theopompos (FFBSS of Hagnias), convinced the court that Phylomache II was not Hagnias' first cousin (FZS) but a second cousin once removed (FFBSSD), and that as such she was outside the limits of *anchisteia*. Isaios 11 is Theopompos' speech from a subsequent case in which he employed the same argument against his nephew (BS), the son of Stratokles, in order to prevent the boy from claiming his father's share of the estate.⁸⁸ We learn from [Demosthenes] 43 (Table 7.9),⁸⁹ a speech from a later round in the contest for Hagnias' estate, that Theopompos was the witness who gave the greatest number of testimonies in support of Hagnias' will in the first case between Glaukon and Phylomache II, which may mean that it had been deposited with him. Theopompos himself emphasizes that he did not contest the will while the estate was held on behalf of the adopted daughter, nor when Glaukon claimed it (Isaios 11. 9); it was only when the estate was awarded to Phylomache II as next-of-kin that the descendants of Stratios I, in the lineage to which Hagnias' mother belonged, decided to claim the estate for themselves. Thus the widow's relationship with her brother and first cousins seems to have had a considerable effect in this case.

On the chronology suggested here Hagnias will have been close in age to his half-brothers. Age is likely to have made a considerable difference in a boy's attitude to a stepfather. Diokles of Phlya, too, may have been fairly young when his mother remarried; Isokrates chose the youngest of his stepsons to be his adopted son (*APF* 7716). Apollodoros son of Pasion of Acharnai, who was twenty-four when his father died and his mother married again, was hostile to her second husband Phormion, whereas his brother Pasikles, ten years younger, sided with his stepfather. Even so, Apollodoros does not seem to have attacked Phormion openly until after his mother's death in 360. He had had to collaborate with Phormion for a time both because Phormion managed their father's estate,

⁸⁸ Theopompos' argument was of doubtful validity (ch. 1. at nn. 99–101), but seems to have persuaded the jury. The sons of Stratos, who stood on the same footing as Theopompos' nephew (FFBSSS of *d.c.*), apparently did not try to claim. It could in theory have been argued that if the law excluded Stratos' sons then his sister, Hagnias' mother, had a right to claim as the sole surviving member of her sibling group (Theopompos' assertion in Is. 11. 17 that he had a better claim by the rule giving precedence to males was open to refutation, since he and she belonged to different lines); but her sons chose instead to put in a claim that she was entitled to the estate as Hagnias' mother, which Theopompos had no difficulty in demolishing (11. 17; in 11. 30 the hypothesis that she could have claimed as a matrilineal kinswoman, i.e. on the same basis as an MB or MZ, is raised and eliminated. The suggestion in [Dem.] 43. 7–8 that Glaukos and Glaukon each put in a separate claim for himself is contradicted by § 10, where we are told that there were only four claimants).

⁸⁹ The strategy of Phylomache II and her husband when they try to re-claim the estate in the late 340s, at Theopompos' death, will be discussed below (at nn. 141–5).

as guardian, until Pasikles came of age in 362, and because they had to work together to collect debts owed to Pasion's bank.⁹⁰

The relation between stepson and stepfather, and between the widow and her second husband, is unclear in the case of the widow of an Ischomachos who married one of the fourth-century politicians called Polyeuktos ([Demosthenes] 58. 30–2). Her son had been adopted by Aischylos of Athmonon or Aixone, who may have been her father. The father of the speaker of [Demosthenes] 58 proposed that the boy should be awarded *sitêsis* as Ischomachos' son, and the proposal was attacked as an illegal move designed to give Polyeuktos control of Aischylos' estate by nullifying the boy's adoption. The proposer of the decree was heavily fined, a charge of ill treatment of orphans was filed against Polyeuktos, and the boy, Charidemos, remained in Aischylos' *oikos*;⁹¹ however, though the move might have left the boy open to attack from collateral kin of Aischylos, Polyeuktos and his associate may have thought that they could arrange for Charidemos to inherit the property and privileges of both his *genitor* and his *pater*.

EFFECTIVENESS OF THE LAW: STRENGTH AND WEAKNESS IN FAMILY DISPUTES

The case histories discussed above show the range of factors that has to be considered in understanding how a family dispute reached the stage of court proceedings: not only the rules of written law, but also their silences and ambiguities; the structuring of lived experience, and consequently of thought, by residence patterns, especially when litigants had lived in or farmed pieces of property included in a disputed estate, and by the age of the parties concerned at various stages in a family struggle; the ability of family rivals to mobilize support, or their vulnerability to attack.

It was suggested above (ch. 1 at 'Law and the *oikos* ii') that Solon's legislation incorporated a contradictory view of women, regarded both as weak creatures towards whom the state could and should adopt a firmly protective and paternalistic attitude, and as capable of exerting a dangerous influence on men's rational management of property. Examination of the working of his laws in practice suggests that he was not entirely successful either in providing protection for women when they were weak or in eliminating their influence when they were in

⁹⁰ APF 11672. Apollodoros had threatened a *graphê hybreôs* earlier, but dropped it ([Dem.] 45. 3–4, 53. 9). Collaboration: [Dem.] 49, 52.

⁹¹ APF 436 (where the situation is misunderstood: see ch. 2 n. 30, Table 29.9). The *graphê kakoseôs* [*orphanou*] ([Dem.] 58. 32; the use of *graphê* rather than *eisangelia* probably has no significance) was later dropped.

a position of strength.⁹² Although there are plenty of examples of (grand)fathers adopting the son of an epikleric daughter (ch. 2), there are also instances of the adoption of heirs who did not marry any of the daughters of their *pater* and so deprived them and their sons of epikleric rights. This was particularly likely to happen if a man had several daughters and no sons; and it was hard for daughters in this position to organize their sons and husbands into united resistance.

On the other hand, the law forbidding marriage between uterine half-siblings, which seems to have been intended to prevent the diversion of property, when a woman married twice, from the estate of one husband to the children of the other, did not prevent manoeuvres that achieved the same result by other means: the adoption of a stepson (Diokles of Phlya, Isokrates and Aphareus) or of half-siblings (Apollodoros of Leukonoion, Isaïos 7) or of their children (the same Apollodoros, Hagnias), claims to the estate by half-brothers (Astyphilos' estate). A woman in her second marriage, who had dealt with two husbands and sets of affines and had renewed contact with her own kin, on a more mature footing, at the time when her first husband died or divorced her, was quite capable of taking an active role in family business. Her position was even stronger if, as in the case of Hagnias' mother, her affines were also her kin.

Strength or weakness depended on the configuration of the kin network especially for women and orphans. For adult males other factors might be more important. As we have seen (Case 2, Dikaiogenes), in the early fourth century those who could be accused of oligarchic sympathies were particularly vulnerable to attack (n. 47, above). Apollodoros son of Pasion of Acharnai, forgetting his own slave origins, hoped to find his stepfather Phormion an easy target as an ex-slave—but Phormion was able to secure the services of Demosthenes as speechwriter and perhaps also as *synēgoros*.⁹³ A first-class speechwriter could clearly make a great difference to a case, even if some clients provided more promising material than others; Lysias' dramatic representation of the family council at which Diogeiton's daughter defended her children's interests is particularly striking.

GROUND S FOR DISPUTE

Oligarchs in the late fifth century claimed that obscurities in the wording of Solon's laws had encouraged litigation and given the courts too free a hand, but it is comparatively rare in our corpus for problems in the interpretation of the

⁹² For a broader view of the ability of women to exercise influence in family matters see Foxhall 1989; Hunter 1994.

⁹³ Deinarchos' statement that Demosthenes was the *synegoros* is usually rejected (A. Schaefer 1858, 169), but the *chutzpah* of the ending implies a well-known, confident, and experienced speaker. Rubinstein 2000, 33 n. 28, suggests that there may have been more than one *synegoros*.

letter of the law to be central to a case. Theopompos used the ambiguity in the rule that *anchisteia* extended *mechri anepsiôn paidôn* to eliminate his nephew's claim to a share in Hagnias' estate, on the grounds that the boy was not a second cousin but the son of a second cousin, but in other cases the basis of the dispute is factual or on the borderline between fact and interpretation. Theopompos had dispossessed a rival claimant, Phylomache II, by asserting that her paternal grandmother (FM) was not the full sister of Hagnias' father Polemon.⁹⁴ Litigants question the legitimacy of rival claimants or of their parents (Isaios 8, Case 3); they dispute the validity of wills. It is also fairly common to find controversy about the proper description of the estate being claimed. In Case 1 (Isaios 6) property left at the death of Euktemon was claimed as the estate of his son Philoktemon, who had predeceased him; in [Demosthenes] 43 Theopompos' property is claimed as the estate of Hagnias thirty years or more after Hagnias' death; in Case 4 (Isaios 3), property claimed on the death of Endios is described as the estate of his *pater* Pyrrhos; in [Demosthenes] 44 property that has descended through three generations of adopted heirs is claimed as belonging to the original *pater* Archiades of Otryne (case 12). Such counter-claims are particularly likely to arise where there has been adoption. In Isaios 10, the *archon* instructed the speaker at the *anakrasis* that he had to describe his mother as the sister of Aristarchos II, who had just died, rather than as the daughter of her father, his *pater* Aristarchos I (Table 7.5), but it seems to have been unusual for an archon to take a firm stand in such circumstances. Such descriptions show that litigants had often been clinging tenaciously for years, sometimes even decades, to visions of the distribution of property that did not correspond to the facts of possession.

Case 10: brothers-in-law in conspiracy ([Demosthenes] 48)

There seems to have been dispute over genealogical fact in the inheritance case which led to [Demosthenes] 48. The speaker explains (with surprisingly little attempt to gloss over the irregularity of the proceedings) that he and his brother-in-law (WB) Olympiodoros, the defendant, had made an agreement to combine forces in claiming the estate of a common kinsman. Olympiodoros was to claim that he was *d.c.*'s next-of-kin, the speaker and his patrilateral half-brother being more distantly related; in return for tacitly supporting this version of the genealogy, the speaker would receive half the estate.⁹⁵ They had made a formal contract

⁹⁴ Table 7.9. To judge from the indignation of the husband of Phylomache II, Theopompos had probably claimed that the mother of Phylomache I was a *hetaira* and her father unknown ([Dem.] 43. 9).

⁹⁵ The speaker says that he only had to remain silent. He seems to want the jury to conclude that Olympiodoros gave the court a false view of his own (O.'s) ancestry, and was then able to discredit the

to this effect and deposited it with a third party (§§ 9–12). However, when the estate was awarded to Olympiodoros, he refused to hand any of it over. In consequence, his brother-in-law sued him for damages. Kin of Olympiodoros and his sister (the speaker's wife) had tried to mediate, without success (§§ 3–4); they testified to this, and to Olympiodoros' extravagant spending on *hetairai*, a source of annoyance to his sister (§§ 40, 53–4). The speaker prefers to remain vague about the claimants' relationships to *d.c.*, which cannot be reconstructed.

Although it is hard not to feel that the speaker was foolish, this case has many features that recur elsewhere: the illegal compromise of which the beneficiary later takes advantage in order to make still further gains, the influence of the speaker's wife, persuading her husband to ally himself with her brother rather than his own, the friction between patrilineal half-brothers, and the possibility of dispute over genealogy even within the fairly restricted range of the jurally defined kindred, which extended only to second cousins of *d.c.*

These genealogical uncertainties probably focused mainly on the status of women and their unions. Although the right of adult males to citizen status was questioned in some cases (Demosthenes 57, Isaios 12), such challenges seem to have arisen as a result of general scrutinies or internal disputes in the demes rather than on the occasion of claims to estates. The claimant to the estate of Kallias of Alopeke (Case 7) was attacked as an impostor and not as a *nothos* who had acquired citizenship illegally. When a man had been enjoying full citizen rights for some time it was an uphill struggle to prove that he was not entitled to them, and the same was true of male ancestors. It was easier to cast doubt on the status of a woman, or of an adolescent, because their claims to legitimate citizen descent had not passed so many tests.

*

Athenian litigants tend to speak as if court cases can only arise as a result of dishonesty, but it should be remembered that all epikleroi who were not yet married at their father's death (even if he had left a will naming the husband), and all estates to which the heir was not a lineal descendant or adopted *inter vivos*, had to be claimed in the Assembly, and in court if there was more than one claimant. This may well have introduced a certain bias towards zero-sum claims and against compromise into such situations, which in turn would make compromise more risky, because less in accordance with jurors' expectations and so more apt to be later rejected by a party who could gain an advantage by doing so (Isaios 6, 5, [Demosthenes] 48). Brothers also quarrelled about the division of their father's

protests of the speaker's half-brother by pointing out that the speaker was not supporting the latter. Cf. the references to agreements and conspiracy in Case 9 (Is. 11. 24, [Dem.] 43. 7).

estate—Hesiod and Perses had appealed to the local *basileis* for judgment, Thoudippos and Euthykrates of Araphen (Case 8) had come to blows—but we have no evidence from classical Athens of full brothers taking their disputes to court, although the *dikê eis daitêton hairesin* existed for settling disputes in which one brother wished to divide the father's estate and another refused.⁹⁶ One might think that there would be considerable scope for quarrels over gifts or loans made to sons by parents during their lifetime, but although Demosthenes 41 gives details of a dispute between brothers-in-law over the dowry, gifts, and loans which their wives, brotherless daughters, have received from their mother and father, we have no such evidence for brothers. Even the sons of Mantias of Thorikos, half-brothers who dispute in court over the amount of dowry the mother of each contributed to their father's estate, have apparently succeeded in agreeing over the rest of their father's estate.⁹⁷ As in this last case, the most serious conflicts are likely to have arisen where it was possible for one son to regard others as illegitimate (cf. Cases 1 and 7). On the other hand, it seems to have been relatively common for brothers to help each other against outsiders by making false or questionable claims about the ownership of property, but we only hear of one case in which such a claim leads to a dispute between the brothers themselves, and here the real cause of dispute seems to be the adoption of an outsider as heir (Case 13).

Aristophanes (*Wasps* 583–5) cites conflicts over wills in which fathers arranged the marriage of epikleroi as a typical item on the Athenian juror's agenda, but they are much less common in the surviving evidence than conflicts over estates. In the only case about which we have any details, the father had died while his two daughters were still very young and had apparently left no will; it was probably settled out of court.⁹⁸ Since one would expect speeches from such cases to make popular reading matter, it is puzzling that none have survived; but Menander's *Aspis*, which shows the potential of the topic, may also suggest that next-of-kin who were not of an appropriate age for marriage to an epikleros may have

⁹⁶ A. R. W. Harrison 1968, 243; refusal to divide may have almost disappeared by the classical period. Hes. *WD* 37–9; as sons of an immigrant (633–40), he and Perses had no kin to mediate between them. Plut. *Mor.* 483d–484b says quarrels between brothers over division are common.

⁹⁷ Dem. 39–40. Admittedly the sons were all under 20 when Mantias died, but Mantitheos was married and had leased a mine with capital provided by his father (Humphreys 1989). Apollodoros son of Pasion of Acharnai (*APF* 11672) complained about the division of his mother's dowry between the four sons of her two marriages (Dem. 36. 14–15, 32). It is not clear if such division was usual; it is possible that Kleon II of Kydathenaion, Mantitheos' uterine half-brother, had claimed a share of their deceased mother's dowry when he came of age.

⁹⁸ Andok. 1. 117–23; see above, ch. 4 n. 8. Sositheos, speaker of [Dem.] 43, had claimed his wife Phylomache II by *epidikasia*, apparently without opposition (§ 13); he was her father's FBDS. Lys. F XII Carey 2007, XI Thalheim 1913 (75 Blass 1868) concerned an epikleros left by a victim of the Thirty. The speaker in this case (Carey 2004, F 5. 5–9) claims that disputants often argue about genealogy (*genos*) versus wills.

hesitated to contest wills.⁹⁹ There is no solid evidence that a daughter already married during her father's lifetime could be claimed by his next-of-kin when he died.¹⁰⁰ In the fourth century we find men arranging by will for the remarriage of their widows and the marriage of daughters who have brothers (as Demosthenes' father did), so wills arranging for the marriage of epikleroi may have become more regularly accepted. Fathers did not necessarily arrange for their epikleric daughters to marry kin. Apollodoros of Leukonoion (*APF* 1395) made a will when young conditionally adopting the daughter of his uterine half-sister and betrothing her to a member of the *genos* Eumolpidai, Lakrateidas, who later became hierophant of the Eleusinian Mysteries; subsequently he had a son, so the project of adoption was dropped, and the girl seems to have married another man. There is no evidence that either Lakrateidas or her actual husband was kin either to Apollodoros or to the girl's father.¹⁰¹ As a potential epikleros neared the age of marriage there might well be friction between her father and his next-of-kin, if they suspected him of plans to marry her outside the family, but in this situation the next-of-kin had no legal recourse.¹⁰² Apollodoros son of Pasion of Acharnai passed over his brother Pasikles and married one of his two daughters to his brother-in-law (WB) Theomnestos of Athmonon; he was already on bad terms with Pasikles. As we have seen (Cases 2, 3), where there was more than one epikleric daughter in a family the right of the father's next-of-kin to claim them in marriage was particularly likely to be disregarded.¹⁰³ Polyeuktos of Teithras married one of his two daughters to his brother-in-law (WB), whom he adopted; this marriage broke up, and the adoption was nullified, but there is no sign that either of the two sons-in-law whose dispute is recorded in Demosthenes 41 was kin to Polyeuktos. In *Isaios* 7. 31 the speaker's opponent and her sister are criticized because they divided their brother's estate without transferring an heir

⁹⁹ We have 9 fragments from speeches that seem to have concerned *epikléroi*, with no indication of the details: *Lys.* F XII, CXVIII, CXLI Carey 2007, XI, CIV, CXXV Thalheim 1913, *Is.* XXVI, XXXIX and perhaps XXXII Thalheim 1903, *Dein.* 57–57a, 58–9, and 60 Conomis 1975. The law of Gortyn makes provision for cases where the next-of-kin is too young (VII 30–VIII 9). An older claimant could cede his rights to his son (*Is.* 10. 12).

¹⁰⁰ Ch. 1. at n. 116; Maffi 1990. Some Athenians may have believed that such claims could be made, but I suspect that the plausibility of the generalization in *Is.* 3. 64 derived partly from the association of divorce with epikleroi in the reverse situation, when a man divorced his wife in order to claim an epikleros (*hyp.* Dem. 30, perhaps only a guess; Dem. 57. 41; cf. ch. 4 at n. 4).

¹⁰¹ Lakrateidas probably belonged to Paiania, though the name turns up later in an aristocratic family with cultic connections in Ikarion (Tracy 1982, 208; ch. 20 n. 99). We do not know whether his one-time fiancée was her father's only child; her son, the speaker of *Is.* 7, claiming the estate of Apollodoros as his adopted heir, is reticent about his family of origin.

¹⁰² See Humphreys 1989 on Dem. 39–40 and ch. 4 on the Danaidai in Aesch. *Suppl.*

¹⁰³ In Case 2 (*Is.* 5) Dikaiogenes III, who was adopted as heir to one-third of the estate of the childless Dikaiogenes II, was the next-of-kin of Dikaiogenes II and his father Menexenos if we disregard the offspring of Menexenos' four daughters; he was too young to marry any of these daughters, who in any case may have been married before their brother died.

by posthumous adoption to ‘continue his *oikos*’, but it was really not possible to combine division and adoption in these circumstances.

The right of a man without sons to dispose of his property as he wished was more likely to give rise to disputes in the case of adoption than in the case of the marriage of potential epikleroi because adoption could be postponed until the testator’s death, whereas the marriage of a daughter could not. Furthermore, whereas a married daughter was expected to start bearing children immediately—and the law provided some measures in the case of an epikleros to ensure that she did—an adopted son was under no obligation to produce an heir at once; and since when such an heir reached civic adulthood the father might return to his *oikos* of origin, leaving his son in his place, there was some reason for kin of an adopter to hope that the adopted heir would die without children and give them an opportunity to claim the estate. The marriage of a daughter thus settled the disposal of her father’s estate rather more definitively than the adoption of an heir; the feeling that a daughter continued her father’s line in a more satisfactory way than either an adopted son or a collateral to whom it was awarded as next-of-kin may also have made the estates of men with daughters less likely to provoke dispute than those of men with no children at all.

One might expect that most court cases over estates would pit the next-of-kin against an adopted heir who was a more distant kinsman or affine, but there are some exceptions. The speaker of *Isaios* 4 claims that his opponent, who has a will in his favour, is not kin to *d.c.* at all; however, *d.c.* was a professional soldier, and this is hardly a typical case. Numerous claims to the estate had been put in, on a variety of bases (§§ 7–10). The speaker of *Isaios* 9 (Case 8) could not claim either to have been adopted by will or to be the next-of-kin of *d.c.*, *Astyphilos*, who was his uterine half-brother; he had however grown up with him in the same household. The speaker of *Isaios* 8 had to defend his claim to be *d.c.*’s grandson (DS) against a collateral who alleged that the speaker’s mother was illegitimate and he, the opponent, was the next-of-kin; in *Isaios* 3 (Case 4) *Phile*’s claim to be the legitimate daughter of *Pyrrhos* was similarly challenged.¹⁰⁴ *Theopompos* had defeated *Phylomache* II in the contest for *Hagnias*’ estate by questioning her claim that her maternal grandmother *Phylomache* I was a legitimate sister of *Hagnias*’ father. As noted above, women were especially likely to be the target of such attacks.

Case 11: Kleonymos’ will (Table 7.10, Isaios 1)

The claimant in this case was the nephew (ZS) of *d.c.*, *Kleonymos* (Table 7.10), attacking a will by which remoter kin of *d.c.* inherited. The unusual feature of the

¹⁰⁴ The speaker of *Isokr.* 19, a Siphnian adopted by will by a fellow-citizen (his father’s sister’s stepson) and married to the latter’s sister, the sole surviving member of her family, is opposed by a woman who claims to be a patrilateral half-sister of *d.c.* but who according to the speaker is illegitimate (another example of the ease with which such charges could be made against women): Table 2.8.

TABLE 7.10. Isaios 1

case is that instead of arguing that the will was not authentic, the speaker claims that Kleonymos had tried to alter it when he felt himself to be dying. He admits that Kleonymos had broken off relations with his sister and her children as a result of a quarrel with the children's guardian, their uncle (FB?) Deinias, but he claims that friendly relations had been restored after Deinias' death. This would certainly have put Kleonymos in a difficult position. An Athenian will in which an heir was adopted, though conditional in the sense that it would be invalidated by the birth of a legitimate son to the testator, was nevertheless a form of contract with the designated heir (the same term, *diathékē*, was used for both wills and contracts), which could not be unilaterally nullified at a whim. In addition, it appears that Deinias had attacked Kleonymos in the Assembly for disinheriting his wards, and as a result the existence of the will had become public knowledge. Kleonymos tried to give his change of heart an equally public character by sending for one of the *astynomoi*, minor officials responsible for public order in the city, but according to the speaker supporters of the heir(s?) named in the will frustrated this attempt.¹⁰⁵

Kin and friends of both parties tried to mediate, suggesting a per capita division of Kleonymos' estate among the various claimants, by which the speaker and his brother would have got one-third of it; these arbitrators testify for the speaker in court (§§ 2, 16). The opponents, however, not only refused to compromise but also accused the speaker and his brother of holding cash or other items that belonged to Kleonymos (§ 2).

Both the account of the last-minute attempt to annul the will and the accusation that the speaker and his brother already held some of Kleonymos' property

¹⁰⁵ The references to the Assembly (§ 11) and the *astynomos* (§§ 3, 14–15) should not be taken to imply that it was possible at Athens in the first half of the 4th c. to deposit a will in a public record office. In my view Deinias, having heard about the will through one of the witnesses to it, tried to put pressure on Kleonymos to change his mind by proposing in the Assembly to prosecute him for ill-treatment of orphans. An *eisangelia* made in the Assembly could be dismissed as unfounded, and this may be what happened here; Deinias' intervention certainly did his wards no good. The *astynomos* was called in not because his board had any special responsibility in the matter but, probably, because he was on duty and readily available (Kahrstedt 1936, 205), and Kleonymos wanted a public official present to witness his decision and prevent the claimants to his estate from coming to blows. Cf. the analysis of Euktemon's attempt to annul his will in Case 1 above, and ch. 9 at n. 50.

(either because he had given it to them or because they had helped themselves) seem plausible enough. Although it was possible to make a secret, sealed will and authenticate it by witnesses who did not know its contents (Isaios 4. 13, cf. 9. 12), it would be very easy in court to attack such a will and argue that a different document had been substituted. Oral testimony had more authority than written record, and will-making was normally an oral rite, though it might well be supplemented by a written document designed especially to preserve an accurate record of debts, credits, and monetary legacies (e.g. dowries; cf. Case 2 above). There was no recognized procedure for annulling or changing a will, and the testator's right to change his mind about the choice of an adoptive heir was not clear. Kleonymos had thus been trapped, both by the hostility to Deinias that had prompted the will and by his public refusal to change his mind, into an engagement from which it was difficult for him to escape. The heirs named in the will had every reason to suspect that quiet transfers of cash or other valuables to the nephews had already taken place.

*

A somewhat similar situation may have formed the basis of Isaios' speech against (*pros*) Aristogeiton and Archippos (F III Thalheim 1903, 6 Baiter-Sauppe 1850). Here the brother of *d.c.* had claimed the estate and had also filed suit to have 'invisible property' that had already been appropriated returned for adjudication. The holder of this property replied with a *paragraphê* stating that he was not obliged to return the property because it had been left to him by will. Here it is the heir instituted by will, foreseeing that *d.c.*'s brother will try to upset the will and claim as next-of-kin, who is accused of forestalling judgment and taking possession of some of the cash and credits in the estate immediately.¹⁰⁶

Brothers may well have been particularly tenacious in their determination to fight heirs adopted by will, because they tended still to think of their father's estate as a single unit. The same attitude could on occasion influence even uterine half-brothers, as we saw in the case of Astyphilos (Case 8), whose property had been continuously managed and worked by his stepfather with the latter's own land. Daughters, who moved out to live with their husbands, were not expected to have the same attachment to property. In Isaios 8 a grandson (DS) of *d.c.*, Kiron, has to defend his claim to Kiron's estate against a nephew (BS) who has the support of Kiron's widow and her brother Diokles of Phlya for his assertion that the speaker's mother was not Kiron's legitimate daughter. In Isaios 2

¹⁰⁶ 'Invisible' property included cash and debts owed to *d.c.* It is not clear why there were two defendants in the *paragraphê* hearing: perhaps the second was the heir's guardian, or a witness to the will. The speaker of Is. 6 (§ 39) accuses his opponents of making off with some of Euktemon's property illegally.

the heir to Menekles' estate, adopted *inter vivos* twenty-three years earlier, still has to defend his rights against a claim by Menekles' brother that the adoption was made under the influence of a woman and was therefore invalid.¹⁰⁷

The speaker of Isaios 7 (Table 2.1), whose adoption by his mother's uterine half-brother Apollodoros of Leukonoion had been interrupted by Apollodoros' death (between presentation of the young man to Apollodoros' phratry and his introduction to the deme), may also have had to contend with claims that a woman's influence was responsible, though in this case the next-of-kin was also a woman (Apollodoros' FBD). However, a distinction should be made between accusations of undue influence directed at *hetairai* and those aimed at respectable women of citizen descent. The stereotype of feminine influence had a strong sexual component, as we see in the account of Alke's influence over Euktemon in Isaios 6 (§§ 18–21, cf. § 29; Case 1) and Apollodoros' account of Phrastor's relations with the *hetaira* Neaira and her daughter in [Demosthenes] 59 (§§ 55–8); there is no suggestion that a wife might influence her husband's decision by such means. The claim to Kiron's estate made by his nephew (BS) against the speaker of Isaios 8, a grandson (DS), is not attributed to the influence of Kiron's widow but to her brother Diokles of Phlya; and even Chrysilla, who replaced her daughter in the house of Kallias III of Alopeke and persuaded him to acknowledge paternity of her son (Case 7), is handled in Andokides 1. 125–7 with some restraint.

We have, of course, no means of telling how many Athenians disposed of their estates by will without any counter-claim being made in court, but the flimsiness of some of the arguments made against wills in forensic speeches suggests a certain tendency to regard any will with suspicion (W. Thompson 1981*b*). The opponents of Dikaiogenes III (Case 2) decide that since Dikaiogenes himself has substituted a new will for that under which his adoption to *d.c.* was originally recognized, they are entitled to treat both wills as invalid. Theopompos (case 9) had testified to the authenticity of Hagnias' will, but put in a claim to the estate on his own account, as next-of-kin, when the will had been rejected by a court. The speaker of Isaios 9 (Case 8) claims that Astyphilos cannot have made a will in favour of a son of his cousin (FBS) Kleon, because Astyphilos' father had died as a result of a fight with Kleon's father.

*

Adoption by will was thus apt to arouse resentment that took a long time to die down. By law, as interpreted in the classical period, an adopted son could not

¹⁰⁷ Case 13 below. The adopted heir was the brother of a young second wife whose marriage to Menekles had lasted only a short time, so there were certainly grounds for suspicion at the time when the adoption took place.

adopt in his turn, so the next-of-kin of the *pater* continued to hope that the adopted heir would die childless and the estate would finally come to them. In Cases 4 and 5, women whose husbands had accepted them with a dowry when they might have laid claim to the estates of their fathers (Pyrrhos and Aristarchos) took advantage of the death of adopted heirs to revive their claims. In each case the daughter was opposed by a brother of the adopted heir; the legal rule that adoption broke the adopted son's ties with his family of origin could not prevent brothers from continuing to feel close to each other. In fact, their closeness may have been increased by the fact that they were no longer rivals in their father's oikos.¹⁰⁸ The brother of Pyrrhos' heir Endios (Case 4) was able to claim on behalf of his mother as Pyrrhos' next-of-kin; in Case 5 (Isaios 10, Table 7.5) Aristarchos I's son Kyronides had been adopted out into the oikos of his maternal grandfather, but had married back into his genitor's family (his FBD) and had recovered his genitor's property; when he died his son Aristarchos II had been installed in the oikos of Aristarchos I as adoptive heir (§ 6). By this time, this side of the family may well have felt that it had secured its hold on Aristarchos' property to the point where the laws limiting the rights of adopted heirs no longer applied; when Aristarchos II died, childless, he left a will naming his brother Xenainetos II as heir. The speaker of Isaios 10 is aware that his parents' failure to claim the estate of Aristarchos I earlier will count against him (§§ 18–20), and he does not cite the law that forbade an adopted son to make a will; he apparently feels that the intrafamilial character of the adoption and Aristarchos II's fine war record (§ 22) will persuade the jury to accept the will. He argues instead that Aristarchos II never had any (moral) title to the property.

Case 12: the heirs of Archiades (Table 2.2, [Dem.] 44, APF 5638)

Leokrates I of Eleusis had been adopted by his great-uncle (MMB) Archiades of Otryne (§ 19), and he and his heirs had controlled both Archiades' estate and that of Leokrates' *genitor* for two generations. It was considered legal for an adopted son to return to his oikos of origin if he left a son to take his place in his *pater*'s oikos,¹⁰⁹ and this Leokrates I had done, leaving Leostratos II in his

¹⁰⁸ It was generally held that adoption did not break a boy's tie of kinship with his mother (Is. 7. 25, probably part of the oral lore of the courts rather than written law), and this would imply that brothers separated by adoption would be in the same legal position as uterine half-brothers, though this deduction is nowhere explicitly made in our sources. In [Dem.] 43 the claimant, posthumously adopted to his MF and not yet old enough to plead for himself, is formally represented by an older brother (§ 15).

¹⁰⁹ The rule was probably stated negatively, forbidding an adopted son to return unless he left a son in his place (Is. 6. 44, cf. M/L 20. 7–8). The 'return' of the adopted son is a rare example in Athenian law of the development, through interpretation of the law in practice, of an institution somewhat similar to Roman legal fictions like the emancipation of a son through sale. Adoption, like some other changes of

place. Leostratos II in turn had returned to the original oikos, leaving his son Leokrates II in the oikos of Archiades; but Leokrates II had died young without leaving an heir.¹¹⁰ Leostratos II had first tried to return to Archiades' oikos himself, and then, when he met opposition from another branch of the family, persuaded the deme Otryne to accept his second son Leochares as heir to Archiades' status and estate in his brother's place. The opponent, Archiades' great-nephew (BDS) Aristodemos of Pallene, argued that as an adoptive heir Leokrates II could only transmit the estate to a direct descendant; but it could be argued that this rule was not intended to apply to an heir who was the grandson of the heir originally adopted. The failure of Leokrates I's descendants to establish a separate lineage in Archiades' oikos created an unusual situation not foreseen by the laws.

*

The rule that transmission of an estate to a new line of heirs by adoption could only become secure from attack by the *pater's* collaterals through the solid establishment of a new lineage in the *pater's* oikos makes explicit, for once, a feature of Athenian law that can also be seen in other contexts: it was not very effective at providing definitive solutions to disputes. Family relationships and family property give rise to strong emotional ties and reactions, and it takes time for people to come to terms with loss and change; a legal system in which there was very little restriction on reopening cases decided in the past, and in which courts were not bound by past decisions, encouraged Athenians (noted, according to Thucydides, for their optimism) to cherish hopes of regaining their rights and pictures of family relationships or property distribution that did not correspond to the currently recognized state of affairs.

It was possible in theory to charge a man at any time in his life with having obtained citizenship under false pretences, so one could cling to the belief that a rival claimant was the product, directly or indirectly, of an irregular union; such allegations could, moreover, be made in cases that turned on genealogical details

status (marriage, the acquisition of legitimacy), was not a single definitive act but a process. This process was not completed until the adoptee had been accepted by the phratry and deme of the adopter (cf. Is. 7). A minor could be adopted, but his or her status remained somewhat anomalous until this completion had been achieved (the equivalent for a girl would be betrothal by her pater or by epidikasia). It therefore seems unlikely that an adopted son could return to his own oikos until his child had completed the process of being accepted as substitute, or at least been accepted by the phratry, although we have no explicit source statement on this point (which does not seem to have been considered by modern scholars). An earlier 'return' would have created additional uncertainties, since the boy's position in the pater's oikos could not be confirmed until he had been accepted by the pater's deme at 18.

¹¹⁰ Cf. ch. 2 at n. 37. *IG ii² 7016* (ch. 24 n. 17) was found at Laureion, an interesting indication of the family's possible residence. Otryne has been thought to be a coastal deme of Aigeis, but has not been located. Archiades had lived on Salamis, and Leokrates I's deme was Eleusis. The family may have had mining interests.

without following up their logical implications by taking action to expel the rival from the citizen body.¹¹¹ Stepfathers and half-brothers could believe that the son of a woman's first marriage had been definitively separated from his patrikin and incorporated into a new set of familial ties based on residence and cooperation, while the patrikin still felt him to belong to their lineage.¹¹²

Imaginary maps of relationships were accompanied by imaginary maps of the distribution of property. The speaker of [Demosthenes] 43 took a witness *c.*340 (?) to attest that olive trees had been cut down on land that he regarded as his by right because it had been owned, for a few months at most, by his wife's mother in 361/0; he regarded the land as part of the estate of Hagnias, who had died in the 370s (Case 9). The sisters of Dikaiogenes II were still in 389 trying to regroup the pieces of property left by their brother in 412/11 and lost by them in 399 (Case 2). Nor were such thoughts confined to kin who might have claims on property. Neighbours, too, might continue to associate fields and farms with past owners.

An earlier generation of scholars, encouraged by the rhetoric in forensic speeches about the sacred duty of the adopted son to 'continue the oikos' of the man without heirs, was inclined to claim that Athenians attributed a transcendental, diachronic reality to the oikos.¹¹³ It may be more helpful to think of the reification of the oikos in more concrete terms, as a collection of fields, trees, buildings, and attached social relationships that time had conglomerated into a whole and that only time could, eventually, split up.¹¹⁴ Where there was tension between lived experience and legal decisions, the expectations generated by experience were slow to give way.

The appearances in court for which our forensic speeches were produced represent points of climax or crisis in manoeuvres that had begun much earlier and would continue long after the jury had given its decision. Some of the process of jockeying for position that went on behind the scenes can be traced in the speeches.

¹¹¹ As Maffi 1989 and C. B. Patterson 1990 have stressed, there was no category of 'recognized *nothoi*' at Athens (except in the generation disenfranchized by Perikles' citizenship law: Humphreys 1974, ch. 19 n. 76; Case 7 above). If a father recognized a child as his, he recognized it as legitimate; if not, it was fatherless.

¹¹² Cf. Sir J. Miles 1952. Such ambiguities were particularly easy to maintain if, as may have been the case with Astyphilos (Case 8), the stepfather belonged to the same deme and phratry as his stepson.

¹¹³ Such claims are not entirely avoided by Wolff 1978, though the article provides an essential starting point for rethinking Athenian conceptions of property and the oikos. See now Rubinstein 1993.

¹¹⁴ For such feelings to develop, it was not essential for the oikos to be spatially coherent; landholdings were often scattered (ch. 5 n. 6) and economic activity might be diversified (W. Thompson 1982*a*). Most enterprises or parcels of land had slaves attached to them, who retained memories of the previous owner, as did neighbours or business clients; all this contributed to conferring a personal character on property. Cf. A. Ryan 1983 for the idea of a 'dramaturgical concept of property'.

MOBILIZING SUPPORT IN FAMILIAL DISPUTES:

(1) MEDIATION

Since kin were expected to be on friendly terms with each other, attempts were normally made to settle differences without coming to court. Many such informal settlements, presumably, were successful enough to leave no trace in our records; but even in speeches that come from court cases we learn of attempts to arrive at a compromise through the use of kin and friends as mediators and arbitrators, either before a formal suit was filed or during the process of bringing a case to court, and of consultations with friends and kin. Many Athenians were nervous of going to court, and in a family conflict it would have been particularly foolish to do so without sounding out potential supporters first.

Recourse to private arbitration seems to have been common at Athens in all types of dispute, but in conflicts between kin other members of their kindreds were especially likely to find themselves called on for advice, drawn in to act as mediators, or subjected to attempts by both parties to enlist their support as witnesses. They could be expected to be well informed on genealogical questions, and their participation in rites de passage (ch. 9) and shared membership of deme and phratry enabled them to testify on marriage, the recognition of a wife by phratry and deme in the form of the sacrifice of *gamêlia* in the phratry and her participation in the Thesmophoria of the deme (chs. 19 n. 48, 12 n. 31), the celebration of *amphidromia* and *dekatê* for a new child, the offering of *meion* and *koureion* in the phratry, the presentation of a son to his father's deme, and the roles taken by kin at funerals. A family council might be convened either in an attempt to settle a dispute out of court, or in order to discuss strategy. We are already told of kin attempting to mediate between Phoinix and his father in the *Iliad* (9. 464–73), and though the three-actor rule limited the scope for such interventions in drama we find Orestes' maternal grandfather (MF) Tyndareus and his father's brother Menelaos pleading for Klytaimnestra and for Agamemnon in Euripides' *Orestes*;¹¹⁵ in the *Andromache* Menelaos arrives to support his daughter Hermione against her rival Andromache, who is championed by the grandfather (FF) of Hermione's husband Neoptolemos.

The daughter of Diogeiton (Case 6), when her older son came of age, had gathered kin and friends (*epitêdeioi*, § 12) to a meeting at which she accused her father of appropriating property belonging to her sons, his wards, and implored him to make restitution and avoid a court case. Those who were present came to court to testify for her in the subsequent case, in which the wards were represented by their brother-in-law (ZH); since the witnesses are not precisely identified they

¹¹⁵ Menelaos was also the husband of Klytaimnestra's sister or half-sister Helen (Table 4.5).

may have been kin of this son-in-law, and perhaps of the mother's second husband, rather than of Diogeiton himself.

Cases brought against guardians by wards when they came of age would presumably always involve consultation with older kin or family friends. Apollodoros of Leukonoion was helped in his suit against his uncle (FB) Eupolis by his stepfather (Isaios 7. 7), and Demosthenes was aided by his uncle (MZH) Demochares (Demosthenes 27. 15–17; cf. [Dem.] 29. 58, on which see below, n. 145).

The speaker of Isaios 1 (Case 11) asserts that when his uncle (MB) Kleonymos died leaving a will in favour of more distant collateral kin, which he had tried to annul during his last hours, kin (*prosékontes*) of the heirs had proposed that instead of taking their claims to court the contending parties should compromise and divide the estate, two-thirds going to the heirs named in the will and one-third to the speaker and his brother. If he had been able to prove convincingly that even his opponents' kin had thought it equitable that he and his brother should get a share of Kleonymos' estate, he might substantially have strengthened his case; but these mediators do not testify for him, and the other side's view of the suggestion may well have been different.¹¹⁶

In the dispute between Apollodoros son of Pasion of Acharnai and his stepfather Phormion, Apollodoros' father-in-law Deinias and his brother-in-law (WZH) Nikias had tried to mediate (Demosthenes 36. 15, 17; Table 4.4). In Case 1, when Philoktemon of Kephisia had obstructed his father's attempt to sacrifice the *koureion* in their phratry for the older of the 'Lemnian' boys, kin and friends (*anankaioi*, Isaios 6. 23, cf. § 26 *oikeioi*), presumably those who had been present at the phratry meeting, met with them and persuaded them to compromise. When Boiotos-Mantitheos threatened to take Mantias of Thorikos to court for failing to present the boy to his phratry, Mantias agreed to settle the matter by challenging Boiotos' mother Plangon to swear an oath that he was the father.¹¹⁷

Case 13: Menekles and his brother (Table 7.11, Isaios 2)

Menekles, *d.c.*, (Table 7.11) had married the speaker's sister as a widower; he had been a close friend (*philos kai epitêdeios*) of the speaker's father (§§ 3–5). After some time, when his wife did not become pregnant, he allegedly decided that he himself must be unable to beget children (cf. ch. 2 n. 12), and proposed to her brothers that he should divorce her and adopt one of them as his heir. The speaker insists that his sister was very reluctant to agree to this proposal, but eventually she was remarried and he was adopted as Menekles' son. The adoption

¹¹⁶ Is. 1. 2, 16. They may, for example, have reckoned that the speaker was already in possession of one-third of the estate.

¹¹⁷ Dem. 39. 3–4. Mantias' other son Mantitheos claims that Plangon had agreed, in return for a payment of 3000 dr., to refuse to take the oath, but we have only his word for it (Humphreys 1989).

TABLE 7.11. Isaios 2

was resented by Menekles' brother, who had expected Menekles' property to revert to him and his son as next-of-kin;¹¹⁸ when Menekles needed to sell or mortgage property in order to raise cash to pay money owed to an orphan, his brother had obstructed the transaction, claiming that he was part-owner of the land.¹¹⁹ Menekles filed a suit contesting his brother's right to obstruct the sale (§ 29, *aporrhêsis*), and after a series of quarrels the brother's *kêdestês* (WF or WB) and other friends were asked to arbitrate.¹²⁰ Their recommendation was that Menekles should cede the disputed portion of the land to his brother and that the two should take an oath to live at peace with each other in future. This, as far as we know, they did; but when Menekles died his brother contested the adoption on the grounds that it had been made under the influence of a woman—an interesting indication of the extent to which adoption and wills had become identified in Athenian minds, since there is no evidence that the law provided for such a complaint about an adoption carried out *inter vivos* twenty-three years before the death of the adopter. It must be recognized, however, that Menekles' second marriage to a wife no doubt much younger than himself, his apparently rather rapid divorce, her remarriage, very possibly with a contribution from Menekles to her dowry,¹²¹ and the adoption of her brother, could easily be made to look sinister.

*

¹¹⁸ The speaker stresses that Menekles' brother had only one son, and claims that if Menekles had adopted the boy his father would have been left without an heir; but of course formal adoption was quite unnecessary in such circumstances.

¹¹⁹ Apparently Menekles had leased an orphan's estate and had used part of his father's property as *apotimêma*. Since he had no children, he and his brother may not have made a formal division of their inheritance (cf. [Dem.] 44. 10, 18; ch. 5 n. 62), though presumably there was a *de facto* division of responsibilities. In other cases we find brothers deliberately playing on such uncertainties about ownership in their dealings with third parties.

¹²⁰ The arbitrators took their oath on the altar of Aphrodite at Kephale (§ 31); it seems likely that they were fellow-demesmen of the two brothers, and that the latter still owned land in their deme. The speaker insists that the arbitrators undertook to decide only what was in the interests of all parties (*ta sympheronta pasin*), and not what was just (*ta dikaia*, § 30); if this has any precise reference, which is doubtful, it may mean that the arbitrators were not willing to open up the whole question of the division of inheritance.

¹²¹ This can perhaps be deduced from the opponent's claim (§ 5) that the speaker had given his sister to Menekles without a dowry.

Other references to arbitration are frequent, but provide less detail. In a situation not dissimilar to that of Menekles, Archiades of Otryne had adopted a great-nephew (ZDS) and *oikeioi* had persuaded his brother Meidylides not to object ([Demosthenes] 44. 19); Meidylides' heirs had nevertheless continued to feel that Archiades' estate should have been theirs, and finally found an opportunity to claim it (Case 12). Polyeuktos of Teithras, who adopted his brother-in-law (WB), married him to one of his daughters, and later wanted to break off both the marriage and the adoption, managed to settle through private arbitration after the adopted son had threatened to bring a court case (Demosthenes 41. 4); after Polyeuktos' death the current husbands of his daughters had tried to settle their dispute over the division of his estate by arbitration, between the first threat of a court case and the eventual hearing (ibid. §§ 12, 14).

Discussions with kin may well have been involved in some of the other compromise arrangements we have met—Pyrrhos' adoption of Endios,¹²² Dikaiogenes II's adoption of Dikaiogenes III, the dowering and marriage of the mother of the speaker of Isaios 10—but we are not explicitly informed about their role. Cases where charges of wounding with intent to kill were brought and then dropped may also have involved mediation.¹²³ On the other hand, litigants who threaten legal action in order to put pressure on kin with whom they are in conflict seem to make direct contact rather than using go-betweens.¹²⁴

MOBILIZING SUPPORT: (2) PLANNING FOR LITIGATION

Kin were perhaps especially likely to meet to draw up a plan of campaign in cases where an epikleros or estate was open to claims from collaterals. When the daughters of Epilykos son of Teisandros were approaching the age when they could formally be claimed as epikleroi, Andokides contacted his cousin (MZS) Leagros and proposed that each should claim one. Leagros was apparently also approached by Kallias III of Alopeke, who wanted to claim one of the girls for his son (Table 4.2).

As we have seen (Case 10), the speaker of [Demosthenes] 48 met with his brother-in-law (WB) Olympiodoros to plan their strategy in claiming the estate of

¹²² Pyrrhos' uncles (MBs) testified that he had adjured them (*epeskēpsen*, Is. 3. 69) to take care of Phile, which may mean that they were to see that Endios either married or dowered her. See above, Case 4.

¹²³ Arbitration in a dispute over a *hetaira*, Lys. 4. 1–2; in a property dispute, Lys. F XX Carey 2007, F XXXVII Gernet/Bizos 1926 (16 Thalheim 1913); over a trumped-up adultery charge, [Dem.] 59. 64–71.

¹²⁴ Direct contact is implied in Is. 10. 19. But Kallias approaches Andokides through his friends with an offer to drop his prosecution for impiety and compensate Andokides for the trouble he has caused him if the latter will drop his claim to the epikleric daughter of Epilykos (Andok. 1. 122).

a common kinsman. They decided that Olympiodoros would claim as next-of-kin, which apparently involved attacking the genealogical basis on which the speaker and his patrilineal half-brother considered themselves entitled to the estate. The speaker would not oppose Olympiodoros (thus weakening his brother's case), and in return Olympiodoros would share the estate with him. A written contract to this effect was drawn up, witnessed by kin and friends (*oikeioi*, §§ 7, 11) and deposited with a third party, Androkleides of Acharnai (*APF* 849). Androkleides testified for the speaker in court when he sued Olympiodoros (§ 11), but the other witnesses did not; perhaps they supported Olympiodoros.

Theopompos of Oion Kerameikon (Case 11) also seems to have done well by persuading less litigious kinsmen to let him take their claims in hand. When the estate of Hagnias had been awarded to Phylomache II, he had arranged with his brother Stratokles and his cousin (FBS) Stratios that they would challenge her right to hold the estate; all three were related to Hagnias in the same degree, as second cousins (FFBSS). Stratokles and Stratios died before they had an opportunity to present their claims, and their heirs were apparently taken by surprise when Theopompos decided that, as sons of second cousins of *d.c.*, they were not entitled to a share of the estate.¹²⁵ Theopompos had also made a written contract with Hagnias' uterine half-brothers and with another kinsman (*epitêdeios*), Eupolemos. We hear of this only from Sositheos, speaker of [Demosthenes] 43 (§ 7), who names the man with whom the contract was deposited but fails to produce him in court as a witness. These claimants presumably agreed to support each other with testimony against Sositheos' claim that his wife's grandmother (FM) Phylomache I was a full sister of Hagnias' father Polemon; it is not clear what Theopompos was offering in exchange.

Many discussions must have taken place between the sisters of Dikaiogenes II (Case 2) and their husbands and sons about the best way of proceeding against the cuckoo in their nest, Dikaiogenes III; here too there was a danger that the man chosen to represent the group in court would succumb to the temptation to settle privately and leave his allies to fend for themselves (Isaios 5. 13–14).

It is less common for kin to join together in a campaign of harassment in the courts in familial disputes than in political rivalries, but the speaker of Demosthenes 55 complains that he has already been sued by his opponent's brother and by his cousin (*anepsios*, §§ 1–2, 31) in a combined attempt to drive him off his land, which was adjacent to theirs (cf. ch. 5 at nn. 84–5).

Many of these references to private discussions and contracts are poorly supported by testimony. It seems to have been something of a *topos* to claim

¹²⁵ The claims apparently had to wait for the beginning of the archon year (Is. 11. 37); the orphans and their guardians appear to have assumed that Theopompos would present the claim in the name of all three families.

that one's opponents had tried to circumvent due process by making private arrangements,¹²⁶ just as it was a *topos* to make the not very dissimilar claim that one had oneself tried to settle a dispute with kin amicably without a confrontation in court. There is no reason to doubt, however, that a great deal of private consultation and discussion did in fact take place.

MOBILIZING SUPPORT: (3) MOBILIZING WITNESSES

An Athenian litigant had no effective means of compelling witnesses to appear in court to support him, and therefore had to ensure, whenever he engaged in any activity that might in future lead to litigation, that he was accompanied by witnesses who could be trusted to come forward when needed. Kin were naturally invited to attend as witnesses in family matters, and often in other dealings also, though to rely only on close kinsmen such as brothers or brothers-in-law might be considered suspicious (Humphreys 1986*a*, 74). They might also become involved in disputes through having looked after the property and affairs of a man on service overseas ([Demosthenes] 49. 40–1).

Thus, although in some cases a litigant had to seek out kin who had been present simply as guests at a family gathering on some past occasion, or who could be presented as well informed on genealogical matters, in many instances the likelihood that witnesses might be needed in court was already foreseen. Pyrrhos had impressed on his uncles (MBs), present at his betrothal to the sister of Nikodemos and at the naming of her daughter Kleitarete-Phile, that he was trusting them to watch over the child's interests (Case 4, Isaïos 3. 69). The speaker of Isaïos 8 took a cousin of his father to the home of *d.c.*, his grandfather (MF) Kiron, when he tried to remove Kiron's body to his own house for the funeral, a move predictably resisted by Kiron's widow. The cousin testified in court on this point and also, with others, bore witness that at the funeral the speaker had accused Kiron's brother-in-law (WB) Diokles of depriving him of his inheritance (Case 3, Isaïos 8. 21–4, 27).

A man making a will, whether oral, written, or some combination of the two, would take care to invite the beneficiaries, and probably some independent witnesses as well. The will of Euktemon of Kephisia, probably made at the insistence of his two sons-in-law, was witnessed by them and others, and deposited with Euktemon's kinsman and fellow-demesman Pythodoros (Case 1, Isaïos 6. 27). The will of Euktemon's son Philoktemon in favour of his nephew (ZS)

¹²⁶ The speaker of Is. 9 (Case 10) claimed that his opponent's principal witness, the speaker's MB Hierokles, had offered to produce a will attributed to *d.c.*, Astyphilos, in favour of anyone who would share the estate with him (§ 24).

Chairestratos was deposited with the husband of Philoktemon's other sister, Chaireas; other witnesses were also involved (6. 7). The will of Astyphilos of Araphen was deposited with his uncle (MB) Hierokles, who was also MB to Astyphilos' half-brother, the speaker of Isaios 9, who was not selected as heir and contested the will (Case 10, Isaios 9. 22). The oral will of the widow of Polyeuktos of Teithras was made in the presence of her two brothers as well as the heirs, her two daughters and their husbands.¹²⁷ The will of Demosthenes' father was witnessed by the guardians appointed for his children, two of whom were his nephews (BS and ZS), and by his brother, father of the younger nephew.¹²⁸

Case 9 continued: Sositheos' witnesses (Table 7.9, [Demosthenes] 43, APF 2921)

Sositheos, speaker of [Demosthenes] 43, had presumably been preparing to claim the estate of Hagnias at the death of its holder, Theopompos, ever since Theopompos had won it from his wife Phylomache II in 361/0. (An attempt to prosecute Theopompos for false testimony, c.360, Is. 11. 45, had apparently failed.) Theopompos had lived on for more than sixteen years, and during this time Sositheos seems to have worked hard at cultivating relations with other branches of the family. Theopompos' unscrupulous treatment of his young nephew and cousins, the sons of Stratokles and Stratios, may have caused family sympathy to swing back to Phylomache II and her husband.

Bouselos, the common ancestor, had had five sons. The line of Hagnias I had died out with Hagnias II, whose estate was the subject of this long-drawn-out family struggle. The line of Stratios I was represented by Theopompos and his son Makartatos, Sositheos' opponent, but also by Theopompos' nephew (BS), the son of Stratokles, and by the two sons of Theopompos' first cousin (FBS) Stratios II. Although Theopompos had deprived them of shares in Hagnias' estate to which they had a claim, they did not support Sositheos and may therefore have supported Makartatos.¹²⁹ Sositheos, however, could count on the line of Habron, into which his father had married; indeed, he himself with his brother represented the lines of both Habron and Euboulides I. Sositheos had also recruited as witnesses Stratonides II and his brother, who probably descended

¹²⁷ Dem. 41. 9. The term *diathékē* is not used, but the dying woman went over her affairs and the money she had advanced to her sons-in-law point by point, in the presence of witnesses, in the hope of preventing later conflicts. One of the witnesses may have been Leokrates, earlier married to one of her daughters and then divorced.

¹²⁸ Dem. 28. 15–16, cf. ch. 3 at n. 23.

¹²⁹ The Phanostratos attested as councillor in 371/0 (*Agora* XV 13a, *SEG* 28. 148) was probably Phanostratos I. It is of course possible that Stratios II's sons and Stratokles' son were dead by the time of [Dem.] 43.

from Bouselos' fifth son Kleokritos;¹³⁰ they had never, as far as we know, made any attempt to claim Hagnias' estate, and they stood in the same relationship (third cousin once removed, FFFBDSSS) to Makartatos as to Phylomache II. This structural neutrality made their support particularly valuable. Sositheos had named his four sons after his father, his wife's father, his wife's father's patrilineal half-brother, and his mother's father (who was also one of the Bouselidai); his daughter had been married to her first cousin (FBS).

Some of Sositheos' witnesses, as already noted, had been taken by him to see that Theopompos had cut down olive trees on land belonging to Hagnias' estate (§ 70). The others appeared in court to support Sositheos' claim that his wife's paternal grandmother (FM) Phylomache I had been the full sister of Hagnias' father Polemon. This was the relationship that gave Sositheos' wife Phylomache II a better claim to Hagnias' estate than Makartatos or other members of the family, and it was by casting doubt on it that Theopompos had secured the estate c.360.¹³¹ According to this claim, Phylomache II was related to Hagnias through his grandfather (FF) Hagnias I, being Hagnias' FZSD, whereas other claimants were only related to him through his great-grandfather (FFF) Bouselos. The witness testimonies, however, do not go into any detail on this crucial point, though they contain a great deal of other genealogical information of very marginal relevance to the case. The testimonies seem to be worded with the aim of persuading the jury that Sositheos' claim is solidly supported by a large body of well-informed kin, without actually laying any of the witnesses open to a charge of perjury, or pressing them to declare themselves on doubtful points. The witnesses explain their own descent, and supply genealogical detail about dead kin who did not put in claims to Hagnias' estate, the implication being that they recognized Phylomache II as having prior rights.¹³² Furthermore, in the published version of the speech Sositheos does his best to conceal the fact that the witnesses from the descent lines of Habron and of Euboulides I are his father

¹³⁰ See Humphreys 1986*a*; I have assumed that one of Sositheos' witnesses was Stratonides of Oion, father of Straton, ephebe in 330/29/8 (*IOrop* 353; cf. Humphreys 2009).

¹³¹ Sositheos actually claimed the estate for his second son Euboulides III, presented as the adopted son of his MF Euboulides II, presumably relying on the rule that the sons of an epikleros inherited her father's property at 18; the posthumous adoption also contributed to his presentation of himself as a model of familial piety. At law the boy's claim stood on exactly the same footing as that of his mother had done.

¹³² These dead kinsmen, Euktemon and Menestheus, were half-brothers respectively, of Phylomache II's FF Philagros and of her father Euboulides II, and were apparently childless, so it is perhaps not surprising that they were prepared to waive their rights in favour of Phylomache II. She may have been Menestheus' heir, since one of her sons was called after him. Litigants drafted testimonies in consultation with their witnesses before the hearing, and there was no opportunity to cross-question witnesses in court. On the problems of assessing the relevance and validity of witness testimonies see Todd 1990, 31.

(§ 27) and his brother (§ 46), and to suggest to the reader that he had two sets of witnesses where in fact he called the same set to testify twice.¹³³

Although Sositheos' use of this tactic is exceptionally elaborate and extensive, it may not have been uncommon for published versions of speeches to conceal close relationships between litigants and their witnesses. It is likely that the claimant's *genitor* testified for his son in Isaïos 6. 34, and perhaps elsewhere, and in Isaïos 7. 7–10, where the witnesses are not precisely identified.

Case 14: Euxitheos' witnesses (Table 7.12, Demosthenes 57, APF 3126)

Euxitheos, the speaker of Demosthenes 57 (Table 7.12), was appealing against the decision of his deme Halimous to expel him as having acquired citizenship under false pretences. He does not, of course, explain precisely what the charge was, but it seems to have concerned his filiation (or his father's identity) rather than the citizenship or marriage of the couple whose son he claims to be.¹³⁴ He was able to produce an impressive array of fifteen kinsmen to testify that his parents were of legitimate Athenian birth and duly married: three first cousins (FBS) of his father, and the son of one of them, all members of his own deme; a stepcousin of his father (son of a uterine half-sibling of Euxitheos' paternal grandmother, FM), and the husbands of this cousin's two sisters; his own two uterine half-brothers and the husband of their sister; three grandsons (SS) of his mother's brother; the son of his mother's patrilateral half-brother (Damostratos II of Melite); and a second cousin on his mother's side (MMBSS), Apollodoros II son of Olympichos of Plotheia. Other members of his father's and maternal grandfather's demes and phratries may also have testified. One of the motives encouraging these kin to testify may have been that it gave them the chance to

¹³³ See Humphreys 1986*a*, 60–2; W. Thompson 1971*b*. In court witnesses were present in person, and would have been identified by name, patronymic, and demotic, so the duplication, and some of the relationships between Sositheos and his witnesses, could hardly have escaped notice.

¹³⁴ The charge may have been that he was an illegitimate child of his mother, conceived while his father was absent (or to an impostor accepted in the father's place? cf. above at n. 77). The uncles (FB) of Thoukritos (Euxitheos' father) perhaps did not expect to see him again when he disappeared during the Dekeleian War, and the share of the family property that they handed over when he came back may have been small (it was not in Euxitheos' interest to admit this), since he returned to military service after marriage, leaving his wife and two children almost destitute. His FB Charisios, whose descendants seem to have been wealthy, named one of his sons Thoukritides, after Euxitheos' father, which might indicate that he had believed this line of the family to have died out leaving no heirs. In the event the returning prisoner was accepted as Thoukritos, but there may have been suspicions, compromise, and gossip, which died down but was resuscitated at Euxitheos' trial. D. Cohen 1998 accepts Euxitheos' version of his opponent's case too easily. Euxitheos could prove that his mother was of citizen parentage; it was much harder to rebut suggestions that economic hardship would have encouraged her to take a lover or welcome an impostor. Deme rivalry was involved: see below, ch. 26 at nn. 14–19. If there had ever been doubts about the legitimacy of his FM Lysarete (ch. 4 at nn. 31–2), they were not mentioned at this date.

Note: Since Diodoros is such a common name, there is only a slight possibility of a link to Epigonos son of Diodoros of Halai Aixonides, ephebe in 333/2/1, IG ii³ 4.337.

TABLE 7.12. Demosthenes 57, APF 3126, 3933 (revised)

stress that a decision against Euxitheos could not affect their own solidly established credentials to citizenship. Some of them—his paternal next-of-kin and/or his uterine half-brothers—may also have hoped to inherit from him, since he does not seem to be married.¹³⁵ Their testimony concerns the citizenship, legitimacy, and marriage of his parents, and—in the case of those witnesses who were members of his own phratry and deme—his introduction to these bodies; none of these points need have been in question. There is no testimony that kin had been present when he was named, or other evidence about his childhood. It is also likely that one line of kinsmen in the deme had refused to testify for him;¹³⁶ the deme was evidently divided between Euxitheos' supporters and the group led by his opponent Euboulides, the current demarch.

The caution with which witness testimonies seem to be worded in these two cases indicates that Athenians were not on the whole prepared to stand up in court and subscribe explicitly to a lie, unless interests very close to home were at stake. On the other hand, if litigants expected to impress jurors by the number of witnesses they recruited, irrespective of the relevance of their testimony, this does not necessarily mean that they thought jurors were fools. Witnesses could not be compelled to testify,¹³⁷ and if a witness agreed to come to court this implied that he felt he would be testifying in a respectable case, even if he was not fully certain that the litigant was in the right. It was not unreasonable for jurors to assess a litigant's genuineness partly by the number and character of the witnesses who supported him (Humphreys 1985*b*).

In another appeal against expulsion from the deme, Euphiletos (Table 7.13), defendant in the case for which Isaios 12 was written, was able to produce testimony from his father, his father's first wife's brother, three patrilineal half-brothers (one of whom acted as his *synēgoros*), the husbands of two patrilineal half-sisters, three other *oikeioi* presented as 'never having been involved in anything disgraceful' (§ 6), and members of the phratry to which Euphiletos had been admitted (§ 8).¹³⁸ Deme rivalries were involved in this case, too (§ 10); the charge was apparently that Euphiletos was his mother's son by an earlier union (§ 5). In this case his half-brother insists that he has known Euphiletos from

¹³⁵ He expects his opponents to make this point, §§ 52–3. There are no affines among his witnesses, and he makes no appeal to the jury to consider the effects of an adverse decision on his children.

¹³⁶ The descendants of Kephisodoros I (buried on Salamis, *IG* ii² 5542; see Humphreys 1986*a*). Charisandros son of Charisiades, acting demarch in the 320s (*SEG* 2. 7, Whitehead 1986*a*, 435, ch. 26 n. 21) and his (?) brother Charisios II, perhaps attested as trierarch *c.*354 (*SEG* 45. 147 II 6) are also absent from the list of witnesses, but their father is present.

¹³⁷ If a person was present in court, he could be challenged to testify or to take an oath saying that he did not know the answer to the question put to him; but he could not be compelled to come to court. If a man had been specifically invited to witness an earlier transaction, he could be sued if he later refused to testify about it. See Humphreys 1985*b*, nn. 27, 55.

¹³⁸ The three named *oikeioi* may also have testified as phrateres. Cf. ch. 26, section 'Halimous'.

TABLE 7.13. Cf. Table 24.4

birth, having been thirteen when he was born; the testimony from the brother of Euphiletos' father's first wife is also impressive.

Such structurally neutral witnesses play an important role, but otherwise it seems to be assumed, in cases where genealogical knowledge is called on, that it is equally distributed. There is no recognized role of 'kin-keeper'. Information about family relationships within the limits of *anchisteia* was of practical importance to everyone in the property-owning class, though outside this range information might rapidly become vague and inaccurate.¹³⁹

*

As we shall see (ch. 9), an Athenian acquired his or her identity, during childhood and adolescence, through a series of rites de passage carried out in the presence of kin and close associates of the family. Identity was, initially, a place in a kin network, and status depended on descent. Even in adulthood a man could not afford to isolate himself from his kin, and if they behaved disgracefully he would not be allowed to forget it or dissociate himself. To have kin as witnesses in court was thus important both because they could testify to the proper performance of rites de passage and because their presence helped to consolidate the respectable *persona* that the litigant needed to present to the jury.

The speaker of *Isaios* 8 had to find witnesses to testify that his mother was duly married as the daughter of an Athenian citizen. *Prosēkontes* of his father testify in §§ 18–20 that they were invited to a feast (*hestia*) to celebrate the marriage of his parents, and that his mother was married with the formality of *enguê*; her first husband's *prosēkontes* testify that her first marriage was also preceded by *enguê*.¹⁴⁰ The husband of Phile (Case 4, *Isaios* 3) has testimony from the uncles (MBs) of her father Pyrrhos that they were present when she was named (§ 30) and at the

¹³⁹ The 'kin-keeper' in modern western society is often a woman (Firth, Forge, and Hubert 1969, 139–42), but this may merely be an indication that genealogical knowledge is considered to be of only sentimental significance. It is not clear how far Athenian men relied on women for information about affines and cognatic kin. The speaker of [Dem.] 48 claims not to have known that his WB Olympiodoros was related to his own kinsman Komon (§ 5), but he may be lying. On inaccuracy in information about famous ancestors see R. Thomas 1989, ch. 2, especially 139–44.

¹⁴⁰ §§ 8–14. The testimony may have concerned her dowry, over which there had been some dispute when the husband died (§ 8) rather than the actual formalities of *enguê*, but the two normally went together.

enguê of her mother (§ 26); her own uncle (MB) Nikodemos had testified that he gave her mother by *enguê* to Pyrrhos as his lawful wife. Nikodemos had not, however, been able to produce very convincing testimony of the *enguê* of Phile herself, supposedly performed by *d.c.*, Endios; his only witness had not appeared in court, and the speaker asserts that he was disclaiming the deposition (*ekmartyria*) that had been produced.¹⁴¹ In fact it is not clear that *enguê* was a markedly public act; when a witness to *enguê* is called it is normally either the woman's *kyrios* or the father of the man who became her husband.¹⁴² Euxitheos, however, claims that when his mother's brother betrothed her to his father, the latter's two paternal uncles (FBs) were present with other witnesses (Demosthenes 57. 41).

Suspicion could be cast on witnesses called to testify about familial occasions if they were not kin or close associates of the family. Mantitheos of Thorikos scored a debating point against his half-brother Boiotos by arguing that the witnesses who testified that Boiotos was named Mantitheos were neither kin nor friends of their father Mantias; one, indeed, was Boiotos' contemporary, and could therefore have no reliable knowledge about the *dekatê* ceremony at which Boiotos claimed to have been named.¹⁴³

On the other hand, there seems to be a certain tendency for litigants to identify only as phrateres witnesses who may have had some traceable genealogical or affinal connection to them. Phrateres testify in *POxy* 31. 2538 (iii 2ff., iv 21ff.) that the speaker had been duly introduced to their phratry, in Demosthenes 57. 23 and 43 that Euxitheos had been elected phratriarch and that his father had celebrated *gamêlia* for his mother; in the latter case we are told that the witnesses are *syngeneis* and *oikeioi*, which suggests that they were members of Euxitheos' *thiasos*, and they may have been quite close kin. The phrateres who testified in Isaios 3. 76 that Pyrrhos did not celebrate *gamêlia* for the sister of Nikodemos need not have been so close.¹⁴⁴

A litigant would also try to find ways of recruiting witnesses who were kin or affines of his opponent, or who had ties to both parties, in order to persuade

¹⁴¹ § 18. *Ekmartyria* was an accepted procedure, and the speaker produces no evidence of the disclaimer. It is not clear if it is this testimony that is re-read in § 53.

¹⁴² The husband of the speaker's elder sister may have testified in Is. 2. 3–5 that she had been dowered; one of Mantitheos' MBs (Table 7.2) probably testified about the dowry of his sister, Mantitheos' mother, in [Dem.] 40. 7 (cf. 24). The witnesses in Dem. 41. 26, testifying about the opponent's dowry, are unidentified, as are the witnesses to *enguê* in Is. 9. 29.

¹⁴³ Dem. 39. 22, 40. 59. Boiotos' witnesses may have testified that he was known as Mantitheos during his childhood rather than that they were present at his *dekatê*. Mantitheos unfortunately does not identify the witnesses who testified about his own *dekatê* (39. 20). Cf. the insistence in Is. 4. 23 that the opponent's witnesses are his own kin and not *epitêdeioi* of *d.c.*

¹⁴⁴ *POxy* 2538, Isaios? Carey 2007 A 3a (n. 78). They may have testified only that they had not heard of Pyrrhos doing so. Further references to testimony by kin, phrateres, and demesmen whose relationship to the litigant is not specified are collected in Humphreys 1985*b*, 1986*a*.

the jury that even those whose loyalties might bias them against him, or lead them to favour compromise, considered his case irrefutable. Demosthenes got testimony from his guardians Demophon (his FBS) and Therippides against his third guardian Aphobos, and from Onetor's ex-brother-in-law (ZH) Timokrates against Onetor.¹⁴⁵ Phormion was supported in his case against his stepson Apollodoros by Apollodoros' brother Pasikles and by a cousin (FZS) of Apollodoros' wife. In his subsequent suit against this witness, Stephanos, Apollodoros gets Stephanos' uncle (MB) Deinias to testify that he is Apollodoros' father-in-law and had not heard about the will which is the subject of dispute. Deinias is presented as a reluctant witness, and the testimony is of no importance in establishing the facts of the case, but Apollodoros hopes to establish that Stephanos' kin disapprove of his support for Phormion.¹⁴⁶ In Hyperides 3 *Athenogenes* 34 the speaker, involved in a business dispute, persuades a *kêdestês*¹⁴⁷ of his opponent Athenogenes to appear as a hostile character witness. A *kêdestês* of the opponent testifies for the speaker of Isaios 2 (29–34; Case 13) concerning the arbitration between the opponent and *d.c.*, Menekles, in which he played a part. In the case over Astyphilos' estate (Case 8), the speaker's uncle (MB) had appeared as witness for the opponent, Kleon, testifying to the validity of Astyphilos' will, a particularly damaging testimony for the speaker's case; conversely, the husband of Kleon's aunt (FZ) supported the speaker with testimony that Astyphilos' father had maintained his hostility to Kleon's father until his dying day (Isaios 9. 19). The witness who testified in Demosthenes 41 concerning his sister's will was structurally neutral, being uncle (MB) to the wives of both litigants.¹⁴⁸

¹⁴⁵ Dem. 27. 14–17, 30. 9. Demophon and Therippides were unavoidably present in court; Timokrates had initiated the divorce himself, but may have welcomed an opportunity to get public acknowledgement that he was paying interest on the dowry (Dem. 30. 7–9). In view of Onetor's wealth one would expect his ZH to be in the liturgic class, so Timokrates may have been either *APF* 13769 or 13772. Either identification might imply that Timokrates had a son by Onetor's sister before divorcing her. That Demosthenes was a political opponent of 13772 by 353/2 is irrelevant. In [Dem.] 29. 3, 15–18 (cf. §§ 23, 25) we are told that Demosthenes had compelled Aphobos' brother Aisios to testify against him, in an earlier suit, but there is no trace of this testimony in Dem. 27–8 and I regard this statement as evidence that 29 is a rhetorical exercise (Humphreys 1986*a*, 75; 1985*b*, nn. 69–70). The speech is defended by MacDowell 1989*a* (followed by Rubinstein 2000). We are also told ([Dem.] 29. 20, 33, 36, 52, 56) that Demosthenes was supported by Demon. Demosthenes may well have been trying to detach Demon and his son Demophon from Aphobos, but the statement in [Plut.] *Mor.* 844d that he let Demophon off may come from a political opponent (cf. n. 35).

¹⁴⁶ [Dem.] 45. 55–6. Deinias is not being forced to take an oath that he knows nothing of the affair, he is giving a voluntary testimony (with a show of reluctance) to this effect; testimony that the witness has not heard of something which would be likely (if true) to have come to his attention occurs elsewhere in Athenian cases. Cf. Is. 6. 11.

¹⁴⁷ Perhaps ZH, see Humphreys 1986*a*, 80.

¹⁴⁸ Dem. 41. 8–10, 17*f.*, 24, and perhaps 11, 26. The allusion in § 15 to *philoi* who know the whole story and support the speaker may refer to this witness, who may conceivably have had less sympathy for the wife of Spoudias (the speaker's opponent) who had divorced his brother.

If kin refused to get involved in a dispute, their silence could still be turned to account. The speaker of Isaios 7 (§§ 18–21) argues that the failure of Thrasylochos of Lousia to put in a claim to Apollodoros' estate, though he stood in the same relation to Apollodoros (FBDS) as the speaker's opponent, constitutes *de facto* testimony that the speaker is in the right.¹⁴⁹

MOBILIZING SUPPORT: (4) FORMAL PROCEEDINGS

When a disputant decided to take formal action, kin might act as summoners, *klêtêres*; they might also help by intervening in the early stages of the process with delaying tactics or objections. The speaker of [Demosthenes] 48, who was at the time in cahoots with his brother-in-law (WB) Olympiodoros, asked for a delay in hearing claims to Komon's estate because Olympiodoros was away on military service (§ 25; Case 10). *Diamartyriai* asserting that the estate was not subject to *epidikasia*, because *d.c.* had left a legitimate son, had been made in Case 13 (Isaios 2) by the son's father-in-law and in Case 1 (Isaios 6) by Androkles, a kinsman of *d.c.*¹⁵⁰

A *diamartyria* had the effect of transforming the supporter who made it into the defendant in a preliminary case in which he was accused of perjury; this was one mechanism by which a nervous litigant could put forward an older man with greater skill and experience to argue his case for him.¹⁵¹ He could also, however, ask an older kinsman or friend to act as supporting speaker, *synêgoros*. There were no rules governing the division of the allocated time between a speaker and his *synêgoros* (or *synêgoroi*); in some suits a *synêgoros* virtually takes over the whole presentation of the case.

The claim to Hagnias' estate made on behalf of Euboulides III, a minor, by his elder brother (acting as his *kyrios*) was argued in court by their father Sositheos ([Demosthenes] 43. 9, 15, Case 9); the case of Diodotos' sons against their

¹⁴⁹ Thrasyboulos seems to have inherited estates both from his *genitor* and from his *pater*, and may have feared that this would prejudice a court against him; he may even have come to a private agreement with the opponent (cf. Case 10 [Dem.] 48), and for all we know may have testified for him.

¹⁵⁰ In Case 2 (Is. 5) a *diamartyria* on behalf of Dikaiogenes III had been made by Leochares, whose relation to Dikaiogenes is unknown; in Case 4 (Is. 3) a *diamartyria* had been made on behalf of *d.c.*'s daughter Phile by her husband Xenokles. In [Dem.] 44. 54 (Case 12) the opposing claimant, Leochares, had made a *diamartyria* on behalf of himself and his father. In origin the *diamartyria* was probably a formal affirmation by a person of standing in the community that a claim or charge had no foundation (against Gernet's ideas on oath-helping see Humphreys 1985b n. 33); after a period of some confusion in the late 5th and early 4th c. (Lys. 23. 13, Isokr. 18. 11f; Is. F III Thalheim 1903, *paragraphe* in an inheritance case) it became customary to use *paragraphe* for objections in most types of case but to retain *diamartyria* in inheritance claims. By this time the reason for asking a third party to make the objection was no longer evident, and some claimants act for themselves. See Appendix 5.

¹⁵¹ In Is. 2, however, the claimant acts as *synêgoros* for his WF, who had made the *diamartyria*.

grandfather (MF) and guardian Diogeiton was argued by their brother-in-law;¹⁵² the defendant in Isaios 12, who had been expelled by his deme, was represented by an older patrilateral half-brother;¹⁵³ the speakers' opponents in [Demosthenes] 44 (§ 27) and Isaios 9 (§ 2) were represented by their fathers. The speaker of [Demosthenes] 44, however, was a son acting as *synēgoros* for his father, represented as poor and unaccustomed to public speaking (§ 4). In several speeches a single brother seems to have spoken for himself and his siblings, and the speaker of Isaios 5 (Case 2) seems also to be representing his aunts (MZs) and cousins; it is possible that this was required in *epidikasiai* where several heirs were claiming an estate on the same basis, but in other types of case litigants may have been able to choose whether to combine forces or not.¹⁵⁴

The extent of the help given to Apollodoros of Leukonoion by his stepfather when he sued his guardian (FB) is unclear.¹⁵⁵ In Isaios 6 and 4 family friends act as *synēgoroi* for claimants in inheritance cases; in the former case the speaker has to make embarrassing disclosures about the behaviour of *d.c.*, Euktemon, in old age (Case 1), and in the latter an inordinate number of claims to the estate had been made, which may have prompted the claimants to look for a respectable and disinterested advocate.

In the closing section of a case in which the unsuccessful defendant stood to pay a penalty or damages, his kin or friends might intervene to plead for leniency or to bargain with the plaintiff, promising to guarantee payment if the sum imposed was not too high. Plato's *Apology* is the only example we have of a speech supposedly delivered in the debate on a defendant's sentence (*timêsis*); in most cases defendants may have preferred not to circulate a speech which

¹⁵² ZH: Lys. 32. 2, Case 6; one or perhaps both boys had recently come of age (§§ 1, 9). ZH speaks for WB in a homicide case, Lys. 13.

¹⁵³ Their father Hegesippos was still alive, and appeared as a witness (Is. 12. 1–3, 8–9); this may be a case where there were accusations that an older husband had been bamboozled by a young wife, cf. Is. 2. Support from a patrilateral half-brother also in *POxy* 2538 (n. 78).

¹⁵⁴ This question does not seem to have been much considered. There could certainly be more than two claimants in a *diadikasia* over an estate, but probably only if the basis of their claims was different. Sositheos implies in [Dem.] 43. 7–9 that Glaukos and Glaukon made separate claims to the estate of their uterine half-brother Hagnias, after it had been awarded to Phylomache II, but contradicts this suggestion in § 10. Claims by one brother on behalf of a sibling group in Is. 1, 4, 8 (cf. Lys. 18); action was taken against Dikaiogenes III first by Polyaratos of Cholargos (Is. 5. 9), husband of one of the sisters of Dikaiogenes II, then by Menexenos son of Kephisophon of Paiania, son of a second sister (§§ 12–14), and finally by Menexenos son of Polyaratos (§ 5). In [Dem.] 38 the twin sons of Nausikrates of Paiania (*APF* 11263) each brought a separate suit against each of the four sons of their ex-guardian Aristaichmos. The twins by this time were forty (§ 6); their opponents presented themselves as young and inexperienced (*ibid.*), but may have decided to divide their inheritance to make things more difficult for the plaintiffs. See ch. 3 at nn. 8, 27.

¹⁵⁵ Is. 7. 6–7, 10, 13. Women are represented in surviving speeches by their husbands or sons (Humphreys 1986*a*), though a father or brother could also have acted as *kyrios* in a court case. On *synēgoroi* see further ch. 14 nn. 49–51.

implied that the first vote had gone against them. But we have several references to appeals for mercy and to the Athenian equivalent of plea-bargaining. In the dispute between Dikaiogenes III and his kin (Case 2), when Leochares was being prosecuted for perjury after his *diamartyria* in favour of Dikaiogenes, they managed to persuade their opponents to compromise before the votes were counted (Isaios 5. 18). Leochares and Mnesiptolemos guaranteed that Dikaiogenes would restore two-thirds of the family property to his opponents; arbitration by a *kêdestês* of Leochares (Diopeithes) and by the brother of Mnesiptolemos, with two representatives appointed by their opponents, followed, before Leochares was sued in the case for which Isaios 5 was written (§§ 31–3). In Demosthenes' suit against Aphobos the latter's brother-in-law (WB) Onetor appealed for leniency and offered to guarantee payment if the damages were limited to one talent.¹⁵⁶ Subsequently he helped Aphobos by erecting horoi on part of the property claimed by Demosthenes, and asserting that it had been ceded to him as security for his sister's dowry, which he was due to recover because (allegedly) her marriage to Aphobos had been terminated by divorce. Demosthenes took him to court.¹⁵⁷

*

As these last examples imply, the seeds of further cases were often sown before the current proceedings had come to an end. Intention to prosecute witnesses for false testimony had to be stated in court when the testimony was produced.¹⁵⁸ The speaker of Isaios 3 (Case 4) had already successfully prosecuted Phile's husband Xenokles for making a false *diamartyria*, and was now prosecuting his chief witness, Phile's uncle (MB), Nikodemos, for false testimony. Apollodoros son of Pasion of Acharnai prosecuted Stephanos son of Menekles, of the same deme, for false testimony concerning Pasion's will, even though his stepfather Phormion had defeated him so resoundingly that he can hardly have hoped to reopen the case (Demosthenes 36, 45–6). After a case in which Philotades of

¹⁵⁶ Dem. 30. 32. *Pace* APF 3597 XVIII, Demosthenes may well have been right in treating Aphobos' offer before the public arbitrator to demonstrate that the guardians had handed over 10 tal., or make up any shortfall (Dem. 27. 50), as mere bluff and not as a serious attempt at settlement.

¹⁵⁷ Dem. 30–1. It is not clear to me why they felt that Onetor's claim to the land had to be strengthened by a divorce. (This may be why APF 11473, p. 423, thinks the whole story of divorce from Timokrates, marriage to Aphobos and divorce from Aphobos is fictitious; but Demosthenes himself shows no sign of taking this view.) [Dem.] 29. 3 says that a multiple dwelling (*synoikia*) owned by Aphobos was claimed by his brother Aisios, but though such claims were often made the speech may not be genuine (see n. 145).

¹⁵⁸ A. R. W. Harrison 1971, 192–3; it may have been fairly common for litigants to change their minds after the end of the case. Unlike prosecution for perjury in a *diamartyria*, a prosecution for false witness did not halt the case in which it was announced, and there do not seem to have been clear rules about the implications of successful prosecution for the preceding court decision (*ibid.* 193–7).

Kydathenaion was expelled from his deme on the grounds that he had been the slave of Timarchos of Sphettos, Timarchos was prosecuted for having taken bribes from a *kêdestês* of Philotades.¹⁵⁹

*

Family disputes often lasted a very long time. The speaker of [Demosthenes] 44 (Case 12) was claiming in the 320s an estate that had passed to another branch of the family by *c.*370 at the latest, and probably well before that date. Sositheos, in [Demosthenes] 43 (Case 9) was claiming *c.*340 the estate of Hagnias, who had died in the 370s, from the heir of Theopompos, to whom it had been awarded *c.*360 (§ 31). The sisters of Dikaiogenes, who had died in 412/11, were still in 389 trying to recover a share of his property. The sons of Mantias were involved in intermittent litigation for at least twelve years after their father's death, during most of which period they shared and resided together in the house that was one of the main subjects of their dispute.¹⁶⁰ The opponent of the speaker of Isaïos 2 (Case 13) was contesting an adoption carried out twenty-three years earlier (§ 15); the family of Thoudippos and Euthykrates of Araphen was still divided some thirty-five years after the fight between them over the division of their father's estate which (it was claimed) had caused Euthykrates' death (n. 85 above); Apollodoros of Acharnai and Nausimachos II and Xenopeithes II of Paiania were still pursuing claims against guardians ten and twenty years after the latter's responsibilities had ended.

EXPERIENCE, EMOTION, AND FANTASY

It would be satisfying to be able to conclude this chapter by pointing to the structural factors that were commonly likely to bring particular categories of kin into conflict with one another; but no simple picture of these emerges. There were, certainly, structural rules that helped to shape Athenians' experience and emotions: the inevitable association with agnates in deme and phratry, the order of succession in intestate inheritance which influenced a man's chances of acquiring additional property by inheriting from a collateral kinsman or his

¹⁵⁹ Aisch. 1. 114–15, wrongly interpreted in Humphreys 1986*a*, 80. Philotades had appealed, and Timarchos had appeared as witness for the deme, taking an apparently voluntary oath.

¹⁶⁰ Humphreys 1989. Mantitheos continued privately to regard his two half-brothers as illegitimate during this period (359–347), but may have been inhibited from attacking their claims to citizenship by a public debt incurred by their father, which the three paid jointly *c.*342/1 (*IG* ii² 1622. 442–3). Mantitheos-Boiotos and Pamphilos had probably also succeeded in building up support in their father's deme and phratry.

search for an heir, the division of property between sons which might lead to neighbourhood between agnates.¹⁶¹ On the other hand, since Athenians could marry within their phratry and deme, these groupings often contained cognatic kin and affines as well as agnates; the rules of intestate succession gave daughters and their children a right to succeed, in the absence of sons, in each generation; and from the time of the Peloponnesian War onwards there was a good deal of residential mobility (ch. 5). Athenians did not make strong distinctions between agnates and other kin, between patri- and matrikin, or between kin and affines; indeed, although *prosékontes* and *syngeneis* seem to be used only to refer to kin, kin are also referred to by terms which also cover close family friends: *oikeioi*, *anankaioi*, *epitédeioi*.

An attempt to quantify conflict and cooperation between kin in the courts shows that affines and matrikin are almost as likely to be involved in such relations as patrikin, and seems to indicate a difference in frequency between relations with those who have at one time lived in the same household as Ego, and more remote kin.¹⁶² The essential point, however, is that Athenians needed support from kin, but had a wide range of kin and affines to choose from (Table 7.14).

As the dispute between Mantitheos and Mantitheos-Boiotos of Thorikos shows (Demosthenes 39–40), an Athenian could not even be sure of remaining firmly attached to his name unless he could produce witnesses that he was entitled to it. For a pre-industrial society Athens had a comparatively high level of literacy and the use of written record, and Boiotos' predicament was unusual for the propertied classes; but even at this level women's names were unstable, as were those of slaves, and probably of metics and the poorer citizens (ch. 8). There was no centralized registration either of persons (births, marriages, deaths) or of property. Civil status was acquired by registration on the lists of phratry and deme, and the decisions of these bodies were open to challenge.

A boy, asked who he was, would identify himself by reference to his father, and this reference continued to be part of his public name and identity in adulthood; even in informal encounters, introductions must often have been referential, a new acquaintance being situated by reference to a kinsman or friend of his who was already known to the grouping. In place of the centralized authority of carefully supervised written record, Athenians relied on the diffuse authority of kin

¹⁶¹ Evidence, by the classical period, is hard to find (ch. 5 at nn. 76–9).

¹⁶² Nothing can be 'demonstrated' by quantitative analysis of such a small sample, in which a few cases such as the dispute over Hagnias' estate (Case 9) or Euxitheos' defence of his right to citizenship (Case 14) contribute a disproportionate amount of the data. There are also problems in dealing with cases where the attitude of kin changes from conflict to cooperation, or vice versa, over time. Cf. Humphreys 1983a/1993, 70–1 on the difficulty of quantifying representations of relationships within the nuclear family in Attic drama. Visual representation, however, is useful in giving an impression of the range of kin identified by precise genealogical reference, and of relative frequencies.

TABLE 7.14. Kin in lawsuits, Ego male (Humphreys 1986, 68)

networks to establish identity, and this dependence of identity on acceptance by others must have been internalized.¹⁶³

Identity was also closely bound up with property and potential property interests.¹⁶⁴ Land was not just an expanse of soil, but relationships with kin and slaves who had helped to work it and neighbours by reference to whose holdings its boundaries were established. A son or daughter represented, from birth, a claim on the family estate in terms of eventual division, as well as maintenance. Fields and farms might have come into the family's possession from different sources, and might be destined to fall again into separate ownership. Some were marked with *horoi* denoting that they were committed as security for a woman's dowry, or for a loan. Relations with kin were shaped not only by their position on the map of social experience—as members of the household, close neighbours, residents in the same community, absentee members of *deme* and *phratry* encountered only at religious festivals and assemblies, city-dwellers met at major cult ceremonies, etc.—but also by the contingencies of demography and family history. Memories of past conflicts and rivalries lived on; kin who lost their heirs found themselves beset with attentions; bachelor uncles who had been popular and frequent visitors to the household became more distant as they married and produced families of their own.¹⁶⁵ Economic expectations for a large number of Athenians centred almost entirely on inheritance, principally of land or urban property. It was only at the very top of the society, where political success or failure moved men to and fro across the line that separated the super-rich from those whose wealth was more modest, and at the bottom, that men would have had a strong sense that their life chances depended on their own wits.

What was personal about an individual's life history, therefore, was often the contingencies affecting his relations with others rather than the outcome of personal gifts or weaknesses. Sositheos (Case 9) had come to play the role of the loyal kinsman and descendant, actively involved in relationships with a wide-reaching

¹⁶³ Cf. Humphreys 1978, 261–5 and 1993, lvii on the limits of individualism in ancient Athens; Humphreys 2002*b*.

¹⁶⁴ Medick and Sabeau 1984*b*, stress that 'economic interests' cannot be sharply separated from personal relationships.

¹⁶⁵ A child's MB might still be in his teens when the nephew or niece was born, and would not marry for another 10–20 years. Differences between attitudes to FB and MB which some have found in the Greek evidence (Bremmer 1976, 1983) may be due to the gap between men's and women's age at marriage. The chances that a young kinsman would die in battle or an older one would not be survived by heirs were quite significant (though it must be remembered that childless men figure disproportionately in our record). For example, among the descendants of Apollodoros I of Leukonoion (Table 2.1, Is. 7, *APF* 1395), one of his three sons had died without issue; the only child of a second son, Apollodoros II, had died before reaching maturity, and he had adopted the son of his uterine half-sister; the third brother, Eupolis, had a son (Apollodoros III) who died childless, and two daughters, who had divided their brother's estate; the only son of one of these sisters, Thrasyboulos, had been adopted by a patrilateral kinsman, apparently after inheriting his father's estate, while the second sister seems to have been childless.

network of kin, through his hopes of recovering the estate of Hagnias. Apollodoros son of Pasion of Acharnai, who as son of an ex-slave had no patrikin, and who had quarrelled with his mother, brother, and stepfather, clung closely to his wife's kin because he had no other allies (ch. 4 at n. 45). Where personality did influence life chances, perhaps, was in its impact on personal relationships, either in informal relations between kin or in determining a man's decision to risk going to court even for small gains, or to avoid it even when much was at stake.

Although litigants like to present themselves whenever possible as retiring men who have no experience of speaking in court and have only been driven to it by extreme danger or flagrant injustice, the nature of our evidence means that we hear more about conflict between kin than cooperation. Court cases arise out of conflict, and the conventions of public speaking in Athens led litigants, when insisting on their own virtues, to stress public service rather than the qualities of the responsible family man. Piety towards the dead may be emphasized, where an estate is being disputed between collateral heirs, but less is said of care for the living. We are not told, for instance, whether Euktemon's daughters and sons-in-law took care of his wife after he had deserted her and her son Philoktemon had died (case 1), nor whether either of the daughters of Polyeuktos of Teithras lived with her husband in the home of her elderly parents.¹⁶⁶ We hear that the father of the speaker of Lysias 19 had taken his widowed daughter and her three children back into his household, when her husband Aristophanes was executed and his property confiscated, only because he and his son were accused of having retained some of Aristophanes' property for themselves.¹⁶⁷ The friend of Sokrates who had taken in fourteen destitute kinswomen during the Peloponnesian War has no counterpart in the forensic speeches.¹⁶⁸ Their stories, like the stories of tragedy, concern the wickedness of kin rather than their good deeds.

*

In studying the world presented by the orators, I am struck not by evidence of structural regularities but by the variety of alternative structures available to actors as frameworks for their experience, hopes, and fantasies. While one potential heir was building his expectations on the definition of next-of-kin in Solon's laws, another would have constructed an alternative map of family relationships in which closeness was measured by personal association, affection, and

¹⁶⁶ Dem. 41. Spoudias and his wife seem to have lived elsewhere (§§ 17–18), though this was the daughter who had first been married to Polyeuktos' adopted son Leokrates. Wealthy families with slaves did not have a problem in arranging care for the elderly.

¹⁶⁷ *APF* 5951. It is likely enough that the size of the widow's dowry had been inflated, though the claim that Aristophanes had borrowed 700 dr. from his father-in-law seems modest in view of the size of his estate.

¹⁶⁸ Xen. *Mem.* 2. 7. Residence of widows is discussed by V. J. Hunter 1989, cf. ch. 5 at nn. 33–5.

cooperation, and distance by offences committed in the past and lack of contact in the present (Case 8). Theopompos' bland assumption that nature is irrelevant in a court of law—'a mother is the closest relation of all by nature, but it is generally agreed that she does not appear in the order of intestate succession laid down by law', Isaios 11. 17—was uncharacteristic both in limiting 'natural' relationship to biology and in its confidence that law was beyond question. Most Athenian litigants preferred to occupy a moral middle ground in which an insistence on the letter of the law, if it diverged from expectations emotionally reinforced by long association, was in itself a sign of lack of proper family feeling. Although such expectations were certainly shaped at least in part by knowledge of the law, a feeling persisted of antagonism between the courts and the proper regulation of family affairs by friendly compromise.

Yet, though the prospect of appearing in court must have been genuinely alarming for many Athenians, though real efforts at compromise and mediation were made, and though litigants regularly preface their speeches with expression of their distaste at having to settle disputes with kin in this manner, court was not a place where disputes were settled by the authoritative interpretation of legal rules. It was, instead, a place where competing stories were told, and where the art of capturing the moral ground had been elaborated by speechwriters. A persuasive speech would certainly make the best of any laws that supported the litigant's position, but above all it had to present him as morally entitled to win at his opponent's expense. A bald statement that *d.c.* was entitled by law, if he had no lineal heirs, to leave his property to whom he wished, and that he had done so in due form, was as unsatisfying as an abstract calculation of degrees of kinship. The jury had to be invited to enter the private world of the family council and to make its judgment accordingly.

Athenians were thus encouraged to go through life telling themselves, and anyone else who would listen, stories about the rights and wrongs of family disputes. Attempts to settle disputes by friendly compromise might themselves encourage the construction of conflicting narratives. These wove themselves around property as well as persons, and contained imaginary mental maps of the ownership of land and houses (Case 2) as well as of genealogy. Often enough a branch of the family would cherish its own account of property and relationships for many years before finding an opportunity to present it in public and test it, if not against reality, at least against an alternative story.

The stories in our sources are those told by adult males, in a public setting; and adult males, who enjoyed full legal capacity, ran up against some constraints in picturing the world according to their idea of their own rights. There was a practical difference between property in one's possession and property possessed by another. It is harder for us to reconstruct the mental maps of women and adolescents, excluded from direct participation in economic transactions, rarely

present in court, and dependent on manipulation of others when they needed to defend their rights. The comparative frequency of cases against guardians among disputes between kin (ch. 3) may be partly due to the propensity of some widows and wards to cherish exaggerated ideas of the wealth that was being managed on their behalf. If, as was common, a widow remarried, both she and her children would feel closer to her second husband than to the kin of her first husband who were acting as guardians (Isaios 7; Isaios 9, Case 8). An orphan who had to plunge abruptly into the adult world at eighteen and satisfy himself that his guardians had acted honestly had every reason to be nervous, and might well rely on protectors and advisers selected by his mother.

The widow with a young son was thus particularly likely to be in a position to exercise influence;¹⁶⁹ but there were other features of Athenian society that helped to give women influence behind the scenes. A man's map of his kindred was not measured only in degrees of kinship as reckoned by the law on intestate succession or beliefs about biology and 'blood'. In deciding whether to call on a kinsman or affine for help, a man also had to envisage making the request; and in a society where competition and jealous defence of one's own honour were constant preoccupations, it was easier to seek help through a woman. The suppliant role was appropriate for women, so help could be sought from the husband of one's mother, sister, or daughter without loss of dignity.¹⁷⁰ Men's perceptions of their kindred were thus coloured by gender; women's perceptions will presumably have been influenced even more by their assessment of whether men involved in a family dispute could be approached without loss of honour or not. The woman who could influence attitudes in a family dispute by her dealings with her own close kin, like Hagnias' mother (Case 9), was in a favourable position.¹⁷¹

Women may also in many cases have had an even more negative attitude towards the law as a means of settling disputes between kin or friends than men did. We catch a rare glimpse of informal communication between women which cuts through the pretensions of male dealings in the public sphere in Demosthenes 55. The speaker was being sued for damages by a neighbour who claimed that his house had been flooded; the speaker's mother, however, had been in the opponent's house, visiting *his* mother, with whom she was on friendly terms, and had seen the damage, which amounted to very little. Friendship between the mothers had not, however, been enough to stop the two sons quarrelling after the death of their fathers, who had also been on friendly terms.

¹⁶⁹ Especially, perhaps, if she had not remarried: Foxhall 1989; V. J. Hunter 1989.

¹⁷⁰ This point is developed further in Humphreys 1998. Gender studies so far have paid too little attention to the difference between direct interaction involving two persons of the same gender and interaction mediated by someone of the opposite gender. Even Simmel's work on the dyad and triad, from which I initially drew the idea for this type of analysis (Simmel 1908, ch. ii), ignores gender.

¹⁷¹ In Case 11, where Kleonymos had disinherited his sister's sons because of his quarrel with their uncle (FB) and guardian Deinias, the sister seems to have died.

We have seen four cases (2–5: Isaios 5, 8. 40–2, 3, and 10) where women whose husbands had accepted them with dowry continued to feel that they were entitled to an *epikleros*' share in their father's estate. There may have been other such cases in which the woman never succeeded in getting her claims represented in court. It appears, too, that a father was not obliged to dower all his daughters equally; we know of no cases in which unequal dowries were given, but it certainly would have aroused resentment.¹⁷²

Differences between the perceptions of men and women, of adults and of adolescents, may well have been paralleled by differences between city-dwellers and villagers, and between men at different levels of wealth. If it is true that Astyphilos left his property to the son of his patrilineal kinsman Kleon, and had no intention of leaving it to his uterine half-brother (Case 8), one reason may be that Astyphilos had moved out of the village of Araphen and its moral narratives into the far wider world of the professional soldier. But such differences are hard to detect in the record, though we shall see later (ch. 14) that the evidence from curse tablets suggests a much narrower range of involvement with kin for the urban underclass than for the propertied families we meet in the courts.

*

Legal disputes and forensic speeches are especially valuable for the study of the relation between practice and ethno-theory because in them theory (laws, norms) is invoked to bolster attempts to restructure the *de facto* distribution of resources. Let me sum up the argument of the preceding chapters (2–6) from this point of view. Adoption and marriage from the theoretical point of view constitute changes of status and identity. Orphans and women (especially *epikleroi*) have theoretical rights to property, but their capacity to exercise these rights is limited. Theory, in the form of legal rules, at times influences practice more than its theoretical powers can justify (as in the case of girls regarded as *epikleroi* during their fathers' lifetime). Imaginary maps of rights and relationships draw on theory as well as experience. Yet at other times theory may be ignored; it would be naive to assume that Athenians who did not quarrel with their kin always followed legal rules. Experience, imagination, and competence in deploying the ethno-theoretical rhetoric of rules and norms were closely intertwined.

¹⁷² In Dem. 41. 26 the speaker says that his father-in-law Polyeuktos could have dowered his daughters unequally if he had so wished, but his contention is that the dowries were equal. These daughters were their father's heiresses, which was an additional reason for maintaining parity. In Athens, unlike Gortyn, dowry was not conceptualized as a share of inheritance, but as a fund for the woman's maintenance (Schaps 1979, ch. 6; Wolff 1957, ch. 1 nn. 120–2). Inequality is tolerated in some areas of modern Greece (Herzfeld 1980; cf. Sant Cassia and Bada 1992).

As Bourdieu (1972) has insisted, theory is (theoretically) timeless, while practice is embedded in time. For a change of status or a transfer of property to be accepted as definitive takes time; the bare fact of change must be concreted into experience. In the case of changes of status, the birth of a new generation—a child of the married woman or the adopted heir—was a major step in this process. The rhetoric of ‘continuing the oikos’ was misleading in suggesting a norm of inheritance of undivided property by a single heir, but the modern tendency to read the phrase with emphasis on ‘the oikos’ was perhaps also mistaken. To pay more attention to ancient conceptions of continuation and its relation to personhood may be more fruitful. Even in the case of the young man growing up in his father’s oikos, marriage and the birth of children were essential steps in acquiring maturity and control over property.¹⁷³

Although, as we shall see, Athenian babies formally acquired names during their first few days of life, the production of identity was a lengthy process. Identity depended on the support of a social network, in which kin played an essential role (it could not be established by exhibiting one’s ‘papers’). In the specialized professions (and, as we shall see later, in politics) the transmission of skills from father to son was not solely a matter of practical convenience. The son began his career with intangible capital derived from association with his father’s reputation. In the case of athletes this association was even supported by a theory of the inheritance of ‘natural’ abilities, derived from horse- and dog-breeding. The line between inherited and acquired abilities was not clearly drawn. Even the *topoi* about good-for-nothing sons of distinguished fathers derived their interest from the assumption that a son should follow in his father’s footsteps.¹⁷⁴

Ethno-theories of social structure are supported not only by their salience, in the form of appeals to laws and norms, in situations of conflict, but also by representations in ritual. The following chapters will trace the process of construction of identity by means of ritual, from name-giving, through the rituals of adolescence and marriage, to death and commemoration; ch. 12 will look more generally at participation in ritual and the permanent record made by dedications to the gods as contexts for the experience and representation of identity.

¹⁷³ Cf. ch. 2 at nn. 11–17 on Athenian conceptions of childlessness.

¹⁷⁴ See e.g. Plato *Meno* 93b–94c. In *Republic* books 8–9 Plato develops a counter-theory of tendencies to degenerate.

PART TWO

Ritual

Construction of the Person: Ritual, Cult, and Identity

Children are born into an identity defined for them by kinship. This remains true even in the Israeli kibbutz, where the separateness of families is minimized on the practical level; and where the role of kinship in the construction of identity is denied in theory, as it is in cultures where it is strongly believed that each individual's destiny is determined by the positions of the stars at his or her birth, the theory has little influence on practice in the early years of life.

On the other hand, all societies recognize that individuals have peculiarities both in physical make-up and in character, and different life chances, the variety of the latter increasing with the complexity of the society. While ascribed elements may dominate life chances in simple societies and achievement may count for much more in complex ones, there is also in both cases a move from ascription to achievement during the course of the life cycle. In some societies this shift is dramatized: in ancient Sparta boys were removed from home to live and compete with their peers, in age-sets, at the age of seven; in many native American societies, adolescents went out into the bush to seek a vision from a protecting spirit, from which they derived a new name and identity. Such practices highlight factors of general significance. The name is always an important element in identity; naming practices, changes of name, and the use of nicknames indicate conceptions of the person, and this section of the book will start with a study of Athenian names. In Athens the transition from family membership to membership of the polis was more gradual than in Sparta, but it was marked by a series of rituals in which kin played a role; as the child was introduced gradually to the wider circles and more formal procedures of the public sphere, he (and, to a lesser extent, she) also acquired a deepening familiarity with a circle of personal kin. Like Sparta, Athens offered few institutionalized opportunities for kin to band together and help each other in the public sphere. Patronage, either by kin or by non-kin, was limited in scope. Nevertheless, the patterns of association with kin formed in childhood persisted in adult life, especially in the transitional period between the acquisition of citizenship at eighteen and the establishment of a personal reputation, which could not proceed very far until after thirty, the age at which men became eligible for the major civil and military offices.

The public sphere, in Athens, was a world of adult men, competing primarily with their age-mates for office and reputation. In the present section (chs. 8–12), before looking at that world, we are going to look at the social experience of Athenians in a milieu which included both men and women, aged grandparents and small children, gods and goddesses. Although Athenians had no personal protecting spirits, their family social life was patterned by religious festivals, and for those who did not aspire to political leadership a special relationship with one of the gods provided an alternative means of asserting an individual identity. To study Athenian religion from this point of view would require a book in itself; here, after tracing the role of kin in rites de passage from birth to death, we shall consider a narrower question: the extent to which Athenians voluntarily associated themselves with kin in making dedications to the gods which were unconnected with rites de passage.

Names

The study of names and naming practices, to which historians and anthropologists until quite recently had paid little attention, is now attracting greater interest. Historians are studying the local and chronological distribution of name stocks, the evidence of name giving for ties of kinship and fictive kinship (patronage, godparenthood, etc.), nicknaming, and the history of surnames; anthropologists are also interested in changes of name to mark stages in the life cycle, and in the impact of colonialism, migration, and the bureaucratic state.¹ Both groups, in varying ways, consider the relation between naming practices and ‘individualism’.

Lawrence Stone’s distinction between structural naming, an indication that children are not regarded as individuals, and more personalized systems of name choice (1977) begins to look rather simplistic. Children and adults are often ‘individualized’ in traditional societies by nicknames based on personal characteristics or incidents in the bearer’s personal history; it is one of the shortcomings of historical research that it tends to privilege official names and is weak on systems of address and informal reference.² To assess the sociological significance of ‘structural’ naming we need to know how names were used in conjunction with other forms of denotation and reference. Structural naming is today prevalent in certain sectors of upper-class American society, successive bearers of the same set of names being distinguished in formal contexts by (Roman) numerals, but one would hardly on this account characterize the families concerned as non-individualistic. Moreover, as James Scott has pointed out, ‘individualization’ in the sense of promoting name systems in which each name designates only one bearer, is a characteristic of the modern bureaucratic state, which however does

¹ See for example Zonabend 1979; Dupâquier a. o. 1984; Alford 1987; S. J. Harrison 1991, 61; Mitterauer 1993; *L’Anthroponymie* 1996; Hart 1999; J. C. Scott, a. o. 2002.

² See Humphreys 2017*a* on anthropologists’ neglect of the use of kin terms in address and informal reference, and of the articulation of kin terms with personal names. Historians could find evidence for nicknames and informal reference in such sources as diaries, private letters, records of witness testimony, etc., but have made little effort to exploit this material. Macfarlane 1976, a study of the 17th c. diary of Ralph Josselin, has little interest in naming, although his material shows that the names of children who died young were given to later-born siblings (p. 82), but that the parents nevertheless regarded their children as individuals. Cf. Golden 1988 for antiquity; women’s and children’s speech, De Martino and Sommerstein (eds) 1995.

not treat name bearers as ‘individuals’ in other senses of that term, and indeed tends to prefer to designate members of its population by numbers, a practice usually associated with disregard for human dignity.³ The contrast between women’s names at Rome and at Athens (extremely structural naming in the Republican aristocracy at Rome, whereas Athenian women’s names were both less structural and less stable than those of men in the classical period) seems to be related to the sharper separation of public and private spheres in Athens rather than to a difference in familial relationships.⁴

Historians of ancient Greece now have, in the *Lexicon of Greek Personal Names* (1987–), a useful tool for the study of naming practices, although it omits nicknames and slaves’ names and, where an individual’s name occurs more than once, does not distinguish between the forms used. The focus of the enterprise was on tracing geographical and chronological variations in the Greek name stock rather than on usage. So far, rather little has been done to exploit this material.⁵

Looked at as a ‘system’, Athenian naming seems at first sight rather modern. The form of an Athenian citizen’s name immediately made clear his civic status. A citizen, in the classical system, was referred to by his personal name, patronymic, and deme affiliation;⁶ a metic might have a patronymic but had no demotic, being identified where necessary as ‘living in’ his deme of residence; a slave was referred to by personal name, often of a distinctive type, and the name of his or her owner. Women of respectable families were usually not named in public, a woman instead being referred to by the name of her father or of another male guardian—husband,

³ Scott a. o. 2002; cf. Venezis 1931.

⁴ See below, at n. 17, on Athenian women’s names and nicknames. A Roman woman had no personal name; she was known by the feminine form of her father’s gentile, modified by an ordinal number if she had sisters. There is some evidence for the use of diminutive forms of gentiles and ordinals, but apparently not for other nicknames (Kajanto 1972, 1977). Roman men’s names were also highly structured, the *cognomen*, which may have originated as a personal nickname, being drawn into the gentile system (Solin 2012).

⁵ The practice of *LGPN* II (*Attica*) is inconsistent, since it omits slave names, although they must often have been bestowed by Athenians or metic traders based in Athens, but includes the names of freedmen; it excludes nicknames when identified as such but includes names that may well have been nicknames (cf. M. J. Osborne and Byrne 1996; ch. 14 n. 78 and n. 18 below on nicknames on curse tablets). My impression is that the question of name use was not systematically considered in designing the project. Hornblower and Matthews 2000, a collection of papers celebrating the *Lexicon*, is somewhat disappointing, but see Morpurgo Davies 2000, 2001; Lambert 2004*c*, 2010*a*. Name forms on dedications (compared with ostraka), Keesling 2009.

⁶ This pattern took some time to establish itself, see ch. 22 n. 37; Wilamowitz 1893, II 171–4, cf. I. 7; M/L 21; Shapiro 1986*b* and 1987. Its establishment, and the increasing use of written record which followed in the 5th–4th c., must have had a significant impact on naming practices, comparable perhaps to that of the introduction of the surname in Europe. I cannot here explore the long-term history of Athenian naming. Cf. Laiou 1977, 118–20 on the influence of the Byzantine state on naming.

brother, or son. The names of respectable women are however recorded on inscriptions, usually with that of father or guardian.⁷

The citizen's three-part name was fixed from the age of registry in his deme at 18 (unless he was subsequently adopted, in which case his patronymic and possibly one or even both of the other parts of his name would change: see ch. 2 nn. 26, 44), and it normally permitted unambiguous identification.⁸ However, the names of metics, slaves, women, children, and even lower-class citizens, may have been less stable. Only jurors, from 378/7 (Kroll 1972, 89), and non-juror candidates for allotment to magistracies, had written identity cards; initially these *pinakes* (found also on Thasos, Grandjean 2010) did not carry patronymics, and when they came to do so the sequence of patronymic and demotic was variable. Although pinakes were issued by the state and inscribed by state employees, a pinax owner apparently had some latitude in choosing how his name should be recorded.⁹

The 'official' form of name supposedly inaugurated by Kleisthenes in 507 was slow to establish itself in practice. Name forms used in ostracism are very varied (as is spelling). Deme registers—the *lēxiarchika grammateia*, which derived their name from the use of the lot in appointment to office—may have recorded each new entrant's patronymic, since legitimate filiation was a requisite for admission, but were not always reliably maintained. The system of 42 hero names repeated cyclically, by which the interval from the year in which each 18-year-old had been registered could be determined, has left almost no trace in permanent written record, although it was used in temporary notices concerning military call-up.¹⁰

Personal names provided clues to status, and to local origin. The stock of favoured names varied from city to city, partly because names were based on local geographical features and cult figures—names based on the river Kephisos were popular in Attika—and partly from culture-based preferences. When the *Odyssey* (8. 111–20) gives nearly all its Phaiakians names associated with ships and the sea, it is representing in exaggerated form a phenomenon which travelling Greeks

⁷ Women not named: Schaps 1977; cf. Sommerstein 1980; Nagy 1979; Todd 1997. E. Dickey 1996 has a more sophisticated analysis of the use of personal names in address. A woman may be named by opponents in a lawsuit who claim that she has not led a respectable life (Dem. 39–40) or is not entitled to citizenship (Is. 3). On naming of women by reference to guardians see ch. 3 n. 3. Women are not named when reference is made to their property in the records of the *polētai*.

⁸ FF, who might well have had an identical name, would often be dead before a boy reached 18. Cases in which father and son bore the same name over three or more generations (so that all three parts of the son's name would be the same as his father's) are hard to find: *APF* 9560 is a possibility. Mantitheos son of Mantias of Thorikos tried to obtain a court decision to prevent his patrilineal half-brother from using the same name (Dem. 39), but apparently failed (Humphreys forthcoming *a*). On renaming of boys whose brothers died in childhood see below, nn. 32–3; patrilineal half-brothers, n. 33 below.

⁹ Kroll 1972, 25–34. See ch. 23 n. 64, for indication of a deme subdivision on a pinax.

¹⁰ See ch. 22 n. 54, on the *lēxiarchikon grammateion*; nn. 37–9 on naming on ostraka, and the history of use of the demotic and patronymic.

met in real life. Names associated with the fleet and with democracy were popular in classical Athens, as we shall see.

Despite such local variations, there was broad agreement throughout Greece on the elements suitable for forming names given to free citizens. Names were formed for the most part from common nouns and adjectives and most names thus had an easily visible meaning. Citizen names were based on terms referring to political life (-archos, -boulos, -demos, -krates, -polis, Asty-, Anax-), to war (Niko-, Strato-, Nausi-, Thrasy-, Deino-, -machos, -p(t)olemos), to victory in the games (Hippo-, Olympio-, Pytho-, -dromos), or to honour and gift exchange (Timo-, Xeno-, -doros, -kles, -kydes). Theophoric names might be found in any class, as might names referring to good fortune: Sosias, 'saviour', was a name not infrequently given to slaves. In Theophrastos' *Characters* (28. 1) the typical gossip asserts that someone's father began life as plain Sosias, served in the army and elevated himself to Sosistratos, then acquired citizenship and transformed himself into Sosidemos, 'saviour of the people'; as well as illustrating the association between name elements and status, this caricature also makes the point that names were less fixed at the lower end of the social scale than the higher.¹¹

Slaves of non-Greek origin were normally given Greek names (or ethnics of Greek form), either by slave traders or by their owners;¹² the barbarian names recorded for slaves come from a very limited stock which had become established in the Greek imagination as typical of a particular slave-producing region (Daos for Phrygians, Getas for Thracians, cf. *SEG* 53. 2194), or were names of barbarian rulers given ironically to slaves (Midas).¹³ Slaves were named for the qualities their owners wished them to have (Speedy, Useful, also Lucky, though there may be an element of irony in the last);¹⁴ for their looks or sexual qualities (Rose-face,

¹¹ Dem. 18. 130 asserts that Aischines' father Atrometos began life as Tromes, as a slave, and was renamed by his son; the joke should not be believed but evidently belongs to a common pattern. Change of name by freed slaves, D. Williams 1995, 154; cf. Plaut. *Amphit.* 304–5.

¹² Cf. Fraser 2000 on ethnics as names; Scott a. o. 2002 on the rejection of 'unpronounceable' names by colonial officials; Hart 1999. Renaming of domestic servants who move to a new household is quite frequently mentioned in English novels of the 19th and early 20th centuries, though there is perhaps always an implication that the process is unjustifiably high-handed. Renaming of women at marriage (surnames) persists. Cf. for antiquity Plato *Kratylos* 384d; Morpurgo Davies 2000.

¹³ See L. Robert 1963; D. Lewis 2011, 93–8. Midas: *IG* ii² 1561. 22; cf. ii² 2934. 4 (metic or slave washerman); Sarpedon and Hylas on *IG* i³ 1032. One of the Hermokopidai had a slave named Peisistratos, *IG* i³ 421. 9; the Erechtheion accounts produce a Kroisos (*IG* i³ 475. 67), and a metic S[isy]phos (476. 57–8, cf. 478. 2). The metic Axiopieithes (475. 101–2) may be a freedman; he owns a slave called Kerdon (476. 22). *Pace* LGPN, the *kalos* Axiopieithes Alkimachou may have been a slave. An invented Persian slave name, Masintuas, Ar. *Wasps* 433. Manes, an authentically Asian name (L. Robert 1963; Briant 1996, 724–5) was perhaps popular because it could be understood as 'stayer' (cf. Parmenon). According to Aulus Gellius (9. 2. 10, cf. Liban. *Apol. Socr.* 71), it was forbidden at Athens to name a slave Harmodios or Aristogeiton. See also Todd 1997.

¹⁴ Wrenhaven 2012, 31–8 (Wunschnames). Tachiste (*SEG* 18. 36 B 55; cf. *IG* ii² 7865); Ophelion (cf. Ophelion, ch. 28 n. 17), Onesime, etc.; Eutychos *IG* i³ 1032. 110. Parmenon, 'stayer', was also popular;

for a woman; Paidikos, Lover-boy, *SEG* 24. 156, cf. L. Robert 1969, 14–23); from their work (Paideusis, ‘Upbringing’, for a nanny at the beginning of the fourth century, *IG* ii² 12387); from their place of origin (Sikelos, Skythes, Syros) or perhaps the place of purchase (Ephesos, L. Robert 1938); from the date of purchase (Noumenios, Thargelios).¹⁵

Not all slave names, however, differed from those borne by the free (Dover 1968, xxv–vi). There may have been differences between the names given to barbarian slaves bought on the market and those given to home-bred slaves; different classes of owners may have had different customs. In the records of workmen engaged in building the Erechtheion towards the end of the fifth century, the metics Kephisodoros who works with Kephisogenes of Peiraios (*IG* i³ 476. 95–8) is probably his freedman, given a name related to that of his master;¹⁶ we cannot tell whether he was home-bred or not.

Women’s names, like those of slaves, were unstable. It seems to have been rather common for a woman who had been given a family name made out of the same elements as masculine names—often, as we shall see, the same elements as the names borne by men in her family—to be known throughout her life by a pet name (Plangon, Dolly; Phile, Dearie; flower-names; Choirine, ‘Piggy’ or, better, ‘Pussy’).¹⁷ These nicknames appear on tombstones, and in some

Taurosthenes, ‘bull-strength’, *IG* i³ 1032. 476. This list of boat crews, including slaves, is a major source for slave names; cf. also *SEG* 18. 36, *IG* ii² 10 + = R/O no. 4 (M. J. Osborne 1981–3, D 6), 2348, 2934, 2940, 4650, 7862–81; L. C. Reilly 1978*a*, 1978*b*; Fragiadakis 1988; Olson 1992 on the naming of slaves in Aristophanes; M. J. Osborne and Byrne 1996; B. G. Robertson 2008. We can seldom attach the names of slave children to those of their parents (who were not necessarily permitted to choose the names), but in *SEG* 18. 36 (see ch. 6 at nn. 14–16 on slave families) we have Eupithe daughter of the wet nurse Lampris (A 255–62), Kordype daughter of Philon and Rhodia (464–75), Chrysion daughter of Herakleides (514), Sostrate daughter of Soterides (546–54), Plangon, Moschos, and Aristonike children of Atta and Malthake (B 112–22), and Simalon and Nikariste children (?) of Ariste (B 232–9).

¹⁵ Noumenios among other names which seem to belong to slaves, *SEG* 24. 156; cf. *IG* i³ 1180. 28; 1032. 254, 350, 389. It also occurs quite often as a citizen’s name (date of birth). Th[a]rgel[ios], *IG* i³ 476. 229–30; cf. also *LGP*N s.v. *Thargelios*, *Thargelion*. On the relation between names and birth dates see Hdt. 2. 82; *RE* s.v. *Genethlios* (W. Schmidt 1910); Mikalson 1975*a*, 14–24; Masson 1997*a*, 68–72.

¹⁶ Cf. Euphron slave of Euphronios, *IG* i³ 1032. 244. Further study of slave names is still needed. Vlassopoulos 2010, which attempts a statistical analysis, has odd conceptions of the categories ‘pet name’ and ‘nickname’, and fails to provide source references. Wilamowitz 1893 II, ch. 7—probably still our best study of Athenian names—compares names given to dogs and horses (for dogs see Valavanis 1999, 204–5; names of satyrs, and dogs, Lissarrague 2013, ch. 3; BArch 310552).

¹⁷ Plangon, Dem. 39–40; add *SEG* 12. 193 to the references in *LGP*N (ch. 32 n. 21); cf. Bechtel 1902. Choirine Euboioi Anagyrasiou *IG* ii² 5639, *APF* 5313; the name carries a reference to the female genitalia (cf. *BE* 1968, 182, 231; *SEG* 24. 256, a young girl; *IG* ii² 7328*a*; 13061 = *CAT* 0. 858*a*, Choiridion for a small girl; 13065, Choirine for a wet nurse, *tithē*). The tradition that Euripides’ wife was called Choirine (Suda E p. 468–9 Adler) might derive from comedy, but is not incredible (Curbera 2013 is essential here). [Dem.] 59. 50, 121 claims that Neaira’s daughter Phano was formally named Strybele (spindle, ‘twister’); this is a sexual innuendo, but the name (also as Stryphele) is attested elsewhere (*SEG* 36. 297/Masson 1997*a*; *IG* ii² 12672 = *CAT* 1. 386, cf. 12672*a*). *IG* ii² 12426 commemorates ‘Polystrate

cases the name given at birth may have been almost completely forgotten. The speaker of Isaios 3 tries to make capital out of the fact that the husband of the counter-claimant to Pyrrhos' estate calls her Phile, while her great-uncles testify that they were present when she was named Kleitarete, Famed-virtue (§§ 30–4); but such changes of name may well have been quite common (cf. Terence *Andria* 942–6; Wyse 1904, 309–10). Women were seldom named in public records; when their names appear on stone they are recorded by private initiative, in dedications or on tombstones, or sometimes on mortgage *horoi*. Official conventions thus had less influence on the form and stability of their names. Male nicknames appear also—on the tombstones of small boys (*IG* ii² 12974 = *CEG* 564), in comedy, in speeches, on ostraka, or on curse tablets¹⁸—but they are relatively rare in the upper class from which most records originate. We only get occasional glimpses of another level of society, in which citizenship

nicknamed Nannis' (Peek 1942 no. 290; cf. Wunsch 1897 no. 87a 5, Glykanthis whom they call Malthake); Nannis/Nannarion/Nannion, also Ninnion, Ninon, appear as primary names (Curbera, *op. laud.*). Use of nicknames was especially common in the case of hetairai (E. Dickey 1996, § 3.1.2; Braund and Wilkins 2000, Athen. XIII; cf. Humphreys 2010*b*), but names given to them were also borne by respectable girls and women (cf. *CEG* 592 on Kerkope, cicada; this one chirped on to the age of 90). Choregis is a hetaira name in *PCG* 4 p. 53, 7 p. 326 f. fr. 9, and Athen. 577c, but a 'family' name in *IG* ii² 13086 = *CAT* 0. 911, a small girl, Choregis daughter of Choregion (cf. *CAT* 1. 264; P. Wilson 2007*c*; Curbera 2013). More work is needed on the age and class distribution of the use of nickname-type names for women. Note also the story in Athen. 576a of a barbarian princess called Petta (cf. perhaps *LSJ* s.v. *Tetta*) who married the founder of Massalia and was renamed Aristoxena.

¹⁸ Nicknames given in comedy—Autolykos Eutresios, Easy-poke, for a handsome adolescent, Eupolis F 64 *PCG* 5, 56 Kock—or in speeches (Dem. 18. 130 Empousa, 19. 207, Aisch. 1. 126, 2. 99; cf. Dover 1974, 30–3) were not necessarily widely used, and the same is true of derogatory additions on ostraka: Kallias son of Kratios is called 'the Mede' on four ostraka (Brenne 2001, no. 119), but most additions are attested only once. Aristides is called 'brother of Datis' (Brenne 2002, T1/37), the writer perhaps intending to suggest a lack of loyalty to the Greek cause in the Persian wars. The name of Kimon's son Oulios (cf. Masson 1988) may have been corrupted to Eleios during his lifetime (Plut. *Per.* 29. 2 cf. *APP* p. 306). Variant patronymics are not uncommon and probably occurred also in comedy; they imply illegitimacy. Other additions to ostraka are more simply designed to avoid confusion: Pausiades the Salaminian, Brenne 2001, no. 212, Eucharides the *thesmothetês* (*IG* i³ 911. 5, Brenne no. 73). On curse tablets, names such as Xophygos, 'the exile' and Chamaios, 'Crawler' (Trumpf 1973, *SEG* 21. 1093) look like abusive nicknames to me (cf. Humphreys 2010*b*). Cf. *A.P.* 45. 1. According to D. L. 5. 38 Theophrastos (not an Athenian citizen) began life as Tyrtamos and was renamed by Aristotle. Pythis perhaps as nickname of a Pythionikos on a vase of c.500, Immerwahr 1982, 62. Posthon ('Prick') on a rock-cut inscription of c.500, *IG* i³ 1399 *ter*, from Agrileza, is probably a lover's nickname (cf. Aristoph. *Peace* 1300; Curbera 2013), though if the cutter was a shepherd (rather than an upper-class adolescent out hunting) 'proper' names may not have counted for much. Demosthenes' nickname is transmitted in two forms, Batalos ('the easy lay', Aisch. 1. 126, 2. 99, cf. Lambin 1982; perhaps a pet name, Curbera *op. cit.*), and Battalos, stammerer (Dem. 18. 180); it is not obvious which of them modifies the other (the entry in *LSJ* needs revision). Alkibiades in Plat. *Gorgias* 482a is addressed by a complimentary pseudo-patronymic, Kleineios; he is not yet *kleinos*, famous, but on the way to it, thanks to a pun on his father's name Kleinias. According to the Suda (*FGH* 392 T I) Ion, son of Orchomenos of Chios, was nicknamed 'son of Xouthos' in reference to his mythical namesake. For later material see L. Robert 1963, 150–6, and index s.v. *sobriquet*.

and official names counted for much less: in *Isaios* 4, a speech from a dispute over property left by the mercenary soldier Nikostratos, the speaker asserts that Nikostratos' father was named Thrasymachos and that the opponents reveal the weakness of their case when they cite the father's name as Smikros (§§ 2–3). This is a milieu of soldiers' names (Winning-Army, Bold-in-Battle), and also of soldiers' nicknames: Smikros is 'Titch'.¹⁹ Such nicknames did in fact find their way into the Greek stock of names,²⁰ and would perhaps have been commoner among lower-class Athenians in the period before the official, post-Kleisthenic form of the citizen's name became established and more frequent experience of participation in public life diffused elite models through all levels of the citizen body.

Most of our evidence on names comes from the fifth century and later, and in this period new names seem to enter a family's stock through a deliberate choice to commemorate a historical event or make a political statement (cf. Judeich 1927) rather than through the imposition of a nickname by others. We have, admittedly, a Nothos ('Bastard') on a casualty list from the second half of the fifth century.²¹ But the Karystonikos and Naxiades who appear on a casualty list of (?) 447 (M/L 48 = *IG* i³ 1162. 27, 75) represent a commoner pattern: they were presumably born at the time of the conquests of Karystos and Naxos in the early years of the Athenian empire. Eurymedon son of Thoukles, general in 427/6 and subsequent years, was named after another famous victory.²² Medimachos of

¹⁹ *IG* ii² 8523 (*CEG* 485), early 4th c., records a metic child from Ephesos with two names, Pythokles son of Herakleides, a.k.a. Satyros (Curbera 2013). Cf. *IG* ii² 7965 + = *CEG* 532, c.350, Praxinos of Aigina nicknamed Pistos, 'trusty' (cf. perhaps BArch 352513, Syriskos/Pistoxenos; 213946 Pistoxenos); Chaniotis 2013*b*.

²⁰ Bechtel 1898; Hug 1929 (includes too much material from comedy); Kamptz 1982, 31–2 on nicknames in Homer; Morpurgo Davies 2000 on hypocoristics; Curbera 2013. Note Xen. *Mem.* 1. 4. 2, Aristodemos (of Kydathenaion, *PA* 1818) 'the one called Mikros' (Small): not necessarily a dwarf as has sometimes been thought. Writers of comedy draw on (and sometimes extend) this stock of characterizing names in order to find appropriate names for their *dramatis personae*: see Gomme and Sandbach 1973, 131–3, 290–1, 386–7, 633–4; Kanavou 2011. Hypocoristic forms are already found in Mycenaean Greek (Mühlestein 1967) as are names based on personal appearance: *si-mo*, *ka-sa-to* (Xanthos). Comparative data: Van Langendonck 1996.

²¹ Nothos, *IG* i³ 1191. 144 (cf. Curbera 2013). Ogden 1996, 26–8 discusses names containing the element *nothos* and synonyms, with a selective list. He rightly points out that they may be inherited (though we do not seem to have any attested cases), and doubts whether such elements should ever be literally interpreted. It might have been rash, in Athens after 451, for a father who was confident of his son's legitimacy to give the boy a *nothos*-based name; by this date such names as Timonothos, Kleonothos, or Philonothos perhaps appealed to a taste for paradox (cf. Kallaischros), in which an element of unkind joking may also sometimes be present. In earlier periods, however, a claim to be famous for one's nothoi (as for one's horses) might be conceivable. The name of Hermogenes, illegitimate son of Hipponikos II of Alopeke, may be a discreet allusion to his status (which in this case would not be due to Perikles' law on citizenship): cf. ch. 4 n. 52.

²² Charidemos, who acquired Athenian citizenship c.357/6, named a son Eurymedon (*APF* 15380). Cf. A. C. Smith 1999.

Athmonon, whose son appears in a fourth-century list (*SEG* 24. 197) may owe his name to the fighting between Athens and Persia in the later stages of the Peloponnesian War or to a grandfather born at the time of the earlier campaigns against Persia. Thebagenes of Eleusis, ambassador in (?) 366/5 (*IG* ii² 366 = *Syll.*³ 304. 44–5; Lambert 2004, 2007*b*), was presumably born when the democrats took refuge in Thebes in 404, while Homophron, councillor in (?) 336/5, *Agora* XV 42. 9, may owe his name to the restoration of democracy and reconciliation in 403.²³ Idiotes son of Theogenes of Acharnai, amphictyon at Delos in 376/5, was apparently named by a father who wanted his son to stay out of public life (cf. L. B. Carter 1986).²⁴ The children of Hagnias son of Bouselos, born perhaps in the late 430s,²⁵ were called Polemon (War) and Phylomache ('Battle of the race'). Demos son of Pylilampes, Plato's stepbrother, born c.440 (*APF* 8792 VIII), seems to have been named to express his father's enthusiasm for the democracy, and other names with the same root may have spread in Athens in the fifth century for the same reason.²⁶

Programmatic names could be given to girls as well as to boys. Themistokles' daughters were called Mnesiptolema (Remember-war, presumably born in the 480s), Asia, Italia, and Sybaris (*APF* 6669 VI). His son Archeptolis may have been named to commemorate Themistokles' tenure of the eponymous archonship in 493/2.

The practice of naming a son to express a special relationship with another state is documented from many parts of Greece and, since such relationships were hereditary,²⁷ brings us closer to the use of names borne by ancestors—although the names discussed here do not seem to have been repeated. Two of Kimon's sons were called Lakedaimonios and Thettalos. One of the Spartans who took the oath of truce between his city and Athens in 423 was Athenaios son of Perikleidas; his father was a member of the embassy that came to Athens

²³ It seems to me less likely that the name refers to the resolution of some private family dispute.

²⁴ *ID* 98 A 7. The later Idiotes whose son Telesinos was cursed on Wünsch 1897 no. 66a was probably a descendant (cf. *LGP*N Telesinos 3–4).

²⁵ *APF* 2921; Table 7.9. The name Phylomache is otherwise known only in myth (n. 64 below). Despite Aristophanes' interpretation in the *Lysistrata*, it is perhaps worth asking whether the names Lysimache/os, Lysistrate/os (also a Lysiptolemos who died in battle in 409, *IG* i³ 1191. 223), and the less common Pausimache/os, Pausistrate/os, were given by war-weary parents or refer to procreation in intervals between fighting.

²⁶ Cf. Demokrates son of Lysis I of Aixone (ch. 29 n. 105, Table 29.18), named perhaps c.460; Cartledge 1990, 45.

²⁷ Cf. Herman 1990, Sekunda 1994. Kephisophon of Paiania, probably the Kephisophon who went as ambassador to Sparta in summer 403 (*APF* 3773 D), had a son named Kallibios (born c.410?), the name of the leader of the Spartan garrison in Athens in 404–3; earlier connections between the two families may explain both the appointments and the name (cf. n. 40 below).

to ask for help against the Messenians in 462/1.²⁸ Another Spartan was called Samios; his grandfather (FF) Archias had died fighting on Samos and had been given a public funeral by the Samians in recognition of his valour (Herodotus 3. 55). A Macedonian called Athenaios (Athaneos) became *proxenos* of the Boiotians in 365 (Roesch 1984, 58).

The normal pattern of naming, however, was to name the first son after his paternal grandfather. Younger sons might be named after other kin; to name the second son after his maternal grandfather was certainly an approved pattern, though perhaps less strongly enforced than the repetition of the paternal grandfather's name.²⁹ In the case of girls it is much more difficult to discern regular patterns. This is partly because there is so much less evidence on women's names, but there are also indications that women's names were felt to be less 'significant', in both senses of the term; they were not used for communication in public contexts and thus attracted less interest.

The main patterns of male naming can also be found in women's names. Hipparete II daughter of Alkibiades IV (Table 8.1) was named after her FM. I have not so far noticed an Attic example of naming for MM, but it occurs in a Hellenistic priestly family in Epidauros.³⁰ A daughter might also bear the name of her mother (Table 31.14, Phainarete; *Agora XXXI* 189, Archippe; cf. *IG ii*² 10867). A daughter might also bear a version of the name of her FF: Phanostrate and Archestrate, daughters of Alexos of Sounion, were granddaughters (SD) of Stratokles I and

²⁸ Athenaios: *Thuc.* 4. 119. 2, cf. 122. 1. Perikleidas: *HCT* I, 604–5. The name is not confined to foreigners, even in the classical period: Athenaios son of Philonautes of Alopeke appears in a list of orphans from c.410 or 402, *SEG* 28. 46. 35; Atheneas at Rhamnous, *IG ii*² 7341 + *SEG* 41. 201, 7344 + *SEG* 28. 268, ch. 31 n. 100, Table 31.15. On the name Phormion in Akarnania see ch. 16 n. 32.

²⁹ 'Normal' may perhaps be too strong a word. A familial pattern of naming could be continued by recombining elements of ascendants' names or by semantic linkage, as discussed below at n. 42. It is rather rare to be able to demonstrate regular alternation of the same father–son pair of names over many generations (there may have been families in which the oldest son felt more obliged to repeat his father's name than his younger siblings did). Moreover, the process of family reconstruction creates a bias towards recognition (or postulation) of FF/SS pairing. Naming for MF may be under-recognized (cf. n. 38). A possible familial repetition of a typical slave name in an isoteles family, *IG ii*² 7863 = *CEG* 595; the Gerys of this text, as *CEG* notes, is not the one who was granted isoteleia in 401 (*pace* M. J. Osborne 1981–3 D 6, A III 13, and *LGP*N Gerys 1), but may be his SS. Bresson 1981 argues from modern Greek parallels that in Hellenistic Rhodes the rule was to take names alternately from the father's family and that of the mother (though its application might be modified by questions of prestige or inheritance). The rule seems to me too rigid for the evidence we have on ancient practice; and the modern idea of 'resurrecting' a dead forebear by the reuse of his or her name does not seem to occur in antiquity. Bresson's study, however, provides a useful example of the work that can be done on ancient naming practices. Rice 1986 provides further Rhodian material.

³⁰ *IG iv*² p. XXV, cf. Broadbent 1968, Table I. Cf. *GVI* 1158 (Kos, 1st c. BCE), where the children of Polychares and Lykourgis are called Kallistrate (MM), Deiogenes II (MF), and Kleinagoris (feminine version of FF's name). Lykourgis may have been an epikleros, and the stone is her tombstone, so the order of names might privilege those from her side of the family. See Table 26.8 for a possible case of patrilateral parallel cousins (FBD) both named for their FM.

APF 600: there are mistakes in numbers (Megakles IV, Kleinias III and IV) on pp. 16 and 18.

TABLE 8.1. Alkibiades (cf. Table 4.8)

had a brother called Stratokles (II), Table 26.10; Demo, Table 31.1, was the SD of Demarchos of Phaleron. A version of the father's name seems to be a commoner choice. Iphikrates had a daughter called Iphidike (Table 31.6); other examples are Demokleia daughter of Aristodemos of Kothokidai (Table 28.1), Nausistrate daughter of Naukydes of Acharnai (Table 28.10), Glaukothea daughter of Glaukon of Acharnai (Aischines' mother), Alkimache daughter of Kallimachos of Anagyrous (Table 29.17; two of her children by Philon of Aixone were called Philostratos and Philostrate, perhaps in allusion to the names of both their parents), Timagora daughter of Timodemos of Alopeke. The root *Chair(e)* was perhaps felt especially appropriate for such feminine variations: we find Chairylla daughter of Chairephon II of Thorikos (Table 27.60), Chairylla daughter of Chairigenes of Ikarion (Table 24.1), and Chairelea daughter of Chaireas of Halai Aixonides (Table 29.21). Phanagora daughter of Euthydemos of Acharnai bore a name related to that of her FM Timagora (Table 26.2), which was perhaps also felt to be semantically linked to that of her father. Praxo daughter of Nikippos of Xypete bore a version of the name of her (?) mother Praxilla (Table 29.4). It seems possible that a girl who was her parents' first child would be more likely to receive a name related to that of her father's family, but evidence is lacking.

It is far from certain, however, that when women bore feminine versions of masculine names with a reference to the public sphere the names were always familial. 'Programmatic' names may have been given to girls as well as boys; this

is certain for four of Themistokles' daughters and might well be true also for Demokrateia and Nikomache. A study of the relation between Athenian women's names and trireme names might be of some interest.³¹ Such names seem to be commoner for women in the classical period than theophoric names.

Given the norm of calling the first son after his FF, we are entitled to ask what a family would do if this boy died in childhood or adolescence. Would the second son's name be changed? This clearly happened in some cases, since the practice is essential to the plot of Plautus' *Menaechmi* (drawn from a Greek original), on which Shakespeare's *Comedy of Errors* was based: the elder of a pair of identical twins is lost and believed dead, and his name is transferred to the younger twin (Newiger 1981, 210). It is unlikely that we will ever be able to detect such cases in the epigraphic record.³² We do, however, find cases where the FF's name is given to a younger son, and it seems likely that in some instances at least this is because an older homonymous brother has died. Sokrates' three sons were called Lamprokles, Sophroniskos, and Menexenos; Lamprokles was the oldest but Sophroniskos bore the name of Sokrates' father.³³ Pyrilampes' eldest known son, as already noted, was called Demos; the name of his father, Antiphon, was given to a younger son, Plato's half-brother (*APF* 8792 VIII). We do not know whether an earlier Antiphon had died young, or whether Pyrilampes' ideas on naming had become more conventional as he grew older. Kimon II, son of Miltiades IV, was named after his FF but had an older half-brother called Metiochos (*APF* 8429 IX–X).³⁴

³¹ Triremes bear names also commonly given to girls (Hedeia, Melitta, Aristonike, Kle(i)o, Hipparche, Kleostrate, etc.), hetaira names (Thallousa, Leaina, Psamathe, a. o., Redfield 2003, 71 n. 34), and theophoric names also given to girls (Aphrodisia, Artemisia, Asklepias, Hephaistia); but girls in the classical period also occasionally bear names also used, perhaps more appropriately, for ships: Euporia, Kratista/e, Nikeso, Polynike, Stratonike, Pherenike, Philonike (the names Demokratia, Theoris, Olympias, and Homonoia are perhaps equally appropriate in both spheres). It seems conceivable that Plato's sister, whose name according to D. L. 3. 4, 4. 1 was *Potónē*, bore the trireme name *Pōtonē*, 'flier' (*IG* ii² 1604. 58; cf. Petomene; *LSJ* s.v. *potaomai*, *pōtaomai*). Cf. Ar. *Knights* 1309, the trireme Nauphante daughter of (built by) Nauson.

³² According to a scholion to Aristides (Dindorf 1829 III, 515) Kimon had a son named Miltiades (V). If this is true, since we never hear of him elsewhere he is likely to have died young. The oldest securely attested sons were the twins Lakedaimonios and Oulios, the second apparently called after a mythical ancestor (*APF* 8429 XI–XIII, Barron 1980; I am tempted to suppose that Oulios was born with more hair than his twin). Ouliadai as doctors in Elia, *SEG* 38. 1020. 4/53. 114. 2; Dubois 1995, 156–8; Vecchio 2003, 20–4.

³³ Cf. ch. 29 n. 73; perhaps ch. 11 n. 42. See Stone 1977 for repetition of names given to dead siblings in more modern times. On the two Mantitheoi, sons of Mantias of Thorikos, see Humphreys 1989, forthcoming *a*. Their dispute in Dem. 39–40 shows that in Athens it was not normal for a child to be given the name of an older living sibling; contrast the French data in Burguière 1980, 38. Fitton 1970 argues that Sokrates' oldest son was illegitimate, Xanthippe being a concubine. Stavrianopoulou 1994 identifies possible cases in Hellenistic Kos of patrilineal half-brothers bearing the same name.

³⁴ *APF* 3597 III assumes that Demosthenes' cousin Demomeles II, named after his FF, was younger than his brother Demophon, because the latter was chosen to be Demosthenes' guardian, but since the guardian was expected to marry Demosthenes' sister after a wait of some ten years, the choice of a younger son is understandable (Table 4.7). The elder Demosthenes may have decided not to call his son Demomeles to avoid cousin homonymy (Demomeles II was still alive in 338). See below, n. 40 for another example of a younger son named after FF, perhaps because the firstborn had died.

If followed with absolute consistency, the rule that the first son should be named after his FF would have produced frequent homonymy among cousins; some families may have varied their practice for that reason, but this does not seem to have been a matter for major concern, since cases of homonymy are well attested. Hierokles I of Rhamnous had three grandsons named after him, two of whom were buried in his family peribolos; Thoukritos son of Thoukritides of Halimous, father of the speaker of Demosthenes 57, had a homonymous cousin (FBS); Aristophanes of Azenia, father of the politician Aristophon, almost certainly had two grandsons named after him (*APF* 2108);³⁵ Kallikrates II of Aphidnai, son of the prominent Kallistratos I, probably had two homonymous cousins (Table 8.6). Two men called Lysistratos were *diaitêtai* from Rhamnous together in 325/4, and may well have been cousins (*IG* ii³ 4. 35. 148–9; cf. Matthaïou 1987*b*).

The conventional pattern is probably found in the sons of the orator Lykourgos son of Lykophron of Boutadai, whose sons were named Lykophron, Habron (after MF), and Lykourgos (Table 4.6).³⁶ Sositheos, the speaker of [Demosthenes] 43 *Makartatos*, named his first son after his own father Sosias, his second son after his wife's father Euboulides, his third son after the boy's great-grandfather (FFF) and his fourth son after the boy's maternal grandfather's half-brother (MF½B, Table 7.9); an unusually wide range in unusual circumstances.³⁷

Pasikles son of Myron of Potamos, who married Timostrata daughter of Pandaïtes of Prospalta, had two sons named Myron and Pandaïtes (*APF* 643, Table 12.1). Aristoteles son of Habronichos of Pallene, who married Kleitomache daughter of Meidyliides of Otryne, had three sons named Habronichos, Meidyliides,

³⁵ Hierokles: Humphreys 1983*a*/1993, 113 Table 2, *SEG* 30. 215–218, Table 31.7. Thoukritos: *APF* 3126, cf. Humphreys 1986*a*. Demostratos son of Aristophon of Azenia, perhaps named to commemorate the march on Athens from Phyle in 403, may have been older than his brother Aristophanes II. The names Aristophanes and Demostratos turn up in another Athenian family (*APF* 3276, to which *SEG* 33. 115 should be added), but there is no very obvious way of constructing an (affinal?) link between the two groups. Koumanoudes and Matthaïou 1987 suggest that Moirokles I son of Euthydemos I and Moirokles II son of Kallippos I, both of Eleusis, were homonymous cousins, but Euthydemos II, son of the former, seems quite a bit older than Kallippos II, son of the latter. It is conceivable that Kallippos I was a younger brother of Moirokles I who named a son after his brother. Moirokles II is known from *IG* ii² 6043, missed by Ampolo 1981 and Whitehead 1986*a*; in view of the prominent career of his son Kallippos II (Etienne and Piérart 1975, 57; Habicht 1985, 85–6; ch. 16 n. 45) it is probably he rather than Moirokles I who was the well-known politician of the 320s (see below, ch. 30 n. 88 and Table 30.4). In *PLond* 324 (161 CE) five brothers all give their father's name to a son.

³⁶ *APF* 9251; on the birth order see Humphreys 1985*a*, n. 3; Gauthier 1985, 89. The same pattern is attributed to the family of Euripides (Mérider 1970, pp. II–VIII), but possibly by conjecture.

³⁷ *APF* 2921. It appears that the decision to adopt one of these sons posthumously to their MF Euboulides II was taken when they were already adolescent; if the adoption had been planned from birth (as might have been expected, since their mother's marriage was epikleric) one would expect the oldest son to be given the name of his MF and adopted. See ch. 7 Case 9, and Humphreys 1986*a*, 63–6. In earlier generations familial names had not been chosen.

and Aristodemos, the name of the last (father of the speaker of [Demosthenes] 44) being related in form to his father's name (Table 2.2). Plato's oldest brother Adeimantos bore a name which cannot on present evidence be traced to a family source, but the second son Glaukon was named after his MF; according to some sources Plato himself was named after his father, Ariston, 'Plato' being a nickname (*APF* 8792 IX–X).³⁸

In an epikleric marriage it may have been normal for the oldest son to bear the name of his MF and be adopted to him, but there are no certain examples of this (see however below at n. 40).

It is also possible that in some cases, if the maternal grandfather was exceptionally well known, influential, or rich, the oldest son would have been named after him. The known sons of Megakles II son of Alkmeon, who married Agariste daughter of Kleisthenes the tyrant of Sikyon, are called Kleisthenes and Aristonymos, Kleisthenes perhaps being the older (see Table 15.2).³⁹ But it remains possible that an Alkmeon died young or failed to achieve distinction. Thoukydides the historian, son of Oloros of Halimous, may have been named after Thoukydides son of Melesias of Alopeke, who *may* have been his MF (*APF* 7268 VII); we do not hear that he had a brother, but arguments from silence are weak. Heragoras of Samos, who acquired Athenian citizenship in the late fifth century and married an Athenian wife, had two sons; one was called after the wife's father, Hippokrates, and the other after the general Thrasylos, who had played a prominent role in relations between Athens and Samos (*IG* ii² 6417; Humphreys 1983*a*/1993, 114, 129 n. 56). This may be an example of an immigrant deliberately putting his Samian past behind him and furnishing his sons from the outset with Athenian points of reference for their identity. Two of the daughters of Menexenos I of Kydathenaion had sons named after Menexenos (Menexenos son of Polykrates of Chologargos and Menexenos son of Kephisophon of Paiania, *APF* 3773 and 11907; Table 7.2B). Homonymy between matrilinear parallel cousins (MZS), which we find here, is much less commonly attested than patrilinear parallel cousin (FBS) homonymy,

³⁸ The name of Ariston's father was Aristokles (D. L. 3. 4). Connections with other families in which the name Adeimantos occurs at the same period cannot be established on present evidence. The tradition that 'Plato' was a nickname is rejected by Notopoulos 1939. Other cases of naming for MF: Lamachos son of Kephisokles of Kikynna (*IG* ii² 6477 and 478, Peek 1942, 98 no. 169); Phanokles of Kettos (*APF* 600, Humphreys 1983*a*/1993, 118, Table 4); Pamphilos son of Mantias of Thorikos (*APF* 9667; see Humphreys 1989); perhaps Thrason of Erchia (*APF* 7305) and Peisianax son of Kimon and Isodike (*APF* 9688 VIII, but see W. Thompson 1969*a*). Kiron, father of Mnesikles of Pithos (*LGP*N Kiron 5), may be the speaker of Isaios 8 (or one of his brothers) and the DS of the Kiron whose estate was the subject of this speech (see *APF* 8443). Kypselos son of Agamestor may have been a grandson (DS) of the tyrant Kypselos of Corinth (*APF* 8429 II). On the view that Kleon son of Thoudippos of Araphen was DS of the demagogue Kleon of Kydathenaion see n. 56 below.

³⁹ Agariste may have been her father's only child, but the marriage was not uxorilocal and can hardly be considered epikleric.

although this may be partly due to the difficulty of reconstructing matrilineal and affinal relationships. It should be noted, however, that Menexenos I had only one son, Dikaiogenes II, who died childless; the daughters may well have hoped that their sons would get a share of the estate.⁴⁰

Lykourgos' third son, we saw, was called after his father; this was also a relatively common pattern. Alkibiades (III) was named after his FF, and his younger brother Kleinias (IV) after their father; Alkibiades' own son was named after the boy's famous father. The delinquency of Kleinias IV may have discouraged his brother from perpetuating the name. The sequence of names in this family gives a good picture of the slight irregularities in the pattern of repetition that were likely to develop over the generations. Perikles' eldest son was called Xanthippos, after the boy's FF; the second son was Paralos, a programmatic name recalling the connection of Perikles' mother's family, the Alkmeonidai,⁴¹ with the Paralia, the coastal district of south-east Attika, and also emphasizing Perikles' commitment to Athenian seapower; the youngest was called after Perikles himself. It may have been desirable to stress the filial relationship in this case, since the boy's mother Aspasia was not Athenian and he was illegitimate until granted citizenship by special decree. Demosthenes, an only son, was as we have seen called after his father. In the family of his opponent Onetor (III) the sequence of names seems strictly agnatic, with no concessions made to affines (Table 8.2).

Family unity could also be stressed by the use of formally and/or semantically linked names.⁴² The tyrant Peisistratos, son of Hippokrates, called two of his sons Hippias and Hipparchos, names recalling the family's success in chariot racing (*APF* 11793 III–IV). Demosthenes' family (Table 4.7) used names formed on

⁴⁰ For the contests over the estate see Is. 5 and ch. 7 Case 2. The daughters considered themselves to be in a sense epikleroi after their brother's death; but at least some of the sons called Menexenos must have been born earlier. Menexenos son of Kephisophon of Paiania had a brother called Kallibios (*APF* 3773 D; above, n. 27); Menexenos son of Polyaratos of Cholargos had two brothers, Bathyllos and Periander ([Dem.] 40. 6). Periander was the youngest of the three. Since this was the name of their FF, an older brother with the same name may have died in childhood. The name of Euxitheos of Halimous (Dem. 57; ch. 7 Case 14, Table 7.12) was also borne by a cross-cousin, his MBS Euxitheos son of Timokrates of Melite; one of the three sons of Timokrates' patrilineal half-brother Amytheon was called Dexitheos (another, presumably the oldest, was named for his FF Demostratos). Naming for matrikin may sometimes have created a special relationship: in *IG* ii² 3854 (3rd c.) a nephew named for MF dedicates a statue of his MB.

⁴¹ Perikles' wife was related to him, according to Plutarch (*Per.* 24. 8); she too may have had Alkmeonid connections.

⁴² This practice is ridiculed in Aristophanes *Clouds* 59–79, where the conflicting values of father and mother produce a son named Pheidippides, son-of-Economical-with-horses (cf. *LGPN* Nothippos; Kanavou 2011). Pheidippos however was a normal name, like Pheidostratos (preserver of cavalry/army); cf. Pheidippos son of Sosidemos of Xypete, *APF* 14160. The reading Pheidippides in *Hdt.* 6. 105 is questionable. Sosistratos son of Diodoros of Halai has a name linked to that of his MF, Damostratos of Melite (*APF* 3126). On names associated with choral performance see P. Wilson 2007c, 372–4. Aktaios of Peiraios has a name semantically linked to his demotic.

TABLE 8.2. Onetor of Melite, *APF* 11473TABLE 8.3. Hegesias of Sounion, *APF* 6351

the root Demo-; the descendants of Hegesias of Sounion used the root Heg-, signifying leadership (*IG* ii³ 1030, 1328; Table 8.3).

The family of Meidon son of Epiteles of Myrrhinous created new names by combining elements of their original stock: Meidon's son was called Meidoteles, combining his father's name with that of his grandfather, and he had a son called Kalliteles; one of Kalliteles' sons was called Kallimedon (Table 4.10; Humphreys 1983*a*/1993, fig. 1; *SEMA* 449–454).

A family name might also be modified by adding the patronymic ending -ides (or -iades) to the father's name. In Homer such patronymics are used as alternatives to given names, and are shared by brothers: both Agamemnon and Menelaos can be addressed as Atreides, 'son of Atreus' (cf. Aitchison 1964). One sixth-century Attic inscription may conceivably show this usage, *IG* i³ 665, *Leobios: epoiesen: Pyretiades*, but there are also several texts from the late sixth or early fifth century in which the patronymic adjective is treated as a proper name and followed by the father's name in the genitive: Neilonides (son) of Neilon (*IG* i³ 1214), Diokleides (son) of Diokles (i³ 681).⁴³ Alkmeonides son of Alkmeon (cf. i³ 1469, c.540) and Eucharides son of Eucharis both had votes cast against them in the ostracism of 443 (Brenne 2001 14, 73; *APF* 9688 IIIB). By the classical period the semantic

⁴³ Aiantides on a late black-glaze vase, BArch 9016597 (*CAVI* 2426).

force of the patronymic ending was no longer clearly felt. Exekestos and Exekestides of Kothokidai (*APF* 4719) were probably brothers, as were Euagides and Euages sons of Deinias of Philaidai (*APF* 5232). Strombichides III son of Strombichos III of Euonymon was probably named after his great-great-uncle (FFFB) Strombichides I, who died under the Thirty Tyrants, or the latter's son Strombichides II, rather than with any deliberate stress on the patronymic force of the name (*APF* 4386; Table 16.1). It appears that the use of the patronymic adjective was eliminated by competition from the custom of naming grandson after grandfather (FF), which does not occur in Homer;⁴⁴ already by the middle of the fifth century we find a Pronapes son of Pronapides, victor in the four-horse chariot race (*APF* 12250, *IG* i³ 880), and a Damon son of Damonides, ostracized in the 440s (*APF* 9688; XIII; Brenne no. 52). Archebios son of Archibiades of Lamptraí (*APF* 2308) is a fourth-century example. The patronymic ending was felt to give a name an aristocratic ring,⁴⁵ but became merely one of a number of alternative ways of varying a family name. A family of Acharnai shows the names Androkles, Androstenes, and Androkleides in three successive generations (*APF* 849).⁴⁶

Another alternative was to give the son a name linked to that of his father semantically rather than lexically. Morychos Lachemoirou (*APF* 10423) has a name which combines both patterns. Semantic linking is found already in Homer (J. M. Cook 1967; Kamptz 1982); it attracted jokers. Stephanos Thallou, Wreath (son) of Olive-leaves, of Lamptraí (*APF* 12883) and Oiax Pedalionos, Tiller (son) of Rudder, of Thorikos (*Agora* XV 39. 11) must have been subjected to some teasing by their age-mates. The name of Dikaïos Eunomionos (Just, son of Orderly) did not prevent at least two men from casting votes against him in ostracism (Brenne 2001 no. 58). Aischines, son of Atrometos (Unflinching), had a brother called Aphobetos, Fearless (*APF* 14625). Lysimachos of Peiraios (End-battle) had a son called Pausistratos, Rest-the-army (*Agora* XIX L 6. 101f.; Pausistratos was economically independent by 343). Hippon son of Olympichos has a name based on a more conventional theme; despite the aristocratic ring of these names Olympichos fell victim to the Thirty Tyrants.⁴⁷

⁴⁴ This pattern can be traced fairly securely to the early 6th c. (Megakles II: *APF* 9688 II–III). Some family names had been in use at least since that date (see *APF* 8792 I, Kritias I; 7856, Habron/Kallias; ? 11473, Onetor).

⁴⁵ Mras 1937; Dover 1968*b*, xxv–vi denies this, but the fact that the -ides ending was imitated by non-aristocrats does not prove that it had no cachet. Kollytides in 4th c. Athmonon, *SEG* 24. 197. 25, is an oddity. Wilhelm 1906, 133–4 argues that simple and patronymic forms of the name might be used interchangeably for the same individual, and discusses other attested 'mistakes' in naming.

⁴⁶ Cf. the alternation of the names Melanopos, Melas, and Melanopides in a family of Ketτος reconstructed by Charitonides 1961, 48, where the original names are of nickname form.

⁴⁷ *SEG* 28. 46. 29–32. See L. Robert 1950, 66; 1967, 24–5 for later examples. Other interesting examples of semantic linkage are Kyknos son of Philochoros I of Anaphlystos (Swan son of Song-Lover), father of the historian Philochoros II, and Astyphilos son of Philagros of Halai Aixonides (Table 29.20). Another joke name, *IRb* 311, Oinoklephes of Rhamnous (3rd c. BCE).

Beyond this narrow circle of father and grandfathers, the number of clearly identifiable cases of the perpetuation of names of kin rapidly decreases. A cursory survey has turned up five possible cases of boys named after paternal uncles (FB): Xenopeithes II son of Nausikrates of Paiania (Demosthenes 38, *APF* 11263) (Table 8.4); Kleinias (III) son of Axiochos of Skambonidai, who bore the name of his FB, FFF, and FBS (Table 8.1); Thoukritides II (*APF* 3126), Sopolis II son of Smikythos of Kydathenaion (Table 5.6), and perhaps Athenodoros II son of Telesistratos of Myrrhinous (Table 8.5).⁴⁸

Two men were perhaps named after the husbands of their paternal aunts (FZH): Kallikrates I son of Agyrrhios of Kollytos, named after Kallikrates of Aphidnai(?),⁴⁹ and Prokleides son of Pamphilos of Aigilia (Table 8.6).⁵⁰ Due to the discrepancy

Note: Xenopeithes II's son belonged to Upper Paiania (transferred to Antigonis).

TABLE 8.4. [Demosthenes] 38, *APF* 11263

⁴⁸ *APF* 600; Table 8.1. Axiochos probably married late and his son (still an *erómenos* in 422: ch. 5 n. 48) may have been younger than Alkibiades III's younger brother Kleinias III. Sopolis II and Athenodoros II died childless, but Kleinias II and Thoukritides II had heirs, and it is possible that the son of Xenopeithes III of Paiania who served as ephebe in 305/4 (Reinmuth 1971 no. 17. 36) was the great-grandson (SSS) of Xenopeithes I (who would have been born c.420). It has generally been assumed (*IG* ii² 1152; *APF* 15187; Traill 1986, 87–8) that the son of Pheidon II of Paiania who served as tribal epimeletes in the late 4th c. bore the name of his FB Pheidippos, but we know nothing about his name except its length (9 letters), and he might have been named for his MF. The reference in [Them.] Ep. 8 (p. 749 Hercher 1873) to a homonymous uncle (*theios*, apparently FB) of Themistokles is probably a conjecture based on belief that the archon of 493/2 was not the politician, in its turn based on Hdt. 7. 143. Euktaios II and Nikias I of Xypete may have named sons for each other, Table 29.4.

⁴⁹ *APF* 8157 III; Hochschulz 2007 (*non vidi*). The filiation of Kallikrates of Kollytos to Agyrrhios is conjectural, but it is certain that Agyrrhios' sister married Kallikrates of Aphidnai; their son Kallistratos was Agyrrhios' *adelphidous* (Dem. 24. 135; *APF* p. 277–8 needs correction here). Kallikrates was a wealthy man; we have already seen that three grandsons were named after him.

⁵⁰ Humphreys 1983*a* (but not 1993), 115 mistakenly has Prokleides II named for MB. Archippe married within the deme; the persons named in Table 8.5 were all buried together, with the exception of Meixiades, and there may have been some kinship between Meixiades and Sostratos.

Note: IG ii² 6905, CAT 2. 813, is a loutrophoros-stele showing two bearded men, the younger (Athenodoros) followed by a slave batman. It seems likely that they are father and son, and that Athenodoros I, guarantor of a lease on Delos c.360–330, was Telesiphron's brother.

TABLE 8.5. Athenodoros of Myrrhinous

Note: LGPN wrongly has Epipethes as father of Kleopeithes, and Peisikrateia (SEMA 32, cf. Lambert 1997a, 152) as Teisikrateia.

If Alkimachos of Myrrhinous was the brother of Epipethes and Kleomachos he was an elderly man when recorded as archon's paredros in 266/5 (IG ii³ 920), but since he had been hipparch in 282/1 (SEG 21.525), and his son Thoukritos was appointed general in mid-century (G. J. Oliver 2007a), this is likely enough. Kleoboulos apparently set up IG ii² 6890 to commemorate two sons, and later added his father's name; he himself was commemorated separately on ii² 6896.

TABLE 8.6. Angele and Myrrhinous

between the ages at which men and women married, a man's sister's husband was likely to be about half a generation older, and the connection between the families solidly established for fifteen years or more before the younger man produced children. A sister's husband was often an influential figure in a man's life (Humphreys 1986*a*, 76–80).

Commemoration of more remote kin is rare, and in some cases the kinsman singled out is one who was particularly well known. Agyrrhios II of Kollytos (Table 8.7) was apparently named after his great-grandfather (FFF), a prominent politician (*APF* 8157). Phaidros II son of Thymochares I of Sphettos was named for his grandfather (FF), his brother Kallias II for their great-grandfather.⁵¹ The same pattern is seen in the names of Meidoteles II and Meidon II, sons of Kalliteles of Myrrhinous (Table 4.10). Sositheos, speaker of [Demosthenes] 43, commemorated a great-grandfather (FFF) and a grandfather's half-brother (MF½B) as well as his sons' grandparents. Euthykrates IV son of Archestratos II of Amphitrope probably called his son Polyeuktos (II) after the boy's FMF (great-grandfather) Polyeuktos II son of Lysistratos of Bate, through whom the family in Amphitrope had acquired a claim to the priestesshood of Athena Polias.⁵² Perikles' brother

Notes: Kallistratos was Agyrrhios' *adelphidous* (Dem. 24. 135); correct *APF*. Agyrrhios had emerged from his imprisonment for debt to propose the law R/O 26 in 374/3. The view that Kallikrates of Kollytos was his son rests only on the name of Agyrrhios II.

Since the name Kallikrates is extremely common (attested before 300 in 30 demes other than Kollytos and Aphidnai; add Otryne, *IG* xii 6.262 II 49, to *LPGN*) there is no great reason to connect Pythodelos of Kollytos and his son Kallikrates to this family.

TABLE 8.7. Agyrrhios, *APF* 8157

⁵¹ *APF* 13964. Kallias I is named as lessee of two silver mines and owner of property at Nape in 367/6 (*Agora* XIX P 5. 42, 48, 65).

⁵² *APF* 2419, 4549; in the table to the latter entry the demotic of Euthykrates I is wrongly given as Alopeke. This example comes from the Hellenistic period.

Ariphron also called a son after the boy's FMF, Hippokrates of the Alkmeonid family; this Hippokrates (II) called one of his three sons after Perikles, who was the boy's great-uncle (FFB); *APF* 11811 II). Timarchos II son of Teisias I of Rhamnous (*APF* 7737) may also have been named after his FFB. Thrasylllos III, adopted son of Apollodoros II of Leukonoion (Table 2.1), probably had a son named Mneson (III); *IG* ii² 1632. 187, 192 after Apollodoros II's FB, who died childless; Apollodoros had acquired some of Mneson II's property after a dispute with his other FB, Eupolis. The speaker of [Demosthenes] 58 had a brother called Aristokrates, named after his grandfather's uncle (*theios tou pappou*, § 67) Aristokrates son of Skellias, prominent in the later stages of the Peloponnesian War.⁵³ Thrasyboulos son of Thrason of Erchia seems to have been named after a great-uncle (FMB), the well-known Thrasyboulos of Kollytos (*APF* 7305). In the family descended from Strombichos of Euonymon (Table 16.1) Diotimos III son of Diopeithes I seems to have been named for his first cousin once removed (FFBS) Diotimos II, a well-known general;⁵⁴ Diotimos IV was named after his uncle (FB) Diotimos III; Eukrates II was named after his great-uncle (FFB); Olympiodoros possibly after his FFFB.

Commemoration of the names of remoter, quasi-mythical ancestors is unusual in the classical period: Kimon's son Oulios is exceptional, though Herodotus (5. 65) tells us that Peisistratos was named after Nestor's youngest son (*Odyssey* 3. 400) on the basis of a claim to descent from the Pylian refugees who supposedly passed through Attika on their way to Ionia. Such claims were perhaps more likely to be made by men in marginal positions: we learn from Xenophon (*Hellenica* 3. 1. 6) that fourth-century descendants (SSS?) of Demaratos, who lost his kingship in Sparta in the late sixth century and retired to Persia, bore the names of the twin founders of the Spartan royal dynasties, Proklos and Eurysthenes (Hofstetter 1978, nos. 116, 274–5).⁵⁵

On the mother's side, to name a son after his maternal grandfather was part of the normal naming pattern, as we have already seen. Two boys seem to have been named after famous great-grandfathers on the mother's side. One of the sons of Megakles II was called Aristonymos, presumably after the father of the tyrant

⁵³ See R. Thomas 1989, 132–8; *APF* 1904. If Libanius (*hyp.* [Dem.] 58) is right in stating that the speaker like his grandfather was called Epichares, then Aristokrates I was either FFFB or FFMB to his namesake.

⁵⁴ If the attribution to Diotimos III of a son named Olympiodoros (II) is correct, there may have been some closer affinal tie between the two descent lines. See *APF* 4386.

⁵⁵ Lysistratos of Bate (Table 20.4) was not called after his FF Lysikles (nor was his brother, whose name was only 6–7 letters long, *IG* ii² 5867); his name seems to be a version of that of his FFZ, the well-known priestess Lysimache, perhaps inspired by Aristophanes' *Lysistrata*. Kleainetos II of Kydathenaion (Table 4.9) was the SSSS of Kleainetos I (father of the demagogue Kleon), but there may have been intermediate uses of the name for which the evidence is lost. Kleainetos II, son of Kleomedon II, had a slightly older contemporary, Kleainetos son of —dros of Kydathenaion, epebe in 332/1/0 (*IG* ii³ 4. 342. 3), who presumably belonged to the same lineage.

Kleisthenes of Sikyon (*APF* 9688 VII, Table 15.2). Phanokles of Leukonoion, who married Hipparete daughter of Alkibiades IV, called a son Alkibiades; he was probably more anxious to advertise his connection with the famous general Alkibiades III, his wife's grandfather, than that with her father Alkibiades IV (*APF* 600 X). The only possible case of a man named after his MMF is Oloros of Halimous, father of the historian Thucydides, but the genealogy is problematic (*APF* 7268 V). Sositheos, speaker of [Demosthenes] 43, named a son after a matrilinear great-uncle, Menestheus, the patrilinear half-brother of the boy's MF (Table 7.9).

It may have been rather more common to name a boy after his mother's brother, but the certain examples have special circumstances attached to them. Mantias of Thorikos introduced his son by Plangon to his phratry under the name Boiotos, which was the name of Plangon's brother; but the young man asserted that he had as a child been given the name of Mantias' father, Mantitheos (*APF* 9667; see Humphreys 1989, forthcoming *a*). Makartatos son of Theopompos of Oion Kerameikon was adopted to his MB Makartatos of Prospalta, and we cannot be certain that he did not change his name on adoption (*APF* 2921; [Demosthenes] 43. 77). Other cases involve conjecture. Hipponikos son of Strouthon, of the tribe Akamantis, may have been a nephew (ZS) of Hipponikos I son of Kallias of Alopeke (*APF* 7826 III); Hipparchos son of Charmos of Kollytos, the first Athenian to be ostracized, said to have been related to the family of the tyrant Peisistratos, may have been the son of a daughter of Peisistratos, called after her brother Hipparchos (*APF* 11793 IX). The name however is common in aristocratic circles, and one would rather expect a grandson of the tyrant to have gone into exile with the rest of Peisistratos' descendants. The view that the demagogue Kleon of Kydathenaion married a sister of Menexenos (I) of the same deme, and that their son was called Menexenos after his MB, has recently been challenged (Table 4.9).⁵⁶

Kimon is credited in one source (Schol. Aristides III 515, Dindorf 1829) with a son called Peisianax, which *may* have been the name of a brother of Kimon's Alkmeonid wife Isodike (*APF* 8429 XII). The fourth-century politician Diophantos of Sphettos was an affine (*kêdestês*) of Melanopos son of Laches of Aixone, and called a son Melanopos ([Demosthenes] 35. 6); it has been suggested that

⁵⁶ *APF* 8674; Bourriot 1982. Traill 1986 rejects Bourriot's suggestion that the Kleon son of Menexenos listed as a councillor in the 380s or 370s (*IG* ii³ 4. 21. 47) belonged to Paiania and not Kydathenaion, but nevertheless doubts the conventional reconstruction of Kleon's genealogy. Bourriot thinks that Kleon [of Paiania] could still have been named after the demagogue, on this view a distant affinal connection (FMZDHF), but although we have a reference in a fourth-century forensic speech to Kleon as a well-known historical figure ([Dem.] 40. 25) I am not sure that his reputation was sufficiently illustrious to inspire commemoration of such a remote connection. On Bourriot's view the two descent lines would not even be continuously linked through membership of the same deme. It should be stressed however that cases of naming for matrikin can easily escape our notice. The patrilinear bias in the naming system may not have been as pronounced as it appears in this analysis to be. Cf. Timarchos II son of Teisias II of Rhamnous, named for MB, Table 31.6.

Melanopos was Diophantos' brother-in-law (WB) but he may have been his father-in-law.⁵⁷

In two cases we can suspect that a boy was named after a matrilateral kinsman but cannot specify the link. Archippos son of Phormion of Peiraios was probably the son of the freedman Phormion who married Archippe, widow of his ex-owner Pasion of Acharnai (*APF* 11672 IX). Phormion had no kin; the boy's name may simply have been formed from that of his mother, but it is also quite likely that her name was related to that of her father or another male kinsman.⁵⁸ In other cases cross-cousins (FZS/MBS) have the same name: Euxitheos son of Thoukritos of Halimous, the speaker of Demosthenes 57, shared his name with Euxitheos son of Timokrates of Melite, his MBS. They may both have been named after the same kinsman, although this was not their common grandparent (Table 7.12, cf. n. 40 above; *APF* 3126). Aresippos of Kephale (*APF* 1598) and Aresippos of Sphettos may have been cross-cousins, and the choice of the name Aresias for their sons, though a fairly obvious one, may also have been influenced by continuing contact between the two families.

Adoption presented special problems. In the family whose affairs are discussed in Isaïos 10, the brothers Aristarchos II and Xenainetos II were named after their natural FF and FMF, whose legal relations to them were adoptive father in the first case and adoptive FF in the second. We do not know which was the older of the two boys (Table 7.5). Aristarchos II was probably destined for adoption from birth. In other cases a change of name may have been made on adoption. Apollodoros son of Thrasylllos of Leukonoion gave his father's name to the son of his maternal half-sister when he presented him to his phratry as an adopted son (Isaïos 7. 17, *APF* 1395); in the same family Apollodoros' cousin (FBDS) Thrasyboulos son of Aischines of Lousia apparently changed his name to Hippolochides when adopted by Hippolochides son of Thrasymedes of Lousia (Isaïos 7. 23, with *IG* ii² 1623. 237–8; *APF* 1395). In the reverse process, Mantias son of Mantitheos of Thorikos may have tried to change the name of a son he had hoped to disinherit, from Mantitheos to Boiotos, when he was compelled to present the boy to his phratry. Such changes, however, are rarely explicitly

⁵⁷ Wyse 1904, 304 suggested that Diophantos had married Melanopos' sister, but if Melanopos was the son of the general Laches (Dem. 24. 12, 126), he must have been born before 418, and Diophantos was still active in 343; as the older of the two, Melanopos should be WF rather than WB (*PA* 9019 postulates a homonymous son of the general as Melanopos' father). Cf. Table 29.16.

⁵⁸ Whitehead 1986*b* assumes that Archippe had metic status when she married Pasion, and was socially superior to Phormion only because the grant of citizenship to her first husband and his sons had by implication included her also. The name, however, is an odd one for a freedwoman (apart from hetairai, *LGP* no. 36 and perhaps 33). Pasion was rich; he may have married into a not-too-fastidious citizen family. Diphilos son of Nausichares of Aixone (*IG* ii³ 4. 337 II 31) was called after his mother Diphile daughter of Timokleides of Euonymon, who may have died in childbirth, since the lekythos representing her with her husband, *IG* ii² 6166, is dated c.350, and her son was born in 347/6 (ch. 29 n. 121).

attested. We do not know whether Dikaiogenes III son of Proxenos of Aphidnai, who was adopted in the will of his cousin (FMBS) Dikaiogenes II son of Menexenos I of Kydathenaion, took the name on adoption or was given it at birth (*APF* 3773, *Isaios* 5, ch. 7 Case 2, Table 7.2; ch. 2 III 1); nor do we know whether Makartatos son of Theopompos of Oion Kerameikon was named at birth after his MB Makartatos of Prospalta or took the name when adopted to him.⁵⁹ Makartatos in turn named a son Hagnias, because he hoped to succeed to the estate of Theopompos' cousin (FBDS/FFBSS) Hagnias son of Polemon.⁶⁰ Chairestratos son of Phanostratos of Kephisia, who claimed to have been adopted by the will of his mother's brother Philoktemon I, named his two sons Phanostratos II and Philoktemon II; both were probably born after the death of Philoktemon I.⁶¹

Some adopted sons, however, kept the name given to them at birth: no change of name took place in the series of posthumous adoptions recorded in [Demosthenes] 44. The speaker of *Isaios* 2, adopted by his sister's husband Menekles, named a son after his adoptive father but presumably did not change his own name (*Isaios* 2. 36).⁶²

No doubt Athenians also named their sons after family friends (Curtius 1870, 525), but such links are hard to trace. One possible instance occurs in the family of the orator Aischines (*APF* 14625). His older brother was called Philochares, and the same name was borne by an uncle (FB) of Aischines' wife. It seems possible that first the name and then the marriage arose out of a long-standing friendship between the two families. An alternative explanation is that Aischines' father had married a sister of Demokydes and Philochares I (ch. 25 at Table 25.3).

As we have seen, women's names are less well recorded. Two of the girls named after FM were epikleroi; this of course was not known when they were born, but it raises the question whether a girl who was her parents' first child was particularly likely to be so named. Phylomache II daughter of Euboulides, of the Bouselidai, was named after her FM (Table 7.9); Kallisto II, daughter of Lykophron son of the orator Lykourgos, was named after Lykourgos' wife Kallisto daughter of Habron of Bate. The marriage between Lykourgos and Kallisto I had joined two prominent

⁵⁹ Ch. 7 Case 9. [Dem.] 43. 77 hints at a change of name, but is not necessarily to be believed. Dikaiogenes III (ch. 7 Case 2) called a son after his *pater's* father Menexenos; the boy was probably named during the period of family disputes.

⁶⁰ The younger Hagnias appears as son of Makartatos in an ephebic list (*IOrop* 353 col. III 8, 330/29/8), so he was not posthumously adopted to Hagnias son of Polemon. This does not necessarily imply that his father lost the case.

⁶¹ *APF* 15164; *Isaios* 6; ch. 7 Case 1. A [Phil]oktemon of Kephisia, very probably the son of Chairestratos, was secretary of the Council in 319/18 (*IG* ii² 388. 4). Chairestratos was young and quite probably unmarried when *Isaios* 6 was delivered on his behalf c.364. The fact that he is called son of Phanostratos in the mid-4th c. dedication *IG* ii³ 4. 63 does not prove that he lost his case.

⁶² See Wentzel 1930, *BE* 1964. 392, and M. S. Smith 1967, 309 for evidence from later periods.

families, and the alliance probably continued to be of practical importance to both. The name Kallisto ('Most beautiful') looks at first sight like a pet name, but the father of Habron (the girl's FF) was called Kallias, so the name had a familial significance. (We find the same pattern in the name of Agariste II daughter of Hippokrates of Alopeke, named after her FM the famous princess from Sikyon; the name of *Agariste* I was related to that of her grandfather *Aristonymos*).⁶³

A third possible epikleros was the daughter of Pyrrhos (Table 7.4), whose estate was the subject of dispute in Isaios 3. Her great-uncles (FMB) testified in court that she had been named Kleitarete after their sister, her FM; her husband however knew her only as Phile. It seems doubtful whether Pyrrhos recognized her as his legitimate daughter; but the great-uncles' testimony shows at the least that naming an epikleros after her FM was an approved pattern.

Hipparete II, daughter of Alkibiades IV, was also named for her FM; her aunt (FZ) had married back into the family of Hipparete I (*APF* 600 VIII, 7826 XV; Table 8.1). Mnesiptoleme II, daughter of Meidoteles II of Myrrhinous (Table 4.10) was named after her FM.

Other girls were given names linked to those of their brothers or of other members of the family. Philostrate daughter of Philon of Aixone had a name modelled on that of her brother Philostratos (*APF* 8065); the name of Phylomache daughter of Hagnias I of Oion Kerameikon was linked by sense to that of her brother Polemon.⁶⁴ Lysimache I, daughter of Drakontides of Bate, had a name linked to that of her brother Lysikles (Table 20.4).

A priestess of Athena Polias was given the name Penteteris, implying the hope that she would play a prominent role in the penteteric festival of the Greater Panathenaia, while another Athenian priestess was allegedly named Theano, after the priestess of Athena in the *Iliad*.⁶⁵

To be a priestess was the only career in the public sphere open to an Athenian woman. To give a girl a name with a programmatic political meaning was something of a contradiction; respectable women were not spoken about in public. Nevertheless, Themistokles is said to have named his daughters Mnesiptolema, Italia, Sybaris, and Asia, as already noted above.⁶⁶

⁶³ *APF* 9688 III, X. On the possible repetition of the name Koisyra among the descendants of Megakles II see ch. 15 n. 18.

⁶⁴ I would assume that Polemon was born in or soon after 431 and Phylomache some years later. Phylomache is not otherwise attested in Attika (nor, so far as I have been able to discover, elsewhere) as the name of a historical person; Phylomache daughter of Amphion, wife of Pelias (Apollodoros 1. 95) presumably derived her name from the conflicts between kin with which the myths about the family are concerned.

⁶⁵ Plut. *Alk.* 22. 5; cf. Nagy 1979, Sourvinou-Inwood 1988*e*. On Lysimache ? II see Table 20.4.

⁶⁶ Cf. above at nn. 26–7. Heroides Attikos, claiming descent from Miltiades, called one of his daughters Elpinike, but by this date upper-class women had many names (*LGPN* Elpinike 5; Elpinike 6 should be reclassified as Epinike?).

One might have expected that women, confined to the domestic sphere, would have displayed familial solidarity more prominently and consistently in their names than men, but this seems not to be the case. Though repetition of grandfathers' names gave formal recognition to the components from which the new conjugal family had been constituted, in general boys' names, even when they were named after kin, were not intended to be significant only within a narrow family circle. A man's name—fixed in form by the procedures of public debate and written record—was his public persona. Familial naming is likely to have been most satisfying when it expressed the tie between a new member of the family and an older kinsman who had acquired a public reputation—just as burial in a group of family tombs, we shall see, was most satisfying when it enabled kin to cluster together round a conspicuous monument (chs. 10–11). In other cases, as we have seen, it was the prospect of making claims to inheritance in the courts that influenced naming. As R. Thomas (1989) showed in her study of family oral traditions (1989), the Athenian family's image of itself was profoundly moulded by the conventions and constraints of discourse in public. Since women had no place in that discourse, there was less need to use their names as a way of making statements about family ties. Their restriction to the private sphere was often expressed by the use of a personal nickname that had no structural significance of any kind.

Fame, of course, was available at a number of different levels, from the upper echelons of the political elite to the 'big men' of a city street or rural hamlet; family naming was not found only among the rich. But fame did not last long even at the uppermost level (Thomas 1989), and not every family had famous forebears to commemorate. Many Athenians asserted their claim to play a part in a world wider than that of the family by choosing names which alluded to matters of public significance.⁶⁷ Hipponikos, in an aristocratic family, might be chosen to commemorate a victory in horse racing, but Nikomachos, Nikostratos, and similar names became popular at all levels. Nausimachos (sea-battle) is another common Athenian name, along with others referring to naval warfare. Political institutions provided another source of inspiration. Boulis son of Demetrios of Thorai, councillor in 328/7 (*IG* ii³ 360. 17, 357 with D. M. Lewis 1954, 49; cf. *IG* ii² 6212), had a name alluding to the Council; his grandfather (FF) had been called Demophilos.

⁶⁷ A comparative study of naming practices would have to focus on the social conditions that stimulate a widespread interest in expressing adhesion to a new ideology or political movement through choice of names. The introduction of a new name stock in revolutionary conditions is well attested in western history (English Puritans, the French Revolution, the Greek War of Independence, etc: see Dupâquier a. o. 1984 for French examples). It would be interesting from this point of view to contrast classical Athenian practice with that of ancient Greek communities in which political activity was less intense, less democratic, and more parochial in its scope; or indeed to contrast the naming practices of Athenians in the classical period with those of later centuries.

Studies of familial naming by historians have dealt with Christian societies in which the stock of names, especially in periods when it was strictly based on those of the saints, was finite and much smaller than that available to ancient Athenians. Saints' names do not appear to have been regarded as having strong semantic connotations; there seems little evidence that boys named Martin or George were destined for military careers, or Lukes for medicine and writing, while in the case of a John or Nicholas one would not even always know on first acquaintance which saint was the patron. Imitation of saints' specific virtues was recommended by the Church, but not stressed by parents. In medieval Florence a child born with a caul might be called Santo or Santa, a child baptized hastily might be called John (though the name was very common anyway); otherwise names chosen for reasons of piety relate the name to the date of birth or baptism, or to a particular tie between the father and the saint whose name is chosen (Klapisch-Zuber 1985).

A father who explained his choice of a particular saint's name to bestow on his child by reference to his special relation with that saint was merely transferring to the spiritual realm a practice which more commonly operated at a purely human level. Names were associated predominantly with bearers who played or had played a significant role in one's life. The choice of a relative to be commemorated in the baptism of a new child may be linked to the choice of a godparent, the two forms of patronage reinforcing each other (Burguière 1984). In Florence in the 14th and 15th centuries the dominant influence on naming was the obligation to 'remake' the name of a dead relative, usually one who had died recently. This focus on recent deaths led to frequent commemoration of the names of uncles and aunts (usually paternal) and of dead siblings, as well as those of grandparents, and of parents who died young. Children might be renamed for this purpose. This strict reliance on death as the mechanism through which names were selected for commemoration seems unusual, comparatively speaking; it has the advantage of preventing disputes over the choice of a relative to be commemorated, at least in most cases, and in particular of limiting the interference of older kin in the choice of a name. It is noteworthy that when the system eventually broke down, it did so because grandparents began to press to have their names 'remade' during their lifetime (Klapisch-Zuber, *op. cit.*; cf. Bresson 1981).

Something should be said about the implications of the repetition of familial names for family reconstruction. The linkage of FF and S has always been exploited for prosopographical purposes. The material now collected in the *Lexicon of Greek Personal Names*, by providing an up-to-date database, has made it easier to assess the frequency or rarity of names, which in combination with deme size⁶⁸

⁶⁸ Deme size varied very widely, from Acharnai, electing 22 councillors per year, to small demes with a quota of 1 councillor every 2 years.

determines the probability that two bearers of the same name in the same deme belonged to a single patrilineage.

Some general points of method need to be stressed:

- (1) Since names are often repeated patrilineally, assessments of name frequency should be based on the number of demes in which a name is attested rather than on the number of separate entries in *LGPN* II (especially since the editors have in most cases been very cautious in attributing separate references to the same individual). It should also be remembered that name frequencies change over time.
- (2) Prosopographical arguments based on the ‘rarity’ of names should consider the whole set of names based on a particular root rather than focusing on a single form. For example, Lambert (1997*a*, 161–2, no. 46) takes Phrynaios (two demes) as a rare name, and speculates on possible links between the attested bearers. However, the father of one of these, Phrynaios of Hybadai, bore the related name Phrynichos, which is attested in thirteen demes. His son’s name may be due to the common process of name variation. The root *Phryn-* (‘toad’ or ‘brownskin’) generated ten names in Attika.
- (3) From time to time epigraphists warn us that it is not uncommon for individuals who are not patrilineally linked to bear the same personal name and patronymic (W. Thompson 1974; Habicht 1990*a*). It is important, however, to distinguish cases in which this identity is (probably) due to common principles of name formation, or to the use of names that are extremely widespread, or popular in a specific period, from cases in which matrilineal ties may be suspected. In Habicht’s list of father–son pairs, pairings such as Hieron son of Hierokles (Halai and Gargettos), Kephisodoros son of Kephisophon (Alopeke, Aphidnai, and Eupyriddai), Melesippos son of Melesias and Melesias son of Melesippos (Ankyle and ?Alopeke), Olympiodoros son of Apollodoros (Anaphlystos, Melite, Phaleron), or Sokrates son of Sogenes and Sogenes son of Sokrates (?Azenia, Erchia, and Kytherros), are presumably due to the operation of the common process of name variation, and one might hesitate to posit kinship between bearers even in the same large deme. The name Asklepiades was perhaps so common (from the Hellenistic period on) that repeated pairings may be coincidental. The combination of Andronikos and Seleukos (Anaphlystos and Rhamnous) links names common in the second century BCE. On the other hand, Aristeides son of Lysimachos of Hestiaia, who appears in a list of upper-class Athenians of c.105–95, was presumably named in reference to the famous general of 480; it seems likely that his family had matrilineal links with the general’s deme, Alopeke.⁶⁹ In the case of the

⁶⁹ The name Aristeides is attested in Alopeke in the Hellenistic period (c.150 BCE), that of Lysimachos so far is not.

paired names Alkimachos and Thoukritos (Angele and Myrrhinous, Table 8.5) it seems quite possible that a daughter of Thoukritos of Angele (*IG* ii² 5228, Bergemann 1997, 214, no. 39) married Kleoboulos II of Myrrhinous and transmitted the names of her grandfather (FF) and father to her son and (eventually) grandson (SS), perhaps because she had returned to her family of origin as a widow when her son was young. The pairing of Kallikratides and Syndromos in Steiria and Trikorynthos reflects a link between the Trikorynthos group, probably *gennetai*,⁷⁰ and the grandee family in Steiria, which was further reinforced by the adoption of Oinophilos (III) son of Oinophilos (II) of Steiria by Kallikratides son of Syndromos of Trikorynthos. It seems likely that the father of Syndromos of Trikorynthos married a daughter of a Syndromos of Steiria. The pairing Leonidas/Nikias (Melite and Oion) in two Delian families of the second century BCE is also not likely to be due to chance.

Thus an assessment of the validity of family reconstructions has to be based not only on the frequency or rarity of the names involved, but also on an understanding of naming practices.

Seen from a comparative point of view, the striking features of the Athenian⁷¹ naming system are its high degree of semanticization⁷² and the variety of naming principles simultaneously employed in it. A child might be named with reference to a relative (repetition of name, formal variation, semantic equivalence or allusion), to its physical appearance or the circumstances of its birth, to public events, to its parents' (usually father's) ties to non-related Athenians, non-Athenians, or gods, to its father's activities or political sympathies. Although repetition of names within a family would tend to deaden perception of the meaning of their components, in a high proportion of cases names were semantically transparent enough for meaning to be reactivated whenever it seemed appropriate. Humour played on this transparency (Barton 1990) and reinforced it. The semantic load carried by names also encouraged a tendency for names to be stratified, specific forms and types being considered more appropriate for the upper class, for slaves, etc. Over time, however, names travelled in both directions along the status spectrum, aristocratic-sounding names becoming more widely diffused (e.g. perhaps Kalliades), while names that may have started their career as pet names for children,

⁷⁰ The numbering in *LGP*N s.v. Kallikratides and Syndromos is extremely confusing: see now Byrne 2003; Schmalz 2009.

⁷¹ The same features seem to characterize naming practices in other parts of Greece, but my research is based on Attic data.

⁷² Cf. Barton 1990 on Plato's *Kratylos*. Hdt. (6. 98; R. Thomas 2000, 230) takes it for granted that Persian names have meaning (the procedure of name forming is indeed common to Persian, Greek, and other IE languages).

used in official contexts only by those of low status, became more respectable (Moschion, 'Little calf').

To name a child was an act of communication. It was directed in the immediate context to kin and family friends attending the name-giving ritual (ch. 9 at section 'Amphidromia and dekate'), but also, especially when the child was a son, envisaged a wider audience of fellow-phrateres, fellow-demesmen, fellow-citizens, and even members of other states, who would come to know the boy by his name and patronymic and could decode the connotations of his name, whether these were relatively private and directed at a small circle (e.g. reference to matrikin) or relatively public, alluding to the family's political tradition, past record (in war, athletics, poetry, etc), or access to hereditary offices and commissions (priesthoods, proxenies).

Rites de passage

I use the term ‘rites of passage’ to define the theme of this chapter because I am concerned with rituals as occasions for kin to gather together, and more specifically with those rituals which by their socio-legal implications and social setting were particularly likely to involve the presence of kin (more ‘individual’ or, as I would prefer to say, deity-focused rituals are considered in ch. 12, although the distinction is not absolute). Rites of passage or of status transition involved kin because they were related to the construction of identity, and hence with claims to legal rights and to prestige; many of them were carried out at least partly inside the house, in the presence of the intimate associates (including kin) known as *oikeioi*, while others took place at meetings of phratries and demes in which a man’s agnates were present.¹

Crudely, we could say that such rituals form a spectrum from the basic rites concerned with the legitimation of children and their admission to citizenship to prestigious rituals performed only by a few members of the elite. However, neither the distinction between citizen and non-citizen nor that between rich and poor can be treated in this context as absolute. There may well have been poor persons of citizen birth who were not interested in maintaining their citizen status, and there will certainly have been successful metics and freedmen with an interest in marking status transitions (cf. E. E. Cohen 1997); in the case of ‘elite’ rituals, they provided models on which poorer families might develop their own variations. Even the de facto marriages of slaves (cf. Todd 1997) may well have included some ceremony.

Rituals construct events by framing them and calling them to the attention both of society and of the gods; the term ‘private’ can hardly be applied to them.² However, there was a growing sense in the classical period of a distinction between public business and events and those of interest to a more domestic circle. In that sense, rites of passage were relatively private; nevertheless, the presence of kin and close friends was related to motives drawn from the public sphere, either because

¹ Solitary ritual activity, even prayer, does not seem to have been highly valued in the classical period. It was ‘superstitious’ (Theophr. *Char.* 16), or somewhat sinister (Plato *Laws* 909d–910e); at the least, what a later age would call ‘enthusiastic’. See chs. 10–11 on commemorative visits to tombs, ch. 12 on dedications. Siurla-Theodoridou 1989 collects representations of such rituals; see also *ThesCRA VI* s.v.

² Phratries, genê, and demes are discussed more fully in chs. 19–20, 22–32.

they were making a statement about alliance (by taking part in wedding or funeral processions) or because they were present as witnesses to a status event that had legal implications. Support, in these circumstances, shaded into control and even, on occasions, opposition and protest.

The historian of Athenian rituals has to hack her way through a thicket of ancient and modern interpretation. Ancient interpretations will have affected practice, and modern interpretations have hardened flimsy combinations of texts into apparently solid facts (Humphreys 2004, ch. 6). Difficulties of interpretation and reconstruction will accompany us throughout the life cycle.

THE *AMPHIDROMIA*/DEKATĒ

At its beginning, a ritual variously termed *Amphidromia* ('the circling'), 'the seventh day', or 'the tenth day' was performed after the birth of a child. Kin and family friends were invited. The evidence from the classical period consists of joking references in comedy, perversion of normal patterns in tragedy, and a Platonic analogy in which both humour and perversion may well be involved. Ancient scholars, starting with the Hellenistic commentators of Alexandria and other centres of learning, but first represented for us in Harpokration's *Lexikon to the Ten Orators* (probably second century CE), made sense as best they could of such references, which probably did not correspond exactly to any celebrations in their own experience.³

No source tells us that more than one ritual was performed for each child in the days following birth, and though the scope of the celebrations no doubt varied according to circumstances (wealth and ambitions of parents, birth order and gender of child, etc.), and feasting might go on all night, we do not hear of activities spreading over several days.⁴ Some variation in the date is likely enough in practice, parents wishing to avoid unlucky days, to time the ritual to coincide with or avoid dates of festivals for which kin would come to town or leave the village, etc. But variation in the sources may well be due also to differences in speech register (*amphidromia* being more solemn and traditional in tone, *hebdomé*

³ Kallimachos wrote a poem for the seventh day of the daughter of a friend (F 202 Pfeiffer 1949–1953), but this was probably a graceful allusion to shared learning (the references are all mythological) rather than part of a current practice. We have a number of invitations to celebrations of children's birthdays, at least two for the first birthday, from Roman Egypt (Vandoni 1964; *PSI* 1242, *POxy* 36. 2791, Rowlandson 1998 no. 232), but apparently no papyrological references to purification rites after birth or naming ceremonies. Cf. ch. 10 n. 26 on the spread of birthday celebrations from the Hellenistic period on.

⁴ According to Deubner 1952 Romans named girls on the 8th day, boys on the 10th; but Phile-Kleitarete is named on the 10th, Is. 3. 30, and there seems no evidence for gender difference in Athens. All-night feasting Ar. *Birds* 494, Euboulos F 3 R. L. Hunter 1983; cf. Bravo 1997, 116–17.

or *dekatê* more colloquial), to context,⁵ and to the gendered experience and interests of participants.

Plato had a mischievous sense of humour, and would no doubt have been greatly amused if he could have foreseen the discussions provoked by his analogy in the *Theaitetos*. Sokrates says to the young man (160e–161a): ‘Now that we have given birth to this child (theory), you as parent, I as midwife, we must really run its Amphidromia in a circle in our argument, examining whether it has not escaped our notice being unworthy to be reared, merely a wind-egg and a deception. Or do you think that *your* child ought in any case to be reared and not cast out? Will you put up with watching it being put to the test, and not be too upset if someone deprives you of your firstborn?’ The passage has led modern interpreters to see the Amphidromia as the occasion of a formal decision by the child’s father, in the presence of kin and friends, whether or not to rear it. However, Plato mixes his metaphors. He moves from the Amphidromia celebrated after a live birth to the false theory as a false pregnancy (cf. 151e),⁶ and then to exposure. His analogy should not necessarily be taken literally.

Exposure was practised in ancient Greece, and philosophers tended to approve of it.⁷ There may have been occasions when a formal decision was required: *BGU* IV 1104⁸ is a formal agreement between a pregnant widow and her mother-in-law specifying that the widow may expose her child if she wishes. It is possible

⁵ Ar. *H.A.* 588a 8ff. says that parents waited until after the 7th day because the risks of infant mortality were highest during that period: biological thought tended to run in sevens (Solon F 27 West; *menarche* in the 14th year, H. King 1998 s.v., Dean-Jones 1994, 47–55). Harp. s.v. *hebdomeuomenou* cites Lys. F LI Carey (2007) for celebration on the 7th day (the case was *peri chrêmatôn*, so perhaps legitimacy was at issue; the opponent Eteokles might be the father of Skaon of Aixone, *daietetes* c.370 (?), *IG* ii³ 4. 24, cf. ii² 2492, or conceivably the father of Chremonides I of Aithalidai, whose son Eteokles is attested as a liturgist in the 320s, *IG* ii² 1933. 11). It is quite unclear where the scholion to Plat. *Theait.* 160e got the 5th day as date for the Amphidromia (also in the *Suda*, s.v. and Apostolios *prov.* 2. 56); Pind. *Ol.* 6. 52–7 may have contributed (Lucian *Halk.* 5 seems less likely; 5th day also in Plaut. *Truc.* 423–5). Orators usually employ the colloquial term *dekatê* (Is. 3. 30, Dem. 39. 22, 40. 28), as does Aristophanes (*Birds* 494), but Lysistrata on the Akropolis uses *Amphidromia* (757) in mock solemnity, as does Plato (*Theait.* 160e).

⁶ On wind-eggs and false pregnancy see Campese a. o. 1983.

⁷ Martin Schmidt 1984. On Plut. *Lyk.* 15. 1 (formal decision by tribal elders in Sparta) see Hodkinson 2000, chs. 2–3; Hodkinson accepts the scrutiny of infants (while rejecting the statement that each approved child was allocated a *kleros*), but this too may well come from philosophical sources. Kirk 1981, 56–61, suggests that Plato himself introduced the idea of testing into the Amphidromia; see now Leitaio 2012. Evidence from Greco-Roman Egypt is decisive for the normality of exposure: Bagnall and Frier 1994, 151–3, Rowlandson 1998, index s.v.; D. J. Thompson 2002. (Eyben 1980 and Ingalls 2002 ignore epigraphic and papyrological evidence.) The statement of D. H. 2. 15 that a Roman child had to be shown to 5 neighbours before exposure, if reliable, might indicate more concern at Rome over the proper ritual treatment of ‘monsters’ (cf. Garland 1990) and less sympathy with exposure of healthy children.

⁸ Alexandria, 8 BCE (Rowlandson 1998 no. 129). The term *amphidromia* occurred in a speech attributed to Lysias (F XI Carey 2007, cf. ch. 7 n. 36) for a defendant accused of homicide, on the grounds that she (?) had aborted a child; the ritual may have been mentioned as an occasion for rejoicing rather than as evidence for the father’s right to accept or reject a child (the context is lost).

also that a husband who suspected his wife of adultery, or of trying to pass off a child that was not her own, would accuse her before a circle of kin, hers as well as his.⁹ In such situations, however, it was not the health of the child that was in question. On the other hand, in the two situations in which exposure was probably most common, illegitimacy and the birth of obviously defective children, formal public decision-making seems impossible or improbable. An illegitimate child had no father, while parents may well have preferred to say as little as possible about the birth and disposal of a defective neonate.¹⁰ Moreover, abandonment of children unwanted because of the parents' poverty would be most prevalent in the social class least likely to formalize such decisions. If there were also well-to-do fathers who decided to limit the size of their families, it again does not seem very likely that they would wish to publicize the decision. The single text repeatedly cited as evidence for selective infanticide of daughters, a letter of 2 BCE from a father in Alexandria (perhaps serving in the Roman army) to his pregnant wife in Oxyrhynchos, evidently does not contemplate any formalities.¹¹

⁹ On supposititious children (*hypobolimaioi*) see Rudhardt 1962. The seclusion of the women's part of the house, and the presence of the midwife, a woman outside the family who had unusual freedom to move about the city and knowledge of mysterious remedies, bred such suspicions. Midwives were normally older women (Bremmer 1985). Cf. Ar. *Thesm.* 407–9, 502–16, Plaut. *Truc.* 389–409, Terence *Andria* 515, 768–9, for fictitious references; Gardner 1989, 55–7; A. E. Hanson 1994.

¹⁰ Illegitimacy, Ar. *Clouds* 530–2; J. Boswell 1989 on exposure/abandonment in Christian Europe (E. R. Coleman 1974 on sex ratios). 'Abandonment' might be a better term also for pagan antiquity, since exposure in a deserted area (as in the case of Oedipus) was probably rare. The usual term for the place of exposure in Greco-Roman Egypt was 'the dung-heap' (Rowlandson 1998, index s.v.; Garland 1990, 85 compares the American expression 'trashcan baby'; cf. Pomeroy 1986; Masson 1996; Riel 2009, 100–1. Golden 2004, 153 doubts the connection of *kopros*-names with exposure). The town dump of Old Smyrna contained 7th c. 'amphora burials' of both infants and young children (Nicholls 1959, 44–6; cf. Rudhardt 1963); the distinction between abandonment and what archaeologists call 'non-ceremonial burial' was not considered by the excavators. See also ch. 10 n. 73 on disposal in wells. It is not clear whether in antiquity babies were also abandoned near the houses of the wealthy or (in the case of girls, literature influencing practice) near brothels. Den Boer 1979, Garland 1995, and Martha Rose 2003, have general discussions of Greek attitudes to disability and deformity. There is some evidence that by the 4th c. abortion was preferred to exposure (A. Cameron 1932, cf. Gallo 1984a, Kapparis 2002), but the fact that the decision to abort could be taken by the mother alone would have been an obstacle to regarding the two practices as functionally equivalent. Oldenziel 1987 gives a useful account of the historiography of the question, but has no sense of the value of the evidence; Schiefenhövel 1989 has a bibliography of anthropological studies of infanticide. Ter. *Heaut.* 626–67 makes fun of the use of the motif in comedy.

¹¹ *POxy* IV 744 (Rowlandson 1998 no. 230; S. West 1998; Legras 2014). Poseidippos *PCG* 7 F 12 (3rd c.) also refers to female infanticide. The use of family listings (Milesian citizenship grants, Gallo 1984a, 1984b; A. Petropoulou 1985; Brulé 1990a; Sallares 1991, 134–6; Ptolemaic census records, D. Thompson 2002) as evidence for female infanticide is more problematic, since gender ratios here will also have been influenced by the early marriage of daughters, and perhaps by the decision of some emigrants (to Miletos) to leave daughters behind. Nutrition patterns may have favoured the survival of boys, although the effects of this may have been at least partly counterbalanced by greater risk of accidents; in a sample from late medieval England there are more accidental deaths of boys than of girls, boys spending more time outside (Hanawalt 1977).

It thus seems likely that in the overwhelming majority of cases, the *Amphidromia/dekate* was a single, joyful celebration comprising purification of the women involved in childbirth, exhibition of the baby to assembled kin and friends,¹² name-giving, and a party lasting into the night.¹³ There was no special role at this ceremony comparable to that of the Christian godparent(s), and its significance as a step in the process of recognition of legitimate filiation (completed only with marriage in the case of girls and presentation to the father's deme in that of boys) was minimal.¹⁴

Although it seems likely that the chosen name was usually announced by the father, he could apparently waive this right. In the *Odyssey* (19. 403) we are told that Odysseus' nurse Eurykleia set him on the knee of his maternal grandfather (MF) Autolykos and told Autolykos to name him; although in the poem this episode serves to stress Odysseus' special ties with this trickster grandfather, it seems likely enough that a grandfather should in real life have quite often have been asked to name a grandchild—particularly if it was to bear his name. The choice of names from both father's and mother's family shows that the mother was expected to exercise some influence on naming,¹⁵ and her kin would be invited as well as those of the father. In the case over the estate of Pyrrhos for which Isaïos 3 was written, Pyrrhos' mother's brothers testified that they were present when his daughter was named after their sister Kleitarete. The speaker tries to cast doubt on their testimony (3. 30), but the claim is clearly a plausible one. Mantitheos son of Mantias of Thorikos attacks the testimony of witnesses

¹² The hearth may have played a role in this ritual (cf. below n. 43 on marriage), but statements in the sources about running round it are probably mere etymological speculation (cf. Hamilton 1984). Central hearths in reception rooms do not seem to be a feature of classical Greek houses (cf. Nevett 1999). *Et. Mag.* s.v. *amphidromia* says: 'a festival at Athens in which they run round a loaf of hidden bread being baked in the hearth. They do the same *meta skenês* (in show?) with infants, carrying them round in front of (*para*) the hearth, since Hestia is called *Kourotrophos* on account of some stories.' In this text (which may not be at all early in origin) there is perhaps a reminiscence of the myth of Demophon, put into the fire by Demeter (*H. Hom.* 2. 239–62). The connection has occurred to modern scholars (Brind'Amour 1975, Furley 1981), probably also to their ancient counterparts.

¹³ Ar. *Birds* 494–5 with Dunbar 1995 ad loc.; Ehippos (?) *PCG* 5, 133 F 3; Euboulos F 3 R. L. Hunter 1983 (*Ankylion*), cf. F 150. *Thuô* in association with *dekate* in Ar. *Birds* 922 does not necessarily imply animal sacrifice (to whom?). On Eur. *El.* 1126 see Hamilton 1984; the passage might suggest that the parturient's mother played a leading role (with the midwife) in the purification ritual, which includes offerings, but the situation is not normal.

¹⁴ Rudhardt 1962 places too much legal weight on the *dekate*. Although we have two references to testimony in court by guests at this rite (Is. 3. 30, Dem. 39. 22 with 40. 59) both cases were unusual: Phile's father had died while she was a small child, leaving her status in doubt (ch. 7 case 4), and Mantitheos-Boiotos was defending his right to the name Mantitheos.

¹⁵ In Aristophanes' *Clouds* (60–74) the parents of Pheidippides disagree over the choice of a name for him and eventually compromise. When Theseus is asked in Eur. *Aigens* (F 2 TGF), 'What did your mother name you?', he has presumably already explained that he grew up fatherless. Cf. Eur. *El.* 654 ff. Naming by FM in Rowlandson 1998 no. 225 (*PMünch* III 57).

called by his half-brother Mantitheos-Boiotos to show that Mantias had given the name Mantitheos to Boiotos at his tenth-day naming ritual (Demosthenes 39. 22, 40. 59): the witnesses must be lying, he says, because they were not kin or friends of Mantias, and therefore would not have been invited.¹⁶

THE *MEION*

The next ritual in a child's life was its first introduction to the public sphere, when a sacrifice was made in the father's phratry to celebrate its birth;¹⁷ on this occasion the father and his agnates had a more salient role. It is not clear whether the sacrifice was offered for both girls and boys, or only for boys. The name *meion* probably characterized it as a 'lesser' sacrifice in comparison with the more important *koureion* offered for boys at puberty;¹⁸ this might imply that it was only sacrificed for boys. The sacrificial meat would be shared by the father's sacrificing group within the phratry (*thiasos* or other terms, see ch. 19 n. 34): usually his close agnates, any close matrikin or affines who belonged to the phratry, and friends. The ritual probably took place normally at the first celebration of the *Apatouria* after the child's birth, although one client of (?) Isaios brings witnesses to testify that his father sacrificed the *meion* for him when he was three or four years old; the delay was presumably due to the fact that his father was a trader who had met and married the litigant's mother in Selymbria on the coast of the Black Sea.¹⁹

Anyone present at this rite who suspected that a father was trying to introduce an illegitimate child to the phratry was presumably entitled to object and obstruct

¹⁶ [Dem.] 40. 59 alleges that the witness was a contemporary of Mantitheos-Boiotos.

¹⁷ The Spartan *Tithēnidia* (Athen. 139a–b) was possibly a similar festival (see however Calame 1977, 297–304; Sourvinou-Inwood 1978, 114–18, on other rituals of presentation of children to deities).

¹⁸ Scholiasts and lexicographers derive the name from the weighing of the victim. In the *Frogs* (798) Aristophanes uses the expression 'to treat tragedy like the *meion*' (*meiagôgēsousi tēn tragôidian*) to describe the contest in which Aeschylus' and Euripides' lines are weighed. The scholia quote a passage from his *Dramata* (F 299 PCG) which refers to dragging on the balance to avoid having to make extra contributions to the phratry (*all' euchomai 'gôg' helkusai se ton stathmon | hina mē me prosprattōsi graun hoi phrateres: graun* is unintelligible without context and may be corrupt, but for our purposes the sense is clear). This implies that the victims were weighed to ensure that they reached or exceeded a set weight, and this is what we are told by the first part of the scholion and the majority of our sources (Harp., Sud., Phot, s.v. *meion*; *Lex. rhet.* Bekker 1814 297. 7, *Et. Mag.* 533. 37). The view given by the second part of the scholion to the *Frogs* and by Pollux (3. 52), that the regulations fixed a maximum weight to prevent the ambition of displaying their wealth, must be mistaken (ch. 19 n. 46). Girls: ch. 19. n. 48; Lambert 1993.

¹⁹ POxy 31. 2538, col. ii 23–8, cf. iii 1–7 (Carey 2007, F A3a; cf. Carey 2005; ch. 19 n. 82). References in Is. 8. 19 and [Dem.] 43. 11 are vague but suggest celebration in the year of birth, as stated by *Et. Mag.* s.v. *Apatouria*. Plat. *Laws* 785a–b prescribes registration in the phratry immediately after birth. It seems likely that Proklos' statement (*ad Plat. Tim.* 21) that the *koureion* was offered in the third or fourth year derived from a source based on this Lysian (?) speech.

the sacrifice, but in the only case attested in our sources the child was presented by its mother's kin and repudiated by the man said to be its father, Kallias III son of Hipponikos of Alopeke. In this case the presentation was to Kallias' *genos*, the Kerykes; presumably the occasion was the sacrifice of the *meion*. Kallias later changed his mind and acknowledged paternity (Andokides 1. 126–7). In some cases where we hear of a dispute over the *koureion* (Isaios 6, ch. 7 Case 1; Demosthenes 39–40) it seems fairly clear that no *meion* had ever been offered. At least in some *phratries*, this sacrifice may have been optional.

THE CHOES

It has for a long time been supposed by modern scholars that there was a rite de passage for children of three or four years old on the day of the Choes, the second day of the Anthesteria, but such a ritual is not attested in any source earlier than the second century CE. The most that can be said with any confidence is that during the period of the Peloponnesian War there was a tendency (perhaps especially among families who had moved from their rural homes into the city) for this and some other festivals to become more child-centred. Miniature wine jugs (*choes*) decorated with images of children's play were produced c.420–390 as presents for children: one is inscribed 'For Akryptos from his father'. The playing children on these vases are often shown wreathed because the gift was made on a festival day and children's play would not culturally be 'seen' on everyday occasions; they are not shown drinking wine. Later, at least in the Athenian Dionysiac association of the *Iobakchoi*, the day of the Choes became the occasion of a rite de passage (first initiation?), occurring at some date between birth and the *ephebate*.²⁰ However, both the gifts of the classical period, which imply more concentration on the nuclear family and less interaction with a wider community, and the initiation, which was orientated towards individual salvation (though celebrated in the sect), lack the social characteristics of the rite de passage in the usual sense of the term.

GIRL'S RITUALS

The main ritual of a girl's life was her wedding. We do not hear of any other rite de passage performed by all girls of citizen parentage in classical Athens, although it is likely that an offering to Artemis would figure at some stage in the childhood

²⁰ Full discussion in Humphreys 2004 ch. 6; add now S. Schmidt 2005 on vases. Akryptos, Baltimore, Robinson, BArch 1012158. *Iobakchoi* (c.170 CE), *IG* ii² 1368.

of most girls.²¹ Girls from wealthy or especially concerned families might make the journey to Brauron on the east coast of Attika to take part in the bear dance in honour of Artemis. Kin would presumably accompany them.²² The girl's mother and other women in the family would no doubt also attend the festival, but we have few testimonies; only a few dedications, as we shall see later (ch. 12 n. 34) indicate that female kin may have joined together on such occasions.²³

It was also possible to perform a related rite at the sanctuary of Artemis in Mounichia (modern Mikro Limani); it is not clear whether 'acting the bear' was involved here too, or the only rite was sacrifice of a goat.²⁴ In addition, selected girls served as *arrhēphoroi* on the Akropolis, as flour-grinders, and as basket carriers (*kanēphoroi*) in a variety of rituals, the most important being the Panathenaia.

²¹ See S. G. Cole 1984; Brulé 1987; Sourvinou-Inwood 1988a; Guarisco 2001; R. Parker 2005a ch. 11; Bodiou and Mehl 2009; N. D. Robertson 2010 ch. 21. Since these rites for girls had no jural function, and we are dealing with a relatively complex, stratified, and differentiated society, varying degrees of engagement in the performance of ritual are to be expected. In the case of Brauron, relatively informal use of the sanctuary in all years by families resident in the area may have been combined, once the Brauronia became penteteric, with expeditions by families from the city and elsewhere, whose daughters would perform the ritual at a wider range of ages due to the infrequency of the festival (cf. Redfield 2003a, 259; ch. 16 n. 53 on variations of age even in the ephebate). Vidal-Naquet 1974 (1981, 197–200) stresses the contrast between boys' and girls' initiation rituals in this respect (cf. Bonnechère 1994). Calame 2002 distinguishes between participation in a public penteteric festival and offerings made individually by women, related to events in the personal biological life cycle (see also Bobou 2015, 56–9 on statues of boys). It is noticeable that dated inventories of offerings (Linders 1972) do not show any penteteric rhythm (ch. 12 n. 34).

²² The Brauron rite seems exotic to modern scholars and offers a rich mix of mythical, literary, archaeological, and iconographical data, which has stimulated much recent discussion, despite the lack of detailed publication of the data (law, *SEG* 52.104, Lambert 2007b p. 80; cutter of *IG* ii² 1262, c.320–296, Tracy 1995; Themelis 2002, 113). In addition to the works cited below, see the collections of papers in *DHA* 16. 2 (1990), Cosi 2001, Gentili and Perusino 2002, and Dodd and Faraone 2003. The slave's exclamation at Ar. *Peace* 872–4, 'You don't say that's the Theoria we screwed all the way to Brauron!' (*paio* also in *Peace* 898; see Olson 1998 ad loc.; Sommerstein 1985, and Sourvinou-Inwood *per ep.*, do not think Theoria can be a girl here) may imply that the prominence of women and girls in this expedition (some accompanied only by slave attendants, or female kin?) gave rise to some anxiety and joking. On sleeping and dining accommodation at Brauron for theoriai, built probably between 421 and c.416, see Mylonopoulos and Bubenheimer 1996a, 1996b; Themelis 2002; I. Nielsen 2009; *SEG* 52. 104. The fact that Theoria is undressed before being given to the chorus may (if Sourvinou-Inwood 1988a is right) continue the allusion to the Brauronia, although the principal ritual reference in this scene in the *Peace* is to *anakalypsis* and the Apatouria. Brulé 1987 and Sourvinou-Inwood suggest that 'bears' were selected by tribe, an interesting idea but not provable at present. N. D. Robertson 2010, 349 plausibly argues that the 'little bears' are a 5th c. innovation.

²³ R. G. Osborne 1985a 161–8 seems to assume (as does e.g. Philoch. *FGH* 328 F 100) that the women seized at Brauron by the Lemnians (Hdt. 6. 138) were girls performing the *arkteia*, but possibly a wider group, including older kinswomen, was involved.

²⁴ R. G. Osborne 1985a 162–3 stresses that the myth connected with the Mounichia sanctuary explains a goat sacrifice and not a 'bear' ritual. However, the representations on *krateriskoi* from the two shrines seem very similar (Sourvinou-Inwood 1988a; Palaiokrassa 1983); there may have been convergence over time. See also S. G. Cole 1984, 242 on the distribution of *krateriskoi*.

It would be a great occasion for a family to have a daughter selected for one of these roles, but we cannot regard this as part of the experience of the ordinary Athenian in the street. Over time, there may well have been a tendency for rituals that had been local alternatives (cf. Polignac 1995) to be reconfigured into a sequence; perhaps Aristophanes was mocking this trend.²⁵

SPECIAL ROLES FOR BOYS IN PUBLIC RITUALS

Boys too might be selected for prominent roles in ritual. In the archaic period such roles were normally given to adolescents. Two youths served as Oschophoroi in the autumn festival related to the myth of Theseus (chs. 19 at nn. 53–9, 20 n. 70; R. Parker 2005*a*, 208–17), and the *pais aph' hestias*, initiated at Eleusis on behalf of the city, was probably in early times an adolescent boy, although in the Hellenistic and Roman periods a younger child, sometimes a girl, might be selected.²⁶ Boys and youths competed in many sports, including those in which the contestants were tribal teams; the *epheboi* collectively played a prominent role in many rituals from the Lykourgan period onwards. The practice of selecting a *pais amphithalês*, a boy whose parents were both still living, for a special role at weddings and in some other rituals seems to have spread during the Hellenistic period, though it is attested earlier.²⁷ In the archaic period adolescents' victories

²⁵ On these rituals and their sequence see Brulé 1987; Sourvinou-Inwood 1988*a*, 1990*c*; Redfield 2003*b*, with references to earlier literature. Walbank 1981 suggests that all the roles mentioned in Ar. *Lys.* 641–7 were performed at Brauron, but the position of the Brauronia in the list tells against this, and the whole context of the *Lysistrata* points to the Akropolis. *Arrhêphoroi* are more securely linked to the Akropolis than to Brauron (cf. Calame 2010), and the *arrhêphoria* of Lys. 21. 5 is likely to be an urban liturgy (see also ch. 18 n. 66). There is a reference also in Dein. F VI 4 Conomis 1975, but the context is irretrievable. The attribution of F 179 Hollis (1990) to Kallimachos' *Hekale* is very uncertain, but if the *arrhêphoria* was mentioned in that poem it presumably occurred in the speech where Hekale says that she was not always poor (F 41). However, we have no evidence that she claimed to have visited Athens (on the position of the deme Hekale see ch. 26 n. 74). *Ergastinai* do not seem to be attested as a separate category of weaving girls before the late 2nd c. BCE (*IG* ii² 1036 + (?) 1060, 108/7; 1034 + 1943, 103/2; 1942, c.200; see Tracy 1990; Mikalson 1998). Pherekrates' *Doulodidaskaloi*, *PCG* 7 p. 127 F 51, has a reference to adult *peplos*-weavers in the 5th c. See Mansfield 1985; Sourvinou-Inwood 2011. On kin (perhaps) taking part together in female choirs at Sparta see Page 1951, 67–8; Calame 1977, I 382–5, II 84–5; the term *anepsia* (cousin) is used but tribal units seem to be involved and the use may be classificatory. On dances of young girls in honour of Artemis elsewhere, Calame I 178–83; ritual office holding by girls, Van Bremen 1996, 248. Kanephoroi, ch. 12 n. 18; Brulé 1987, 303 on the sister of Harmodios.

²⁶ On the *pais aph' hestias* see ch. 12 nn. 18, 109; on the Oschophoria chs. 19 at nn. 53–9, 20 n. 70.

²⁷ For tribal teams see ch. 21 at nn. 58–60; for epheboi Humphreys 2004 ch. 3, 2009. Rituals for the young in Plato's *Laws*, Georgoudi 1989; children (even under 7) in procession at Eretria; *IG* xii 9, 194/LS 93, c.300. *Pais amphithalês* in Pindar F 94b Maehler (1975); see L. Robert 1940; Lambrechts 1957, on later developments; n. 42 below; R. Parker 2005*a*, 213–4 (Oschophoria); Kowalzig 2007, 283 n. 130; N. D. Robertson 2010. See also Comella 2002.

in the Panhellenic games or performance of special ritual roles might be further celebrated by choral singing and dances, in which kin might take part. Epinikian odes praised the victors' famous forebears and thus reflected glory on their kin, even though most references are to lineal ancestors. Pindar's *partheneion* for Agasikles son of Pagondas, an adolescent *amphithalês* chosen to bring the new laurel bough from (?) Tempe to the Ismenion in Thebes, seems to refer to the participation of female kin in the ritual and dances; Pindar is also said to have written a 'laurel-bringing' (*daphnêphorikon*) song for his own son, which mentioned participation of the boy's sisters in the dancing.²⁸

THE KOUREION

The main rite de passage for adolescent boys was associated with incorporation into the citizen body. The koureion was a sacrifice of a lamb offered in the phratry at the Apatouria by the father of a boy who had reached the age of 15–16. The Apatouria took place in Pyanopsion (19–21 or 26–8, Mikalson 1975, 79, which would fall in October), and the 'shearing' to which the name koureion seems to refer cannot therefore have anything to do with sheep. The koureion must then either be a sacrifice for male adolescents (*kouroi*) or the sacrifice celebrating the occasion when they ceremonially cut their hair to mark the transition to manhood. Since we are told in *Iliad* 23. 141–8 that Peleus had promised to sacrifice fifty rams to the river Spercheios when Achilles cut (*kereô* = *keirô*) his hair, the latter explanation seems plausible. Later sources speak of a libation to Herakles (associated with the gymnasium) and offerings of wine to kin who were present at the hair-cutting.²⁹

The Apatouria was a three-day festival; the first day was called Dorpeia, 'the suppers', and began at sunset with a meal eaten by phratry members, some of whom might have had to travel some distance to the meeting; the second was called Anarrhysis, the name being explained from the 'drawing back' of the head

²⁸ Pind. F 94 b–c Machler 1975; Sbordon 1940 (see however Lefkowitz 1981, 63); Rutherford 2004. A *partheneion* is a song composed for dancing girls. Kurke's discussion of the social dimensions of Pindar's poetry (1991) concentrates on the two poles of household and city, neglecting the kindred, but has helpful remarks on the use of marital metaphors both for victory (as the bride brought home by the victor) and for ties between cities. Cf. Kowalzig 2007, 377–89; Feeney 2016, 225–32 on hymns.

²⁹ Athen. 494f, Hsch. s.v. *oinistêria*; cf. Pollux 3. 53, ch. 19 n. 69. On Delos both male and female adolescents offered locks of hair on the graves of the Hyperborean maidens Hyperoche and Laodike, the girls' offering being considered a preliminary to marriage (Hdt. 4. 33–5; cf. Redfield 1982); hair cutting at Sparta, Vernant 1998, 99–101; at Eretria Knoepfler 2010a, 141–2. Winkler 1990b, 24 n. 5 suggests that hair was cropped short, 'sheared' like a fleece (ch. 19 n. 47). The women's begging song associated with Opis and Arge, also considered to be Hyperborean (Hdt. *ibid.*), may be an equivalent of the ritual begging from the newly-wed by the priestess of Athena at Athens (N. D. Robertson 1983b). On women's pre-marital rites see also Parker 1983, 344–6; 2005a, 440–3; n. 36. On boys' age classes, J. Davidson 2006.

of a sacrificial victim (offered to Zeus Phratrios and Athena Phratia?); the third day was the Koureotis. We do not know in detail how various phratries allocated their time between the sacrifices offered to Zeus and Athena (and in some cases perhaps to other deities as well) by the phratry as a whole, the meion, koureion, and *gamêlia* sacrifices offered by individual members, the assembly to conduct phratry business, and other activities associated with the festival.³⁰ The latter part of Aristophanes' *Peace* (819ff.) seems to be based on the ritual of the Apatouria but cannot be pressed on the order of events. In some phratries there may have been athletic competitions.³¹ Small boys competed in reciting poems they had learned (Plato, *Timaios* 21b; Aristophanes, *Peace* 1265–1304).

Kin who were members of the phratry would be present when the koureion lamb was led up to the altar for sacrifice; anyone who wanted to challenge the candidate's claim to phratry membership could obstruct the sacrifice and lead the lamb away (Isaios 6. 22; cf. [Demosthenes] 43. 14). An unobstructed sacrifice was probably accompanied in most phratries by a vote on the candidate's eligibility, or at least an oath.³² The father or other kinsman who presented the boy sometimes (perhaps always) had to swear that he was the legitimate son of citizen parents (cf. Isaios 7. 16). When all went well, the sacrificial lamb would be shared by the family's kin and friends—members of the father's *thiasos* if the phratry contained such subdivisions, members of his *genos* if he had one. Procedure for dealing with disputes must have varied. The introducer of the candidate might decide to withdraw and negotiate privately with his opponents (Isaios 6); we do not know if it was possible to force the issue to an immediate vote, and in most cases applicants would probably prefer to gather support and witnesses, and argue their case in a formal hearing. The phratry of the Demotionidai, which had apparently been much

³⁰ See further ch. 19 n. 63. The references to women's sacrifices and meetings of female kin at the Apatouria in [Hdt.] *Biog. Hom.* 29 may be connected with the *gamêlia* or may have been an Ionian custom not found in Athens (the story is set in Samos).

³¹ Cf. ch. 19 at nn. 61–7. The 'obstruction' of Trygaios' sacrifice in the *Peace* (1018–22) may contain an allusion to the objections made to sacrifices at the Apatouria, though other motifs are also present. A. Mommsen 1898 accepts *Peace* 894–904 as evidence for races at the Apatouria, but Aristophanes' love of puns may be running away with him here. The hymn to Hephaistos recorded by Istros (*FGH* 334 F 2) seems to look forward to the Chalkeia, possibly celebrated on the day after the Apatouria and perhaps sometimes loosely spoken of as part of it.

³² The practice of 'carrying the votes from the altar', still observed by the Demotionidai; (*IG* ii² 1237 A 17–18; see ch. 19 at nn. 87–110), suggests that the vote, and the oath by the father or introducer that the boy was the legitimate son of a phratry member, had once been a part of the ritual of sacrifice. In Is. 7. 16 the introducer takes an oath *kata tôn hierôn*. It was perhaps possible at least in some phratries to sacrifice the koureion at meetings other than the one for the Apatouria; in Is. 7. 15–17 we are told that an adopting father who feared he might soon die presented his adoptive son to his phratry at the Thargelia (May). The alleged son of Euktemon of Kephisia whose koureion offering at the Apatouria of 367/6 (see W. Thompson 1970*e*) was obstructed by Euktemon's son Philoktemon (Is. 6. 22) may have been introduced (after a family compromise) at the Thargelia of 366: ch. 7 Case 1. Different phratries had varying regulations (Is. 3. 76, 7. 16).

troubled by disputes in the years immediately after the Peloponnesian War, decided in 396/5 to postpone the formal scrutiny of candidates' qualifications, including the hearing of any disputed cases, to the year after that in which the koureion was sacrificed; probably the phratry held a business meeting in the morning, and the new koureion sacrifices of the year and accompanying feast took place in the evening. Rejected candidates could appeal to have their case re-heard, apparently at a still later date (*IG* ii² 1237; cf. ch. 19 at nn. 87–110).

INTRODUCTION TO THE DEME

A boy was introduced to his father's deme at about eighteen. Since candidates accepted by their demes had to undergo a further scrutiny by the Council, it seems likely that enrolment in all demes took place at or around the same time, apparently soon after the beginning of the civil year in July.³³ Acceptance by the deme conferred citizenship and membership in one of a series of forty-two named age classes, categories used i.a. for purposes of military call-up. The system could, obviously, be used to calculate at birth which age class a boy would be enrolled in when he reached eighteen. However, there was no formal registration of births,³⁴ and assessments of age were made by demesmen and councillors on the basis of physical maturity; both for this reason, and because in some families it was felt desirable for brothers to be enrolled together, there seems to have been some elasticity in the interpretation of the regulation on age (cf. Humphreys 2009, n. 2; 2010*a*, 79).

In order to pass deme scrutiny without question, a candidate would need the support of his kin in the deme. In one appeal against rejection, the candidate is supported by his half-brothers, his father, and matrikin and affines who may or may not have belonged to the same deme (Isaios 12; ch. 7 n. 153). Appeals against rejection by the deme were heard by the city courts; on the general scrutinies of 445/4 and 346/5 see ch. 22 nn. 18, 30.

MARRIAGE

'Marriage' in Athens was a protracted process which began with wooing and formal betrothal (*engué*), proceeded through payment of the dowry, rituals for

³³ See Whitehead 1986*a*, 100–103; Cantarella 2010. On the Council scrutiny, for which our authority is *A.P.* 42. 1–2, see P. J. Rhodes 1981*a*, 493–510; B. G. Robertson 2000.

³⁴ Cf. Humphreys 1974; 2010*a*, 79. The tombstone of the young cavalryman Dexileos of Thorikos, who died in 394 (*IG* ii² 6217) gives the archon year of his birth (414/13); this is unusual (ch. 11 n. 70). A 2nd c. BCE list of women, girls, and boys from Kalymnos (Segre 1952 no. 88) gives the year and month of birth. Cf. W. Schmidt 1910; Derow 2006, Chios, 1st c. CE; ch. 22 n. 45.

prospective brides, wedding rites, sacrifice of *gamêlia* in the phratry, and the ritual transfer of the bride to her new home, to cohabitation, and was completed by the birth of children (Vernant 1973; H. King 1983). Ideally all these steps were expected to follow each other in a smooth and fairly rapid progression, at appropriate intervals. Interruptions, delays, or omission of steps in the sequence gave rise to disputes and ambiguities concerning the status of the union. Although a woman might marry more than once (due to divorce or, more frequently, widowhood; Table 7.7), a first marriage that proceeded through all these steps transferred her irrevocably from the category of *parthenos* to that of *gynê*. Marriage had a history (cf. Seaford 1988); whereas archaic marriage was mainly a mechanism for alliance between elite families, by the classical period it had become for all citizens a prerequisite for the production of legitimate children.

We are not too well informed about wooing. The girl of course had little official say in the matter, whatever influence she may have been able to exert by arguing privately with her parents. Fathers tried to arrange marriages for their sons also, but the image of the young man who finds his own bride had been present in Greek culture from early times. In the *Iliad* the poet dwells on men's relations with mates who have been captured or stolen: Hector and Andromache, Achilles and Briseis, Paris and Helen. The archaic period had tales of young men travelling from all over Greece to compete for the daughter of a powerful man: the wooing of Agariste daughter of the tyrant Kleisthenes of Sikyon (Herodotus 6. 126–31), of Atalanta, and of Helen (M. L. West 1985, 133ff.). In New Comedy the contradictory models are brought into open conflict; fathers plan with each other to dispose of their children, sons fall romantically in love with *hetairai* or with respectable girls met or glimpsed on ritual occasions.

Except for such occasions, upper-class youths had little opportunity for meeting suitable girls unless the girls were kin or affines (cf. ch. 4 n. 51). We have a few references to the use of intermediaries in wooing, but the sources are problematic, the choice of intermediary varies (wooer's brother or mother; girl's younger sister?) and the role of go-between or matchmaker does not seem to have been institutionalized.³⁵

³⁵ The wooer sends his mother to talk to the girl's mother in a lost Menander play, according to the *periochai* (POxy 1235, col. II 50–6; Koerte I [1938] p. 147; PCG VI 2 p. 137); Ar. Byz. knows of female wooers (*promnéstria*, 279 ab, p. 93 Slater 1986). Melampous won the daughter of Iphiklos for his brother (*kasignêtos*), Od. 15. 235–8; this may have supplied the model for the inclusion of Agamemnon, acting for Menelaos, in the catalogue of suitors of Helen (cf. Janko 1982, 247). Carey's view (1986) that in *PKöl* II 58 (Archil. F 48 West, Page SLG 478) Neoboule's younger sister has been sent to the poet as a go-between is not plausible. The girl is not a messenger, and it is far from certain that she is a sister. If Archilochos' poems referred in any consistent way to real people, which is still doubtful, it would be better to assume that the link between this girl and Neoboule was based on common membership of a group like that gathered round Sappho. The use of her mother's name is probably to be explained by a reference in the lost beginning of the poem and not, as suggested by Koenen (Gelzer a.o. 1974, 500) by assuming that she and Neoboule are stepsisters. See also Slings 1987.

Betrothal took the form of a verbal contract between the fiancée's *kyrios*—father, brother, or other guardian—and the fiancé, the *kyrios* undertaking to give the girl 'for the ploughing of legitimate children' and specifying the dowry to be given with her, the fiancé formally accepting her on these terms. Although in some scenes in New Comedy only the *kyrios* and fiancé (and sometimes a silent fiancée) are present,³⁶ it is unlikely in real life that such an agreement would be made without witnesses (cf. Demosthenes 30. 19–23, Isaios 6. 64 for general statements to this effect). The fiancé's uncles act as witnesses in two cases (FBs in Demosthenes 57. 41, MBs in Isaios 3. 29, 70); unspecified kin of the fiancé are mentioned in a third passage (*prosékontes*, Isaios 8. 14). These are witnesses who are still alive when testimony is later needed in court; they are not necessarily the only persons who were present at the betrothal.

In New Comedy, where stage conventions restricted the number of actors who could take part in a scene together, betrothal scenes commonly take place in the presence of the fathers (or guardians) of both fiancé and fiancée; this is the situation in Menander's *Samia* (726–9), his 'Fabula incerta' (ll. 29–31 *OCT*, cf. Gomme and Sandbach 1973, 683–8; the fiancé Moschion is not himself present), and in Terence's *Andria* (949–51).³⁷ In the *Andria* a witness to the girl's identity, Crito, is also present. In three cases—Menander's *Dyskolos*, the 'Fabula incerta', and Plautus' *Trinummus* (1183–9)—the betrothal also takes place in the presence of a young man who is or will be engaged to marry the sister of the fiancé. This is of course partly due to the conventions of plot in New Comedy, and in the *Dyskolos* the witness is also the brother of the fiancée; nevertheless, one can understand a young man turning to his sister's husband—older, already married, but not as remote as a father—for advice and support in this stage of his life. In the alternative ending to the *Andria* (which may be late, Skutsch 1957) Chremes betroths his second daughter

³⁶ Menander *Perikeiromenē* 1013–15 (not Attika), *Misoumenos* 436–47, and perhaps the first betrothal in the 'Fabula incerta' (17–18 Sandbach 1972), and in Plaut. *Trinummus* 1151–63 (where a friend of the girl's father is also present). In the two former plays the fiancé is a soldier and not the typical young man dependent on his father. In Plautus' *Curculio* the girl is betrothed by her brother (a soldier) to the fiancé in the presence of the parasite Curculio (663–78). In Menander's *Dyskolos* Gorgias betroths his half-sister, whose guardian he has become, to Sostratos with no witness present (759–63), but reference is made to the need for the consent of Sostratos' father, which is given in the later double betrothal scene (821–47). Scafuro 1997, ch. 7 (cf. also pp. 243–5) has material on male discussions preceding marriage, in which kin of both parties might in real life have been involved. Women make promises in marriage contracts from Ptolemaic Egypt (see Vatin 1970) but not in classical Athens; there the fiancée does not have to be present when she is betrothed, and in New Comedy she frequently is not. She is present and consents in Plaut. *Curc.* 673. For women's offerings before marriage to Nymphe and to Aphrodite Ourania (*SEG* 41. 182) see Ando 1996; Brouskari 2004, 32–7; Papadopoulou-Kanellopoulou 1997, 2005; Sabetai 2014. Post-nuptial offerings, M. P. J. Dillon 1999.

³⁷ It might, I suppose, be argued that the powers of the Roman *paterfamilias* gave him more control over his son's marriage than a Greek father had, and that therefore Roman playwrights may have tended to introduce the fiancé's father in scenes where he was absent in the Greek original. Fathers arrange marriages alone, in the absence of the fiancé, in Terence *Andria* 99–102, 569–73; *Heautontimoroumenos* 863–6, 935–44; Plaut. *Trinummus* 442–581.

to the hero's friend Charinus in the presence of the hero, Pamphilus, who is by now engaged to the girl's sister.

In some cases a dying man would make arrangements for the remarriage of his wife and/or the marriage of his daughter(s); such occasions are better classed as wills than as betrothals, and will be discussed below under that heading. In such circumstances a long interval might elapse between betrothal and a wedding that could not take place until the girl reached puberty. Demosthenes' sister was betrothed by her dying father at the age of five. Normally, however, engagements do not seem to have been long.

WEDDINGS

Information on Greek wedding rites comes in large part from the lexicographers, without distinctions of place or period, and most modern accounts are equally indiscriminating. Even with some help from vase paintings, it is difficult to be certain what was normal in classical Athens.³⁸ The bride was washed and dressed by women from her own family and its friends, and had a maid of honour, *nymphentria* (Aristophanes, *Acharnians* 1056), who presumably was usually a kinswoman. Her father or guardian would sacrifice and feast guests at his house, or sometimes in a building borrowed from a cult association for the occasion. Plato in the *Laws* (775a) seems to assume that wedding feasts will take place in private houses, and limits guests to twenty: five male and five female kin (*syngeneis* and *oikeioi*) from each of the two families concerned, and the same number of family friends. In the late fourth century in Athens the number of guests at weddings and other private rites (*thysiai*) was limited to thirty (Athenaios 245a–d, *FGH* 328 F 65). In Evangelos' comedy *Anakalyptomenê* (*The Bride*) a father plans a wedding with four tables for female and six for male guests.³⁹ We are told that Perikles, who gave up social life when he became a political leader, attended the wedding feast of his cousin (*anepsios*) Euryptolemos II but left immediately after the libations.⁴⁰

³⁸ For vase paintings see Oakley and Sinos 1993; Sabetai 1993; for accounts in the traditional style, with no attempt to distinguish place or period, Erdmann 1934; Vatin 1970; Buxton 1987; Avagiannou 1991. Magnien 1936 is very speculative. See also Sant Cassia and Bada 1992, 107–9; M. P. J. Dillon 1999; Redfield 2003b.

³⁹ *PCG* 5 pp. 184–5, 3rd c.? Cf. Erdmann 1934, 255ff.; F. Cairns 1977, 147; Ar. *E.N.* 1165a 18–21 on *syngeneis* as wedding guests; Kurke 1991, 118–22 on Pind. *Ol.* 7. 1–12; Russell 1979 on wedding speeches in the Roman period. On *gynaikonomoi* and control of number of wedding guests see Piolot 2009.

⁴⁰ Plut. *Per.* 7. 5. According to *APF* 9688 VIII Perikles would have been Euryptolemos' second cousin (FFBDS). W. Thompson 1969a argues that *anepsios* is only used of a first cousin, or first cousin once removed, and that one of Euryptolemos' parents was a sibling of Perikles' mother Agariste. The naming patterns in his reconstruction of the genealogy, however, are improbable. Cf. ch. 14 n. 43.

At the end of the feast the bride would perhaps be unveiled⁴¹ and receive presents, *anakalypteria*. Finally in the late evening she would be taken to her new home, usually riding in a cart with the groom and his companion (*parochos*),⁴² a kinsman or close friend; they would be escorted by torchbearers, the bride's mother among them, singing hymenaia. The bride was welcomed at the door of the groom's home by his mother, or by both his parents. She was then perhaps formally incorporated into the new household by a ritual at its hearth, and finally was accompanied to the door of the bridal chamber—which at least in Hellenistic times was decorated with a specially built temporary porch hung with fine cloth, the *pastas*—by her *nymphentria* and the rest of the party; an epithalamium might be sung. Friends or kinsmen of the groom stayed outside the door on watch, joking. Another song was sung to wake the couple in the morning, when a further feast was given by the groom or his father.⁴³ The reference in Isaïos 8. 18 to the groom celebrating his wedding with kin (*prosêkontes*) and three friends may be to this second celebration.

In this last passage the speaker adds that he offered the gamêlia sacrifice later in his phratry according to custom, and calls both wedding guests and phratry members as witnesses to his marriage. Normally, however, in Attic sources, it is the celebration of gamêlia in the phratry that litigants stress in court. Isaïos 3. 76 argues that since the opponent has produced no evidence that he offered gamêlia for his marriage with Phile, she cannot have been married as a legitimate daughter

⁴¹ The position of the unveiling in the ceremony is controversial: see Oakley 1982; Buxton 1987; Redfield 2003b, 69–71; Gherchanoc 2006. The legal status of anakalypteria gifts as the bride's property was discussed in a speech attributed to Lysias (F VIII Carey 2007). Pherekydes' account of the wedding of Zeus and Chthonie (F 68 col. I 11–13, see Schibli 1990, 64–5) in which the groom gives the bride a new robe on the third day of the wedding (i.e. after the wedding night), may suggest that questions about the day on which the bride was unveiled are misplaced, since the unveiling before wedding guests (whether it was part of the wedding process or only an iconographic convention) was only a metaphor for the consummation of the marriage. In this case the 'real' unveiling took place at night, and while the anakalypteria would always be given on the third day the place of the token unveiling in the ritual may have varied.

⁴² The *parochos* (cf. Ar. Byz. 280–4, pp. 93–4 Slater 1986) is perhaps shown on the Amasis painter's lekythos New York Met. Mus. 56. 11. 1, BArch 350478. Rühfel 1984a argues that this figure is a *pais amphithalês* and that such a child (with both parents still alive) traditionally played a role at weddings (cf. R. Parker 2005a, 282). However, although an Attic representation of Theseus and Ariadne (Rühfel figs. 61a–b; BArch 206410; lekythos, Taranto, c.480) may be related to the Naxian custom of putting a *pais amphithalês* to bed with the bride on the night before her wedding (Kallim. *Aitia* F 75. 1–3), references to the use of such children in ritual are rare before the Hellenistic period (cf. n. 27 above). In Men. *Sikyon*. 404 the groom's brother (an adolescent, 200f.) is to be *parochos*.

⁴³ Representations of wedding processions, Krauskopf 1977; Moesch 1988; Moesch-Klingele 2006. Calame 1977, I 159–162 discusses evidence for dancing and singing at archaic weddings; songs occurring at various stages of the festivities were not sharply distinguished in genre or terminology. On hymenaia see Contiades-Tsitsoni 1990; for *katachysmata* at the hearth, Paradiso 1987. Sourvinou-Inwood 1990a, 8 notes that iconographically the preferred moments are the preparation of the bride and the wedding procession.

of citizen parents.⁴⁴ It evidently was not specified by law that celebration of *gamêlia* in the phratry was an—or the—essential element in the definition of marriage as a union from which legitimate children could be born, since such a formal requirement should have been attached after Kleisthenes' reforms to the deme and not to the phratry. Nevertheless the functioning of the law on citizenship required some public recognition of the constitution of a marriage, and for this purpose a ritual in the phratry (we do not know how 'traditional') was more appropriate than a private wedding. The continued relevance of the celebration of *meion* and *koureion* to cases of disputed legitimacy and citizenship even after Kleisthenes' reforms will have encouraged this tendency to give the phratry a quasi-official role in the recognition of marriage.

It seems likely, in any case, that plenty of Athenians, especially the less well-to-do, would have combined wedding and *gamêlia*. This seems to be the pattern that Aristophanes has in mind in the *Peace*, where Trygaios' preparations for a wedding sacrifice are interrupted by small boys practising their recital of patriotic poems, for the contest which took place on the third day of the *Apatouria*, and the play ends with a wedding procession leading the bride to her new home.⁴⁵

To combine the two celebrations, however, implied that the families concerned lived close to the centre where the phratry held its meetings; emotionally the climax of a wedding was the transfer of the bride to her new home and the wedding night, and a celebration in the phratry that did not culminate directly in this physical transformation of the virgin *parthenos* living under her family's care into deflowered *gynê* with responsibilities in a new household was a mutilated remnant. We can assume that two factors combined to favour a separation of wedding celebrations and *gamêlia*: distance between residence and phratry centre, and the desire of wealthy families to celebrate weddings at home, where they could display their own generosity and hospitality most extravagantly, on a date when their peers were not engaged in ritual celebrations elsewhere in other phratries.⁴⁶ The second motive is likely to have operated fairly constantly in upper-class families; the former was more variable. During the Peloponnesian War many rural families and phratries had to move from their homes in Attika into the city,

⁴⁴ Cf. Demosthenes 57. 43, 69; ch. 7 case 14.

⁴⁵ Hesychios s.v. *gamêlia* says that the term was used both for the wedding feast (*deipnon*) and for the *phernê*, the trousseau gifts carried in the wedding procession.

⁴⁶ Though Solon had restricted the display of transferred property (*phernê*) in wedding processions (ch. 1 n. 120), the fact that marriage implied transfer of trousseau and dowry as well as change of home for the bride may also have created difficulties for the simultaneous celebration of wedding and *gamêlia* (ch. 19 n. 48). We do not actually know when dowry payments were made; in some cases there were delays. On dowry guarantees and the gradual move towards public registration of dowry land see Germain 1968, 1975; A. R. W. Harrison 1968, 296–303.

and this may well have encouraged more frequent celebrations of the type portrayed by Aristophanes in the *Peace*.

Certainly weddings did not always take place at the time of the Apatouria (late Pyanopsion, October). In *Acharnians* 1048ff. Aristophanes has gifts of meat from a wedding sacrifice being received at the time of the Anthesteria, in spring (cf. ll. 100, 1076);⁴⁷ Demosthenes' delinquent guardian Aphobos married in Skirophorion, in midsummer, in the hope of frustrating Demosthenes' claims on his property.

DIVORCE

The normal consummation of marriage was not only sexual intercourse but the birth of children. Until this point had been reached a marriage was not yet securely based, and a father's right to remove (*aphaireisthai*) his daughter from a marriage of which he had come to disapprove was particularly likely to be exercised at this stage. Herodotus' report (1. 61) that Megakles I's daughter, married to the tyrant Peisistratos, reported to her mother that he was having anal (*ou kata nomon*) intercourse with her in order not to beget children, and that Megakles thereupon broke up the marriage, may rest on gossip but is nevertheless symptomatic. The law on epikleroi prescribed a minimum frequency of intercourse between husband and wife; a woman who became an epikleros when already married could perhaps be claimed by her next-of-kin if she had not yet produced children. The poets of New Comedy liked to present young wives bravely defying fathers who tried to remove them from husbands who were behaving badly; behind this romanticized picture lay real tensions present in the early stages of marriage, when a teenage girl and a man reluctant to give up the pleasures of bachelor life had to adapt to each other.⁴⁸

⁴⁷ For other evidence that early spring was a common time for weddings see Deubner 1932, 117. Aristotle (*Pol.* 1335a) says that most Greeks marry in winter (*cheimōnos*). I do not know whether it is significant that a child conceived in early Gamelion would have been born in time for celebration of the meion in Pyanopsion of the same year. For the Kabyle (Bourdieu 1980; 1990, 205–7) the best times for marriage are those of season-change, after the spring equinox and in autumn. The month Gamelion attested in Athens and many other parts of Greece (Trümper 1997 s.v. *Gamêlîon*, *Gamilîos*, *Gamos*; L. Robert 1948, 5–15; 1960, 568) fell in December/January in Athens and was named for the celebration of the *hieros gamos* between Zeus and Hera. Aristophanes in the *Acharnians* has already jumped from the Rural Dionysia of December (ll. 202, 236ff.) to the Anthesteria (1000ff.; cf. ch. 19 n. 60), and evidently is not closely following the ritual calendar here (cf. Parke 1977, 114 f.; *contra*, Belknap 1934).

⁴⁸ On *aphairesis* and *epiklêroi* see A. R. W. Harrison 1968 11–12, 30–1, 309–11; Rosivach 1984; Furlley 2009, 28. *Aphairesis* in a papyrus of the 2nd c. CE, *POxy* 237. Resistance by wife, Menander *Epitrep.* 655–9, 714–44; *P. Didot*; F 566 Kock = F 7 Sandbach 1972; Paoli 1946, 1957; P. G. M. Brown 1983; Scafuro 1997, 307–9; ch. 1 n. 116.

In one case (Isaios 2. 8–9) an older husband allegedly decides that he is responsible for the childlessness of his second marriage and proposes to his wife's brothers that the marriage should be dissolved and they should find her another husband. A husband did not have to give any formal grounds for the decision to 'send away' (*apopempein*) his wife, but presumably it was common for him to state his reasons either to his wife's kin or to witnesses.⁴⁹ In Lysias 14. 28 the husband summons witnesses to listen to his grievances, and alleges that his wife has been sleeping with her brother; the speech may be fictitious but the procedure is plausible. The husband did not have to allege misconduct on the wife's part; a man could divorce his wife in order to marry an epikleros, (Demosthenes 57. 41). Plato in the *Laws* (929e–930c) prescribes that officials shall try to reconcile spouses who want to divorce, but this is a consequence of his 'one-child-family' policy. No doubt in Athens kin and friends may sometimes have tried to prevent divorces, but this certainly was no concern of the state; and no stigma attached to divorce.

We have two references to the registration of divorce with the eponymous archon, both in cases where the woman takes the initiative in leaving her husband (*apoleipsis*).⁵⁰ In the case of divorce a husband was obliged to repay his wife's dowry to her kin, who could claim interest at 18% during any interval between the wife's return to her family of origin and repayment (A. R. W. Harrison 1968, 57–8). Such cases (*dikai sitou*) were the responsibility of the archon; this provides an adequate motive for voluntary notification, and there is no need to assume that any wider concern of the archon and the city for private life was involved. It would undoubtedly have been difficult to get Alkibiades to restore his wife's dowry in the first attested case, while in the second (Demosthenes 30. 15) manoeuvres involving the dowry were the main motive for a divorce and remarriage that may have been intended as only temporary.

As far as we can see, divorce did not usually lead to bad relations between the two families concerned.⁵¹ The situation of Euripides' Medea, who finds herself set aside for another woman in a city where she has no kin to protect her interests, is extreme, even if her resentment was modelled on the reactions of divorced wives in Athens as observed or imagined by Euripides. While the second marriage of a father was a threat to the interests of the children of his first marriage, whether due to divorce or widowhood, there is no sign that

⁴⁹ Many divorce negotiations must have hinged on the question of infertility.

⁵⁰ Plut. *Alkib.* 8, where we are told that the husband forcibly carried his wife back home; Dem. 30. 15. Cf. Is. 3. 78, A. R. W. Harrison 1968, 40–4.

⁵¹ Additional complications were present in the case mentioned in Dem. 41. 3–4, where the bride's father had adopted his son-in-law and subsequently wished to dissolve both the marriage and the adoption. He had to repay to his ex-son-in-law everything that the latter had contributed to the estate (*ousia*). Cf. also Cohn-Haft 1995; Buis 2003.

Athenians expected divorce as such to be traumatic for children, and no evidence of disputes over custody or access. It seems quite possible that Plato's mother was divorced from his father and kept her children with her (ch. 24 n. 4). A child's legal right to inherit from his or her father would not (at law) be affected by such an arrangement.

APOKÊRYXIS

A man could repudiate his children as well as divorce his wife, but this was a much rarer and more abnormal act. Strong motivation was expected, in the form of misconduct by the child, and attempts at conciliation by kin would certainly be made. A scene described in *Iliad* 9. 446–80 represents an embryonic form of *apokêryxis*, with attempts by kin to force father and son into reconciliation. In Plato's *Laws*, if a father wants to repudiate his son the case must be argued before the father's kin up to the degree of first cousin (*mechri anepsiôn*) and the son's matrikin to the same degree. If the father gets more than half the votes the repudiation is valid (*Laws* 928d–929c). The repudiated son is given ten years in which to find himself an adoptive father.⁵² Threats of *apokêryxis* may have been made quite often by angry fathers (cf. Euripides *Alkestis* 734ff.; Cobetto Ghiggia 2001), and it became a topic for rhetorical exercises,⁵³ but there are no certain historical cases.

SENILITY

Plato associates with *apokêryxis* the *graphê paranoias* by which a son could have his father certified as incapable of managing the family's affairs; both contravene the norms of affection and respect which should govern relations between fathers

⁵² Father, mother, and son do not vote. Both male and female adult kin do. Plato does not specify whether the calculation of matrilinear kinship *mechri anepsiôn* starts from the son or his mother; probably the latter is meant. His introduction of public announcement by a herald (928d) may be merely due to etymological deduction. *Pace* Wurm 1972 there seems no reason to suppose that in Athens *apokêryxis* after a son had come of age and been introduced to deme and phratry would have threatened his right to citizenship, unless based on a claim that he was not legitimate (cf. Plat. *Laws* 928e); in any event, the question may never have arisen. A father who repudiated a son in his childhood would not present him to phratry and deme. Against the theory of Photiades 1925, accepted by Gernet (1957, 10–11), that Mantias repudiated Plangon's sons by *apokêryxis* (Dem. 39–40, *APF* 9667) see Rudhardt 1962 and Humphreys 1989.

⁵³ Cf. Cantarella 2011, 337. See Düll 1943, Wurm 1972, and Maspero 1911, 455, 460 (6th c. CE). In *IG ii³* 452. 16–21 (M. J. Osborne 1981–3, D 22, c.334; V. Chankowski 2008, 252) citizenship is granted to Peisitheides of Delos and his descendants, 'except the one sent by his enemies to kill him', but strictly speaking this does not imply *apokêryxis*, since a repudiated son would not come into question. Ismard (2010, 80) attempts to rescue the tradition (deriving from Aischines the Socratic?) of Themistokles' *apokêryxis* (cf. *APF* p. 213 n. 1).

and sons. In the city of the *Laws* sons are to consult with the older men among the Guardians of the Laws, who will support them in bringing their case if it is judged really necessary (*Laws* 929d–e). We have no historically attested cases of the use of the procedure; attempts to introduce it into an unreliable anecdote about Sophokles are unwarranted.⁵⁴

WILL-MAKING AND DYING

Although we cannot be sure what Solon meant by his law that a man who had no legitimate children and had not adopted could dispose of his property (*diathesthai ta heautou*) as he wished, by the classical period it was interpreted as permitting a man setting out for a campaign or some other dangerous journey to make a will conditionally designating an heir who would become his adoptive son or daughter if he did not return to beget progeny of his own (see Humphreys 2002*a*; ch. 1 n. 88). We have no detailed accounts of the making of such wills, but the presence of kin as witnesses would clearly be required, whether the will was oral or written.⁵⁵ A somewhat similar though more complicated situation is described in Isaïos 6. Euktemon of Kephisia had made an oral agreement with his son Philoktemon that the latter would not obstruct the presentation of an alleged younger half-brother to Euktemon's phratry, on condition that the boy was only to inherit one piece of land (*chôrion*) and not a full share of Euktemon's estate. After Philoktemon's death Euktemon produced a written record of this agreement for his two sons-in-law, husbands of his only other surviving children, on an occasion when one of the two was about to set off on campaign, and deposited it with a kinsman (*prosêkôn*) and fellow-demesman, Pythodoros of Kephisia. When he later wished to revoke this

⁵⁴ See TGF IV, *Vita Soph.* 13, with TGF I no. 22 F 1 c; Lefkowitz 1981, ch. 8 and App. 4; Scullion 2002, 89; ch. 1 n. 134. *Paranoias dikên* in Plut. *Mor.* 785a is probably guesswork; the references in the *Vita* to Sophokles' phratry and to his son by Theoris of Sikyon, Ariston, and the latter's son Sophokles III indicate that the quarrel with Sophokles' other son Iophon concerned questions of legitimacy. In any case the whole story comes from a comic source and it is impossible to say what, if anything, lay behind that. On Aristophanes' *Dramata* see PCG 3. 2 p. 158 T vii; n. 18 above. If the story came from this play, which is quite uncertain, the reference to the meion in F 299 (p. 167) would imply that the story concerned a child of Iophon. One *might* then assume (since the preserved fragments of the two comedies to which the name *Dramata* is assigned suggest a paratragic context) that the references to phratres and the meion were metaphorical, and Aristophanes was joking about the legitimacy of Iophon's plays.

⁵⁵ Isaïos 9. 12 mentions the possibility of a secret will made without witnesses, but the argument appears to be a form of *reductio ad absurdum*, implying that such a document would in general be most improbable. [Dem.] 46. 28 refers to wills whose contents are kept secret, but this does not imply that the existence of a will would be unknown. In Soph. *Trach.* 163 Herakles is said to have left a written will with his wife Deianeira. In Lys. 13. 41 a man in prison makes an oral will in presence of his wife alone.

agreement he went before the eponymous archon⁵⁶ with Pythodoros and one of the sons-in-law to ask that the document be returned to him (Isaios 6. 27–33). Pythodoros objected that a legal guardian (*kyrios*) should be present to represent the daughter of Euktemon's second daughter, since she was also an interested party; when this objection was upheld Euktemon announced petulantly that he at least considered the will no longer valid. The episode shows that it was normal for representatives of all interested parties to be present when a will was made or revised (cf. Demosthenes 41. 17, to which we shall return).

Other references to the deposit of written wills with disinterested third parties indicate that advantages could be seen in separating will-making from dying. Testators liked to maintain full control over their property and power over their heirs as long as they could, and oral will-making with its concomitant solemn injunctions and moral exhortations to heirs was a major part of the ritual of dying; but dying is always an unpredictable affair in which the chief actor cannot count on being left to play the scene out as he has planned.⁵⁷ When the heirs were minors a will would incorporate arrangements for guardianship and had to be preserved until the period of guardianship came to an end. The will of Pasion was deposited with Kephisophon son of Kephalion of Aphidnai, a well-known politician and probably a client of Pasion's bank ([Demosthenes] 45. 10, 19).

⁵⁶ As in the cases of divorce discussed above, we are here dealing not with well-established customary practice but with improvisations in which officials are called on to give a greater air of legitimacy to questionable behaviour. The phenomenon belongs to the move towards public registration of private legal transactions which can be observed in 4th c. Greece, and would be worth more detailed study (Sickinger 1999 deals mainly with public documents. Wills on stone, 2nd–3rd c. CE, *IG* ii² 2711–15). Antipater is named as general trustee in Aristotle's will, D. L. 5. 11. Epicurus deposited a property transfer record, mentioned in his will, in the public record office in Athens, the Metroon (D. L. 10. 16, cf. D. Clay 1982). Wyse's argument that in Is. 6. 27–33 the archon was holding an *anakrxisis* preceding a *dikē eis emphanōn katastasin* (1904, 31–2) is too technical; Kamps' attempt (1938) to save the reference to a 'fifth part' of the estate in 6. 46 by arguing that Euktemon had made a *partage d'ascendant* dividing his estate equally between Isaios' client, Alke's two sons, and his own two daughters is over-complicated (ch. 7 Case 1); the attempt to claim a daughter as epikleros makes better sense as an alternative to supporting Alke's sons. There was no clearly established legal procedure for changing a will (cf. Is. 1. 3, where again there is an attempt to involve the archon). Hellenistic wills often specify explicitly that the testator retains the right during his lifetime to dispose of his property as he wishes (Rabel 1907, 534). Cf. the procedure of annulment of an agreement concerning the disposal of an estate in [Dem.] 48. 46–7. Pythodoros, with whom Euktemon's will was deposited, was councillor in 367/6 (*IG* ii³ 4. 54); the will was probably made in summer 366. On written wills see also Pébarthe 2006, 88–94.

⁵⁷ Ariès 1977. Coptic Christians in the early middle ages often stress their foresight in making wills while still in good health, having reflected that death may come at any time (eg. *KRU* 74, Till 1954; cf. MacCoull 2011—with oral will, p. 122); a different mentality from that studied here. Arkesilaos of Pitane thought it necessary to make three copies of his will, depositing one in Eretria, one in Athens, and one in his home town, but he did not make it until weakened by illness (D. L. 4. 43–4, 3rd c.). Cf. Zingale 1997 on Hellenistic/Roman wills in Egypt. Discourse about the afterlife does not seem (*pace* Plato) to have been a normal element in Greek deathbed scenes; regulation of inheritance and business affairs seems to have been the main focus of attention for men, expression of emotion being (in principle) left to women. See D. Clay 1983 on Epicurean concern with sickness and dying.

Pasion as an ex-slave had no kin, and his wife had no near male relative alive when he died ([Demosthenes] 46. 19); in any case her kin may have been metics and not citizens. Pasion, who had acquired citizenship, no doubt preferred to have his will backed by the authority of a citizen, particularly since the affairs of his bank had included dealings with men prominent in the public sphere. Pasion had leased his bank and shield-factory to his ex-slave Phormion in summer 371/0 (*APF* 11672 VI). Subsequently he fell ill (Demosthenes 36. 7) and made his will, dying during the Attic year 370/69.

It was commoner for wills to be deposited with kin. Diodotos, whose estate forms the subject of Lysias 32, was killed on active service in 409 having deposited a will with his brother Diogeiton, who was also the father of his wife and was appointed guardian of his children. Diogeiton at this time had no other child and it is unlikely that before this will was drawn up the two brothers had divided their inherited property in any formal way. Their real estate was certainly still held in common, and we cannot be sure that the debts listed in the will were owed to Diodotos alone and not to both brothers. Astyphilos of Araphen, a professional soldier (Isaios 9. 14), allegedly made a will adopting a son of his cousin (FBS) Kleon when about to go on campaign, and deposited it with his mother's brother (§ 5), who supported Kleon in the ensuing court case. The wife of Polyuktos of Teithras drew up a written list of money owed to her in the presence of her brothers,⁵⁸ who questioned her about each item, sealed the document and deposited it with Aristogenes, who may be one of the brothers (Demosthenes 41. 9, 21–2). The document included a record that 1800 drachmas had been lent to one of her sons-in-law, Spoudias, and is said to have been intended to obviate quarrels after her death. Her husband, Polyuktos, in his last illness, made an oral will similar in form (in which he included the debts owed by Spoudias to his by now deceased wife), in the presence of his two daughters, one of his sons-in-law, and Aristogenes. Spoudias, the second son-in-law, was invited to attend but (allegedly) said that his wife's presence was sufficient. Aristogenes announced the contents of the will to him, and later testified to all this in court. Polyuktos lived on for five days after making the will.⁵⁹ Demosthenes' father made an oral will in the presence of his brother Demon and the three guardians appointed for his children—Demon's son Demophon, the testator's nephew (ZS) Aphobos, and a family friend, Therippides (Demosthenes 28. 15). Demophon and Aphobos were to marry the testator's daughter and widow.⁶⁰

⁵⁸ Presumably her daughters were also present, though perhaps not her sons-in-law. Reference to a woman's will also in Men. *Sikyonios* 248.

⁵⁹ Dem. 41. 8–9, 17–20. Note the reference in §§ 6, 16 to the erection of *horoi* to mark a debt as a provision made by a dying man.

⁶⁰ The oral deathbed will by a woman in Terence *Andria* 284–98 seems to be influenced by Roman law (*tuae mando fide*, 296; cf. G. Williams 1958, 20–1). It incorporates a formal betrothal (of a younger sister).

The noun *diathékê* and the corresponding verb *diatithesthai* denoted two acts which in some respects were markedly different and which only partially coincided: the conclusion of a legally binding agreement about the disposal of a testator's property, and the terminal regulation of his affairs and injunctions for the future given by a dying man to his heirs. As legal agreement the *diathékê* was subject to constraint from legal rules,⁶¹ tended progressively to take written form, and needed to be legitimated by recognition from the public sphere, at a minimum in the form of the presence of disinterested witnesses. As part of the drama of dying, on the other hand, it was scripted by emotional needs, essentially oral, and intimate. While the law stated that only a man who had no direct descendants could make a *diathékê*, i.e., appoint a successor of his own choice, a man with sons might still want to ensure that debts were paid or collected, make arrangements for his own burial, appoint guardians, give directions for the remarriage of his widow and/or the marriage of his daughters, free faithful slaves, divert at least some small part of his property to illegitimate children or perhaps to friends, or possibly take into his own hands the division of his property among his sons.⁶² Legal and emotional needs both worked to make will-making a universal phenomenon, but contradictions between the two kept oral will-making alive for a long time as an alternative to the use of writing,⁶³ and prevented the complete fusion of the two forms; many of the dispositions characteristic of oral will-making were not legally enforceable or were even, as in the case of legacies to non-heirs (or the 'deathbed' adoption in Menander *Dyskolos* 729–60), apparently contrary to law. The deathbed scene had its own, religious, sanctions, originally perhaps associated with the term *episkêpsis*, although this by

⁶¹ On Solon's regulation of *diathekai* see Humphreys 2002*a*.

⁶² Debts: note payments to *oikeioi* and *philoï* of the deceased in Isaios F XVI 2 Thalheim 1903, VIII P. Roussel 1922, record of wife's dowry in Soph. *Trach.* 155–63, commissions in D. L. 5. 15 (Aristotle), vows to gods *ibid.* 16. Burial: *Phaedo* and *Trachiniai*, discussed below; D. L. 5. 16 (Aristotle). Marriages: Pasion's widow, the widow and daughter of Demosthenes senior, Aristotle's daughter and mistress (Dem. 36. 8, 27. 4, 28. 19, D. L. 5. 12–14), Men. *Dysk.* 729–60 (daughter). Manumission is first certainly attested in Plato's will (D. L. 3. 42; a possible reference earlier in [Dem.] 47. 72). Small bequests to *nothoi* permitted, A. R. W. Harrison 1968, 67; no actual examples are known. Aristotle gives bequests to freed slaves, D. L. 5. 14. Bequests to friends are not yet attested (with the exception of the quasi-corporate estates and libraries of philosophical schools); Demosthenes' allegation (18. 312) that Aichines inherited 5 talents from his brother-in-law (WB) Philon may refer to adoption of one of Aischines' children, since no offspring of Philon or his brother Epikrates are known and the sum seems much too large to be plausible as a legacy (ch. 2 n. 48). Rabel 1907 raises the question of directions given by the father in his will for the division of his estate among his sons, citing Soph. *Trach.* 163 (cf. Eur. *Herakles* 462–75). No historical cases are known from Attika, although division (*merismos*) seems to be a common term in wills from Greco-Roman Egypt. While it was in sons' interests to recognize their father's right to distribute property before his death, they had less reason to allow him to take control of the division if it would only take effect when he died. [Dem.] 49. 42, a minor as witness to an oral will.

⁶³ Note that in the late 4th c. BCE 'Tables of Heraclea' (Uguzzoni and Ghinatti 1968, I 151–2) intestacy is described as dying 'without speech' (*aphónos*).

the end of the fifth century had acquired a secular meaning in the public sphere⁶⁴ and seems to have become restricted in the private sphere to solemn injunctions of a particularly awful nature, such as requests to avenge the death of a victim of homicide (Lysias 13. 40–42; cf. Isaios 9. 19–20).

The scene of Herakles' death in Sophokles' *Trachiniai*, in which the hero compels his son Hyllos to lay him on his funeral pyre, an act only one step away from parricide, and makes him promise to wed the captured princess Iole whose presence has precipitated his parents' death (1146–1251), portrays in extreme form the overriding force associated with deathbed instructions. At the opposite end of the range of variations in normal Athenian behaviour we may set another heroic death, that of Plato's Sokrates, who refuses to make any testamentary dispositions concerning his body, his property, or his children—if his friends are true friends they will not need instructions—but with his last breath gives Krito just one formal injunction to pay a debt, the cock to Asklepios who has healed him of the sickness of living and given him a new dawn.⁶⁵ Herakles' claims on his son transcend all ordinary human norms and feelings; Sokrates' attitude implies that death makes no significant change either for the dying man—the essential Sokrates will continue to exist—or for those he leaves behind him. His friends will continue to care for the interests of his family as they did in his lifetime. Good men do not need laws or legal forms to order their behaviour (cf. Humphreys 1988). Absolute authority and absolute trust were not features of normal deaths; but they may help us to understand the obstacles to treating will-making purely as a piece of legal business.

⁶⁴ *Episkēptó* is the technical term for interruption of a lawsuit by a charge of perjury against a witness; Aristotle's attribution of the procedure to Charondas (*Pol.* 1274b 5–7) implies that it was felt to be archaic. *Enepiskēptó* is used for claims made on property confiscated by the state. See Sanmarti Boncompagni 1956.

⁶⁵ Plato, *Phaedo* 115b–e, 118a; cf. *Krito* 54a; Most 1993; Stafford 2008. While Sokrates is indoors, off stage, with Krito, preparing himself for death, he sees his children and the women of his family (*oikeiai*) and speaks to them, giving them some instructions (*episteilas*), which Plato does not report, although he says that this interlude took quite a long time (116b). His friends break down when he drinks the hemlock, but he rebukes them for this womanly behaviour (117c–e). (*PKöln* V 205 contains part of a new Socratic dialogue on death, but it may be Hellenistic).

Funerals and Burials

One of the new developments in studies of Greek funerals and monuments, in the last three decades, has been a clearer recognition of the reflexive processes of change affecting them. Far from conforming—as was earlier assumed—to immutable, ‘traditional’ beliefs about the rights of the dead, they were shaped by conceptions of honour (*geras thanontôn*) that were influenced by poetry, by interpretation of the visible remains of earlier burials, by memories of recent funerals (perhaps also by accounts of practice in neighbouring regions), and by gossip, all moulding buriers’ conceptions of what contemporaries would consider appropriate for their status and that of the dead. Modern interpretations, in turn, are influenced by historically changing ideas of the relations between poetry and social practice and between ‘beliefs’ and practice, by a tendency to forget that the archaeological data available have been biased by the changing interests of excavators, readers, and purchasers of ancient objects, by shifting conceptions of proper disciplinary practice, and by (again, changing) modern funerals and tombstones (compare Baines 2013 on ancient Egypt).

Disciplinary training predisposes scholars to think of funerals as textual, graves as ‘archaeological’, and stone monuments as ‘epigraphic’ or as ‘art’. Historically, however, textual evidence was available before the spread of excavation. Hence, although the main aim of this chapter is to reconnect archaeological data with the funeral contexts that produced them, we begin with the literary evidence, which provides at least a relatively fixed set of reference points.

FUNERALS AND COMMEMORATIVE REUNIONS: THE TEXTUAL SOURCES

For the Homeric hero, death had two possible meanings, two faces (Vernant 1981). It could mean perpetual renown, immortality on earth in the public sphere, the memory of a man’s great deeds in battle preserved in the songs of poets and in oral traditions anchored to the mound that marked his grave; it could also mean an equally endless existence as an anonymous unit in the crowd of gibbering spirits in Hades, ‘displaced persons’ whose fate was worse even than that of the living *thêês*, the day-labourer who belonged to no *oikos*. In this stark contrast

between fame and anonymity there is no place for kinship; the dead in Hades do not group themselves with their kin.¹ To be of use to his kin a hero has to remain alive, as Hector's wife and parents remind him; here there is tension between private loyalties or obligations and the public glory that the hero may win by dying.

From the beginning of our period, then, death is never simply a private matter, although it terminates relationships central to private life. Regulation of competitive display at funerals began, at Athens, with Solon's legislation and continued to be a concern well into the Hellenistic period, although the ideological bases of the argument shift over time.²

Modern research, due to the longstanding interest of archaeologists in tombs, has tended to concentrate on monuments, and to deal with funerals only insofar as they leave material traces in the form of pyre remains or grave-goods. Even mounds have been treated as monuments rather than as evidence for funerary ritual. This attitude has some justification for the classical period, when there was a sharp distinction between public and private funerals, though I shall argue that even at that time the public funerals of the war dead exerted a decisive influence on forms of commemoration (cf. Humphreys forthcoming *c*). For the archaic period, especially before Solon's legislation, a comprehensive reconstruction of the funeral process is essential (cf. Polignac 1995, 11).

In the *Iliad*, the distinction between the more public and the more private elements in the funerary rites is expressed in terms of the rhythms of daily life, symbolized in the Greek camp above all by the alternation of day and night, and in Troy by movements between public and private space. When not fighting to avenge his death, those close to Patroklos are continuously concerned with his corpse from the moment when it is brought back to the Greek camp until the end of the funeral games. Achilles refuses food, and neither he nor the Myrmidons go to bed, although even Achilles is overcome by sleep—only to dream that Patroklos is speaking to him.

This dream takes place on the night after Hektor's death, when the Myrmidons are mourning on the shore and the rest of the Greeks are sleeping. On the following day the whole Greek army helps to collect wood for the pyre; the non-

¹ Sophokles' *Antigone* gives a different view; concepts of the afterlife change over time. See Sourvinou-Inwood 1983.

² Ch. 1 n. 62. I am not wedded to the view that the 'Solonian' funerary legislation belongs to the same years as the measures linked to his poems, but I would put it in the first half of the 6th c. Plato and Demetrios of Phaleron (F 135 Wehrli; Fortenbaugh and Schütrumpf 2000 no. 53) object to expensive grave monuments as extravagant and inappropriate, since attention should focus on the *psyché* of the dead rather than the corpse (cf. D. L. 5. 53, Theophrastos; Stobaios 4. 55); the funerary law from Gambreion (3rd c. BCE, *Syll.*³ 1219; Arnaoutoglou 1998, no. 110; Frisone 2000, 139–54) seems mainly concerned to limit the mourning period and ensure that women, in particular, return to participation in public religious life when it is over. Cf. Engels 1998.

Myrmidons then sit and watch while the Myrmidons process, in armour, with the corpse (this is the *ekphora*), and deposit it ceremonially on the burial ground. Achilles cuts his hair and lays it on the body, with a speech, and the whole company responds with cries of grief. The day by now is drawing to a close; the rest of the Greeks are dismissed and Achilles and the Myrmidons pile wood round the body and burn it, a process that takes all night. In the morning the whole Greek army gathers again, the pyre is quenched, the bones are collected, and a mound is heaped over them; the rest of the day is taken up with funeral games.³

The sequence is complicated in Hektor's case by the absence, initially, of the corpse. In *Iliad* 22. 405–515 the whole city mourns, though the scene begins with Hektor's mother and ends with his wife. In 24. 160 Priam and Hektor's kin are mourning indoors; in 237–47 Trojans who come on visits of condolence are driven away (both Achilles and Priam refuse to submit to the normal rhythm of mourning, but such refusals themselves fall within a predictable range of behaviour). When Hektor's body is brought back it is greeted with public lamentations (24. 697ff.), which would have continued *until sunset* if Priam had not insisted on going *indoors* (713–17). A lament follows; from the general description (720–2) we expect male singers to lead and the women of the family to act as chorus, but instead we are given laments by Andromache, Hekabe, and Helen. The scene begins indoors, but at the end the scene is public (776). Now Priam orders the Trojans to gather wood; when they have done so, on the tenth day, there is a formal *ekphora*, Hektor is cremated, the pyre is quenched, the bones are collected and buried and a mound is heaped over the grave. The Trojans are said to fear a Greek attack; this helps to excuse the poet's rapid summary of the funerary rites and divergence from the plan announced in 24. 664–6, in which there was to have been a feast beside the grave before the mound was made. The poem concludes instead with a feast in Priam's palace in the city.

Like marriage, dying was a protracted business which had to pass through a number of stages. Between being a living person and becoming a fully disembodied memory, the subject of the process was first an unburied corpse and then—at least if interred—a buried, rotting cadaver. There were a number of possible points of climax in the process: in the mourning round the laid-out corpse (*prothesis*), at the end of the *ekphora* procession when the corpse was laid

³ *Iliad* 23. 58–257. It should be stressed that cremation in premodern times is a much longer and slower process than inhumation (cf. Liston and Papadopoulos 2004). Even when—as in the case of *tholoi* or shaft graves—the preliminary labour of grave digging may be as great as or greater than that of wood-gathering, the rhythm of the operation is very different. Sourvinou-Inwood 1995, 109–17, stresses the function of the mound as a barrier between the dead and the living, and its construction as a definitive act of separation (in her view every grave would have had at least a small mound; indeed, merely replacing the earth creates this effect temporarily). It is also important that (as still in Jewish funerals) everyone present makes the gesture of separation implied in casting earth into/onto the grave.

on the pyre or in the grave, at the moment when the pyre decisively caught fire (awaited with some anxiety, as we see in Patroklos' funeral), at the culmination of the heaping of the mound over the grave, or in festivities of various kinds marking the end of the mourning period, in many societies considered to coincide with the end of the process of decomposition of the corpse.⁴ Other climaxes could be introduced by inserting sacrifices and/or banquets at various stages in the proceedings. Participants with different roles in the ritual experienced its dynamics in different ways, according to their gender and their degree of intimacy with the deceased. For Achilles one of the decisive moments in the whole process came at the end of his dream, when he tried to embrace the ghost of Patroklos and it slipped through his grasp.

We need not assume, therefore, when the *Iliad* sets one funerary feast in honour of Patroklos during the period of prothesis and mourning before the cremation and another at the end of the funeral games, whereas the funeral feast for Hektor takes place immediately after the completion of his funeral mound, that the poem preserves material drawn from two different and clearly defined ritual sequences belonging to distinct periods.⁵ We should expect variations in ritual; and we should expect a poet like 'Homer', whose whole technique consisted in playing variations on well-known themes, to be interested in such variations.

Attic vases of the eighth and seventh centuries show the prothesis with mourners standing round, processions of armed men and chariots (*ekphora*), and wailing women. Hesiod refers to funeral games. But it seems likely that during the seventh century these were in many cities eclipsed by the growing *éclat* of the Panhellenic games at Olympia, and disappeared.⁶ The Solonian law on funerals

⁴ See Humphreys 1983*a*/1993 ch. 7; Hertz 1907; Huntington and Metcalf 1979.

⁵ The present discussion owes much to the work of Christiane Sourvinou-Inwood (1981, 1983, 1995), and implies a shift of emphasis rather than disagreement (cf. below at nn. 67–71). One can indeed see in the *Iliad* anticipations of later restrictions on the display of grief by men in public (7. 427–8; cf. Van Wees 1998*a*), and perhaps also (though I am less convinced of this) a trend away from stress on intimate contact with the corpse, which will eventually come to be seen as polluting (Parker 1983; Humphreys 1991, 30–31), towards greater stress on the rites that reintegrate the mourners with the community. My interest here is in disentangling the various rhythms and constraints—ranging from the operational delays inherent in pyre-building and cremation to the adaptation to death taking place subconsciously in the mourners—which had to be harmonized (at least to some degree) on each occasion and which were responsible for a general tolerance of variation and flux within the framework of which directional change (*drift*) could also occur. Poets, both because they deal with exceptional situations and because the contrast between normal and abnormal behaviour is part of their repertoire, offer a wider range of models than real-life experience (cf. Kama 2008); some of these models may themselves influence the behaviour of later generations. It is a post-Enlightenment prejudice to assume that ritual must have been more 'fixed' in earlier periods than later.

⁶ They continued in Boiotia, *LSAG* 91–2 (see Shapiro 1991 on representations of funeral games, interpreted as Homeric allusions, in late 6th c. Attika), and are also attested for the (?) 6th c. in (western) Cumae (Dubois 1995 no. 16) and Lampsakos (*LSAG* 367, 371 no. 47). Drakon's law (*IG* i³ 104) distinguishes games from amphictyonic sanctuaries. Athens founded a festival with public games, the Herakleia,

(ch. 1 at nn. 62–3) set firmer boundaries between public and private segments of the ritual.

These restrictions, as Christiane Sourvinou-Inwood has stressed (1981, 1983), focus especially on the disruption of the daily life of the community by the elaborate funerals of prominent families. A long prothesis meant daily comings-and-goings at the house of the dead, involving not only men but also women in a ritually appropriate state of distress and dishevelment; the pre-Solonian ekphora would bring the whole city to a standstill and draw a crowd of followers to the place of burial, where the proceedings would be prolonged by a tour of nearby graves and an extravagant feast. The funerals of Spartan kings (cf. Nafissi 1991, ch. 6; Toher 1991; Baines 2013, 239–40 on Egypt) took this absorption of the whole group into the funeral of a prominent individual to the limit. The Solonian law did not prohibit male non-kin from attending prothesis and funeral, but tried to confine their participation within the ‘private’ limits earlier associated with the activities of kin (indoors or at night).

It was apparently more successful in controlling prothesis and ekphora than in restraining celebrations at the grave, perhaps because its measures in the former case coincided with a pre-existing tendency to concentrate the role of women in the preliminary stages of funerary ritual and bring men to the fore in the rites of reintegration that followed the interment (Van Wees 1998*a*). Increasing differentiation of public and private spheres, as the city’s political institutions developed, and perhaps increasing concern with avoiding pollution, would on this view have encouraged a shift from the alternation of public and private phases that characterized Homeric funerary rites towards a more linear movement from intimate contact with death to resumption of public life.⁷ Ambitious families,

to honour the dead of Marathon, *IG* i³ 3; 523–5 (ch. 31 n. 45). See Humphreys forthcoming *c*; games for war dead at Thebes, *SEG* 59. 502. For a Hellenistic revival (Amorgos), Helms 2003.

⁷ Cf. Cordano 1980; Van Wees 1998*a*; on pollution, Sourvinou-Inwood 1983, 1995; R. Parker 1983; n. 70 below. We are still far from clarity or consensus about the contours of the Greek concept of pollution and the factors that influenced its development. The elaboration of material culture during the 9th–8th centuries allowed the Greeks to give concrete form to boundaries between city and countryside, sacred areas and profane ones, public spaces and *oikoi*: between culture and nature, gods and men, men and women. The invisible actors in social life—gods, the dead—began to take more visible form, and this will have had both limiting and liberating effects on creativity in ritual; new barriers had to be respected, new fields were opened to speculation. The chronological stages of the material definition of the sacred are beginning to be studied (see Rolley 1983, 112–13; Rupp 1983; see also Sourvinou-Inwood 1993; S. G. Cole 2004, ch. 2, on terminology), but much remains to be done in understanding the factors involved. Migrant religious specialists from the east may have had an influence, as suggested by Burkert 1983, but it is still essential to reconstruct the Greek context in which they worked (the same goes for Van Wees’s suggestion, 1998*a*, that the practice of self-laceration by female mourners came from the east). Mourning perhaps became caught up in the logic of pollution partly because self-defilement was a familiar reaction to death (e.g. *Iliad* 24. 163–5); the idea that mourners actively pollute themselves rather than automatically becoming polluted by contact with the corpse is still expressed in the funerary law of

however, did not give up the practice of rallying their supporters round them at funerals without a struggle. According to Cicero (*de legibus* 2. 64), ‘some time after’ Solon’s legislation the Athenians passed another law, that no grave monument was to be greater than ten men could make it in three days, that tombs were not to be made of bricks, and that stones (‘herms’) were not to be erected on them.⁸ The conspicuous consumption that had been forbidden at funerals had apparently shifted to monuments, and the first provision of the law was concerned with the erection of huge mounds that required a large party of workers. A sixth-century epitaph from Troizen boasts that the *betairoi* of the dead man finished his mound in a single day, evidently implying that they must have been very numerous to do so.⁹ There was also, however, a new distinction between public burials, which involved the whole community, and private burials which did not. The mass burial of war dead on the battlefield was of course the earliest form of public burial, and is mentioned already in the *Iliad* (7. 417–32); but we also have a record from c.600 (?) of the burial on Kerkyra of a *proxenos* from Oiantheia, where his *kasignêtos* Praximenes was aided by the Kerkyraian demos in making his mound. It became the custom to give public burials to distinguished foreigners who died while on an embassy or other formal

Ioulis in Keos in the late 5th c. (*Syll.*³ 1218; see Frisone 2000, 57–102; Hölkeskamp 1999, 146 for the possibility that the law antedated the inscription).

⁸ On the date of this law and the interpretation of the provisions on brick tombs and ‘herms’ see Humphreys 1983*a*/1993, 88–90; R. G. Osborne 1985*c*, n. 10; Engels 1998; Rückert 1998, 172–6; Bernhardt 2003; ch. 11 at nn. 50–8. Rückert points out that herms (in the usual sense) are sometimes represented on Hellenistic tombstones for young men; no examples are known from Athens, but possibly this imagery led Cicero to confuse *herma* with *Hermes*, a herm in the usual sense. These provisions seem to be directed against lasting monuments; small mounds did not last long. Cicero’s inclusion in this law of a ban on speeches at private funerals may be due to historical speculation later than the 5th c. (Demetrios of Phaleron); in any case the exception made for speeches at the public funeral is in my view a later addition (Humphreys forthcoming *c*).

⁹ *IG* iv 800, *CEG* 139. Cf. Simonides CLXXX (Schneidewin 1885), large mounds for important men. Plat. *Laws* 958e limits mounds to the work of 5 men for 5 days, but by this time the labourers may be slaves or hired men. (*Laws* 956a–b also sets limits on the amount of labour to be expended on weaving or painting dedications, but here only a single worker is envisaged.) See also Bernhardt 2003, 71–91. Two huge mounds in the Kerameikos, Hügel G and the Südhügel, belong to the middle of the 6th c.; so does a large mound excavated by Stais at Petreza. Stais’ mounds at Vourva and Velanideza covered graves dated c.580 (see Humphreys 1983*a*/1993, 95–101 for references and further details); and mound I at Vari is dated c.570 (*AA* 1940, 176; but Alexandridou 2012*b* says late 7th c.). This evidence is far from satisfactory, but is not inconsistent with the view that large mounds were mainly a feature of the post-Solonian period (cf. below, n. 108; the evidence for a pre-classical mound on the Kerameikos Rundbau site is very poor). For the mound on which the Kroisos base (*IG* i³ 1240, 540–530) was set see Mastrokostas 1974; Kakavogianne and Petrocheilos 2013. It still stood 2m in height from the level of the ancient road when investigated, was 28m in diameter, and probably covered a single bronze ash urn, perhaps brought back to Attika from elsewhere, since Kroisos died in battle (cf. Thonemann 2016). For effects of the shift from funerals to monuments see Polignac 1998.

visit.¹⁰ The two forms of public burial became fused at Athens in (?) the 460s, when it became customary to bring back the bones of the war dead, cremated on the field of battle, and hold a ceremonial mass funeral for them at the end of the campaigning season.¹¹

The Athenian pattern of introducing a distinction between members of the jural kindred, who are involved in all stages of burial, and the general public, was followed in Keos, in a law preserved in an inscription of the late fifth century which shows more concern with technicalities of pollution and ritual than Solon (n. 7 above).¹² Other communities, however, may well have followed other paths. At Delphi the phratry of the Labyadaí passed a law c.400 which followed Solon in restricting the amount of property to be buried with the dead and specifying that the ekphora procession is to pass through the streets in silence, and without delays; but the distinction between kin and non-kin was here strictly enforced only after the burial, when only the deceased's household, patrikin, affines, and descendants might return to his house for further rites. This law may imply that at Delphi phratry members were obliged to attend the funerals of their fellow-phratores.¹³ The separation between kin and non-kin after the funeral also appears in the Ioulis law from Keos, where only those who have polluted themselves, i.e., are in deep mourning, may return to the house of the dead; only his mother, wife, sisters, daughters, and up to five other women and some related children, may take on this status.¹⁴

¹⁰ Kerkyra, *IG* ix 1² 4. 882, M/L 2nd ed. no. 4 (Bruss 2005, 88–9, with inadequate epigraphic references); Athens, *IG* i³ 1154, 1178, 1353, ii² 5224 (*CEG* 469).

¹¹ Loraux 1981; Clairmont 1983; on the date at which bringing home the war dead became the rule see Humphreys 1999, forthcoming c. On Jacoby's view (1944*a*, 1944*b*) that the funeral of the war dead was held on Boedromion 5, the date of the Genesia, Humphreys *ibid.* As is well known, communities in some cases honoured the exceptional dead with burial in a prominent place within the city, after it had become normal to bury extra muros (note Winter 1982). The Athenian rite for war dead seems to have been imitated at Thasos (*LSS* 64 +, *SEG* 57. 820/60. 944; Pouilloux 1954*a*, no. 141). The expression *pandēmēi parepempsan* (D. L. 5. 41 Theophrastos; cf. 3. 41 Plato, but restricted to frequenters of the Academy) seems to denote spontaneous participation in the ekphora which made a funeral de facto public although it was not officially so. On public funerals for individuals see also L. Robert 1968; R. Parker 1983, 42–3; Couilloud-Le-Dinahet 2003, 81–4; *SEG* 60. 1937; Kennell 2013, 222; *BE* 2014, 104; ch. 11 n. 72.

¹² Cf. P. Herrmann 1958, 118f., 4th c. epitaph from Miletos (*CEG* 686): hair is torn by kinswomen, *pasa syngeneôn plêthos*. Despite Solon's law, women were still seen by strangers on the occasion of funerals in classical Athens: Lys. 1. 8 (daughter-in-law at funeral of HM), Ter. *Phorm.* 91–116 (daughter at funeral of mother). Either the rule that the cortège had to leave the city before dawn was relaxed (after the plague?), or women were seen as they returned from the graveside.

¹³ No parallel from Attika before *IG* ii² 1275, *thiasos* regulations, early 3rd c. BCE; cf. Wilhelm 1896. In the Labyadaí text (*CID* 1. 9, R/O no. 1; Frisone 2000, 103–26; Jacquemin a. o. 2012, no. 30) affines are distinguished as *pentheroi* and *gambroi*.

¹⁴ The text is uncertain; cf. R. Parker 1983, 40. He sees a development from definition of mourning pollution in spatial terms to the use of kin categories (37 n. 17; 39–41); but Athens has the same law,

In Attika more attention seems to be devoted to the prothesis as the climax of women's involvement in burial rites. A late sixth-century funerary plaque shows a dead boy on the bier with mourners carefully labelled: mother, sister, grandmother (*thêthê*), aunt, aunt on the father's side (*thêthis pros patros*), father, brother. A small girl and baby boy stand by the mother, and the grandmother stands at the head of the bier.¹⁵ Later stages of the funeral are rarely depicted, and even in prothesis scenes the women's gestures of grief are perhaps more controlled in the sixth and fifth centuries than they were in earlier representations. After the early fifth century vase-painters shift their attention to the visit to the tomb with offerings, a favourite subject for the painters of white-ground lekythoi (Oakley 2004; Humphreys forthcoming *c*).

It was the duty of the next-of-kin to carry out funeral rites,¹⁶ and in cases where there was some doubt who held that position, and the prospect of an inheritance dispute, quarrels might begin when the corpse was barely cold. The speaker of Isaios 8 went to the house of his maternal grandfather Kiron to collect the corpse and carry it off to his own premises, taking a cousin of his father as witness; he was persuaded by the widow, Kiron's second wife, to conduct the funeral from Kiron's house instead (8. 21–7, 38–9). Her brother was also involved. Euktemon of Kephisia died at ninety-six in the house of a freedwoman; his wife and daughter went to prepare the body for burial (Isaios 6. 18, 40). The speaker of [Demosthenes] 44, claiming the estate of Leokrates of Otryne, tried to take possession of the corpse but was prevented by Leokrates' father and ceded to the

probably Solonian ([Dem.] 43. 62). On the links between touching the dead, pollution, and kinship see also Chanotis 2006, 219–23.

¹⁵ On the kin terms see Lopez Eire 1997, 92. BArch 463, Louvre MNB 905, Sappho painter (cf. Immerwahr 1990, 74 no. 436; Shapiro 1991; Beaumont 2013, fig. 9. 1); the same painter's phormiskos Kerameikos 691, BArch 306487, has personal names, and the leading male mourner says *Oïmoi thygatêr*; on a fragment in Malibu, BArch 361406, the mourners greet the dead as *kêdeste* (for this painter see also Manakidou 2006, Clostermann 2007, Jubier-Galinier 2014). No other painter shows this interest in kinship (Cordano 1980 and Shapiro 1991 suggest reference to Solon's law, but this seems unnecessary). Eur. *Alk.* 101–3 (cf. Buxton 1987) seems to imply that mourners attending the prothesis left a lock of hair by the door of the house on leaving (or entering?). Cf. Xen. *Hell.* 1. 7. 8 for male kin (*syngeneis*) shaving their heads and wearing black in mourning, perhaps an allusion to the Apatouria (ch. 19 n. 28).

¹⁶ [Dem.] 43. 57–8; if they failed to do so the demarch was responsible for burial and could collect double the cost from the next-of-kin (cf. *IC* iv 75b, c.450; *LS* 154 B 17–31, *IG* xii 4. 72, c.240, Kos). The poletai record *Agora* XIX P 5. 25–9 records a claim on the confiscated property of Theosebēs son of Theophilos of Xypete (who had been condemned in absentia for theft of sacred property, *hierosulia*, having fled before the trial), made by Isarchos son of Philon of Xypete, for 30 drachmas spent on burying Theosebēs' father and mother. Pace Whitehead 1986a, 234, he was in my view probably a kinsman, though the sum is small. [Plut.] *Mor.* 849c (*FGH* 372 F 34; from Hermippos? *FGH* IV 3 A F 47, 87) says that Hypereides was buried by a cousin (*anepsios*) or, some say, a grandson (SS) (ch. 2 II B 9 and Table 2.3). Performance of burial rites had no formal legal significance, but it indicated closeness and concern.

claims based on this natural tie, while pointing out that the adoption of Leokrates into another oikos had in law destroyed his kinship with his father (44. 32).

We remain poorly informed about the conclusion of the funeral ceremony, which presumably ended with some kind of feast, and about later rituals. References to ‘third-day’ rites, *ta trita*, perhaps denote the day after the funeral.¹⁷ The speaker of Isaios 8 celebrated the ninth-day ritual (*enata*, also mentioned elsewhere; cf. the tenth-day rite of the Labyadai at Delphi) with particular lavishness because he had not been able to monopolize payment for the funeral of the man whose estate he was claiming; ordinarily this rite would perhaps have been a minor affair. We do not know the date of the Nemes[e]ia paid for by a daughter also involved in disputes over inheritance (Demosthenes 41. 11; 100 dr.).¹⁸ The name (if correctly transmitted) suggests a fear that the dead would bear a grudge against their heirs if their passage was not accompanied by the due offerings, but this does not seem to be a prominent theme in Greek culture. Athenians could be sued for ill-treatment of parents (*kakôsis goneôn*) if they neglected ancestral tombs, according to Demosthenes 24. 107, but no cases are recorded.¹⁹

¹⁷ Alexiou (1974, 7, 208) suggests that *trita* refers to the funeral itself, but this is not so at Ioulis (*Syll.*³ 1218), and the Labyadai (*CID* I 9, R/O no. 1) have a rite on the day following the funeral. Note that Hegisippos *Adelphoi* F 1. 11f. (*PCG* 5 p. 549) uses *perideipnon* to denote a feast held immediately after the funeral, in the heir’s home.

¹⁸ *Nemes[e]ia* for the dead are mentioned only here and in lexicographic entries probably derived from Harpokration’s comment on this passage (Harp., Phot., *Sud.* s.v. *Nemesia*; *Anecd.* Bekker 1814 282. 33). Harpokration suggested, doubtfully, that the term perhaps (*mêpote*) referred to a festival (*beortê*) of Nemesis at which offerings were made to the dead; the explanation given by Photios and the Bekker lexicon, ‘a festival (*panêgyris*) for the dead, since Nemesis has responsibility for the dead’, seems to me to be dependent on Harpokration’s comment, adding further explanation but no independent material. The two texts are recombined in the *Suda*. R. Parker (1996, 247 n. 101; cf. 2005a, 27–31) suggests that the word is an early corruption of *Genesisia*; one might also think of *eniausia* (Humphreys forthcoming c n. 31; cf. Plat. *Laws* 717e–718a; Wyse 1904, 269 on Is. 2. 46, *Syll.*³ 1218 B 4–9; *CID* I 9). In any case, the reference is probably to annual commemoration at the *Genesisia*. The passage has other peculiarities: 100 dr. seems quite high for a commemorative ritual (including an expensive dinner for numerous guests?), although Plato (loc. cit.) does mention yearly offerings, after tombstones, as the types of expenditure on dead parents that should be moderate but in accordance with family tradition and the size of the estate. There is also a striking use of the terminology of public liturgy: *eispherein*, *proanaliskein*. For interpretation of the representations of commemorative visits to tombs on white-ground lekythoi as originating in visits to war graves see Clairmont 1983, Humphreys *ibid.* Karagiorga-Stathakopoulou 1985, 26 claimed to have found archaeological evidence of commemorative cult (*latrentikôn pyrôn*) in a *peribolos* of the 2nd half of the 4th c. (Lenormant St. 191–3), but only a preliminary report is available, and the remains (carbon, ash, sherds) might have come from cremations.

¹⁹ When the Athenians consulted Delphi about a sign in the sky they were told to make various sacrifices and to see that kin (*pothikontas*) performed customary rites for the dead ([Dem.] 43. 66, *nomizomena*; Apollo seems vague about local custom). There was a belief that the dead who had been injured in life could send ‘visitants’ (*elasteros* in *SEG* 43. 630; Dubois 2008 no. 18; *SEG* 57. 888, Selinous, cf. Jameson a. o. 1993; another interpretation in N. D. Robertson 2010; *hikesios* in *LSS* 115, Kyrene), to persecute the offender, but (*pace* S. I. Johnston 1999, on which see Bardi 2001) there is no clear evidence that failure to perform commemorative rites could trigger such visitations.

A feast attended by kin thirty days after death is somewhat more solidly attested. Harpokration, Pollux, and Hesychios suggest that attendance was restricted to the jural kindred, those related to the dead as second cousins or more closely, but the existence of a proverbial phrase ‘outside the thirty’ to denote exclusion need not imply this.²⁰ Fragments of mourning songs, *thrēnoi*, composed by Pindar and Simonides have a philosophical tone that might suit such an occasion better than the funeral itself,²¹ but selective quotation may give us a false idea of the tone of the whole original poem.

The thirtieth-day feast may have marked the end of mourning. Some would no doubt continue to bring offerings to graves (curiously, no source refers to the erection of the grave-monument as an occasion for ritual), but the only other fixed obligation mentioned in sources is an annual ceremony (Isaios 2. 46) which may be that of the Genesia on 5 Boedromion (August/September).²² Litigants whose claim to inherit by adoption is being challenged in court depict with great pathos the piteous fate of the man who leaves no heir to tend his tomb, but this rhetoric must be treated with caution (cf. Rubinstein 1993). Certainly candidates for the annual archonship at Athens were expected to be able to say where the tombs of their fathers and (perhaps) grandfathers were ([Aristotle], *Athenaion Politeia* 55. 2–3), but although Xenophon (*Memorabilia* 2. 2. 13) takes this question to imply a duty to decorate the tomb (with *tainiai*?) it does not show that cult continued unbroken for many generations; and the democratic assumption that every Athenian should have commemorative offerings can hardly have been of great antiquity.

The change from the archaic practice, in which the elaboration of funerary rites, monument, and commemoration were proportionate to the status of the deceased, to emphasis in the classical period on public burial and severe restriction of private rituals and monuments, generated when these restrictions began to be relaxed in the Peloponnesian War a much wider distribution of private

²⁰ Harp., Phot. s.v. *triakas*, Pollux 1. 66, Hsch. s.v. *atriakastos*, *exô triakados*. Artemidoros 1. 4 implies that in his day all remembered dead kin, except those who had died in exile, were ‘invited’ by name to share commemorative banquets. *Triēkost[ia]* are forbidden in the funerary law from Ioulis, *Syll.*³ 1218. 21–2. Cf. Phot. s.v. *kathédra*. Is the notion of a primitive *genos* of 30 members in *A.P.* F 3 influenced by this complex of ideas? (ch. 18 at nn. 29–34).

²¹ See Cannatà Fera 1990; Yatromanolakis 1998; Kowerski 2005, 130–44. Shapiro 1991 suggests that some prothesis scenes on vases may show male mourners singing *threnoi*.

²² Jacoby 1944*b* argued that the date was fixed by Solon because he wanted to prevent powerful families from gathering large groups of friends and followers to celebrate private anniversaries, but the idea of the private anniversary may be a later phenomenon; cf. n. 26; Humphreys 1983*a*/1993, 87–8; Georgoudi 1988*a* (of the Isaios passages cited by Georgoudi, only 2. 10, 46, and 6. 65 refer to regularly repeated annual rites). A month Nekusios is attested at Knossos (Trümper 1997, 193) and Leontinoi (*EBGR* 11, 1998, 232); Genesios/ὄν in Arkadia, *BE* 2017. 229.

celebrations for the dead.²³ The commemoration of the ordinary hoplite soldier or even rower as having died a heroic death fighting for his city contributed to the slow shifting of belief which eventually came to confer on all the dead a continuation of personhood. With this democratization of the cult of the dead came anxieties about its permanence, exacerbated by the rhetoric of the courts. Aristocrats in the archaic age had trusted to poets to preserve their fame; the war dead were annually celebrated by the city; but the ordinary private citizen had only the personal memories of his descendants to rely on.

Later developments in patterns of commemoration need to be seen in the context of wider modifications of cult practice, which cannot be studied in detail here. The offerings taken to graves were similar to offerings made to gods; sacrifice, libation, and small gifts of food had always been common to both domains.²⁴ Thus, though such offerings might express the yearning of the living to remain in contact with the dead, they also set the dead apart. Philosophers made a conscious effort to resist this trend; the corpse should be decently but modestly interred and then disregarded,²⁵ and the friends of the dead should meet at regular intervals for a non-ritual dinner at which they would share their memories of him.²⁶ The ordinary man, however, contemplating his future existence, may have found it hard to conceive of commemoration without a physical link to his remains and a ritual scenario.

The commemorative dinners held by philosophers were related only accidentally to corporate groups; philosophical schools acquired quasi-corporate status by the transmission of the land, buildings, and libraries which provided the basis for their common intellectual activities. Other private individuals deliberately founded corporate religious associations, endowed with land to provide revenue in perpetuity, in order to ensure continuity in cult. Gods and the dead may be

²³ I argue in Humphreys forthcoming *c* that the disruption of funerals during the plague years played an important role (cf. Mikalson 1984).

²⁴ Cf. Hägg 1987. The distinction between ‘Olympian’ and ‘chthonic’ beings (on which see now R. Parker 2011 s.v.) did not distinguish the dead from gods, since there were deities in the ‘chthonic’ category. The increasing popularity from the 4th c. onwards of ‘receptions for the gods’, *theoxeniai*, also tended to blur the distinction between cult of the gods and of the dead (cf. N. D. Robertson 2010 s.v. *table hospitality*). However, the banquet scenes known as *Totenmahlreliefs* are relatively rarely used by Athenians on tombstones (Scholl 1993); their primary context seems to be hero-cult (Jameson 1994b, 53; Csapo 2010a, 89–96; Parker 2011, 115–67). Cf. Oakley 2004 for representations of food gifts on white-ground lekythoi.

²⁵ Pl. *Phaed.* 115c–e, *Laws.* 958d ff.; Dem. Phal. F 135 Wehrli 1949 (Fortenbaugh and Schütrumpf 2000 no. 53); Stob. 4. 55.

²⁶ D. L. 10. 18, Epicurus: funerary offerings (*enagismata*) to E.’s parents and siblings, continuation of annual dinners to celebrate his birthday (on the date see D. M. Lewis 1969) and of monthly gatherings to commemorate Metrodoros, at which E. will henceforth be remembered also. Ar. *Rhet.* 1398b 16–17 (Anaxagoras) refers however to a public festival. Cf. D. Clay 1983, 1986; N. F. Jones 1999, 227–34; *EBGR* 11, 1998, 225. 424 (imperial).

associated in such cults: the descendants of Poseidonios of Halikarnassos (*Syll.*³ 1044, *LSAM* 55, third century BCE) are to worship Apollo, the Mother of the Gods, Zeus Patroios, the Fates, the Agathos Daimon of Poseidonios and his wife, and the Agathe Tyche of his father and mother. Where membership of such groups is to be based on descent, the criteria of inclusion tend to be broad and bilateral.²⁷

The main trend in the Hellenistic period, however, was not towards the foundation of new descent groups with commemorative functions but towards a reappropriation of the public sphere for the commemoration of ambitious members of the elite. Rich citizens who had made themselves influential, popular, and renowned during their lifetime by gifts of cash or produce to the city prolonged their careers as benefactors (*euergetai*) in death by leaving land to the community, the revenue from which was to be used in annual public festivals commemorating the donor.²⁸ Funerals of war dead were a thing of the past;²⁹ the rhetoric of the public sphere was now used to extol the civic devotion of the rich.

FUNERALS AND COMMEMORATION: THE ARCHAEOLOGICAL EVIDENCE

I. What is a grave?

Traditionally, archaeological data from graves and tomb monuments have been interpreted as evidence for beliefs about death, the afterlife, and the duties of the living towards the dead, and such beliefs have been taken to be long-lasting and deep-seated. When I published my first analysis of the Attic evidence for ‘family

²⁷ See Humphreys 1983*a*/1993, 119–20. Husbands of female descendants may hold office in the group founded by Poseidonios; that founded c.200 BCE by Epikteta of Thera (*IG* xii 3. 330, *IJurid* II I pp. 77ff., *SEG* 40. 678) is to include agnatic descendants of all the male founder members, plus descendants of epikleroi, and of some additional, named women. New funerary foundation, Lycia, Tlos?, c.150, R. Parker 2010*b*; see also Harter-Uibopuu 2011 = *SEG* 61. 1588; Carbon and Pirenne-Delforge 2013. N. F. Jones (cit. n. 26), fails to recognize the role of property in the crystallization of a corporate status for philosophical schools (never very clearly defined: J. P. Lynch 1972).

²⁸ *Euergetai*: see Van Bremen 1983, 1996, with comments on the increasingly paternalistic vocabulary used to praise them, implying a merging of public and private spheres; Curty (ed.) 2009. The proportion of benefactions made in kind, coming directly from the donor’s estates, needs study. The bequest of oil by the philosopher Lykon to Aigina does not specify a festival, but he is to have a statue and be remembered (D. L. 5. 71). Commemorative festivals are studied by Schmitt-Pantel 1982 and 1992; cf. also Wyse 1904, 377–8.

²⁹ Soldiering had become a profession; the soldier, *qua* soldier, was not a citizen. Athens, now increasingly concerned with preserving the memory of her past greatness, continued to commemorate the dead of earlier wars with annual games, the Epitaphia (see Mikalson 1998, s.v.; Humphreys 2004, ch. 3; Humphreys forthcoming *c*).

tombs' in 1980, my main target was the assumptions that Athenians buried their dead in lineage ('genos') tombs, probably located on private land,³⁰ which continued in use over many generations and that these were regularly visited by descendants making commemorative offerings.

During the last quarter-century assumptions have certainly altered. It is now much more widely accepted that funerary practices (like other forms of conspicuous consumption) can change quite rapidly, and that the archaeological data primarily provide evidence for practices and processes, only indirectly and secondarily for beliefs.³¹ It is also accepted that these practices are selective, structured by social categories (status, age, gender); the data do not represent whole populations (see below at nn. 72ff.). The search for linear evolutionary models has also largely been replaced by more flexible and reflexive conceptions of time, encouraging interest both in short-term change and in actors' ideas about pastness and about death as materialized in graves and monuments.³² There is an increasing tendency to see death as a locus for an ongoing dialogue between private concerns and representation to a wider public (ch. 11 n. 7); and modern researchers are perhaps becoming readier to think of beliefs about the dead and the afterlife as vague, speculative, and labile rather than 'traditional' and dogmatic.³³

However, these changes in interpretive frameworks have not yet had much influence on the character of the data. This is partly because data accumulate only slowly, and are published (if at all) at an even more glacial pace. There are only two areas in Attika in which planned excavation has dealt extensively with funerary material, the Kerameikos and Rhamnous; almost all the other data come from salvage digs carried out under varying constraints of time and space.³⁴ The

³⁰ Recent survey work in rural Attika has led to the discovery of more classical periboloi in rural areas (Bergemann 1997; cf. Carter a. o. 1998 for Metaponto), but it is nevertheless generally accepted now that tombs were sited by roads, and monuments positioned to catch the attention of passers-by as well as family members. Cf. below n. 64. Thorikos seems to be an exception.

³¹ See the very useful and thoughtful discussion of the relation between beliefs and their material expression in C. Morgan 1996; also Whitley 1994a, 52–3, on 'context' (equivalent to what I call 'practice'); Knappett 2011 on material re-presencing of both the dead and the buriers. Christiane Sourvinou-Inwood's emphasis on reconstructing ancient 'perceptual filters' (1991, 1995) has been very important, but does not say enough about the role of experience in forming such filters.

³² See ch. 11 n. 4 on deliberate archaism in funerary practice; Humphreys 1990b; Whitley 1994b; cf. Houby-Nielsen 1998 on the Hellenistic and Roman Kerameikos; Bruss 2005 on the ideas of Hellenistic poets.

³³ Cf. Carneiro da Cunha 1981; Bardi 2001; Humphreys 2004 on the speculative dimension of all religious thought (though I do not find it helpful to label funerary practices 'religion': among other reasons, funerary activity could be regulated by sumptuary laws).

³⁴ The Agora excavations have been carried out systematically since 1931 in a protected environment, but there were few burials in the area after c.700 (cf. n. 67 below), and bedrock has not been reached in all areas. Themelis 1979 claims to have excavated a complete burial area at Agios Panteleimon, Anavyssos. Relatively large burial area at Kifissia, Skilardi 2009, 2013. Under the term 'salvage digs' I include both sites considered to be at risk from illegal excavators and those opened up by modern building operations

other major problem is lack of communication between excavators and those who try to interpret the data as indicators of social, political, and economic change. Excavators publish little interpretation, and interpreters' theories rely heavily on arguments from silence.³⁵

I shall start, therefore, with a brief account of the history of burial excavation in Attika (both authorized and unauthorized) and of the changing interests of those who have conducted it. Excavators, like the people whose cultures they study, have perceptual filters; they do not see everything, and they do not record or publish all that they see.

Early excavators and travellers were interested, especially from the period of the eighteenth-century classical revival, in sculpture and, to a lesser extent, 'good period' vases, i.e., Attic black-figure and red-figure—provided that the objects were not too fragmentary and, in the case of vases, were clean enough for the painting to be noticed at the time of excavation.³⁶ British and French political interest in the eastern Mediterranean in the late eighteenth and early nineteenth century not only led to the appointment of powerful and wealthy ambassadors with an interest in collecting (Choiseul-Gouffier, Elgin) but also stimulated topographical research and mapping. Military experts, surveyors, and hydrographers all had classical educations and used classical texts and place names to orientate them in their work; in the case of Attika, this produced by the middle of the nineteenth century an interest in tomb inscriptions from rural areas as evidence for deme location.³⁷

The decision to move the capital of the new Greek state from Nauplion to Athens in 1834 stimulated both archaeological exploration of the city area and a

(housing, transport, cable- and pipe-laying, etc.). As will become clear, excavators have not in general shown much interest in establishing the limits (spatial or chronological) of burial in a given area even where there were no material obstacles.

³⁵ The various annual archaeological reports published are brief and uninterpretive (epigraphists are much better served by *SEG* and *BE*, which indicate the historical significance of their items); the *Kerameikos* volumes (hardly user-friendly) restrict interpretation to 'burial customs' as traditionally understood. For the interpreters' side of this *dialogue des sourds* see below, especially at nn. 72–87.

³⁶ Here I discuss only burial excavations; for other interests of 18th-c. travellers cf. Humphreys 2008. A formidable number of tombs was excavated, especially in the early years of the 19th c. (cf. Eliot 1962; Beschi 1975; Matthaiou 1999, on the Aixone–Glyphada area; S. P. Morris 1984 on Aigina). Burgon, in the early 19th c., destroyed a number of Panathenaic amphorae before noticing that they were painted (Martha 1876).

³⁷ See Legrand 1897 on Choiseul-Gouffier and Fauvel (Fourmont, in 1729, was sent to look for Greek texts in monasteries and became interested in inscriptions only secondarily); St Clair 1983 on Elgin (cf. also T. Spencer 1954). Leake was sent to Istanbul to give military advice in 1799, subsequently doing survey work in Greece (H. C. S. Ferguson 2001; cf. Hussey 1995 on George Finlay). Francis Beaufort had charted the southern coast of Anatolia in 1811–12, and as Hydrographer Royal from 1832 was responsible for the work of Thomas Graves (who charted Piraeus in 1840) and Spratt. Cf. Humphreys 2008; Fotiadis 2001 on early 20th c. Macedonia.

great deal of accidental discovery of material encountered by builders, roadmakers, and drainlayers. Much was simply destroyed in these processes; some items went to private collectors; even objects acquired by museums came with minimal information about the context of discovery. Very little was published.³⁸ The Kerameikos area was explored for sculpture; ruined churches containing ancient materials were demolished.³⁹ Pittakes, Ross, and Rangaves tried to keep track of epigraphic discoveries, and Stephanos A. Koumanoudes from the 1860s paid particular attention to the provenance, location, and form of tombstones. The German Archaeological Institute's Athens branch (founded in 1874) organized systematic research in the Attic countryside and produced an archaeological map, the 26-sheet *Karten von Attika*.⁴⁰

From the late 1870s Schliemann's excavations at Troy, Mycenae, and Tiryns generated a new interest in pre-classical pottery, which had previously been classed as 'Phoenician' (or, in the islands, 'Carian'). Researchers realized that painted pottery had a history in Greece before Attic black-figure, and that the Homeric poems could be connected to that history; the result, in terms of cemetery research, in Attika, was interest in 'Dipylon style' pottery, i.e. the large Geometric painted kraters and amphorae found in the Kerameikos area. This interest remained very selective: the German archaeologists Brückner and Pernice (1893), reporting on an excavation carried out by the Greek archaeological service near Koumoundourou Square (Eleutherias), described only the 19 'Dipylon' burials, although the total number of graves opened was 231.⁴¹ The search for Homeric archaeology led to interest in modes of burial, including cremation and the *Opferrinne* which Stais had found under the mounds of Marathon and Vourva, discussed in Helbig's study of Homeric burial customs (1884); further examples were found at Velanideza and in the Kerameikos (Kistler 1998, 20–1; below,

³⁸ Cf. Humphreys 2004, 263 n. 101; Kokkou 1977 (with a good selection of contemporary photographs).

³⁹ It was decided that the new city needed only 12 churches (A. Mommsen 1868, with an invaluable map of locations). The old church of Agia Triada (Mommsen no. 45), in a major Kerameikos burial area, was demolished but replaced.

⁴⁰ See Petrakos 1987, A. P. Matthaiou 1988*a* on the early work of the Greek Archaeological Association (the latter with an important introduction on method); S. Matthaiou 1999 on Koumanoudes, whose *Attikai epigraphai epitymbioi* (1871) was republished with a volume of additions by the Association in 1993. The *Karten von Attika* (also recently republished, maps only, in reduced format, Korres 2010) drew on German military surveying technology (Kaupert); the archaeological field research was done by Milchhöfer (Humphreys 2008; Lohmann 2010*b*).

⁴¹ Smithson 1974 is very useful on the turn-of-century interest in 'Dipylon vases' and the difficulty of reconstructing the details of excavations carried out in this period. Dörpfeld's 1897 excavation on the north slope of the Areiopagos also encountered post-Geometric ('probably Archaic') graves, in which neither he nor Smithson was interested. Note that in the 1890s finds went by law to the owner of the land on which they were excavated (Droop 1906); see also Stroszeck 1999 on unpublished records from Brückner's early work in the Kerameikos.

n. 97). Most were seventh century in date, and this stimulated interest in Proto-Attic pottery.

The study of pottery chronology was gradually developing its own dynamic (R. M. Cook 1960), and this had an impact on methods of tomb excavation: it was recognized that undisturbed graves represented closed groups useful for establishing chronological links between contemporary styles, while the superimposition of later graves on earlier had diachronic implications.⁴² Since from the late Geometric period it had increasingly become the custom to bury neonates and small children in pots, child burials became of interest to archaeologists if there were grave-goods.⁴³

By the outbreak of the First World War the German Archaeological Institute had begun systematic excavations in the Kerameikos, while the Greek Archaeological Association remained responsible for the rest of Athens and Attika. It was widely recognized that museums and private collectors were eager to acquire sculpture and painted pottery, and antique hunters were digging busily.⁴⁴ Archaeologists still directed their attention primarily, in the countryside, to sites where they hoped to find sculpture (hence the interest in mounds), but were also more aware of chronological problems, and more likely to record some details of burial customs: forms of tomb other than simple pits or pot burials, such as cists or tile-covered graves; orientation of the tomb and of the head of the corpse; evidence interpreted as indicating commemorative offerings (pyres).⁴⁵

Even in the inter-war period much still went unnoticed, unrecorded, or unpublished.⁴⁶ The first analyses of skeletal material (from graves in the Agora and Kerameikos) were published only in 1939.⁴⁷ When Rodney Young (1942) re-examined material from Pelekides' cemetery excavation (1916) in Old Phaleron, he could only reconstruct from excavation notes and museum labels 26 of

⁴² Cf. Burrows and Ure 1908, 227 (Rhitsona) on the importance of comprehensive recording; Bosanquet 1899, 169–70; N. Momigliano 1999, ch. 2, on Duncan Mackenzie's work at Melos in 1896.

⁴³ Cf. below, at nn. 75–78. Earlier excavators had noted the contents of sarcophagi: see Lusieri 1813 in Walpole 1818, and early reports republished in *ARMA*.

⁴⁴ Cf. Venezis 1939 for a story set in Anavyssos in 1923. The material published by Buchholz (1963) from tombs in the Keratea area was all in private collections, and much more had gone overseas to museums (ch. 11 n. 16, 27 n. 53).

⁴⁵ The interest in orientation was due to Christian ideas, reinforced by Plut. *Sol.* 10 on the difference between Athenian and Megarian practice.

⁴⁶ Note the references in Whitley 1991, 88 to unpublished SM graves in the Agora.

⁴⁷ R. S. Young 1939, Breiting 1939 (cf. Whitley 1991, 64–5; on Young in the war, Lalaki 2013). The samples were small, and re-studies have shown some analyses from this period to be unreliable (*AR* 2001–2, 48, Pylos). Greece has only recently begun to catch up with other areas in the frequency and sophistication of bone analyses (compare I. Morris 1992 ch. 3, Carter a. o. 1998), though see Baziotopoulou-Valavane 2002, Mark Rose 2000, n. 73 below. Most attributions of gender are still based on grave-goods with no skeletal check; see Strøm 1998, Carter a. o. 1998 for assessments of the reliability of this procedure; Sofaer 2006.

the 87 graves dug, all but one of these being child burials in pots. Pelekides also found 18 pyres, but was not clear whether these were burials or not.⁴⁸ Subgeometric pottery was of no interest to collectors and was not much noticed by excavators.⁴⁹

Most of the development that took place in Athens, Piraeus, and (to a lesser extent) rural Attika during the first half of the twentieth century—which apart from industrialization, road and rail construction, drains, electricity, etc. included the resettlement of a high proportion of the two million refugees who arrived from Anatolia in 1923—was more likely to result in unnoticed destruction or increased supply to the antiques market than in archaeological publication.⁵⁰

Since I shall also be discussing the evidence for rural sanctuaries and dedication (ch. 12), I note here that changes in archaeologists' interests followed a more or less parallel course in that field, beginning with work on temple remains at Rhamnous, Eleusis, and Sounion, followed by excavation in search of sculpture. Much of the votive material from early excavations has never been fully published, and archaeologists became interested in dedication as a social practice only in the 1980s–1990s.⁵¹

Since the 1950s standards of salvage excavation and control over illegal excavations have improved;⁵² on the other hand, the increasing pace of development has meant that the Greek Archaeological Service is under relentless pressure,

⁴⁸ Cf. below, at n. 77–8, on Phaleron as a 'child cemetery'. Mersch (1996, cat. no. 50. 2) reconstructs 55 grave groups, with a larger proportion of adults. Mazarakis Ainian 1996 notes that is still sometimes difficult to decide whether pyre remains represent a burial or associated offerings (but the small pyres found in residential areas, once identified as child burials, are now considered to derive from non-funerary votive practices: see *City* 2000, 92–103; Rotroff 2013).

⁴⁹ Cf. R. G. Osborne 1989; Whitley 1994*a*, Table 3.2, 50% of Kerameikos graves assigned to the 7th c. had no grave-goods (cf. below, n. 87); *AR* 2003–4, 1 (Whitley) on the production by art-historical interest of 'gaps' in data. On the supposed 'gap' in 7th c. burials see also Polignac 1995, 84–8; D'Onofrio 1997. *AD* 56–59 B 1 [2010] 370–1 reports a burial area at Phoinikia, 'opposite the Kroisos mound' (see n. 9) used from LG to the mid 4th c.

⁵⁰ See (e.g.) the complaints of Keramopoulos 1919 and Philadelphus 1921 about tomb-robbers.

⁵¹ On the history of exploration at Rhamnous see Petrakos 1999; votive material other than sculpture and inscriptions has not been systematically studied or published either for Rhamnous or for Eleusis and Brauron (early Brauron terracottas, Mitsopoulos-Leon 2009). Material from the peak sanctuaries of Hymettos and Lathourea, and the sanctuary of Artemis Mounichia, all excavated before WW2, is known only from later studies (Langdon 1976; Lauter 1985*a*; Mazarakis Ainian 1994; Palaiokrassa 1983, 1991), while the first instalment of that from the urban sanctuary of Nymphe was published only in 1997 (Papadopoulou-Kanellopoulou, with ead. 2005), and a peak sanctuary on Parnes (Polignac 1995; D'Onofrio 1997) remains unpublished. Only sculpture has been published from the sanctuary of Herakles Pankrates near the Lykeion (Vikela 1994). On the temple of Artemis at Halai Araphenides see now Sparake and Stathe 2013, Kalogeropoulos 2010, 2013. On the late date of interest in dedications as evidence for religious practice (rather than art history) see Polignac 1996; Catherine Morgan's work has been especially influential for the archaic period.

⁵² However, illegal excavation continues (e.g. *AD* 52 B 1, 1997 [2002], 86–7, Phoinikia), though some finds are now confiscated after their context has been destroyed.

and most of its excavations are ‘published’ (if at all) only in brief notices in *Archaiologikon Deltion* and/or the media.⁵³ The catalogue of the exhibition of finds from the Athens Metro excavations (*City 2000*), though representing only a small selection of the material recovered, constitutes from the point of view of funerary data a major advance on the normal situation from the point of view both of excavation size⁵⁴ and of information published (of course it is no substitute for full publication).

The problems are intellectual as well as economic. As Matthaiou (1988*a*, 1988*b*) has forcibly pointed out, there is at present no centre of research or forum for common discussion among the archaeologists, epigraphists, and historians concerned with Athens; no archaeological research plan for the city,⁵⁵ no systematic mapping of finds, the probable extension of burial areas, etc.; no publication policy, beyond the obligation to produce minimal preliminary reports;⁵⁶ no critical thought about the type of training needed by archaeologists working in the Service,⁵⁷ or about provision of storage and conservation facilities. The result is that the constant process of selection in recording and (minimally) publishing excavations is often carried out by archaeologists who are not reflecting critically on the questions implied in their practice and have little or no exposure to the problematics of interpretation. They are not asking themselves why they regularly record percentages of tomb types (without correlating them with period, age of the dead, or any other variable), why they regularly note the direction of the head in inhumations (but not, if it is on its side, which way it

⁵³ Chronicles compiled by the foreign archaeological schools, published in *BCH*, *AR*, and (less frequently) *AJA*, summarize or occasionally supplement those publications (H.-R. Goette’s exceptional knowledge of developments in the Attic countryside will be much missed by historians of Attika). *Ergon* and *PAAH* publish only the excavations of the Archaeological Association, not those of the ephorates.

⁵⁴ Most salvage excavation areas are extremely small; see e.g. Alexandre 1968 for a typical example of a pipeline excavation. This is why so many ‘cemeteries’ contain only a few excavated tombs. Preliminary publication of Olympics-related excavations at Merenda (Myrrhinous, see ch. 25 at n. 44), Kakavogianne 2003. *Mes.-Arg.* 47–204 has several more reports, no cross-referencing, one plan, hardly legible even with a magnifying glass. See also Vivliodetes 2007.

⁵⁵ Note Gallis 1982 on the importance of systematic observation as opposed to reliance on chance discoveries.

⁵⁶ In the 1960s preliminary reports in the revived *AD* used to promise that the materials would be studied and fully published, but even this gesture is no longer made. While we must sympathize with the Archaeological Service over the burden it bears, a form of ‘salvage’ in which most of the information retrieved never reaches the public domain scarcely deserves the name. More effective procedures for rapidly making excavation notes and finds available to researchers, better cooperation with those in Greece and elsewhere who train graduate archaeologists, and more collaboration with archaeologists outside the service, should surely be considered. While additional resources were provided for salvage excavations in the areas affected by work on the Athens Metro and the facilities for the 2004 Olympic Games, I am not aware of any provision for full publication.

⁵⁷ For example, whether archaeologists excavating in areas with classical tombs should be trained to read and publish simple inscriptions.

faces⁵⁸), why they record the type of tile used to cover graves but not the dimensions of the skeletons . . . Still less are they asking themselves whether a grave is a closed ceramic deposit or the residue of historically changing and socially inflected funerary practices. There is far too little recognition that change in archaeological techniques implies changes in questions and problematics.⁵⁹

If the concept 'grave' should be subjected to critical examination, 'cemetery' is even more problematic (cf. C. B. Patterson 2006*c*). An unfortunate side effect of the concentration of systematic excavation on the Kerameikos archaeological site since the early twentieth century has been a tendency to reify its borders, which do not coincide with a gap in burial materials in any direction except (after the 470s) that of the Themistoklean walls.⁶⁰ The 'archaeological' Kerameikos does not include the area(s) where those who fell in battle were buried, and it covers rather little of the Sacred Way and even less of the road to the Academy, both of which are attested as privileged burial locations. Thus major sectors of even this urban burying ground, as well as the similar areas along the other roads leading out of the city, are known only from inadequately published old excavations, or salvage digs.⁶¹

Outside Athens, we have some idea of the classical tomb enclosures that lined the road from the fortress of Rhamnous to the temples, and on along the route leading thence to other parts of Attika;⁶² a substantial burial area west of the sanctuary of Eleusis was excavated and published by Mylonas;⁶³ but the burial patterns

⁵⁸ At Metaponto (Carter a. o. 1998, which should be required reading for all archaeologists excavating burials) direction of the face seemed more significant than orientation of the body.

⁵⁹ There is more concern with new questions in work on rural settlement sites, a field in which there has been more interaction between archaeologists and historians; salvage excavation began much more recently (cf. Steinhauer 1994*a*) and was influenced from the start by historians, while the sites rarely delivered 'art' objects.

⁶⁰ The excavations for the (abandoned) Kerameikos station of the Athens Metro found part of the NW limit of the burial area (between the Sacred Way and Peiraia St.), the absence of graves being due to ground water (*City* 2000). On burials before 470 inside the line of the Themistoklean wall see below, n. 68. The 'cemetery'—like other burial areas round the city—stretched along the roads leading outwards.

⁶¹ Papadopoulos 1993 complains that historians rely too much on the Kerameikos excavations, but in the current state of the data historians have little choice; I prefer to stress that the Kerameikos material creates an illusion that we have a firm basis for historical conclusions. For excavations along the Sacred Way see e.g. Stoupa 2000, and *City* 2000 on the Iakchou shaft; for the Academy road, Stroszeck 1999, and *AD* 52 B 1, 1997 (2002), 52–6 with Mark Rose 2000, on a site claimed to be that of 'the Demosion Sema' (but see Humphreys forthcoming *c* n. 40). Skilardi 1975 is an unusually thorough publication of classical graves excavated near the northernmost of the Long Walls linking Athens and Piraeus, but the site had been seriously disturbed by mechanical excavators before archaeological work began.

⁶² Petrakos 1999; much more attention has been paid to monuments and inscriptions (ch. 11 n. 25) than to graves.

⁶³ Mylonas 1975; the excavation did not reach the edge of the burial area, though such edges are reported from salvage digs elsewhere in the town (*AD* 43 B 1, 1988, 43–6; 47 B 1, 1992, 32–42 no. 4). It would be useful to have a comprehensive overview (and map) of burial excavations here.

of other Attic towns and smaller centres are very inadequately documented, and several major excavations remain unpublished.⁶⁴ Ironically, one of the better publications records private excavations carried out intermittently since 1947 by the owner of the surviving core of a large *çiftlik* based on Trachones.⁶⁵

If we attempt to measure rates of information loss during the last two centuries, the results are not encouraging. On the positive side, archaeologists are now much less prone to discard ceramic, stone, glass, or metal materials from periods in which they are not interested, and illegal excavators have perhaps become somewhat less active, although they certainly have not disappeared. On the other hand, there is still very little interest in non-artefactual evidence, while the increasing speed of development means that any drop in illegal excavations is counterbalanced by a huge rise in the quantity of officially legal but inadequately thought out and published salvage excavations. Comparison of the reports in the publications of the Greek Archaeological Association and the Service from the 1890s to the Second World War with those of the postwar period suggests to me that the ratio of excavated published information to excavated material has worsened. At the very least, it must be recognized both that early excavation records, however limited the excavators' interests, may preserve valuable information (see e.g. Crielaard 2007; Mazarakis-Ainian and Alexandridou 2011; Alexandridou 2012*a*, 2012*b*) and that a policy of safeguarding the archaeological patrimony without considering standards of training and publication is extremely problematic.

In these circumstances, historical conclusions inevitably rely heavily on arguments from silence. In my view we need more and better questions, and more experimentation with alternative models⁶⁶ and their methodological implications, rather than premature theories which may harden into dogma. The two scholars who have done most recently to criticize the assumptions underlying modern

⁶⁴ See Bergemann 1997 for a list of known rural periboloi; Mersch 1996 for burial areas in Attika. Lack of publication at the time of excavation is particularly frustrating in the case of the 'north cemetery' at Vari (the vases published in Papaspyride-Karouzou 1963 came from illegal excavations and not from the follow-up investigation; data from the excavation notebooks published in Alexandridou 2012*a*, 2012*b* do not solve all problems) and Papademetriou's excavations at Merenda (on the absence of records see *Mes.-Arg.* 73, n. 124; Xagorari-Gleissner 2005).

⁶⁵ Geroulanos 1973; only the Geometric graves were published, although there was other material. For the Trachones estate see Eliot 1962; ch. 23 n. 5. Cf. n. 44 above on illegal excavations in the Kephale area.

⁶⁶ I disagree here with Sourvinou-Inwood's discussion of the role of models (1995, Appendix)—though not with her practice. Explicit, clearly formulated models are more useful than the implicit, unexamined models underlying apparently empirical observation, because they promote argument over the relationships postulated (Max Weber 1904, 1906, 1917 on ideal types still provides the best statement on the role of models in the social and historical sciences). However, models are only heuristic tools, useful (as long as the assumptions on which they are based remain current) for exposing gaps in our data and orientating future research.

approaches to funerary data both seem to me, despite the value of their work, too eager to promote a single explanatory model rather than trying to refine our research questions.

Christiane Sourvinou-Inwood (1981, cf. 1995) suggested reading the funerary evidence from ancient Greece in terms of Ariès' model (1977) of a shift from 'familiar death' to a greater distanciation. Ariès' model is itself problematic, as a typical example of the modern western tendency to contrast *Gemeinschaft* and *Gesellschaft*, tradition and modern alienation; and the phenomena singled out by Sourvinou-Inwood, especially the move to extra-urban burial and (for men) a more self-controlled style of mourning, are also problematic. Whether the drop in the number of burials in the Athenian Agora after c.700 can be interpreted as evidence for a reluctance to bury the dead in close proximity to residential areas is still very much open to question. One Agora burial area remained in use until the end of the sixth century, and it is a *petitio principii* in this context to claim that it must have belonged to a special family group;⁶⁷ some of the early excavations on the north slope of the Areopagus uncovered but did not publish 'probably archaic' material.⁶⁸ Moreover, even if after c.700 there was a growing preference for burial in areas more closely associated in Athenians' minds with the dead, this might have more to do with conceptions of the prestigious funeral (see below at section 'Funerals, monuments, and the rise of the polis') than with repugnance. Those whose work required clay and water continued to site their workshops, in which most of them presumably also lived, in close proximity to burying grounds; indeed, 'Kerameikos' means 'the potter's quarter', not 'the necropolis'.⁶⁹ Ideas about pollution in relation to death developed only

⁶⁷ R. S. Young 1951, cf. *Agora XIV*; most of the burials were 6th c. There are still areas in the Agora where the excavations have not yet reached or are only now reaching pre-classical levels. See also Papadopoulos 2003; C. B. Patterson 2006*b*, 2006*c* on 'extramural' burial before Athens was walled.

⁶⁸ Smithson 1974. We know very little about other parts of the city, although the excavations for the Makryianni station of the Athens Metro did not uncover any graves (*City* 2000). The situation in the area of the Themistoklean wall, on the Kerameikos side of the city, is unclear; Knigge 1983 claimed to have found a grave peribolos and mound of the early 5th c. beneath the wall, but the evidence is scarcely conclusive (see now Stewart 2008, 583–4), and in any case the line of any earlier wall in this area, if it existed (Weir 1995, Papadopoulos 2008), is unknown. *AA* 2006. 2, 164 is unhelpful. Three cremations in bronze cauldrons, of c.680, were found under the wall (*Kerameikos* VI.1 gr. 62, Anlage LXII); this might have been an especially prestigious burial near an entrance to the city, like the Eretrian 'heroon' of the same period, but the Eretrian case is itself not entirely clear (cf. Crielaard 1998). Cf. also *Agora XXXV* 1–2 on possible 6th c. burials in the Agora area.

⁶⁹ On workshop siting see Papadopoulos 1996, 2003; Monaco 2000, 2012; *City* 2000, 128–31; Eschbach 2014 for Athens (cf. Humphreys forthcoming *c*, n. 46); Papadopoulos 1994 and Fischer-Hansen 2000 for comparative data. Archaeologists have only recently become interested in this topic, and little has been done on precise chronological and spatial relations between workshops and graves. Cf. Bodel 2000 on 'potters' fields'.

slowly, as did beliefs that some categories of the dead were dissatisfied and therefore dangerous.⁷⁰

The development in images of mourning practices is double: more detachment and composure for men, at least in public, but wilder grief and closer contact for women. The prothesis of the corpse seems to function here as a site for the construction of gender difference, chosen because of the prominence of funerals in cultural experience. If Ariès' model of 'familiar death' is relevant at all here, the contrast would be 'heightened death', a more conscious acting out of loss, grief, and the end of a life. Men's restraint acquires its meaning by contrast with women's grief.⁷¹

Ian Morris's work has been very important in reminding historians that funerary practices are selective, and therefore burials cannot be used as evidence for demography.⁷² However, it is important to distinguish between funerals socially 'seen' by contemporaries and funerary material that has been noticed, recorded, and published by archaeologists. Archaeologists cannot see everything that an ancient participant in a conspicuous funeral would have seen; on the other hand, they may also 'see' burials that were inconspicuous to contemporaries, such as child burials in pots, or methods of informal disposal such as the accumulation of children's and dogs' skeletons found in a Hellenistic well in the Agora.⁷³ Morris's

⁷⁰ For a historical approach to ideas about pollution see Humphreys 1991, 30–1, 37–8. Evidence that burial areas were regarded as polluting for ordinary people, or sinister, and that particular categories of dead were considered 'restless' and thus dangerous, increases over time (Parker 1983; S. I. Johnston 1999), and it should not be assumed without question that such beliefs are 'primitive'. Cf. below at nn. 126–7, on the Tritopatores. Most Athenians' experience of graves (other than those of personal acquaintances) would be as roadside structures in areas near settlements. The image of the Kerameikos as a site of dubious activities (gambling, prostitution, etc.: see *Agora III*, pp. 222–3) may have developed only in the classical period.

⁷¹ On mourning see Van Wees 1998*a*. In modern Europe too there was perhaps an increased focus of interest on the deathbed in the 19th c., after the move to extramural burial, before the distancing of the 20th c.

⁷² I. Morris 1987 focuses on age, but at Metaponto there was also gender imbalance (J. C. Carter a. o. 1998). For comparative data see also Houby-Nielsen 1995; Scheidel 2003; Gowland 2006; Sofaer 2006. The extreme case is Sparta, where almost no burials can be dated between c.700 and 200 BCE (Hodkinson 2000, ch. 8; but see Themom and Zavrou 2010); cf. Cornell 1995, 106–8, on the absence of graves datable between c.580 and the 4th c. in Rome, which does not necessarily imply that there were no imposing funerals.

⁷³ Lagia 2007; Liston and Rotroff 2013 (pottery, *Agora XXXIII*): at least 449 infants and children, mainly newborns or full-term foetuses, and at least 150 dogs. Liston and Rotroff argue convincingly against the interpretation of the human bones as a ritual deposit (e.g. Osanna 1989, followed by N. D. Robertson 2005, 91), but are inclined still to connect the dog bones with ritual, despite evidence of injuries and malnutrition (so also Roy 2007; Trantalidou 2013, Eretria). They suggest that the non-infant bones may have been in the lowest levels. The idea that it was midwives who disposed of neonates seems unnecessary (household slaves?). A considered argument for ritual deposit of infant and animal bones (Roman Britain) in E. Scott 1991; see also ch. 6 in Lambrick and Allen 2004; M. Maltby 2010. Archaeologists have only fairly recently begun to 'see' dog skeletons (cf. n. 81), and I am not sure when

attempt to draw sociological conclusions from variations over time in the ‘visibility’ of child burials and their proximity to or separation from those of adults is thus open to criticism.⁷⁴ I want to make three points here. First, the ‘visibility’ to archaeologists of child burials was radically altered by the introduction (in the later eighth century⁷⁵) of pot burials. Second, the evidence for the burial of children⁷⁶ in separate burying areas requires closer evaluation. Third, we need a processual analysis of the distribution of adult and child burials, based on fine-grained chronology.

Because children’s bones are relatively soft and can therefore disintegrate easily in the ground, child burials without grave-goods may well pass unnoticed, while a cluster of grave-goods may not always be recognized as such. On the other hand, as I have shown, when archaeologists became interested in pottery chronology child burials in pots, if the pot also contained grave-goods, became more visible than other burials. As we have seen, in the area at Old Phaleron

they began routinely to record bones in wells; Little and Papadopoulos 1998 for an EG II adult well burial; Lawall 2000, 70, animal bones in Agora well Q 15. 2. Cf. I. Morris 1987, 107f.; Lindenlauf 2001, on other evidence for informal disposal of corpses; Pakkanen 2011 (Kalaureia); ch. 11 n. 6. Dog burials (not casual disposal) *AR* 2004–5 47, 89 (Hellenist.), 98; Diggle 2004, 409–11; Roy 2007, 349; Versnel 2011, 493.

⁷⁴ Morris’s book has given rise to fruitful discussions on methodology: see especially Köberle and Rohweder 1992; Papadopoulos 1993; Polignac 1995; Kistler 1998; Bergemann 1999; C. B. Patterson 2006c. Morris 1998 replies to some of his critics, but he is reluctant to consider how the data were shaped by selectivity in excavation and publication.

⁷⁵ I do not know of any study devoted to the history of child burials in ancient Greece (Lagia 2007 makes useful points, see also Blandin 2007; Vlachou 2007; the École Française conferences published by Guimier-Sorbets and Morizot 2010, Hermay and Dubois 2012, do not fill the gap; Carroll 2012 for Rome), but it seems that in Attika the shift from (secondary) cremation and urn burial for adults to inhumation was accompanied by an increase in the practice of interring small children in amphoras and similar vases (cf. Mylonas 1975 II; Haentjens 1999). In the same period (late 8th c.) there are also some cases of adult cremation in which bronze mixing bowls (lebetes) are used as urns: in Attika, Dipylon grave 3 (dated MG II–LG I by Whitley 1991a; *MDAI(A)* 1893, 104f.); Pnyx (in a tripod: *MDAI(A)* 1893, 414f.); Kerameikos graves 6, 58, 71, and 72; Kriezī St. graves 45 and 67 (*AD* 22 B 1, 1967, 92–6); Kifissia, Skilardi 2013, 204; Anavyssos 73/I; Vari South Necropolis grave 38; Merenda graves 23 and 27; Old Phaleron grave 14 (for publications of rural burials see Mersch 1996). Cf. also Kerameikos Rundbau Rb 13a, early 7th c. (*Kerameikos XII*), and 3 fragments from fills (M 132, S 205, S 206). For later use of bronze (and clay) vessels as urns see ch 11 n. 4. In *Iliad* 23. 243 Patroklos’ bones are to be put in a golden phiale; bronze cups are sometimes used as lids for amphora-urns in Attika, but perhaps the term was also used for a large high-sided cup.

⁷⁶ The category ‘child’ also needs scrutiny. The 5th c. grave relief of an adolescent holding a strigil, and an associated tombstone, from the Kerameikos, were published under the title ‘Zwei klassische Kindergräber’ (Vierneisel-Schlörb 1964), but archaic epitaphs and monuments strongly suggest that the death of an adolescent near the age of puberty was culturally a very different event from the death of a small child: see Beaumont 2012, 2013. Small children are under-represented in tomb monuments in both the archaic and the classical period (cf. Lagia 2007; Houby-Nielsen 1995 for other societies), but adolescents are not.

cited by Morris as a ‘child cemetery’⁷⁷ Pelekides (1916) excavated 87 graves, but R. S. Young (1942), working from the excavation report and from labelled material in store, could only reconstruct 26 closed groups, of which all but one were child pot burials. The impression of a preponderance of children is thus due largely to Young’s interest in chronology. Pelekides’ report gives almost equal numbers of adult and child burials.⁷⁸ In section Γ of the Eleusis West Cemetery there were nine child burials, four adults (one, Γ 16, quite rich) and perhaps some further undated cremations.⁷⁹ In trying to understand differences in the way dead adults and dead children were treated, we must start from funerals. Rather than a clear-cut dichotomy, there is a continuum in the archaeological evidence running from the prestigious burial involving the use of fire and of valuable artefacts to represent the social persona and achievements of the dead to, at the extreme opposite end of the scale, the dumping of infant corpses in places used for other waste material.⁸⁰ In between, there is a wide range of material from the burials of less prestigious adults and of children. Such burials are presumably the residue of unambitious funerals in which only a small number of persons were involved; we should recognize the possibility that the task might be assigned to slaves (n. 73). While it is unlikely that there were formal restrictions on burial in particular areas, it seems quite possible that those involved in small-scale funerals would avoid sites currently associated with the most prestigious funerals. On the other hand, areas associated with the disposal of the dead were often preferred,⁸¹

⁷⁷ The term ‘child cemetery’ (still used by Houby-Nielsen 2000) has inappropriate associations (one is reminded of modern pet cemeteries), and Morris’ criteria are very loose: if the proportion of adult to child burials in an area is more than 3:2 it is an adult cemetery, if it is less than 2:3 it is a child cemetery (intermediate ratios are ‘balanced’: 1987, 58).

⁷⁸ Similar proportions in Killgrove 2016. Morris also cites Soteriades’ report of his excavations in the Vrana area (1934, see Mersch 1996, 230 no. 3), which elaborated on the sentimental significance of child burials; however, Soteriades also noted ‘pyres’, which he did not trouble to record (his main aim was to locate the Marathon Herakleion, on which see ch. 31 n. 45), and a ‘burning-place’ which had apparently been in use for a long time. ‘Pyres’ also in burial areas at Merenda (ch. 25 n. 44), with no information on contents.

⁷⁹ *AD* 52 B 1, 1997 (2002), 61 reports an area at Eleusis containing child burials of the 7th c. followed by a mixture of adult and child burials from the late Archaic and Classical periods (cf. also *AD* 44 B 1, 1989, 31–2); perhaps child graves on the margin of a burial area that subsequently expanded? See also Pologorge 2005.

⁸⁰ Cf. above, n. 73, and ch. 9 n. 10, on the difficulty of distinguishing between burial and exposure. Weinberg 2007 is a model example of a conceptually critical discussion of mortuary archaeology, beginning with funerals and continuing into post-disposal practices—but deals only with EH. On the problems of distinguishing formal deposits from dumping see A. M. Chadwick 2012; Thilderkrist 2013.

⁸¹ It is likely enough that low-prestige disposal of the dead continued in residential areas after prestigious funerals had moved to other locations. For possible slave burials near Lavreion see Salliora-Oikonomakou 1985. If low-prestige funerals took place at night, this may have given Solon the idea of restricting all funeral activity inside the city to the hours of darkness. Note Parlama 1998, 535, mass burial of 11 dogs among and above tile graves in an area of numerous, mainly poor graves; Crielaard 2007, infant burials in area previously used for prestigious ones (Eretria; cf. Blandin 2010).

and it was not uncommon for large archaic mounds covering a small number of prestigious burials to be later used for poorer graves.⁸² There are also areas in which child burials appear to cluster at the edges of areas used for adults.⁸³ We need to explore the possibility that the patterns in the data represent, rather than shifts in the attitude towards prestigious and non-prestigious funerals (between seclusion and integration), a more continuous manifestation of spatial and/or temporal hierarchy, in which the less prestigious burials always occupied more marginal spaces.⁸⁴

Morris (followed by e.g. Whitley 1994*a*) has also argued that while Athens had been in the forefront of polis development in the late eighth century there was a regression in the seventh century to a more conservative attitude, with a hardening of the boundaries of the elite, a drop in the proportion of deaths marked by conspicuous funerals, and less interest in developing ties with aristocrats from other cities by frequenting sanctuaries. Critical discussion both of the conception 'rise of the polis' and of the data is needed here. While the project of raising the date of the 'rise of the polis' may have had its uses in destabilizing models based too exclusively on a traditional type of constitutional history, it may be more helpful now to look for less reified conceptions of 'the polis' both in time and in space, i.e., to take more interest in processes of historical change and in the varying degrees of centralization observable in archaic and classical

⁸² See the mounds at Velanideza (Mersch 1996 no. 75. 1) and Petreza (ibid no. 77. 3), and Mound G and the Südthügel in the Kerameikos (Knigge 1988, 37; ead. 2006; Houby-Nielsen 1995). There were also later burials in classical periboloi (Stichel 1984, 1990; it is far from certain that burials after 338 in the 'Messenian peribolos', *Kerameikos XIV*, were Messenians), and apparently in a mass grave of plague victims, Baziotopoulou-Valavane 2002 (children). Cf. ch. 11 n. 6. In the South Necropolis at Thorikos (*Thorikos I*, 47–58) a rich adolescent burial c.700 (with a bronze cup) was followed by child burials; in the West Necropolis (*Thorikos III*, 31–56) children were buried in the ruins of a Geometric building, but there were adult burials nearby. Later child burials in mound at Diamantopoulou 10, *AD 56–59 B I* (2010), 209–10. The records from the N cemetery at Vari (Alexandridou 2012*a*, 2012*b*) are not clear on sequence, on which Houby-Nielsen 2000 is also weak. For similar data elsewhere in Greece see C. Morgan 2003, especially Platanos Almyrou Mound Γ.

⁸³ Eleusis West Cemetery areas E and H (Mylonas 1975; cf. *BCH* 1995, 861?); the material from Thorikos, known only from preliminary reports with little interpretation, might also be examined with these questions in mind. See also Mazarakis-Ainian 2011*b* (Marathon). Cf., from other parts of Greece, Vlavianou-Tsalike 1981, 27 graves, Archaic to late 5th c., of which at least 22 were child burials (19 pots, 3 small larnakes), in an area near the SW corner of the city wall of Eretria, apparently not near a gate or road, so presumably marginal; Vokotopoulou 1989, Moschonissiote 2010, Mende, 174 graves of which 10 at most were adult burials, on the beach—another marginal area (cf. Trakosopoulou 2005, Akanthos). A burial area on Astypalaia apparently used exclusively for child burials from LG to the Roman period may have been associated with worship of goddesses linked to childbirth (Hillson 2009; Michalake-Kollia 2010*a*, 2010*b*). The situation at Mitrou, *AR* 2004–5, 54–5, is less clear.

⁸⁴ J. C. Carter a. o. 1998 (I ch. 6) is a rare example of an excavation report that pays close attention to the sequence of graves within burial clusters.

Greek states.⁸⁵ Moreover, some of the key features we might associate with the Greek polis, such as the institutionalization of methods of power sharing (elective office, limited terms, and division of responsibilities among a number of office-holders) might well have been developed by an elite closing ranks against outsiders.⁸⁶

The data are in any case problematic. I have noted above that the Subgeometric pottery of the seventh century in Attika attracted little interest from either legal or clandestine excavators; it is not difficult to point to known burial areas from which Geometric material has been published, while evidence for later burials is mentioned only in passing. It will be some time before the statistics from thoroughly excavated and published sites change the balance between eighth and seventh century sites derived from looking at all publications since the 1890s.⁸⁷

THE ARCHAEOLOGICAL EVIDENCE

II. What is a funeral?

The discussion about comparative levels of wealth in votive and funerary material does at least invite us to take a broader view of the occasions on which valuable objects were ceremonially removed from the household: weddings, funerals, and rituals of dedication seem to be the main examples. All might involve processions and feasting, while in the case of dedications and (sometimes) funerals a permanent marker was left in commemoration. All were concerned with journeys: the last journey of the dead, the bride's journey to a new home, the expedition to a

⁸⁵ C. Morgan 2009. On the need for a more gradualist, generative approach see also Polignac 1995, J. K. Davies 1997, Hölkeskamp 2002; on interregional sanctuaries and their varied history, Ulf 1997; ch. 18 at nn. 6–7.

⁸⁶ Cf. Crielaard 1998, 2007. Cf. below, n. 134, on alternative interpretations of the decrease in rich female burials in the later 8th c. (cf. Houby-Nielsen 1992).

⁸⁷ See R. G. Osborne 1989, Mersch 1996 for notices of inadequately published 7th–6th c. burials in Attika; D'Onofrio 1997. At Merenda, for example, LG and Late Archaic/Classical tombs were excavated by Papademetriou (*Ergon* 1960) and Vavritsas (1970), but Papademetriou noted unexcavated archaic and Classical tombs and Vavritsas found Archaic sherds in a Hellenistic dump of necropolis material (sketchy publication of these and new excavations, ch. 25 n. 44). At Eleusis post-Geometric graves had been destroyed by erosion (Mylonas 1975). 7th c. material continues to accumulate; 4 early 7th c. tombs in the Kerameikos Metro station excavation, *City* 2000, 276ff.; 7th c. burials in the Psyre area (one with a 5m mound?), *AR* 2003–4, 5, from newspaper reports (no mound in *AD* 54 B1, 73–4); along the Sacred Way, Stoupa 2000 (no. 42 a secondary cremation with weapons and a PA marker); burial areas in continuous use from the Geometric through the Archaic and Classical periods (or longer) at Sounion, *AD* 52 B 1, 89 (only 3 LG tombs published), at Phoinikia, *ibid.* 86, at Kato Kifissia, *AR* 2002–3, 11, and at Elleniko, *AD* 56–59 B 1, 473–4.

sanctuary.⁸⁸ All might be occasions for strengthening alliances, even if only weddings had this as their primary purpose; all were occasions for the construction and display of status.

A city could not regulate men's gifts to the gods (except to ensure that regular sacrificial commitments were met), but Solon is said to have limited display of wealth in both bridal and funeral processions (ch. 1 n. 62). In both, items closely associated with personal identity might be displayed together with other material from the household's stores: jewellery and (for a male corpse) armour in the first category, textiles and other artefacts in the second. Participants in the procession will have been feasted in both cases. It is not clear whether the feast after a funeral usually took place beside the grave or at the heir's home, but the *Opferrinne* ritual (see below, n. 97) represented the dead symbolically as a host, and may have increased the resemblance between a funerary procession and an expedition to a sanctuary, where again the paraphernalia will have represented the wealthy worshipper as a man used to entertaining.⁸⁹

Against this background, let us try to read the archaeological data as evidence for funerals as processes. Where did the funeral take place? What happened at it? How long did it last? What kind of statements did it make about the dead person, his/her family and associates? What did it say about death? How did all these aspects of funerals change over time? Did they also vary from one part of Athens and Attika to another?⁹⁰

Archaeologists have all too often treated burial as a means of preserving artefacts rather than as a metaphor for the transformation of life into memory. Nevertheless, the basic categories of archaeology—destruction and preservation, object and representation, above and below ground—may be helpful in thinking about funerals.

We might start with fire, because that brings out the paradox of the enterprise. Like life, it is not directly visible to archaeologists, yet it was a central part of the experience of dealing with death, in Attika, from the eleventh to the seventh

⁸⁸ Cf. Redfield 2003*b*, 116; Sabetai 2014, 70. Men. *Dyskolos* uses the metaphor of travel to a distant sanctuary to represent the social isolation of Knemon. The measurement of distance varies with gender; cf. also below at n. 136 on adolescent dedications.

⁸⁹ Cf. Isocr. 16. 34, [Andoc.] 4. 29, Plut. *Alk.* 11, Athen. 3e, on the importance of cutting a dash at Panhellenic festivals. Was the *Opferrinne* material (n. 98) displayed at the prothesis before being taken to the grave? Evidence for the classical period for the perideipnon implies that it took place in the home of the dead after the funeral (n. 17 above; Men. *Aspis* 232f. is not conclusive, since there was no burial; 4th c. building near burial area at Merenda, possibly for common phratry festivals, *Mes.-Arg.* 72). If there was in early times a sacrifice at the funeral (Plut. *Solon* 21. 5–7; [Plato] *Minos* 315c, before the ekphora) it is not clear to whom it was made.

⁹⁰ Archaeologists now proclaim the importance of thinking about funerals (cf. also Polignac 1995, 11), but this has had only a limited effect on practice: for example, Scheid 2008 is still very much focused on graves and material remains. Cf. Baines 2013, 14 for ancient Egypt.

century. It is a metaphor both for life and for an ending, a focal point for attention and for pain.

As we have seen, the funerals described by Homer lasted for several days and had more than one climax: the peak of mourning, the pyre-building, procession, and burning, the collection of the bones for reinternment, and the funeral games. Athenian funerals too, until c.760, were 'secondary' cremations, in which the bones were collected and placed in an urn in the grave after the body had been burned elsewhere; unburnt grave-goods were set round the urn, but remains of the pyre, including further grave-goods, were also placed in the grave. This might suggest that the burning took place near the grave site.⁹¹ Some funerals took place in areas that already had an association with burial, but others were close to habitation sites. Men were mainly differentiated from women, as in life, by differences in the items carried on or about their person; status differences were also perpetuated in these items. Few children's graves have been found, but the distinction between cremating adults and inhuming children crystallized only slowly.

During the ninth century more elements of competition seemed to enter into this careful, unvarying, rather standardized ritual. More attention is paid to representing the persona of the dead: markers are placed over graves, both marker vases and urns being of different shapes for men and women; more high-value and more exotic items are placed in graves, and there is some standardization of the items used to represent wealth; there is also some experimentation with forms of burial in which funerary ritual is concentrated on the grave rather than being divided between pyre and grave. The use of markers might possibly be associated with a tendency for different groups to have their own burying areas, for each of which an especially elaborate funeral had provided a point of identification.⁹²

From c.760 the pace of change increases. Prestigious funerals in the city area more clearly shape their ritual as a linear progression from prothesis through procession to interment; inhumation becomes the dominant rite, and monumental vases set up as grave-markers depict both the prothesis and the funeral procession (normally without showing the corpse).⁹³ These vases also at least to some extent take over from grave-goods the function of representing the persona

⁹¹ Later disturbances in the Kerameikos, and the limited scope of excavations elsewhere, make it difficult to settle this point; a Neolithic *ustrinum* was identified in Thessaly (Gallis 1982).

⁹² See the very thoughtful discussion in Whitley 1991*a*. The assumption that burying groups, if they existed, were defined by kinship is not based on any reliable evidence. See below, n. 105.

⁹³ Van Wees 1998*a* envisages a procession round the bier at the prothesis, but he may be reading the images too literally, and there was surely a procession at the ekphora, although transport of the bier is not usually represented on vases, possibly because it would require a second representation of the corpse (ekphora replacing prothesis on NMA 803, amphora; 990, krater: Marwitz 1961, Whitley 1991*a* pls. 30, 33). For prothesis images see also Siurla-Theodoridou 1989; Brigger and Giovannini 2004; Manakidou 2006.

of the (male) deceased, with allusions to fighting, sea travel, and perhaps victories in games.⁹⁴ Prestigious burials seem to be more (though not exclusively) concentrated in the area west of the city from which roads led to Eleusis and the Academy—the latter too already a cult site in the eighth century.⁹⁵

The change to inhumation was rather rapidly followed by reintroduction of the use of fire, to burn offerings displayed over an offering trench beside the grave, which might contain either an inhumation or a primary cremation.⁹⁶ The use of gravemarkers became rarer, burials no longer contained weapons (cf. Van Wees 1998*b*), and the Opferrinne display represented the dead as a giver of feasts.⁹⁷ We should perhaps remain open to the possibility that these leading men entertained their peers in a public building (a *prytaneion* or *basileion*), or at sacrifices, rather than in a domestic context.⁹⁸ Although burning the dead over a pyre constructed inside a deep grave would have been more difficult than using a pyre built on flat ground, a number of reports note that the primary cremations

⁹⁴ Whitley (1991*a*) suggests that the large ‘Dipylon’ grave vases were specially commissioned, but his conception of the potters’ *modus operandi* is not clearly formulated. A display of large grave-markers might have been a matter of pride for the workshop responsible. Rombos 1988, studying LG II iconography, argues that as the use of motifs such as the warrior or chariot frieze became more conventional painters’ experiments in the use of high-status symbols developed aesthetic dimensions; buyers too may not have thought in strictly biographical terms. There are clear references to games on funerary vases in LG II and PA, but not necessarily to funeral games (cf. C. Morgan 1990, 205–12).

⁹⁵ Travlos 1971, s.v.: votive deposits of LG amphorae and jugs, and much ash from sacrifices (cf. R. Parker 1996, 33–4); Mazarakis-Ainian and Alexandridou 2011. New excavations, AD 55 B 1, 2000 (2009), 84–5 (no structures). Road: Lykourge 2009. The choice of a location outside the Melite gates, in Koile, for the burial of Kimon I and his horses (n. 110) should be seen as political and not (as in e.g. APF 8429 XVI) attributed to pre-existing property interests.

⁹⁶ Houby-Nielsen 1992 stresses that grave pits became larger, both for inhumations and for cremations (cf. I. Morris 1995, 66 and 71, on ‘outsize’ pit graves). Archaeologists’ terminology for cremations is not entirely consistent, some restricting the use of the term ‘secondary’ to urn burial, and some extending the term ‘primary’ to cases of cremation on the grave site before the grave was dug.

⁹⁷ See Kistler 1998, an important attempt to reconstruct the Opferrinne ritual processually; Alexandridou 2009, 2015; Houby-Nielsen 1996, especially the remarks on possible visual associations between Opferrinne and altars; Polignac 1996 on sacrifice. Note the archaic ‘offering table’ of Kakavogianne 2003, 31 fig. 3. Markers on Kistler K I 3 (Opferrinne β, associated with mound Q, 660s, krater), K I 5, K I 8 (both stone, c.640–625). Opferrinne and Opferstelle (offering places) continue or recur sporadically in the classical period: e.g. AD 56–59 B 1 (2010) 209–10, OR at Diamantopoulou 10; 212, OS with no related grave; Eliopoulos 2010, 86–7, shaft grave with OR, both covered by mound of small stones, Kynosarges, c.420s.

⁹⁸ The suggestion in Houby-Nielsen 1992 that the banqueting symbolism is linked to inheritance does not seem very persuasive (cf. Fehr 1996*b*). For public banqueting see LSAG 336–7, nos. 43–4 (cf. p. 72), dated c.575–550, from Sigeion, recording a gift of banqueting equipment for the prytaneion (krater, stand, strainer); also Haggis a. o. 2011, excavation of archaic public dining spaces at Azoria, E. Crete, with krater-stands (cf. Erickson 2010, 2011). Athens: Kavvadias and Matthaïou 2011; on Baurein-Rebillard 1998 see K. M. Lynch 2011.

of the late eighth and seventh centuries left very little bone;⁹⁹ this may suggest that more effort was made to use resinous or seasoned wood, although as yet hardly any research has tackled this question.¹⁰⁰

Conscious development of mound-heaping as an element in funerary ritual, with the size of the mound remaining as a permanent record of the number of men taking part in the funeral, may also be a phenomenon of the later eighth century. It seems to belong with the linear model and greater formalization of funerary ritual, providing its closure, and also with a growing tendency for prestigious burials to take place in areas reserved for the dead.¹⁰¹

This period of elaboration of funerals and changes in modes of disposal and commemoration is likely also to have been one of increased speculation about death and the claims of the dead, which will also have opened up ambiguities in attitudes and practices. Did the funeral represent the end of a life, or transform a living person into a presence beneath the earth? Could the dead, if left unburied or not honoured by an appropriate ritual, bear a grievance? Did they acquire some kind of rights over the earth in which they were buried? Did they expect continuing attention? Rather than being elements of age-old, unquestioning belief, these speculations seem to me to be characteristic of a period in which funerary practice is attracting heightened attention.¹⁰² In this perspective, the

⁹⁹ At Lefkandi (Musgrave 1980) graves contained only token amounts of bone, mostly pounded into small fragments (cf. Papadopoulos 2005, 384, Torone). In some, grave-goods were laid out as if for an inhumation. Possibly these practices were encouraged by the need to commemorate men who had died abroad or at sea; cf. Popham and Lemos 1995 on the grave (with bone) of a Lefkandi 'warrior-trader'. Boneless graves also at Koukos in Chalkidike (S. Sithonia), Snodgrass 1994. Cenotaph with model boat at Skala Oropou, Mazarakis-Ainian 1998, 30–2.

¹⁰⁰ Thorough consumption: e.g. *Kerameikos* VI 1, 83–5; Geroulanos 1973; Liston and Papadopoulos 2004. Note graves with air vents at Acharnai, *AD* 56–59 B 1 (2010), 426 (5th c.). In *Il.* 23. 110–26 the pyre (for secondary cremation) is said to be made of freshly cut oak logs. Young 1951 noted 'carbonized logs'; Stais 1890 reported remains of large logs at Vourva; *AD* 22 B 1, 1967, 79–83 reported 'large lumps' of wood; Stampolidis 1990 notes use of pine, cypress, and olive in Geometric-Archaic Crete; Rundbau gr. 8, second quarter 7th c., had remains of olive wood (*Kerameikos* XII); olive wood at Ag. Andreas Zouberi, *AD* 56–9 B 1, 384; Myson's representation of Kroisos' pyre, in the early 5th c. (BArch 202176) shows logs; Skilardi 1975 reports vine twigs from a classical cremation. More attention to ship-building in the later 8th c. (perhaps with the development of biremes, Wallinga 1993, ch. 3) might have stimulated interest in seasoned wood; I wonder also whether there was more use of charcoal at this date in domestic braziers, pottery kilns, and smiths' furnaces. There has been very little research on kilns until recently (above, n. 69; Baziotopoulou-Valavane 1994); Mazarakis-Ainian 1996 found olive pits perhaps stored for use as fuel. See also *Ktema* 2005; McKinley 2006; Vernet 1999 and Dufraisse 2006 for identification of charcoal sources, and research methods, in areas other than Greece; *Proceedings of International Meetings on Anthracology*, I (1991)—IV (2008, pub. 2013).

¹⁰¹ Some Opferrinne were partially covered by mounds (Kistler 1998). Any grave digging produces a small temporary mound; it is not clear when buriers began to bring in additional earth. See nn. 9, 107–8 on the large mounds of the archaic period.

¹⁰² Note Tarlow 1999, 103: 'beliefs about death are rarely coherent, consistent and orthodox'. There will have been cross-influence between experiments with new forms of funeral and grave and poets' descriptions.

increased archaeological visibility of children's graves in the late eighth century might be interpreted as a trickle-down effect of the increased salience of adult funerals, a growing tendency to think that some care should be exercised in dealing with any corpse. The use of pots as containers for infant burials seems to begin when their use as containers for the ashes from secondary burials ceases, as if the development of alternative methods of distinguishing adult graves had freed container-vases to serve as the graves of children.¹⁰³

What kind of appropriation of space was represented by this funerary practice? Interpretation is still haunted by the model of the 'family grave plot', in which members of a defined¹⁰⁴ kin group would bury their dead and commemorate them at regular intervals. Any trace of walls enclosing a burial area, any mounds into which later burials were cut, or cluster of graves in a regular pattern of orientation (especially if separated by a gap from other burials),¹⁰⁵ is taken as evidence for a family plot; any trace of activity in burial areas that cannot be directly related to funerals is taken as evidence for feasting at the graveside (cf. n. 89). More questions should be asked. Is a grave whose position is marked a piece of property? and if so, whose? Is the marker supposed to protect the rights of the dead? Homer refers only to memory; yet there seems to be some correspondence between the use of above-ground markers and the use of underground framing not normally visible to the living: stone slabs lining the tomb sides or covering it, tile covers, pots enclosing children's bodies or the bones of cremated adults. Seen in this context, the framing of graves by stones visible above ground might be an extension of the use of stones in cist graves, a means of protecting the dead from disturbance (or limiting their influence?) rather than a proclamation of the rights of heirs. Symmetrical placing of enclosed graves might be due to imitation and not evidence that their occupants were kin. It seems quite possible that increased emphasis on funerals had led some Athenians to feel that the dead should be left undisturbed.¹⁰⁶

¹⁰³ Cf. n. 75. In I. Morris' calculations (1987, fig. 22) the 8th c. peak in child burials is later than that of adult burials.

¹⁰⁴ The idea of the 'family tomb' of course goes back to antiquity: see e.g. Plut. *Kim.* 19. 5 and Marc. *Vit. Thuc.* 17, 32, 55 on the *Kimoneia mnēmata* (n. 110). Just how such groups would have been defined is often not specified by users of this model: cf. Humphreys 1987 (1993, 130–4); 1990b; Sourvinou-Inwood 1994b and Sørensen 2002 on I. Morris' 'lineage tombs' at Vroulia (1992). See also n. 92 above.

¹⁰⁵ See Carter a. o. 1998 for an attempt to check such assumptions by DNA analysis. Pologiorge 2009 no. 8 (ch. 29 n. 35) *may* be right to think that a stone found in Piraeus had originally stood with others on Salamis, but such groupings should not be taken for granted.

¹⁰⁶ In the Kerameikos *Plattenbau* (graves 51–63, c.730s, *Kerameikos* V 1, 17–19) slabs enclosing each grave or couple of graves were erected sequentially, sometimes disturbing earlier burials; the structure was not planned as a whole. Cf. underground walling of graves in plaster or (once) mudbrick, *AD* 56–59 B 1 (2010) 247–50 (Pythodorou 33); 375 (Kato Souli), 382, 384.

Instead of concentrating on the model which assumes that burial groupings must be based on kinship, and trying to refine the criteria for its application, we need to analyse the factors involved in grave grouping. Is it generated by funerals, or by concern for the context in which monuments will be seen? Does it express status competition between peers, or hierarchy? Is the context of a burial grouping (e.g. a large mound) consciously designed to accommodate further burials, or are such burials subsequently attached to the area independently (cf. Shepherd 1995)?

The Plattenbau burials (n. 106) seem to be funeral-orientated (it appears to be assumed that the slabs separating the graves did not remain visible), although presumably the close association of graves also expressed some social ties. The next grave grouping to be considered is the Kerameikos 'Rundbau'. Here, according to the excavators, a large mound eventually covered five burials, one equid (M. Schaefer 1999), dating from the late eighth to mid seventh century; the earliest may have antedated the mound, while two of the later burials were probably cut into it, one of these being a pony or donkey and the other a cremation (c.675–650).¹⁰⁷ Conditions on this site were highly problematic, with interference from earlier archaeological work as well as from later burials, and the theory that this was a burial mound used by the *genos* Kerykes from c.700 until the fifth century has little solid support.¹⁰⁸ While it may be of interest as the earliest large mound in the Kerameikos (even this is far from certain), the pattern of burials seems similar to that of other archaic mounds: an initial burial, its mound sometimes covering earlier monuments, followed by some subsequent burials cut into the mound (and adding to its height?), and further activity in later periods when the area had probably lost all specific associations (cf. n. 82).

Because excavators of mounds have assumed from the start that the mound was designed to hold the grouped burials of a kin group, basic questions about

¹⁰⁷ *Kerameikos* XII (Knigge 1980; ead. 2006). Rb 8, the cremation, is said to be cut into the reddish layer with Geometric sherds which may represent the original mound. Rb 13a, the richest burial, is not in the centre of the mound as reconstructed, and Knigge therefore takes Rb 6, the oldest burial (with 5, next to it, which had no grave-goods) as that originally covered by the mound.

¹⁰⁸ The argument depends on assuming (a) that the original mound was very large and therefore must have belonged to an important *genos*; (b) that continuity between the original 5 burials and further activity on the site in the early 5th century is provided by the 7th–6th c. cremations Rb 15, 15a–c, dated only by the form of their air vents and supposedly located in a 'terrace' (for which there is no stratigraphic evidence) attached to the mound; (c) that traces of a semicircular wall of c.470 enclosing the area on the side of the Eridanos and the Sacred Way belonged to a new, walled, circular mound constructed for Rb 2 or 3, in which further graves would then have been dug (Rb 4, 13, 14, and perhaps 1 and 7); and finally (d), that the monument of the 5th c. herald Anthemokritos, seen by Pausanias (1. 36. 3) 'on the right, soon after the Sacred Gate', stood on this site. Much of this argument is circular; it may be added that we have no evidence for the appropriation of burial areas by *genè* at any date (cf. Bourriot 1976), and that c.700 one might have expected the Kerykes to be conducting their funerals in Eleusis. Cf. Bourriot op. cit. for other sites once identified as *genos* burial grounds.

process have not been asked. We have evidence from much later periods that tombs could be designed to hold a series of burials (some have inscribed lists of those entitled to use the tomb¹⁰⁹), and it is also reasonable to assume that at least some classical periboloi were planned to hold a series of burials, but it may be rash to attribute this form of prospective design to the archaic mound, which was primarily evidence of the participation of many men in the earth piling at the funeral.¹¹⁰ One inscription of c.530–520 (*IG* i³ 1267) proclaims that the dead man, Pediarchos, ‘begins the *sēmata*’, but this need not imply a mound planned for further burials; it tells us only that to stand first in a group of tombs was a cause for pride, and that in such groups each grave would have its monument. This also seems to be the case in the Kerameikos when burials succeed each other rapidly in a confined space (cf. Humphreys 1983*a*/1993, 96–7 fig. 1). Whereas in the classical peribolos competing memorials were contained within a frame that proclaimed the unity of the group (which could often also be reconstructed from inscriptions), the relation between successive mounds and monuments on an archaic burial site (assertions of alliance? subordination? aggression?) could be read only because viewers had prior knowledge of the social context.¹¹¹ Because it has been assumed that a mound was an expression of property rights, excavators have not asked whether subsequent burials in an existing mound were covered by a new mound that altered the shape of its predecessor.¹¹²

Interpretations of archaic burial practices have been over-influenced by classical periboloi, modern cemeteries, and modern conceptions of property.¹¹³ Space

¹⁰⁹ See e.g. Heberdey and Kalinka 1896; Hermann and Polatkan 1969 (a will; part only, Strubbe 1997 no. 40), NW Lydia, 1st–2nd c. CE, only F, M, Z, ZD to be buried in tomb precinct of Diophantos (*progonos* here may be a stepson or son by an earlier union, cf. ch. 12 n. 90).

¹¹⁰ Mound piling: M/L 4, Kerkyra, late 7th c. (n. 10 above); cf. *CEG* 139, Troizen, late 6th c. (Humphreys 1983*a*/1993, 90; above at n. 9). The funeral c.527 of Kimon I (after violent death in suspicious circumstances, Hdt. 6. 103) with his 4 horses must have produced large mounds, known as *ta Kimoneia mnēmata*; on Polemon’s report that Thucydides was buried there see Luzzatto 1993; *FGH* IV A 3. 1026 F 87. The bronze horses of Ael. *VH* 9. 32 are probably imaginary. For the presumed location see map in Lalonde 2006*a*, 2006*b*.

¹¹¹ Archaic epitaphs give little information on relationships. See Humphreys 1980, and commentary on the enigmatic (to us) *IG* i³ 1229.

¹¹² This process can be traced in the Kerameikos (see Humphreys 1983*a*/1993, 96–7), but there is almost no information on the composition of mounds in the countryside. Use of mounds as stone-dumping sites in more recent periods may have complicated the picture. Recent reports of mounds (cf. n. 87): *AD* 56–59 B 1 (2010) 209–10, mound with Opferrinne at Diamantopoulou 10 (c. 430?); 243–5, mound 2.22-m high, 5.40-m diameter, surrounded by 9-course mudbrick wall, at Kalogerou Samouel/Psaromelingou, dated beginning of 5th c.; 2 pyres of c.450 dug into it.

¹¹³ *Agora* XIX 16–18 is typically uncritical. Tomb horoi giving the dimensions of the precinct are 4th or 3rd c. in date (*Kerameikos* III, nos 13–14; *Agora* XIX H 66–7, note also 454–6, H 68–9, perhaps 3 stones marking one tomb; *IG* ii² 2561–6, with Sauciuc 1912; 2567 prohibits sale; cf. *SEG* 58. 883/*BE* 2009, 403, Kos; *SEG* 60. 1949; Faraguna 2012*b*); this is also the period when states began to define their frontiers, and may be the date of horoi marking deme territory (ch. 22 n. 52). Mortgage horoi do not

may be appropriated and categorized without any material indication of its boundaries, by repeated performances of ritual which—as in the case of processions—leave no material residue, or by the erection of a single marker, a sign (*sēma*) that warns potential encroachers to keep their distance.¹¹⁴ As social groups have their conceptions of personal space, which is not physically marked, they may also have conceptions of the spatial rights of the dead (in both cases varying with social status). Moreover, while the appropriation of space by a high-status burial might initially serve to keep others at a distance, it would also exert an attraction. It marked the area as funerary and, at least in the short term, as prestigious; it might attract satellite burials from those who could claim some link (not necessarily of kinship; Houby-Nielsen 1995, followed by Ismard 2010, 52–4, suggests that the huge sixth century mound G and Südhügel in the Kerameikos belonged to hetaireiai) with the deceased; on a more practical level, a mound provided easy digging for low-status burials (cf. n. 82 above).

The evidence for walls surrounding groups of graves, before the sixth century, is also very problematic. There is no clear evidence for an early wall on the Rundbau site. Two small segments of wall were found near four PG graves at Nea Ionia (Smithson 1961), but the site was much disturbed by modern workings, the wall segments (interpreted by Smithson as terracing) were not stratigraphically dated, and the view that the graves were enclosed by a (partly) circular peribolos wall is very hypothetical. In the burial area near Agios Panteleimon at Anavyssos, used c.850–700, Themelis found a wall bordering LG graves, but he dated it only by this association; it abutted on a building used in the fourth century for storing beehives and other material, and Themelis' view that both wall and building must belong to the eighth century, and the building must have been used for funerary cult, is not backed by any evidence (Mersch 1996, 104–5). Two plots in the Agora in which burials continued to be made into the sixth century were excavated by R. S. Young: the Tholos plot (Young 1939) was separated by a retaining wall (with returns) from the adjacent road, but the rest of the area was enclosed only in the late sixth or early fifth century, the only two burials in the seventh and sixth centuries were of children, and the area was not respected by the builders of the Tholos enclosure wall c.460.¹¹⁵ The Arciopagos plot

provide measurements. Cf. the criticism of the concept of 'territory' in Malkin 1996. Private ownership in the Roman period, Harter-Uibopuu 2010.

¹¹⁴ Cf. Sourvinou-Inwood 1993; 1995, 434–5, on sacred space; Polignac 1998 on processions.

¹¹⁵ Most of the burials were 8th c. (MG II/LG I to LG II), the richest being of two girls c.19 (no. 9) and c.15 (no. 17). J. L. Angel's claim (1939) that the skeletons showed evidence of kinship is not reliable (cf. Whitley 1991a, 65; Liston and Papadopoulos 2004, 15). It certainly should not be assumed without stratigraphic evidence that walls apparently enclosing grouped archaic tombs were contemporary with them (cf. Humphreys 1990b, 267). Partial enclosure round G graves near G house at Herakleidou 40, AD 56–59 B 1 (2010), 214.

(Young 1951) contained 50 graves: one late 8th century, one 7th century, 206th century, and 28 containing no dateable material. It was enclosed by a wall in the 6th century, but we do not know whether the builders were responding to a long-standing tradition of burial on the site.¹¹⁶

The concept of the ‘family burial plot’ handed down among modern historians, in addition to resting on rather vague notions of lineal continuity, presupposed that descendants had an obligation to visit graves with commemorative offerings. There is, however, little textual or archaeological support for the latter assumption; texts show only that prospective archons were asked whether they had *éria*, ‘tombs’, and if so where, and that Solon’s laws on funerals prohibited visiting the tombs of others on any occasion other than a funeral.¹¹⁷ The question about *éria* probably derived from a period when it was a matter of pride for the office-holding class to mark tombs in a conspicuous way, but the plural form might suggest reference to one or more conspicuous individual monuments rather than a collective tomb. Solon’s law implies that ambitious men were inviting allies and followers to attend commemorative visits to tombs, but may refer to ninth-day and thirtieth-day rites (above, at nn. 17–20).

Archaeological evidence for the regular performance of commemorative rituals, now that the Opferrinne are taken to be part of the funeral ceremony,¹¹⁸ appears scarce and problematic. At least some Geometric marker vases had holes drilled in them, perhaps for libations, but Attic necropoleis do not seem to have contained any permanent structures that could be interpreted as offering platforms, and the pre-classical sites in the Kerameikos identified as ‘offering places’ are not clearly associated with graves.¹¹⁹

¹¹⁶ I. Morris (1987, 68) assumed that the undated graves were 6th c., and suggested that the ‘plot’ belonged to an important family such as the Peisistratidai, but the area was not ‘in the Agora’ for the Athenians, and the number and relative poverty of the graves makes this idea very implausible. R. S. Young (1951, 75–7) suggested that part of a 6th c. marble sarcophagus (re-used nearby) came from this plot, but stones often move (he had to assume that the rest of the sarcophagus was carried elsewhere).

¹¹⁷ *A.P.* 55. 3; *Plut. Sol.* 21. 5–7 (*allotria mnēmata*); cf. Bergemann 1999.

¹¹⁸ On the Opferrinne see now Kistler 1998 and n. 97 above; note that the representation of the dead as host in the Opferrinne ritual implies a stress on alliance rather than descent (as do the images of funeral processions on LG vases).

¹¹⁹ Archaeologists have not asked whether evidence for offerings at tombs comes from rituals associated with the funeral (including 9th and 30th day ceremonies) or indicates repeated commemoration over a long period. For stone offering-platforms on Naxos and at Asine see Antonaccio 1995. On the supposed ‘ritual building’ at Anavyssos see above, at n. 115–16. A brief report of piles of sherds near a burial area at Phoinikia, taken as evidence for funerary/commemorative dining (‘nekodeipnon’, *AD* 52 B 1, 1992 [2002], 86–7), provides no evidence on date; Carter a. o. 1998 take such piles as evidence for ‘respectful removal’ of burial material. We need stricter criteria for distinguishing the remains of commemorative meals (suggested e.g. *AD* 56–59 B 1, 2010, 371, Kalyvia Kiteza/Thorikou) from use of the periphery of burial areas for dumping, as perhaps *ibid.* 132, 251–3, 396–7, 426–7, 435, 467–8. In the Kerameikos, *Opferstelle* of the classical period are found directly above the grave and apparently derive from funeral rites carried out after it was filled; *Opferplatz a* was found with a primary cremation of c.680

Research in other areas of Greece makes it increasingly clear that there was much local variation as well as intra-regional change in norms, rather than (as once assumed) a uniform set of 'natural' or 'traditional' beliefs.¹²⁰ Norms changed in part because society was changing, but also because the dead, like the gods, were removed from everyday life, and this invited speculation about their powers, needs, or desires (Humphreys 2004).

The figure of the hero should be seen as part of this speculative activity. Attempts to trace beliefs and practices concerning heroes to a single cause are mistaken. We should think instead of a dialogic interaction between the impressive funerals, graves, and monuments of powerful contemporaries, speculation about the occupants and builders of conspicuous tombs and other constructions visible in the landscape or discovered by accident, and the elaboration by poets of tales about great men and great deeds of the past. The fit between present and past tombs, between the old dead under the earth and the named heroes of epic, was a loose one; eighth-century Greeks did not build themselves tholos tombs, worry about archaeological niceties such as the distinction between inhumation and cremation, try to attach a name to every hero's tomb at which they made offerings, or restrict their identification of sites linked with epic tales to tombs.¹²¹ But their conceptions of the past and of memory took on a dimension of material practice—monuments and poems made to last—which makes them visible to us, and made them more visible to contemporaries. Heroes (and heroines) became part of the theological and physical landscape, they were there to be investigated or discovered,¹²² to be incorporated into causal narratives of human history or the explanation of good or bad fortune. They might be incorporated into the pedigrees of individual aristocratic families or stand for the identity of residential

(Anlage IV), but otherwise there seems to be no clear evidence from the archaic period of the relation between tombs and such deposits. See also Soles 2001 on criteria for 'ancestor-worship'. OS later than classical burial, Stichel 1984.

¹²⁰ See e.g. I. Morris 1987, 1992. Morris 1995 raises the question of Greek awareness of such variation.

¹²¹ Most discussions have tended to look for a single 'origin' for the hero, which inevitably leads to discovering cases that do not fit. Better to think of the category as acquiring definition only gradually, and always embracing a spectrum of statuses from the deified Herakles to heroized historical figures and anonymous local powers. For recent discussions and further references see Lorenz 1996; Mazarakis Ainian 2004; N. D. Robertson 2010, esp. 95–6, 165; Parker 2011. Note also *Corinth* XX (2003) 252, heroön over a group of PG tombs apparently discovered c.600.

¹²² For offerings made at BA tombs in Attika in the 8th c. and later see Antonaccio 1995, Boehringer 2001. Mylonas' identification of the graves of the 'Seven against Thebes' at Eleusis (1975), on the basis of a LG wall in section A of the West Cemetery is very problematic, especially since there was some looting and reuse of graves in the area during the period of the wall's construction (Antonaccio, 112–17; Boehringer 63–4).

groups; many of them may have attracted interest only for a short time and have disappeared without leaving any trace in our sources.¹²³

The Tritopatores too should be regarded as the product of speculation about (i.a.) creation, procreation, the winds, and the dead of the past, and as having gradually acquired a somewhat clearer identity over the course of time. The name implied remoteness (see Taillardat 1995); they were always nameless, and usually plural.¹²⁴ In an early fourth-century text on purification rites from Kyrene they are distinct from the Akamantes (*Akamantia*), another generic term for the dead; the two groups were worshipped on the same occasion by the Marathonian Tetrapolis.¹²⁵ There was a Tritopatration in the Kerameikos necropolis at Athens, in the angle between the Sacred Way and a road that led further westward, in the direction of Piraeus. It was identified by markers, the earliest of which is dated c.500–480; in the later part of the fifth century further markers were set up, proclaiming it *abaton*, not to be entered, and it was walled in the early fourth century. No archaeological traces of votives earlier than the fifth century have been found, and assumptions that there must already have been a sanctuary there in the archaic period rest only on prejudice. It seems to me quite likely that the first marker was set up (presumably in the course of a sacrificial ritual) at the time of the re-use of grave monuments from the area in the Themistoklean wall (479), to guard against possible anger from the dead, and that there was more ritual activity, including the erection of horoi round the area, at the time of the plague, when it might have been feared that the unceremonious mass disposal of plague victims had angered them and/or the other dead in the area; the wall may be due

¹²³ See Antonaccio 1995; Mersch 1996, 64–7; Boehringer 2001, for archaeological evidence of hero-cult in Attika; Kearns 1989 for heroes of Attic corporate groups. Kephalos seems to have featured in the genealogy of the Kerykes (ch. 20 n. 81) as well as being a deme eponym. Sacrificial calendars have provided much information on heroes in rural demes, but it should not be assumed that all these cults were old or continuous. A hero could be ‘discovered’ at any date, and many may soon have been forgotten, until perhaps a crisis (and, in some cases, compilation of a written calendar) stimulated renewed attention. Cf. Humphreys 2004, ch. 4; Mazarakis Ainian 2004, 135–8.

¹²⁴ See especially Jameson a.o. 1993, 107–114; Georgoudi 2001; Gagné 2007 (probably underestimating variation in rites and understandings of them). Important discussion in N. D. Robertson 2010, though I do not agree with his view that they originated in Attika. Antonaccio’s attempt to link the term to three-generation lineage memory (1995) seems to me mistaken. The singular use of the term by the Pyrrhakidai on Delos, c.400 (*ID* 1 66; ch. 20 n. 82), must be derivative. Local sacrifices in Attika (Marathon Tetrapolis *SEG* 50. 168, Erchia *LS* 18) may be earlier than the Kerameikos enclosure. City sacrifice, *SEG* 57. 64 B 12.

¹²⁵ Jameson a. o. 1993, 110–11. In the Kyrene regulations (*SEG* 50. 1638, 57. 2000) there seems to be a distinction between the completely anonymous dead, whose tombs and offerings do not pollute, and a category of ‘recognized’ dead, who are polluting to the pure except in the case of Battos, the Tritopateres, and Onymastos the Delphian. Probably these all had specific precincts. (See also Dobias-Lalou 1997; Ali Mohamed a.o. 2007; N. D. Robertson 2010; Pirenne-Delforge 2011, 134–6).

to further anxieties after the end of the rule of the Thirty.¹²⁶ Similarly, at Selinous, a ritual text of the mid-fifth-century prescribing offerings to be made (i.a.) to ‘polluted’ and ‘pure’ Tritopatores may have been set up after a period of civil war. We should not expect too much precision; the drafters of the text may not have asked themselves whether *miaroi* Tritopatores were polluted or polluting, nor whether there was a wholesale transformation through the ritual of *miaroi* Tritopatores into pure ones. It would be enough that there were fears that at least some of them had been stirred up into a dangerous state; possible ill-will had to be averted, and then a further offering would be made, in a more optimistic spirit, to reinforce whatever positive aspects were present in the situation.¹²⁷

FUNERALS, MONUMENTS, AND THE ‘RISE OF THE POLIS’

What do we mean by ‘the rise of the polis’? I take it to be a process of formalization and systematization of roles and procedures which in turn stimulated changes in less formal behaviour patterns.

For the elite, formalization meant the introduction of authoritative procedures of power-sharing and turn-taking. Athens developed a system in which the leading role in relations with the mass of the male population was divided into three functional spheres—assembly, army, phratries (and *genê*)—each assigned to an office-holder whose term was restricted to one year.¹²⁸ Responsibilities for cult were also formalized, and the dates of some of the major festivals may have been stabilized. There was also, on a panhellenic scale, a process of formalization of warfare, of procedures for making peace, and of truce arrangements for supra-regional festivals (cf. Ulf 1997).

What did all this imply for elite patterns of interaction? It must have become very important to be recognized as a member of the power-sharing group, and the development of the symposium will have played a key role in the ongoing process of status validation. Intermarriage provided a mechanism for closer

¹²⁶ Cf. Humphreys forthcoming *c*; Knigge 2006, 159–62; Stroszeck 2010. Horoi, *IG* i³ 1066–7 (1067 was once dated to the 6th c.). Two ‘burnt offering places’, earlier than the wall, but located outside the walled area, have been dated to the third or last quarter of the 5th c. (*AA* 1974, 191–2). The area has not been completely excavated. Re-use of monuments in the Themistoklean wall, Willemsen 1963, Niemeyer 2002; cf. Humphreys *ibid.* On tombs of plague victims see *City* 2000; *AR* 2006–7, 7. Part of another mass burial (22 graves regularly laid out) excavated at Agios Andreas Zouberi, *AD* 56–59 B 1 (2010) 383–4, but dated early 5th c. Cf. regular layout of graves in Voula (*A to Z* 203 Z 3), Kouragios 2013, 74.

¹²⁷ *SEG* 43. 630; on the historical situation see Jameson a. o. 1993, 59–60, 123.

¹²⁸ Humphreys 2004, 232–3. The list of eponymous archons began in 683; we do not know that it was based on a continuous record (ch. 1 n. 70), but the date should be approximately correct. I assume that the prohibition on repeated office was early, though there is no proof.

alliances, and these were made publicly visible in wedding and funeral processions. For many families this may have enhanced the attractions of making marital alliances within the Athenian political sphere (however this was understood at any given period), although those whose elite status was most secure may have continued to seek brides and guest-friends abroad. Formalization of rights to priesthoods, and of the sacrificial calendar, may also have affected practices of dedication in Athens and Attika.

The early Greek state was not 'democratic' by later standards. A sharp boundary between citizens and non-citizens was only needed if citizen rights were being denied to a significant underclass, and in the 8th to 7th centuries only the helots of Sparta constituted such a group. The seventh-century Spartan assembly was unusually democratic for its day, but its initiative was limited, and Sparta did not encourage free-ranging debate. By the mid sixth century (Hodkinson 2000) Sparta had also probably formalized the symposion into her syssition system, which included all citizens and may have been tied to military organization; these two features plus the formalization of the educational system, which created strong ties within peer groups, could mean that kinship played a minor role in recruitment.¹²⁹ Sparta was also probably unusual in formalizing voting by acclamation rather than by show of hands (*cheirotomia*); this made it easier for the voter to conceal his choice, except from those standing very close to him.¹³⁰

Athens, in contrast, relied on locally based patrilineally recruited phratries as the subordinate units of the citizen body (and possibly army; ch. 19 n. 2). Phratries will have been dominated by their leading families, who would recruit, as required, voters, soldiers, and participants in rituals such as the Synoikia. At least in the more distant parts of Attika, the ordinary farmer's relations with the polis will have been mediated by his relationships with horse-owning neighbours who could combine participation in city life with supervision of their estates.¹³¹ There may also have been rural horse-owners who took little interest in the social life of the city, and, on the other hand, ambitious men who thought it more important to get votes from the urban population than to cultivate rural support. In any case, adherence to formal rules was precarious, and the political game could degenerate into thuggery, stasis, or tyranny.

Such a system was likely to make short-term alliances seem more important than lineal continuity. The successes of recent ancestors would certainly improve a man's standing in the early stages of his political career (ch. 16 pp. 513–14),

¹²⁹ The link between syssition and military *enomotia* probably required syssition numbers to be standardized, and the blackball system also implies that a boy did not automatically enter his father's group. Cf. ch. 18 n. 34.

¹³⁰ Cf. Flaig 1993. It is conceivable that a syssition was expected to stand, and vote, as a block.

¹³¹ See Humphreys 2008 and ch. 18 at nn. 96–101, on the naukrariai, which may date to the (mid?) 6th c.

but matrikin would count here as well as patrikin, especially since (generation for generation) they were younger. Priesthoods were owned by *genê*, and membership of a major *genos* was probably recognized in itself as a claim to elite status (though it would be foolhardy to press such a claim without appropriate resources to back it). But there is little sign (except perhaps in the case of diviners) that length of pedigree was highly valued. The attempt of the Eupatridai (however they defined themselves) to maintain a monopoly on election to political office seems to have collapsed after three generations; and it is hard to identify features of the funerary data of this period (c.680–590) that would reflect an increased emphasis on lineage.¹³²

We should also think about the implications of such changes for relations between men and women and between fully adult males (over 30) and adolescents, who in turn must be distinguished from children. Wives and daughters will have been valued for their role in making and maintaining affinal ties, but the elaboration of the symposion will have given an increasingly homosocial cast to male social life even within the household.¹³³ Competition for political office, and the formalization of warfare, may also have encouraged ambitious men to stay in Attika rather than trying to increase their wealth and status by travel; if so, there would be less expectation that a wife should be able to run the household during prolonged absences of its head.¹³⁴

A growing separation between the lives of men and women may also be reflected in an increase in dedications made by women in sanctuaries used only by them, although inadequate publication makes it impossible to trace this process in any detail (ch. 12 n. 30). Moreover, it is hard to see how we will ever, from the archaeological record, be able to distinguish the practices of groups of mature women acting independently from those of families displaying their nubile daughters in public by escorting them to sanctuaries where they will carry out premarital rites.

¹³² It might be held that this is the period characterized by I. Morris (1987) as one of elite closure; if so, however, I would see such closure as a result of political innovation and not of conservatism. See also Polignac 1995.

¹³³ On homosociality in archaic religious festivals see ch. 12 nn. 30–1.

¹³⁴ Two of the rich women's graves that are a striking feature of the 9th–8th c. (Whitley 1996; Liston and Papadopoulos 2004) contained stamp seals, which might suggest administrative functions (cf. Strömberg 1993: a young woman in Freytag 1974, LG; the burial in Smithson 1968, end of EG I, was a cremation). The presence of a granary (?) model has also been taken as an indication of control over property, although Polignac 1998 suggests that it might indicate a role in the cult of Demeter. Cf. ch. 18 nn. 6–7 on travel to interregional sanctuaries as a feature of elite activity in the EIA. The *Odyssey* suggests a society in which there were tensions between the experience that allowed a wife to run the household in the absence of her husband, the wish of a widowed mother to stay with her son while he grew up, and the pressure from kin and society for a widow to remarry.

It may be easier to trace the activities of male adolescents, because they were independently mobile. The rise of the polis will have helped to crystallize a pattern of long male adolescence, running from puberty to full admission at thirty¹³⁵ to political life (girls, in contrast, were expected to move rapidly from puberty to marriage, with a brief period of public visibility, in ritual, during this transition). This more formal exclusion of adolescents from a political life growing in intensity seems to have been accompanied, in a gradual process that we cannot trace in detail, by a growing separation in social life. Adolescents elaborated a pattern of romantic love between bearded erastes and beardless eromenos; it may have been especially in the seventh century, the period of greatest activity at Attic peak sanctuaries, that hunting played a central role in this development, before a new space on the margins of city life was created for them in the gymnasium and palaestra. Offerings at peak sanctuaries consist mainly of simple drinking vessels, but show a high level of literacy, with some inscriptions referring, like archaic rock-cut texts, to sexual affairs. It seems to me that there is a case for ascribing these activities to adolescent hunters rather than to herdsmen.¹³⁶ In the sixth century—perhaps especially during the Peisistratid tyranny—male adolescence became more like a greatly prolonged version of the fleeting public appearances of the nubile girl, boys and young men being continuously celebrated in urban gossip and visible in games. This is also the period of statues commemorating *kouroi* who died in battle, and of development of the Athenian cavalry, which provided further opportunities for display.¹³⁷

The intensification of political activity in the city would presumably also affect relations between city and countryside. The creation of a sense of Attika as a unified territory was a slow process, in which important steps were taken only in the sixth century (Humphreys 2008), but elite life in the city will have increasingly become a focus for ambitions and a source of new cultural patterns, even if some communities on the margins of what would become Attika still looked elsewhere.¹³⁸

¹³⁵ Perhaps a distinction between married men with sons (cf. perhaps Roman *patres*) and bachelors was later specified in terms of age.

¹³⁶ Polignac 1994 notes the prominence of writing but does not think of adolescents. Polinskaya 2003, 98 points out that hunting was not confined to remote hillsides (hares and foxes, often depicted as game, were farmers' enemies); nevertheless the peaks may have been attractive. Dedications of armour on Mt Parnes, Polignac 1995, D'Onofrio 1997. On rock-cut inscriptions see A. Chankowski 2002 (new material from Attika, Langdon 2015); on homosexual 'initiation' ch. 13 n. 25.

¹³⁷ There is not much evidence on the positioning of men of various ages in the hoplite army, and practice may have been more formal at Sparta than elsewhere (ch. 18 n. 34). On the cavalry see Bugh 1988; Spence 1993.

¹³⁸ There is some evidence for cult links between NE Attika and Boiotia (ch. 20 at n. 47); the question of relations with Euboia has been little researched (but see Huber 2003, 150–3; Mazarakis-Ainian 2007). It may be correct to think that the grave mounds of the Mesogeia were influenced by Athenian fashions, but cultural unity of Attika in terms of funerary practices has been assumed rather than critically examined.

In terms of class, it seems to me questionable whether in most cities the rise of the polis would encourage a sense of common citizenship uniting all classes (colonies and the quasi-colonial Laconia–Messenia state may be exceptions). Such a sense would perhaps be felt in the hoplite army, but it is increasingly clear that the early hoplite phalanx was a rather small elite corps (Van Wees 2004). The formalization of political roles and the development of a distinctive elite culture, characterized by the symposion and by public processions for weddings and funerals, might well perpetuate or intensify a perception of cleavage between *agathoi* and *kakoi*. On the other hand, the introduction of elections and probably, over time, the increasing size of armies pushed the elite to find ways of maintaining or reshaping ties with poorer neighbours. Moreover, aristocratic life was glamorous even for those excluded from it, and ideas about adolescence, gender roles, and death may have percolated downwards.

We should try to see the rise of the polis as a process of imaginative development, not merely in the narrow terms of political procedures and rights. New questions need to be asked, and this requires open and intensive discussion between historians and archaeologists, as well as more comparison between different parts of Greece.

Vari and Anavyssos, on the sea route from Phaleron to Sounion, may have been more susceptible to city ideas than inland areas. If the large mound (25 m. diameter) dug by Kakavogianne on the SE side of the Anavyssos plain was really constructed to cover the 3 G graves found under it (which seems to me doubtful; see Mersch 1996, 106; Kakavogianne and Petrocheilos 2013), it may have pre-dated any large mound in the city.

Commemoration

When I began working on the relationship between kinship and burial in classical Athens, in the 1970s (Humphreys 1980), I had to deal with an inherited conglomerate of unquestioned assumptions: that burial practices were ‘traditional’, unchanging,¹ and somehow religious in character; that families or lineages—not clearly distinguished—continued to use the same burial plot over many generations; that ‘cult’ continued at graves over long periods; that burial practices were part of private life and tombs were often located on private property;² that although burial treatment varied with wealth all members of a family, regardless of age or gender, would get comparable graves. Most of these assumptions owed more to nineteenth-century western Christian ideals than to historical or archaeological data. Some of them still linger, sometimes in modified form.³

My conclusion from the evidence, forty years ago, was that the fourth-century rhetoric in forensic speeches about family plots and perpetual commemoration as traditional both derived from and contributed to a trend towards the familialization, privatization, and sanctification of burial practices that cannot be traced back before c.430 and always coexisted with special treatment for exceptional individuals (and minimal burial for the most insignificant). Tomb groupings stretching over more than three generations were rare, and lateral spread was more likely to draw in affines than remote agnatic kin. There was no evidence for burial on private land; repeated annual commemorative celebrations on dates of private significance are better attested for the Hellenistic period than earlier (ch. 10 at n. 26). Archaic monuments mostly commemorated individuals. New research has not altered the balance of the evidence for the ‘familial’ range of tomb groupings, so—apart from a few currently controversial issues—kin group reconstructions based on (i.a.) tomb monuments will be presented in chs. 23–32.

¹ Nock’s study of change in Roman burial practices (1932) had not made much impact.

² This view, argued most influentially by Fustel de Coulanges (Humphreys 1983a/1993 ch. 6 part 2, orig. 1980), became less widespread in the 20th century.

³ These assumptions recur in Marchiandi 2011a. There is no evidence that all later interments in the Mound G area and ‘Messenian peribolos’ in the Kerameikos were connected with the original burials (cf. ch. 10 n. 82; Knigge 1988, 107; 2006, 154–5); below at nn. 75–7 on burial as ‘religious’; ch. 10 n. 119 on commemorative cult. The assumption that each classical peribolos had a ‘genealogical’ stele as its central monument is also questionable (see below, at nn. 23–4).

Other assumptions have been questioned by Ian Morris: that dead children in all periods were buried in the same style as their parents (1987); that the disappearance of stone grave monuments in Attika at some date between c.510 and c.480 was due to legislation—he suggests that it was a general Greek trend—and that the alleged law was uniformly observed (Morris 1992). Morris's arguments are often problematic,⁴ but the questions he has raised are important.

Further research has made it clearer that there were burials along some remote rural roads in Attika—but not around farmhouses away from roads.⁵ It is clear that in 1980 I underestimated the extent to which stones naming only one or two individuals were grouped in periboloi (Bergemann 1997), and we are getting a better picture of modifications and alterations to monuments already erected (Schmaltz 1998, 2001; Schmaltz and Salta 2003; Cavalier and Lambert 2004). While the term 'cemetery' is still far too often inappropriately used (cf. C. B. Patterson 2006*b*, 2006*c*), excavation records do show that small children were often unceremoniously interred in spaces between and around periboloi or on the fringes of ground intensively used for more prestigious tombs, i.e., that some areas came to be associated with burial.⁶

Various researchers have struggled with the apparent discrepancy between the domestic and 'private' atmosphere of relief monuments and the 'public' face of stones orientated to roads and epigrams addressing the unknown passer-by. Attempts to reconcile the two aspects by stressing the importance for legitimacy, after 451,

⁴ See Bergemann 1999 on reviews of Morris' earlier work; ch. 10 at nn. 72–84 on 'children's cemeteries'; Holtzmann 2001 and Berranger-Ausserve 2001 on 5th c. funerary sculpture outside Attika. Much is made of a rich burial in the Kerameikos where a sarcophagus contained a bronze *lebes* with bones wrapped in cloth (Morris 1992, 132 dates the burial c.25 years earlier than Knigge 1988, 109–10, and associates it with brick tomb e—Knigge has f—and with 'mound o', which is a post-Chaironeia fill). For another rich sarcophagus grave see Stupperich 1994*c* (possibly associated with IG ii² 6626 = CEG 568). However, metal urns in stone containers—perhaps indicating classical attempts to 'heroicize' funerals—have been discovered in increasing numbers over the past few decades, both in the Kerameikos and elsewhere. See lists in Rendeli 2005, Marchiandi 2012, 235–6, plus bronze 'hydria' between 2 stone *thékai* at Elleniko, AD 56–59 B 1, 2001–4 (2010), 474 (cf. *Mes.-Arg.* 443); *ibid.* 370–1, urn in *théké*, Phoinikia; 251–3, clay kalpis in marble theke, Athens Liosion (at Ionias/Sozopoleos); 435, other clay urns in stone thekai; *Mes.-Arg.* 604–5 (cf. SEG 57. 92), bronze *kalpé* with lid, Od. Pleiaddon, Kifissia, 5th c.

⁵ Lohmann 1993*a*; Goette 2000, 108–12, on SE Attika; Andreou 1994, 205–6 on Halai Aixonides; cf. ch. 10 nn. 30, 64. Recent examples: AD 55 B 1 (2009) 133–4, Pousi Ledi; 56–59 B 1 (2010) 469, Halimous, Kleious 7, 4th c. peribolos over earlier burial area; 473, Elleniko (earlier graves disturbed by later). Note the very large mudbrick tomb at Vourva illustrated in Bergemann 1999, pl. 6. 1; and urns found by Fauvel in the Aixone area, Beschi 1975.

⁶ Arrington 2010, 2015 still refers to 'the Athenian public cemetery'. A 4th c. wall found in the Kerameikos Metro site excavations, NW of the archaeological site, was low and 'unobtrusive' and separated an area used for burials from marshland (*City* 2000, 273; ch. 10 n. 60). Minor burials: ch. 10 at nn. 80–4; above, n. 3, on Mound G and the 'Messenian peribolos' in the Kerameikos; Baziotopoulou-Valavani 2002 on child burials in the top layer of the mass burial pit for plague victims; Bourbou and Themelis 2010 (Messene); *City* 2000, 269, dogs; cf. ch. 10 n. 73.

of citizen parentage on both sides⁷ do not seem to me successful, largely because they ignore the dialectical relationship between the public burial of the war dead and the private burials of the rest of the population—a topic I shall explore further below.

Ongoing problems are created by the intersection of different specializations in the field, each with its own priorities. Social historians pay insufficient attention to trends in sculpture that interest historians of art; prosopographers, epigraphists, and specialists in sculpture may uncritically accept each other's dates;⁸ too many excavators are still interested only in artefacts and chronology, skeletal remains being poorly reported and unstudied, new questions about burial practices ignored.⁹ Dating is made more difficult by the variable quality of sculpture and inscriptions.¹⁰ Selective interest, in the past, on the part of re-users of ancient stones, of excavators, and of collectors and the illegal market in antiquities, means that sculptures have been separated not only from the graves and periboloi near and in which they once stood, but also from their bases.¹¹

Some examples: a stele and two lekythoi commemorating members of a family from Lamptrai, identifiable by the rarity of some names, were dispersed as a result of illegal excavation in the 1980s, the stele being abandoned in the burial area near Koropi where it presumably once stood, while one lekythos is now in Quebec

⁷ E.g. E. A. Meyer 1993; Breuer 1995; Stears 1995; Bergemann 1997 (on which see Himmelmann 1999); Clostermann 2006; Hildebrandt 2006. Socj 2005 is more sophisticated. The arguments of Meyer from the use of demotics on tombstones are very uncritical: she does not compare other evidence for the gradual growth in the use of demotics during the 5th c. (especially ostraka: ch. 22 n. 37), and a thorough study of naming practices on Attic tombstones would need to consider the many stones on which no demotic is preserved, and the points made below on the identification of citizens among these, and on the complementarity of stones belonging to a single familial group (n. 22). Pologiorge 2002*b* joins IG ii² 12743, which has labels for Sostratos and Sokratides, to ii² 7318, which gives Sokratides' full name. For a general study of naming on stelai see Fraser and Rönne 1957. There are helpful remarks on the use of a public frame of reference for private purposes in Cicchetti 1983 and Mordenti 1983, discussing early modern Italian *libri di famiglia* (it is interesting that references to occupation, apart from fighting and slaves, disappear from Attic tombstones rapidly after the late 5th c.).

⁸ E.g. Ensoli 1987 has no interest in later burials in the peribolos of Dexileos; Hildebrandt 2006 relies on others for prosopography and (where he mentions it) epigraphy. See further below at nn. 27–8.

⁹ Contrast Andreiomenou 2007 with Papadopoulos 2005; cf. also Carter a. o. 1998 on Metaponto. I sympathize with Bergemann's suggestion (1999) that we need a new, more theoretically sophisticated (and more user-friendly) edition of Kübler's *Kerameikos* volumes. For skeletal analysis (mainly of mass graves) see ch. 10 nn. 47, 83, 126; Tritsaroli 2006 (Byzantine).

¹⁰ Note Tracy 1990, 5 on the difficulty of identifying cutters and dating in funerary inscriptions.

¹¹ Some good remarks on this point in G. J. Oliver 2000*b*; cf. also AR 2006–7, 2; Stupperich 1994*b* for separated fragments; ch. 10 n. 44. Reporting of whether a base is preserved, restored, or lost is patchy; published photographs do not always show where a stone is broken. Some stones classed as trapezai (mensae) might be better described as bases (e.g. IG ii² 5367, 5614, both with relief loutrophoroi?; see n. 37) or cult tables (D. Gill 1991). See also Kissas 2000. On IG ii² 5811 see ch. 4 n. 32. Kosmopoulou 2002 has a chapter on sculpted funerary bases but does not seem to deal with this question. For a rare, recent discovery of base, stele, and lekythos together see SEG 56. 255.

and the other in the Kanellopoulos collection in Athens.¹² The Metropolitan Museum, New York, in 1911 acquired the relief stele *IG ii² 7287* with the naiskos *CAT* 3. 846, but failed to buy a pediment perhaps belonging to the naiskos (let alone its base) and two associated lekythoi, one of which was given to the Pergamon-Museum in Berlin by a private collector in 1938, while the other was bought by the University Museum in Philadelphia.¹³ A naiskos separated in earlier excavations at Rhamnous from its inscribed base and pediment has now been reunited with them (*SEMA* 832 + 834, cf. Bergemann and Hallof 1997). Four dispersed, matching lekythoi set up by a family of Halai Aixionides have now been joined by the base of a fifth vase.¹⁴ However, while a stele commemorating Euphanes son of Myrmex was found in the area of Echelidai, with the base of a lekythos or loutrophoros set up for his son, the associated vase is still lost.¹⁵ Two loutrophoroi and a lekythos now in the National Museum, Athens, reached it separately, *IG ii² 12499* donated by a private collector in 1913, *ii² 12658* confiscated in Piraeus on its way to Marseilles, and *ii² 12967* found near Keratea. None has a base or a demotic; they have been attributed on the ground of names and the provenance of *ii² 12967* to the family of Polystratos of Deiradiotai, the subject of *Lysias* 20.¹⁶ Cf. Pologiorge 2000*b* on the stele of Euboulos son of Euboulides of Kopros (ch. 30 n. 112).

The difference between the use of inscribed names as labels to identify relief figures and their use for a more formal identification of the dead is sometimes noted (e.g. E. A. Meyer 1993, 100), but its implications have not been fully explored. It is at least partly responsible for difficulties in deciding which figure in a sculpted group represents the dead, and for controversies over the meaning of the 'loutrophoros' (below, at nn. 35–43).¹⁷ In the rare cases where a

¹² Stele, *SEMA* 386; lekythos Quebec, Université Laval, *CAT* 4. 271 = *SEMA* 1523; Kanellopoulos lekythos *CAT* 4. 326 = *SEMA* 1565. Cf. *SEG* 56. 263 (Fossey 2004); ch. 23 n. 70, Table 23.2.

¹³ *CAT* 3. 846 = *SEMA* 581, report of lost pediment in Richter 1954, no. 83; Berlin lekythos *IG ii² 12023a*, with Bergemann 1997, 210; Philadelphia lekythos *IG ii² 11118* (the lekythoi are not a pair).

¹⁴ Peppas-Delmousou 1977 (*SEMA* 70–71); see ch. 29 at n. 136. Four lekythoi were found in a peribolos excavation near Ikarion in 1983, three with relief decoration, one with inscribed names (Valavanes 2007); *CAT* 2. 379f (corrected by Valavanes) inadequately publishes one, now in the Piraeus Museum.

¹⁵ *CEG* 559–60, *SEMA* 1880, 1543. *IG ii² 11500*, found in the Agora (Euphanes Myr[–]) could belong to this group, but there are many other possibilities.

¹⁶ *APF* 12076 (the demotic from *Lys.* 20. 12); the attribution is now strengthened by Dubois 1996 no. 21, awarding Olbian citizenship to Philopolis son of Philopolis of Deiradiotai (?) the late 4th c. For the location of Deiradiotai, and the family, see ch. 26 n. 109–10. For the history of the vases see *AE* 1913, 201 and *AD* 6, 1920–1, 128–30. 12499 = Schmaltz 1970 A 94, *CAT* 2. 258; 12658 = Kokula L 81, *CAT* 4. 237; 12967 = Kokula L 59, *CAT* 3. 235. *CAT* 3. 364C (*SEMA* 2337) suggests that a loutrophoros sold at Sotheby's in 1990 came from the same set of graves. For other examples see Goette 2001 224; *SEMA* 50 with 57. 270 (n. 40).

¹⁷ Uncertainties are also introduced by additions and alterations to monuments after their initial use (below, at nn. 44–9); addition of labels may have been particularly common (e.g. the children's names on *SEMA* 866; cf. Schmaltz and Salta 2003). Some stones—especially naiskos pediments—show a mixture

lekythos or loutrophoros has been preserved or re-united with its inscribed base, a relief depicting and even naming two or more figures may have a base naming only one.¹⁸

Two main trends can be seen in recent research. One is statistical.¹⁹ Its utility is limited by problems in the data (effects of the history of research; uncertain chronology; separation of stones once grouped together) and in research design. For example, Elizabeth Meyer (1993) argues that the use of demotics on tombstones shows Athenians' attachment to citizenship, without comparing the use of name forms in other contexts, both civic and informal (decree preambles, dikastic pinakes, ostraka, curse tablets ...).²⁰ Johannes Bergemann, initiator of a new statistical database for Attic tombstones, has been criticized for trying to construe statistical norms as rigid rules (Himmelmann 1999; other criticisms, *Agora* XXXV, 1–2).

A more promising approach, in my view, is the study of process through detailed examination of monuments and peribolos groups, facilitated by the work of Bernhard Schmaltz on alterations to monuments (Schmaltz 1998, 1999, 2001; Schmaltz and Salta 2003; concordance, *SEG* 53. 231). At least in some cases we can now be fairly sure which death prompted the construction of a new peribolos, and can begin to trace the dynamics of subsequent burials. The construction of a peribolos in the Kerameikos for the cenotaph of the young cavalryman Dexileos of Thorikos, followed by other members of his family, is a well-known

of labelling with more formal identification (e.g. *SEMA* 832 + 834, discussed further below, n. 48). Note the comments of Pologiorge 2009 on the labels of *CAT* 2. 793 (*SEMA* 2170). On *IG* ii² 5294 (Scholl 1996 no. 155, *CAT* 3. 320c) the labels all appear to be in the same hand, although the cutter did not leave enough space for the last letter of the third name.

¹⁸ *IG* ii² 5980, labels Anenkletos, Nikodemos; base, Anenkletos Nikodemou Dekelieus (ch. 19 n. 105). *CAT* 3. 403 = *SEMA* 324, two-figure relief (unlabelled), base naming Aristomache Kephisodorou Kollyteôs (an uninscribed stele base found with it, Knigge 1988, no. 40). It is no accident that these examples come from the Kerameikos and the royal estate at Tatoi. Base of lekythos or loutrophoros preserved alone (if not a dedication), *IG* ii² 6775 = 6815 (*SEG* 51. 267); cf. n. 37. Lekythos and base, *SEG* 57. 270, *Mes.-Arg.* 466–7 (nn. 16, 40). Sculpted base with (incomplete) lekythos or loutrophoros, NMA 4498 (*CAT* 4. 270, Neer 2010 fig. 139).

¹⁹ See especially T. H. Nielsen a. o. 1989 (with G. J. Oliver 2000*b*) and Bergemann 2001.

²⁰ Similar problems in Ferrario 2006. It is interesting that Heragoras of Samos, who was buried in Athens (*IG* ii² 6417), identifies himself by his place of origin and not by a demotic (cf. Shipley 1987, 130–1; C. Koch 1993). The same should be true of at least some of the Plataians buried in Athens; this may reflect Athenians' tendency still to distinguish such persons from full citizens when referring to them. It has usually been assumed (e.g. M. J. Osborne 1981–3, III–IV, 38–9, also Humphreys 1980) that Heragoras did not get Athenian citizenship, but since he was buried in Attika, it seems quite possible that it was his choice to identify himself as Samian. Hildebrandt 2006 (no. 32) has doubts about the order in which the names were cut; all the inscriptions are cramped, but the division of ll. 1–4 between the epistyle and the stele, and the distribution of names in these lines, suggest that they were cut later than ll. 5–7. On this family cf. ch. 23 n. 49. (Humphreys 1983*a*/1993, 129 n. 56). There is no great reason to assume that other family monuments joined this stone. Other possible citizens still known as Samian: *IG* ii² 10223, *SEG* 59. 305, and the naukleros Hyblesios of [Dem.] 35, possibly father of *IG* ii² 6431.

example (*IG* ii² 6217, 6226–7, 6230; Table 27.6A).²¹ Schmaltz 2001 argues that another Kerameikos peribolos was initiated on the death of Korallion, wife of Agathon of Herakleia (*IG* ii² 11891); when Agathon died he was commemorated by a painted naiskos and a stele naming him with his brother Sosikrates (ii² 8550–1); the inscription on Korallion's naiskos was changed to identify her as Agathon's wife—an identification only comprehensible in the context of the other monuments—and two additional figures were added to her naiskos, which directed more attention to the figure of Agathon.²²

These examples show that peribolos sequences did not always begin with the death and monument of a patriarch. Even where a list on a stele begins with the name of a 'founding father'—as in the case of the 'Meidonidai' (Table 4.10)—his name may have been inscribed only on the death of a more junior member of the family.²³ Rather ironically, one of the clearest examples of a patriarchal foundation is probably the stone commemorating Heragoras of Samos—an immigrant new citizen—with his two sons and wife, the wife and children of one of the sons being added later (see n. 20). The stele of Euphranor of Rhamnous, with an epigram on its base saying that he lived to be 105, and names of descendants added later, is another clear example.²⁴

It should be emphasized here that the reconstructions of periboloi at Rhamnous illustrated in Petrakos 1999 are not accompanied by any archaeological evidence, and do not necessarily include all the monuments recovered around the peribolos area.²⁵ Hildebrandt (2006) assumes a priori that where a

²¹ On this family see ch. 27 n. 78, Tables 27.6A–D. Clostermann 2006 suggests an interval of c.50 years between Dexileos' stone and the later burials. Hildebrandt 2006 (107–8) thinks *IG* ii² 6227 is earlier than Dexileos' monument, but his reasons are unconvincing.

²² Ohly 1965 thought that Korallion's naiskos, another smaller naiskos, and the name stele *IG* ii² 8551 (almost 4-m high) would have been re-erected after the damage of c.338–7, when the peribolos was restored. The peribolos originally had two lekythoi, on the corners, as well as the lost naiskos (and possibly something to the right of Agathon's naiskos). Report of 1863 excavation, *ARMA* II p. 710 nos. 106–7. Cf. n. 27 below; *SEG* 61. 195 (unconvincing). Other stones on which a woman is identified as the wife or daughter of a man whose name is not given in full should be similarly explained (e.g. *IG* ii² 10567 = *CAT* 1. 431, and perhaps *IG* ii² 12912 + *SEG* 51. 247 = *CAT* 2. 364b).

²³ *IG* ii² 6971 = *CEG* 481 explicitly states that earlier members of the family (father and uncle) are commemorated. *SEMA* 469 (Etienne 1975, Table 5.2) seems to commemorate three generations of ancestors—perhaps partly to demonstrate the family's long residence in a rural deme other than its own. (ch. 25 n. 60). All names were cut by the same hand, but with a gap of one line before the last, a woman: did she give instructions for the monument? Clostermann 2006 too often assumes that periboloi were pre-planned.

²⁴ *SEMA* 820–1, Table 31.14. Euphranor's age could be calculated by the Athenian system of 42 named age-sets: the hero in whose year he had been registered in his deme would recur when he was 60 and again when he was 102.

²⁵ The relative dating of two naiskos bases apparently shown in the plan of the peribolos of Diogeiton, Petrakos 1999 I fig. 259 (but not discussed by him or by Bergemann 1997 p. 10) is the only exception. Several monuments that probably stood in the peribolos of Hierokles are not shown in the restoration. Bergemann (10–11) is entirely uncritical of the Rhamnous reconstructions.

peribolos had a name stele this was its first monument, and does not discuss conflicting evidence.²⁶

The problems besetting the reconstruction of monument sequences are well illustrated by the Kerameikos peribolos of a Melite family. Brückner (1909) assumed that the stele of Koroibos *IG ii*² 6008 (almost 3-m high) began the sequence, the relief stele of Hegeso daughter of Proxenos (*IG i*³ 1289) and the loutrophoros-stele of Kleidemos (taken to be Koroibos' grandson; *IG ii*² 6859) being later added to left and right of it. Later work on stylistic and epigraphic chronology, however, placed Hegeso's monument in the fifth century; and re-examination of the monuments and the peribolos suggested that their positions and bases were not original. The front wall of the peribolos had been destroyed c.340—i.e. probably in disturbances associated with the defeat at Chaironeia—and it was thought that members of the family had rescued the monuments and reconstructed them, on new bases (and in a different order?), further from the position near the front wall in which most monuments were originally set up.²⁷

More recently, however, Martha Weber (2001, followed by Hildebrandt 2006), has argued that the Koroibos of *IG ii*² 6008 should be identified with the architect of Plutarch *Perikles* 13, who died in 431, and that Brückner's sequence for the monuments was correct. This is prosopographically doubtful, since the name Koroibos is not exceptionally rare;²⁸ it is less rare than the name of Koroibos' father Kleidemides, otherwise only attested in Aristophanes *Frogs* 791 as that of an associate of Sophokles (the scholia guess, an actor), who had perhaps died shortly before the play was produced in 406.

Kleidemos' epigram—'once his father's pride, now a grief to his mother'—suggests to me that the father had died earlier, although perhaps when the son was already in his twenties. If Hegeso was married to a member of this family—which seems probable but is not certain—we do not know whether she was the wife of Kleidemides or of Koroibos. If she was Kleidemides' wife, Kleidemos' monument would be the earliest in the sequence.²⁹

²⁶ Cf. below, and ch. 29 s. *Melite*, on the Koroibos stele.

²⁷ Ohly 1965; Knigge 1988, 132–4 (the connection between Hegeso's monument and the rest is thus quite uncertain, see n. 29). For other possible examples of movement/re-erection of monuments after 338 see *Kerameikos XIV* pp. 29, 31, 79. Martha Weber (2001, followed by Marchiandi 2008*b*) thinks the original bases are preserved (in their original position), their rough surface showing that they had originally been covered in stucco. She also rejects, probably rightly, the claim that Kleidemos' stele was given a new anthemion (Knigge 1984, 225).

²⁸ Comm. *IEleus* 30 suggests that Perikles' architect had a homonymous grandson. The identification (Martha Weber 2001; Hildebrandt 2006) of Phormos I of Kydantidai (*IG ii*² 6609) with the Phormos (tribe unknown) of *IG i*³ 1192. 149 is also hazardous, but since his grandson Phormos II son of Prokleides II was old enough to serve as a deme official in 331/0 (*SEG* 39. 148) Phormos I should anyway have been born in the 5th c. *LGPN*'s identification of the Phormos I of the grave stele with the deme official would put all the names on the stele—cut on separate occasions—after 330, which seems to me unlikely (genitive in *o* in l. 2, *ou* elsewhere). Weber reports that Stratonike's name was not cut with that of Phormos; this is not clear on Hildebrandt's photograph (pl. 111). Cf. ch. 24 n. 94/Table 24.6. For other criticisms of Hildebrandt, and a concordance, see *SEG* 56. 34.

²⁹ Epigram *CEG I* 102 (*IG ii*² 6859), dated c.400. The argument for identifying Hegeso's father with Proxenos I of Aphidnai (*APF* 12267) is not strong, especially since the fairly common name Proxenos is attested later in Melite (*IG ii*² 2383, cf. *APF* 11473, pp. 424–5).

The relationship to Koroibos' family of the two Eiteians named on the stele (*IG ii² 6008*) is also controversial. The name of Koroibos II, the last demesman of Melite in the list, is followed by that of Euthydemos son of Sosikles of Eitea, while the name of Sosikles son of Euthydemos of Eitea was inscribed above the rosettes; a cippus naming an Euthydemos son of Sosikles of Eitea (*IG ii² 6001*) was found six metres behind the stele of Hegeso (Brückner 1909). It has mostly been assumed—perhaps due to over-patrilineal conceptions of Athenian kinship—that Sosikles' name represented occupation of the peribolos by an unconnected family, Euthydemos being commemorated both on the stele and by another stone. But it is also possible that Euthydemos I was an affine of the Melite family, perhaps married to a daughter or sister of Koroibos II, that the Sosikles (II) named on the stele was his son, and that *IG ii² 6001* commemorated his grandson Euthydemos II. At present we really know very little about the re-appropriation of monuments in the late fourth and third century.³⁰

Closer attention to process and sequence may also provide some insight into the ability of women to steer resources into commemoration.³¹ A plausible example is *IG ii² 6218*, a stele found in the Kerameikos area near the Academy road,³² with a list of names all cut in the same hand, beginning with Demochares (II?) of Thorikos³³ and ending with his widow. It also names two Thorikian brothers, perhaps her brothers-in-law,³⁴ her father, and Demochares' two sisters. This does look like a woman's view of her kin network.

A dead youth, if not shown alone (or with only a dog, horse, or slave) is often portrayed with his mother, but this need not imply that she was widowed; it could indicate that he was not yet part of the world of adult men.

The belief that such youths were commonly (though not necessarily) commemorated by the vases archaeologists call *loutrophoroi* was challenged by Bergemann (1996), but his arguments are not convincing. He claims that the statement in [Demosthenes] 44. 18,

³⁰ The epigram of *IG ii² 5768* (*CEG 480*) was partly destroyed by a later relief (*CAT 1. 891*), but the situation is still not clear.

³¹ Cf. the discussion of dedications set up by women, ch. 12 n. 93. Houby-Nielsen 1997 may exaggerate the distinction between women's choice of grave-goods and their influence on the imagery of monuments. Socj 2005 asks who set up monuments for women, but not whether women commissioned them. *IG i³ 1226* was set up by sons at their mother's request; *IG ii² 6748*, where the two women (mother and daughter?) have patronymics and the man (husband? and father) only a single name, may have been set up in a peribolos where he had already been commemorated. On *IG ii² 7702* (Kroll 1972 fig. 231; ch. 29 n. 88) the last name appears to me (*pace* Kirchner) to be cut by a different hand; possibly Kalliades' name was later added to a stone set up to commemorate his wife with her parents. Cf. *IG ii² 11103* (*CEG 548*), set up by stepmother for stepson.

³² Prophetes Daniel St. (*A to Z* 123 A1; Wilhelm 1909 no. 53).

³³ An earlier Demochares of Thorikos in *IG i³ 1032. 148*. Demochares II is probably the choregos of *SEG 34. 174*. It is curious that the rare and similar names Attabos and Atarbos are both used by prosperous Thorikos families in the same period (Tables 27.6A–D) but I see no clear prosopographical explanation. *IG ii² 6241 = Agora XVII 148*, of c.200, commemorates a later member of the family.

³⁴ A cousin of these men, Sosigenes son of Sosippos of Thorikos, was buried in the deme: *SEMA 255*, Table 27.6D.

that a loutrophoros on the grave showed that the person commemorated died unmarried, refers to a relief or statue of a boy water-carrier, but no such monument is known.³⁵ Posamentir (2006; cf. Kaempf-Dimitriadou 2000) has made a firm case for a difference in meaning between lekythoi and 'loutrophoroi', and the majority of representations on the latter are consistent with the traditional interpretation. Bergemann objected that many of the men are shown bearded and two women are shown with infants; but Athenian men were rarely married before the age of thirty (ch. 5 nn. 48–9), and a woman who died in bearing her first child might well be thought not fully to have completed the marriage process (H. King 1998; ch. 9 pp. 304–5).³⁶ The view that loutrophoroi with two handles (loutrophoros-amphorai) were set up over the graves of men and those with one handle (loutrophoros-hydriai) over women's graves is more open to question (see now Margarite 2010). Insofar as Athenians were conscious of a gender distinction, it may have derived from a stronger association of the loutrophoros-amphora with war and the hydria form with marriage (cf. Moesch 1988; Boardman 1988; Sabetai 1993, 2014; Moesch-Klinge 2006).

Kokula (1984) catalogued about 200 loutrophoroi and loutrophoros-stelai,³⁷ and of these fewer than ten present problems that require discussion. In three cases it has been

³⁵ The 'hydrophoros' found in the Kerameikos (Knigge 1988 fig. 126, CAT 1. 334) is a young girl. Loutrophoroi by two men's names on IG ii² 6193. See also Trinkl 2009; Stamatopoulou 2014, 212 and fig. 7 (terracotta). On *loutrophoros* as a ritual office in other areas, Chaniotis 2008; on funerary use of clay loutrophoroi, Sabetai 2009.

³⁶ Women with infants, CAT 3. 703, Kerameikos P 663 (handing baby to another woman); CAT 1. 691, NMA 792, possibly not Attic, odd-shaped L-A in field. See also Schulze 1998. Niobe is shown with 'loutrophoros-amphorai' at the tomb in LIMC Niobe nos. 10, 13, 16, and 18 (Electra, however, has hydriai, lekythoi, and an amphora). Relative age is often shown by pose, the older generation seated and the younger standing, rather than by other features; however, the seated, bearded man on the L-A Coll. Makridi 1239 (Lembese 2003) is being portrayed as a writer. On SEMA 2105 the 100-year old Littias stands with a seated wife and small girl; this seems an inappropriate image. CAT 2. 342a (SEMA 319, Scholl 1996 no. 400) is a good example, where the inscription shows that two very similar bearded men, one seated and one standing, are father and son. Age may also be shown by attributes, as in SEMA 2528 (CAT 2. 879), where the older of two standing bearded men is distinguished by his stick (cf. n. 69 below). Status may be shown by size: small bearded slave batmen accompanying hoplites are not necessarily to be taken as 'dwarves' (Kokula L 59, L 81, = IG ii² 12967, 12499). Pologiorge 2009 suggests that age was sometimes differentiated by painting.

³⁷ Not all her entries are inscribed and/or figured, and there is some overlap between categories. Posamentir 2006 nos. 62, 95, and 96 (= IG ii² 6444) are new painted loutrophoroi. Other examples I have noted, published since 1984, are, in SEMA, nos. 50 (n. 40), 51, 67 (CAT 2. 346a), 184/5 (see ch. 24 n. 64), 470 (CAT 2. 295a), 596 (CAT 2. 913), 678, 772, 895 (IRb 334, SEG 40. 238), 2170 (CAT 2. 793, Piraeus Mus. Inv. 5282 + 5289a), 2299 (Piraeus mus. 5280, L-stele), 2528 (SEG 34. 236, CAT 2. 879); 2450. Not in SEMA: City 2000, 223, no. 198 (uninscribed); Lembese 2003 (private coll., Athens); Steinhauer a.o. 2005, 128–39 (Attikê Odos, Pallene); SEG 54. 341/57. 218 (Table 29.23); AD 55 B 1, 2000 (2009), 103 fig. 12 (loutrophoros base, Moschato; SEG 56. 262, AR 2009–10 fig. 11); SEG 59. 305 (Piraeus Mus. 11956, *Horos* 17–21, 218 no. 10, a Samian); AD 56–9 B1 (2010), 51–2 fig. 21, L-hydria; ibid. 321 fig. 13, stele with relief L-A, 2 hoplites setting up a trophy (*Mes.-Arg.* 413 fig. 16); part L, SEG 61. 81. IG ii² 5367 and 5614, loutrophoros-reliefs on 'mensae' (n. 11) are not catalogued by Kokula. Petrocheilos 2003 publishes SEG 54. 341 (on which see ch. 29 s.v. SEG 54.341), and 3 further uninscribed fragments. Schmaltz and Salta 2003 think that a loutrophoros was erased from SEG 47. 260; n. 37, they list later additions of loutrophoroi; n. 168, Hellenistic examples (add SEG 53. 239;

claimed that the man commemorated had attested children, but none of these is certain. Timophon son of Timostratos of Anagyrous, named on the loutrophoros *IG ii² 5636* (Kokula O 12, c.340) may be the son, rather than the father of the Timostratos son of Timophon A. named on a list perhaps to be dated c.350;³⁸ the Phalanthos of Kerameis who served as councillor in 328/7 (*IG ii³ 360*) may be the father and not the son of the Theodoros son of Phalanthos K. commemorated by the loutrophoros-stele *IG ii² 6326/7* (c.350?), since other elderly councillors are known;³⁹ the loutrophoros-stele *IG ii² 10909* has been taken to represent two brothers (both standing), both possibly fathers, but since the base is lost we do not know which was commemorated, and the prosopography is in any case conjectural.⁴⁰

Four loutrophoroi and one loutrophoros-stele show a small child, but the child may be a younger sibling of the deceased.⁴¹ A loutrophoros with a four-figure relief is difficult to interpret, especially since one of its label inscriptions is damaged.⁴²

Perhaps the most problematic case is *SEMA 596* (*CAT* 2. 913), a loutrophoros-amphora from Merenda that shows a seated woman shaking hands with a standing male accompanied by a slave. This is usually a typical mother-son scene on loutrophoroi commemorating young men (only youths and soldiers are shown with male slaves) but here

Agora XXXV 198, 204, 207–8, 211). Roman: Korres 2009, 231 (fig. 16. 14). NMA 792 is considered non-Attic (Clairmont 1988). For loutrophoros-stelai see also Moesch-Klingele 2006.

³⁸ Reinmuth 1971 no. 16; for the date see Humphreys 2010a n. 30 (the list can hardly be ephebic), ch. 23 n. 19.

³⁹ Kokula L 27; ch. 17 n. 15. Since Theodoros is a very common name, the Myrrhine daughter of Theodoros K. commemorated on *IG ii² 6335*—probably, on spelling, to be dated later than 6326/7—may be unrelated; or she may have been Phalanthos' sister. On *IG ii² 7180* and 6054 see ch. 30 n. 21.

⁴⁰ Both men are standing, though Autokles looks older. Since the stone (*CAT* 2. 279, Kokula L 16, dated c.350) was found in the Thorikos area, the Autokles and Demokles named *may* have belonged to Kephale, in which both names are attested. Demochares son of Demokles K. is named on a dikastic pinax of the 350s, Kroll 1972 111c (and may be the father of the Nikaios commemorated on *IG ii² 6365*, a lost stone of uncertain date); the Autokles son of Autokles K. who served as councillor in 304/3 (*Agora XV* 58) could be a grandson of Demokles rather than a son of the Autokles named on the stele. On the other hand Lysis of Aixone, named before his son Timokleides on their loutrophoros (*SEMA* 50, *CAT* 3. 363a, Steinhauer 2001 figs. 466–7) is definitely portrayed as a seated old man (he had his own lekythos, Piraeus Museum 3280, *Mes.-Arg.* 466–7, *SEG* 57. 270/61. 199). The prosopography of *IG ii² 6572–3* is extremely problematic (ch. 25 n. 3), but to reject the traditional view on loutrophoroi does not solve the problems. See Schmaltz and Salta 2003, no. 9 and pp. 166–7, for possible additions.

⁴¹ On *IG ii² 11634* (Kokula L 71), showing a seated bearded man, small girl, and standing youth with dog, the youth is hardly old enough to be a father; on ii² 12237 (L 93) a father and son (with patronymic) are shown with a standing woman (mother?) and small girl, both also labelled. *SEMA* 2528 (n. 37) has a small boy between an older man and a youth; ii² 7799 (L 74) has a small girl between a standing hoplite and seated woman. The stele *CAT* 2. 889 (L 36, Scholl 1996. 100) has a relief with girl between the seated and standing males; the young man is shown again, as a traveller (pilos, slave with baggage) on the loutrophoros.

⁴² *IG ii² 10612*, *CAT* 4. 205, Kokula L 96. I would guess that the standing bearded Aischylos and seated Archippe are the parents of both the hoplite Ph[eidi]ppos and the youth also named Pheidippos, the latter having been renamed when his elder brother died (ch. 8 n. 33; was Archippe an epikleros?), but certainty is impossible. (Peek 1942, no. 242, read Ph[eidi]ppos on a squeeze, Kokula read Pheidēmos on a photograph and is followed by *CAT*, but not by *LGP*N.) Cf. *IG ii² 11341* = 11988 (L 97). Dead (?) hoplite with dead youth on naiskos, *SEMA* 2172 (*CAT* 3. 200 + 3. 195 + *Suppl.* 67, Despines 1991).

the label reads *Lysippe Stration KRhamnousiosiou* (*SEMA*). The carving is unusually crude, and the base is lost; possibly the intrusive K and other letters are left from an earlier label, erased when Lysippe's name was added?⁴³

We are beginning to get a clearer picture of the interaction between monument makers and their clients. Part of the stonecutter's work could be done in advance: vases were made with raised bosses into which reliefs could later be cut, and a sunken *Bildfeld* with reliefs could be cut into an already prepared stele. Addition of painted imagery or details was even easier (see Posamentir 2006). It is more difficult to tell whether masons would have prepared monuments with ready-made standard scenes. Claims that a relief is inappropriate for the inscription that accompanies it may be controversial, and the implied models of efficient labour use and off-the-peg shopping practices may be anachronistic (but see n. 36 above on *SEMA* 2105).⁴⁴ We have no evidence on the erection of tomb monuments, but it seems likely that they were set up on either the ninth or the thirtieth day after death (ch. 10 at nn. 17–20), which would give time for sculptures to be carved to order—even if in most cases a familiar schema was chosen.

⁴³ *IG* ii² 12118, with an erased first inscription and an added loutrophoros-hydria, is dated 2nd c. BCE. On *IG* ii² 10567 (*CAT* 1. 431, Kokula H 25) the labels and the relief on the loutrophoros-hydria may be added. However, on ii² 11894 (*CAT* 3. 392), a *Bildfeld*stele, the schema of seated woman with standing youth (and older man) does seem to be used to commemorate a woman. Painted L-A added to naiskos for young woman (or, less probably, her father), *IG* ii² 6582 = *CAT* 2. 436, with Schmaltz and Salta 2003 no. 53, Posamentir 2006, 87. (Youth as living member of group, *SEMA* 892 = *CAT* 3. 372b.) Two 'mensae' (cf. n. 11) with relief loutrophoroi are problematic, *IG* ii² 5367 because it seems to commemorate a married couple, and ii² 5614 because Tauriskos son of Polyuktos of Amphitrope, named with (perhaps) his mother, may be the father of —xis Tauriskou A., who appears on another problematic stone, ii² 5753 (a list of names, with additions, which can hardly be a dedication but is also rather unusual in scope for a tombstone). These stones have been dated mainly on the basis of questionable prosopographical reasoning (ch. 32 n. 105), and they should be more closely examined before too much weight is based on them in argument. On *IG* ii² 7262 (*CAT* 2. 270a, Kokula L 37), with a relief of seated woman and standing youth, the inscription appears to indicate that they were siblings, but it is possible that the woman was an epikleros and her son was adopted by or to her father.

⁴⁴ Cf. ch. 10 n. 94. Kokula 1984 H 19, where a loutrophoros-amphora was converted to a L-hydria but the name is masculine (*IG* ii² 10553) is puzzling (but there is lost paintwork). Clairmont 1970 discussed correspondence between epigrams and imagery but did not think in terms of supplementation, on which see now Socj 2005, 125; *SEG* 57. 270. A good case is *IG* ii² 12151 (*CAT* 2. 286, *CEG* 513), where a naiskos representing a woman with a slavegirl is complemented by an epigram mentioning her husband, her mother (a widow?), her siblings, and her child. Cf. *IG* ii² 10864 (*CEG* 539, *CAT* 2. 820, Kaltsas 2002 no. 360), showing a seated woman with small girl and slave; the epigram refers to her husband. *IG* ii² 7394 = *CAT* 3. 352c, 3 women named (all same hand), only one represented. On the loutrophoros-stele ii² 7839a (Kokula L 14) the young Euthykritos is shown with his father or a brother (it is unusual that both have dogs); the epigram *CEG* 527 refers to his parents, sisters, and friends. A small number of representations showing the moment of death (other than battle images) must have been explicitly commissioned: some show women in childbirth (Vedder 1988, cf. Stewart and Gray 2000; Catoni 2005, 298–303), and the unusual *CAT* 2. 279b (Schmaltz 1970 A 34) seems to show a dying soldier not in combat. Cf. Bergemann 1997, 64–5; I. Huber 2001.

Schmaltz and Salta (2003) claim that alterations to naiskoi made in the sculptor's workshop (at the request of a specific client) would not be detectable, and that the changes they have observed would have been made after the monuments had been set up; I have not seen any detailed critical discussion of their work.⁴⁵

Schmaltz and Salta do not speculate much on the motives behind the decision to alter an existing monument rather than commissioning a new one, beyond associating the later alterations with Demetrios of Phaleron's sumptuary legislation. Addition of names to a list on a stele was clearly regarded as normal; and a similar list appears on the pediment and mouth of a loutrophoros-stele from Marousi.⁴⁶ Here, two of the added names designate persons represented in the relief, although not positioned over their figures (a third does not). More attention should be paid to the distinction between inscriptions added to a list of dead members of the family and inscriptions added to convey information either about sculpted figures or about their relation to other monuments in the same peribolos (as in the case of Korallion, *IG ii² 11891*, identified in a secondary inscription as wife of Agathon). Since so many tomb monuments have lost their bases, we can seldom be sure that we have the primary inscription by which the dead was commemorated when his or her stone was set up; and we do not as yet have any study of the phenomenon of labelling, i.e., use of names to identify sculpted figures (cf. above, at nn. 17–18). Some labels may have been commissioned from the start (especially if figures were small and very typical in design⁴⁷), but at the time of death and in the years soon after it kin did not need them; it seems possible that some labels on peribolos monuments were added only after some time had elapsed. (Addition of a label when the labelled person died is another possibility.) Thus in the controversial case of the Rhamnous naiskos of Hieron and Lysippe, where art historians think that the monument was designed to commemorate Lysippe but epigraphists consider her label later than that of Hieron, it seems possible that an original inscription on the base commemorating Lysippe was deleted to make place for Hieron's epigram (or was on the lost right-hand

⁴⁵ One clear case of alteration of sculpture was already noted in Clairmont 1976 (*CAT* 3. 433, *SEMA* 82). A good example is *IG ii² 6972* (*CAT* 4. 460, Schmaltz and Salta no. 10), naiskos for a youth, father's name and slavegirl added, ch. 31 n. 61. Alterations to Egyptian reliefs, Baines 2013, 219 n. 11.

⁴⁶ *IG ii² 5327*, Hamiaux 1992 no. 183, *CAT* 3. 213, Kokula L 30. Hamiaux thought that only line 3 was added, but this does not seem certain. On the accepted reconstruction of the family, Chaireas (l. 4) would be the uncle (FB) and not the son of Archedemos II (ll. 1–2); it is a little surprising to find his name in the list but not impossible. Cf. Table 29.14, ch. 29 n. 80.

⁴⁷ Added labels and central figure perhaps in *IG ii² 6572* = *CAT* 3. 90, Schmaltz and Salta 2003 no. 9. I cannot here discuss the question of portraiture in detail: see L. Giuliani 1986; Schmaltz 1999; Bergemann 2001; Piekarski 2004; Catoni 2005; Socj 2005; S. Dillon 2006. It is clear that while Athenians did not on the whole have modern conceptions of a 'likeness'—with the possible exception of some well-known figures with distinctive features, such as Themistokles—their conceptions of identity included signs of character as well as age.

stone of the base), while her label was added only after the fuller label identifying Hieron.⁴⁸ Similarly, *IG ii² 7169*, a stele with a loutrophoros in the pediment, may have had a base identifying Hippon son of Agonippos of Peiraios as the dead, supplemented by a label naming his mother Philostrate, with a further label for Hippon added later.⁴⁹ All this is speculative, but it is important to think about all the elements of a set of monuments that are not preserved, in order to avoid the trap of drawing conclusions only from the evidence available. Evidence, in most cases, is not enough.

Would the established custom of adding to or revising inscriptions on tomb monuments lead on to additions or changes to sculpture? If we feel there is a difference, we would need to explain it in Attic terms—to think about what kind of identity the image represents. In most of the cases noted by Schmaltz and Salta it is not the figure of the person originally commemorated that is changed, but that of a member of the surrounding group—more commonly, a female figure changed into a man. More attention should be paid to such nuances.

The question of the effect of legislation is also important, and here the period around 500 has to be considered as well as the law of Demetrios of Phaleron. Cicero, no doubt drawing on Demetrios, in a passage on Athenian funerary legislation, after reporting Solon's law, says that 'some time later' it was enacted that (1) no *sepulcrum* should be larger than could be made by ten men in three days, (2) *sepulcra* were not to be decorated with *opus tectorium*,⁵⁰ (3) 'what are called *hermae*' were not to be erected on them, (4) no funeral speech was to be pronounced except that delivered at the funeral of the war dead, and (5) the number of persons attending funerals was to be limited, to reduce the public expression of grief.

Cicero does not explicitly say that all these measures were enacted in a single law, and we have no guarantee that Demetrios said this, although it is fairly certain that he thought in terms of legislation. Nor should we assume without question that he was drawing on archival research, even at second hand (via Krateros?). The futility of expensive tomb monuments was a philosophical topos,

⁴⁸ *IRb* 271 + 273 (*IG ii² 13102A*) = *SEMA* 832 + 834, cf. Bergemann and Hallof 1997; Schmaltz 1998; Schmaltz and Salta 2003 p. 159.

⁴⁹ *CAT* 3. 408a, Kokula L 49. Bergemann (1997, p. 90) thought that Philostrate's name was cut earlier, presumably because that of Hippon is crowded into a smaller space; *CAT* notes only that the names were cut by different hands.

⁵⁰ *FGH* 228 F 9 = Wehrli F 135, Fortenbaugh and Schütrumpf 2000 no. 53. See Engels 1998; Bernhardt 2003, 79–81. It is generally accepted that the labour restriction referred to mounds, and that *opus tectorium*—although no one has suggested a Greek equivalent—referred to built tombs of mudbrick and/or stucco coverings for built tombs and mounds.

and the calculation of expenditure in terms of labour time is also found in Plato's *Laws*,⁵¹ as is the contrast between public and private funerals.

Archaeologists, lured by the prospect of providing a date from their own discipline for what they mostly took to be a single law, and in the process explaining the disappearance of tomb sculpture in the early fifth century, were forced if they took the reference to public funerals seriously to date the law immediately after the defeat of Xerxes. This has always been a controversial position,⁵² and the effort should probably be abandoned. A point that has not been sufficiently discussed is the term *hermae*. Had the abandonment of the custom of setting up sculptured monuments over tombs around the turn of the century not posed a problem, no one would have thought of connecting it with any form of sculpture other than the Hermes-headed pillars that became a feature of Attic roads and streets after the erection (before 514) of the Herms of Hipparchos.⁵³ 'Herms' of this form were not set up over tombs,⁵⁴ and it is arguable that any use of the term Hermes or (perhaps more likely) *herma* in association with tomb monuments should have a pre-Hipparchan origin—consciousness that the usage was archaic being possibly shown by Cicero's phrase *hermas hos quos vocant*.⁵⁵

Eckstein's view that the so-called 'law' should be seen as a collection of changes spread over almost a century may well be right, but if so we should go further and ask whether legislation was ever involved. Is it possible that a philosophical source reported a number of funerary practices which Athenians had discontinued, and Demetrios inferred that a law or laws had been passed?⁵⁶

⁵¹ *Laws* 958e (5 men in 5 days), cf. Engels 1998, 137–41; Blok 2006. This way of calculating labour cost is quite odd for antiquity, which had little conception of the daily wage outside military contexts, and especially for funerary mounds which were originally piled up by the friends and associates of the dead (ch. 10 n. 9; had the restriction of funerals to the hours of darkness made a difference?).

⁵² Sculpture dates in the period c.510–480 are notoriously problematic (cf. Stewart 2008, 583–4)—even if 'hermae' can refer to sculpture—and there are very strong arguments for dating the introduction of the public funeral in 464 (Humphreys forthcoming c). The size of mounds in the Kerameikos decreased after the erection of Mound G c.550. Felix Eckstein (1958, 1964) already argued for a succession of measures over the period c.550–464.

⁵³ The surviving Herm, *IG* i³ 1023, has lost its head but calls itself 'Hermes'.

⁵⁴ The only exceptions (*LIMC* Hermes 89–91, from Delos/Rheneia), are Hellenistic, and here the herm is a sign for the palaistra. Hermes Chthonios on Hellenistic gravestones in Thessaly, Stamatopoulou 2014, 226.

⁵⁵ The phrase is evidently corrupt, and Eckstein proposed an emendation that eliminated the reference to herms, but this is drastic and *hos/quos* may be alternatives; *hermas hos* is an emendation for *hermasos*. The term *herma* had two senses: a post used to prop up a ship on land (cf. *hermis* or *hermin*, bedpost), and a reef or pile of rocks. R. Parker (1996, 80–83) suggests that the post was set up in a pile of stones, but the connection may be less material, *herma* meaning a fixed point or marker; for Frisk (1960) the basic meaning may be 'weight', hence 'heavy stone', then 'prop'. Cf. also Triante 1977. And yet, if grave markers were in question, why not use the familiar term *séma*?

⁵⁶ The last point in Cicero's list, limitation of numbers at funerals, may have been taken from Thuc. 2. 34. 4. It is entirely unclear under what procedure such legislation could have been enforced, had anyone wished to prosecute.

Legislation, even if designed by philosophers or reformers, must draw to some extent on ideas or feelings present in its historical context; and if, as is usually claimed, the ‘*post aliquanto* law’ was ‘democratic’ (i.e. passed by an assembly?),⁵⁷ we need to reconstruct a sympathetic climate of opinion.

It may thus be significant that both the reaction against funerary sculpture—which is archaeologically attested even if hard to fit to Cicero’s text—and the legislation of Demetrios of Phaleron followed on periods in which tomb monuments had been damaged and moved. Attika had been invaded and the Akropolis besieged in 480, and in the hasty wall-building that followed Xerxes’ withdrawal tomb monuments from the Kerameikos had been used as building material.⁵⁸ In and after 338 there was a similar situation; a Macedonian invasion was feared, and walls were rebuilt in haste, with some reuse of funerary material (Theodoraki 2011, 119). Moreover, many young men went away to fight for Alexander (or for Persia), and there was further emigration, after the losses at Krannon, when (?) the oligarchic regime restricted citizenship (ch. 22 n. 35). The disruption of periboloi in the Kerameikos on this occasion has been documented by excavation; a few periboloi were reconstructed, many were not, and a large fill was dumped over earlier burials between the Street of Tombs and the Sacred Way.⁵⁹ In both periods the custom of erecting tomb monuments had been disrupted by external circumstances; in both periods Athenians had died in battle against an external enemy, and the war dead had been given special treatment.⁶⁰ These factors may

⁵⁷ Even if some of the supposed measures should be attributed to the tyrants (cf. Eckstein 1964), they were not insensitive to popular opinion. A Thasian law on public funerals (*LSS* 64+; Frisone 2000; see now Fournier and Hamon 2007, *SEG* 57. 820/60. 944) should have been passed in a period when Thasos was fighting independently and not as a subject of Athens. The preserved text is dated c.360–340 by Pouilloux 1954*a*, but might be repeating (on the occasion of the introduction of *gynaikonomoí*?) earlier legislation (see however Picard 2011). Their public funeral might have been an immediate imitation of Athens in 464–3, or might date to the period of oligarchic revolt 411–407, to c.405–390, or to the 360s, when Thasos was fighting in defence of her mainland interests. The latter date is preferred by Fournier and Hamon, but this fighting might have inspired revision of an earlier law.

⁵⁸ For Demetrios of Phaleron see Engels 1998; Houby-Nielsen 1998. On the Themistoklean wall cf. Bäßler 2001, over-focused on ‘religion’. What happened elsewhere in the suburbs of Athens, and in rural Attika, is unclear. The monument of Phrasikleia (*IG* i³ 1261) and a contemporary *kouros* were deliberately buried after damage (whether Persian or local is unknown; cf. Mastrokostas 1972; Rosenberg-Dimitrakopoulou 2015; Humphreys forthcoming *c*). One collection of monuments was buried in a place of honour under the Sacred Gate (Niemeier 2002)—perhaps volunteered by their living ‘owners’? (cf. also Keesling 1999).

⁵⁹ See Ohly 1965; Knigge 1988 p. 136; Kovacsics 1990 (above, nn. 22, 27); Stichel 1984, 1990 on the periboloi of Dionysios of Kollytos (ch. 24 n. 7).

⁶⁰ The dead of Plataia, like those of the Euripos ([Simonides] F 26 Budé), Marathon, and Salamis (Stupperich 1977), were buried on the battlefield. In earlier periods there had been a distinction between the exceptional individual, buried as a mark of honour where he fell, and the rank and file; among the latter, the bones of some will surely have been brought home by their kin and friends (archaic epigrams referring to death in battle need not have stood over cenotaphs). The idea of a collective honorary burial was new (Humphreys forthcoming *c*). The bones of the dead of Chaironeia were brought to Athens

have tipped a balance, in the direction of hostility towards ambitious private monuments. There was also in both periods encouragement to divert resources from funerary display into liturgic expenditure—from the late sixth century with the creation of new tribes and tribal competitions, followed by the building of the trireme fleet, and after Chaironeia with encouragement from Lykourgos. Only Demetrios of Phaleron did not offer alternative outlets for conspicuous competitive expenditure.⁶¹

Engels has energetically argued that Demetrios was justified in arguing that expenditure on private tomb monuments had risen to unprecedented heights,⁶² but the chronology is far from solid, its only fixed date being—at the end—the legislation whose effectiveness is under discussion (cf. G. J. Oliver 2000*b*). Efforts to quantify costs are unlikely ever to reach accurate results, for a number of reasons. The state's standardized processes for procuring stelai and commissioning cutters for decrees are not necessarily a guide to the arrangements made by individual families to organize stone transport and the preparation of monuments. Quality of inscriptions and sculpture in rural demes would depend at least to some extent on the local availability of skilled cutters and artists. We do not even know the relative cost of paintings and sculpture: Posamentir (2006) thinks that painting was cheaper, but Dionysios of Kollytos had a large painted naiskos as well as an impressive carved bull over his grave (another bull, Alexandre 1973, dated c.400–350), and the (painted) naiskos of Hermon looks expensive.⁶³

(Stupperich, op. cit), but the battle had been constructed as a revival of Athens' past days of military heroism (cf. Ma 2008). Late 6th c. casualty list at Thebes, recopied in 4th c., *SEG* 54. 518.

⁶¹ Lykourgos' disapproval of choregiai (1 *Leocr.* 139) does not seem to have had much effect, and he energetically promoted more patriotic forms of spending. On Demetrios see Habicht 1995, 64–7; Mikalson 1998, 54–61; O'Sullivan 2009; Csapo and Wilson 2013 on the *agonothesia*; on the meaning of the restrictions on tomb monuments, Twele 1975; Stichel 1992.

⁶² Engels 1998, 121–8; cf. Scholl 1994; Kaninia 1977 on the dating of sculpted 'trapezai' (cf. n. 11); Schmaltz 1978; Brouskare 2004. The suggestion of Goette 1989 that *IG* ii² 3206 might come from an impressive funerary monument does not seem to me likely (and crowns inscribed 'the *Athenian* demos' suggest a foreigner; cf. chs. 12 n. 25; 32 n. 59). See Palagia 2003 for another implausible conjecture. *IG* ii² 6750 comes from a large monument, but it may not be funerary; the restorations are very conjectural, so possible connections with the family of *APF* 2092 (the entry needs revision) are hardly worth discussing. If the 7-metre pillar monument found near Ikarion commemorated Hagnias (*APF* 131), as suggested by Valavanis 2007, it would date after 323/2 (*IG* ii² 1631. 637–8). Schmaltz and Salta 2003 say that the number of figures in naiskoi increases in the later 4th c., whereas that on lekythoi decreases, perhaps suggesting an increasing polarization between the most ambitious memorials and smaller efforts. (Early lekythoi with numerous figures: *IG* i³ 1285 = ii² 12196, *CAT* 5. 150; 1286 = ii² 11129, *CAT* 4. 120; 1292 = ii² 13026, *CAT* 4. 671.)

⁶³ They might borrow carts and draught animals if they did not own them; such evidence as we have suggests that quarry arrangements were variable and did not necessarily include a charge for the stone (ch. 30 at section 'Eleusis') It is in any case clear that the surviving monuments represent a wide range of expenditure (and equally clear that not every burial had a monument). Dionysios of Kollytos *IG* ii² 11169, *CEG* 593, *SEG* 51. 291, n. 59 above; Hermon, *SEMA* 1820, *CAT* 1. 419; Knigge 1988 fig. 145.

More generally, we do not have a clear idea of changes in commemorative practices over the period from c.430 to the late fourth century. The use of the stone peribolos as a frame for a set of related monuments seems to have begun in the late fifth century,⁶⁴ and developed rapidly in the fourth. We do not know whether the early periboloi were constructed to add grandeur to single monuments or to enclose grouped burials. At present it seems—despite some well-entrenched assumptions to the contrary—that a peribolos could be constructed initially round the memorial of a young person or a woman, and that both the custom of erecting ‘genealogical’ stelai to which names were added successively and the idea that every member of a family (however defined) should have some memorial were later developments inspired at least in part by the peribolos itself.⁶⁵ They were not adopted by all families, and it seems likely that some isolated monuments were still set up even in areas where periboloi became very common, as at Rhamnous.⁶⁶ It is likely also that there was considerable variation among rural demes, some generating a lively local tradition of monument construction (Rhamnous) whereas in others ambitious deme members preferred burial near the city.⁶⁷

One aspect of the dynamics of commemoration that has not been sufficiently discussed is the dialogue between the public burial of war dead and private monuments. I argue elsewhere (Humphreys forthcoming *c*) that on white-ground lekythoi the normal ‘unmarked’ scene of a woman visiting a grave-stele with offerings was read as a visit to the war graves—even though ‘marked’ alternative images where the tomb is that of a woman or child follow rapidly. Be that as it may, it can hardly be denied that when an Athenian in the middle of the fifth century thought of ‘tomb monuments’ the war-grave stelai would be the most salient example. A few archaic kouroi might still be standing, but they would attract much less attention than the ritual of the repatriation of bones from overseas campaigns, the *prothesis* in the Agora, and the public funeral. I also argued that the experience of mass deaths and unceremonious burials in the plague years

⁶⁴ There seems to be a development in the Kerameikos from the mudbrick enclosure wall of the Tritopatreion (c.430: ch. 10 n. 126; on possible earlier proto-periboloi see Bergemann 1997, 1999; Breder 2013*a*, 2013*b*) through mudbrick walls with a stone facing on the road side (Knigge 1988 no. 17, the peribolos very conjecturally attributed to Alkibiades’ burial, see n. 4 above) to constructions entirely of stone. Periboloi were three-sided, the enclosed area being without a border at the back; marker stones (horoi) seem to have been the exception rather than the rule (none found at Rhamnous); and it is not clear how far or in what sense periboloi were regarded as private property (ch. 10 n. 113), even if they could be called *hiera* in tragedy (Walter-Karydi 2003) and were sometimes marked by horoi. Cf. C. B. Patterson 2006*b*.

⁶⁵ Cf. above at nn. 21, 26–9 on the Koroibos peribolos and that of Dexileos.

⁶⁶ The situation with regard to sculptured monuments is far from clear, but it is unlikely that all the rosette-stelai stood in periboloi.

⁶⁷ Thorikos may be an instance, perhaps influenced by the prominent Dexileos peribolos in the Kerameikos.

prompted a reaction against the practice of honouring only those who died on campaign. However, the contrast between impressive public monuments and inconspicuous private burial may also have had a more lasting effect in the case of adult men than in that of the commemoration of women, adolescents, and children. The high proportion of women commemorated by late fifth century tombstones has often been noted, as has the fact that the two earliest monuments from the Kerameikos stood over the graves of a youth—represented on one of the stelai—and a boy.⁶⁸ It is also my impression (given the approximate and sometimes controversial chronology certainty is impossible) that representation of adult men as soldiers is common in the fifth and earlier fourth century, while the standard type of older men in civil dress, leaning on a staff, seems to be introduced only in the early fourth century, for a short period.⁶⁹ Images of soldiers not in battle scenes but in interaction with family members may not have stood over cenotaphs; perhaps they were used to stress that the man in question had served in war even if he did not die in battle. On the other hand Dexileos' memorial, though exceptionally conspicuous, was not necessarily the earliest private monument to a man also listed on the war grave stelai.⁷⁰ What I am suggesting here is that there was an ongoing dialogue, starting perhaps with the Marathon stelai, reinforced by the public funeral and monuments for the war dead in Athens,⁷¹ and continuing into the early fourth century, between public and private burial and commemoration; that this is the context in which the tension between public and private aspects of 'private' monuments should be

⁶⁸ Stears 2000*a*; *IG* i³ 1283 (*CAT* 1. 081), 1294. Schmaltz and Salta 2003, 144–7 note the high proportion of adolescents commemorated by naiskoi (cf. Himmelmann 1999, 118). However, the relatively early relief stele Piraeus Museum 385 (*IG* i³ 1314, c.420–410? Steinhauer n.d. pl. 17) represents two (heroicized) hoplites.

⁶⁹ Bergemann 1997, 76–8, 222 (fewer before 360; cf. list of seated men, 224, most frequent 360–330); Schmaltz and Salta 2003; Ferrario 2006. References to great age in 4th c., Humphreys 1983*a*/1993 (1980), 107, cf. n. 24 above.

⁷⁰ Schmaltz and Salta 2003 note that soldiers are rare in naiskoi, but there has not been much detailed research on this topic (list of soldiers, Bergemann 1997 p. 224; Schmaltz 1970 says that the number on lekythoi rises in the early 4th c. and again after c.340). Note also Schmaltz 1999 on *CAT* 2. 930. For battle scenes on private monuments and their relation to the war grave monuments see Clairmont 1972; Stupperich 1977; Kaempf-Demetriadou 2000; M. Schäfer 2002; Pirson 2014; Spence 1993 for cavalry (add *CAT* 3. 443; *SEMA* 2299); Arrington 2015. Dexileos' monument (*IG* ii² 6217), with its unusual record of his date of birth and specification of the occasion of death, is generally thought to have been prompted by a wish to show that although serving in the cavalry he was too young to have been involved in the oligarchy and had died serving the democracy. No monument shows a rower (unless *CAT* 1. 330, *IG* ii² 11114 does), but their casualty rates were lower. Bergemann (op. cit.) 43–4, 63–4, 79, argues that soldiers may appear on tombstones as 'survivors', they are not always to be identified as the persons commemorated.

⁷¹ Cf. Low 2012; Humphreys forthcoming *c*; for a casualty list originally from the Marathon area listing 22 members of I Erechtheis see Steinhauer 2009*b* (*SEG* 56. 430/61. 269; *BE* 2014, 165–6). Another 5th c. Erechtheis list (80 names), *AR* 2010–11, 34–5.

interpreted;⁷² and that the commemoration of men of fighting age who had not died in combat was a particularly sensitive point.

This perspective may also be relevant to the introduction of the ‘dexiosis’ motif which became so popular on tombstones. While its rapid spread and success may well be due to the multiple connotations noted by many scholars, it has also been observed that an early context for its use is the ‘warrior departure’ scene popular with vase painters. Here the gesture bridges the divide between peace and war, family life and the risk of death; as its popularity increased, the link between the living and the dead and the moment of departure became dominant, but the question of introduction can be separated from that of subsequent popularity.⁷³ Perhaps also the lack of contact during death and burial in the case of death in battle and (very often) in the plague may have played a role. It has often been noticed that whereas many scenes on white-ground lekythoi make explicit allusion to death by representing graves, Charon, Hermes, and *eidola*, while they very seldom show physical contact between the dead and the living, stone monuments from c.430 onwards avoid such funerary allusions and like to diminish the divide between life and death.⁷⁴ Dexiosis was one of the most positive means of achieving this.

Detailed study of tombstones is highly valuable for prosopography, but for the analysis of kinship it has so far been significant mainly through calling into question anachronistic or simplistic assumptions. It is still difficult to say clearly what we are learning about Athenian attitudes to the dead.

What kind of commitment was represented by the erection of tomb monuments? The treatment of the dead in ancient Greece is usually discussed under the heading of ‘religion’,⁷⁵ and in Xenophon *Memorabilia* 4. 4. 19–20 Sokrates and Hippias agree that all peoples respect the gods and parents. On the other hand, Greek practice differed radically from Christian in that less significance was attached to the treatment of corpses⁷⁶ and, above all, there was little connection between burial practices and beliefs about the afterlife—which were in any case

⁷² See n. 7 above, also Breuer 1995. The Thasian law (n. 57) repressed private mourning at public burials to increase the honour awarded to the war dead (*agathoi*). On the extension of the public funeral to celebrated individuals see C. P. Jones 1999; Chaniotis 2006, 223–6; *id.* 2012, 310; on war graves outside Attika, Low 2003. Giudice 2002 is unconvincing.

⁷³ See G. Davies 1985; Pemberton 1989; Schmaltz and Salta 2003, 153, 156–8; Socj 2005, 68; warrior departure on RF vases Spiess 1992, 176–8. Stupperich (1977, 246–7) suggested that the dexiosis motif could have been used in reliefs on the war grave monuments, but this seems to me unlikely. Warrior departure on tombstone, CAT 2. 158; dexiosis between hoplite and woman on WGL, BArch 216757.

⁷⁴ Bergemann 1997, 66–7 with 226; add Hermes: IG i³ 1285 = ii² 12196, CAT 5. 150. Cf. Socj 2005, 66; Baines 2013 on ambiguous attitudes in Egypt to representations of (private) graves.

⁷⁵ Vernant 1998, 90 more cautiously says ‘not entirely secular’.

⁷⁶ Athenians in the classical period seem to have attached little significance to the choice between interment and cremation (see ch. 10 at nn. 91–100 for earlier periods).

vague and variable.⁷⁷ Nor was belief in vengeful ghosts strongly connected to the question of proper burial. It was those unlawfully killed and unavenged, and the ‘untimely’ dead, especially infants, who were considered to bear a grudge against the living (S. I. Johnston 1999), but their resentment was attributed to being deprived of *life*; infants were scarcely prominent on tombstones. Moreover, the marked contrast maintained in Athens c.480–430, and in Thasos (n. 57) over an uncertain period, between the honorary funerals and monuments awarded to the war dead (and a few outstanding civilians) and the unceremonious treatment of other dead persons does not suggest any strong beliefs about the rights of the dead as such. Even during the period when monuments were again set up to commemorate those who died peacefully, there was still much unceremonious burial, while in many other cases the ‘memorial’ may have consisted only in the addition of a name to a list or the adaptation of an earlier tombstone (Schmaltz and Salta 2003).

Athenians surely grieved over the deaths of those close to them (and sometimes said so in epitaphs), and they seem to have been especially moved by the death of the young in the period between childhood and full adulthood (lasting until thirty for men). They were perhaps more concerned over the loss of futures than the preservation of pasts; the Greek discourse of memory is also future-orientated, towards being remembered by those who will live in later times rather than remembering forerunners. Their attitude to time, in relation to the dead, does seem to have shifted over the sixth to fifth centuries from a strong focus on the expression of grief during funerals to a quieter form of remembrance expressed in the erection and tending of tombstones.⁷⁸ But it is unclear how far the monument was felt to be a substitute for the dead person;⁷⁹ this individualistic ideal was perhaps most clearly realized in the innumerable Hellenistic *kioniskoi*, most of which bear a single name, but without any further characteristics. Between c.430 and c.338, in contrast, we have many more monuments representing groups, in a range of forms from the list of names almost like those on the war grave stelai to sculpted *naiskoi* that remind us of eighteenth-century

⁷⁷ Orphic sects were an exception and the Derveni papyrus may warn us that the dead could be given texts on perishable material to aid them in the afterlife (see Graf and Johnston 2007 for a recent discussion). It is not clear whether mystery sects with their own beliefs about the afterlife were more likely to bury in special areas (in the Hellenistic period and later) than other cult groups (ch. 12 n. 69). Note the remarks of Carneiro da Cunha 1981 on the afterlife as a domain of free speculation and fabulation; Walter-Karydi 2003; R. Parker 2005a, 363–8 on afterlife beliefs.

⁷⁸ On tomb visits see Humphreys forthcoming c. It remains odd that we have no textual references to the commissioning and erection of sculptured or inscribed monuments (apart from a few general remarks on the expense of burial, on which see G. J. Oliver 2000b).

⁷⁹ Cf. Vernant 1962, 1990, Badoud 2011b on the *kolossos*. Classical monuments (unlike archaic statues, whether dedications or monuments) rarely speak of themselves in the first person.

family portraits.⁸⁰ It is noteworthy, too, that these ‘group portraits’ appear in a period when other group sculptures (apart from battle scenes) are almost entirely absent in Attika.

The lists suggest continuity over time, even if names were sometimes cut before or after the corresponding burial, while the group images convey a sense of timeless togetherness reaching even beyond the grave. These ideas are somewhat contradictory, but in both cases there was little beyond the repeated practice of adding new names and monuments to keep them operative over a long period. Classical Athenian society was democratic, and it was difficult for a family to maintain a leading position (let alone special privileges) over many generations.⁸¹ Moreover, any exceptionally distinguished ancestor might well have been buried apart from his kin.⁸² Even at Rhamnous, where one might expect residents to have felt family pride in monuments, the name of a descendant of the family responsible for the grandest of these is cut on the wall of another group’s peribolos.⁸³

We should like to know much more about variations in practice between city and country, and among rural demes (though the pace of modern development in Attika and continuing shortcomings in excavation and publication make this unlikely). Even though there were strong pressures towards conformity in imagery and practice, kept up by the frequent experience of seeing roadside tombs and the character of the production process, it is clear that there was still room for both local and individual variation. We need to be ready to recognize this—rather than generalizing from what may well be exceptional examples—and above all we need to be aware of the huge gaps in the evidence.

These gaps are not only due to the inadequacies of research in the past; lack of communication between disciplines continues to cause serious problems. Since 1980 several new catalogues of Attic monuments and inscriptions (of varying quality) have appeared,⁸⁴ but there has been no improvement in the excavation record. Provision for the study and publication of material from salvage excavations has always been inadequate (see Matthaïou 1988*a*), and the situation is getting worse. It is even more difficult to get an overview of research in other

⁸⁰ Especially the family of Menestides, *SEMA* 862, Table 31.6.

⁸¹ Cf. *APF* and J. K. Davies 1981; ch. 12 at nn. 71–9 on family traditions in cult; ch. 20 on *genè*.

⁸² Lykourgos, Perikles (Paus. 1. 29. 3). On the *Kimoneia mnēmata* of the late 6th c. see ch. 10 n. 110.

⁸³ Peribolos of Hierokles, *SEMA* 831–43 (Table 31.7); Lykeas son of Kephisios, *SEMA* 809 (peribolos of Diogeiton).

⁸⁴ The most important are *CAT* (1993–5; reading of inscriptions not always reliable, cf. Daux 1972), Bergemann 1997; *SEMA* (2006); Posamentir 2006; and Marchiandi 2011*a*. On Hildebrandt 2006 see n. 28 above.

parts of Greece; the systematic effort of the University of Texas (Austin), in collaboration with the Italian archaeological service, to map known burial sites in the territory of Metapontum, excavate a responsible sample in full awareness of current methodology, and publish the results (Carter a. o. 1998), remains as far as I know unique. Studies of grave monuments in other parts of (modern) Greek territory⁸⁵ have seldom made any attempt to provide excavation data.

⁸⁵ Fraser and Rönne 1957; Berranger-Ausserve 2001; Holtzmann 2001. Fraser 1977 is the exception. Couilloud-Le Dinahet 1978 (Rheneia) is based only on surface exploration.

Festivals, Associations, Dedications

The Sicilian traveller Saverio Scrofani, visiting Delphi in the 1790s, carved on the rocks by the Castalian spring ‘the names of all my family with, in the middle, that of my mother; my uncle immediately after my father, my aunts near my mother, those of my brothers and sisters all mixed up, as they are in my heart’. A moment of intense experience, culmination of a secular pilgrimage, had to be shared with those closest to him.¹ This record of an inscription at Delphi is striking for the modern reader, but may be misleading. When ancient Greek inscriptions in sanctuaries list kin, those listed will have been present at the ritual of which the text is a record; the idea of sharing an emotional experience with absent kin would be anachronistic here.² Similarly, the transition from funerals and burials to ‘religion’, as contexts for the relation between identity and kinship, which may seem self-evident to the modern reader, might have been less obvious for ancient Athenians—or, rather, the connection would not rest on the classification of funerals as ‘religious’, but on the opportunity offered by all rituals to invite kin and associates to participate, and to support a representation of identity by their presence.³

The analysis in this chapter differs in purpose, and thus in content, from other recent work on more or less the same set of data in three respects. In the first place, being concerned with evidence for patterns of association, I do not here discuss activities sometimes classed as ‘religious’ which were intended to harm or

¹ Scrofani 1965, 63. Cf. *PBrMus* 854, 1st–2nd c. CE, tourist in Egypt carves names of philoi on shrines; Antoninus Placentinus 4 (*Corpus Scriptorum Ecclesiasticorum Latinorum* 39. 161) for a parallel from a Christian pilgrim of the 6th c. In point of fact Scrofani had left Palermo in 1792 to avoid arrest for fraud, and was not to return until 1822; but he had translated Sterne’s *Sentimental Journey*. On pilgrimage see below, n. 35.

² The only possible candidates for inscriptions naming absent (living) persons are homosexual rock-cut inscriptions; see A. Chankowski 2002, and *SEG* 49. 2 (cf. 51. 101–3, Langdon 2015); Langdon is preparing more Attic rock-cut inscriptions for publication (*SEG* 54. 82; ch. 13 n. 25).

³ See H. J. Jones 1962, Humphreys 1983a/1993, 18–19, and Vernant 1998, 105–6 on the linking of identity to action and to association with others. Interaction with the gods was seldom solitary; on prayer see Versnel 1981*b*; Depew 1997; Pulleyn 1997. A vow might be made in solitude but would be fulfilled in the company of others. On resemblances between dedications and tomb monuments see below at notes 103–4.

constrain the victim (curse tablets, magic).⁴ Secondly—as throughout this book—I make a distinction between the nuclear family (parents and children, co-resident siblings) and wider networks of kin, normally living in separate households (for residence patterns see ch. 5). Thirdly, I distinguish the corporate groups that were concerned with legitimacy and citizenship, and recruited strictly by agnatic filiation, from more ‘voluntary’ groupings.⁵

Some of these groupings were temporary, ‘action sets’ of associates invited for a specific occasion, while others met repeatedly over a shorter or longer period. Having no specific legal functions, they were fuzzy at the edges, although, as we shall see, some made efforts to become corporate groups with established recruitment procedures, subscriptions, and even in some cases penalties for non-attendance. Since we are dealing with interaction with the gods, the rhythm of meetings might well be influenced by the local calendar of festivals.⁶ On the other hand, the gods might modify these rhythms, appearing in dreams or indicating through omens that unscheduled action was required. The distinction between public and private spheres does not fit well here.⁷ Large groups of ritual participants, and larger sacred spaces, were more ‘public’ than small; women’s festivals might exclude men, a question of secrecy rather than privacy; if associations were formalized, they used the procedures of the public sphere (assemblies, decrees, elections, accounts, etc.). One chose the company of *philoi* (a term covering kin as well as ‘friends’) and *oikeioi*—‘intimates’, who could be invited home, but also, perhaps, those one ‘felt at home with’.⁸ It must be stressed, however, that gender and age distinctions reached into the home and structured conceptions of intimacy.

Kinship, in regard to the choice of associates, provided a structural constant (based on parentage), though extended by marriage and limited by disputes (ch. 7). The question, then, is what evidence we have for the choice of kin as associates in various types of ‘voluntary’ interaction with the gods, and whether we can detect changes over time and/or synchronic differences related to specific forms of action.

Modern scholars, in considering these issues, tend to focus mainly on the nuclear family, guided by a complex of assumptions about the interconnections

⁴ See Graf 1991 on magic and cursing as solitary activities; R. Parker 2005*a*, ch. 6.

⁵ Tribes, phratries, genê, and demes are studied in chs. 18–32. N. F. Jones’s study of associations (1999) deals also with these, and under the heading of voluntary associations deals with some groupings that I consider elsewhere: philosophical schools (ch. 2 nn. 50–1) and political *hetairiai* (ch. 13). Arnaoutoglou 2003 has a list of Hellenistic Attic associations.

⁶ The choice of a date on which to make a dedication has not been studied; Georgoudi 1998 discusses private sacrifices made on the occasion of public festivals (cf. also Van Straten 1981).

⁷ On the problems of distinguishing ‘private’ and ‘public’ dedications see now Ma 2005.

⁸ Konstan (1997) wants to restrict *oikeioi* to kinsmen, but I do not think this is strictly tenable. Cf. Pembroke 1971.

of religion, private life, tradition, and childhood.⁹ Such assumptions privilege continuity rather than change; yet all these categories (including ‘tradition’), and the category ‘family’ itself, change over time. While it is not difficult to find texts that fit modern assumptions (‘Meidias and Danaï, having made a vow to Asklepios, on behalf of their children Hediste, Sosikles, and Olympiodoros’¹⁰), to generalize from such examples may blind us to evidence for other groupings.

The (ideal) pattern of modern family life, in which married couples spend most of their leisure time with each other and with their children, developed only in the last two centuries, and spread from the middle classes to the rest of society even more recently.¹¹ In antiquity, gender and age remained very important in structuring patterns of association, though in Athens the nuclear family became more significant from the Peloponnesian War onwards. The setting of Menander’s *Dyskolos* is sometimes presented by modern scholars as a family picnic, but careful reading of the text shows that it was a women’s outing. The hero’s mother takes her daughter, slaves, a hired cook, and ‘a crowd’¹² who must be female friends, since her husband (needed for the betrothals at the end of the play) arrives only late, and the hero had made his own way to the area. Women’s offerings and festivals are considered in more detail below.

The role of ‘children’ in a family’s ritual activities also requires careful scrutiny. Rites significant for the child’s legal status were concentrated at the beginning of life and, most importantly, around the age of puberty. In the archaic and early classical periods elite families took especial pride in the beautiful adolescents who led ritual processions, danced and sang in choruses, competed in games, and were publicly displayed on their entry into adulthood as new citizens, paraded before the Council, or as brides.¹³ Less attention was paid to younger children.¹⁴ However, while girls after a very brief adolescence were expected to make a rapid transition to marriage and motherhood (H. King 1998, 23), men did not become eligible for political office (including Council membership) until they were thirty, and rarely married before that age. A son also had limited possibilities of becoming financially independent during his father’s lifetime, although from the 470s

⁹ Cf. below at n. 83–4, on Löhr’s study of *Familienweibungen* (2000), which shows no recognition that the ‘family’ may have a history. R. Parker 2005*a* begins with a chapter on ancestors, tombs, and household cults, and ends by asserting the ‘deep conservatism’ of Athenian religion; a different perspective in Humphreys 2004.

¹⁰ *IG* ii² 4403 (not necessarily Athenian citizens). In the Homeric *Hymn to Apollo* Ionians go to Delos with their children and wives.

¹¹ See Bott 1957, Donzelot 1977, Poster 1978; Steedman 1990, 1995 on the history of childhood.

¹² *Polus ochlos*, 404–5; cf. 230, 432.

¹³ See chs. 19, 22 for rituals with legal implications; ch. 9 for other rites de passage, for both boys and girls.

¹⁴ On the Choes see Humphreys 2004, ch. 6; ch. 9 n. 20. Statues representing pre-adolescent children in ritual contexts seem to begin in the 4th c. (see n. 18 below).

onward pay for military service made some difference here.¹⁵ During this prolonged period of adolescence, young men had their own characteristic activities—hunting, the gymnasium, the symposion, and *kômos*—and their own social groupings. Hunting may have been at least partly responsible for the popularity of Attic peak sanctuaries during the seventh century, and the gymnasium had its own cults; as we shall see, some adolescent clubs may also have engaged in ritual activity. It was also in such clubs that rituals were parodied.¹⁶ Lykourgos' formalization of military training for epheboi of 18–20 was very successful in harnessing the traditions of the gymnasium and of tribal competition into a new set of rituals in which the epheboi collectively represented an ideal image of citizenship, but in the classical period there are few references to the individual ritual roles that had earlier been played by young men from leading families.¹⁷ In the Hellenistic period ritual performances by girls and younger boys become more prominent, and ambitious families commemorate these activities by dedicating statues.¹⁸

¹⁵ See ch. 5 on the age of marriage and financial independence for men.

¹⁶ On young men's social lives see ch. 13 and below at n. 58, on Lys. 8; in the archaic period travel and hunting were probably more important (Chaniotis 1991; Humphreys 1983a/1993, 16–18; ch. 10 at n. 136 on peak sanctuaries; n. 2 above). On parody of rituals see below, n. 57 (they are also parodied by Aristophanes).

¹⁷ Choral odes for victories in games seem to become rare after the middle of the 5th c. Kimon may still have given prominence to adolescents in the cult of Theseus (ch. 20 n. 70). On the reference in Euripides' biography to service as Torchbearer for Apollo Zoster see Lefkowitz 1979.

¹⁸ On the ritual roles of adolescents and children see also ch. 9 at nn. 21–8. The earliest surviving dedication of a kanephoros (or of her four crowns?) is IG ii² 3457, of c.300. There is no certain dedication of an arrhephoros before 229: ii² 3461 is dated 220/19, 3465 could be either [kanê-] or [arrhê]phoros, 3466 is dated only '3rd c.' (see Von den Hoff 2008; Karila-Cohen 2009; R. Schmidt 2010; Pilz 2013; list in Choreme 2009). On the description of Peisistratos' daughter as an arrhephoros in POxy 664 see ch. 4 n. 50. Clinton 1974 discusses some representations of boys (under c.14?) from Eleusis, who could have acted as *pais aph' hestias* (perhaps mentioned in IG i³ 6 C 25; the earliest dateable representation is 4th c., Mylonas 1961, fig. 80); most of the inscribed bases are for girls (cf. Mikalson 1998, 260), but ii² 3478, of the late 2nd c., is for a boy. An important body of material from Brauron has not yet been published in any detail (Kontes 1967 reports more boys, perhaps aged less than 10, than girls, aged under 12; see also Lundgreen 2009; Bobou 2015, 56–9; Mitsopoulos-Leon 2009 no. 535, TC figure of squatting boy, 5th c.); a life-size child figure (gender unclear) from the Akropolis metro station (City 2000, 108 no. 91, Inv. M 413) is dated 350–300. In IG xii 9. 194. 5–6 (Eretria, c.300 BCE) children under 7 of either sex may have a role in ritual processions. There was apparently a statue of Isokrates represented as a *kerêtistês*, hockey player (Oikonomos 1920); or *kelêtistês*, jockey (H. N. Fowler 1969, 384 n. 2–3; Roisman a. o. 2015, 168) in the ball court of the arrhephoroi on the Akropolis; if this story is reliable, perhaps we have here a transitional image between earlier *kouroi* and later figures of younger children? On sculpted representations of children see Vorster 1983; Rühfel 1984a, 1984b; Beer 1987, 1988; Raftopoulou 2000; Bobou 2015; also T. L. Shear 1969, 393 with pl. 104, initiates?; Petrakos 1987a, fig. 64; conventions of age depiction have not been discussed. Cf. Van Bremen 1996, 145–7 on distinctions between older adolescents—ephebes and nubile *parthenoi*—and younger children. On IG ii³ 4. 632 (boy Pythaistai) see ch. 24 n. 43.

The Attic evidence¹⁹ becomes more problematic as we move into this area of ‘voluntary’ behaviour: it covers a wider social spectrum, the groups involved may often have been shortlived (whereas demes and phratries were sustained by their relation to citizenship), and persons who put their activities on record were less likely to use the full three-part naming formula. While some elite dedications commemorating military or athletic achievements were certainly addressed to a wide public,²⁰ many of the epigraphic texts to be discussed here were addressed primarily to the gods and/or to the members of an association linked to a specific shrine; background knowledge about identity could be presumed. Patronymics or demotics might be added only to distinguish two persons with the same name.²¹ Identification of women is particularly difficult both because they were not accustomed regularly to identify themselves in public contexts and because many of them were known in local and domestic circles by pet names drawn from a limited repertoire (ch. 8 n. 17). Brulé (1987, 237–8) finds only seven ‘usable’ names in c.120 records of dedications to Artemis Brauronia, i.e., only seven women who identified themselves by reference to a husband or father attested elsewhere.²² Slaves and freedmen, who can plausibly be identified as such in some records of dedications and associations by names typical of their status, had no supplementary names. Foreign residents (metics) might identify themselves by a patronymic and/or ethnic name denoting their city or region of origin, but there was a split between the official practice of Athens, in which metics and freedmen were identified by their deme of residence, and identification in unofficial contexts, where residence never seems to be mentioned.

Despite these problems of identification, the records of the treasurers of Athena and of the Other Gods on the Akropolis, and of dedications to Artemis Brauronia and to Asklepios, provide a substantial proportion of our knowledge of Attic

¹⁹ I cite some non-Attic data for comparative purposes (below at nn. 113ff.), but have made no attempt at systematic coverage.

²⁰ Cf. Keesling 2003, especially 32–3, on the prominent position of names in dedicatory inscriptions.

²¹ This is also true of many tombstones (ch. 11 n. 17) and curse tablets (ch. 14). Deities—Olympian or chthonic—might be assumed to have background knowledge (cf. below, at n. 100, on questions to oracles). See Lambert 1999*a* on the addition of patronymics or demotics to distinguish homonyms.

²² Brulé 1987, 237–8 (one of his cases is doubtful; he does not include Artemis Brauronia dedications listed by the Treasurers of the Other Gods). On Malthake wife of Leosthenes (of Kephale), *IG* ii² 1529. 11–12 (and copies), see n. 107 below. Brulé omits Philoumene daughter of Mnesidemios of Lamptrai (*IG* ii² 1514. 62–4, 1516. 38–9, 1518. 79–81, with *PAAH* 1949, 85), whose father is known from *SEG* 19. 174. 11 and perhaps also *SEMA* 373. 4 (*LGP*N entries need some correction). Only one woman uses her demotic of origin without a patronymic (Hedyle of Phrearrhioi, ii² 1524. 193–4, of 334/3). We have no study of the ways in which women name themselves in dedications (some data in Masson 1997*a*), or of the variations in treasurers’ records of the same label. Note Theophr. *Char.* 13. 10 criticizing excess of information on women’s tombstones.

dedications, especially those in precious metals and perishable materials.²³ They passed, however, through a double process of selection; the dedicants themselves decided whether to record their names and, if so, in what form, and treasurers varied in the amount of details copied from dedications onto stone. Dedicatory reliefs in stone, which were not recorded by treasurers, might easily become separated in the course of time from the pillars and bases on which they stood and on which dedicants' names were often recorded (cf. Van Straten 1992; ch. 11 n. 11 on tombstones); a relief might also bear the name of a single dedicant while representing a group of worshippers.²⁴

Cult associations, like other local groups (chs. 19, 22), did not regularly record their decisions and accounts on stone; many such records were probably generated in moments of crisis and dispute. Leases of land owned by such groups were, by the late fourth century, more often recorded on stone, but might be set up on the leased land rather than in a sanctuary (if the leased property was not a *temenos*), which could influence chances of preservation. On the other hand, the custom of awarding crowns to benefactors, which became common from the Lykourgan period onwards, led to dedication of the crowns and publication of honorary decrees in the group's sanctuary, and hence to an increase in records.²⁵

²³ Note also the fragmentary catalogue of bronze dedications from the Akropolis published by D. Harris 1992; Linders 1990.

²⁴ Cf. Edelman 1999; R. Parker 2005*a*, 45–9; Stafford 2008. Figures who play ritual roles in dedicatory reliefs—the kistephoros and the boy who leads the victim to the altar—may (at least in the latter case?) be slaves. Despines 2002 discusses large reliefs from Brauron, one (B5/1151) showing 4 nuclear families (father, mother, a child), decreasing in age from the altar leftwards, but his attempt to construct a 3-generation lineage is unpersuasive. On Palagia 1995 (discussing Akropolis Museum 581) see ch. 19 n. 46.

²⁵ On dedication of crowns see Humphreys 2007; Lambert 2004*b* no. 9 on *IG* ii² 298; n. 85 below; ch. 19 n. 153. The conventions of dedication, and of recopying decrees awarding crowns, have not been studied (note Tracy 2003, 52–5, on duplication of texts). The classification of stones is confused; epigraphic publications tend to class dedications as decrees when they include decrees, or as 'catalogi' when they include lists (cf. Humphreys 2010*a*; but some 'lists' have been moved to *IG* ii³ 4; Appendix 1), while archaeologists may class document-reliefs with dedications (e.g. Tagalidou 1993). Painted images of crowns are not always mentioned even when the spacing of inscriptions indicates their presence (cf. n. 61 below; Ma and Tracy 2004, *SEG* 54. 306). *IG* ii² 3202 = *Agora* XV 33 cannot be a tribal prytaneis dedication but must have been dedicated by an individual, because one crown was awarded by demotai (cf. ii³ 4. 61; ii² 3214, perhaps Mnesitheos of Kydathenaion); it is therefore unnecessary to read [*sylllo*]geis instead of Ross's [*hip*]peis (cf. *IG* ii² 1233, 1238, also dedications, ch. 19 nn. 153, 151). The dedicant had received at least 12 crowns, which makes the monument comparable to *IG* ii² 3207, perhaps commemorating Lykourgos (Lambert 2015*a*). We do not know the form of either monument (ii² 3202 was seen in the Kareas monastery on the west side of Hymettos, 3207 was found on the Akropolis); both are classed as *tabulae*. Can they have been statue bases? *IG* ii² 3206, an epistyle found in the Kerameikos, has been interpreted by Goette 1989 (*SEG* 39. 211) as part of a commemorative naiskos for Nausikles son of Klearchos of Oe (cf. *APF* 10552 with D 8), set up by his son c.325. He restores 17 crowns. However, the specification that crowns and statues were awarded by the Athenian hippeis (I), the Athenian demos on Salamis (II), the Athenian demos on Imbros (III), and the Athenian demos (IV, V, for service as gymnasiarch and general) seems to me to imply that the honorand was not an Athenian citizen. Demetrios

Few non-documentary texts provide useful material for the present analysis, but those few provide useful sidelights. Plato and Demosthenes supply information on traditions of ritual specialization among the aristocracy (*Lysis*) and the urban bourgeoisie (Aischines); the role of ritual outings and parodies of ritual in the social life of young men about town is occasionally mentioned in forensic speeches; Menander's *Dyskolos* and a mime by Herondas represent women's visits to sanctuaries (Goeken 2010). Drama, mime, and Theophrastos' *Characters* help us to understand religious enthusiasm as a recognized lifestyle. Attika had no local oracle, but evidence from elsewhere suggests the range of interests of those who consulted oracles privately; dream books and astrological handbooks from a later period also provide indications of private anxieties.²⁶

All these sources have their silences. They tend to single out leading players in ritual while ignoring other participants, and they very seldom provide any sense of the passage of time, either in the process of a single ritual performance or in the dynamics of group formation and dissolution. Yet—as we have seen in the case of funerals—questions about process are essential.

Association with kin in cult is cited as an index of closeness and affection. Kiron, whose estate is claimed by his daughter's sons, 'never made a sacrifice without us, large or small, always took us with him to the Rural Dionysia and seated us beside him to watch the performances; we celebrated all the festivals at his home. And when he sacrificed to Zeus Ktesios, something to which he attached great importance (and he never had slaves or free non-kin present) we shared in the sacrifice and handled the sacred implements...' (Isaios 8. 15–16; cf. Plato *Laches* 187 d–e, children at deme festivals). The speaker of Isaios 9 is claiming the estate of his half-brother Astyphilos; he tells the jury that his father used to take Astyphilos (his stepson) to meetings of the *thiasos* of Herakles to which he belonged, and introduced him to membership at the appropriate age (§ 30). This was cited as proof of the close relations between Astyphilos and his stepfather's family. The speaker of Isokrates 19 (§ 10) emphasizes his closeness to his brother-in-law (WB) Thrasylochos by asserting that as children they had always attended sacrifices, pilgrimages (*theôriai*), and festivals together; they were closer

Poliorketes (or one of his henchmen) would be a possible candidate. In this case the monument would belong to the period after Athens recovered Imbros in 307, and the gymnasiarchy would probably be an exceptional liturgic office (for the Panathenaia? of 305/4?). CEG 761 classes IG ii² 4321 as a public monument, but the prayer for wealth, pleasure, and health for the honorand and his descendants seems to me to exclude this interpretation. It may be a private monument commemorating the grant of public honours. IG ii² 4330 (ch. 26 n. 59) is also a crown dedication.

²⁶ CEG 2. 860 is a 4th c. record on stone from Knidos of a woman who dedicated an *oikos* and *agalma* to Demeter and Kore after a dream announcing that she would become their priestess. Cf. below at n. 102 for further references to dreams.

to each other than to their own brothers.²⁷ When Strepsiades in Aristophanes' *Clouds* is trying to persuade his son to do what he wants, the memory he conjures up is of childhood treats associated with religious occasions: 'My first day's pay as a juror went to buy you a toy cart at the *Diasia*' (863–4). We also, however, have texts (from New Comedy) that portray young men as bored by such occasions.

Dinners with relatives, which would take place largely on ritual occasions, were dreary to a Menandrian youngster:

What a drag to get caught in a family dinner!
 Father starts on a speech as he's lifting the wine cup for the first drink,
 (goes on) until you're screwed to the eyeballs with good advice; then mother;
 then some granny rambles away; then a growling old man,
 auntie's father; then an old woman calls you 'Darling';
 a fellow just has to nod away at them all.²⁸

Another Menandrian character envies those with no kin; 'No hassle from brother or sister; not a glimpse of an aunt, not a murmur of an uncle—what luck to have few *anankaioi*!' ²⁹ These young men are bored by 'the family' in the wider sense, by the company of kin, and by pride in familial status and ancestry (*PCG* VI 2 F 835; 612 Sandbach 1972):

The family turn me off! If you love me, mamma, don't keep on and on about 'the family' (*genos*). It's people who have nothing good to say for *themselves* who fall back on that—tombstones, 'the family', counting up ancestors (*pappous*). They only have the same number as anyone else—everyone has ancestors!

These speeches are preserved out of context and no doubt belonged to the wild-oat-sowing phase of Menander's heroes, who by the end of the play would be engaged to respectable girls and ready to settle down to become pompous fathers in their turn. Pride in family traditions and achievements was probably increasing rather than decreasing in Athens in Menander's day. But they remind us that when adolescents participated in ritual they did so on their own terms and in their own age-set, not as part of a family gathering. The characteristic ritual activities of upper-class adolescents in classical Athens, as portrayed by our sources,

²⁷ Conversely, not to associate in sacrifices is evidence of bad relations: *Is.* 1. 31, 9. 21. The speaker in *Is.* 8. 17 tries to suggest to the jury that his opponent was not invited to sacrifices by *d.c.*, but his indirect way of doing this does not inspire confidence.

²⁸ *PCG* VI 2 F 186; Sandbach 1972, 209. The passage contains several textual problems and any translation is bound to be controversial in details, but the gist is clear. The text does not help us to decide whether the kin at dinner are co-resident in an extended household or have been invited from outside for this *triklinon syngeneias*; I prefer the second alternative.

²⁹ F 187 *PCG* VI 2, 208 Sandbach 1972. This fragment is thought to belong to the same context as the former passage.

are athletic and musical contests, all-night festivals (*pannychides*) and parodies of ritual.

The opening scene of Plato's *Republic* is instructive. Sokrates is on his way back to the city, with Plato's eldest brother Adeimantos, from Peiraios, where they have been watching the rites in honour of the Thracian goddess Bendis, recently accepted into the city's pantheon. They are accosted by Adeimantos' brother Glaukon and by Polemarchos son of Kephalos, who urge them to come to Kephalos' house and wait for the evening festivities, which will include a relay race of torchbearers on horseback. Kephalos has just finished a private sacrifice at home with his sons and three visitors; being an immigrant, he does not have kin to invite but is holding open house for his sons' friends, who can be spotted as they walk past on their way to or from the festival. Young men did not make formal plans for such occasions; they expected to find friends and kin of their own age taking part.

One attractive feature of all-night festivals, for the young, was the chance of sexual adventures. Although the number of respectable girls of citizen family represented in Menander's plays as having been raped on such occasions certainly passes belief, we should probably recognize that Athenian girls could attend these festivals and that some of them may have hoped to find husbands there. When Plato in the *Laws* (771e–772a) sees the search for marriage partners as one of the functions of the ritual dances in which young men and women are to be involved, he may be reincorporating into daytime rites a function which they had had in the archaic period (Calame 1977), but which by the fourth century in Athens was disquietingly associated with darkness and the carnival atmosphere of the *pannychis*.

Parodies of religious rites will be discussed below (n. 57) with other social activities of young-men-about-town, but it should be pointed out here that even these had roots in ritual. Jestings, horseplay, obscenity and insult, drunken revels all had their appropriate place in the religious calendar, and young men must always have figured prominently among the 'princes of misrule' (N. Z. Davis 1975, ch. 4) who set them going. Parody of ritual was accepted as a major ingredient in Aristophanic comedy, and the *kômos* or drunken revel in which any excessive drinking party might end (Plato, *Symposium* 212c–213a) wavered along the borderline between rite and parody. The pupils of the sophists went further, but not in a radically new direction.

WOMEN

Participation in ritual was structured by gender as well as age. There were traditional festivals in many parts of Greece in which the women of a city or a

smaller settlement gathered together, appointed their own officials, and made their own offerings or even sacrifice, strictly excluding all males from the proceedings. The shared social life and culture of the women of the community—gossip at the fountain, visits to borrow pots and pans or food for unexpected visitors, help in illness or childbirth, skills to be passed on to daughters—all this, like any other extensive pattern of social interaction, had to have its expression in cult.³⁰ There was presumably some element of sexual antagonism built into such rites from the beginning; myths in which women collectively murder their menfolk (the Lemnian women, the Danaidai) may have been associated with these festivals already in the archaic period, and some cities developed parallel, linked cults restricted to men (Burkert 1970*b*; 1985, 245). The secrecy of the rituals permitted a relatively free play of the imagination both on the women's side, in devising rites, and on the men's, in imagining what the women did. It also, however, made these rituals very vulnerable to the scepticism which developed in the fifth century. Aristophanes' *Lysistrata*, *Thesmophoriazousai*, and *Ekkleziiazousai*—the latter incorporating references to the Skira—perhaps suggest a feeling that it was unwise to allow women so much independence. The speaker of *Lysias* 1 (§ 20) complains that his wife went to the Thesmophoria (in the city) with the mother of her lover Eratosthenes. Husbands preferred to be able to supervise their wives' choice of associates.

One of the many things we do not know about the Thesmophoria is whether women could choose where they celebrated the festival. Aristophanes treats the celebration as a female counterpart to an Assembly meeting, i.e., a gathering of women from all over Attika; but he may have his own reasons for exaggerating the 'public' character of the festival (cf. Clinton 1996). Peiraios had its own sanctuary of the Thesmophoroi, used by the women of the deme at the Thesmophoria, Plerosia, Kalamaia, and Skira (*IG* ii² 1177, *LS* 36), and other demes may have had similar centres. We do not know whether the two married women elected as officials for the festival (*archousai*) in Cholargos, Pithos, and perhaps in other demes, presided over local festivities or represented their demes in Athens. Even if most demes had local celebrations, which is likely enough, a woman whose husband belonged to a rural deme but had a house in Athens could presumably join the women of the city demes in the city's celebrations, perhaps held in the City Eleusinion.³¹

³⁰ The archaeological record from some local sanctuaries suggests use mainly if not exclusively by women (Kiapha Thiti, Christiansen 2000; Lathoureza, Mazarakis Ainian 1995; Vryokastro, id. 2005, Mitsopoulou 2010; for gender segregation in ritual in other parts of Greece see S. G. Cole 2004, 91–104). Note that if women attended theatre performances (Spineto 2005, 292–315) they may well have sat separately; cf. the discussion of women watching games in M. P. J. Dillon 2000. On sacrifice by women see now Connelly 2007; N. D. Robertson 2010; on the Thesmophoria, Versnel 1994*a*, 235–60.

³¹ *Archousai*: *IG* ii² 1184, *LSS* 124 (Cholargos); *Is.* 3. 80, 8. 19–20 (Pithos); cf. *Men. Epit.* 522. The number of officials and the deme cannot be deduced from *Is.* 3. 80. On deme celebrations see Whitehead

The significance of the question from the point of view of the present study is that we should like to know whether such festivals provided women who had married outside their deme of origin with an opportunity for meeting female kin, or prevented them from doing so. Celebration of religious festivals by phratries and demes, which grouped men with their fathers, brothers and other agnatic kin, introduced discontinuities into the religious experience of women. Transfer of cult responsibilities from the phratries to the demes, which were smaller units, together with increasing spatial mobility which presumably increased rates of phratry and deme exogamy, may well have meant that a substantial proportion of Attic women were not meeting close female kin and childhood friends at deme festivals. Men who moved from their deme village to the city had a meeting place there where they could associate with fellow-demesmen, but the demesmen of Dekeleia met at a barber's shop near the Herms in the Agora (Lysias 23. 2; cf. *IG ii*² 1237. 122–3); such rendezvous were not available to their wives. Whether a woman who lived in the city would take part regularly in festivals like that of Elaphebolion 16 at Erchia (*LS* 18 A 44–51, D 33–40), in which the sacrificial meat was distributed to the women of the deme and had to be consumed on the spot, would depend on her husband's willingness to provide transport and an escort. Wealthy husbands were under some pressure from demes to provide funds for their wives' service as officials for the deme Thesmophoria, but certainly were not expected to do this every year.³²

Insofar as the Athenian religious calendar was tied to a framework of patrilineal descent groups, it created problems of discontinuity and separation for women which men did not experience to the same extent, though of course it did separate brothers from sisters and fathers from daughters. It is particularly noteworthy that a mother who had served with distinction as *genos* priestess could not pass on her position to her daughter, unless she had married within the *genos*.³³

On the other hand, the religious sphere did offer some openings for initiatives by women. The plot of Menander's *Dyskolos* is set going by an alarming dream sent to the hero's mother (407–18), which prompts her to organize a trip to a remote part of the countryside to propitiate Pan (see Borgeaud 1979, ch. 8). She takes household slaves and a hired cook. Her son says she makes such sacrifices

1986*a*, 80, 189–90; Humphreys 2004, ch. 4; R. Parker 2005*a*, 333; Sakurai 2008; ch. 26 n. 11. 'Thesmophorion' at Halimous, Mersch 1996, Kat. 7. 3–4 + *AD* 56–59 B1 [2010] 475. C. Austin and Olson 2004 think that deme celebrations would have had to be on a different date from those in the city; I doubt this. City Eleusinion: Broneer 1942, followed by Clinton 1996; *Agora* XXXI. Clinton's view that the City Eleusinion was in Melite is questionable; see Lalonde 2006*b* and ch. 29 n. 2. On the location of Thesmophoria celebrations in other Greek cities see S. G. Cole 2004 s.v.

³² The question of married women's contacts with their kin is raised for Rome by Dixon 1988, ch. 8; see also Humphreys 1998; H. Lambert 2000 for ethnographic data.

³³ See ch. 20 n. 131 for some possible cases of the influence of cognatic kinship on the selection of *genos* priestesses.

all the time; he politely declined the invitation to attend on this occasion (*Dyskolos* 260–5). A big crowd (presumably of women) was expected (404–6). Her husband arrives late (775–6). In a fragment of another Menandrian comedy a character complains that married men constantly have to pay for feasts, *heortai* (PCG VI 2 F 878 = 796 Koerte 1938); one of these would be the Thesmophoria, but there may be a reference to private initiatives too. Presumably women who were not hampered by the conventions of the stage might well invite female kin, neighbours, and friends to accompany them on such expeditions. A woman whose husband was generous, an *epikleros* with her own claims to have a say in the use made of property inherited from her father, or a widow with an adolescent son who had not remarried, could easily find convincing reasons for such enterprises. Dedications are also in some cases set up by women, some of whom may have been *epikleroi* (below, n. 93). In Herondas *Mime* 4, two women visit a sanctuary together (with slaves), bringing a cock for sacrifice, and leave a *pinax* as record (cf. Goeken 2010).

Women's activities, however, seldom leave permanent traces in our records. Presumably when a little girl went to Brauron to serve as a 'bear' in the sanctuary of Artemis, or when an older woman made a dedication there to ask, or give thanks, for help with medical problems, female kin would accompany her, but there are only a few instances in the records of offerings to Artemis that seem to provide concrete evidence of the association. In *IG* ii² 1524. 56–8 (334/3) the offering of Penteteris daughter of Theophemos is followed by that of her mother (more valuable); Penteteris' name suggests that her conception or birth may have been associated with one of the penteteric festivals, perhaps the Brauronia.³⁴ In *IG* ii² 1514. 24–6 (before 336/5) the name of Archestrate daughter of Mnesistratos of Paiania is followed by that of Mnesistrate daughter of Xenophilos, who might be her daughter. The same text (line 9) records a joint dedication by two women, Chairippe and Eukoline, but their relationship is not stated.

³⁴ On the 'bears' see ch. 9 n. 22. If the decrease in the number of *krateriskoi* dedicated at Brauron from the second half of the 5th c. onwards implies a decrease in the number of 'bears' (and not merely a shift to other types of dedication, textiles and/or terracottas), the dangers of travel in Attika during the Peloponnesian War may account for it. Garments were dedicated to Artemis by *parthenoi* with menstrual problems (H. King 1983, 114, cf. Van Straten 1981, 90–1) and perhaps also by older women experiencing gynaecological difficulties (Van Straten 99). The term *rhakos* in the lists of offerings is now generally thought to denote a dedicated garment which has become moth-eaten (W. Günther 1988, S. G. Cole 2004; but see Martha Weber 2010) rather than the rag onto which a girl's first menstrual blood was shed. For later evidence of women travelling together to healing sanctuaries see Rousselle 1976. One woman dedicant to Artemis Brauronia recorded her husband's pedigree on her gift: he was the son of Oulios and grandson of the famous general Kimon (*IG* ii² 1388. 81–2, 397/6, repeated in later lists). Penteteris' father could be Theophemos of Euonymon, the only known 4th c. bearer of the name, *APF* 7094; he was unmarried in 357 ([Dem.] 47. 38), but could well have a daughter of the right age in 334/3 (a 'Brauronia' year if the calculation of Humphreys 2004, 168 n. 93, is right; but Parker 2008, 38–9 argues for 333/2).

Even in cultic activities not restricted to women, a woman might travel in female company. When the orator Lysias offered to initiate his mistress Metaneira into the Eleusinian Mysteries she travelled from Corinth with her ‘mother’ Nikarete (for whom she had worked as a prostitute) and her ‘sister’ Neaira, a younger girl from the same establishment ([Demosthenes] 59. 22). These however were unusually independent women.

PILGRIMAGE

Whether it is useful to employ the term ‘pilgrimage’ for travel to sanctuaries in antiquity will depend on the purpose of the analysis.³⁵ The culture of ancient Greece was not one in which the experience of such travel had a religious value in itself; we are consequently told very little about it. Athenian women travelling to Delphi in midwinter had to be rescued from a snowstorm in Plutarch’s day;³⁶ visitors to some major festivals were protected from military attack by truce agreements. Some theoric expeditions were very large; the Athenian Pythais in the late second century BCE contained some 500 persons (including a cavalry squadron), plus, presumably, a large contingent of slave attendants.³⁷

Some comparative data might help us to visualize the logistics of Greek ‘pilgrimage’, on which rather little work has been done. Visitors travelling to attend games, seek healing, or consult an oracle might well spend several days at their destination. Accommodation provided by sanctuaries seems to have taken the form of dining rooms rather than sleeping areas (were couches used for both purposes?); but separate dormitories (*enkoimētēria*) for men and women are attested at the Amphiaraion of Oropos in the fourth century. Water supplies were important.³⁸

³⁵ See Rutherford 2000, Elsner and Rutherford 2005, Scullion 2005, Rutherford 2013, 12–14, for recent discussions (also on pilgrimage as tourism); Daniel 1984 for an anthropological study of the experience of pilgrimage. See also M. P. J. Dillon 1997 on women as pilgrims; Kowalzig 2007 s.v. *theōria*.

³⁶ Plut. *Mor.* 953 c–d. Attika had local legends about women being carried off from sanctuaries by hostile bands (Hdt. 6. 138. 1, Brauron; Plut. *Sol* 8. 4, Halimous, cf. Polyæn. *Strat.* 5. 14; but a theoria of leading men on its way to Sounion by ship is captured in Hdt. 6. 87). Baines 2013, 251, women’s journeys in ancient Egypt. On travel by embassies and armies see ch. 16.

³⁷ W. S. Ferguson 1911, 372–3. On the Pythais see now Karila-Cohen 2007; Ismard 2010, 368–75; Rutherford 2013, 222–30; ch. 20 n. 142.

³⁸ *IOrop* 277 (4th c.; cf. Sineux 2007); Kron 1989, M. P. J. Dillon 1990, 1997, on use of tents; Themelis 2002 on stables at Brauron. See also Tomlinson 1980, Dillon 1990, Bookidis 1990, 2010, Bookidis and Stroud 1997; Bookidis a. o. 1999 on *hestiatoria*; Knoepfler 1986, Argoud 1985, 1993, Schachter 1994 (298), Pimpl 1997 on water. Useful data also in J. W. I. Lee 2007 on military camps. The sanctuary of the Virgin on Tenos in the weeks preceding 15 August provides a useful comparison. Perlman 2000*b* deals with the travels of festival announcers, not visitors. On travel to competitions and provision for competitors see *IG* xii 9. 189, R/O 73 with comm., Artemisia at Eretria, c.340.

In the choice of travel companions, the balance between personal ties and structural categories will have varied with the purpose of the journey, the age and gender of travellers, and the distance covered. A sick person seeking healing would presumably travel and camp with carers (some at least of whom would be slaves) in a close-knit group related only coincidentally to others on the same errand, even though many might well choose the period of a festival for their visit. References to ritual obscenities (*aischrologia*) on some theôriai suggest that men and women travelled separately.³⁹ Young, unmarried men would form their own parties. A client of Lysias, involved in a dispute with boon companions (*synousiastai*), mentions that they made the theoria to Eleusis together (8. 5).

ASSOCIATIONS

The theoria thus has links to the context of religious companionship to be discussed next, the voluntary religious association. Such groups were ‘voluntary’, as I indicated earlier, in the sense that they were not linked to the definition of legitimacy and citizenship;⁴⁰ most of those for which we have any evidence are known from decrees that entitle them to the term ‘association’, although only a series of records can provide any indication of their length of life.⁴¹

There was no standard Greek terminology for such groups, and usage could be fluid even within a single document.⁴² *Orgeônes* had no corresponding term for the group as a unit, for which *koinon* or *thiasos* might be used. Folk etymology probably suggested a connection between *orgeônes* and *orgia*, which might have made the term seem appropriate for worshippers of the more exotic new deities; but *orgiônes* occurs in the *Hymn to Apollo* (389), apparently denoting cult servants, and *orgeônes* was also used by the group responsible for the sanctuaries

³⁹ See Halliwell 2000. Brumfield 1996 and O’Higgins 2001 do not consider travelling arrangements; Worman 2008 has little interest in ritual.

⁴⁰ N. F. Jones 1999 Appendix 1 lists Hellenistic associations; cf. Mikalson 1998, 145–51; Arnaoutoglou 2011. For the emphasis on shared activity in terms for associations see Chaniotis 2006, 228–9. Collection of texts and translations, with commentary, in Kloppenborg a. o. 2011 (concordance, SEG 61. 1585).

⁴¹ On procedures for incorporating new members see below, nn. 64–5.

⁴² *Thiasos* and *eranos* in IG ii² 1298, 248/7 (archon Diomedon); *thiasos* with *archeranistês* in ii² 1297, 236/5 (Kimon); also SEG 32. 149; Graml 2014, 4th c.?²; *koinon* and *thiasôtai* in ii² 1317 = SEG 59. 151, 249/8 (archon Hieron); *koinon*, then *orgeônes* and *thiasos* in ii² 1246 + AJA 1965, 104 (Dow and Gill 1965, cf. Gill 1991), end of 4th c., and IG ii² 1316. Worshippers of the Great Mother in Peiraios are *thiasôtai* in ii² 1273, 265/4 (arch. Euboulos; M. J. Osborne 2004), *orgeônes* in ii² 1314 (last quarter of 3rd c.); in ii² 1316, 272/1 (Lysitheides) they are, in my view, *orgeônes* subdivided into 4 *thiasoi*, each of which separately crowns the priestess and her husband (see also N. F. Jones 1999, 262–3). Arnaoutoglou 2003 does not deal with these variations. Given the fluidity of terminology, it is sometimes hard to tell whether inscriptions separated in date refer to the same group or not. See also below, nn. 46, 48. Todd 2007, 546–8 notes that the association of Lys. 8 may not have designated itself by any specific term.

of Amynos and Asklepios and of Dexion, and by worshippers of Asklepios from the deme Prospalta. In the Hellenistic period the term probably came to connote antiquity and tradition, but at present we have no idea how to connect the orgeones of Solon with the worshippers of new gods introduced in the second half of the fifth century.⁴³

The connotations of *thiasos* seem to have been equally vague. It may have had some Dionysian overtones, but could be used of any group that met to share sacrifices, including phratry subgroups.⁴⁴ Religious associations also used terms such as *synklinoi*, *synthytai*, *synousiastai*, or *oikos* (and *eranos*, discussed below), or used a name derived from their patron deity or the date of their meetings; terms with the suffix *-istai* or *-iastai* seem to spread during the Hellenistic period.⁴⁵

While distinguished from demes and phratries by having no officially fixed criterion of recruitment and by being open (at least in many cases) to non-citizens,⁴⁶ these associations imitated the subdivisions of the citizen body—and

⁴³ On orgeones in phratries see ch. 19 at nn. 163–7 (the evidence for continuity in groups of parasites, ch. 20 n. 129, is rather better). Byrne 2008 treats the orgeones of Asklepios from Prospalta (*IG* ii² 2355) as a phratry subgroup, but see Humphreys 2007. Orgeones at Eleusis, *SEG* 57. 416. The Eikadeis of (?) Myrrhinous (ch. 25 n. 44; Ross 1846 p. 54 no. 23, *ARMA* II no. 169; ch. 19 n. 152; below, at n. 59) might be a phratry subgroup; however, it was not uncommon for a voluntary association to take its name from a festival date (cf. the Dekadistai of *IG* ii² 2701 = Finley 1952 no. 32, and the Hebdomaistai of *SEG* 32. 244/57. 65, 330–325; R. Parker 1996, 336), and the Eikadeis who owned property on Salamis in the Lykourgan era may well (*pace* Lambert 1997a, 199–201 and Papazarkadas 2011) be a different, homonymous group. Conceivably the term *orgeónes* was applied to or adopted by the worshippers of Bendis when her cult was introduced (by 429?; see R. Parker 1996, 170–5; Sakurai 2014) because it suggested *orgia*, and was subsequently felt to be appropriate for other newly introduced deities (for *orgia* see Motte and Pirenne-Delforge 1992); see, however, Schuddeboom 2009. Orgeones (but not phratries) appear on Lemnos: *IG* xii 8. 19, 21 = Culasso Gastaldi 2006, nos 5, 9–10 (of Herakles), end of the 4th c.

⁴⁴ Dionysos: cf. Jacottet 2003 (*thiasos* could also be used of a group travelling to a festival). On thiasoi as subdivisions of orgeones, n. 42 above; in *IG* ii² 1262, 301/0, thiasotai of (?) Tynabos (Tracy 1995, 145) award 2 crowns each to a pair of epimeletai, possibly implying a division into 2 subsections (contrast *IG* ii² 1317b, *Add.* p. 673, *SEG* 59. 153, thiasotai of Bendis on Salamis, 249/8, archon Hieron, and ii² 1298, 248/7, arch. Diomedon).

⁴⁵ *Synklinoi* in *IG* ii² 2350, dated by Wilhelm (1909, 51, no. 40) to the later 4th or early 3rd c.; if l. 2 is Aristomachos Aristaïou of Peiraios (*IG* ii³ 4. 225 and ii² ?7189), or a brother, it should belong to the Lykourgan period or earlier. See Table 30.2 on the prosopography of this family and that of ii² 7195. The *n* of 2350. 2, interpreted by Wilhelm as *n(cóteros)*, is not at all clear on his squeeze photograph, and the interpretation may be anachronistic. *Homochytroi* on Lemnos, Culasso Gastaldi 2006 no. 7; 2010, 358 (ch. 19 nn. 65, 164). *IG* ii² 2360 is Boiotian (*SEG* 50. 484). For *oikos* see Wilhelm, *ibid.*; L. Robert 1969, *SEG* 21. 535–6 (end of 2nd c. BCE); Lambert 2004a. *Eranistai* are discussed below. N. F. Jones 1999, 309, lists names in *-(a)stai*.

⁴⁶ The view that membership in some groups of orgeones was restricted to citizens came from the interpretation of *FGH* 328 F 35 as implying that all citizens were either *gennétai* or orgeones (see ch. 19 n. 3; Arnaoutoglou 2011). The reference in Is. 2. 14–17 to introduction of an adopted son to his pater's phratry, deme, and orgeones does not necessarily support this interpretation, and its word order is against a close connection between phratry and orgeones. The 4th c. orgeones attested at the sanctuary of Pankrates (*SEG* 41. 84, unpublished) come from the demes Phlya and Probalinthos, which does not

the state itself—in their procedures. They elected officials, passed decrees, and crowned their benefactors.⁴⁷

Such groups might develop in a variety of ways. Often co-participation in ritual led to the formalization of looser, pre-existing ties, as for example in the case of non-Attic communities sharing the worship of deities introduced from their area of origin, or the cultic activities of *eranistai* and other groups formed originally for more secular purposes.⁴⁸ It is also possible that worshippers coming independently to the same shrine, in a cave or other locality thought to have numinous properties, might unite to develop the cult of its patron deity in a more structured manner. This may well have happened at the sanctuary of Pankrates by the Ilissos, near the Lykeion.⁴⁹ Additional impetus and legitimation

encourage thoughts of a shared phratry (the idea of N. F. Jones 1999, 251 that they had a base ‘in the vicinity of Pentelikon’ is topographically absurd). Until the texts are published (latest references: *SEG* 53. 160–1), we cannot tell whether the orgeones, thiasotai, and eranistai of this sanctuary were all separate groups. The *org[e]ónes* of Teos seem to be Hellenistic or later (Pottier and Hauvette-Besnier 1880, no. 21, is dated c.172–50; but McCabe and Plunkett 1985 no. 242 give 2nd c. CE).

⁴⁷ It was clearly common for office in these groups to be quasi-liturgic (female, non-citizen epimeletria honoured in *SEG* 56. 203, 3rd c.), but in addition to gratitude for benefactions there are some references to presenting accounts: *IG* ii² 1263, secretary of thiasos, 300/299, Piraeus; 1277, 278/7, epimeletes and secretary, *logos* and euthynai; 1317 with *SEG* 59. 151, 272/1, tamiai, Bendis on Salamis, *logoí* (restored); 1284 II, c.240 (archon Lykeas), orgeones of Bendis in Piraeus, secretary; cf. 1282, 263/2 (arch. Antipatros), where the commission may have been handling a donation (from Egypt?) for work on the sanctuary of Ammon. For Bendis on Salamis see M. J. Osborne 2009a. Thiasos with *archieranistés*, secretary, *logistés*, and *synepimelétai*, 4th c.?, Graml 2014.

⁴⁸ Vondeling 1961 sees the uses of *eranos* to denote a loan and a cult-group as separate developments from an original meaning ‘potluck dinner’, but this may be too legalistic; see Baslez 2006, 165–7; Faraguna 2012a. We should perhaps say only that the term implied contributions to a common enterprise carried out in a friendly spirit. *Eranos* and *eranistai* cover a spectrum of activities from making a single loan to regular meetings and formal procedures (e.g. *SEG* 54. 235). Pace R. Parker 1996, 337, there is no way we can draw a line (cf. Ismard 2010, 288–90). New *eranos*-horoi (not in Finley/Millett 1982): *SEG* 32. 236 (mine works and slaves, Lykourgan period), 41. 127 (house, Rhamnous), 48. 173 (Agrileza), 54. 256 (mine works and slaves). *Eranos* and its derivatives may be used in combination with other terms: *IG* ii² 1292, Sarapiastai with *proeranistria*, late 3rd c.; *SEG* 24. 156, *thiasos* and (?) *er[anos]*, c.290 (Tracy 2003, 39–45; 296/5 Thonemann 2005); see also n. 42 above. Dedications by workgroups: *IG* ii³ 4. 635, launderers (*pluncis*) to nymphs, 4th c.; ii³ 4. 650, by officials crowned by *ergazomenoi*, 276/5 (archon Philokrates); on ii² 4327 see below, at nn. 95–6. Cf. also Lauffer 1979, 177–204, on mine-slave cults and dedications; below, n. 57, on dining groups. An *eranos*-loan might well be raised among a dining group, and such a group might decide, once the loan had been repaid, to continue paying subscriptions (cf. *IG* ii² 1298, 248/7, arch. Diomedon) into a fund for sacrifices. New *eranos* loan documents *SEG* 48. 173, *Kerameikos* XVII 446, *SEG* 55. 290, 57. 167–8. Catalogue of *eranistai* c.50 BCE, *SEG* 54. 235.

⁴⁹ See R. Parker 2005a, 419–23, and n. 46 above on Pankrates, whose worshippers included a group of *droméis* (*SEG* 44. 139); Wycherley 1970, Andreou 1994, and Lalonde 2006a on other relatively small local sanctuaries. The sanctuary of Pan in Men. *Dysk.* had P(ai)anistai (230), but perhaps this term need not imply a lasting group. Although formed by private initiative, such groups might respond to public affairs (thiasotai of Pankrates sacrifice in thanks for a victory of King Antigonos in [261/0 or] 256/5, archon Antimachos, *SEG* 41. 83), and might be attached to a sanctuary whose priest/ess was appointed by the state (see Mikalson 1998, 148–9 on *IG* ii² 1297–8 with 788; there is no reason to suppose that the

might be provided by dreams or visions; this is not directly attested for Attika, but is a well-known phenomenon in the wider Hellenistic world.⁵⁰ I have suggested (Humphreys 2007) that the orgeones of Asklepios from Prospalta owed their existence in part to a dream in which the god was seen by one of the parents of the strikingly named Kritophantos I, in the decades following the introduction of Asklepios to Athens. Archedemos of Thera, in the later fifth century, became possessed by the nymphs and ‘developed’ the cave of Pan near Vari/Anagyrous (*IG* i³ 977–80 + ii² 4655 = *SEG* 51. 230; Schörner and Goette 2004; Jim 2012; Graf 2013, 123–7); in this case no corporate group came into being, perhaps because Archedemos was too eccentric and was not a citizen.

Voluntary associations of the types discussed here seem to have been commoner in urban areas (N. F. Jones 1999); this may be to some extent a question of preservation of evidence, especially in the case of property leases, yet leases and other records did survive in the countryside, often incorporated into later churches.⁵¹ In rural areas, however, cults associated with numinous sites in the landscape were often cared for by demes, which might respond collectively to a local manifestation of divine power, take over responsibility from pre-existing groups, or, perhaps, collect information about neglected local heroes in a period of anxiety.⁵² In the city and in Piraeus (and in kleruchies) it was more likely that a local shrine would attract worshippers of varied status or deme affiliation.⁵³ Boundaries between citizen and non-citizen would be more clear-cut in rural

‘state’ and thiasos cults were separate here, or that the thiasotai were all non-citizens). At Rhamnous, perhaps soon after 229, a new group of Amphierastai (with an archeranistes, a secretary, and a treasurer) was formed by some of the garrison to repair neglected buildings in the sanctuary of Amphiaraios (*IRb* 167).

⁵⁰ E.g. *IG* xi 4. 1299 (*SEG* 24. 1158), cult of Sarapis on Delos c.200; n. 26 above, Knidos; cf. R. Parker 2005*a* ch. 6 on omens and dreams.

⁵¹ Rural leases: *SEG* 24. 151–2 Teithras, *IG* ii² 2497 and *SEG* 21. 644 Prasiai, *IG* ii² 2493–4 + *IRb* 180 Rhamnous. Cf. nn. 43, 59, on horoi of the Eikadeis at (?) Myrrhinous. *IG* ii² 2701 (Finley no. 32), a horos found at Spata, includes a group of Dekadistai, but it is not certain that they were local. See also Lambert 1997*a* on sale of rural property by cult groups; Papazarkadas 2011. Rural dedications: *SEG* 24. 223, from a small settlement site 4 km north of Eleusis (Elaiou?), dedication by a thiasos, late 4th c. *IG* ii² 1242, from Tatoi, is a decree referring to hieropoioi and a cult of the (female) Hegemon; *pace* *SEG* 21. 528, there is no reason to attribute it to orgeones. *IG* ii² 2358, an eranos record from Chalandri in at least 4 hands, with a mixture of citizen and non-citizen names, is dated c.100 BCE by Tracy 1990, 247 (but see n. 70 below). Tagalidou 1993 no. 40, a dedication to Herakles of c.400, said to come from the church of Agios Nikolaos near Kake Thalassa (not marked in *KvA*), might come from the genos Salaminioi. *SEG* 37. 103 is dated 52/1 BCE.

⁵² Cf. Humphreys 2004, ch. 4. Examples: Herakles in Halimous (deme from genos); Steinhauer 1994*a*, 176, shrine and temenos at crossroads with well; Zeus Kataibates at Thorikos. On property owned by orgeones see Papazarkadas 2011, 191–206.

⁵³ Cf. n. 43 above on orgeones in kleruchies. Lambert 1997*a*, 255–6, suggests that almost 100 groups of orgeones might have sold land in the hekatostai sales, but only one such group is actually attested in the records.

areas, where there were fewer metics of immigrant origin (they could not own land),⁵⁴ and fewer freedmen; citizens and non-citizens would work together in both contexts, but slaves resident outside their owners' households were presumably commoner in urban areas.⁵⁵

The comparison with modern urban society implied in the term 'voluntary association' suggests a contrast between the recruitment patterns of these units and those of the descent-based deme and phratry. To some extent this is true; as was noted above, some associations developed from patterns of activity already shaped by gender, age, and class. *Eranistai* would be male, financially independent, and relatively affluent, though they may sometimes have collected money on behalf of women;⁵⁶ some groups may have developed from dining clubs; the popularity of Herakles suggests the milieu of the gymnasium or dining club.⁵⁷

These points, and the factors that often made such groups short-lived, are well illustrated by Lysias' speech *Against (pros) my synousiastai* (8). The speaker had fallen out with a group of friends with whom he had dined and shared a theoria to Eleusis. The *casus belli* was apparently the death of a horse which he had received as pledge for repayment of a loan. The speaker held that he was still entitled to repayment, but the rest of the group contested this.⁵⁸ Quarrels and backbiting ensued; the speaker claims that they resented his wealth and his pretensions to be regarded as their patron (which is likely enough). Several elements in the process of group formation are attested here: previous social ties, co-participation in ritual, creation of a fund to support group activities. But it all ended in the courts. Perhaps, if the horse had lived and Lysias' client had been more tactful, matters might have turned out differently.

⁵⁴ The extent of leasing in rural areas, which might have attracted metics, is disputed (R. G. Osborne 1985*d*). The lease by a freedman of land confiscated from an oligarch, Lys. 7. 10, is a special case (ch. 14 at n. 40).

⁵⁵ Only about 15% of slaves in our manumission records have rural occupations (Jameson 1978); they had less chance of buying freedom. The proportion of owner-occupied farms to those run by slave or freedman bailiffs is disputed (N. F. Jones 2004). Dedications by slaves or freedmen (judging by the names) from the mining area, *IG* ii³ 4. 633–5 (perhaps Herakles rather than Men); slave miners were presumably supervised by slave or freedman foremen. R. Parker 1996, 337–42, is perhaps unduly reluctant to accept that citizens mixed socially with non-citizens in the 4th–3rd c. (contrast Ismard 2010).

⁵⁶ E.g. for prostitutes to buy freedom ([Dem.] 59. 31). A woman as *plérôtria* (probably beneficiary) of an eranos in *Agora* XIX H 124 (Finley 1952, 114A; E. M. Harris and Tuite 2000; Faraguna 2012*a*, 139, thinks she is the lender).

⁵⁷ Young men whose fathers were still alive needed a meeting place; the *nothoi* of Kynosarges, who had no inheritance prospects (Humphreys 1974) provide an interesting example. The link between dining groups and illicit performance or parody of ritual (ch. 13 n. 4) supports the view that more conventional groups might meet in a cultic context. Herakles' reputation as a glutton made him a natural patron for dining clubs (cf. Lind 1985; R. Parker 1996, 334), and he was associated with male adolescence (Van Straten 1979; ch. 19 n. 47), though he was also popular in the demes (ch. 24 n. 92; ch. 20 n. 129 on parasites). Hermes was more specifically associated with the gymnasium (Parker 2004, 391–2).

⁵⁸ See Todd 2007.

A later stage in a comparable process is represented by three records from the Eikadeis of (?) Myrrhinous, whose activities centred on a shrine (*hieron*) of Apollo Parnessios. Their income was based (at least in part) on land—more secure than horses—but even so there was trouble in 324/3. Some members of the group had been using its land as security for mortgage loans (*IG* ii² 1258). Again, the question of ownership may have been unclear; possibly one or more rich local landowners had made over the income from land without necessarily making a formal transfer of ownership. The Eikadeis represent themselves as having been slandered, and appoint representatives to defend their interests in court; apparently they won their case, since they apparently set up two *horoi* warning creditors that their land was not to be used as security for loans.⁵⁹

Disputes could also arise from members' failure to pay subscriptions: *Agora* XVI 161 (*LSS* 20, early third century), set up by the orgeones of Echelos and of the Heroines, includes a list of debtors and republishes earlier decrees, a practice often inspired by disputes. The provision that the *hestiator* was not to spend more than the group's income on festivals suggests tensions generated by competitive generosity. We do not know whether the division into two *koina* of orgeones, those (sacrificing?) 'by the property of Kalliphanes' and those of the hero Echelos, was the result of fusion or fission.⁶⁰ Dedications to Homonoia also suggest reconciliation after disputes. In 302/1–300/299 the thiasotai of Aphrodite in Peiraios honoured the breastplate maker Stephanos for serving as epimeletes, and then twice as hieropoios, in three successive years; he dedicated his crowns, with copies of the decrees, to Demeter Homonoia of the koinon.⁶¹

While disputes might lead to fission, or complete dissolution, rivalry between groups worshipping the same deity or deities may sometimes have promoted

⁵⁹ A similar situation perhaps in *IG* ii² 1289, *SEG* 52. 132/58. 149, if the issue was whether the land was sacred or privately owned (a different view in Sosin 2002, followed by Papazarkadas 2009c; 2011, 194–5, 199). Vagueness in legal matters was characteristic of supposedly friendly arrangements, and often led to disputes, also in the affairs of individuals (ch. 7 Cases 1, 4, 10; ch. 14 at nn. 41–2). It is only an inference that *IG* ii² 1258 and the *horoi* ii² 2631–2 belonged to the same incident, but the *horoi* must have been generated by some process such as I have described (cf. *IG* ii² 1289, above, mid 3rd c.; ch. 25 n. 44). One of the factors influencing the sales of corporately owned land in the 340s–330s (Lambert 1997a) may have been the frequency of disputes over ownership, the sale allowing a putative private owner or sitting tenant to establish his rights. Compare the gift of revenue from a rubble quarry (*haimasia*) to the Amphierastai of Rhamnous in the late 3rd c. (*IG* ii² 1322 = *IRB* 167); the donor's claim to own this resource may have been disputable (cf. ch. 30 n. 75 on Herakles in Akris).

⁶⁰ The reference to a single *hestiatôr* in the republished decree might possibly suggest that the groups had earlier been more united. On the other hand, Echelos may have migrated to the city (the stone was found on the Areiopagos) from Echelidai near New Phaleron; he is represented with Hermes and Basile on *IG* i³ 986, found there.

⁶¹ *IG* ii² 1261, end of 4th c. The stone (lost) does not seem to have been a statue base, so there may have been a painting of Demeter Homonoia in ll. 17–21, and crowns in ll. 22–4 and 41–3. Cf. *IG* ii² 4985, a round altar (3rd c.), inscribed *homonoias tou thiasou*; Thériault 1996 on dedications to Homonoia as indicating previous conflict; Chaniotis 2006, 234. *Homonoistai* on Kos, *SEG* 55. 937/58. 886–8.

stability. The orgeones of Amynos, Asklepios, and Dexion (who had two sanctuaries) may have had a story about the introduction of Asklepios to Athens which differed from that advertised in the larger sanctuary of Asklepios south of the Akropolis; and Bendis was worshipped both by Thracian and by Athenian orgeones.⁶²

The possession of corporately owned property and/or a common fund maintained by regular subscriptions will also have promoted long-term stability, though it could not guarantee permanence; disputes could arise, or the group could fall back into dependence on the generosity of an especially rich member. Where a group arose in connection with the introduction of a new cult, or by taking over responsibility for an existing shrine, a minimal core of property was *ipso facto* present; it might include an income-producing temenos.⁶³ Groups might also acquire property by gift, or because it had been offered as security by a creditor who had subsequently failed to repay his loan. In such situations, the land might still be farmed by its original owner; if not, lessees would probably be members of the group (Jameson 1982).

Collection of regular fees by such groups is attested by the 320s (*IG* ii² 1361); the influence of the practice of cash payments to priests and priestesses, already documented in the fifth century (J. K. Davies 2001; Pafford 2013), is clear. Such payments are collected (ii² 1361) from non-members who wish to sacrifice to Bendis; her orgeones pay two drachmas each, collected three days before the Bendideia. Provision is made for new members, on passing a *dokimasia* and paying an entry fee, to be registered on the stele.⁶⁴

Descendants (*ekgonoi*) of these orgeones apparently had automatic rights of membership, though this does not necessarily mean that they were exempt

⁶² Amynos, Asklepios, and Dexion, *IG* ii² 1252 + 999, cf. 1259. See also Clinton 1994*a*; Connolly 1998; Humphreys 2007; Ismard 2010, 258–9; Beschi 2002; Riethmüller 2005 for recent work on the Telemachos inscription (n. 75). Bendis had orgeones both in Piraeus and on Salamis, and the history of her cult is far from clear. See R. R. Simms 1988; Steinhauer 1993 (*SEG* 44. 60, 153. 158, 244/3, archon Lysiades, M. J. Osborne 2009*a* for date); R. Parker 1996, 171; G. J. Oliver 2007*a*, 65–9; Ismard 2010, 261–73. The attribution of *SEG* 21. 531 to Bendis is doubtful.

⁶³ E.g. perhaps *SEG* 24. 203 (*képos*, *orgeōnes* of hero, 333/2). Papazarkadas 2011, 203–4, suggests that groups which sold or lacked property would be more likely to break up. A number of voluntary associations could afford to give gold crowns: *IG* ii² 1252, orgeones of Amynos, Asklepios, and Dexion, 2 crowns of 500 dr. each, Lykourgan period; ii² 1255, 337/6, citizen (?) orgeones of Bendis, 3 crowns of 300 dr. each. Horoi (excluding those recording debts to *eranistai*) show voluntary associations lending sums between 100 and 1000 dr.; there is no evidence so far of such a group funding its activities from interest-bearing loans. Cf. Shipton 2000; Humphreys 2004, 147–54.

⁶⁴ *IG* ii² 1361 (*SEG* 57. 135; date Tracy 1995, 131); we see a development from festival payments to regular subscriptions. In ii² 1252 + 999 (also probably Lykourgan in date: the proposer was *diaitetes* in 325/4, ii³ 4. 35. 122, while one of the honorands proposed *Agora* XIX L 13, of 324/3; the other was cursed in Wunsch 1897, 95b 20) the *chous* from which the honorands and their descendants were exempted was no doubt a cash subscription. *IG* ii² 1361 also refers to rent from the *oikia* and the water in the sanctuary, and to fines, providing a useful picture of group finances.

from entry fees. The provisions in the decree classifying the payments to be made when non-orgeones sacrificed, and the process of registration of new members, indicate that Bendis' cult was growing in popularity; they do not necessarily imply that the orgeones had previously formed a descent group closed to non-kin. It had probably always been possible for new recruits to be introduced by members.⁶⁵ The father of the speaker of Isaios 9 had introduced his stepson to the thiasos of Herakles to which he belonged (§ 30), and there is no strong reason to suppose that thiasoi differed from groups of orgeones in this respect.

Changes took place in the late fourth century due to emigration, depopulation of rural areas, and restriction both of the citizen body and of its functions and prerogatives. Alexander's campaigns increased the demand for mercenary soldiers (fighting for Persia as well as against her), and provided opportunities for permanent settlement overseas; return to Athens in one's thirties, after a period of adventure abroad, became a less attractive option when the poor were excluded from citizenship, the government became more oligarchic, and the city came under Macedonian control. Some of the disenfranchised were attracted to settle in Thrace. Pay for political services was abolished, and there may have been some problems in recruiting councillors.⁶⁶ After c.300 phratry and deme records almost disappear, with the exception of the 'garrison demes' Eleusis and Rhamnous. A shift in the balance of residence of deme and phratry members towards urban areas and away from an original rural base would increase the likelihood that assemblies would be held in the city (ch. 19 at nn. 44, 22; ch. 22 at nn. 109–16), and might well lead to the neglect of rural festivals. In these circumstances, religious associations based on urban shrines would offer the attraction of continuing the combination of festival and public business, in a group small enough for each member to feel a sense of belonging, that had earlier been experienced in deme and phratry. Women and children would have some share in festivals, if

⁶⁵ Sons probably entered at puberty (however that was socially defined); the Iobakchoi, c.178 CE (*IG* ii² 1368, Jacottet 2003 no. 4), specify that a member's sons pay a half-fee for entry and a half-subscription (*hemiphorion*) *mechris hotou pros gynaiikas ósin*, 'while still in the women's quarters'. A member's brother paid the full entry fee; if an outsider (*exótikos*) was chosen as *hieros pais*, he and his father became members, the father paying a single fee for both. The rule of a Tenian *patra* (?), in the mid 4th c. (*IG* xii *suppl.* 303; R/O 61, *SEG* 40. 688), that a son could only enter when his father died, seems unusual; in *IG* ii² 1326 (Jacottet no. 2, 176/5; Ismard 2010, 359–63) the reference to rights of the eldest son seems to refer to honours and privileges rather than ordinary membership. On the process of recruitment in *IG* ii² 2355, orgeones of Asklepios from Prospalta, see Humphreys 2007. On commemorative cult groups outside Attika see ch. 10 nn. 27, 109; one such group at Olbia, 4th c., lists members (mostly descendants of the person worshipped) as thiasotai: Dubois 1996, nos. 8, 11–12.

⁶⁶ Cf. Humphreys 2010a, n. 29. *IG* ii² 1336, seen by Fourmont and Ross serving as threshold in the church of Ag. Demetrios at Keratea, is tentatively dated *fin. s. II*, but we cannot even be certain that it was issued by a local group.

only peripherally, as well as adult men;⁶⁷ marriages might be arranged between group members and take place in buildings owned by the group, or members might introduce their affines to it. Such units came to take on some of the functions of an extended kindred that had characterized demes and phratries.

Evidence for all this, however, is sparse. In *IG* ii² 1275 (with *SEG* 21. 534), from Piraeus, perhaps early third century, a koinon of thiasotai specifies that when a member dies his next-of-kin is to inform the thiasotai, who are to attend the funeral, bringing their *philoi*.⁶⁸ In *IG* ii² 1277, of 278/7, from the southwest slope of the Pnyx, another koinon of thiasotai crowns officials for generous performance of their duties, which included ‘taking care of those who died’. By 194/3 (*IG* ii² 1323, archon Dionysios) the officers of a city group of thiasotai are being praised for handing over the burial payment (*to taphikon*) promptly when a death occurred. In the second century CE members of the Iobakchoi (*IG* ii² 1368) are expected to celebrate a whole series of rites de passage and other achievements with the group.⁶⁹

Lists of members of such associations are relatively rare in the classical period and not always prosopographically useful, since they may not record patronymics, demotics, or ethnic affiliations. The sixteen orgeones from Prospalta who made a dedication to Asklepios, probably in the Lykourgan period, belonged to six small patrilineages perhaps linked by affinal ties (*IG* ii² 2355, Humphreys 2007; note also *SEG* 61. 169). *IG* ii² 2349, another fourth-century list, appears to record a father, Hephaistion, and two sons but we do not know what type of list it is.⁷⁰ In *IG* ii² 1252 the orgeones of Amynos, Asklepios, and Dexion honour

⁶⁷ *SEG* 21. 530 (orgeones of Echelos and Heroines, early 3rd c.) prescribes a full share of sacrificial meat for a free wife, and half shares for children and a maid; the husband is to collect his wife’s share, but the inclusion of an attendant shows that she was present. Cf. Humphreys 2004, ch. 6, on children at festivals; n. 24 above on reliefs showing dedications. Women listed in separate columns on *IG* ii² 1297 (236/5, Kimon).

⁶⁸ In line 5 I would restore *ê huo[s autou ê p]atêr*, or possibly *ê huo[s ê gunê ê p]atêr*, rather than [*ê mêtêr*] (Wilhelm) or [*ê huônôs*] (Tod 1907). *Philoi* here are household members?

⁶⁹ *Taphikon* is restored in *IG* ii² 1278. 2 (270s?). Cf. ii² 10248 (Hellenistic, found in Odos Omerou, NW of the ancient city, *AEE* 2362), where eranistai erect a gravestone for a Seleukian. On Rhodes and Kos associations had their own burial grounds: Fraser 1977, 58–70; *SEG* 53. 2150, 2167; Bosnakis and Hallof 2005, 242; Maillot 2013, 207–10; so possibly did [*phrê*]terēs on Paros already in the 6th c., Matthaiou 2003a (*SEG* 51. 1071). On associations and funerals see also Baslez 2006, 160–1; Ismard 2010, 356; material from the Roman period (mainly W Mediterranean) in Rebillard 2003. On the Iobakchoi see Humphreys 2004, s.v.; Baslez 2004; Chaniotis 2006, 232–4. The tendency for cult associations to take on kinship functions may be connected with a drift towards henotheism (cf. Burkert 1982), although this link cannot be demonstrated. Three brothers in a thiasos at Olbia c.300, Dubois 1996 no. 95.

⁷⁰ *IG* ii² 2349. 1, Myrtaso, might also be related to Myrtil[os], in line 3. *IG* ii² 2353. 6, 9 (Asklepiastai, c.215 Tracy 1990, 49) has 2 sons of Thrasyleon of Kydathenaion; ii² 2346, dated before 350, is a long list of names and patronymics (some women listed separately); there are kin, but we do not know what the list represents (*pace* Koehler, N Greek names do not predominate). *IG* ii² 2343, early 4th c., is an altar

two brothers, demesmen of Peiraios (see n. 63 above); in ii² 1265, of c.300, another pair of brothers is honoured by eranistai based in the city for serving as tamias and hieropoios; in SEG 21. 532 a city koinon, in 227/6, probably honours [Gna]this with his sons. Later lists in which names are given in fuller form make it possible to identify mini-lineages (e.g. ii² 2361).

FAMILY TRADITIONS

Since membership of thiasoi and other such associations may have promoted in some families a sense of special attachment to a particular deity or sanctuary, it is worth asking whether there is other evidence for family traditions of religious specialization or loyalties. Plato supplies two references to mythical ancestry, Alkibiades claiming descent from Eurysakes and Lysis being credited with kinship (*syngeneia*) and guest-friendship with Herakles, but these are probably references to genos affiliation.⁷¹ Only members of elite families would claim a god or hero as ancestor; there is little evidence that rank-and-file gennetai, who were not favoured candidates for priesthoods, felt a special attachment to genos heroes or deities.⁷²

Elsewhere in Greece there were recognized lineages of *manteis* (Kett 1966; cf. Parke 1967, 173–8; Bowden 2003; Flower 2008*b*); in Attika we have a family in

tray dedicated by a koinon of thiasotai; there might be kinship ties between Antitheos and Amphitheos, Theophon and Theophanes, or the two men called Melanopides (FBS?). Cf. Welsh 1983; note also Theophanes son of Amphitheos, dedicant to Asklepios before 274/3 (Aleshire 1989 Inv. IV 130), although this combination shows a common pattern of name formation. IG ii² 2358 (cf. n. 51) is dated c.100 by Tracy (1990, 247), but if Philonides of Iphistiadai in l. 73 is the ephebe of ii² 1009. 103 (117/16) and also the father of Euporia Philoni of l. 45, the date should be rather lower.

⁷¹ Plat. *Alk.* I 121a, see APF 600 II (Salaminioi); *Lys.* 205c–d, cf. Table 29.18; see also ch. 20 n. 89. On genealogical inscriptions see Chaniotis 1987; n. 112 below; note the mini-genealogy of Kimon's descendants in IG ii² 1388. 81 etc. (n. 34 above). On [Plut] *Mor.* 842f–843c and IG ii² 3474 see Humphreys 2007. The discussions of genealogies and Greek historiography in Luraghi 2001 do not deal with inscriptions.

⁷² Possibly Epiteles I and Oinocharēs I, sons of Soinautes I, of Pergase, who dedicated a lustral basin to Poseidon Erechtheus c.450 (IG i³ 873) belonged to the Eteoboutadai. The family had a long tradition of cultic activity (not confined to the Akropolis): Oinocharēs II son of Soinautes II (SS of Oinocharēs I) made dedications to Ammon (IG ii² 1642 = SEG 21. 562. 12, 26), and Epiteles III son of Soinomos (SSSS of Epiteles I) councillor in 336/5 (*Agora* XV 42. 42), served as naopoios at Delphi, was one of the epimeletai for the Amphiaraia in 329/8, and in 323/2 proposed a decree concerning Athens' theoria to Nemea and her proxenos there (IG ii³ 375, restoring [Archias] in line 2). On the family see also ch. 23 n. 31. Pythodoros II son of Python II of Kedoi, naopoios at Delphi in the 320s (*CID* II 32, 79, 97, 119; ch. 23 n. 35), may have been encouraged by his name to take an interest in the sanctuary, but Pytho-based names go back in the family to the 5th c. (APF 12444) and none of his attested kin have Delphic connections. On the brothers Euthykrates and Theophron, sons of Euthyphron of Kerameis, also naopoioi in the 320s, see ch. 27 n. 7. On familial links with priesthoods see also Chaniotis 2008.

Myrrhinous in which Meidoteles I and his son Kalliteles I were both seers, while an agnatic grandson of the latter was given the rare name Hieroptes, ‘sacrifice-interpreter’ (Table 4.10). Aischines’ mother’s brother was a *mantis*, while his mother specialized in initiations, perhaps in the cult of Sabazios.⁷³ Religious expertise was a skill (*technê*) learned partly from oral instruction and partly from books; practitioners, like those in other specialities, taught their art to younger kin or to slaves, and left their books to their heirs. But practising a craft for money was not respectable, so the sons of the more successful specialists might prefer to acquire land and live as gentlemen. If a son did want to pursue his father’s trade, he had to prove his ability to retain clients; there were no established positions or congregations.⁷⁴

As in the case of Hieroptes, the choice of a child’s name sometimes suggests a family tradition of expertise or of devotion to a particular deity, but unless we have a succession of significant names in one family, theophoric names do not carry much weight; there was in any case no guarantee that a child would be guided by the meaning of its name.⁷⁵

The three attested bearers of the girl’s name Penteteris may all have had family links to penteteric festivals. Penteteris daughter of Hierokles of Phlya was priestess of Athena Polias in the second century BCE,⁷⁶ while two girls with the same name made offerings to Artemis Brauronia (above, at n. 34). Kephisodotos son of Demogenes of Boutadai set up an altar apparently in the sanctuary of the

⁷³ CEG 519 (SEMA 148); E. M. Harris 1995, 21–8. Cf. R. Parker 2005*a*, ch. 6. Bremmer 1996*b*, n. 48, suggests that Mantias and Mantitheos of Thorikos came from a family of manteis (but they clearly did not practise). A Phoenician mantis, Pologiorge 2013.

⁷⁴ Inheritance of books; Isokr. 19. 5–6; cf. ch. 6 nn. 2–3 for doctors’ families; Burkert 1982; Griffith 2001; Humphreys 2017*b*.

⁷⁵ On theophoric names see Parker 2000; Humphreys 2007 (cf. P. Wilson 2007*c* on theatrical names). EBGR 17, 2001, no. 142 notes that the name Hieropoios in Attika is mainly attested at Rhamnous, presumably deriving from office holding. As with all names, a first, possibly significant use might be perpetuated over the generations. Healing deities provide more examples of family tradition than others: IG ii² 4362–3 were dedicated to Asklepios in the first half of the 4th c. by a father and son; 4404 was dedicated to him in the second half of the century by a son of Prokleides of Kerameis, while Prokleides, *diainîtês* in 330/29 (IG ii³ 4. 33), proposed honours for Asklepios’ priest, a fellow-demesman, in 328/7 (ii³ 359). Medical families, although doctors competed with Asklepios for clientele, also made offerings to him. While the dedicants of ii² 4359 may not themselves have practised medicine (Aleshire 1989, 94–5), three of them (two brothers) were the sons of doctors. On the possible relationship between the Telemachos who claimed to have introduced Asklepios to Athens and Telemachos son of Theangelos of Acharnai see chs. 20 n. 95, 28 n. 69; Aleshire 1991 and Wickkiser 2011 note that the restoration of Thea[ngelos] as priest in IG ii² 4963 is highly speculative.

⁷⁶ Cf. Humphreys 2007; ch. 20 n. 131. Hierokleia daughter of Dionysios of Phlya (IG ii² 1036 + 1060. 61, cf. Aleshire and Lambert 2003 = SEG 53. 143) might belong to the same family. Note the dedication by a brother and sister of their brother Ptoiokles at Akraiphia in the 2nd c. BCE, SEG 15. 333. On priestesses called Theano see Brulé 1990*b*, 85–6; Freyer-Schauenburg 1989, 62–3 (but her explanation of the name of the priestess Choirine seems far-fetched); Stamatopoulou 2014 n. 37.

river-hero Kephisos at Phaleron in the late fifth century (*IG* i³ 986), but the inscriptions on it do not mention Kephisos, and the name Kephisodotos was common (attested in 20 demes).

Since names and name elements were often repeated within families (ch. 8), we can never be sure that a name carried its full semantic load at the time when it is first attested in a given family. It does, however, seem possible that the theophoric names of the largest lineage among the orgeones of *IG* ii² 2355 were derived from a religious experience connected with Asklepios (Humphreys 2007).

Occasionally we have evidence of a family tradition of dedications over time in a specific sanctuary. A family of Halai Aixonides cultivated relations with the nymphs worshipped in a cave near Vari: Eukleides and his two sons Eukles and Lakrates dedicated *IG* ii² 4651 there jointly, and another dedication, ii² 4653, was made by Eukles son of Lakles of Halai, clearly a kinsman.⁷⁷ In other cases, however, the choice of local sanctuaries derives simply from the wish to be on good terms with a supernatural neighbour. Timesios son of Lysistratos and Doros son of Timesios, perhaps his uncle (MB),⁷⁸ cut a dedication in the rock to Artemis, for whom they had apparently made a small shrine on or near their farmland near Agrileza (*CEG* 754), asking for good fortune, probably in hunting.

In other cases a family will develop a special relationship with a more distant sanctuary. Charias son of Neoptolemos from Athens dedicated a statue of his father, Neoptolemos son of Stratokles (of Auridai) in the sanctuary of Amphiaraos at Oropos before 335 and both Meidias of Anagyrous and his brother Thrasylochos made dedications there after Oropos came into Athenian hands in that year; the dedications do not form a pair, but it seems likely that one influenced the other.⁷⁹ That a dedication by one member of a family was

⁷⁷ Compare the dedications from Hermione, stretching over four generations, published by Jameson 1953. *IG* ii² 4651 does not give demotics or state relationships, but [Eu]kles Eukleidou appears on ii³ 4. 223, a list of demesmen prominent in Halai Aixonides (Table 29.21); ii² 5481 (*SEG* 13. 79), found on the Akropolis, may be another dedication by him. Eukles son of Lakles appears as a purchaser of land at Poros in SE Attika in ii² 1594. 20–1 (Lambert 1997*a*, F 7 A, 21–2; see also Whitehead 1986*a*, 431 no. 186, where ii² 4651 is omitted). If the Eukles son of Eukles of Halai who was ephebe probably in the 250s (archon Antiphon, *IG* i³ 986), and later proxenos of Delphi (*FD* III 2. 77), is a descendant, the family may have been Eumolpidai; the future hierophant Aristokles of Perithoidai was adopted into P. from this family (ch. 20 n. 116, Table 20.3; Habicht 1979, 152 n. 10; Clinton 1974, 24–7).

⁷⁸ Cf. Goette 1994*a*. See ch. 26 n. 97, Table 26.9, for the relationship. Waelkens 1982 regards them as cousins (FBS).

⁷⁹ Charias *IOrop* 341, *APF* 15339, ch. 30 n. 125; Meidias and Thrasylochos *IOrop* 335–6; cf. 361–3, thronos and pair of thrania dedicated by Meidias' son Kephisodoros *c.*322–304 (ch. 23 n. 54). *IG* ii² 3911 may be a Roman copy of another dedication by Thrasylochos (no provenance, Eleusinian stone). *IOrop* 375, set up *c.*300 by a son for his mother, is probably non-Athenian. There are also examples of repeated dedications to healing deities by a single individual: *IOrop* 325, 93 dedications to Amphiaraos by Kephalion (probably non-Athenian), late 3rd c.; Aleshire 1989 Inv. V 108, 111, 119, repeated

remembered by others, perhaps even serving as a focus for visits, is made clearer by cases in which sons add their names to monuments set up by their fathers (*CEG* 755, *IG* i³ 699, cf. Keesling 2005).

DEDICATIONS

Although at first sight Scrofani's 'dedication' at Delphi (above, n. 1) might remind one of ancient Greek dedications in which a circle of kin is recorded, there is an essential difference: the ancient texts document and perpetuate presence, whereas Scrofani's kin are present only in his memory. Indeed, the problem for an anthropological analysis of Greek dedications is that inscriptions may seriously under-represent the number of persons who took part in the ritual. Making a dedication was not a solitary activity (even if in some cases it followed a vow made privately in a moment of crisis); it was a ritual, including a sacrifice, a process of communication with both gods and humans. Herondas' fourth mime represents a minimum: a woman goes with one female companion and their slaves to make an offering to Asklepios, bringing a cock to sacrifice, and leaving a pinax recording her offering. Some of the small metal or textile offerings listed in sanctuary inventories may have been deposited without sacrifice (on the occasion of a public festival?), but the stone reliefs and inscriptions representing or recording dedications commemorate the performance of rituals; where an inscription was attached to a valuable offering (statue, tripod, vase, crown) the dedication surely also included a sacrifice.⁸⁰ This lack of clear distinction, in the case of statues, between the ritual of dedication and its commemoration is probably one reason why it is difficult—and indeed unnecessary—to decide whether an archaic *korē* represents the goddess, a servant in her sanctuary, or a specific girl on whose behalf the offering was made; the statue was a means of focusing all these ideas in a single presence, not (as Keesling 2003 tries to do) separating them.

The permanent remains of dedications (inscribed bases, reliefs, inventory lists⁸¹), as well as presenting the prosopographical problems noted above (at nn. 21–4),

dedications to Asklepios by Kallippos of Phaleron and his wife Mika; *IG* ii³ 1154. 58–78, nine dedications to the Hero Iatros by Kallistion in 221/0.

⁸⁰ Where the dedication commemorated victory in a tribal competition, it may sometimes have been set up when the dedicant feasted the team or players, or may have provided the occasion for a second feast. Aischraios of Anagyrous set up his tripod in the year after his victory (*FGH* 328 F 58, cf. *IG* ii³ 4. 460), but he had it silver-plated, and if he won at the Thargelia the interval until the beginning of the next archon year would only be two months. See P. Wilson 2000 for the process of dedication of choregic monuments; ch. 28 n. 44 on *IG* ii³ 4. 500.

⁸¹ Archaeologists also find many uninscribed dedications (see Wagner 2001 for vases as offerings on the Akropolis), but they are useless for the present inquiry. Statues often become separated from their

deliver only fragments of information torn from their context.⁸² An ancient visitor saw dedications against a cluttered background of older, larger or smaller, richer or poorer offerings, and in the light of memories of ritual occasions;⁸³ while an individual monument might attract attention as an artwork or as commemorating a famous figure, or a family member, a sanctuary's dedications also carried messages about the power and wealth of its deity or deities. A dedication was addressed to the god(s), and its material remains served as a memorial of that message, of gratitude for prayers answered or hope of future benefits.

Christoph Löhr's study of *Familienweihungen* (2000) divides the material into three classes: representations of kin, dedications made with kin, and dedications made on behalf of kin (either to fulfil vows or to plead for their safety). It is also useful, however, to classify dedications on a continuum ranging from more to less public statements, and by the occasions that prompted them.

Dedicated statues of kin usually commemorate the performance of public roles⁸⁴—ritual roles in the case of women and children, more frequently commemorated from the third century onwards. Normally a single individual is represented, though dedications by kin might be grouped together; this was also the case for dedications of tripods or crowns awarded for public service.⁸⁵

inscribed bases (Van Straten 1992); some evidence, however, is provided by texts and inventories. Note Fehr 1996*a* on dedication of temple components.

⁸² See Ma 2005 for the importance of spatial context; Hölscher 1988 on the grouping of dedications.

⁸³ Day 1994, 2010 suggests that a visitor who read an inscription aloud repeated the act of dedication; cf. Chaniotis 2012. Day does not, however, ask who took part in the dedication ritual.

⁸⁴ Statues of men were also set up by the state (recent discussions, Von den Hoff 2003, Gyax 2016; for proposal of decrees by kin see ch. 17 p. 527–33). Joint dedication by Konon and Timotheos, *IG* ii² 3774 + *SEG* 36. 246; ch. 32 n. 74. For dedications that seem to serve as substitutes for grave monuments see below at nn. 103–5.

⁸⁵ Plat. *Gorg.* 472a mentions a group of tripods dedicated by Nikias of Kydantidai and his brothers; cf. the references to a father's victory, and to a father's hopes that his children will also be victorious, in *IG* ii³ 4. 507, *CEG* 773 (Anagyrous, after 350; ch. 23 n. 53) and ii³ 4. 545. Base for set of 2 or 3 tripods, or one large one, *IG* ii³ 4. 446 (Matthaiou 1994, *SEG* 44. 129; ch. 26 n. 102). *IG* ii³ 4. 435 was part of a larger monument, the lost stone(s) perhaps dedicated by Atarbos' father (Appendix 3). See also *AD* 35 B 1, 1980 (1988) 14–18; Goette 2007*a* on *IG* ii³ 4. 466; Csapo 2010*a*. The dedications in the theatre of a homonymous grandfather (FF) and grandson, ii² 3830–1, may have stood together. *IG* ii³ 4. 231, two fragments of a stone that originally would have had at least 3 crowns at the bottom, is a dedication by Diognetos son of Hypsimos I of Hybadai and his son Hypsimos III, commemorating the award to them of crowns, one from fellow-tribesmen. Hypsimos III served as councillor *c.*333 (*SEG* 28. 52. 51), and as treasurer of the *Paralos* at about the same date (*APF* 13915, *IG* ii² 1623. 225f.). Such linked crown dedications are rare if not otherwise unknown; since we are in the Lykourgan period, perhaps both men had been involved with the ephebate. See also ch. 26 n. 63. Two dedications to Athena Ergane by brothers, found separately, may once have stood together (*IG* ii² 4329 + *Agora* XVIII V 579; the restoration Tei[sikle]s is dubious), as may *IG* ii² 4362–3 (n. 75, above, father and son to Asklepios). Paus. 1. 25. 1 notes that Perikles' statue on the Akropolis was *not* placed by that of his father. Cf. also Keesling 2005 on additions by kin to earlier dedications; *SEG* 23. 124 = *CEG* 755 (cf. n. 87); n. 91 below. List of Panathenaic victory dedications in Themelis 2007.

However, whereas a grave peribolos could act as a reserved space in which a series of monuments could be erected, it was not possible to privatize sanctuary space in this way.⁸⁶

Many dedications recorded more private forms of success, in economic enterprises or in fulfilment of a vow made in a moment of danger happily surmounted. Women as well as men made such dedications; kin might make them jointly if engaged in the same enterprise.⁸⁷

Some dedications on behalf of kin were made to fulfil vows made by men who had died, or by women; some associate children with a parent's offering. Others, however, were a response to illness. Women were expected to make dedications before marriage and after childbirth; many of these were textiles or small metal items, known only from inventories. Many small dedications (often, though not always, representations of afflicted body parts, cf. Versnel 1998) were made to healing deities. This is the most private type of offering, of interest only to those intimately concerned and, they hope, the god.

The number of Attic dedications from our period that can be identified as grouping a set of kin wider than the nuclear family is small, even smaller than that of comparable grave monuments.

If *IG* ii² 4881, dedicated by Diopeithes son of Strombichos of Euonymon, carried a statue of his uncle (FB) Strombichides I, a well-known general killed by the Thirty (as has generally been assumed since Koehler 1896, 151 suggested it), he may have made the dedication as the oldest surviving member of the lineage and as guardian of his cousins (FBS) Autokles I and Strombichides II, who certainly survived their father.⁸⁸

⁸⁶ See Van Straten 1992, Aleshire 1992, Lombardi 2009, for priests' control over the placing of offerings in sanctuaries (but the evidence, such as it is, concerns small objects kept under cover rather than stone monuments; cf. also *SEG* 48. 1198, Delos).

⁸⁷ E.g. *IG* ii² 4323 (*CEG* 762); *SEG* 23. 124 (*CEG* 755), *deina pathôn kai polla idôn*, c.350–300. *IG* ii² 4319 (*CEG* 760) might have been dedicated by Phaidimides son of Protarchos of Probalinthos when he was about to leave Attika for Samos as a kleruch, since he is now attested as councillor there c.350 (*IG* xii 6. 262 III 85); though if his father was the Protarchos of Probalinthos, who served as hellenotamias in 407/6, Ph. should have made the dedication (which indicates that he did not yet have children) by the 360s. Note that the dedicants of *SEG* 21. 752 could be husband and wife and not brother and sister. Dedication (now lost?) by brothers, *AE* 1934/5 Chr. 16 (Table 27.6A).

⁸⁸ *IG* ii² 4881 (*CEG* 746; for the family see Table 16.1 and *APF* 4386). The filiation of Strombichides II is uncertain. Statue of FB set up by BS after 266/5, *IG* ii² 3854 (Habicht 1982a, 189 ff.). *IG* ii² 3838 (*CEG* 780) was set up by a brother, Polystratos, to commemorate Polyillos son of Polyllides of Paiania. If, as seems likely in view of the rarity of the names (and the status of those involved), ii² 11630 = *CAT* 3. 343 (Getty Museum; Bergemann 1997 no. 508) commemorated Polyillos' granddaughter (SD), representing her with her parents, perhaps ii² 3838 should be dated while Polyillos' son Nikodemos was still a minor (or after his death). *IG* ii² 3841, in which brothers apparently dedicate their brother at Eleusis (*IEleus* 110) is hard to interpret.

Pausanias (10. 21. 5) reports that kin (*prosêkontes*) dedicated in the stoa of Zeus Eleutherios in the Agora the shield of Kydias (presumably son of Kybernis, of Halimous) who died as a youth in his first experience of battle, fighting against the Gauls at Delphi in 279.⁸⁹

Family pride, perhaps in a local context, will also have motivated the replacement of a herm set up in the area of Chaidari (perhaps originally beside the Sacred Way, east of Daphne?) by the grandsons (*ekgonoi*) of the original dedicant Kallisthenes.⁹⁰ We also have some examples of local family pride in dedications by victorious co-choregoi who were kin.⁹¹

A woman's service as priestess of Aphrodite Pandemos was celebrated by an imposing dedication shared with her sister and sister's son, *IG ii² 4596*, a temple-like facade with their portraits. The absence of other kin may well indicate that the two women were (or had de facto become) epikleroi, the priestess's sister at least being presumably also a widow.⁹² We have as yet no analysis of the evidence

⁸⁹ Even though the name Kydias is attested in 6 demes (add Lamptrai, *IG xii 6. 252 I 19*, to the list in *LGPN*), it is very tempting to associate the Kydias who fell at Delphi with the Kybernis son of Kydias of Halimous who proposed Athens' decree welcoming the foundation of the Delphic *Sôtêria* commemorating the victory over the Gauls (*IG ii³ 1005*, archon Polyeuktos, dated 250/49 by M. J. Osborne 2009*b*; (the date of *FD III (2) 159*, granting proxeny to Kybernis, is still controversial: see Knoepfler 1995*a*; *CID IV* pp. 15–16). Since the Kydias who fell in 279 seems (*pace* Habicht 1995, 138) to have been too young to have sired a son, the proposer of *ii³ 1005* will be his father or, more probably, a younger kinsman posthumously adopted to Kydias and perhaps renamed (a Kybernis is attested as cavalryman *c.*250, Bugh 1988, cf. ch. 26 n. 22). *AD 44 B 49* = *SEMA 230*, a kioniskos for the wife of a Kybē[r]nis of Halimous, will have commemorated either Kydias' mother or the wife of the proposer.

⁹⁰ *IG i³ 1040, 460s?* cf. *i³ 964*, perhaps copying the dedication of a homonymous grandfather (FF; ch. 29 n. 58); *i³ 969 bis. IG ii³ 4. 583 (CEG 758)* refers to victories in the pankration at the Isthmian games by two sons of Empedion (of Cholleidai), Diophanes and his half-brother (*progonos*) Stephanos; the latter is now attested as a councillor after 307/6 (Appendix 1), *Agora XV 56* + *SEG 34. 127. 175*, confirming that *stephanos* is to be read as a name and not as *stephanous* (ch. 26 n. 56).

⁹¹ *IG ii³ 4. 502–3, 506*, Ikarion; on *ii³ 4. 498, 500* see ch. 28 n. 44; on 7195, a related tombstone, ch. 30 n. 17. Cf. *ii³ 4. 252*, dedication by a father and 2 sons all victorious as phylarchs in the anthippasia (*APF 3276*, Pharaklas 1969, Bugh 1988; chs. 16 n. 50; 21 p. [11] 00). On choregic dedications see now Goette 2007*a*, 2007*b*; above, n. 85. *IG ii² 3831–2*, bases dedicated by Astynomos son of Lysiades of Oion Kerameikon and a homonymous grandson, found in the same area of the theatre, may belong to this category (cf. Habicht 1982*b*).

⁹² *CEG 775*; on the monument see Beschi 1967–8, 521–6. The priestess's nephew (ZS) Archinos son of Alypetos of Skambonidai is now attested as councillor in the kleruchy on Samos *c.*350, *IG xii 6. 262 IV 127*, and should therefore have been born before *c.*380; he may have gone to Samos in 352 (Habicht and Hallof 1995). Since it is rather unlikely that his mother and her sister were both still alive in 321, when the kleruchs left Samos, he perhaps returned to Athens when his father died (cf. ch. 24 n. 7 on the return of Dionysios of Kollytos, *IG ii² 11169* = *CEG 593*; Humphreys 2010*a* n. 8). Archinos may also have stood to inherit the estate of his maternal grandfather Dexikrates of Ikarion; perhaps the dedication was an attempt to avert *phthonos*. *SEG 51. 215*, a base found in the Athens Metro excavations for Monastiraki station, held a statue of Chairippe daughter of Philophron (I) of Kephisia, priestess of Demeter and Kore, signed by Praxiteles and dedicated (presumably in the City Eleusinion) by her brothers Aristodemos II and Philophron II. Orphanou-Phlorake 2003 dates it *c.*360, but reconstruction of the family (ch. 23) would make a date *c.* 340 more likely. Pasquier and Martinez (2007, 49) say 'mid-century'.

of dedications for women's control over property. Xenokrateia, dedicant of *IG* i³ 987, whose son Xeniadēs was named after her father and probably adopted to him,⁹³ will have been an epikleros and widow. The two daughters of Eteokles of Aithalidai, who dedicated *IG* ii² 3458 to commemorate their father's agonothesia, probably did so when their brothers were out of Attika (Humphreys 2007; ch. 26 n. 65). The women who dedicated an *aparchē* or *dekatē* on the Akropolis from work profits will presumably have been widows.⁹⁴ However, some women who made vows or received divine messages had their dedications set up by male kurioi.⁹⁵

⁹³ *CEG* 744/320*b*, c.405–400 (Beschi 2002; see also R. Parker 2005*a*, 430 n. 49; Voutiras 2011; and A. Williams 2015). Xeniadēs belonged (or, since he is represented as a child, would belong) to his maternal grandfather's deme; although Xenokrateia might have married a member of her father's deme (as an epikleros, she could have been claimed by an agnate), the form of the statement seems to imply adoption by MF. Note also *IG* i³ 745 (*CEG* 228), dedication by Kynarbos to Athena on behalf of his two daughters and their (future?) descendants, *genea*; it seems likely that he had no sons (cf. ch. 26 n. 67 on possible later kin). The priestess of Artemis (in the city) who dedicated an altar to her on a rural estate, *IG* ii² 4573 = *CEG* 770, identified herself as 'mother of the children of Dionysios', so was probably a widow. The same may be true of Lysistrate, who dedicated ii² 4613 to Herakles on behalf of her children at the end of the 4th c. (though the relief shows 4 adults, with 3 children, and a victim; see Löhr 1996, no. 168). The daughters of Kleonothos who dedicated ii² 4565 to the nymphs in the first half of the 4th c. were perhaps still unmarried; but Archippe, who dedicated a statue of her homonymous daughter to Demeter and Kore c.350–325 (*Agora XXXI*, 189 no. 10), may have done so on her own because the relationship mirrored that of the goddesses. In ii² 4025 the restorations are dubious; probably the base held two statues, children dedicated by their [*patēr kai mē*]*tēr* or possibly parents dedicated by their [*thuga*]*tēr* (cf. Löhr 1996, no. 151). Dedications made by women at the end of the 5th c. are also of some interest. The gold olive-leaf crown (36½ dr.) dedicated to Athena by Aristomache daughter of Aristokles of Oe in or before 402/1 (*IG* ii² 1402 *add.*, cf. 1389, 1393, *SEG* 23. 82, Tréheux 1965) was presumably awarded to her father; possibly she was an epikleros who married an agnate and became the mother of Aristokles (II) son of Epainetos of Oe (ii² 6945*a*, p. 892; ch. 28 n. 75). Her mother Kallion perhaps made a dedication to Artemis Brauronia on the same occasion (ii² 1386 + 1381 *add.* 26, 1400. 42, 1401 + *SEG* 34. 116. 26). It is also possible that the Kleostrate daughter of Nikeratos who dedicated a silver thymiaterion of 1300 dr. in or before 405/4 (*IG* i³ 342. 6, cf. ii² 1381, 1384, 1388, 1393, 1400) was the daughter of N. of Kydantidai, killed by the Thirty. Her (?) brother Nikias II was still a minor in 404 (*APF* 10814, ch. 5 at section 'Age of marriage'). For possible examples of tombstones set up by women see ch. 11 n. 31 (dedication or tombstone, *SEG* 22. 173); for later, non-Attic evidence on women managing their own affairs see Van Bremen 1996.

⁹⁴ Melinna, who dedicated *IG* ii² 4334 (*CEG* 774, second half of 4th c.) to Athena Ergane, had raised her children by *tolmai dikaini* and hard work. While *aparchē* had associations with grain (*IG* i³ 78) and *dekatē* with the tithing of humans and perhaps flocks, there does not seem to be a significant pattern in their use on inscribed dedications (*dekatē* from a woman's land in i³ 800; both terms are rare outside the Akropolis; see now Patera 2012 s.v.; Jim 2014; 52–5). Indeed, the frequency of such dedications on the Akropolis in the late 6th and early 5th century may well be due to the involvement of artisans in a developing cash economy (and not to the 'democratic' ideas of Kleisthenes; see Keesling 2003 for discussion of that suggestion). Cf. *IG* i³ 1226 (510–500), *sēma* set up by children for father at mother's behest.

⁹⁵ E.g. *IG* ii² 4602; 4368 = *CEG* 772 (before 343/2).

Evidence on the composition of work-groups is more frequent in other sources (see ch. 6), but *IG ii² 4327* was dedicated to Athena Ergane in the middle of the fourth century by Autophilos of Phlya with his three sons and three grandsons who were sons of his daughters; very possibly his sons' sons were not yet old enough to work. The list of launderers (*pluneis*, men and women, free and slave) who dedicated *IG ii³ 4. 635* at the same period was headed by a father and son.

More private in character are the dedication by Kallias son of Demalkes of Skambonidai of statues of his adopted son Lysiphanes and the latter's mother,⁹⁶ and the dedication to Zeus Epiteleios Philios, his mother Philia, and his wife Agathe Tyche of a relief showing the deities by two women and a man whose relationships probably mirrored those of the gods.⁹⁷ Affection and the wish for good fortune are also expressed by dedications on behalf of the sick, but only a single example concerns a dedicant outside the nuclear family, a grandmother (*têthê*).⁹⁸

ORACLES AND DREAMS

We do not have oracle responses, dream books, or astrological handbooks for Attika, but evidence from other parts of the ancient world shows a similar concentration on the nuclear family. Much of our evidence for private consultation of oracles comes from men,⁹⁹ and their questions concern their own lives and those of their immediate family: 'Is the child my wife is bearing really mine?'; 'Will my son recover from sickness?' A father has concerns about his daughter's marriage; an Athenian visitor to the oracle of Zeus at Dodona (our main source of evidence on private consultations), Diognetos son of Aristomedes, asks how to ensure good fortune for himself, all his well-wishers, and his mother (whom he names). 'The children of Eurynos' ask if they will do better to move house. Men want to know how to get children. Questions of

⁹⁶ *IG ii² 3850*, early 3rd c.

⁹⁷ *IG ii² 4627*, 4th c. Dedication to Zeus Philios by two brothers, *SEG* 41. 173/ 44. 135 (cf. ch. 27 n. 86; the entry in *APF* 7865 needs revision).

⁹⁸ Aleshire Stele V 104 (*IG ii² 1534 B 229*), c.254/3; 3 typoi dedicated by Archestratos (2 dr.), his grandmother (4 dr.), and his mother (4 obols). See Stafford 2008 for reliefs showing family groups bringing offerings to Asklepios.

⁹⁹ Women's questions *FD III* (1) 560, end 4th c. (childlessness); Rowlandson 1998 no. 21 (*PSI* Congr. XVII 14, 2nd–1st c. BCE, health); no. 47 (*POxy* 8. 1149, 2nd c. CE, purchase of slave). From Dodona (Dakares, Vokotopoulou, and Christides 2013; cf. also Lhote 2006, Eidinow 2007) we have questions from husband and wife together (e.g. 313 A, 417 A?), and a scattering from women alone: 325 A, 'should I stay with my husband (*syμβιος*)?' (cf. 2552); 429 B, a widow (cf. 3320A); perhaps 395 A; 2762A (safety of husband); 2980, is husband dead, should wife and children *τ[elein] ta nomima*; 3113A, about *panklaria toi kat<ε>gneitoio*, perhaps with reference to marriage of daughter. Slaves' questions, Eidinow 2012.

inheritance preoccupy others, and one consultant wants confirmation of his suspicion that Aristokles' female servant was kidnapped by Archonides, by Archonides' son, or by Archonides' or his wife's slave. We also have a query from Egypt, from the first century CE, from a married couple who want to know whether it is advisable (*beltion*) for them to oppose the husband's father.¹⁰⁰

The range of kin with which these questioners are concerned is narrow, and the same is true of the clients of dream interpreters and astrologers (Oberhelman 1997; Konstan 1997*b*, 169). Apparently only men are expected to seek professional interpretations of dreams about their kin, and they dream about their fathers and mothers, wives, children, and siblings, brothers more often than sisters; they may also dream of step-parents and stepchildren. Dreams of parents, children, and wives offer multiple possibilities of interpretation, depending on the details of the dream; the significance of dreaming that one sleeps with one's mother depends on the position.¹⁰¹ A brother in a dream may stand for the dreamer himself, but may equally stand for or be represented by an enemy, 'since a brother deprives a man of property he might otherwise have inherited' (cf. Konstan, 163). A daughter may stand for a sister. To dream of step-parents is bad, stepmothers being more sinister than stepfathers; *progonoi* (stepchildren, or possibly one's own children by earlier marriages) signify the return of old worries.¹⁰² The younger Pliny (*Letters* 1. 18) dreamed that his mother-in-law asked him not to take on a legal case; he did so nonetheless, and won.

The activities of the superstitious man, as portrayed by Theophrastos (*Characters* 16) centre on his household and nuclear family. When he goes each month to an Orphic specialist for purification he takes his wife or, if she is too busy, his children and their nurse. Some of these itinerant religious specialists went from house to house offering their services (Plato *Republic* 364b–365a).

These references suggest that Orphic specialists carried out their rites of initiation separately for each individual or household, and thus their clients did

¹⁰⁰ Diognetos (not in *LGP*N), Lhote 2006 no. 23; kidnapping, *SEG* 15. 385; Dakares a. o. no. 354 children of Eurynos. Hunt and Edgar 1932, 193 from Egypt (cf. Parsons 2007, 175). On questions and appeals to gods concerning theft see also *SEG* 19. 429; Versnel 1991, 1994; Konstan 1997, 162; Chaniotis 2004*a*, 2004*b*. Pugliese Carratelli 1957 may be a query about dividing the [*klaro*]*n* or [*oiko*]*n* (ch. 5 n. 81), cf. Dakares a. o. nos 45 B, 313 B, 328, *panklaria*; 2366B, should questioner do business with his ZH; 2564B, reference to B's death? 3142A to sharing with [*adel*]*phos*. One questioner perhaps asks if he should live with his *kasí*[*gnêtê*]; but see *ZPE* 197, 127. Question from a slave, 3690B, cf. perhaps 3999B.

¹⁰¹ Astrologers discuss sex with mother, daughter, elder sister, mother's sister, brother's wife; for a woman, mother's husband, sister's husband (Konstan 1997, 165, 168; cf. Héritier 1994, 1995).

¹⁰² The topics of adoption and fosterage also figure in the astrological text analysed by Konstan, 1997. It is not clear whether *progonoi* in the dream oracle given to Aristichos at the Ptoion in Akraiphia (Guillon 1943, 109–14, 143–6) are stepsons or sons of an earlier marriage.

not meet together as a congregation (cf. Burkert 1982; 1985, 293–304; M. L. West 1983). Voluntary associations with a religious base do not normally seem to have formed round religious experts with the specialist knowledge required for carrying out initiations and purification rituals; the central rite of the *thiasos* was a sacrifice which could be performed by any member elected to priesthood.

TOMBSTONES AND DEDICATIONS

To see how far this restriction of interest to a narrow range of kin is typical for Greek antiquity we may turn to a series of selective comparisons, first with Attic tombstones of the late Archaic and Classical periods (further discussed in chs. 10–11), secondly with later Attic dedications, and finally with some examples from other parts of the Greek world.

Tombstones and dedications have much in common; indeed, one of the most extensive representations of a kin group as a dedication, *IG* ii² 3829, is apparently commemorative. It showed five figures (with a gap for a sixth, between the first two statues at the left): Pasikles (I) son of Myron (I) of Potamos and his wife Timostratē, with their son Myron II, a space probably for his brother Pandaites, their daughter Aristomachē, and Lysippe, probably the wife of Pandaites. The group was dedicated by Pandaites and by his nephew (and ward?) Pasikles II son of Myron II (Table 12.1). On this reconstruction Pandaites should have been added to the group when he died, its other members being already dead.¹⁰³ The monument may have been set up after the legislation of Demetrios of Phaleron limiting expenditure on tombstones. However, this law did not encourage a general fashion for familial commemorative dedications; on the whole, dedications in stone became rarer after the late fourth century.¹⁰⁴ In addition, *APF* 13519 suggests that the painted stele erected by Telesias of Probalinthos for his

¹⁰³ The proposography is controversial. *APF* 643 pointed out that if Lysippe (daughter of an Alkibiades of Cholleidai) was the sister of the Alkisthenes son of Alkibiades of Ch. who served as councillor in 370/69 (*IG* ii³ 4. 25), and as trierarch c.357 (*IG* ii² 1611. 304), she could not be the wife of the dedicant Pasikles, who was ephebe in 333/2/1 (Reinmuth 1971 no. 9), and is attested in the early 3rd c. as a comic playwright (*PCG* 7 p. 100). Löhr 1996 no. 161 follows *APF*. However, this calculation would also make Lysippe rather old as a bride for *APF*'s candidate Pandaites of Prospalta (father of Timostratē), unless he was her second husband (both would have been born c.400). It may be better to assume that Alkisthenes of Cholleidai or his brother Alkidamas (*SEG* 19. 174) had a son named after his grandfather, Alkibiades II, and that this was the father of Lysippe, who could then have been born c.340 (ch. 26 n. 55). See also Keesling 2007. On the career of Sthennis, who made the figures of Lysippe and Myron II, see Habicht 1998.

¹⁰⁴ Cf. R. Parker 1996, 271. Demetrios' legislation may have prompted some sculptors to leave Attika; sculpted dedications are also relatively rare c.480–430, when there were almost no sculpted tomb monuments (cf. Van Straten 1993). On Hellenistic, non-Attic dedication of statues of dead kin according to instructions in their wills see Van Bremen 1996, 178–9.

TABLE 12.1. Myron
of Potamos, *IG* ii²
3829, *APF* 643
(revised)

daughter Alkippe, *IG* ii² 4914, may fall into this category; the monument set up by Polystratos of Paiania for his brother Polylllos, on the Akropolis, is explicitly called ‘an eternal remembrance of a mortal body’ (*IG* ii² 3838, *CEG* 780), and that set up by [Ape]mon of Anagyrous on Salamis for his father (*IG* ii² 3830, *CEG* 767, *APF* 10898) was probably also commemorative. Philippides I of Paiania may have been dead when his son Philomelos II set up statues of his father and himself (*IG* ii² 3823, *APF* 14670); the statues of [Kon]on son of Kephisodotos of Aithalidai and his (?) father may also have been posthumously dedicated.¹⁰⁵

The family of Philippides was to become distinguished in public life, as far as we know, only with the career of his grandson Philippides II, although Philomelos II was clearly a rich man. We may end this discussion of the dedications of the fourth century with a text which exemplifies the problems of interpretation which these dedications pose, and the difficulty of drawing a firm line between public and private concerns. *IG* ii² 4611, of the late fourth century, is plausibly restored as a dedication to Herakles by a father and two sons:

[Straton Str]atokleos Lak
[anethe]ken Heraklei. Theodo-
[tos Stratonos.] Kleophon Stratonos.¹⁰⁶

One of the generals at the battle of Chaironeia was a Stratokles, perhaps of Lakiadai (*AO* 343, with *Agora* XVII 25). Was this text set up by his sons and grandsons? If so, how much did their descent from one of the Chaironeia

¹⁰⁵ See also Keesling 2004 on *IG* i³ 883–4; *IG* ii² 3828, perhaps dedicated by Konon’s brother Apolexis, when he inherited (‘once part of a large base’, Hurwit 1999, 293–4); cf. n. 92 above on dedications intended to avert *phthonos*. On the prosopography see Table 26.4.

¹⁰⁶ Straton II, son of Kleophon, was one of the councillors from Lakiadai in 303/2, *Agora* XV 62. 190.

commanders mean to them and to their contemporaries? In the days of radical democracy, descendants of the great families of the Athenian aristocracy had to reshape their family history to conform to the discourse of the polis (R. Thomas 1989); after Chaironeia this discourse itself began to serve as the legitimating ideology of a new aristocracy.

It may be an accident of the preservation of evidence, which comes only from literary sources, that our only references to the dedication of painted portraits are also commemorative. A *pinax* by Ismenias of Chalkis in the Erechtheion represented the statesman Lykourgos and his sons, with their forebears Lykomedes and Lykophron and their remote ancestors Erechtheus, Hephaistos, and Ge; a painting in the sanctuary of Zeus and Athena in Peiraios depicted Leosthenes son of Leosthenes of Kephale, hero of the Lamian War of 323/2, with his sons (*paides*). Both of these family portraits were probably dedicated soon after the restoration of democracy in 307.¹⁰⁷ One would like to know whether there were precedents for these family portraits, and whether the fashion continued. When dedications again became more frequent, it remained very rare for any large group of kin to be concerned in a dedication.¹⁰⁸

Two later developments in Athens seem particularly worth noticing. The first, continuing a trend which has its beginnings in the fourth century, is the frequent dedication of statues of children to commemorate their performance of the ritual roles of *kanêphoros* and *arrhêphoros* (girls), *pais aph' bestias* (boys, and girls also from the second century BCE), or *kleidouchos* (boys). These statues are of course most frequently set up by parents, but we find a few dedications also by grandparents (perhaps acting as guardians), and one in which the mother's two sisters join her in honouring their niece.¹⁰⁹

¹⁰⁷ Lykourgos, [Plut.] *Mor.* 843e in the text of J. Mau 1971; cf. Humphreys 2004, 102 n. 61; Appendix 4. In my view *katagôgê tou genous* does not necessarily imply a full genealogy, and Paus. 1. 26. 5, 'paintings on the wall, of the genos Boutadai', probably refers to Ismenias' picture (Löhr 1996, no. 167, and Von den Hoff 2008, 180, imagine a row of portraits of priests). Paus. 1. 1. 2 says that Themistokles' sons, when they returned, dedicated a painting in the Parthenon that included their father. Leosthenes: Paus. 1. 1. 3, *APF* 9142. The discovery of a dedication to Athena by Philoumene daughter of Leosthenes of Kephale commissioned from Kephisodotos in the middle of the 4th c. (*SEG* 44. 136, Matthaiou 1994) makes it rather unlikely that her father was the general Leosthenes condemned for treason in 361, whose property was confiscated (cf. Humphreys 2009, n. 9; ch. 16 at section 'Akamantis'; ch. 27 n. 55).

¹⁰⁸ The narrow range of dedicating groups in Athens, in contrast to Rhodes, is noted in Fraser 1977, 58; Rhodian dedications have now been studied by Rice, 1986 (see also Bresson 1991). Even in a milieu as close to Athens as Hellenistic Delos we find Athenian texts associating six or even nine kin as dedicants (*ID* 1871, 1891, 2226), and a mixture of vows for kin with those for public bodies and officials which is not found in Attic texts (cf. Vial 1984, 304).

¹⁰⁹ Cf. n. 18 above; Von den Hoff 2008. *IG* ii 3480 set up by MF and MM for a female *pais aph' bestias*, 2nd c.; *IEleus* 238 by mother and her sisters for *pais aph' bestias*, 2nd c.; *IG* ii² 3492, by FF and FM for a female *pais*, 1st c. Mansfield 1985, 296–301 has a list of *arrhêphoros* dedications, with discussion of the dedicants (see also Choreme 2009, Pilz 2013). *IG* ii² 3496 was probably dedicated by the girl's MF,

Notes: Protogoras, the leading donor in the epidosis of (?) c.210 (Tracy 1990, 57 with 262), had a younger brother whose name is lost, *IG ii²* 2333a 1-3, possibly Chrysis' father (but the chronology of this family needs more work; cf. Karile-Cohen 2012).

Pace *LGP*N Niketes 26, Protogoras 4, we have no evidence that Chrysis' father was a son of Protogoras.

TABLE 12.2. Niketes of Pergase, *IG ii²* 3484

In these monuments children are publicly honoured for playing a ritual role in the public sphere. The same phenomenon is found in the portrayal of women: statues are set up to commemorate their service as priestesses, or their priestly status is highlighted in a dedication with which they are associated. In *IG ii²* 3484 two brothers who themselves had been *Pythioi paides* as children set up, with their sister, a statue of their cousin (MBD?) Chrysis, priestess of Athena Polias (Table 12.2).¹¹⁰

The second interesting innovation in Attic dedications of the Hellenistic and Roman periods is the upper-class practice of tracing the honorand's descent from famous figures of past history; here too several of the most elaborate texts commemorate women. *IG ii²* 3474 + 4283 was set up in the late third or early second century for another priestess of Athena Polias, Phil(o)tera, daughter of Pausimachos (Humphreys 2007; *SEG* 57.45); it celebrates her father's military achievements, the restoration of the Piraeus to Athens in 229 by her ancestor Diogenes, and her descent from the orator Lykourgos (Table 12.3).

Lykourgos' descendants also allied themselves with the powerful family of Medeios of Peiraios and, at the end of the first century BCE, with a family from Hagnous that traced its descent from Themistokles and had married into one of the leading families of the Kerykes, that of Leontios of Acharnai (*IEleus* 300-1).

since her father's demotic is given; the MF may be Hippon[ikos of Phlya]. The statue of Habryllis daughter of Mikion of Kephisia, priestess of Demeter and Kore (*Agora XXXI* no. 75; Themis 2009a, *SEG* 56.235), was probably dedicated by her father, brother, and husband (ch. 20 n. 141).

¹¹⁰ Cf. Humphreys 2007. *IG ii²* 3902, of the end of the 1st c. BCE, may be a dedication by grandchildren to honour their *pappos* which refers to the priestesshood of the grandmother (*tēthē*), but it is very fragmentary.

TABLE 12.3. Philoter (Humphreys 2007/SEG 57.45)

Pausanias (1. 37. 1) tells us that Akestion, the woman whose marriage made this latter connection, was buried close to the tomb of Themistokles son of Poliarchos, grandson of the great Themistokles, and to the tombs of other members of the family, about which Pausanias regrettably chose not to inform us;¹¹¹ Akestion's monument carried the information that she was descended from three generations of holders of the office of daidouch (Torchbearer) at Eleusis and lived to see her brother, husband, and son hold the same office (cf. Schmalz 2009).

Another genealogical inscription commemorates the service as *pais aph' hestias* of Tiberius Claudius Demonstratos in the second half of the first century CE.¹¹² Titus Flavius Glaukos III of Marathon, in the third century, made a practice of composing poems for inscriptions honouring his kin (J. H. Oliver 1949; Follet 1976, 262–7); those that survive were written for his niece (BD) Euneike II, his grandmother (MM) Isidote, *hierophantis* at Eleusis, his uncle (FB) T. Flavius Glaukos II, hierophant, and for a monument set up by his aunt (FZ) Flavia Euryale for her husband, who also held office as hierophant. The poet also honoured a young cousin (FMBSS?), Q. Statius Themistokles, for his service as kleidouchos, this time in prose. The poem for Euneike II (IG ii² 3709) names her parents, her grandparents (FF, FM), her great-grandmother (FMM) Isidote, and a still more remote ancestor (FMMFF), the 'Assyrian' sophist Isaeus. It also

¹¹¹ The name should be Archeptolis if Pausanias' information was correct; APF 6669 VI suggests Polyektos, but since the elements of Greek names were still semantically 'live', the substitution of Poliarchos for Archeptolis would be an easy slip to make.

¹¹² Kapetanopoulos 1964, Schmalz 2009. This Demonstratos appears also as an ancestor of the hierophant whose genealogy is recorded, in a somewhat more technical format than that of earlier texts, in IG ii² 2342 (4th c. CE); see Woloch 1973, 181; Kapetanopoulos 1968 stemma C; Follet 1976, 273; Byrne 2003. Another example, Clinton 2004 (SEG 54. 307). IG xii 6. 310, a Samian claiming descent from Alkibiades (2nd c. CE).

mentions her illustrious cousins (*anepsiadoi*), perhaps the children of her FFBS Flavius Dryantianos. The poem for Isidote (*IG ii² 3632*) was part of a monument set up by her daughter and grandsons (DS), of whom the poet was one. The text for Q. Staius Themistokles (*IG ii² 3704*) mentions that he and the poet had a common great-grandfather, Q. Staius Sarapion, and alludes to a nearby monument set up by Sarapion to commemorate *his* grandfather (FF; *IG ii² 3631*; cf. *Agora XVIII C 187*, M. J. Osborne 2010*b*, 2013; Karila-Cohen 2007, 378–9). The statue of Aelia Epilampsis, priestess of Demeter and Kore *c.*160–170 CE, set up by her grandchildren (SS, SD; *IG ii² 3687*), lists the offices held by her grandfather (FF), uncle (FB), cousins (FBS), son, and grandson (Byrne 2003 stemma I).

KIN REPRESENTED AS GROUP

The harvest of evidence on kinship from Attic dedications and their inscriptions is a modest one in comparison with that provided by other Greek cities, and the wealth of material from the Greek world generally increases in the Hellenistic and Roman periods. Two well-known monuments from other parts of Greece, which neatly bracket our period—the Geneleos group of *c.*560 from Samos and the Daochos monument of (?) the 330s at Delphi, set up by a Pharsalian—serve to indicate the wider range of archaic and classical evidence that is missing from the Attic corpus. The group sculpted by Geneleos and dedicated in the sanctuary of Hera on Samos, read from right to left, consisted of a reclining man, three standing girls, the two last being named Philippe and Ornithe, a standing boy, and a seated woman, Phileia—father, daughters, son, mother?¹¹³ The monument set up by Daochos II of Pharsalos at Delphi contained nine standing male figures. Reading from right to left again, they are: ? Apollo, Aknonios son of Aparos, his son Agias, Agias' brother Telemachos, a third brother (or cousin?) Agelaos, Agias' son Daochos I, his son Sisypchos I, his son Daochos II, and his son Sisypchos II. Aknonios had ruled as 'tetrarch of the Thessalians' in the early fifth century; the three athletes would have won their victories about the middle of the century; Daochos I is thought to have ruled Thessaly from 431–404; Daochos II came to power in the 330s as a supporter of Philip. His monument may have

¹¹³ Geneleos group (550s?) *IG xii 6. 559*; Walter-Karydi 1985; Löhr 1996, 2000; Steuben 1999*b*; Duplouy 2006; Giannisi 2006, 21–3. The second line of the inscription reads from right to left, the first line is illegible. Possibly the statue group commemorates ritual performances by its younger members; we cannot be sure that it represents a family. There were other groups of figures at Samos (*LSAG* 328–9, nos. 4, 7; Lazzarini 1976, 727–8) and at Miletos (*LSAG* 332, Lazzarini 168), but relationships cannot be reconstructed. At least 10 seated figures, both male and female, were set up *c.*530–525, in a temenos in a prominent position beside the road from Miletos to Didyma, and were destroyed during the first half of the 5th c. (Tuchelt a. o. 1996; Duplouy 2006).

TABLE 12.4. Daochos

been inspired by the Philippeion constructed by Alexander at Olympia to honour his parents, although that group included only Philip's parents Amyntas and Eurydike, Philip and his wife Olympias, and Alexander (Pausanias 5. 20. 9);¹¹⁴ Preuner (1900) also compares the Mausoleum, and the Nereid monument at Xanthos. The length of the six-generation pedigree in the Daochos monument is impressive, but it is also noteworthy that it spreads to include collateral lines only to record the athletic victories of Daochos I's uncles. The athletes' descendants, if any, were not included in or associated with the monument (Table 12.4).

Larger groups of sculptures of kin were favoured in the Hellenistic period especially by royal families (Hintzen-Bohlen 1990); a much more widespread fashion, in some areas, was to list a sometimes extensive group of kin as co-dedicants. For example, in Rhodes a man was honoured in the second century by his parents, mother's brother and the latter's son, brother's wife and two nephews (BS?), four patrilineal first cousins, and three patrilineal first cousins once removed (probably agnatic: Rice 1986, *IG* xii 1. 72b). On the Rhodian *peraia* c.110–81 the dedicants were parents, brothers, mother's brother, and a sister's daughter who had married her MB (Bresson 1991, no. 9). On Delos, in the second century, another (Delian) man is honoured by his mother, three nephews, and two cousins (FBS?; *ID* = *IG* xi 4. 1181). On Kos, a priestess was honoured c.190–160 by her husband, son with his wife, (perhaps his FBD) and son, and daughter with another

¹¹⁴ Cf. Hintzen-Bohlen 1990. Daochos group (possibly earlier than the Philippeion, though dated c.287–277 by Geominy 1998, 2007; see also Löhr 2000, 139): Jacquemin a. o. 2012 no. 48. Agelaos is described as *syngonos* of Agelaos and Telemachos: either a brother or possibly a more distant kinsman (FBS?).

grandson, probably DS (Höghammar 1993, no. 65; cf. also *IG* xii 4. 449). It is notable in these cases that women appear among the co-dedicants even when their husbands are alive.

In considering the relations between kinship and identity in this field of 'religious' action, the interesting questions for further research seem to concern (1) the decreasing importance over time of homosocial groupings, (2) the connection between stratification systems and interest in proclaiming kinship ties, and (3) whether the spread of 'voluntary' religious associations indicates a trend towards henotheism and, possibly, towards some blurring of the distinction between kinship ties and membership of a religious community, at least in the lower social strata (and thus an anticipation of patterns found in early Christianity).

For Athens, in the period studied here, there does seem to be a development away from homosocial groupings, starting already in the Peloponnesian War, and perhaps associated with a more urban environment. Esoteric rituals become 'mysteries' rather than being restricted to one gender. Reliance on epigraphic evidence for prosopographical data makes it more difficult to assess either the extent of any drift towards henotheism or the relation between stratification and display of kinship ties; the development of the use of writing as a means of conveying information had its own dynamics and patterns of distribution. As I have noted, kin may well have participated in dedication rites even when their presence was not recorded on stone. The trend in the Hellenistic period (and later) towards recording a wider range of kin on dedications may well be associated with the increased presence of women and children among honorands and dedicants; this implies some weakening of the distinction between public and private spheres, which in itself may be related to steeper social stratification.¹¹⁵

¹¹⁵ See the discussion in Van Bremen 1996, especially 173–80.

PART THREE

Politics, Informal

Young Men's Social Groupings

Male adolescence in Athens was, as we have already seen, a long period, lasting from puberty to the early thirties. Citizenship was acquired (from 507) at 18, with deme membership, and this gave a young man the right to attend the Assembly, to vote, and to defend his interests in court, together with the obligation to serve in the army.¹ He could perhaps hold minor military offices. But he could not stand for election to major military or political office, or serve as a councillor, until he was thirty. Young men were not expected to speak in the Assembly; according to Xenophon (*Memorabilia* 3. 6. 1) Plato's brother Glaukon, who rose to speak when not yet twenty, was mocked by the audience and forcibly silenced.

Fathers in the late fifth century may have liked to believe that they had spent their adolescence docilely sitting at the feet of older kin, internalizing traditional ideals, and imbibing political wisdom (Plato *Laches* 179a–e). That was hardly true; young men had been gathering in gymnasia at least since the time of the tyrants, and in the archaic period they had probably spent much of their twenties voyaging in search of booty, trade goods, victory in the Panhellenic games, or wives from leading families in other cities, their aims and trophies varying with their social status. Archaic Greek society seems to have had quite a sharp sense of distinction between age-classes. But new features were indeed introduced during the fifth century. Symposia, in which the city's leaders had once drunk while young adolescents waited at table, became increasingly the preserve of the young;² they would meet in the house of a rich contemporary whose father had died and left him in possession of his inheritance (below, n. 35), or of an older man who still clung to a bachelor style of life. Professional teachers came to Athens to offer training in athletics, hoplite fighting, rhetoric, and politics. Sons were less dependent on their fathers economically, being paid for military service; those

¹ The period between 18 and 20 (earlier, 16–18) was more formally liminal: see ch. 19 n. 37. The view of Kleijwegt 1991 that Greek and Roman society lacked adolescence is very strange. On terms for age categories see J. Davidson 2006.

² Symposiasts usually seem to be bearded on BF vases, and get younger with the development of RF; the chronology of this shift, which was of course gradual, while the evidence is affected by the preferences of individual painters, needs more detailed study. Bearded revellers in the late 6th c., Kurtz and Boardman 1986; see also Lissarrague 1987, M. C. Miller 1999.

with political ambitions were conscious that they lived in a rapidly changing world, and easily lost their awe of the older generation.

The adolescents of late fifth century Athens were the first student society documented in historical record: testing themselves in sport and drinking competitions, getting their first experience of sex and of romantic love, resentful of parental authority, easily captivated by new ideas that challenged conventional norms and beliefs. Their specific cultural heritage included the implicit assumption that society would tolerate some deviant behaviour from them, indeed almost expected them to play at role-reversal in permitted contexts; well-established conventions of homosexual courting and romantic love (D. Cohen 1991); and a complex of ideals and behavioural patterns clustered round the term *hetairos*, which is hard to translate adequately in English.

Hetairos in Homer is used in two ways: reciprocally between equals, and hierarchically to denote the nameless followers of a leading warrior. It is, however, a rather euphemistic term for the relation between leader and followers—*laos*, an alternative, puts the rank and file more clearly at a lower level—and thus seems to have had some egalitarian overtones from early times. These had become stronger by the fifth century; and aristocratic resistance to tyranny in the sixth century had added to the context of adventure in war and voyages familiar from the Homeric poems a new use for the term in internal politics. An oppressive government could be overthrown by the daring and loyalty of *hetairoi*.³

A parallel note of defiance is struck in the use of the feminine form of the word, *hetaira*, for the women who shared the couches of the *hetairoi* at symposia instead of leading the sheltered life prescribed for the wives and daughters of citizens. Parties in their company were very different from those family dinners that young men found so boring; *hetairai* shared their lovers' enthusiasms and urged them on to further extravagances instead of preaching caution or reminding them of future responsibilities (cf. Kurke 1999).

It is, I think, against this rather frivolously rebellious, romantic background that we must see the practice of oath taking between *hetairoi*. It was widely believed by the early fourth century, and probably earlier, that groups of young men made a practice of breaking religious and other taboos, either as a pledge of their daring and loyalty to the group (cf. Thucydides 3. 82. 6), or more generally because group drinking led them to throw off traditional restraints. Lysias (F. LXXXV/195 Carey 2007, V Gernet/Bizos 1926, 53 Thalheim 1913) alleged that the dithyrambic poet Kinesias, frequently attacked as a passive homosexual by comic poets, belonged to a club whose members called themselves the

³ On the use of *hetairoi* in war see now Van Wees 2004, 95–7. They could also be involved in attempts to set up tyranny: Hdt. 5. 71. 1 reports that Kylon was aided by a *hetaireia* of age-mates (*hēlikiotai*). Thuc. 1. 126. 10 mentions his brother. See also P. J. Rhodes 1986; Milani 1995.

Kakodaimonistai, worshippers of ill luck; they held their symposia on unlucky days. The speaker of Demosthenes 54 claims that his opponent Konon used to hold 'ithyphallic' mock initiations with his sons, and as a young man in the 380s or 370s had belonged to a club called the Triballoi 'Bongo-Bongo', whose members feasted on offerings to the underworld goddess Hekate and on the pigs' testicles used in purification rites. Such stories lost nothing in the telling, but may well have had a real basis in initiatory ordeals imposed on new members of drinking clubs; oaths may also have been exacted.⁴ In 424, when Kleon in Aristophanes' *Knights* sees the chorus of young cavalymen, he shouts in alarm, '*Synômotai!*' (oath-brothers, line 452), and calls on the audience for help.

As class antagonisms sharpened, during the period of the Peloponnesian War, and rationalist criticism of traditional religious and political practices and beliefs became fashionable among the sophists' pupils, membership of some symposion groups will have begun to take on distinctive ideological colourings. Instead of being an agreeable milieu in which to pass the time until one was old enough to play an active part in political life, the symposion became a setting in which a young man could develop a new, unconventional or revolutionary identity, supported by a like-minded peer group.

We should therefore like to know how radical a change of companions was involved: to what extent hetairoi were recruited through pre-existing ties of kinship and alliance between families, and whether ties forged at this stage of life were carried forward into later years. The evidence is of course scantier than one would wish, but we do have two unusually detailed sources for the constitution of adolescent groups in the late fifth century: Plato's portraits of Athenian society in the introductions to the Socratic dialogues, and Andokides' account of the indictment of upper-class groups in 415 for acts of impiety.

Table 13.1 represents some of the attested ties of kinship, friendship, and love between members of Sokrates' circle. The opening scene of Plato's *Republic*, as we saw in ch. 12, brings Sokrates to the house of the metic Kephalos. The others present are Kephalos' sons, Plato's two older brothers Adeimantos and Glaukon, Nikeratos son of the general Nikias of Kydantidai, Kleitophon son of Aristonymos, who was later to be involved in the oligarchic proposals for constitutional reform in 411 (*A.P.* 29. 3), Charmantides of Paiania (*APF* 15502), and Thrasymachos of Chalkedon. Apart from the older Kephalos, all seem to be age-mates and friends. Kephalos, who had come to Athens from Syracuse, is said to have been encouraged by Perikles to settle in the city (Lysias 12. 4, [Plutarch] *Moralia* 835c).

⁴ N. F. Jones 1999, 223–7. Dem. 54. 16–17, 39; cf. Andok. 1. 67, *HCT* IV 286; Hornblower 2008, 368–9; Ar. *Lys.* 181–239; Todd 2000 on Lys. F 4. The Triballoi were Thracians, the stock barbarians of comedy (cf. Ar. *Birds* 1572ff.; *CAH* 2nd ed. VI 463, Archibald, 1994). Hekate's suppers: K. F. Smith 1913; Kraus 1960; S. I. Johnston 1991; Versnel 2011, 365–6. On *autolekythoi* (Dem. 54. 14) see Henderson 1972. For comparable rituals in 18th c. clubs see Humphreys 2004, 204.

Notes: Simple lines = kinship, double lines = friendship. This table is based partly on Dover 1968, 52.

In constructing the relationships between Perikles and Alkibiades I have followed W. Thompson 1970c; for *APF*'s view see ch. 14 n. 43.

The links between the three men called Adeimantos are very conjectural, since the name is fairly common (note also *POxy* 664).

TABLE 13.1. Platonic Society

Plato's *Phaidros* represents Phaidros of Myrrhinous (*APF* 5951) as a friend of both Sokrates and of Lysias, Kephalos' youngest son, who had left Athens at fifteen after his father's death and returned in 412/11. Lysias tried out his speeches on Phaidros and lent him his manuscripts (*Phaidros* 228a–b); Phaidros, who had been condemned in 415 for parodying the Eleusinian Mysteries, was probably about ten years older than the young orator and considerably poorer, but represented a link with an earlier, more exciting period of Athenian intellectual life which Lysias had missed. Phaidros' relationship with Lysias may have combined the roles of *erastes* and *client*.⁵ Plato's parody of Lysias' style may suggest that he too had known the orator well in the final years of the war, as one might expect from the friendship between their older brothers. After 404 their paths diverged.

Sokrates' friendship with Alkibiades was well known; after Alkibiades had come to be blamed for Athens' defeat in war, Sokratic writers liked to present the relationship as one in which the initiative came from Alkibiades' side, as Plato does in the *Symposion*, but the fact of frequent association remains. The affair of the profanation of the Mysteries, which will be discussed further below at section 'The scandals of 415', linked Phaidros with Alkibiades and his uncle (FB) Axiochos, with Nikeratos' young uncle Eukrates of Kydantidai,⁶ and with Adeimantos son of Leukolophides of Skambonidai, a friend and fellow-demesman of Alkibiades. This Adeimantos appears in *Protagoras* 315e with a homonym, Adeimantos son of Kepis; there may conceivably have been some connection between their families, and between either or both of them and the family of Plato, whose oldest brother was called Adeimantos, but the name occurs in four other demes in the classical period (e.g. *APF* 5949). Phaidros was also closely associated with the young doctor Eryximachos (*Protagoras* 315c, *Symposion* 176d, *Phaidros* 268a–f); in *Phaidros* 227a Eryximachos' father Akoumenos, also a doctor, who was accused of parodying the Mysteries in 415, is said to be a *betairos* of Phaidros and Sokrates.⁷

⁵ The dramatic date of the *Phaidros* is problematic. Dover's suggestion of 418–416 (1968a, 32–43; followed by Nails 2002) requires us to disregard not only the archon date 412/11 for Lysias' return in D. H. *Lys.* 1, but also the statement that he returned after the Athenian defeat in Sicily, which might have come into an *Atthis* from a Lysian speech. Conceivably Phaidros had risked returning to Athens in 411 (cf. Andok. 2. 10–13) or 410. At some point, perhaps only after 404, Phaidros' kin provided him with a wife who brought a dowry of 4000 dr. (*Lys.* 19. 15); he may also have recovered some of the property recorded on *IG* i³ 426. 102–5 as leased. His wife's family evidently moved in philosophical circles; her sister married Philemos of Paiania (*APF* 14670), whose father Philippides appears as a follower of Protagoras in *Protag.* 315a, and Lysias 19 was written for her brother. Nails' entry on Lysias is inaccurate.

⁶ Eukrates' brother Diognetos may also have been accused; it is unclear whether his exile (*Lys.* 18. 9) was due to this or to association with the oligarchy of 411 (Table 13.2).

⁷ On Plato's use of the term *betairos* see Sartori 1958; on doctors' families, ch. 6.

Table 13.1 also shows that Athenians joined social and philosophical groupings as individuals, and that their decisions to do so might introduce cleavages within families rather than strengthening ascriptive ties. Nikias was a political opponent of Alkibiades, and in Plato's *Laches* is presented as being only distantly acquainted with Sokrates; he did not move in the same circles as his son and his younger brother.⁸

Nikias' detachment was no doubt largely a question of age and political commitments. A paterfamilias, especially one engaged in a serious political career, was not expected to pass his time in the company of adolescents. Instead, he would attend the dinners for 'generals, hipparchs and candidates for office' mentioned in Xenophon's *Symposion* (1. 4). In the *Republic* the elderly Kephalos retires rapidly from the scene after he has seen to the entertainment of his sons' guests. Nevertheless, there were some older men in Sokrates' circle. Kriton appears in the *Phaedo* and *Apology* with his son Kritoboulos; he is an age-mate and fellow-demesman of Sokrates, and seems to have supported him financially;⁹ a rich quietist (L. B. Carter 1986) whose hangers-on included not only Sokrates but also the sycophant and demagogue Archedemos 'the blear-eyed' (Xenophon *Memorabilia* 2. 9). The rose-coloured portrait of Kriton painted by Xenophon and Plato should not delude us; this was an unconventional lifestyle, which in the opinion of the majority would have classed Kriton, like Sokrates, among the middle-aged and elderly playboys of Athenian society.¹⁰

In Plato's *Euthydemos* Kriton consults Sokrates about his son's education (306d–307c); in Xenophon's *Symposion* Kritoboulos appears as a newly married young man, probably in his mid to late twenties, who is still in love with Alkibiades' cousin (FBS) Kleinias son of Axiochos, whom he has adored since their schooldays.¹¹

Xenophon's *Symposion* provides another flattering portrait of a father whose lifestyle provoked hostile comments. Lykon of Thorikos has been invited with his son Autolykos, victor in the boys' or youths' *pankration* at the Panathenaia of 422, to a celebratory dinner given by the rich young Kallias son of Hipponikos of Alopeke, who has recently inherited his father's estate, at the age of about

⁸ Table 13.2. Speeches hostile to Alkibiades were attributed to Lysias, but he did not always share his clients' views (Dover 1968a, 53–6), and in any case like other associates of Alkibiades, Kritias, and Sokrates he was eager to dissociate himself after 404. Dover (78–80) suggests that Lys. 6, an attack on Andokides, if it was delivered in court, may have been spoken by Sokrates' accuser Meletos (cf. Todd 2007).

⁹ APF 8823, D. L. 2. 20, Plat. *Apol.* 33d; D. Phal. *FGH* 228 F 43 says that Sokrates drew the interest from 7000 dr. supplied by Kriton.

¹⁰ For Sokrates as an elderly playboy see Plat. *Gorg.* 486b–c, 508c–d. On *parasitoi*, literally 'dining-companions', see Fisher 2000; Xen. *Symp* 1. 11–16 gives the best picture of the role.

¹¹ Xen. *Symp.* 4. 23. In the *Euthydemos* Kleinias has another lover, Ktesippos of Paiania, who also appears in the *Lysis*.

twenty-three,¹² and is in love with Autolykos. Xenophon paints a touching picture of proud father and bashful son, both of whom retire from the party before the dancing girls start to perform; but references in comedy tell a different story. Autolykos was nicknamed Eutresios, Easy-Poke, and Lykon was mocked for his poverty, his effeminacy, and the loose behaviour of his wife; he was also accused of being of foreign birth. Kallias' party was clearly not the only symposion he attended. He is named in Aristophanes *Wasps* 1301–2, with Lysistratos, Antiphon, and Phrynichos, as one of the drinking companions Philokleon takes up with when he starts to lead the life of a man about town; they seem to be a 'smart set' of rather marginal characters—Lysistratos a parasite, Phrynichos (if he is the future oligarch) a politician who had risen from humble beginnings through success in the law courts—men perhaps mostly in their forties, more suitable companions for the elderly Philokleon than his son's friends.¹³

Lykon reappears as an accuser of Sokrates in 399. His son had been killed by the Thirty, which supplied an unexceptionable motive for the attack; but he nevertheless falls into the category of prosecutors in the years after Athens' defeat who sought to distract attention from their own questionable pasts by denouncing others. The attack on Andokides in 400 by Kallias and Meletos (MacDowell 1962, 208–10, c–d) shows the same pattern; Lysias, who seized every chance to attack oligarchs, had personal reasons to take revenge for their treatment of his family, but also had to cover up his own association with the Sokratic circle. Lykon's fellow accusers, Meletos and Anytos, may have had similar motives: Anytos is said to have been a lover of Alkibiades, and Meletos' father if he was Meletos I, the tragic poet, lover of Kallias, had moved in the same circles.¹⁴

¹² *APF* 7826 IX sets the transfer of Perikles' wife to Hipponikos II, and the birth of Kallias III, c.450, but it could have been five years later. Perikles II, Perikles' son by Aspasia, was born by 446, since he was admitted to the phratry during his father's lifetime (*Plut. Per.* 37. 5, cf. ch. 4 n. 52). Kallias is presented by Eupolis in his *Kolakes* (421) as exceptionally young and silly; his son Hipponikos III may not have been old enough to claim an epikleros on his own behalf in 400 (he was married and divorced in 395, but married very young: ch. 4 n. 40). In any case, since Kallias came into his inheritance young, he may also have married young. His sister Hipparete was not married until the late 420s, and therefore should have been born c.440 or later, whereas Kallias himself was still alive in 367/6; I put his birth c.445.

¹³ Lykon: Eupolis F 64, 61 *PCG* 5 (cf. 65); *Ar. Lys.* 270 with schol.; cf. Fisher 1998, 2000. Autolykos seems to be portrayed as 15–16 in the *Kolakes*, and is therefore more likely to have won in the boys' *pankration* (11–15) than the youths', if there was already a boys' competition at this date. Lysistratos might be the man named by Andokides as involved in parodying the Mysteries in 415 (n. 44 below; MacDowell 1962, 100; 1971, 302–3).

¹⁴ On Meletos see n. 30 below. Chroust 1957 thinks the affair between Alkibiades and Anytos (*APF* 1324; see also P. J. Rhodes 1981*a*, 431–2) was invented by Sokrates' friends to discredit his accusers, but there may have been some association to provide a basis for the story. Xen. *Apol.* 30–31 claims that Anytos was annoyed by Sokrates' criticism of his son's upbringing.

An idealized picture of the traditionally approved relationship between fathers and sons, very different from the antics of characters like Lykon or Philokleon, is sketched at the beginning of Plato's *Laches*. Lysimachos, son of the great Aristides, and Melesias, son of the great Thoukydides, both of Alopeke, regularly eat together, with their sons, and tell them about the famous deeds of their ancestors. They certainly do not hang out with their sons' contemporaries in gymnasia or at symposia, and they are only distantly acquainted with Sokrates, about whom their sons are enthusiastic (180e). Lysimachos warms to Sokrates on learning that he is the son of a fellow-demesman and friend, Sophroniskos; on this basis he is invited to visit Lysimachos' house in the future (201b). In the same dialogue Nikias, whose son Nikeratos appeared, as we have seen, in the *Republic*, and in Xenophon's *Symposion*, praises Sokrates for having introduced a good music teacher to him, and would like him to teach Nikeratos (200c–d),¹⁵ but clearly does not know him well. These three fathers are ill at ease in the new world in which oratory and fighting are taught for a fee by professionals.

Brothers are frequently portrayed as close associates in the world of the gymnasium and symposion, their friendship unclouded by any hint of possible future quarrels over inheritance. Plato's own older brothers Adeimantos and Glaukon appear together in the Agora in *Parmenides* 126a, and meet in the *Republic*; Glaukon has been to see the festival of Bendis in Peiraios with Sokrates, while Adeimantos has accompanied Nikeratos and Kephalos' son Polemarchos. The latter's brothers Euthydemos and Lysias are found at home with their father (328b 4–8). In the introduction to the *Parmenides* (126a–127a) Adeimantos and Glaukon take Kephalos of Klazomenai to the house of their matrilinear half-brother Antiphon son of Pyrilampes. Antiphon, they say, used to share their philosophical interests but has now turned to horse-racing; presumably he was expected to enjoy this teasing from Plato, the closest to him in age of his half-brothers.¹⁶

In the *Protagoras* Perikles' sons Xanthippos and Paralos both appear in the group gathered round Protagoras in the house of their matrilinear half-brother Kallias son of Hipponikos. Plato's seventh letter (333e–334c) refers to two

¹⁵ Nikeratos was killed by the Thirty (APF 10808), and Plato is presenting Sokrates in a good light. We do not have to believe in the conversation with Nikias, but the portrait of these courteous, old-fashioned Athenian gentlemen is persuasive. Theages and his father Demodokos appear together in the *Theages*, but it may well belong to the Roman period. The case of Eryximachos and his father Akoumenos is somewhat different since both, as doctors, belonged to a profession that brought them into the company of philosophers.

¹⁶ In the introduction to *Parm.* Antiphon and his stepbrothers still seem to be leading the life of young men (Antiphon perhaps living with their widowed mother), so Nails' suggested date (2002) for the dialogue's 'frame', c.382, may be too late. Antiphon was born after 425; his father Pyrilampes was dead by 412 at the latest, but Antiphon had an older patrilinear half-brother, Demos, who was still alive in 390 (APF 8792 VIII). Plato and his brothers will have grown up in Pyrilampes' house.

Athenian brothers, Kallippos and Philostratos, sons of Philon of Aixone (*APF* 8065; not named here by Plato), who had become friends with Dion of Syracuse, 'not for the sake of philosophy, but in the ordinary sort of *hetairia* of most friends, arising from hospitality and initiation and taking part in mystery rites' (*xenizein*, *muein*, *epopteuein*; non-Athenians needed an Athenian to sponsor them at Eleusis). They accompanied Dion back to Syracuse, but subsequently joined his enemies there. Kallippos, at least, maintained sufficient contact with Attika to be commemorated there with other members of his family (Humphreys 1983a/1993, 118, Table 3; Table 29.17). Other pairs of brothers who appear in the Sokratic dialogues are Chairephon of Sphettos, one of Kallias' hangers-on, and his brother Chairekrates; the two Chian brothers Euthydemos and Dionysodoros, who set up business together in Athens as teachers of the arts of argument and war (*Euthydemos* 271c ff.); the Thasian brothers Aristophon and Polygnotos, who both paint (*Gorgias* 448b); and Nikostratos and Theodoros sons of Theozotides of Athmonon, who appear together at Sokrates' trial (*Apology* 33c, *APF* 6915).¹⁷ Kallias' relations with his illegitimate patrilateral half-brother Hermogenes seem to have been, understandably, less close, but Hermogenes is invited with Sokrates and others to the Xenophontic symposium, at which he gives Kallias a rather tactless lecture on Platonic love (*Symposium* 8. 12 ff.). Sokrates' suggestion that, since he has no funds of his own, Hermogenes will have to ask Kallias to pass on to him what he has learned in his expensive lessons from Protagoras (*Kratylos* 391c), is not well received. Hermogenes did not depend solely on Kallias; he was befriended by a Diodoros (Xenophon *Memorabilia* 2. 10), and perhaps by Kratylos, whom he is accompanying to his country estate in *Kratylos* 440e. According to Xenophon (*Symposium* 4. 23 ff.) Kriton had employed Hermogenes as a teacher for Kritoboulos, in the hope of distracting the young man from his love for Kleinias son of Axiochos. Hermogenes wanted to become rich, but was always unsuccessful (*Kratylos* 384c). He led a precarious life, as one of the parasites of the Sokratic circle.¹⁸

Brothers, however, do not always associate with each other. Hippokrates son of Apollodoros (*PA* 7630) comes to Sokrates for an introduction to Protagoras, without consulting his father or his brother, although it was his brother who told

¹⁷ Chairephon: Xen. *Mem.* 1. 2. 48, 2. 3; Eupolis F 180 *PCG* 5 (165 K). Dover 1968b xcv–vii argues that Aristophanes had once intended to make him a co-director of Sokrates' *phrontistérion* in the *Clouds*. Lysis and Menexenos were taken to the *palaistra* with younger brothers, *Lys.* 223a. On the historicity of Euthydemos and his brother see Canto 1987, 268 n. 3.

¹⁸ Hermogenes is *ouk enkratēs tōn patrōōn*, apparently a euphemistic way of saying that he got little or nothing from his father's estate; his mother presumably was not of citizen birth (on the suggestion that he was legitimized during the later years of the Peloponnesian War see *APF* 7826 XVI). The *Kratylos* has little indication of dramatic date. A half-brother of Sokrates is mentioned in *Euthyd.* 297c—in his argument with Euthydemos and Dionysodoros Sokrates could call on his own brother for help—but he appears nowhere else.

him that Protagoras was in town (*Protagoras* 310c, 313a). Alkibiades is never represented in the company of his younger brother Kleinias; Plato reports that Kleinias' guardians tried to keep them apart because they considered Alkibiades a bad influence, and also says that they could not control Kleinias (*Protagoras* 320a).

Cousins are also found in each other's company. Kritias son of Kallaischros, the future oligarch, appears with his cousin (FBS) and ward Charmides son of Glaukon, who would later serve as one of the ten controllers of Peiraios under Kritias' regime, in both *Protagoras* and *Charmides*. They shared an interest in poetry; Kritias wrote tragedies, and an elegy in honour of Alkibiades, and Charmides was 'very poetic'.¹⁹ In the *Protagoras* they arrive independently at Kallias' house; in the *Charmides* Kritias summons his ward, the beauty of the day, and introduces him to Sokrates. In a similar scene at the beginning of the *Lysis*, set in a *palaistra*, Sokrates' friends praise the beauty of the young Lysis and arrange an introduction; this is easy because Ktesippos, one of Sokrates' companions, is an older cousin of Lysis' friend Menexenos son of Demophon.²⁰ Strict rules of decorum seem to govern relations in the gymnasium between boys, escorted by their slave tutors (*Lysis* 223a–b) and young men, *neaniai* (but the law cited in Aischines 1. 12 is hardly genuine: see Fisher 2001). Boys are expected to be too shy to join a group of *neaniai* unless a kinsman is present (*Lysis* 206c–207b); ties of kinship create cross-linkages between age-sets and provide the introductions which may allow romantic love at a distance to develop into a friendship or an affair.

But cousinhood, like the tie between brothers, does not automatically imply close association. Both Alkibiades and his cousin (FBS) Kleinias son of Axiochos appear in Plato's dialogues, but they are not shown together, although as we shall see there is evidence that by 415 Alkibiades and Axiochos were considered to be on friendly terms. The relationship of the oligarch Kritias to Plato and his brothers—he was their MFBS—is not mentioned in the dialogues, although it is noted in the seventh Letter as an excuse for Plato's involvement with the oligarchic government of the Thirty. Plato's brother Glaukon, to judge from the reference to his political ambitions in Xenophon's *Memorabilia* (3. 6, cf. Plato *Republic* 548d–e), is likely also to have been involved with the Thirty.²¹ Kritias'

¹⁹ *Charm.* 154e–155a; Plut. *Alk.* 33. 1; *TGE*, 2nd ed. 770–5. Cf. n. 35 below.

²⁰ A *palaistra* was a small, often privately run gymnasium in or close to the city, with less extensive grounds than the public gymnasium (Delorme 1960, ch. 9; cf. Trombetti 2013; Mango 2003, 18–20). *Lysis*, *Charm.*, *Theait.*, *Laches*, and *Euthyd.* are set in *palaistrai* or gymnasia; *Gorg.*, *Prot.*, *Symp.*, *Parm.*, *Rep.*, *Krit.*, and *Tim.* in private houses; *Krat.* and *Euthyphron* in or near the Agora, *Phaidr.* on a suburban walk.

²¹ The silence in the dialogues about this relationship is hardly surprising; but in any case Kritias was a good deal older than Plato and his brothers. The suggestion that Kritias was the lover who wrote a poem about the exploits of Glaukon and Adeimantos at the battle of Megara (*Rep.* 368a, see *APF* 8792 X B; Schleiermacher 1828, 537) is hardly compelling; there must have been many poets in this circle. In the

cousin Charmides was the uncle (MB) of Plato and his brothers; in Xenophon's *Memorabilia* Sokrates takes an interest in Glaukon because of his friendship with Charmides and Plato (3. 6. 1); after persuading Glaukon not to speak in the Assembly until he is older and wiser, he suggests that the young man should take Charmides' oikos in hand, to which Glaukon replies that Charmides would not listen to him (3. 6. 14–15, *APF* 8792 IX).

Affinal relationships are not mentioned in the dialogues; most of the dramatis personae are unmarried. Alkibiades, who comes with Kritias in the *Protagoras* to the house of Kallias III of Alopeke, was to marry Kallias' sister Hipparete, but there is no reference to her in the dialogue.²²

Kinship continued to be one basis of recruitment to philosophical schools; Plato's successor was his sister's son Speusippos (Watts 2007). But here the interest of Plato's dialogues is that they portray a wider group of young men about town, many of whom were only superficially or temporarily interested in philosophy. The sketches of Athenian life that set the stage for Plato's philosophical text provide us with glimpses of the interaction between kinship and other ties in the process by which a young Athenian built up his network of associates.

Boys made their own friends among their age-mates, and such friendships could last into later life; Lysis and Menexenos, *hetairoi* as boys (*Lysis* 206d), were still together at the time of Sokrates' death in 399, when they were perhaps in their late twenties.²³ Chairephon of Sphettos had been Sokrates' *hetairos* from his youth (*ek neou*, *Apology* 21a). In the *Theaitetos*, *Sophist*, and *Politikos* Plato introduces a second Sokrates, younger and apparently unrelated, who is an age-mate and *syngymnastês* of Theaitetos (*Sophist* 218b). Ties with fellow-demesmen may in some cases have been formed in boyhood, sometimes on the basis of family friendships. Lysimachos son of Aristeides and Melesias son of Thoukydides, both of Alopeke, were apparently drawn together by their common situation as sons of distinguished men; Sokrates' friendship with his fellow-demesman Kriton may also have begun in their youth.

Eryxias, which though spurious seems to be well informed, Eryxias is said to be a kinsman (*syngenês*) of Kritias; the relationship cannot be reconstructed.

²² *Prot.* has no consistent dramatic date (Athenaios 218b–e); some indications point to the 430s, others to the 420s. Nails 2002 seriously underestimates the difficulty of explaining how Kallias could control a city house during his father's lifetime. In Eupolis' *Kolakes* (PCG 5 F 171) there may be a reference to Alkibiades being in the women's quarters of Kallias' house; this might be taken as a very tenuous indication that in spring 421, when the play was produced, he was courting but not yet married. *APF* 600 VII A puts the marriage in the late 420s. By 411 Kallias and Alkibiades were perhaps enemies (Thuc. 8. 53. 2; cf. n. 47).

²³ *Phaedo* 59b. The *Lysis* has no clear dramatic date, but what we know of Lysis' family (*APF* 9574, Table 29.18) suggests a birthdate for him in the 420s. His father may have been a lover of Alkibiades (Plut. *Alk.* 3). Ar. *E.N.* 1165b 23–36 discusses the proper treatment of boyhood friends whose tastes one no longer shares.

Although deme members were grouped in forty-two named age-sets, each representing one year's intake of eighteen-year-olds, friendships struck up in the deme may have begun between boys attending deme festivals as children, and need not have been confined to age-mates. Acquaintance in the deme, like kinship, could provide a basis for contact between age-groups in the gymnasium. As we have seen, such structural ties could be used to smooth the passage for homosexual courtship, the main mechanism by which ties were formed between members of separate age-groupings in the adolescents' social world.

It is by now well established that in ancient Greece, as in many if not most other societies,²⁴ a strong distinction was made between active and passive roles in male homosexual intercourse. A Greek male was expected to take a connoisseur's interest in male as well as female good looks, and to take advantage of opportunities to penetrate a good-looking sexual partner of either gender. Male slaves as well as female were exposed to sexual demands from their masters; the availability of slave partners may have contributed to the acceptance of bisexuality in Greek culture. Non-citizen prostitutes of both sexes were easy to find in Athens (Halperin 1990). However, the strong cultural associations between penetration, domination, and masculinity made the passive role in homosexual intercourse problematic for a free male. The Athenians, in the archaic period, developed elaborate norms to mitigate this contradiction; an acceptable homosexual relationship was one in which an older, bearded, 'active' lover, *erastês*, courted a reluctant, younger, beardless 'beloved', *erômenos*. The *erastes*, normally in his twenties, adopted the submissive pose of the romantic lover entirely at the mercy of the caprices of the *eromenos*, reversing in their publicly visible social interactions the relationship of dominance and subordination which—if his suit was successful—would characterize their sexual relations in private.

And surely many courtships must have developed into sexual partnership. While a few acknowledged beauties could play off a number of suitors against each other, many shy boys would be flattered to be singled out for attention by a sophisticated older companion and thus gain entry to the inner circle of his associates. *Eromenoi* who needed to rationalize their acceptance of the role could remind each other of all they could learn from their more experienced *erastai*; some lovers promised to help the *eromenos* when he started on his political career (Plato *Symposium* 184a–b). Despite the apparently submissive role played by *erastai* as wooers, power remained on their side; collectively, they defined the rules of the game, and though they might censure a boy who took

²⁴ Halperin 1990; Oberhelman 1997.

lovers too freely, the younger partner in a pairing that had the approval of the group would be under strong pressure to accept his role.²⁵

Since an Athenian would not in later life publicize the fact that he had taken the passive role in a homosexual relationship, it is hard to tell how common it was for *erastes* and *eromenos* to remain friends in later life. The tragic poets Pausanias of Kerameis (PA 11717) and his *eromenos* Agathon son of Teisamenos (*TGFI* no. 39) appear together listening to the sophist Prodikos in *Protagoras* 315d–e, where Agathon is still a young boy, and in Plato's *Symposium*, which is set on the occasion of Agathon's first victory in 416, and left Athens together for the court of Archelaos of Macedon in 407/6; by 411 Agathon was being attacked in comedy for continuing to play the passive sexual role.²⁶ Ex-lovers who remained friends would have to be discreet in public. But in the semi-private milieu of upper-class dinners and meetings of right-wing *hetairoi* their ties with each other may have continued to play a significant role.

THE SCANDALS OF 415

Plato's dialogues show us a society made up for the most part of young bachelors, but including a few older men who for one reason or another have rejected the focus on political affairs normal for the upper-class Athenian. The example of Sokrates—and of other philosophers who came to Athens as foreigners and were thus debarred from taking any formal part in political life (as was Plato, after 403, due to his link with Kritias)—contributed to the development of the idea of the 'theoretical life' of the philosopher as a vocation in which the social and intellectual activities of adolescence would become a lifelong career. An alternative means of prolonging adolescent culture into adulthood was offered by the revolutionary oligarchic movements of the late fifth century. Older *hetairoi* transformed friendship into political alliance and met to plan their campaigns for

²⁵ See especially Halperin 1990 (ch. 3 deals well with the question of the relevance of Melanesian initiation rites; cf. Calame 2002), D. Cohen 1991. Norms regulating intercourse between older and younger males, predominantly adolescents, varied from one part of Greece to another and were subcultural patterns developed by elites on the basis of a general acceptance of bisexuality. Cf. also Dover 1978, 1988; von Reden 1995a, ch. 9; Griffith 2001; Humphreys 1983a/1993, 56–7; Bremmer 1989; Winkler 1990a, ch. 2; A. Chankowski 2002; P. Wilson 2007c, n. 65. New homosexual rock-cut inscriptions c.500, *SEG* 54. 82 (insulting rather than erotic: Chaniotis 2012, 316; cf. Täuber 2003). Winkler's discussion, in other respects excellent, seems to me to pay too little attention to the rhetoric of self-abasement affected by *erastai*. The beard would develop only in the early 20s: Eyben 1972; Moller 1987. Terms for age-classes: J. Davidson 2006.

²⁶ Ar. *Thesm.* 29–265, cf. *PCG* III 2 F 178, 592. 35. According to Aelian *V. H.* 13. 4 Agathon was about forty in 407. It is not always clear whether passive homosexuals attacked in comedy are promiscuous boys or older men.

court cases, elections and, eventually, *coups d'état*; those still in their adolescence were recruited to terrorize the opposition and to provide a show of force when needed (Thucydides 8. 65–9).

Since the coups of 411 and 404 were successful only for brief periods, and most of those involved tried hard to conceal the fact once democracy had been restored, we have little prosopographical information about the participants. Andokides' speech *On the Mysteries*, however, provides useful evidence on the membership of several overlapping upper-class adolescent social networks in 415, in an affair which nicely illustrates the permeability of the boundary between adolescent pranks and political conspiracy (cf. Furley 1996; McGlew 2002, 112–38; Todd 2004).

The story is well known. Shortly before the departure of the massive expedition to Sicily in 415, the Athenians woke up one morning to discover that the 'Herms' which were a characteristic feature of the city's public spaces—blocks of stone with an erect penis on the front and a head of Hermes on top—had been mutilated. The Assembly met, and an informer came forward who had nothing to say about the Herms, but instead reported another act of impiety: Alkibiades and his friends had been parodying the Eleusinian Mysteries at their symposia. Other denunciations followed, varying in their plausibility. Most of those named fled into exile and were convicted and deprived of their property *in absentia*; a few were caught, tried, and executed.

Andokides tells the story because in 400 he was accused of impiety by Kallias III son of Hipponikos of Alopeke, Torchbearer of the Eleusinian Mysteries, for taking part in the ritual when, having been condemned for parodying it, he was debarred from doing so. His main defence is that he had never been accused of parodying the Mysteries; moreover, he had saved himself and his kin when they were accused of taking part in the mutilation of the Herms, by informing against the real culprits, most of whom were already in exile or were suspect because of their known associations with those accused (on the legal argument that he was protected by the 'amnesty' of 403 see Carawan 2004).

It is the propensity of informers to rely on guilt by association that makes Andokides' lists interesting to the social historian, whether or not the accusations were valid. The lists group men who were known or could plausibly be assumed to have been associates.²⁷ We shall find similar groupings on curse tablets (ch. 14); informers' minds will have worked like those of cursers, circling outward from a few core names by a variety of patterns of association (Humphreys

²⁷ Aurenche 1974 is too ready to take the informers' lists as documents of historical activity, and builds up implausible political groups on the basis of very slender links; cf. the review by D. M. Lewis (1977a). More critical discussions in *HCT* IV (264–87) and Ostwald 1986; survey of bibliography, Hornblower 2008, 367–72.

2010*b*), of which kinship was one. It is noteworthy, however, that these informers do not name women, although slave or metic *hetairai* may well have been present at parties where the Mysteries were parodied.²⁸

Hermes, with their archaic grins and explicit sexuality, must have appeared antique and absurd to the fashionable young men of late-fifth century Athens and may have been targets for joking on many occasions, as *kómoi* of drunken revellers wove their way home from symposia. The playful treatment of Hermes was rooted in affinity; the area of the Herms in the Agora was associated with the cavalry, and Hermes was a god of marginal, transitional spaces, including gymnasia. To give a Herm a shave (faces as well as penises were attacked) was perhaps to emphasize its association with the world of the adolescents—indeed, while Herms of the late sixth and early fifth centuries were bearded, there may have been beardless examples by the late fifth century. The attack on the Herms in 415 may have been something more than a juvenile prank that got out of hand, but if there was a plot involved it was one that imitated recognizable patterns of youthful devilry.²⁹

Since the mutilation was promptly followed by a denunciation of Alkibiades for parodying the Mysteries, historians have been tempted to suppose that the aim had been to create an atmosphere in which this accusation could be made with maximum effect, and to infer that those responsible were young men of the Athenian upper class, fringe members of a right-wing movement growing in strength and cohesion, which viewed Alkibiades and the ambitious expedition he was about to lead to Sicily as a threat to Athenian security and economic stability.

Six informers are named by Andokides, the last being himself. One gave information about both the Mysteries and the Herms, three about the Mysteries only, and two about the Herms only. Several men were accused of being involved in both affairs; the mutilation of the Herms was drawn into the ambit of the more serious offence. Andokides stresses that many of the men he names as having been denounced were present at his trial in 400. Few of them were willing to stand up and testify to the accuracy of his account, but he would quickly have

²⁸ In a not dissimilar incident of religious scandal and panic in Rome in 186 BCE, women figured prominently among those accused (North 1979, 1980; Beard, North, and Price 1998, 91–6).

²⁹ Thuc. 6. 28. 1 notes reports of other statues mutilated for a joke by the drunken (*meta paidias kai oinou*). A pelike by the Perseus painter (Berlin 2172, BArch 206706) shows a caricatured Herm with a bird perched on its elongated penis; the Herm portrayed with the hero Kephalos, in a hunting context, on the skyphos Tübingen 1347, c.425 (BArch 214330), has a jaunty air. Cavalry: *Agora XI* 108–9; Threpsiades and Vanderpool 1963; Bugh 1988, 219–20. Gymnasia: Vernant 1963, Plat. *Lys.* 206d. Beardless Herms, *Agora XI* no. 206; shaving, R. G. Osborne 1985*c*, citing Artemidoros 2. 37. Osborne's article, though valuable, in my view over-stresses the political connotations of Herms in 415, and perhaps underrates the hostility of intellectuals towards cult images and rituals which they considered primitive or irrational (Humphreys 2004; on Herms see also Furley 1996; Humphreys 1999; Graf 2000; Versnel 2011, 335–52).

been in trouble if he had named men who could prove that they had never been accused. He may well have left names out, but it would have been rash to make additions. The names of those who had been condemned were publicly recorded on stone in the Eleusinion, where Andokides was tried (D. M. Lewis 1966). He may have made some mistakes in remembering which names had been given by each informer, but any such mistakes would themselves conform to the patterns of association by which the informers' lists had been produced. The lists give an account that Athenian audiences would find plausible—either from personal observation of the men concerned or on general principles—of the social networks of those known or singled out as the ringleaders.

It is hardly surprising, given the limitations of our knowledge of Athenian society, that in many cases the links between those named are irrecoverable. In the first informer's list of those who had parodied the Mysteries with Alkibiades, the only possibly significant connections are that the owner of the slave informant may be the Archebiades mentioned as having been a lover of Alkibiades' son soon after the father's death, and that the Meletos named may be a kinsman of Alkibiades.³⁰ The slave informant, Andromachos, had been present with his brother and two other slaves, one a flute player; perhaps Andromachos and his brother also had talents as entertainers and were *chôris oikountes*, slaves who lived independently and paid part of their earnings to their owner.³¹

A second informant, the metic Teukros, named Sokrates' friend Phaidros of Myrrhinous as having parodied the Mysteries, together with a Diognetos who might be the brother of the general Nikias and of Eukrates, whom we shall meet presently.³² He also claimed to know who had mutilated the Herms, naming Phaidros' friend Eryximachos son of Akoumenos, the doctor; Meletos, already

³⁰ Andok. 1. 12–14, Lys. 14. 27 with Todd 2000 (cf. perhaps *APF* 2308); the emendation in Andok. 1. 12 is supported by 1. 13. The others named were Alkibiades, Nikides son of Phoinikides of Melite, Meletos, Archippos, Diogenes, Polystratos son of Diodoros of Ankyle, Aristomenes, Oionias son of Oinochares of Atene, and Panaitios son of Philochoros of Aphidnai, perhaps the 'monkey' of Ar. F 409 *PCG* 3. 2 (394 K), allegedly son of a cook (cf. schol. *Birds* 439–40). If the Meletos named here is the son of Megakles (IV?) of Alopeke, who purchased property confiscated from the Thirty in 402/1 (*Agora* XIX P 2, *APF* 9688 XI; add *SEG* 48. 91) he was Alkibiades' uncle (MB), but the name is common (MacDowell 1962, 208–10. Sokrates' accuser was young, was son of a Meletos, and spoke for the poets, *Apol.* 23e; he may well be the son of the tragic poet M. of Pithos; cf. n. 8 above). Andokides gives only first names, presumably to minimize embarrassment for those who were in Athens in 400, but patronymics and demotics can in some cases be supplied from *IG* i³ 421–30, the records of the sale of property confiscated from those condemned.

³¹ It would be riskier for a domestic slave to inform against his master, and I do not see why Archebiades should take his domestic slaves to dinner in another man's house. The term used for Andromachos is *therapôn*, a euphemistic word which diminished the social distance between owner and slave (Gschnitzer 1963, 1976; it is used for slaves listed as war casualties. Cf. Van Wees 1992, 333–4 n. 61).

³² *APF* 10808. Teukros named nine other men, including the metic Kephisodoros who appears in *IG* i³ 421. 33.

denounced by Andromachos for parodying the Mysteries and presumably already in exile; Euphiletos son of Timotheos of Kydathenaion, a friend and fellow-demesman of Andokides; Pherekles of Themakos; Telenikos, perhaps son of the Teleas (of Pergase) attacked in comedy as a flatterer and glutton;³³ and thirteen others who cannot be identified. Euphiletos and Pherekles were eventually condemned for both offences, Phaidros for parody (*IG* i³ 426. 78–9, 83–4, 101–2).

A further charge of parodying the Mysteries was laid against Alkibiades by a woman, Agariste wife of Alkmeonides; the names suggest that both she and her husband belonged to the family of Alkibiades' mother, the Alkmeonidai.³⁴ She claimed that Alkibiades had 'celebrated the Mysteries' with his uncle (FB) Axiochos and with his friend and fellow-demesman Adeimantos of Skambonidai, in the house of Charmides—probably the son of Glaukon, cousin of Kritias and associate of Sokrates, who appears in the house of Kallias III in the *Protagoras*.³⁵ Adeimantos and Axiochos were both condemned (*IG* i³ 422, 424, 426–7, 430); they may have joined Alkibiades in Ionia in winter 412/1, and probably returned to Athens with him in 407. Adeimantos served as general with Alkibiades in 407/6, and was elected again for the two following years, after Alkibiades had once more left Athenian service. Axiochos is said in [Plato] *Axiochos* 368d–369a to have spoken on behalf of the generals attacked in 406 for failing to retrieve casualties after the battle of Arginoussai; if this report is reliable, he would have

³³ Teleas: *LPGN* Teleas 2; see Phrynichos F 21 *PCG* (20 K), Ar. *Peace* 1008, cf. *Birds* 168, 1025; Plato F 176 *PCG* 3. 2 (161 K); *AO* 150. Probably son of the mantis and *kalos* Telenikos, since that name is only attested in Pergase (see ch. 23 n. 33). Dover (*HCT* IV) thinks that Teukros' Eryximachos should be a younger kinsman of the doctor, the latter being too old by 415 to mutilate Herms; but as his father's assistant the doctor may have gained a reputation early, and aggressive scepticism on religious matters was part of a doctor's persona.

³⁴ If the husband was Alkmeonides III of Aphidnai (*APF* 9688 XIII), his connection with the Alkmeonidai was remote. Agariste had previously been married to a husband called Damon, probably the musician who was friendly with both Perikles and Sokrates (*APF*, *ibid.*; R. W. Wallace 1992; Raaflaub 2003). The pattern of informing was different for the two offences: information about parody of the Mysteries, which took place in a private context, was given by slaves, a metic, and a woman, whereas both Diokleides and Andokides, who gave information about the mutilation of the Herms, were citizens (Andok. 1. 37, 45).

³⁵ *Prot.* 314e–315a, *APF* 8792 IX A. There were two young men called Charmides in Athens at this time, both orphans who would have inherited a family house at 18 and no doubt used it for symposia, the second being Andokides' cousin (FZS, *APF* 828 VI), the son of Aristoteles. Charmides son of Glaukon had closer connections with Alkibiades, and if Andokides' cousin had been named by Agariste he should not have been still in Athens to be arrested as a result of Diokleides' accusations (Andok. 1. 16, 47–8). The son of Glaukon is represented as being already in financial straits in 421, in Xen. *Symp.* 4. 13. Rather than accusing Xenophon of 'double confusion' (*APF* 8792 IX), we could assume that Charmides' loss of overseas property may be due to Brasidas' activities in the north, and his loss of revenue from property in Attika to Spartan invasions, or extravagance and mortgage. He has sold the contents of his house, but apparently still has the house itself. His finances may have recovered somewhat by 415. Cf. R. W. Wallace 1992.

been supporting his affine Euryptolemos son of Peisianax, a friend and cousin of Alkibiades.³⁶ At some later date, perhaps only after the final defeat of the Athenian fleet at Aigospotamoi in 405, he joined his nephew in the Hellespont area; gossip reported that they shared a wife and slept in turns with the daughter whom one of them had fathered (Lysias F V 8 Carey 2007, 4 Thalheim 1913, XXX Gernet/Bizos 1926).

A further denunciation concerning the Mysteries was made by Lydos, slave of a man already denounced by Teukros, Pherekles of Themakos. He named, among others, Akoumenos, who was presumably the doctor, father of Eryximachos and friend of Sokrates (*APF* 11907); Eryximachos had been denounced by Teukros as involved in the mutilation of the Herms, and appears with Alkibiades and Adeimantos in *Protagoras* 315c–316a. Lydos also said, according to Andokides, that the latter's father Leogoras was present but was asleep, with his cloak over his head. Leogoras protested that the proposal to hand over all those named to the courts for trial was illegal, using the *graphé paranomôn* procedure,³⁷ and secured acquittal for himself, persuading the jury that he had not been present. By stating that his father was said to be asleep, Andokides not only stresses his innocence of the charge but also implies that even the accuser considered Leogoras—married by the early 430s and therefore probably in his fifties by 415—too old to take any interest in the pranks of the young. There is evidence, however, that Leogoras had not given up his adolescent pursuits on marriage, and was indeed the type of middle-aged playboy who could plausibly be accused of frequenting such parties. In Eupolis' *Autolykos*, performed in 420, he is represented as telling a *hetaira*, Myrrhine, that he has spent all his money on her.³⁸

The next informer, Diokleides, may perhaps have been partly inspired by the Leogoras affair; the fact that a Herm near Leogoras' house had not been mutilated also attracted attention to the family. Diokleides claimed to have seen three

³⁶ According to *APF* 9688 VIII Euryptolemos would be the BWBSS of Axiochos and MBSS of Alkibiades; Thompson 1969*a* has the relationships as BWZS and MZS (cf. ch. 14 n. 43). The reconstructions of Stanley 1986 are implausible.

³⁷ Leogoras' use of the *graphé paranomôn* on this occasion must, in my opinion, have been the model for Euryptolemos' attempt to use it in somewhat similar circumstances after Arginoussai (Xen. *Hell* 1. 7. 12). Leogoras' case would thus have been that when presented with such an accusation the Council should allow the individuals named the chance to defend themselves on the spot. The question whether those named would have been tried individually in court in 415 is academic, since those denounced did not stay in Attika to stand trial. The frequent use of *paranomôn* and related terms in Antiphon 5 (cf. Ostwald 1986, 122–7) suggests that in this period the idea of using the *graphé paranomôn* to protest against procedural irregularities in court was in the air, but that no clear guidelines for its use had been set (cf. Humphreys 1988, n. 48; Carawan 2007).

³⁸ *PCG* 5 F 50 (K. 44). Leogoras is mentioned in Ar. *Clouds* 109 (423) as a pheasant breeder, and in *Wasps* 1269 (422) and Plato F 114 *PCG* 7 (K. 106) as a hedonist. Furley 1996 stresses the differences in attitude between Andokides and his father.

Notes: Names of those accused in italic type.

1. On *APF*'s Andokides I and II see R. Thomas 1989.

2. *APF* 10808 suggest that Diognetos and Eukrates were Nikias' patrilateral half-brothers, but one would expect Eukrates to be a half-generation older than his WB Kallias and a full generation older than Kallias' WB Andokides; this would bring Eukrates' date of birth to *c.*470, which is within a decade of that of Nikias.

3. *APF* (828 IV, 8792 IV) improbably assumes that the Kritias named here was the tyrant.

4. Three further cousins of Leogoras, Phrynichos, Taureas (with his son Nisaïos), and Kallias son of Alkmaion were also accused.

TABLE 13.2. Kin of Andokides: *APF* 828, 7840, 8792 IV, 10808

hundred men gathered in the moonlight in the Theatre of Dionysos on the night when the Herms were attacked.³⁹ The next day, he said, he approached Andokides' brother-in-law (ZHB) Euphemos son of Telokles, and threatened to inform; Euphemos took him to the house of Leogoras, father-in-law of his brother Kallias, and later to that of Kallias himself. A bribe was agreed on; when it was not paid, Diokleides denounced forty-two men to the Council, eleven of them being members of Andokides' kindred. Phrynichos, a cousin (*anepsios*) of Andokides, cannot

³⁹ Dover (*HCT* IV 274–6; cf. *CAH* 2nd ed. V 450, Furley 1996) does not think Diokleides can be the informer who according to Plut. *Alk.* 20. 6 made a mistake about the moon; but if such a mistake was made it must have concerned the mutilation of the Herms, since witnesses informing on parodies of the Mysteries testified to being present at indoor activities. Dover's view that Diokleides was actually, as he eventually claimed, suborned by Alkibiades of Phegous to attack enemies of Alkibiades III, and that politics entered into the story only with his accusations, does not persuade me. It is not clear how a panic about oligarchic conspiracy in Athens would have helped Alkibiades in 415, while accusation of Nikias' brother's affines was an oblique and not very promising way of attacking the conspicuously pious Nikias. On the other hand, Diokleides' approach has features that suit Andokides' insinuation that he was a common blackmailer: he seems to have admitted demanding money from the kin of Leogoras, who were already in a vulnerable position, and his claim to have seen about 300 men, of who he could name 42 (Andok. 1. 43), left a promising field for future negotiations.

be securely placed.⁴⁰ Kallias (B) and Taureas were first cousins of Leogoras; Nisaios was Taureas' son, and Kritias (the future oligarch?) was the son of another cousin; Charmides was Leogoras' nephew (ZS), brought up in his household; Kallias (A), son of Telokles, was Leogoras' son-in-law, while Euphemos and Eukrates were affinally linked to Leogoras through Kallias.⁴¹ We can reconstruct these relationships because Andokides provides the details in his speech, while explaining that he turned informer in order to save his kin (*syngeneis*, 1. 47); most of them could not have been reconstructed from a list of names alone, even if it had included patronymics and demotics.

Diokleides also named two members of the Council, Apsephion and Mantitheos, and all or most of the men already denounced by Teukros. If his denunciation began as an attempt at blackmail, it is not surprising that some men old enough and ambitious enough for Council service should appear in the list. His Mantitheos may be PA 9670, who later escaped from Sardis with Alkibiades, and was left in charge of the fleet by him in 407 (Xenophon *Hellenika* 1. 1. 10, 1. 3. 12–13); we do not know whether the link with Alkibiades existed before the accusation or arose later.⁴² When confronted with inaccuracies in his story, Diokleides changed his tack and claimed that he had been bribed to inform by Alkibiades' cousin and homonym Alkibiades of Phegous, and by a metic, Amiantos of Aigina. Alkibiades of Phegous, who fled, may be the cousin (FZS?) of Alkibiades who joined him in exile and was still fighting on the side of Athens' enemies in 409.⁴³

Andokides' own story was that he had been present at a drinking party when the mutilation of the Herms was planned (as a test of loyalty, *pistin*, 1. 67), but had opposed the idea. The ringleader was his friend and fellow-demesman Euphiletos of Kydathenaion, already denounced by Teukros. Later, when Andokides was in bed with a broken collarbone and other injuries due to a riding fall, Euphiletos had carried out his scheme, telling the other participants that Andokides would deal with the Herm near his own house. The next day, seeing it still intact, the conspirators had become alarmed, and Euphiletos and Meletos had called on Andokides to urge him not to betray them. Diokleides' report, however, changed the situation. The city was in panic, assuming that the three hundred conspirators allegedly seen by Diokleides were planning a coup; Andokides and his kin, with others on Diokleides' list, were arrested, jailed, and put in the stocks to make flight impossible. He decided, therefore—so he tells the court in 400—that since most

⁴⁰ Kallias: APF 7840, IG i³ 969 *bis*. It is unclear whether Phrynichos is described as the son of Orchesamenos or as 'the ex-Dancer', and if the latter, whether this is a nickname or an inaccurate gloss that has crept into the text: see F. D. Harvey 2000.

⁴¹ One of the two men named Kallias may have acted as a witness for Andokides in 400 (1. 18).

⁴² It seems likely that many of those who fled in 415 sooner or later gravitated to Alkibiades' side.

⁴³ APF 600 VI, Xen. *Hell.* 1. 2. 13, Harp. s.v. *Alkibiades* with Dindorf's note. The restoration of this Alkibiades' name in IG i³ 428. 3–4 is perhaps scarcely warranted.

of the actual conspirators had by this time fled the country, or had been put to death, he must tell what he knew in order to save the innocent. Euphiletos, Meletos, and others had already been denounced by Teukros. Andokides added four new names: Diakritos (perhaps the doctor, son of Dieuches of Phrearrhioi), Lysistratos, Charidemos son of Elpias, and perhaps a second Panaitios.⁴⁴ All four, he claimed, were already under suspicion as associates of men denounced earlier.

We shall never know whether Euphiletos' escapade—if the plan was indeed his—was deliberately designed to provide an occasion for discrediting Alkibiades, or was merely intended as an initiation ritual to bind together members of a new adolescent drinking club. Whatever the political views of those involved, socially they did not fall neatly into distinct and hostile groups.⁴⁵ Leogoras' cousin Taureas had been assaulted by Alkibiades when they were competing as *chorégoi*;⁴⁶ but Kritias, another cousin, was Alkibiades' friend. Diokleides' denunciation of Leogoras and his kin was allegedly inspired by Alkibiades of Phegous, probably a cousin of Alkibiades of Skambonidai; but Diokleides may have been interested only in blackmail. Alkibiades' brother-in-law (WB) Kallias may have been on friendly terms when young with Leogoras, and was to marry the widow of Leogoras' brother-in-law (WB) Epilykos, probably after the events discussed here.⁴⁷ Euphemos son of Telokles was affinally connected both with Leogoras and with Alkibiades' political rival Nikias; the Charmides in whose house Alkibiades was said to have parodied the Mysteries (Andokides 1. 16) was either Leogoras' nephew (ZS) or, more probably, his affine (MZHBS, above at n. 41). Networks overlapped; they constituted potential lines of alliance, not all of which could be actualized simultaneously.

Adolescence was a liminal period, and in the second half of the fifth century Athenian society was changing rapidly, in the atmosphere of crisis that accompanies a major war. The lengthy adolescence, for males, of fifteen years or more was one of the sources of the vitality of Greek culture, its competitiveness, its openness to new ideas; but it could also be a source of instability. In the late fifth century young upper-class Athenians did not feel that the adult world awaiting them was the same as that into which their fathers and older kinsmen had been socialized. Adolescence

⁴⁴ Andok. 1. 53. Lysistratos may be the son of Makareus of Amphitrope, attacked in comedy as a parasite and homosexual (Ar. *Wasps* 1301–2 and schol. 787). Charidemos appears in *IG* i³ 428. 7–8; his deme was either Acharnai or Acherdous (Table 30.2). His father might be the proposer of *IG* i³ 133, but the name Elpias occurs in Ikarion in the 4th c. (*IG* ii³ 4. 31, ii² 6273). Andok. may possibly have forgotten that a Panaitios (son of Philochares, of Aphidnai) had already been denounced by Teukros.

⁴⁵ Brunt 1965 makes a similar point about Romans in the late Republic.

⁴⁶ *APF* 828 IV; Dem. 21. 147, Plut. *Alk.* 16. 5, [Andok.] 4. 20–1, cf. 42.

⁴⁷ *APF* 7826 XII (c.412). Leogoras' appearance in Eupolis' *Autolykos* (F 50 *PCG* 5, 44 K.) may imply that in 420 he was moving in the same circles as Kallias. By 415 Kallias may already have begun to quarrel with Alkibiades (*APF* 600 VIII). His dispute with Andokides over *epiklēroi* belongs to the years immediately after the war (*APF* 8429 IV; see n. 12 above).

began to seem, at least to some, to contain in itself the basis for new patterns of adult behaviour. Those whose adolescent pleasures had been intellectual could become philosophers or poets;⁴⁸ others clung to homosexual relationships or the convivial world of the symposion, and were attacked in comedy as passive homosexuals or middle-aged playboys; yet others, no longer sure of their ground in a situation where the qualities required for a successful adult political life were changing, carried the ideals and *mores* of the adolescent *hetaireia* into revolutionary activity. Operating outside the framework of public political institutions, they worked through private networks and met in private houses. The oligarchic revolutions of 411 and 404 were extreme expressions of a tension always present in Athens between the public institutions of the city, which provided remarkably little scope for cooperation based on private ties, and the social lives of the citizens, especially the life they led during the formative period of adolescence.

⁴⁸ *Hetairos* acquires a new use to denote acceptance of the same philosophical principles (e.g. Ar. *Met.* 985b 4).

Political Marriages, Lawsuits, Curse Tablets

Even Athenians who were eager to put their adolescence behind them and embark on a career as fully active citizens needed friends, made enemies, and took note of their opponents' friends and associates. However, cooperation and the formation of factions were not formally recognized, either institutionally or in political theory, as integral elements of the political process. References to friendship in historical or philosophical texts tend to be general; we hear only occasionally of specific ties, usually from hostile witnesses. These scraps of evidence can be supplemented by a few cases in which political alliances may have been made or reinforced by marriage; by evidence of the role of kin and allies in court cases that had political overtones; and by lists of names scratched on curse tablets. We are still dealing here with activities that took place on the margins of the public arena, but with behaviour more normal than the bizarre escapades of the late fifth century. This is the backstage side of everyday political action.

The term *hetairoi*, used in the archaic period to add a heroic touch to private associations, acquired negative connotations after the experiences of the late fifth century, which were even more strongly marked in the case of the related term *hetaireia*.¹ In *Theaitetos* 173d Sokrates' list of matters with which the philosopher would not even dream of concerning himself includes 'campaigns (*spoudai*) of *hetairiai* for office, and meetings (*synodoi*), and dinners, and revels with flute-girls'.² A client of Lysias, who has quarrelled with the group of *synousiastai* to which he belonged, describes their activities (8. 5, 10–11, 18–19): they travelled together to Eleusis for a religious festival, lent each other money, supported each other in lawsuits, and praised each other to third parties—presumably in election campaigns, or when involved in lawsuits or attempting to raise money. Thucydides (8. 54. 4) mentions 'oath-groups for lawsuits and elections', and [Andokides] 4. 4 refers to the mobilization of groups of *hetairoi* and oath-fellows by men threatened with ostracism. Aischines (1. 54–64) alleges that Hegesandros, Timarchos,

¹ Isokr. 3. 54, 4. 79, 5. 2, 16. 6 (1. 10, 24–6, where *hetairoi* is used as a synonym of *philos*, is addressed to a Cypriot); Dem. 21. 20, 139; 52. 14; 58. 42; Hyp. 3. 8; Plat. *Rep.* 365d.

² Most 4th c. sources distinguish the abstract *hetairia*, friendship, from *hetaireia*, a group of *hetairoi* (Plato does not). Political functions of *hetaireiai* are discussed in Calhoun 1913; Sartori 1957, 1958; Dover 1968*a*, 49ff.; *HCT* IV 286; Aurenche 1974; P. J. Rhodes 1986, 138–9.

and their gambling companions broke into the house of the public slave (perhaps freedman, Fisher 2001) Pittalakos, surrounded him when he appeared as a suppliant at the altar of the Mother of the Gods in the Agora, and persuaded him to go home, with promises that he would receive compensation; ganged up to argue that he was Hegesandros' slave when, having received nothing, he tried to sue them; and, when he found a citizen to champion him, produced an arbitrator who was Hegesandros' fellow-demesman and ex-lover, who delayed hearing the case, and eventually intimidated Pittalakos into dropping his claims. When Timarchos was a councillor and Hegesandros treasurer of Athena, they arranged 'in true hetairic style' to misappropriate a thousand drachmas (Aischines 1. 110–12).

Hegesandros is said to have collaborated politically with his brother Hegesippos (§ 64) but, as we shall see (ch. 17), precise evidence of collaboration between kin in formal political contexts is hard to find. Kallistratos of Aphidnai presumably derived some advantage (and, at other moments, disadvantage) from the fact that Agyrrhios of Kollytos was his uncle,³ but speculation about the possible connections between their known political activities is pure guesswork. Kallimedon, said to have been sent as ambassador to Sardis in 392, may have been linked with Agyrrhios' family, since the latter's grandson (SS) bore the name Kallimedon; but again this does not take us very far.⁴

We are on more solid ground with the evidence of Apollodoros of Acharnai ([Demosthenes] 50. 48) that his fellow-demesman Timomachos, serving as general in the Thasos area in 361/0, sent a trireme to bring the same Kallistratos, his *kédestés* (probably father-in-law, *APF* 8157), from Methone to Thasos. Kallistratos had been impeached for political misconduct, had fled to avoid trial, and had been condemned *in absentia* (M. H. Hansen 1975, no. 87). Kallippos son of Philon of Aixone was in charge of the expedition to fetch him; it is possible that Philon, also in exile, was with Kallistratos at Methone.⁵ Presumably exiles often communicated with friends and kin serving on Athenian military expeditions (cf. Xenophon *Hellenika* 2. 1. 25–6), though Timomachos' use of his official powers to provide transport for Kallistratos was more than questionable.

³ MB, Dem. 24. 135. Sealey 1956 and Strauss 1986 speculate on political implications. I ignore this type of prosopographical study not only because to use it in the present context would be *petitio principii*, but also because reconstruction of hypothetical factions seems to me a very poor substitute for analysis of the way political choices were perceived at specific points in time.

⁴ Xen. *Hell.* 4. 8. 13, rejected by Jacoby *ad FGH* 328 F 149; Table 8.7. Sealey's suggestion (1956, 183) that one of the ambassadors was Hermogenes the Sokratic, illegitimate half-brother of Kallias III of Alopeke, does not seem to me plausible, though *APF* 7826 XVI seems inclined to accept it.

⁵ Philon: M. H. Hansen 1975 no. 89, *APF* 8065; Table 29.17.

'POLITICAL' MARRIAGES

Timomachos, at Thasos, was honouring the obligations he had contracted in marrying Kallistratos' daughter; but we do not know what the relationship between the two men was at the time when the marriage was contracted. This is a recurrent problem in attempts to uncover political motives for marriage alliances between leading Athenians.⁶

There had certainly been something of a tradition of alliance through marriage in the early Greek aristocracy (cf. Duplouy 2006; Wilgaux 2010). Homeric heroes bring home brides from far-off places, and marry their daughters to immigrants whom they incorporate into their own households. Inter-marriage among city aristocracies continued in the archaic period. Kylon is said to have married the daughter of Theagenes of Megara (Thucydides. 1. 126. 3). Peisistratos married Timonassa, daughter of Gorgilos of Argos, who had previously been married to one of the Corinthian Kypselidai, Archinos, ruler of Ambrakia on the west coast of Greece (*APF* 11793 VI); she gave him two sons, apparently brought up in Argos, who may have arrived with Argive troops to help their father regain power in Attika in 546.⁶ Kypselos, eponymous archon of Athens in 597/6, may well have owed his name to an affinal connection between his family and the tyrants of Corinth (*APF* 8429 II). Two Athenians were prominent among the suitors of Agariste, daughter of Kleisthenes of Sikyon: Hippokleides, probably the nephew of the archon Kypselos (BS, *APF* 8429 II) and Megakles II, who was the successful candidate (Herodotus 5. 126–30; *APF* 9688 III). Megakles' father Alkmeon had already aided Kleisthenes of Sikyon in the First Sacred War, waged c.595 to ensure control of the Delphic oracle by the neighbouring cities represented in the Amphiktyonic League, and had befriended the Lydians who came to consult the oracle (Herodotus 1. 125); the family became conspicuously rich,⁷ and maintained close ties with Delphi.

Tyrants, if they did not wish to treat any of their fellow-countrymen as equals, were compelled either to marry their children to kin (Gernet 1953*b*) or to seek

⁶ Hdt 1. 61. 4, *A.P.* 17. 4; *APF* 11793. V. The name Hegesistratos may have given rise to this tradition (but cf. P. J. Rhodes 1981*a*, 199). Lavelle 1988 suggests that Peisistratos also married an Eretrian (ch. 15 n. 18). Gods and Homeric heroes made uxori-local 'marriages' and sired sons who were reared by their maternal grandfathers, but it is not clear how readily such an arrangement would have been tolerated, or how it would have been understood, in the 6th c.

⁷ Herodotus' story that 'Kroisos' loaded Alkmeon with gold dust (6. 125) perhaps acquires a new interest in the light of theories that in the early 6th c. the Lydian kings may have awarded privileged persons the right (and the wherewithal?) to strike coins (R. W. Wallace 1987, Descat 1994; but see Wallace 2006).

spouses for them abroad. Peisistratos' son Hippias married a daughter to the son of Hippokles tyrant of Lampsakos, c.514; he proved to be a loyal ally.⁸

The search of the aristocracy for prestigious alliances abroad was not confined to Greek cities. Miltiades IV, who ruled a little principality in the Thracian Chersonese from c.516 to 493, married a Thracian princess, Hegesipyle; Themistokles' mother was said to have come from the same area.⁹ The use of coinage was spreading rapidly in the late sixth century, and the Thracian and Macedonian hills were known to contain gold and silver; the area was also probably a good source of mercenary troops. Foreign marriages were precluded by Perikles' law of 451, restricting citizenship to those born of Athenian parentage on both sides, but Thracian princesses reappear in the fourth century: Iphikrates (*APF* 7737) married the daughter of the Thracian king Kotys c.387/6. Charidemos' marriage to the sister of Kotys' son Kersobleptes may have taken place before Charidemos became an Athenian citizen.¹⁰ Military leaders needed personal allies abroad and knew that they might have to leave Athens and sell their skills elsewhere. Ergokles, the target of Lysias 28, was accused of having advised Thrasyboulos of Steiria in 390/89 to seize Byzantion, keep the fleet, marry the daughter of Seuthes of Thrace, and set up on his own (28. 5). Konon acquired a wife and son, and property, in Cyprus in the 390s (Lysias 19. 36, *APF* 13700). Demosthenes' maternal grandfather Gylon, condemned *in absentia* c.410 for betraying Nymphaion to the rulers of the Bosporan kingdom in the Crimea, probably married while in exile; Demosthenes' enemies claimed that his mother was a Scythian, though the truth was presumably less sensational (*APF* 3597 VII). Miltiades VII, who led an Athenian colony to the northern Adriatic in 325, married his daughter to the Macedonian Ophellas, one of Alexander's Companions, who later became ruler of Kyrene; she subsequently married Demetrios Poliorketes (*APF* 8429 XV).

Perikles' law did not bar Athenian citizens from giving their sisters and daughters to foreign husbands, but by 450 the Athenians may have felt themselves too superior in power to both Greeks and barbarians for this type of alliance to seem

⁸ *APF* 11793 IX C; Thuc. 6. 59. 3–4. On the modern view that Hipparchos son of Charmos, ostracized in 488/7, was the son of another daughter of Hippias see ch. 15 n. 25. The idea that a third daughter of Hippias married Miltiades IV, c.520 (*APF* 11793 IX D, 8429 IX) was revived by Piccirilli (1986), but is highly speculative, as is the suggestion that Hippokrates son of Anaxileos (*APF* 9688 IV) was another DS of Hippias.

⁹ Miltiades: Hdt. 6. 39. 2, *APF* 8429 X. Themistokles: *APF* 6669 II; Bicknell 1982; D. M. Lewis 1983b; Ogden 1996.

¹⁰ Both were serving as mercenary generals in Thrace at the time of the marriages. Kotys was granted Athenian citizenship c.384/3, Chairedemos probably c.357 (see Lambert 2006, no. 2). *APF* 7737 argues, from the statement of Dem. 23. 129 that the two affinal relationships were on the same footing (*τῶι αὐτῶι τρόπῳ*), that Iphikrates married Kotys' sister, but it seems unlikely that Kotys' citizenship grant would have included his siblings.

desirable. We hear only incidentally that before 353 Timokrates of Krioia had married his sister to a Kerkyrean *xenos*, an arrangement that Demosthenes treats as disgraceful.¹¹

The first attested political marriage inside Attika turned out badly. Peisistratos married the daughter of Megakles II when they combined forces c.560 against Lykourgos of the Eteoboutadai, but neither the alliance nor the marriage lasted. Gossip said that he slept with her ‘the wrong way’ to avoid begetting children (Herodotus 1. 61. 1). Speculation about other political marriages is concentrated in the period between c.510 and 470, a favourite hunting ground for all forms of prosopographical guesswork. The end of the Peisistratid tyranny left the descendants of Megakles II in a strong position. They claimed to have been responsible for the Spartan intervention that had driven out Hippias; they had friends at Delphi, and affines in Eretria (ch. 15 n. 18); Megakles’ son Kleisthenes, grandson (DS) of the tyrant of Sikyon, had emerged as the political leader of the city in 507. Xanthippos of Cholargos, future father of Perikles, married Kleisthenes’ cousin (FBSD) Agariste II, daughter of Hippokrates and sister of Megakles IV, probably in the early 490s.¹² Alkmeonid names turn up in several demes besides Alopeke, in which the main branch of the family was registered; in some cases this may indicate residential dispersal of the family—which traced its origin from an Alkmeon who lived c.600—before 507, but it is likely enough that names were also transmitted to other families by marriage. There is no point, however, in speculating about possible instances.¹³

A perhaps inserted chapter of Herodotus (6. 122) records that Kallias I of Alopeke—successful chariot racer and member of the *genos* Kerykes, perhaps Torchbearer of the Eleusinian Mysteries—had allowed his three daughters to choose their own husbands. If there is any genuine tradition behind this story, it may refer to a competition between suitors of the type organized by Kleisthenes of Sikyon. It is possible that one of these marriages produced Aristides, also registered in Alopeke; but the chain of evidence is weak, and in any case we know nothing of Aristides’ ancestors.¹⁴

¹¹ Dem. 24. 202–3; *APF* 13772 (erroneously ‘daughter’).

¹² *APF* 9688 X. On the question of a possible earlier intermarriage between the two families see ch. 4 n. 33.

¹³ The 700 families of Alkmeonidai who were briefly expelled from Attika in 508 (Hdt. 5. 72. 1) can scarcely all have been kin. The name Alkmeonides was still current in a family of Aphidnai in the early 4th c. (*APF* 9688 XIII); in 415 an Alkmeonides was married to an Agariste (III), from his own or another branch of the family (Table 15.2).

¹⁴ *APF* 7826 III. The conjecture that another daughter of Kallias married a man called Strouthon (ibid.; see *FGE* 11–15; D. M. Lewis 1984b, 179) rests on even weaker grounds, since Hipponikos (the name of Strouthon’s son) must have been a common name in archaic Greek aristocratic families. Shapiro’s suggestion (1982) that the third daughter became the mother of Kallias son of Kratios, a prominent candidate for ostracism in the 480s and perhaps 470s, has equally little basis; Kallias is an even commoner name.

More can be said about the marriage of this Kallias' grandson (SS), Kallias II. He married Elpinike, daughter of Miltiades IV and sister of Kimon, in the late 480s or early 470s; the marriage was something of a gamble, since Miltiades had died in disgrace, Kimon was still young, an older half-brother was living in Persian territory (Herodotus 6. 41. 4), and there had been gossip about Elpinike and Kimon. However, Kimon had already shown in 480 that he could turn his good looks and inherited charisma to advantage with a well-staged symbolic gesture, leading a procession of young cavalymen up to the Akropolis to dedicate their bridles to Athena as a pledge of their readiness to defend Athens at sea (Plutarch *Kimon* 5. 2–3); and Kallias' own affairs were not above question. The family had already been rich in the sixth century, but the sudden increase in wealth which earned Kallias II the nickname *Lakkoploutos* (pit-rich) appears to have aroused some hostility.¹⁵ Interpretations of later political relations between Kimon and his brother-in-law depend on the date and political context assigned to the peace treaty or treaties that Kallias negotiated with Persia. If he was first sent to Persia in the 460s, just after Kimon's victory at Eurymedon, he may (but need not) have been carrying out a policy of which Kimon approved; if peace negotiations began only in 449, after Kimon's death, Kallias will have been carrying out the policy of Perikles, whose ex-wife was soon to marry his son Hipponikos II.¹⁶ In either case, Kallias may have been selected as ambassador more because he could carry off the role with an appropriate display of wealth and *dignitas* than because he carried weight as a political ally.

Kimon himself married a girl of Alkmeonid origin, Isodike, but here too it is easier to sketch out a plausible context for the marriage than to identify any long-term political consequences. In the years around 480 both families, though illustrious, were under attack; it was not clear how—or if—they would adapt themselves to a rapidly changing political situation, a challenge which Kimon, in the event, met more successfully than his affines. On the relations of Xanthippos, who attacked Miltiades at the beginning of the 480s, with his wife's family see Table 15.2. The best evidence for friendly relations between Kimon and the Alkmeonidai comes from the tradition that the Stoa Poikile, which contained a painting of the battle of Marathon, was built by a Peisianax, who may have been Kimon's brother-in-law (WB).¹⁷ We have no evidence of other political activity

¹⁵ On Kimon's use of political theatre see Humphreys 1999. The story that Kallias had bought property confiscated from Peisistratos (Hdt. 6. 121. 2) may derive from the early 5th c. and refer to Kallias II and the Peisistratidai rather than originating in the 550s (where *APF* 7826 II places it).

¹⁶ The earlier date, in my view, does not necessarily imply that peace with Persia was Kimon's policy (Humphreys 1999). On the date of Hipponikos' marriage see ch. 4 n. 52.

¹⁷ Much of Peisianax' contribution may have consisted in persuading friends in Attika and Aigina (the source of the stone used) to donate labour and lend ships and draught animals (Burford 1965, 1969 ch. 6; R. G. Osborne 1985*a*, 98–100, 103, 105–7). Polygnotos, who did the paintings, is said not to have

by Alkmeonids during Kimon's heyday in the 470s and 460s. Isodike's cousin Perikles rises c.463 as an opponent of Kimon; another cousin, Megakles V, seems to have been known only for his success in horse racing.¹⁸

Our sources, however, seem to be confident in ascribing the rise of Thoukydides son of Melesias as Perikles' main opponent in the 440s to the fact that he was an affine (*kêdestês*) of Kimon, probably his son-in-law.¹⁹ We hear nothing of a previous political tradition in Thoukydides' family; his father was a successful wrestler, turned trainer, who moved in aristocratic circles (Wade-Gery 1932). Since we do not hear of Thoukydides until after Kimon's death—perhaps as much as twenty years after the marriage that linked them—the extent of active collaboration between the two remains doubtful, and we cannot argue that Kimon was looking for a political aide or successor in selecting his son-in-law. The most we can say is that Kimon would have felt at home in the network of friends in other Greek cities that Melesias had built up through his athletic activities,²⁰ and that Thoukydides proved more successful than Kimon's sons—who would have been some fifteen years younger—in claiming to inherit Kimon's political charisma when he died.

The father of Oloros of Halimous may have married a sister of Kimon (*APF* 7268 V), but the first member of the family for whom a political career is attested, the historian Thucydides, son of Oloros, was an admirer of Perikles.

The transfer of Perikles' ex-wife to Hipponikos, son of Kimon's brother-in-law (ZH) Kallias, has already been mentioned.²¹ Rather than indicating a major change in Kallias' political views, it perhaps shows Perikles making a diplomatic gesture of friendship in a difficult period of his career to an elderly man (Kallias) who had always been a visible figure to be reckoned with on the political scene (and still more prominent in religious contexts), despite his lack of military achievements.²² It should be remembered, in any case, that the woman's own kin are likely to have had some say in the matter.

asked for pay (Plut. *Kim.* 4. 10); he belonged to the Thasian upper class (Salviat 1979, 4. 16, cf. perhaps 4. 20) and seems, like Stesimbrotos, to have accepted Kimon (there was gossip about Polygnotos and Elpinike). But other skilled craftsmen may have required wages.

¹⁸ According to *APF* 9688 VIII–XI, Perikles would have been Isodike's FFBDS, Megakles V her FFBSS (Table 15.2); according to W. Thompson 1969*a* the relationships would be FZS and FBS. Isodike may have been dead by 463 (Plut. *Kim.* 4. 10).

¹⁹ *APF* 7268 III. *A.P.* 28. 2 and Plut. *Per.* 11. 1 have *kêdestes*, Schol. Arist. III 446 Dindorf 1829 *gambros*, which should mean ZH or DH, but might be a guess.

²⁰ Two of Kimon's sons were called Lakedaimonios and Thettalos.

²¹ *APF* 11811 III, 7826 IX. Bicknell 1972 suggests that Perikles' wife was a sister of Deinomache, hence Perikles' MBD and Alkibiades' MZ; but this will not make Perikles Alkibiades' *theios* (D. S. 12. 38. 3) or *avunculus* (Val. Max. 3 ext. 1).

²² Above, n. 17; *APF* 7826 VI, IX. For the possibility that Kallias was general in 449/8 see ch. 16 at section 'Antiochis'.

It might be argued that the scarcity of clear cases of politically motivated marriage is due to our lack of evidence for long-term political association; yet this itself may reflect structural realities. Athenian politics in the classical period were individualistic, competitive, rationalistic, and situational. Each ambitious politician set out at every Assembly meeting to persuade the audience that he had the best advice to give in the current circumstances. Leaders were not strongly identified with long-term policies or ideologies, so there was neither need nor basis for long-term alliances.

For a leading politician to rely regularly on support from a more junior kinsman or affine would look uncomfortably like a patron–client relationship. Such arrangements may indeed have existed, but they will have borne little resemblance to the coalitions of leading figures postulated by some prosopographers. Thoudippos, if he was indeed Kleon’s son-in-law, will have been acting in a client-like role in proposing the tribute reassessment of 425 BCE;²³ in 349 the well-known Kephisophon of Aphidnai sent his kēdestes Amphiās, perhaps of the same deme, to bring to court a will that had been deposited with Kephisophon, and testify on his behalf.²⁴ Konon in 393 arranged a marriage between Aristophanes, son of his lieutenant Nikophemos, and the widow of Phaidros of Myrrhinous (*APF* 5951); Konon is acting as patron here, but was probably using his friendship with the bride’s father to ensure Aristophanes a place in a wealthy and respectable family rather than pursuing any more specific political aim.

A more normal pattern may perhaps be represented by the marriages of the sisters of Epilykos son of Teisandros, who served as councillor and secretary to the Council in 424/3, and probably went to Persia as ambassador in the same year (*APF* 8429 IV). Teisandros, their father, may have been a distant kinsman of Kimon. One daughter married Perikles’ son Xanthippos; another married Glaukon of Kerameis, who was perhaps general several times in the 440s and son of the Leagros who served as general in 465 at Drabeskos;²⁵ a third married Leogoras of Kydathenaion, whose father Andokides II had served as ambassador to Sparta in 446/5. The daughter of Glaukon married Kallias III son of Hipponikos of Alopeke; Epilykos himself married the daughter of the wealthy Ischomachos. This was an extremely well-connected family, about whose marriages we are exceptionally well informed. Teisandros may have had political ambitions; he was a candidate for ostracism c.440.²⁶ Yet if there was any political intention behind these marriages, the choices were unfortunate. Xanthippos died young without showing any political promise;

²³ *APF* 7252, 8674; but see ch. 8 n. 56.

²⁴ *APF* 8410, [Dem.] 45. 10. Amphiās was probably WB or DH (Humphreys 1986a, 80).

²⁵ On the date and location of the campaign see Pritchett 1995; Humphreys 1999. The identification of Glaukon (*APF* 3027) is contested by W. Thompson 1971e (cf. ch. 4 n. 8 and Table 4.2).

²⁶ Perhaps 443 (Brenne 2001, no. 251). There is one ostrakon naming an earlier Teisandros, son of Staseas, from the Kerameikos (Brenne 2001, no. 253, 471?).

Leogoras and Ischomachos made no mark; Kallias did his kin no good; only Glaukon, if he is the general of that name, had a solid military career. It may be safer to assume that Teisandros was looking among his peers for affines who were rich, respectable, and well known, without having any more specific aims in view.

It is important to consider the chronological relationship between marriage and alliance. Teisias (son of Teisimachos, of Kephale? *APF* 13479; ch. 27 n. 54) was *kedestes* of the oligarch Charikles and himself served in the Council under the Thirty (Isokr. 16. 42, 45). Teisias was general in 417/16, Charikles in 414/13. There was normally an age difference of about 15 years between brothers-in-law. Since Teisias in 416 was an associate of Alkibiades and a chariot-racing enthusiast, we might assume that he was still in his thirties at this time, owing rapid promotion to Alkibiades' influence (and his own wealth), and that Charikles had married his sister c.435–430, long before either of them had any serious oligarchic interests.

A marriage which, it has been suggested (*APF* 10808), may have had a more specific political colouring is that of Nikias II of Kydantidai, grandson of the famous general of the Peloponnesian War, shortly before 390, to the daughter of the prominent democratic leader Thrasyboulos of Steiria (*APF* 7310; D. M. Lewis 1955, 30). Nikias' great-uncles (FFB) Diognetos and Eukrates, especially the former, had been involved with the oligarchic regimes of the late fifth century, and it is thought that Nikias might have sought protection in this alliance. However, Nikias' father Nikeratos had been killed by the Thirty (as indeed had Eukrates); Nikias' early marriage, perhaps in his early twenties, is explained by the fact that he was an orphan; and Thrasyboulos may well have stood to gain at least as much by acquiring a rich son-in-law as Nikias would gain from his father-in-law's political protection or patronage.²⁷ In the event, Thrasyboulos died soon after the marriage, and if he had lived would probably have been tried for misappropriation of public money (Lysias 28. 4–8), while Nikias led a quiet and undistinguished life.

The only marriage explicitly characterized in our sources as 'for advantage' (*epi tou sympherontos*, [Demosthenes] 49. 66) is that of Timotheos' daughter, in 362, to Menestheus son of Iphikrates. Timotheos had threatened to prosecute Iphikrates for treating a union with a foreign woman as marriage; he dropped the

²⁷ I do not see why *APF* (10808) thinks that Nikias would have been the gainer financially. The 14 T. he inherited from his father (Lys. 19. 47), though less than everyone expected, was a sizeable sum, and the family land in the mining district would recover its value after the war; Thrasyboulos, according to Isokr. 18. 23, did not recover the property he lost while in exile under the Thirty. Support for the view that a democratic record was an asset in matrimonial negotiations at this period can, however, be found in Andokides' assertion that his great-grandfather (FFF; he may have made a mistake in generations, *APF* 828 II with p. 596) preferred exile to marriage alliance with the Peisistratidai, and eventually married the daughter of a man who helped to expel them, Charias (Andok. 2. 6, 1. 106); see R. Thomas 1989 on the influence of the reign and defeat of the Thirty on oral tradition concerning the earlier tyranny.

suit, and the marriage was a conspicuous gesture of reconciliation.²⁸ Whether the alliance lasted is not clear.

It is tempting to see structural factors at work in the marriage of Lykourgos of Boutadai, c.350, to the daughter of Kallias of Bate (*APF* 9251, 7856). Both families belonged to aristocratic genê, Lykourgos to the branch of the Eteoboutadai that currently held the priesthood of Poseidon Erechtheus, Kallias to the [? Apheida]ntidai. They may have been drawn together by rivalry with a third family, the descendants of Drakontides of Bate (*APF* 4549, Table 20.4), which held the other major Eteoboutad priesthood, that of Athena Polias, and will have competed with Kallias' family in the deme Bate. But this can have been, at most, only one factor in Kallias' choice of a son-in-law. Moreover, Lykourgos did not become a force in Athenian politics until after the battle of Chaironeia. Then indeed we find his brother-in-law (WB) Habron of Bate serving as treasurer of military funds while Lykourgos himself has general charge of the city's finances (ch. 17). But these developments could hardly have been foreseen when Lykourgos married.

Lykourgos' son Lykophron (II) married his daughter Kallisto to Kleombrotos son of Deinokrates of Acharnai, perhaps as part of the 'Lykourgan revival' c.307; Deinokrates had been a prominent general of the 330s (338/7, *IRb* 93; 336/5, see *AO*; cf. also *IRb* 94, *IG* ii² 2793; ch. 28 n. 54).

As we shall see (ch. 17), the Athenian political system did not provide much scope for formal collaboration between kin. Much of the executive business of government was carried on by boards appointed by lot on the basis of equal representation of all ten tribes. Informally, leading politicians had their hangers-on; but these were probably mostly small fry, and one did not need to rely on younger kinsmen or affines. Marriages were arranged by the fathers of the groom and bride, and our sources suggest that their main concerns were *genos* (a respectable family background), wealth, and character.²⁹ They looked among their friends, long-standing associates, and social equals. To make an alliance with an ambitious and successful political leader was a gamble; he would be rich while successful, but might fall victim to accusation, exile, and confiscation of property, which as we shall shortly see was liable to bring kin and affines also into jeopardy. Below this level of prominence was a solid stratum of respectable and wealthy men who led less eventful lives, but regularly attended the Assembly, and served in other posts when called on: gentry, whose support was worth having precisely because it was not obviously given as a *quid pro quo*.

Athenian political life was itself a social world, which created opportunities for intensive association. We hear by chance of the marriage between the children of two men who served together on a military board in the 370s; perhaps their

²⁸ *APF* 7737, 13700. On the date of [Dem.] 49 see now Trevett 1992, 35–6. On the threatened prosecution see ch. 5 n. 47.

²⁹ Plat. *Euthyd.* 306d.

friendship was formed at this time.³⁰ Marriage resulting from political association of this kind would be no different from the marriages arranged by associates in other walks of life. In Menander's *Samia* two fathers who have travelled together to the Black Sea and Byzantion arrange a marriage between their children. The speaker of a Lysianic speech (*POxy* 31. 2538, F A 3b Carey 2007) was the son of an Athenian trader who had married into a family living in Selymbria on the Thracian coast. Pasion's widow married his freedman Phormion, who was to manage the bank in which he had been employed; both status anomaly and business interests favoured this arrangement (*APF* 11672 VI, IX; Whitehead 1986*b*). The sculptor Praxiteles may have married the daughter of his teacher Kephisodotos (*APF* 8334). Others married their sons to the daughters of neighbours, fellow-demesmen, or members of the same *genos*.

Marriage was an inflexible, slow, and risky vehicle for political manoeuvring in a climate as volatile as that of classical Athens. (Foreign princes, whatever the ups and downs of dynastic rivalry, may well have appeared to have a much more stable position.) The thirty-year-old groom who looked set for a promising career might die young or remain a playboy. Alliances shifted; Philodemos of Paiania, who supported Demosthenes' enrolment in the deme in 366, married his daughter about ten years later to Aischines (Aischines 2. 150, 152; *APF* 14625). While a father would presumably be unlikely to accept as son-in-law a young man who made a point of contradicting his political views, the Athenian political system directed citizens' attention to day-to-day policy issues rather than questions of principle and ideology. The relation between politics and personal identity will therefore have differed from that in the modern democratic state. Individual charisma, for those of the elite who possessed it, was (even) more important than it is today; political convictions, except in periods of oligarchic revolution, less so.

LAWSUITS AND OTHER POLITICAL CONFLICTS

Politics impinged on private life most seriously through the use of prosecution to eliminate political rivals; a court case might result in exile or loss of property, and

³⁰ *IG* ii² 6077 (*CAT* 2. 376, *c.* 320); the fathers had served together as taxiarchs or phylarchs under Thrasyboulos of Kollytos in 373/2 (*AO* 246: Theophilos of Hermos and Thrasymedes of Acharnai). Sealey 1956 suggests that Malthake, daughter of Moschos and wife of Leosthenes (*IG* ii² 1524. 203, 1529. 11–12) may be the daughter of Moschos son of Thestios of Kydathenaion, secretary to the Council in 368/7, who served as treasurer of Athena in 366/5 (*IG* ii² 106, 1428. 6 + add.), and wife of the Leosthenes who was general in 362/1 or 361/0 (M. H. Hansen 1975, no. 88; *APF* 9142; but see now Humphreys 2009). Even if these very conjectural identifications are valid, all we can say is that this was a marriage within the politically active elite. The possible marriage of Demetrios of Phaleron to a daughter of Konon III of Anaphlystos (suggested *APF* 3455, on flimsy grounds) might be another example.

litigants were unscrupulous in repeating or inventing scandal about each other's kin and associates.

The distinction made in this study between lawsuits concerning family matters (ch. 7) and cases of a 'political' nature, to be discussed here, is obviously somewhat problematic in general terms.³¹ When one Athenian pursued another in court anything was grist to the mill, and I can think of no text which would suggest that Athenians thought it proper to keep 'private' and 'political' disputes separate. Nevertheless, the cases about which we have evidence fall fairly neatly into two sets. Apollodoros' attack on Stephanos of Eroiadai in the speech *Against Neaira* ([Demosthenes] 59), on the grounds that he had married a non-citizen, a public offence, concerns Stephanos' private life, but arose from a political encounter and not a clash over family matters; Stephanos had prosecuted Apollodoros by a *graphê paranomôn* for illegally proposing to spend money from the theoric fund for military purposes. Only in the case of Kallias III of Alopeke's prosecution of Andokides for impiety in 400 (Andokides 1) do we hear of a preceding family quarrel over the allocation of epikleroi.³²

Political lawsuits, as defined here, are cases brought against prominent politicians and their associates with the aim of removing them from the political scene, damaging their reputations, or inhibiting specific measures which they were seeking to carry through. A decree could be blocked by filing a *graphê paranomôn* asserting that the proposal was illegal; this apparently became a very common manoeuvre in the fourth century, although it is represented in our corpus of speeches only by Demosthenes 22, Aischines 3 with Demosthenes 18, and Hyperides 2 *Phil.*³³ Political opponents could be removed by having them sentenced to exile or to a fine too heavy for them to pay, usually through the process of *eisangelia* (M. H. Hansen 1975), or by alleging that they had already been deprived of their political rights on account of debts to the state or some earlier condemnation or misconduct. They could be discredited by attacks on their own morals or those of their kin or associates, for which there were many opportunities; for example, when the brother of the litigious Theokrines of Hybadai was serving as *thesmothetês*, enemies of Theokrines protested that he was corrupting the board by giving his brother

³¹ For an analysis of the role of kin in court in all types of case, organized by kin categories, see Humphreys 1986a, and Table 7.14.

³² Homicide cases brought after the fall of the Thirty had some political implications, but essentially homicide was seen as a private matter, and such cases have accordingly been analysed in ch. 7. P. J. Rhodes 2004 defines 'irrelevance' rather narrowly.

³³ Dem. 20 is another possible instance. Before the potential of the *graphê paranomôn* was established, other tactics were used; the speaker of Antiphon 6 alleges that his indictment for homicide was a move first to prevent him from pursuing his *eisangelia* against Aristion and others for embezzling public funds (6. 35), and later to silence him when, as a councillor, he began to make similar charges against a number of officials (6. 49; see M. H. Hansen 1975, nos. 131–4).

advice, presumably on legal questions. The brother was deposed; the aim of this manoeuvre was apparently to discredit Theokrines by attacking him through a less adroit member of his family, without allowing him the opportunity to defend himself directly ([Demosthenes] 58. 27–8).

The victim's kin might formally or informally be forced to share his exile; they might lose rights to property they expected to inherit from him, or might be accused of holding property that was rightfully his and therefore subject to confiscation; scandalous stories about them might be told in court. Prosecutors hoped to persuade kin of the defendant to appear as witnesses against him, this being regarded as especially strong proof of moral turpitude; and the inducements to do so may in some cases have been considerable. Those who were not prepared to wash their hands of kin, quite apart from any sincere feelings of solidarity, loyalty, and affection that may have motivated them, were drawn into lawsuits willy-nilly, and had every interest in rallying round to clear the name of a relative, bring counter-attacks against his enemies, appear after he had been found guilty and plead for a lenient penalty, or save some of his property from confiscation.

Sentence of exile had traditionally, in many cases at least, included the offender's *genos*, but in this context the term only refers to direct descendants; and in classical Athens sons were not necessarily affected unless they inherited an unpaid fine.³⁴ When kin went into exile together they presumably did so either because kin and close associates of an exiled individual would have found life uncomfortable had they stayed, or because they shared membership in a group defeated in political conflict. Evidence for the involvement of a wider range of kin is poor, but the very scanty Athenian material can be supplemented by a few pieces of evidence from elsewhere in the Aegean. The marriage of Themistokles' daughter Nikomache to her cousin Phrasikles suggests that the groom, son of one of Themistokles' siblings, had accompanied the family into exile. Alkibiades was joined in exile at some time after 415 by his uncle (FB) Axiochos, and a cousin, Alkibiades of Phegous, both of whom had been sentenced on their own account. The exodus of democrats from Athens to Thebes under the Thirty no doubt in many cases set groups of kin on the road together, but precise evidence is hard to find. Thrasyboulos of Kollytos may have travelled to Thebes with his sister and her husband, whose sons Lysitheides and Thrason of Erchia later supported Theban interests in Athens (*APF* 7305). In c.385 Athens granted tax immunity to a number of Thasians who had been exiled from their island for

³⁴ The affair of the Alkmeonidai at the end of the 6th c. was exceptional. The legal position of a son who applied for membership of phratry and deme, or a daughter who married, while the father was *atimos* was far from clear, but it is likely enough that many of them were accepted without challenge. The treatment of the subject in Glotz 1904 is vitiated by misinterpretation of the term *genos*. On Dein 1. 62 see ch. 16 n. 54.

pro-Athenian activities; the list of thirty-three names, seventeen of which are fully preserved, includes a father and son, and a group of three brothers.³⁵ In 376/5 seven Delians were exiled for attacking the Athenian officials on the island in a sanctuary; two of them, Pyrrhaithos son of Antigonos and Hodoiteles son of Antigonos, may have been brothers or cousins (*IG* ii² 1635. 138, 140; V. Chankowski 2008, 249–51). Isokrates 19 gives a lively picture of the wanderings of a group of Siphnian exiles (ch. 2 n. 65, Table 2.8).

Exiles in most cases stood to lose their property, or at the very least had to make arrangements for its management during their absence; kin often came to the rescue in such circumstances, not always acting from wholly altruistic motives. A variety of tactics could be adopted. A kinsman could assert that property claimed by the state, or denounced for sale to pay off debts owed to the state, was his own, or was jointly owned; he could claim that it had been leased or mortgaged to him; he could denounce it as the property of the debtor, claim a reward, and contribute the reward towards payment of the debt; he could purchase confiscated property when it was sold at auction, in order to ensure that it raised enough money to pay off the debt, keep it in the family, and perhaps return it eventually to its original owner. Some of these manoeuvres can only be illustrated by evidence from private proceedings for debt, but it is clear that they would be applicable also in the case of debts owed to the state.³⁶

When Pamphilos of Keiriadai was heavily fined for his conduct as general in 389/8, Mantias of Thorikos seems to have salvaged some of his property by claiming that it had been given to him as the dowry of Pamphilos' daughter Plangon (cf. [Demosthenes] 47. 57; Demosthenes 30. 7–9). Mantias had two sons by her, but their status was far from clear (*APF* 9667, Humphreys 1989, forthcoming *a*). Mantias may have feared that if he openly recognized Plangon as his wife he would be accused of having appropriated even more of Pamphilos' estate. This was the predicament of the speaker of Lysias 19, if we can believe him; his sister, after the death of her first husband Phaidros of Myrrhinous,

³⁵ *IG* ii² 33 (*SEG* 36. 143). Stellandrides, the father of the Nymphon who appears in this text, is mentioned in Pouilloux 1954*a* 348, no. 131, dated to the end of the 5th or beginning of the 4th c., but may have died before his son was exiled. Three brothers, sons of Peithagoras, exiled from Delphi, *CID* II 73; see also *IEph* 2, *IAsos* 1 = *Syll.*³ 169. Forsdyke 2005 deals only with Athens (and her empire).

³⁶ *DGE* 424 (Minon 2007, no. 30) is an Elean law of the mid 4th c. guaranteeing security of civic rights and property to the male and female descendants of exiles, but forbidding next-of-kin to sell property or send money abroad to the exiles. In *Syll.*³ 306 (*IG* v 2, xxxvi–vii, *IPArk* 5), a Tegean regulation of c.324 found at Delphi, it seems possible that women have been preserving or recovering exiles' property (VI), and there are also cases in which guarantors, presumably kin or friends, have taken over exiles' property and repaid debts secured on it (V); but the details are hard to reconstruct (Plassart 1914; Balogh and Heichelheim 1943, 71–81). The complex arrangements made by many Greek cities to enable returning exiles to recover pieces of property they had lost (see also *IvO* 22, *Nomima* 17) have to be seen against this background of sub-legal transactions.

had been married to Aristophanes, son of Konon's lieutenant Nikophemos, and when Nikophemos and Aristophanes were executed in 390/89 the defendant and his father were suspected of having kept part of Aristophanes' property for themselves (*APF* 5951).

We have no explicit example of attempts to preserve property from confiscation by claiming that it was jointly owned,³⁷ but the speaker of *Lysias* 17 was involved in a private suit against the sons of Eraton when the state intervened and apparently confiscated Eraton's property; complications arising from the existence of three heirs may have confronted state officials as well as the private creditor. When Apollodoros of Acharnai denounced the property of his neighbour and ex-client Arethousios (of Pelex? *APF* p. 481 n. 1, Whitehead 1986*a* no. 308; ch 26 n. 53), who had been condemned for issuing a false summons (*pseudoklêteia*) and fined 6000 drachmai, Arethousios' brother Nikostratos claimed that some slaves included in the list of property were his own; their mother also made claims ([Demosthenes] 53. 28). Trouble between the families went back to the lifetime of Apollodoros' father Pasion (D. R. Jordan 2003/*SEG* 53. 256; see also Sosin 2008). Similarly, in a private case, Demosthenes had to deal with claims by Onetor, in his attempt to recover his property from Aphobos; [Demosthenes] 29. 3 says that Aphobos' brother Aisios claimed to own a *synoikia* which Demosthenes regarded as part of Aphobos' estate, and the passage was written by someone who had studied Athenian forensic speeches, though probably not by Demosthenes.

Even more complex manoeuvres can perhaps be detected in *Lysias* 18, delivered by a nephew of the general Nikias of Kydantidai. Nikias' son Nikeratos was killed by the Thirty, but Nikeratos' son Nikias II apparently succeeded in recovering his inheritance when democracy was restored. His cousins, sons of Nikias' brothers Eukrates and Diognetos, had a more difficult time. Eukrates, though perhaps not free of all suspicion of oligarchic tendencies, had served as general in 412/11 and 405/4, and had also been killed by the Thirty, leaving two young sons. Diognetos had gone into exile, probably in 415, and seems to have returned under the Thirty. *Lysias* 18 was delivered by one of Eukrates' sons, opposing the confiscation of property currently held by himself and his brothers, but also being used to support Diognetos' son Diomnestos. The basis for confiscation was presumably a judgment passed against Diognetos in 415 or 410. It seems likely that the same property was claimed at that date by Eukrates; then, under the Thirty, at the time of Eukrates' execution, by Diognetos; and again, c.397, by the sons of Eukrates. The controversial status of this estate probably derived at least partly from Eukrates' and Diognetos' manoeuvres,

³⁷ See however *Is.* 2. 28–9, with Wyse's note; there may have been an ongoing dispute over division. The speaker of [Dem.] 47. 34 checks whether his opponent and brother have divided their father's estate.

first in 415 and later under the Thirty, to preserve each other's property from confiscation.³⁸

Lysias 29 comes from a case in which a friend of Ergokles, the condemned man, is accused of having withheld some of his property from confiscation.

The speaker of Lysias 7 was defending himself against a charge of having destroyed the enclosure surrounding a sacred olive tree.³⁹ The land on which it had allegedly stood had belonged to the oligarch Peisandros; confiscated with the rest of his property in 410, it had been given to a metic, Apollodoros of Megara, as reward for his assassination of another oligarch, Phrynichos; shortly before the rule of the Thirty it had been bought by a certain Antikles, and the speaker had bought it from Antikles after the end of the civil war, in 403. He had leased it to a series of tenants for seven years before taking it into his own hands (7. 4–11). He was on bad terms with some of his neighbours (§ 18); the accusation evidently included allegations that he had sympathized with the Thirty (27). He admits that he has enemies (39–40). He is also childless (41). It seems possible that first Antikles and then he had bought the property with the idea of returning it eventually to Peisandros or his heirs, and that there was local resentment of their actions.

When Leokrates of Pallene left Athens after the battle of Chaironeia—a case of voluntary exile—he ‘sold’ his house and a workshop of slave bronze-casters to his brother-in-law (ZH) Amyntas, who later ‘sold’ it again to Timochares of Acharnai, husband of Leokrates’ younger sister. The sale was probably *prasis epi lysei*, a form of mortgage under which Leokrates would retain the right to repurchase the property if he returned to Athens—although it appears that when Leokrates did return, in 330, Timochares took advantage of Lykourgos’ attack on him and appeared as a witness against him, presumably hoping to keep the property for himself.⁴⁰ Records of rent from leased property, in the lists of houses and

³⁸ Carey 2007 (on Lys. 18. 14) suggests that Poliochos (possibly the comic poet *PCG* 7 p. 550f., since the name is rare) had tried to oppose by *graphê paranomôn* a general decree granting rights of recovery to the owners of property seized by the Thirty, and had been defeated (incurring a fine of 1000 dr.). Lys. 18 would then come from one of a series of cases (§ 20) in which Poliochos and others pursued reinstated owners, or their heirs, whose title was open to question; these suits would belong to the not uncommon category of cases brought, despite the amnesty of 403/2 (on which see Carawan 2004, 2013), against persons suspected of complicity with the oligarchs. Eukrates’ sons were young, inexperienced, and compromised by the record of their FB Diognetos. On the *syndikoi* of § 26 see Rubinstein 2000, 45; § 20 casts doubt on the implication of § 26 that Poliochos had no connection with them. Compare *P. Rainer* XIII F 1 (Carey 2004; 2007, XII F 25–29); this case is even harder to reconstruct, but we are explicitly told (F 27 Carey) that an Epistratos had claimed property in order to preserve it (from the Thirty) for Antiphon’s daughter.

³⁹ Foxhall 2007 argues that this is the meaning of *sêkos*.

⁴⁰ Lyk. 1. 22–4, 58; for Leokrates’ deme see § 136 with *IG* ii² 1669 (Humphreys 1985a, n. 40). One wonders whether the ancestral *hiera* that Leokrates transported to Megara (§ 25) had been made in the family workshop. The mortgages of Is. 5. 21. 3 may have been similar transactions. Cf. also Dein. 1. 58,

land confiscated from those condemned in 415 for mutilating Herms and parodying the Mysteries, may refer to similarly ambiguous arrangements. However, Diogeiton may have rented the house of Phaidros of Myrrhinous (Lysias 32. 14), and Andokides' house was leased during his exile (which may well have been voluntary) to the demagogue Kleophon (Andokides 1. 146); in these cases it seems unlikely that the lessees were well intentioned.

When Apollodoros of Acharnai had successfully prosecuted Arethousios for *pseudoklēteia*, in the case already mentioned, he made an *apographē* listing Arethousios' property for confiscation and waived his right to a reward. In this case the waiver did not benefit the debtor, but in *IG ii² 1631. 351ff.* the property of Sopolis of Kydathenaion, condemned for failing to return naval equipment issued to his deceased brother, is denounced by Polyektos of Hestiaia, who asks to have his reward credited towards payment of Sopolis' debt. We cannot tell whether something similar was going on when Euthykles son of Euthymenides of Myrrhinous denounced the Peiraios property of his neighbour and fellow-demesman (possibly also kinsman) Meixidemos of Myrrhinous.⁴¹

A similar tactic is reported in the *hypothesis* to [Demosthenes] 25, which derives its information from Lykourgos' speech against Aristogeiton. When Aristogeiton was in debt to the state for 62,000 drachmai he 'denounced' a piece of his own property and his brother 'bought' it, arranging to pay off the debt over ten years in instalments. After two years the brother, Eunomos, defaulted on the payment.

Demosthenes 24. 135 suggests that the politician Kallistratos might have brought in a measure to secure the release of his uncle (MB) Agyrrhios from his imprisonment for debts to the state; this is pure hypothesis, but it is significant that kinship is considered an appropriate motive. (Agyrrhios was free by 374/3, R/O 26.)

Hypereides F XLII/134 Jensen 1917 comes from an *antidosis* case against Pasikles, presumably the son of the banker Pasion of Acharnai; the speaker alleges that Phormion (Pasikles' stepfather and ex-guardian) is 'sneaking him off' the liturgy list of the 300 richest Athenians (*ekkleptei auton*; Sauppe's *hauton* seems unnecessary). Phormion probably claimed as his own or his wife's some of the property attributed by the speaker to Pasikles.

Polyektos accompanies exiles to Megara to help his MH (Worthington 1992 mistranslates), and *DGE* 424, n. 37 above.

⁴¹ Sopolis: Gabrielsen 1994, 163–4 (on the family see ch. 25 n. 11; Table 5.6). Meixidemos: *Agora* XIX P 26; ch. 5 n. 87. The account in R. G. Osborne 1985*a*, 1–6 contains several inaccuracies. R. G. Osborne 1985*e* collects material on *apographē*. Pace Hallof 1990, Langdon 1994, the question is not whether property was sold by auction, but how purchasers' social ties influenced practice. The evidence seems to show that in practice private denouncers usually waived their rights to reward (demarchs were not rewarded for denouncing). However, D. R. Jordan 2004 interprets Wunsch 1897 110 (non-Attic dialect) as cursing a denouncer (?) together with the poletai and purchasers of the confiscated property.

We also, naturally, find kin intervening to help ward off adverse court judgments. Xanthippos' prosecution of Miltiades in 489 (Herodotus 6. 136) may have been designed to divert hostility from his wife's kin, the Alkmeonidai, to another target. A father puts in a *graphê paranomôn* when his son is threatened with immediate execution, without trial, for theft of sacred property; a son defends his elderly father, accused of involvement with the oligarchic government of the Four Hundred (Lysias 20).⁴² When the generals who returned from defeat at Arginoussai in 406 were attacked, Euryptolemos III son of Peisianax, a kinsman (*anankaïos kai epitêdeïos*) of Perikles II, one of the accused, made an attempt by a *graphê paranomôn* to ward off immediate condemnation.⁴³

Prosecutions that might be stigmatized as sycophantic, undertaken only for the sake of financial reward or in the hope of frightening the defendant into buying the prosecutor off, are sometimes justified with the claim that the speaker is avenging a prior wrong done to him or to one of his kin. Epichares, speaker of [Demosthenes] 58, prosecutes Theokrines of Hybadai, who was responsible for his father's loss of civic rights, alleging that Theokrines too is *atimos* and is exercising his own civic rights illegally.

Demosthenes 22 is an attack on Androtion delivered by Diodoros; he claims that Androtion had earlier accused him of parricide and had prosecuted his uncle (*theios*, presumably FB) for impiety, for associating with him (§ 2). [Demosthenes] 59, as already noted, is a speech written by Apollodoros of Acharnai for the trial of Neaira and (indirectly) of Stephanos of Eroiadai, who had allegedly passed off Neaira, a freedwoman and prostitute, as his legitimate wife. The suit was brought by Apollodoros' brother-in-law (WB) and son-in-law Theomnestos son of Deinias of Athmonon, who explains that he is bringing the case because Stephanos had prosecuted Apollodoros for illegally proposing a decree when in debt to the state and therefore debarred from doing so, and had proposed a crippling fine of 90,000 drachmai; he had also brought a homicide charge against Apollodoros. Theomnestos explains their reasons for hostility to Stephanos (§§ 1–15), and Apollodoros then takes over the case, acting as supporting speaker (*synégoros*).⁴⁴ Andokides in 400

⁴² *Hyp.* [Dem.] 25. 1–2. From the reference to the same affair in Dein. 2. 12 it appears that the boy accused was kin to the priestess of Artemis Brauronia whose orders he claimed to be carrying out. In Lys. 23. 10 Pankleon, accused of being a runaway slave, avoids court proceedings temporarily by producing guarantors who say that his brother will defend his claim to be a free man. In Lys. 20 the son is supported by another speaker: see Rubinstein 2000, 148, 153–4.

⁴³ Xen. *Hell.* 1. 7. 16; Humphreys 1986a, 82–3. FMFBSSS in *APF* 9688 VIII; FMBDS in W. Thompson 1969a. In the previous year Euryptolemos had figured prominently in the welcome given to Alkibiades, also a kinsman (*anepsios* Xen. *Hell.* 1. 4. 19; MFFBSSS *APF*, MZS Thompson; cf. ch. 9 n. 40). Cf. also D. L. 5. 79, an *anepsios* of Demetrios of Phaleron defends Menander against an attack for being Demetrios' friend.

⁴⁴ To bring such a charge was also a way for a young man with political ambitions to become known. When Thettalos son of Kimon denounced Alkibiades for parodying the Mysteries (Plut. *Alk.*

calls as witnesses for his defence two kinsmen of men denounced for parodying the Mysteries in 415, Alexippos nephew of Akoumenos and Philippos uncle of Autokrator, explaining that they are sure to remember the name of the man who denounced their kin.⁴⁵ Timokrates of Krioia and his son Polyeuktos (*APF* 13772) were both expected to appear as witnesses for Meidias in the case initiated by Demosthenes in 348; Timokrates had been prosecuted by an associate of Demosthenes in 353/2 (Demosthenes 21. 139).

A man preparing to appear in court would call upon kin for help; they might collect witnesses for him, aid him in composing his speech, appear as supporting speakers (*synégoroi*) or witnesses, appeal to the jury to let him off lightly if the verdict went against him, or merely show up in court as a passive expression of solidarity.

Two orphaned young-men-about-town, Teisis and Archippos, got into a scuffle in the palaestra. Teisis' guardian, himself, it is claimed, young enough to be the boy's *erastes*, advised him to pretend to make up the quarrel and watch for an opportunity to catch Archippos alone. Teisis enticed his enemy into his house by pretending to invite him to a *kómos*, and flogged him. An older kinsman, who heard of it the next day and felt they had gone too far, had Archippos taken to the nearby house where he lived with his brothers; they carried him to the main trading hall in Peiraios, the Deigma, and showed his injuries to as many people as possible, both Athenians and foreigners, to arouse public indignation and, no doubt, to recruit suitably respectable and well-known citizens to appear as witnesses.⁴⁶ Ariston, the speaker of Demosthenes 54, who was attacked in the evening in the Agora, met a kinsman (*syngenés*), Euxitheos of Cholleidai, as he was making his way home; Euxitheos took him to the baths to clean up, accompanied him to see doctors, and then arranged for him to spend the night in the house of Meidias, with whom Euxitheos had been dining; this enabled them to call Meidias, a well-known man, as a witness (54. 7–10).

When Apollodoros of Acharnai was having difficulty in prevailing upon his co-trierarch Polykles to take over the ship for which they were responsible, his father-in-law Deinias went with one of the ship's officers (*pentékontarchos*) to

19. 3, 22. 4), he was presumably motivated by envy of Alkibiades' political success and hopes of furthering his own career.

⁴⁵ Andok. 1. 18, *APF* 11907. Autokrator's uncle was probably MB (closer in age than FB).

⁴⁶ Lys. F XVII Gernet/Bizos 1926, CXIX/75 Th. 1913, CXXIX/278–9 Carey 2007. The speaker is a friend who was with Archippos when he entered Teisis' house. On the selection of witnesses see Humphreys 1985*b*. Since Archippos was delivered to his brothers, his father was presumably dead. Teisis was recently orphaned and trying to cut a dash as *neos kai plousios* (§ 4). The speaker of Lys. 1 recruited various friends to help in his rather similar plot (intention to rough up, rather than kill?) against his wife's lover (§§ 23–4); he took a slave witness to the house of one of them for questioning (§ 18). Entrapment also in [Dem.] 59. 64–71. See also Scafuro 1997, ch. 8; Todd 2000 on Lysias F 2.

Polykles, who was still in Athens, in an attempt to settle the affair; Deinias later testified for Apollodoros in court.⁴⁷

No doubt there were councils with kin and friends before cases came on in court, discussions and advice on the presentation of the argument. Sometimes kin acted as supporting speakers, as Apollodoros did in the Neaira case. The brother of the speaker of [Demosthenes] 58 made a supporting speech; the homicide prosecution of Lysias 13 was formally made in the name of the victim's brother, Dionysios (§ 86), but the main speech was delivered by his brother-in-law, the victim's WB.⁴⁸ Demosthenes was asked by a cousin (FBSS), Demon, to help him in a bottomry case; the speech we have, Demosthenes 32, is ostensibly Demon's own part of the presentation, and ends with a hint of division of labour between the two, Demosthenes being out of practice in dealing with business disputes (§ 32); since he was by this time a famous rhetor, he had to give the impression that his involvement in the case was limited, a kindness done by a busy man for a kinsman.

The story that Kallias II 'Lakkoploutos' of Alopeke called his cousin⁴⁹ Aristeides (also of Alopeke) to testify for him in court, true or not, represents an ideal situation; Aristeides' reputation for integrity would persuade a jury that Kallias' cause was a just one. No fourth-century rhetor was so unambiguously respected. The advantages of having an eloquent, clever, well-known kinsman as supporter in court had to be weighed against the risk that the jury would feel they were being manipulated. But for a well-known kinsman to refuse support was damning. Demosthenes reports indignantly that the politician Euboulos—witness for Aischines against Demosthenes in 343—had refused to speak for his cousin Hegesileos in the first part of his trial, though called on to do so, and in the second part of the hearing, when the vote had gone against Hegesileos and his penalty was being decided, did not plead for his kinsman but apologized instead to the jury for being related to him.⁵⁰

Euboulos had perhaps hoped that his presence in court would be taken as sufficient evidence of support, and that Hegesileos would not embarrass him by

⁴⁷ [Dem.] 50. 24–8. Polykles was probably *APF* 11988, son of Polykrates of Anagyrous, a man with a respectable liturgic record apart from this affair.

⁴⁸ The speaker represents himself as acting on behalf of his sister, who had been solemnly adjured by her husband to see that his death was avenged, and of her child. The question whether the victim's brother or his son's guardian had the better right to play the role of next-of-kin in a homicide case may not have been raised. For kin as *synegoroi* see Rubinstein 2000, index s.v. *relatives*.

⁴⁹ FZS: Plut. *Arist.* 25. 4–8, *APF* 7826 IV. The story belongs to the 5th or early 4th c., and can probably be taken as valid evidence of kinship between Kallias and Aristeides.

⁵⁰ Dem. 19. 290, FBS? It is not clear whether Euboulos was called in the first part of the trial as *synēgoros* or as witness. A hostile witness who refused to testify could be compelled to take an oath disclaiming knowledge of the matter in question, but a litigant was not compelled to impose such an oath, and would not use it on his own witnesses (Humphreys 1985*b*). See *AO* 313–14.

calling on him to speak. Andokides in 400 was more tactful; the audience at his trial included many of those who had been accused in 415 (1. 25–6), but he was careful not to call anyone formally as witness who had actually been condemned. He calls on his own kin, who had owed their release to him—our text of the speech (1. 69) gives no indication of their identity or number—and the Kallias who testifies in 1. 18 about the indictment of Andokides' father may be the latter's cousin.⁵¹ Plato tells us that kin of many of Sokrates' associates were present at his trial and were ready to affirm that his influence had not harmed their sons or brothers, but it is far from clear that any of them actually spoke.⁵²

The speaker of Lysias 20 (§ 11ff.) was the second of three brothers, defending his elderly father Polystratos of Deiradiotai on a charge of participation in the oligarchic government of 411/10. He stresses the patriotic exploits of his two brothers; the older one may have been abroad on service in the Hellespont, but at least the younger brother should have been present in court, and presumably spoke in support.⁵³ The brothers of Arethousios appeared in court to support him when Apollodoros prosecuted him for *pseudoklêteia*; they begged the jury to fine him instead of sentencing him to death, and promised to help him pay the fine. As we have seen, they later claimed that property which Apollodoros denounced as owned by Arethousios belonged to them and to their mother.⁵⁴

Aischines' brothers appeared in court to support him in his case against Demosthenes in 343; Demosthenes expected them to speak, and can find nothing to reproach them with except their humble origins (19. 237). The eldest, Philochares, was currently serving his third consecutive term as general. Demosthenes is more offensive about Aischines' brothers-in-law (WBs) 'Nikias' (Philon) and 'Kyrebion' (Epikrates): the former, he says, had gone with Chares

⁵¹ FFZS? *APF* 828 IV B. My suggestion (Humphreys 1986*a*) that the Diognetos who testifies in Andok. 1. 14f. might be his ZHZHB, the brother of Nikias of Kydantidai, should be withdrawn; Lys. 18 implies that Diognetos was dead by this time, and had been too much involved with the Thirty to be a desirable supporter.

⁵² *Apol.* 33e. Fathers and sons: Kriton and Kritoboulos of Alopeke, Lysanias and Aischines of Sphettos, Antiphon and Epigenes of Kephisia. Brothers: Nikostratos son of Theozotides, whose brother Theodotos, a follower of Sokrates, was dead (*APF* 6915), Adeimantos and Plato, Aiantodoros and Apollodoros, Paralios and Theages sons of Demodokos of Anagyrous. The brother of Chairephon of Sphettos testifies in *Apol.* 21a.

⁵³ *APF* 12076 (see also Rubinstein 2000). They were an adventurous and much-travelling family; the younger brother probably served with the 10,000, and the eldest, Philopolis, had a homonymous son who was (?) given honorary citizenship and proxeny at Olbia (Dubois 1996 no. 21). Habicht 1979, 151 dated this text late 4th c., but he agreed *per ep.* in 1995 that a date c.380 would be possible. However, *SEG* 42. 722, a partial copy of the proxeny decree on a sherd, is dated by the script c.300.

⁵⁴ [Dem.] 53. 26–8. *Pseudoklêteia* was a form of sycophancy. General remarks in 53. 29 on appeals by and on behalf of orphan children, *epiklêroi*, and widowed mothers. Unspecified *syngeneis* and *philoï* appear unsuccessfully for a condemned man, [Dem.] 59. 117. See Chaniotis 1992, Rubinstein 2000 on non-speaking supporters in court.

to Egypt as a prostitute (i.e. mercenary), and the latter had misbehaved in the procession at the Dionysia.⁵⁵ They had been in court when Aischines prosecuted Timarchos ('water running uphill', the pot calling the kettle black), and were probably present again in 343.

It was a common practice to denigrate an opponent by making damaging assertions about his kin. Alkibiades IV, son of the famous general, presents his father's career in as favourable a light as possible and reminds the jury that Charikles, brother-in-law of his opponent Teisias, was a member of the Thirty.⁵⁶ The accuser of Polystratos of Deiradiotai alleged that he was a kinsman (*syngenês*) as well as a fellow-demesman of the oligarch Phrynichos (Lysias 20. 11–12). Ariston, the speaker of Demosthenes 54, expects his opponent Konon to slander his brothers (§ 14).

The commonest accusation, of course, is that the opponent's kin are utterly unreliable as witnesses. Demosthenes tries to put a damaging construction on the fact that Aischines sent his brother to the Council to testify that he was too ill to travel on the third embassy to Philip in 346.⁵⁷ The speaker of [Demosthenes] 47 is suing the brother and brother-in-law (ZH) of Theophemos, with whom he had come into conflict over trierarchic obligations, for perjury.⁵⁸ The dispute had been going on for some time; the speaker had successfully prosecuted Theophemos by *eisangelia*, there had been a fight, Theophemos had sued him for assault (*aikêia*), and had got him convicted on the testimony of the defendants, Euergos and Mnesiboulos. They had forced their way into the speaker's house to seize property, and had left an elderly freedwoman mortally wounded. The speaker must have announced his intention of suing them for perjury earlier, when they gave their testimony in the assault case, but now they had given him added provocation. As he says (47. 4), most of his speech is devoted to discussion of their character and behaviour; in any case, no one should believe a litigant who can produce only kin to support his word (11–12). The same point is made in *POxy* 1607 fr. 5. 215–24, where the witnesses in an *eisangelia* are affines (*kêdestai*).⁵⁹ The

⁵⁵ Dem. 19. 287, *APF* 14625; cf. Dover 1974, 30–3. The nicknames must have been topical reference; 'Nikias' is hopelessly obscure to us, but Kyrebion is 'bean-husks'. Men who eat bean-husks are shaggy-arsed and hence virile: Kratinos 339 *PCG* (295 K), Plato Com. 3 *PCG* 7, with Dover 1978, 37–8, Henderson 1975, 211–12. Aischines responds (2. 149): 'my brother sired his own children, he didn't have to send his wife to sleep with Kyrebion'.

⁵⁶ Isokr. 16. 42, *APF* 13479. Charikles seems to have been older than Teisias, to judge from their careers, so was perhaps his ZH (above, p. 455).

⁵⁷ Dem. 19. 124; a doctor also testified, and so according to Aischines (2. 94) did A.'s nephew, apparently one of the sons of Aphobetos (*APF* 14625 II misses this reference).

⁵⁸ *APF* 7094; ch. 5 n. 30.

⁵⁹ M. H. Hansen 1975, no. 119; cf. Whitehead 2000, 86–9. One of the witnesses, Theomnestos, also acted as *synēgoros*, perhaps de facto taking the leading role in presenting the case (*PLond* I 115 = Hyp. 1). If the other two witnesses, Anaschetos and Kriton, are the sons of Demoteles of Halai (*APF* 819; ch. 29 n. 147) and of Astyochos of Kydathenaion (*APF* 8828; these identifications are not suggested in *APF*; on

speaker of Isokrates 18 (52–4) tells a story of previous conspiracy between his opponent Kallimachos and a *kêdestês*. After Kallimachos' affine had come to blows with Kratinos in a dispute over land, he concealed a female slave and claimed that Kratinos had killed her. Kallimachos testified in court that the slave was dead, but Kratinos managed to discover where she was hidden, seized her, and confounded his opponents by producing her in court.⁶⁰

The corollary of the expectation that kin and affines would be prepared to lie for one another in court was belief that a kinsman who appeared as a hostile witness must be telling the truth. Athenians were of course aware that kin quarrelled, but expected them to close ranks in conflicts against outsiders; a man whose kin refused support in these circumstances must have treated them with unpardonable ruthlessness. Aischines recruited the blind uncle (FB) of Timarchos, whom he was prosecuting for illegally exercising civic rights, to testify that Timarchos had defrauded him of his share of the family property and had even failed to support his application for a disability allowance (1. 102–4). The speaker of Hyperides 3 called a *kêdestês* of his opponent, Athenogenes, apparently to give damaging evidence about his character.⁶¹ The speaker of Lysias 31 (20–3) alleges that his opponent's mother brought accusations against her son during her lifetime (no details are offered), and gave three hundred drachmai to a non-kinsman, Antiphanes, for her funeral, not trusting her son to bury her; he calls Antiphanes as a witness.⁶² The topos of the hostile kinsman's testimony attracted composers of rhetorical exercises: in [Demosthenes] 25. 55 we are told that the brother of the defendant, Aristogeiton, who is in court waiting to speak on his behalf, has a suit pending against him for selling their matrilinear half-sister into slavery, and in [Demosthenes] 29. 15–18 (cf. 23, 55) Demosthenes is made to claim that in his earlier suit against Aphobos he compelled his opponent's brother to give hostile testimony, which he is now repudiating, and that he compelled Aphobos to give testimony against his uncle (MB) Demon.⁶³ Aischines (2. 93) claims that Demosthenes had initiated a

Anaschetos see also now Steinhauer 2009a/SEG 59. 142), then the two also appeared together in the list of guarantors of triremes for Chalkis in 341/0 (IG ii² 1623. 191–3). The defendant, Lykophron, was accused of destroying the democracy by disregarding its laws, i.e. by committing adultery. The charge included allegations that the woman's child, born after the death of her first husband, was not his, so the witnesses may have had property interests in the case. Use of *eisangelia* for cases of moral turpitude is typical of the Lykourgan age (Humphreys 1985a).

⁶⁰ The story has notable similarities to the affair of [Dem.] 47.

⁶¹ Hyp. 3. 34. The witness may be ZH (Humphreys 1986a, 80); the passage is unfortunately fragmentary.

⁶² Antiphanes may well have testified only that he received the money and spent it as directed. The woman may have died in the last years of the Peloponnesian War, or under the Thirty, and there is nothing necessarily sinister about this arrangement for trusteeship (cf. Todd 2000, 310). The accusation in [Dem.] 25. 54 that Aristogeiton sued those who buried his father seems to be based on Dein. 2 (8, 11, 18). Cf. Is. 5. 39.

⁶³ For the argument that [Dem.] 25 and 29 are rhetorical exercises see Humphreys 1985b nn. 69–70, 1986b. M. H. Hansen 1976, 144–52 defends [Dem.] 25; MacDowell 1989, followed by Rubinstein

suit for assault against his cousin (FBS) Demomeles, but subsequently dropped it; he can produce no testimony to support this allegation, and it is interesting that he does not attempt to make capital out of Demosthenes' suit against his guardians. To threaten to sue a kinsman and subsequently settle out of court was not particularly heinous behaviour.

Suits of a political nature against kin do seem to have been rare. Kallias III of Alopeke, a man who can have had few real friends, is said to have protested to the Assembly that his brother-in-law (ZH) Alkibiades III was plotting against him;⁶⁴ in 400, claiming to act in the capacity of Torchbearer of the Eleusinian Mysteries, he prosecuted Andokides, with whom he had affinal connections, for impiety.⁶⁵ This relationship was perhaps too remote to be considered a bar to court action. Perikles' prosecution of Kimon in 463 was also an attack on a remote affine, husband of a cousin (MFBSDH according to *APF*9688). It is interesting that the gossip about this trial—in which Perikles eventually played only a minor role—did not hint at any mediation by Kimon's wife or any other member of her family, but instead attributed Perikles' change of heart to a private plea by Kimon's sister Elpinike.⁶⁶ The story implies that Perikles' private ties with Kimon should have inhibited him from carrying their political rivalry into court.

Questions of political etiquette and the proper dividing line between public and private relationships seriously preoccupied fifth-century Athenians. Themistokles, a target for many hostile stories, was said to have pledged himself openly to look after his friends' interests even when in office (Plutarch *Aristeides* 2. 5, cf. Wade-Gery 1937; but see also *Mor.* 307b). Perikles and Kleon both made a point of neglecting private ties in order to devote themselves to public affairs (Connor 1971). Sophokles presents Kreon, in the *Antigone*, as determined to subordinate private loyalties to the interests of the state. Political rivalry was, in theory, impersonal, a matter of securing for the city the best leadership and the best advice. To take a political opponent to court meant—if the prosecution succeeded—to inflict real damages on him, to put his property, civic rights, or even life in jeopardy. The feelings of aggression and hostility engendered by political competition could be more openly expressed in court than in the Assembly. Particularly in the fourth century, after

2005, defends [Dem.] 29; Dilts 2008 rejects 25 but accepts 29. On the claim in [Dem.] 29. 20 that Demosthenes made Aphobos testify against Demon see ch. 7 n. 145.

⁶⁴ [Andok.] 4. 15; if there is anything in this story, it should belong in 415, when Kallias had to dissociate himself from Alkibiades' parodies of the Mysteries. The text is usually thought to belong to the early 4th c.; for authorship see Feraboli 1972.

⁶⁵ On the date of the suit see MacDowell 1962, Appendix J. Kallias had been married to the widow of Andokides' MB, and earlier to A's cousin (MZD; *APF* 828, 7826 XI–XII). They were involved in dispute over an *epiklêros* (Andok. 1. 117–23, ch. 4 n. 8, Table 4.2).

⁶⁶ Plut. *Kim.* 14. 5 (Stesimbrotos *FGH* 107 F 5). The brother–sister tie is considered stronger than that between husband and wife (cf. Humphreys 1983a/1993, 71).

ostracism had been discontinued, court cases provided a constant running accompaniment to the (more elevated?) style of confrontations in the Assembly.

CURSE TABLETS

Beneath the surface soil of Attika lay a muttering chorus of yet more antagonistic voices. A man or woman who felt injured or threatened could invoke the aid of underworld deities by writing the names of enemies on (usually) a piece of lead sheet, with a curse or request to the dark powers to seize or paralyse them, and placing it in a tomb, throwing it down a well, or posting it in some other conduit felt to be suitable.⁶⁷ In many cases the curser associates further victims with his principal target, either because they have collaborated in the activity against which he is reacting, or because he wishes to punish his victim by associating those near and dear to him in his sufferings.⁶⁸ The writer of one particularly long list appears to have decided to finish off all his enemies in one fell swoop, associating well-known politicians, deme opponents, and loose women in a single comprehensive imprecation (cf. Gordon 1999; *SEG* 58. 265).

Socially, these documents seem to fall into two main groups: curses provoked by legal or political disputes, directed at men attested elsewhere as members of

⁶⁷ Curse tablets are difficult to read, and to date; the classic discussions are Wunsch 1901, Audollent 1904, and Wilhelm 1904; see also now Lopez Jimeno 1991 with *SEG* 49. 313; Ogden 1999; Eidinow 2007 (curses in Eidinow's appendix of texts and—not always reliable—translations, which follows the numbering of Wunsch 1897; Audollent 1904; and D. R. Jordan 1985, 2000*b*, are marked E below; concordance in *SEG* 57. 2157). Pébarthe 2006, though he discusses lead letters on pp. 82–4, does not deal with curse tablets; see Ceccarelli 2013 s.v. *curses*. Comprehensive list of finds in Jordan 1985, updated 2000; some more recent bibliography cited below. Tablets of classical date that seem to be written by women are scarce, but Jordan 1985 no. 127 (E), from near Cosenza (Cavalcanti 1974), has only female victims—Diodora sister of Klenagora, Thearis daughter of St[...], [...]a mother of Philira—and the identification by reference to other women suggests a female milieu (it should not, in my view, be connected with the magical practice of identifying men matronymically, attested in curses of the Roman period). The date is unclear. Lead was a common material for letters (Wunsch 1897, 102, E, explicitly calls itself a letter, and Ziebarth 1934 no. 20 = Jordan 1985 no. 62, from Eretria, has an address; see Lopez Jimeno 1999, 63–4; Nisoli 2007, Eidinow and Taylor 2010). It is possible that curses were also written on more perishable materials, and posted in sites less often examined by archaeologists than graves, sanctuaries, and wells (on these sites see Lopez Jimeno 1999, 37–44; cf. also Nisoli 2007; D. R. Jordan and Rotroff 1999/*SEG* 49. 322; Ogden 1999; N. D. Robertson 2010, 36; curse in house, *Agora XIV* p. 177). After the classical period cursers tend to devote increasing amounts of space to invocations and formulae, and provide correspondingly less information about their targets, though lists of victims occur in the 3rd c. CE at Kourion in Cyprus (Mitford 1971 nos. 132, 137–8, 140). For changes in practice over time see Bravo 1987, 1995.

⁶⁸ The belief that curses were inherited by descendants, both male and female (Parker 1983, 198–206) does not seem to influence the writers of these tablets, whose references to children, when they occur, are more specific than the formulaic *kai genos* found in e.g. proxeny decrees or sentences of exile.

the wealthier class,⁶⁹ and those inspired by petty fraud, directed at tavern keepers, prostitutes, craftsmen, and other members of the urban under-class, many of them freedmen and -women, or slaves.⁷⁰ In the first type of tablet the principal targets are most often associated with fathers, sons, brothers, affines, or fellow-demesmen; in the second, with spouses or slaves.⁷¹ This is one of the few types of evidence that allows us to see differences in the kinship components of identity, and in the position of women, corresponding to social class. In the under-class identity seems to be more narrowly concentrated in the household, and women are regarded as more active participants in its affairs; slaves, too, are regarded as their owners' active partners.

In either class, the targets may be associated in the curser's mind positively, as cooperating to harm him, or passively, as members of a unit on which he wishes to inflict punishment. A curser involved in a legal dispute names Theagenes, his wife, his accomplice Kineas, three cooks with the wife of one of them, and three other men—Pherekles, Seuthes, and Lamprias—the two latter of whom, at least, are probably slaves (Audollent 1904, no. 49, E). Someone seems to have suffered from food poisoning after a festive dinner. Another tablet (D. R. Jordan 1985, no. 6, E) curses Pytheas and Pythippos, Hegesistratos, Smi(n?)dyrides, and 'all those who are opposed to Euopes, with Pytheas, in the law suit'.⁷² Cursers often designate those named as opponents in lawsuits or as members of a gang,

⁶⁹ D. R. Jordan 1980 no. 2 = 1985 no. 14 (E) names Pleistarchos, Eupolemos, Kassander, and Demetrios of Phaleron (see also Habicht 1993*b*). Rubinstein 2000, 64–5 and Eidinow 2007 do not deal with the prosography of curses. SEG 44. 226, from the NW Agora, cursing a Menekrates with 5 named *synégoroi* (the term perhaps used loosely to cover also witnesses), may have been provoked by a tribal dispute in X Antiochis: the main target could be M. Kratetos of Alopeke (APF 9940). Autolykos Epilykou and Timostratos Hierokleidou could also come from Alopeke (ch. 32 n. 24), Kallistratos from Pallene, and Nikostratos Gniphonon from Pallene or Thorai (cf. n. 85).

⁷⁰ 'Under-class' tablets (cf. Dickie 2001, 85–7) may also refer to lawsuits (3 *mageiroi* in court, Audollent 1904, 49, E). Münsterberg 1907 no. 1, a list of 12 names, both male and female, found at Liossia east of Dekeleia, Jordan 1985 no. 39, is hard to classify. No. 3, with the same provenance (Jordan no. 41, Lopez Jimeno 23), is apparently directed at a family of Egyptian metics. *Mes.-Arg.* 464–5, husband and wife (?), *kapêleion* (SEG 57. 297). Few tablets are attested as coming from rural Attika (had Münsterberg's tablets belonged to G. Finlay?), and we should not be surprised by structural differences between rural and urban texts—though Wunsch 1897, 65, (E), from Daphni, directed at opponents in a lawsuit, does not differ from tablets found in or near the city or Piraeus. There are also probably structural differences between Attic urban curses and those found in other parts of Greece: e.g. perhaps Dubois 1996, no. 106 (D. R. Jordan 2000*b* no. 116, E), a juridical curse where the list of targets begins with a nuclear family.

⁷¹ The distinction is not absolute, and unidentifiable cognatic kin may figure on tablets of the first type. The 'under-class' pattern occurs also on Wunsch 1897, 55 (E, SEG 53. 257), many of whose targets are soldiers (both citizen and non-citizen).

⁷² *Kerameikos III* no. 4 (Jordan 1985 no. 6, E). Peek dated this text to the 4th c., noting Pytheas son of Pythippos of Bate, councillor c.343/2 (*IG* ii³ 4. 75. 29), but Jeffery 1955 (followed by *LGP*) puts the script in the late 5th c., and Smindyrides (l. 4) may be the man named in Andok. l. 15 and on SEG 52. 254 (Jordan 2004). In any case Pytheas and Pythippos are probably kin; we may be dealing with earlier members of the councillor's family, but the names are not rare.

ergastêrion: the term for a workshop could be used of any combined effort the writer wished to stigmatize.⁷³

On the other hand, when Lysanias, the melter (*phusêtês*) of the mint, is cursed with his wife and his works, we need not necessarily conclude that she worked in the mint with him; she was part of his life, and the curser wanted to see that life in ruins (*Kerameikos III*, no. 1 = *SEG* 10. 394, D. R. Jordan 1985 no. 4, E, mid fifth century). Similarly, ‘Titibis, daughter of Choirine, who wronged me’ is cursed (by a rejected lover? by a woman?) with her husband and her three children, ‘two female and one male’.⁷⁴

The writer of the long tablet already mentioned (n. 70) has enemies at all levels. He groups three members of a prominent family from Euonymon with Sostratos and Polyeuktos of Sphettos (A 60–4):

Strombichos Euon.
Strombichides Eu.
Sostratos Sphe.
Polyeuktos Sphe.
Eukrates Euon.

Strombichides and Eukrates (repeated in 71–2) may be brothers, sons of Strombichos (III); Sostratos and Polyeuktos are father and son, and the order of names suggests that they might have been affinally linked with Strombichides.⁷⁵ The curser also lists a group of about sixteen demesmen from Kydantidai, presumably his own deme, and a number of women, some labelled as whores.⁷⁶

⁷³ *SEG* 30. 1175 (Jordan 1985 no. 124, E; Dubois 2002 no. 60; Samama 2003 no. 506), mid 3rd c. BCE, from Metaponto, is a curse on an *ergastêrion* of doctors, with 17 names. No kin ties can be detected.

⁷⁴ Wunsch 1901, no. 102 (E, *SEG* 37. 219). The reference to Titibis’ children is followed by the names Pankrate, Mant(ian), Diophanton, Metagenei [*sic*]. These might be additional victims; further targets are listed on side B, including two boxers.

⁷⁵ This family is hard to reconstruct (cf. Table 16.1). *APF* 4386, dating our curse in the 320s, assumed that Strombichides and Eukrates were otherwise unattested sons of Strombichos III (son of Diopeithes I of Euonymon), who is recorded as member of a trierarchic symmory in mid century. (*APF*’s Strombichides II, named without patronymic on *IG* i³ 1048 = *IEleus* 49, should be identified with Strombichides I, killed in 404.) Jordan and Curbera suggest that the Eukrates of the curse may be Eukrates I, taxiarch in 356/5 (*SEG* 21. 668), uncle (FB) of Strombichos III. He would however have been an elderly taxiarch, and still older at the date of the curse; his brother Diopeithes I must have been born c.425–420. (Their father Strombichos II is not attested for any activity of his own; *LGPN* Strombichos 6 wrongly attributes Thuc. 8. 15 to him rather than to Strombichides 2). The three targets were certainly kin, but precise specification of their relationships is currently impossible. Demophilos and Demosthenes of Phyle (B 93–4) may be father and son; whether Pamphilos (B 95) belongs to the same family is unclear (Humphreys 2010*b*; Table 28.12).

⁷⁶ Kydantidai: ch. 24 n. 97. *Laikas(tria)*, B 119–23: cf. Jocelyn 1980; Bain 1991; Humphreys 2010*b*. In this case the designation should probably be taken literally, although offensive epithets and nicknames do occur on curse tablets. Trumpf 1958 = *SEG* 51. 66, Jordan 1985 no. 9, E, a curse buried with a doll labelled Mnesimachos, evidently used for magical purposes, and a list of names followed by ‘and any *syndikos* or witness they may have with them’, may include insulting nicknames (cf. Brenne 2002 for

His mind seems to flit from one category of enemies to another, but coherent groupings occur. Xenokles son of Xeinis of Sphettos and his father appear below a metic called Xenokles, and a Xenokles of Leukonoion (A 20, 22, 25); it is not clear whether the former is a freedman of the Sphettos family and the latter a kinsman, or whether they are linked in the curser's mind only by their names.⁷⁷ The same question is raised by the juxtaposition in A 26, 30 and B 128–9 of Democharides of Thorikos and Charidemios of Peiraios.

The potential of curse tablets for revealing the role of kinship in social classification can be clarified by contrasting the Attic material with tablets found elsewhere. A large fifth-century curse from Selinous in Sicily lists at least twenty men, fourteen of whom can be arranged in four mini-lineages with possible links to each other and to three of the remaining individuals (Table 14.1).⁷⁸ The curser adds unnamed 'sons' to several names. This list resembles Attic lists of phratry members (Table 19. 1) rather than Attic curse tablets. Either it was provoked by a quarrel within a phratry or similar group, or patrilineal groupings were more significant in the social and political life of Selinous than in that of Athens.⁷⁹

Where small kin groups can be identified on Attic curse tablets (Table 14.2), their structure is that of the by now familiar bilateral kindred with its network of affines:

Nausistratos of Aigilia
Nikonymos son of Nausistratos
Smikythos of Aigilia
Smikythion of Aigilia
Aristaichmos of Anaphlystos
Euktemon
Kleistrate daughter of Nausistratos of Aigilia
Xenokrateia daughter of Smikythos of Oe

(SEG 24. 262, Couilloud 1967; D. R. Jordan 1985 no. 45; Lopez Jimeno 1999, 27)

offensive comment on ostraka), although Babyrtides is attested elsewhere as a personal name (*IG* i³ 1157. 18), as is Oinokles. Xôphygos and Chamaios (crawler? or whore, cf. LSJ s.v. *chamaitypê*?) are not, and all 4 names are later additions. Doll and tablet were found in a grave dated c.420–410 (SEG 55. 87). Cf. Eliopoulos 2010, 88–91, curses written on figurines. The epithet *ôméstês* has been eliminated from SEG 49. 314 = 52. 254 (Kerameikos; Jordan 2000b no. 10, E).

⁷⁷ The Krates (son of Xeinis?) in SEG 58. 265 A 23 is doubtful; see ch. 27 n. 28. On the family see *APF* 11234 with Habicht 1988b, Lambert 2001. On targets chosen by association of names in ostracism cf. ch. 15 at section 'Ostracism'.

⁷⁸ SEG 16. 573; Jordan 1985 no. 107, E (Bettarini 2005 no. 23), dated c.475–450 by Jeffery 1955.

⁷⁹ In SEG 16. 571 = 36. 855, Jordan no. 104 (Bettarini 2005, no. 24), also from Selinous, three of the men listed have the qualification *Herakleidas* after their names, possibly indicating membership of a *genos*. Other tablets from Selinous, however, lack such features. I would not argue strongly, on the basis of present evidence, for a difference in social structure between Athens and Selinous (most Selinous curses have the Attic pattern), but note the methodological point that variations in the structure of groupings on curse tablets can be seen even where we lack prosopographical data. Small kin-group cursed in Mytilene, SEG 48. 1055/61. 685 (by a Cypriot? Dale and Ellis-Evans 2012).

(13) Kadosis son of Matulaios

(14) Ekotis son of Magon

Notes: Names in square brackets appear only as patronymics. Numbers refer to the order in which names first appear in the text.

Names like Lykinos, Halos, and Titelos may have been rather common. Dotted lines indicate possible connections.

TABLE 14.1. Selinous, SEG 16.573

It is not clear whether there is a traceable kinship tie between the families of Nausistratos and Smikythos of Aigilia (son of Deinostratos, who appears in *IG* ii² 1927. 178–9? ch. 32 n. 56; Humphreys 2010*a*), but it seems likely that there was an affinal link between Smikythos of Oe (ch. 28 n. 77) and Smikythos of Aigilia. The two other men, Aristaichmos and Euktemon, may be husbands of the women, or kin of the wives of the men already discussed.

In a group of tablets found together (Wünsch 1901 nos. 47–50, E) Menyllos, member of a family prominent in the deme Halai Aixonides in the mid fourth century, is cursed with his father Astyphilos, his *kēdestēs* (WF or WB) Kephisokles, his associate Philonautes, who may also be some kind of kinsman, and an unidentifiable Phantias.⁸⁰ A Theochares (possibly father of the general Chares,

⁸⁰ Philonautes is described as *ton meta Menyllon*. Names with the base Philo- were popular in the family; Astyphilos' father was Philagros. Wünsch 1897, 57 also links an Astyphilos with its target, Philonautes. See Whitehead 1986*a* nos. 184, 195; Table 29.20. Other known members of the family apparently were not involved. Further curses linking fellow-demesmen for whom no closer relationship can be suggested are noted in ch. 22 n. 122.

TABLE 14.2. SEG 24.262

cf. ch. 25 n. 61) is cursed with his *kêdestês* Sosistratos and others, including a Diokles (of Phlya? ch. 29 n. 89) on SEG 50. 279 (Jordan 2000*b*, no. 12, E; on Wolicki 2012 see BE 2013, 44).

Another tablet lists a group of siblings (or half-siblings), and provides an interesting example of a woman serving as link in the chain of association along which the curser's mind is running:

Mnesippos
Mnesias of Paionidai
Plangon, sister of Mnesias
Kallippos, brother of Plangon

The same list contains two sisters, daughters of Demokrates (ll. 5–6); Aristoboule the *pallakê* (concubine, l. 8); Charias son of Pheidiades and his *hetaira* Ameinonike (9–10); Ergasion, his servant Py[th]ion, and his wife.⁸¹

⁸¹ *Kerameikos III* nos. 3 and 6 (Jordan 1985 nos. 1–2), found in different graves (no. 6 in *Kerameikos VII* 429) but directed against the same targets in Paionidai, were dated to the 5th c. (despite Peek's impression that the script was mid 4th c.) because the excavator, Kübler, said they must be contemporary with the graves in which they were found. But it is hard to see how a curser could deposit tablets during funerals (the tablet was not—as erroneously reported by D. R. Jordan 1988, followed by Eidinow 2007—in the corpse's right hand, but near its fingertips). Prosopographical indications for a 4th c. date are now reinforced by the appearance of the sons of 2 targets—Hegestratos son of Hegemachos and Blepypros son of Polymnestos—as ephebes from Paionidai in the Lykourgan period (ch. 26 n. 60). It is interesting that a curse probably generated by a deme dispute (among demesmen resident in the city?) includes women among its targets. Wunsch 1897, 103 (E, found in Piraeus) may have been provoked by a dispute in Lamptrai (ch. 23 n. 76); only 3 of its 20 legible names have no attested link with the deme (Kallenikos—also on Wunsch 54; LGPN omits Wunsch 103—Demokrates, and Archinos). Four of the targets, Kallikrates, Kine(i)as, [Lysi-] or [Kydi]machos, and Antiphilos, occur also on IG ii³ 4. 233, a deme dedication to Apollo (Kallikrates' father's rather rare name Anaxikrates is also attested in the deme); Eudidaktos, Philokles, Demophilos, and Nikokrates are known in L. in the 4th c., Theophilos possibly (IG ii³ 6682, cf. 6691a); Dorotheos, father of a target, appears as a Lamptrian on Samos (IG xii 6. 262, 22). Menekles (another father) is attested in the 3rd c. (Olympiodoros only in the 2nd). SEG 44. 203 (CAT 4. 350), a lekythos found at Voula naming Theophilos, Mnesimache, Teisistrate (or Pei-?), and Olympiodoros, might be connected. On Wunsch 67a 2 Archedikos and Naukritos might be son and

Brothers appear together quite frequently: [Ke]phisokles and [Mel]anop[os] sons of Polystratos of Potamos, with a Hermippos of Potamos, on Peek 1957 no. 205 (D. R. Jordan 1985 no. 12; Lopez Jimeno 1999, 12); Sonik[os] and Teiseas sons of Son[ikos?], in rather low company, *ibid.* no. 207 (Jordan 1985 no. 11, E; Lopez Jimeno 11); Eupheros and Aristokles, perhaps the brothers of Kallistratos son of Kallikrates of Aphidnai, on Wünsch 1901 no. 24 a (E). Bakchis and Kittos, who appear among a group of tavern keepers and their associates on Audollent 1904, no. 72 (E), may be the brothers known as potters. Cf. perhaps Sosimenes and Aristandros of Eleusis on Wünsch 1897, 87 (E). The brothers Eunomos and Aristogeiton of Pithos are cursed together on *SEG* 58. 265 A 2–3; Kassandros' younger brother Pleistarchos is cursed with him on *SEG* 30. 325 (see n. 69). Kallias IV of Alopeke and his son Hipponikos IV are named together on Wünsch no. 65 (E), with a reference to their *kêdestai*: Kallias is the main target, and the hostility arises from a lawsuit.⁸² Aristophon of Azenia (*APF* 2108) is cursed with his brother's son Aristophanes II (and others) on Coll. Froehner no. 11, ll. 25, 29 (*SEG* 37. 214, Jordan 1985 no. 42, Lopez Jimeno 1999, 23; ch. 30 n. 120).

Three of the men named on Wünsch no. 42 (E) may be related: Gniphonides (l. 15), Kleandros son of Gniphon(nides?) (17), and <K>leandros son of Phoinix (of Oe), perhaps an affine.⁸³

Demetrios and De[m]ađ[es], both (?) tilers (*keramodetai*), may be kin, in view of the similarity of their names (*Kerameikos III* no. 9; Jordan 1985, no. 44, E; Lopez Jimeno 1998 no. 26); so may the boxers Aristomachos and Aristonymos, named together on Wünsch 102 (E), although these may be unrelated slaves who were given similar names by their trainer or owner.

father, in Lamptrai, cf. Bayliss 2011 (ch. 23 n. 86). The targets of *SEG* 44. 226 (*Agora XXVIII*, 55–7, Jordan 2000b no. 15, E) may possibly all belong to X Antiochis. *SEG* 40. 265 (note 42. 217) starts with targets in I. Erechtheis but does not confine itself to this tribe (ch. 29 n. 47).

⁸² Cf. Wilhelm 1904, 119; *APF* 7826 XV (a father and son also Wilhelm 1904, 121 = Jordan 1985 no. 18, E, Lopez Jimeno 18). The Hip<p>o<l>och-<id>es named with them may be Hippolochides II, adopted son of Hippolochides of Lousia, born Thrasyboulos son of Aischines of Lousia (*APF* 1395, Table 2.1). A curse of the 460s from Gela or Kamarina (Dubois 1989 no. 134, E, D. R. Jordan 2007) attacks rival choregoi with their children and fathers.

⁸³ See Table 32.3. This text is variously dated in *LGNP* but should be 4th c. Kleandros Gniphon (l. 17), should be K. son of Gniphonides (cf. l. 15) of Thorai, known from *IG* ii² 1927 (see Humphreys 2010a on date); 'Leandros Phoinikos' (l. 16) should be Kleandros son of Phoenix of Oe, diatetes in 325/4 (ii³ 4. 35. 89); ii² 6831 is probably the tombstone (trapeza) of his SW. Kydimachos son of [G]ni[pho]n[?] of Thorai, commemorated as a grandfather on ii² 6214/*CEG* 601, may be Kleandros' brother or an earlier member of the family (the name Gniphonides is also attested in Thorai in the 2nd c.). 'Euxenos Kêtonos' (l. 18) may be E. of Sounion, father of Kêdôn (ii² 2308A, a dedicatory base) and of Demophon, attested as ephebe on *IOrop* 353 (Humphreys 2009); he may be linked with Euxenos of Thorai as a kinsman, or simply by association of ideas. Thallos (l. 14) is assigned conjecturally to Lamptrai by *LGNP* (cf. ch. 23 n. 75), but the name also appears in Thorai, *IG* xii 8. 68. 1.

Kinship undoubtedly played an important role behind the scenes in Athenian political life. Even if marriages were seldom made with clear political ends in view, affines appear frequently as supporters and allies; in at least some cases women will have acted as intermediaries (Humphreys 1998). Kin acted as associates, and were seen in association; relationships were known and used by political and legal opponents, and cursers. We shall now turn to look at the representation of kinship in the public forum of formal political institutions.

PART FOUR

Politics, Formal

Paredroi, Epidosis Lists, Ostracism, the Thirty

The phenomena to be discussed in this chapter—the choice of *paredroi*, the association of kin in making *epidosis* donations, the assumptions about the political solidarity of kin that can be deduced from votes cast for ostracism, and the choice of associates by the oligarchic groups which seized power in 411 and 404, may seem an odd collection. But the oddness in itself makes a point. When we look for clear assertions of solidarity between kin in official public records they are only to be found in marginal situations—archaic survivals, liturgies in which private resources are ostentatiously donated for a public cause, anti-elections (ostracism), or oligarchic *coups d'état*. The normal democratic processes of appointing officials in tribal boards of ten and selecting them by lot left few chances that kin would find themselves associated in the performance of public functions—least of all agnatic kin whom we are more likely to be able to identify. Democratic practice stressed randomness in the selection of public officials; nothing could be further from this than the association of kin as colleagues.¹

PAREDROI

Despite this commitment to random selection, in each of the three major traditional offices—those of eponymous archon, basileus, and polemarch—the officeholder was allowed to select two assistants or assessors, *paredroi*, and kin seem regularly to have been chosen (P. J. Rhodes 1981*a*, 621–2; Kapparis 1998). These were the three offices that were institutionalized when annual election began—in the early seventh century according to Attic tradition (Rhodes 98–9)—and the practice of appointing *paredroi* may well go back to an early date. Their function would have been to sit beside the archon and advise him when he gave judgment, to act on his behalf in receiving pleas,² and to help him with the

¹ C. Taylor 2007. Narrow oligarchies might also rule that only one member of a household or sibling group could be eligible for office (Ar. *Pol.* 1305b 6–10). Association of kin in the Athenian Council—a much larger body—is discussed in ch. 17. On democracy and use of the lot see Demont 2001.

² Advice: Is. 6. 32, A. R. W. Harrison 1971, 11–12; but there is no firm evidence for selection of *paredroi* with legal expertise, and the original function may rather have been that of witness, as in the case of the *mnamones* at Gortyn (cf. Carawan 2012). The magistrate's consilium at Rome evolved much more

expenses of his office ([Demosthenes] 59. 72). It is possible that the six thesmothetai, who took over some judicial functions from the three major archons at a relatively early date (before Solon), evolved from the six *paredroi* (Humphreys 1983*c*, 233–5). During the first half of the fifth century the traditional archonships lost much of their prestige and a significant part of their functions; the ten tribal strategoi (generals), instituted in 501/0, took over the supreme military command from the polemarch (P. J. Rhodes 1981*a*, 264–5), election was replaced by sortition in 487/6 (ibid. 272–4), and the power to impose fines of more than a fixed limit³ was taken from the archons probably in 461, leaving them with the duties of conducting preliminary hearings (*anakrasis*) and presiding in a merely formal manner over courts. The presiding magistrate had no power to instruct the jury or sum up the issues on which it would vote. The introduction of ostracism in the 480s and the more frequent use of other procedures for sanctioning misconduct by magistrates may have discouraged archons from using their full traditional powers even before Ephialtes removed these in 461 (Humphreys 1988, 470). The theme of the ruler who voluntarily submits decisions to the people instead of exercising his full powers is prominent in Aeschylus (*Suppl.* 365–9, 397–401, 480–8, 517–18; *Eum.* 470–84; cf. the critical treatment of Zeus in the *P.V.*, e.g. 326). Personal choice of *paredroi* therefore survived, I would suggest, because with the development of radical democracy their position lost any real power that had once attached to it and became merely ceremonial and liturgic.

Other officials also had *paredroi*, but it is doubtful whether any of these were personally chosen. The twenty *paredroi* of the ten *euthynai*, who scrutinized the accounts of outgoing magistrates and received written accusations of misconduct in office, were appointed by lot, presumably from the Council (*A.P.* 48. 4; cf. Kahrstedt 1936, 124–6, Piérart 1971). The ten hellenotamiai, responsible for the finances of the Athenian empire, had one *paredros* each; we do not know

clearly into an advisory council of experts (Crook 1967, 88–9; Frier 1985, index s.v. *consilium*). In a Gortynian inscription of the 2nd–1st century BCE the *mnamon* of the *kosmoi* is the brother of the president of the board (*IC* iv 260). Receiving pleas: [Dem.] 58. 32 (on which see M. J. Osborne 1981*c*, 177–8). The scholion (AO) to Plato *Laws* 945b, of which Pollux 8. 100 and *Lex. Rhet.* Bekker 1814, 257. 15–16 seem to preserve shorter versions, says that each archon had a *euthynos* as well as a *paredros*; if any genuine information lies behind this we cannot recover it from our present sources. Röhrmann 1968, 29–36 is not concerned with the origins of the institution or the criteria for selection. Other texts known to me, which throw no light on the present question, are Archippos F 27 *PCG*, *IG* ii² 7404 (*CEG* 484, Justice as p., in 412/11, early 4th c.), *IG* ii³ 4. 208 (mid 4th c.), *IG* ii³ 950 (3rd c.), *IG* ii³ 4. 125 (1st c. CE), and *IG* ii² 1738 (2nd c. CE). *IG* ii³ 4. 115 (mid 2nd c. BCE) may be a dedication by a polemarch and his *paredroi*, all belonging to different demes. Cf. also *AO* p. 349.

³ Humphreys 1983*c*, 242–5; A. R. W. Harrison 1971, 4–7. The limit was 50 dr. for some officials; we do not know the figure for the traditional archons. It may be noted here that although *IG* ii² 1629. 238–9 provides an attractive parallel to *IG* i³ 133. 18–19 it is also possible that the official who acts with *paredroi* in the latter text and in i³ 136. 24 is the *basileus*.

how these were appointed. While the allocation of paredroi may have been a way of reinforcing boards whose duties were becoming too heavy (Kahrstedt, loc. cit.), it is possible also that the position of paredros developed from the custom of having a reliable witness present when engaged on judicial or financial business for the state.⁴ The deme euthynos had paredroi in Halai Aixonides (*IG* ii² 1174, 368/7) and in Thorikos (*SEG* 33. 147 = *IG* i³ 256 *bis*; perhaps c.430, Parker 1987*b*). We do not know anything about the method of appointment in demes.

Close kin figure in a substantial proportion of the cases where paredroi can be identified. The eponymous archon of 394/3, Euboulides son of Epikleides of Eleusis, appointed his brother Dictys as paredros;⁵ the archon of 363/2, Charikleides, appointed his father (Demosthenes 21. 178–9: he helps his son keep order in the theatre at the Dionysia). Theogenes, basileus about the middle of the fourth century, was supported at his dokimasia and helped with the expenses of his office by Stephanos of Eroiadai, who then persuaded him to marry the daughter of the prostitute Neaira; this provoked a scandal which led Theogenes to divorce the girl and dismiss Stephanos from his position as paredros ([Demosthenes] 59. 72, 83–4). Theogenes (if we can trust Apollodoros) was a poor man, a member of the priestly genos Koironidai which had claims to appoint officials to roles in the celebration of the Eleusinian Mysteries (Toepffer 1889, 101–10), innocently ambitious to show that he could carry off the duties of the religious head of the state with a dignity befitting his ancestry. His story casts an interesting light on the type of candidate attracted to these traditional offices and on the financial burdens they still carried.⁶ At the end of the fourth century the basileus Exekestides son of [Nikokr?]ates of Alopeke appointed Nikokrates son of Exeke[s]tides of Alopeke?, probably either his father or his son, as paredros, together with Kleainetos son of Menon, whose demotic is lost (*IG* ii³ 4. 95). The speaker of [Demosthenes] 58 alleges that when his opponent's brother was thesmothetes he used the opponent, Theokrines, as his adviser

⁴ Kahrstedt (1936, 124–6) thinks that the paredroi of the hellenotamiai were elected, were attached to specific members of the board, and had to come from the same tribe as their partners, but the latter point is only supported by *IG* i³ 375. 20–1. The apparent reference to a *paredro[s]* or *paredro[i]* of the generals sent to Sicily, *IG* i³ 370. 50, is puzzling and may be non-technical, perhaps referring to a financial official sent with the generals; the use of the term in *Hell. Oxy.* 15. 1 Bartoletti and Chambers 1993 is also in my view non-technical.

⁵ *Agora XVIII* 35, ii³ 4. 42; only one paredros is named in this inscription, but it would be rash to conclude that the number of paredroi was raised to two only later. It is hard to imagine a motive for such an increase in the 4th c. The polemarch appointed by the kleruchs in Imbros had two paredroi (*IG* xii 8. 47; the relation of paredroi to polemarch cannot be recovered). The decree has been assigned to the late 4th c., when the island was independent; but we have little idea how Imbros was governed before 318.

⁶ We are not told precisely what Stephanos paid for: perhaps extra sacrificial victims, or other accompaniments to festivals in which the basileus had a prominent role, such as spices, wine, or music.

(*symbolos*), with disastrous results (§ 27); thesmothetai did not officially have paredroi but apparently might nevertheless coopt advisers. The only connection that can be established between the archon of 361/0 and his paredroi is that one came from his own tribe (Mitsos 1965, 131–6, *SEG* 23. 78; cf. Dow 1976, 80–4), but it must be remembered that matrilinear and affinal ties cannot be detected in such inscriptions.

The pattern is similar in the Hellenistic period. Miltiades son of Zoilos of Marathon, basileus in the middle of the second century, had his brother as one of his paredroi (*IG* ii³ 4. 113); Euxenos son of Euxenos of Thorai, basileus about 155 BCE, may have had a fellow-demesman, Gniphonides son of Semion.⁷ Nikias of Otryne, archon in 266/5, appointed a fellow-demesman, Antiphanes son of Polykrates, as one of his paredroi (*IG* ii³ 920, *Syll.*³ 388).⁸ However, no links can be reconstructed between Euthios son of Antiphon of Teithras, archon 283/2, and his paredroi who come from Athmonon and Paiania (*Agora* XVI 181). A polemarch of c.30 BCE also has paredroi from two demes other than his own (*Agora* XVIII C 42).

Kinship was not of course the only basis for appointment. Aischines (1. 58) refers to an archon simply as ‘the archon to whom Aristophon of Azenia was paredros’; evidently a well-known politician could sometimes be persuaded to add dignity to the office of an obscurer man. Euthydemos son of Moirokles of Eleusis is praised by the Kerykes for his services at the Mysteries while acting as paredros to the basileus at the end of the fourth century (*IEleus* 100, cf. 177. 243, 245, and Matthaïou 1987*b*); Whitehead (1986*a*, 303–5) suggests that the basileus was also Eleusinian, but the fact that the Kerykes do not name him suggests to me that he was not, and had deliberately chosen a prominent member of the deme (ch. 30 at nn. 87–92) to help him with his duties at Eleusis.

In *IG* ii³ 327 (Schwenk 1985, no. 18) the council and demos honour three men from Oinoe (Aiantis), who held office together in 336/5, Phyleus son of Pausanias who was elected and *hypenthynos* and two others, one of them possibly his father or son [Paus]anias,⁹ who were coopted. These are not paredroi, since paredroi had to pass euthynai. Their function was probably connected with the Council; Koehler’s suggestion that they were three of the *syllogeis tou demou* has been justly criticized by P. J. Rhodes (1972, 129–30), and the very fragmentary

⁷ *IG* ii³ 4. 111; Tracy 1990, 139; *Agora* XVIII C 39. The demotics are restored on the basis of Wunsch 1897 no. 42.

⁸ 282/1 in Whitehead 1986*a*, 304 should be corrected. Nikias’ other paredros, however, was Alkimachos of Myrrhinous, whose son Thoukritos (general in the 250s) may already have been distinguishing himself in the cavalry (G. J. Oliver 2007*a*, 161; Table 8.7).

⁹ Pausanias son of Phyleus O., councillor in 281/0 (*Agora* XV 72. 204), could be the son serving at an advanced age; if the Antimachos son of Pausanias O. who proposed *IRh* 45 c.229 is his son, the generations are long. Cf. ch. 31 n. 62.

remains of the text do not permit us to reconstruct the office in question (*IG* [Tsountas], followed by Schwenk, had suggested hieropoioi; Lambert 2004*b*, no. 3, secretary and *syn*[*grammateis*]).

EPIDOSIS AND OTHER LITURGIES

When a Greek city asked its richer citizens to donate sums of money for a public cause (epidosis), an inscription would often be put up listing the contributors and the sum that each had given. In some cases a man will specify that he gives on behalf of himself and his son (*Agora XVI* 213 = *IG* ii³ 1011, 248/7 BCE, col. II 44, 53, col. III 37) or will associate his wife, mother, daughter, grandson, brother, or nephew (BS) with the donation (all found in *IG* ii² 2332, 183/2 BCE; cf. ch. 20).¹⁰ In other cases kin are recorded on successive lines, which if the text on the stone was taken from a temporary list made as payments were received¹¹ would imply that kin went together (to a treasurer seated in the agora?) to make their individual contributions. In [Demosthenes] 34. 39 the speaker, who invests money in trading voyages, says that he and his brother jointly contributed a talent (6000 dr.) for corn purchases, c.330. *IG* ii³ 1011 = *Agora XVI* no. 213, a list of contributions made for the defence of the Attic countryside in 248/7, prescribes that contributors may register either in the Assembly, in the Council, or with (*pros*) the generals. The list of names is arranged in three columns with

¹⁰ Nevertheless, I cannot think it right to restore a reference to the infant sons of Xanthippos in *IG* i³ 49. 13–14. Mattingly's suggestion (1961, 164 n. 73, revised 1966, 69–71) that the sons of Kleiniades (Alkibiades III and his brother) are here associated with Perikles and his sons seems preferable. I do not know if we need find it odd that Paralos is mentioned before his older brother. The affair of the epikleros daughters of Epilykos (*APF* 8429 IV, Table 4.2) implies that there was no son of Xanthippos alive c.399.

¹¹ The method of recording may have varied (on the history of alphabetization see Daly 1967). Veyne 1976, 212–13 suggests that some lists may record promises of contributions made during a meeting of the Assembly, rather than actual receipts. Such promises are well attested for classical Athens, with some pressure on the reluctant (Is. 5. 37–8, Theophr. *Char.* 22. 3, Plut. *Alk.* 10. 1, *Phok.* 9. 1–2); in Hellenistic Amyzon (J. and L. Robert 1983, no. 28, early 2nd c. BCE) contributors were directed to register with officials, and did so in family groups. General discussion of epidosis, Migeotte 1992 (*IG* xii 6. 203–16 may be epidosis lists). Mothers and daughters together on side A of the large inscription from Tanagra (Reinach 1899, dated to the beginning of the 2nd c. by Knoepfler 1977; *SEG* 34. 1690) in ll. 53, 57–9, 66–7. A Hellenistic list of female donors from Kos (*IG* xii 4. 1. 301, end 3rd c.; Migeotte 1998 = 2010*b* no. 13) seems to show a preference for grouping bearers of the same personal name together (mothers and daughters, at least in some cases?); *nothai* (4) and metics are separated from citizens. Migeotte 1992 does not re-edit lists of names, or include epidoseis to units smaller than the state. Migeotte 1993, publishing a list of women donors from Rhodes, assumes that it reflects the order in which they presented themselves. See also Chanotis 2013; Ellis-Evans 2013.

blank spaces at the bottom of each and this arrangement may have been intended to correspond to these three sources.¹²

The left-hand column is headed with the following five names:

Antiphon of Erchia
Eurykleides of Kephisia
Mikion of Kephisia
[D]romeas of Erchia
[Dio]kles of Erchia.

Each makes the maximum permitted contribution of 200 drachmas, as do the majority of those listed. We know that Eurykleides and Mikion were brothers, prominent at the time (Habicht 1982*a*, 179–82); Dromeas and Diokles were also brothers.¹³ In col. II 55–8 Xenon son of Asklepiades of Phyle and his son Asklepiades appear together, each contributing 200 drachmas. Nikokles and Nikosthenes of Phlya (col. I 63–4) may be related, as may Philotheos and Demophilos of Phrearrhioi (col. II 75–6). In the case of other pairs of demesmen with unrelated names (col. II 33–4, 45–6, 63–4) it would be more hazardous to postulate a relationship; even more so in the case of men with related names but from different demes (Lysiades of Oion and Lysimachos of Oinoe, I 80–1; Pausimachos of Koile and Pausias of Paiania, II 50–1). In any case the groupings that can be suggested are extremely small, two or at most three persons.

Records from other states show more interesting patterns. In a list of contributions for the purchase of oil in Elateia in Phokis, probably to be dated *c.*160 BCE (Migeotte 1992 no. 31, *SEG* 32. 555), a number of kindreds can be conjecturally reconstructed. The list starts with a gymnasiarch, his son, and a second gymnasiarch. Names 4–22 can be arranged as in Table 15.1.

It seems possible that groups B i–iii were linked affinally or matrilaterally and that nos 6–7, 9, 19, and 21 were similarly linked in some way to the principal groups.

More work remains to be done on the evidence provided by catalogues of names for procedures of registration and for principles of classification, and self-classification by informal association, in ancient societies.¹⁴ It is scarcely surprising to find siblings listed together in the Athenian catalogue of orphans from *c.*410 or 403/2 (Stroud 1971, *SEG* 28. 46; Matthaïou 2011*a*, 71–3 = *SEG* 61. 51). Listing principles vary for *diaitetai*, sometimes but not always listed by deme; in

¹² However, as Nigel Pollard pointed out to me, the first two columns are of equal length, which tells against this suggestion. Cf. G. J. Oliver 2007*a*, 200–4, 282–4.

¹³ Habicht 1982*a*, 183–5, *APF* 126; Dromeas III and Diokles II. There is no evidence of any connection with Antiphon.

¹⁴ Even the character of such lists is often in doubt: cf. Dow 1983; Humphreys 2010*a*. Lists of soldiers are dealt with in ch. 16. Two of the *epidosis* lists published by Hallof *a. o.* 1998 (cf. Habicht 2000, 295–301), *IG* xii 4. 1. 75–7, are alphabetical (by first letter of name).

* Bracketed names appear only as patronymics. Numbers refer to sequence of names in list.

TABLE 15.1. Epidosis in Hellenistic Phokis, Michaud 1974

IG ii³ 4. 24 three members of Aixone appear together in col. III but otherwise no organizing principle can be detected. In the list of guarantors for the ships lent to Chalkis in 341/0 (*IG* ii² 1623. 161–96) Derkylos and Kallias sons of Autokles of Hagnous appear consecutively (179–81); so do Kriton son of Astyochos of Kydathenaion (*APF* 8828), l. 191, and Anaschetos son of Demoteles of Halai (*APF* 819), l. 192, who may have been kin or affines if they are the *kêdestai* of Lykophron’s accuser mentioned in *POxy* 1607 (ch. 14 n. 60).

Even where an institutional framework is imposed on a list, signs of individual association may break through. The list of those entitled by descent to share in sacrifices at Kos (*IG* xii 4. 1. 104, c.180 BCE) is alphabetical (by first letter of

name), but among the latecomers added at the bottom two brothers appear together (V 77–80). Lists of applicants for the corn dole in Oxyrhynchos were organized by districts and in some cases alphabetically within districts, but the fact that two applicants in *POxy* 2892 from the same district are identified by the same two witnesses suggests that they went together to file their applications.

OSTRACISM

It would have been, essentially, similar patterns of informal association that caused Athenians to perceive a set of kinsmen as a politically significant grouping. It should be clear by now that friends and associates were recruited through a mixture of ties of different kinds, and that networks overlapped. To speak of ‘clans’ is totally inappropriate for such groupings; even in studies of the Roman republic, where the name of a famous *gens* counted for more, the view that *gens* membership provides all the explanation of political allegiance that we need has been abandoned (C. J. Smith 2006). Admittedly the idea of private military recruitment in the archaic period, also based on Roman material, seems to be becoming fashionable now in Greek history too;¹⁵ but there is no reason to suppose in either case that military bands were purely agnatic groups.

The few cases in which Herodotus, our best guide to Athenian society in the sixth and early fifth centuries, uses family names cannot bear the weight that has sometimes been laid on them. He tells us that the Gephyraioi were believed to have come from Boiotia (5. 57); but he does not suggest that the assassination of Hipparchos by Harmodios and Aristogeiton, who were of this *genos*, was part of a group policy. The term *oikia* is used of leading families, both Greek and barbarian; some of these have hereditary privileges or positions, like the Spartan royal families or the *oikia* of Kleisthenes’ rival Isagoras, which worshipped Zeus Karios or Karaios (5. 66); others merely have a succession of illustrious names, like the *oikia* of Miltiades (6. 35) or the Alkmeonidai (6. 125).

It is against this background that we must evaluate the significance of the belief that ‘the Alkmeonidai’ were under a hereditary curse, the accusation that they had tried to betray Athens to the Persians after the battle of Marathon, and the high incidence of votes cast against members of the family in ostracisms.

The curse was believed to derive from the responsibility of the archon Megakles for killing suppliants at the time of Kylon’s attempted coup c.630. Supposedly inherited by all his descendants through both men and women, it supplied—though only intermittently (cf. R. Parker 1983, 16–17)—one of the main bases

¹⁵ Rome: e.g. Versnel 1980, Momigliano 1984, 418–29 (the problem is treated too cavalierly in Raafaub 1986b, 45), Cornell 1995 s.v. *sodales*. Greece: Van Wees 2004, 95–7.

of solidarity which led Athenians to think and speak of the Alkmeonidai as a group. The solidarity was negative rather than positive; if an enemy decided to make use of the alleged ‘curse’ on the descendants of Megakles, the logic of the belief that pollution was hereditary meant that no member of the family could count himself safe. Thus the hereditary curse performed in the case of the Alkmeonidai the function of supplying a motive for coherence which cult privileges supplied for other aristocratic descent groups—although transmission through women occurs much earlier in the case of the curse than in priestly *genê* of conventional type. The curse was used in the fifth century in propaganda against Perikles, whose mother was an Alkmeonid (Thucydides 1. 127. 1), whereas *genos* membership does not seem to have been transmitted through women until the Hellenistic period.¹⁶

Although the Alkmeonidai had Eupatrid status—Megakles I held the archonship, and at some period they claimed descent from the royal family of Homeric Pylos, the name Alkmeon being allegedly borne by one of Nestor’s great-grandsons (Pausanias 2. 18. 9)—their prestige was not based on any prominent role in cult (cf. *APF* 9688 I).¹⁷ Their ambitions focused on the panhellenic rather than the local level. Indeed, their connections stretched beyond Greece; gossip said that they owed their rise to the generosity of the Lydian kings (Herodotus 6. 125, cf. R. Thomas 1989). Megakles II, probably grandson of the archon, married the daughter of the tyrant of Sikyon; he was first the rival, then for a brief period the ally and father-in-law of Peisistratos.

After the temple at Delphi had been destroyed by fire in 546, ‘the Alkmeonidai’—which need mean no more than Megakles and his sons—took charge of the rebuilding programme, using their connections in Greece and beyond to solicit contributions of building materials. They claimed to have been indirectly responsible, through their influence at Delphi, for the expulsion of Peisistratos’ sons; however, Megakles’ son Kleisthenes had probably held the eponymous archonship under the tyrants in 525/4. The fall of the tyrants was followed by a struggle for power in which the curse was invoked and Kleisthenes had to leave Attika with 700 households of his supporters (Herodotus 5. 70–2); it is not possible that all of these were descended from the Megakles who was archon c.630 (Ismard 2010, 83, over-interprets this episode). They soon returned.

In the next generation the leading member of the family was Kleisthenes’ nephew (BS) Megakles IV son of Hippokrates. He won the four-horse chariot race at Delphi in 486—not the family’s first Panhellenic victory—and celebrated his success with a Pindaric chorus (*Pyth.* 6), in itself a sign of ambition. His father

¹⁶ See Gagné 2013; Humphreys 2007; Blok and Lambert 2009 do not consider possible effects of the epiklerate.

¹⁷ One ostrakon calls Megakles *euneidês*; Brenne 2002 T1/114 suggests *eu<ge>neides*, ‘well-born’.

had married a woman from a leading Eretrian family, Koisyra, and this may at least partly explain the story that after the battle of Marathon ‘the Alkmeonidai’ had tried to betray Athens to the Persians (Herodotus 6. 115); such a betrayal had certainly taken place at Eretria (6. 101).¹⁸ In any case the family’s history could be held to justify the suspicion that they would seek allies anywhere if engaged in a bid for power.

Ostracism was perhaps designed as a safeguard against such ambitions. The votes cast in an *ostrakophoria* might be described as electoral votes in reverse, the aim being to eliminate the candidate with most votes from the political scene for ten years, instead of appointing him to high office as in a normal election. Ostracism carried no financial penalty and brought, in itself, no disgrace, although much mud was slung during the preliminaries, some of which might stick (Brenne 2002). In theory ostracism only affected the individual against whom votes were cast, whereas removing political opponents by exile or crippling them by the imposition of heavy fines affected their children too;¹⁹ exile was normally accompanied by confiscation of property, whereas in ostracism the victim’s property and family were untouched.

In practice however the situation was not so simple. The aim of the institution was to rid the city of factious leaders and potential tyrants without giving them a formal opportunity to defend themselves (Humphreys 1978, 229; Camassa 2011, 47).²⁰ The only way in which a possible victim could defend himself was to start a campaign against someone else. Supporters no doubt canvassed actively, and on occasion mass-produced ostraka carrying the name of their preferred target (Vanderpool 1970*a*, 11–12; *Agora* XXV). The nature of the campaigning process might encourage in some cases a scatter of votes against men associated with a major target, or a campaign might develop an impetus of its own that led to voting against associates in later years, when the main target had been eliminated. If we had a complete record of all votes cast, it would certainly tell us something about patterns of political association. The scatter vote, however, in addition to mistakes (in patronymic or demotic), also seems to have included ostraka cast for reasons of personal enmity, sometimes against homonyms of the principal ‘candidates’ (Ruggeri 2002 perhaps underestimates such factors).

Of course the record is anything but complete; moreover, many of the men named on ostraka are not otherwise attested and cannot be securely placed in

¹⁸ No link in nomenclature can be traced between later Alkmeonidai and the Eretrian traitors named by Herodotus, Euphorbos son of Alkimachos and Philagros son of Kyneas, but this proves nothing. One ostrakon of the 480s marked ‘the Eretrian’ may be directed against Megakles; but Eretrieus does occur as a proper name in Attika (*IG* i³ 1190. 14; *ID* 75. 18). On the problem of the wife or wives called Koisyra see *APF* 9688 X, Brenne 2002. Another ostrakon tells Megakles to leave but not to go to Eretria.

¹⁹ On exile see ch. 14 nn. 36–7; Forsdyke 2005, B. Gray 2015.

²⁰ De Ste. Croix 2004 (180–215, 229–30) suggests the main danger was a coup aided by foreign powers.

relation to known families. Spoiled votes introduce further complications. It seems clear, however, that hostility directed against Megakles IV in the 480s and again in the 470s prompted votes against men associated with him. A few other cases of votes cast against related victims can also be identified, although the Alkmeonid group remains by far the most striking.²¹

The first man to be ostracized is said to have been a kinsman of the Peisistratids; this may in itself be an indication of the way in which voters' thoughts worked. Megakles was the second victim. Ostraka mention his racing stable, his wealth, and his 'greed', as well as referring to the Alkmeonid curse and accusing him of adultery. Table 15.2 shows the probable relation to him of other men against whom votes were cast (names in *italics*), with dates for those known to have been ostracized.²²

The chief targets, apart from Megakles IV, were his father Hippokrates, his brother-in-law (ZH) Xanthippos, and his cousin (FFBSS) Kallixenos, on one sherd called 'the traitor'.²³ Identification of further victims is conjectural. It must be remembered that the standardized form of the Athenian citizen's name—*nomen*, patronymic, demotic—had not yet become established (see ch. 22 n. 39). Demes were new, and voters who identified their victims by demotics may sometimes have made mistakes; a rich man known to own property in a deme might have been thought to belong to it when in fact he did not. Some voters could not

²¹ General discussion in Raaflaub 2003. The standard of publication set by Mabel Lang for the Agora ostraka (*Agora XXV*) has not yet been matched for the Kerameikos finds; the latest information in Brenne 2001, 2002. A single sherd naming (a) Peisistratos, if from an ostrakophoria, may be a spoiled vote (Sancisi-Weerdenburg 2000*b*, 91).

²² Dates mostly from Brenne 2001; see also *APF* 9688 + pp. 598–9. Much ink has been spilt in attempts to identify Kallias son of Kratios of Alopeke, against whom many votes were cast in the 480s, either as an Alkmeonid or (Shapiro 1982) as the son of a daughter of Kallias I *lakkoploutos* of Alopeke (*APF* 7826 III). In the present state of our knowledge such speculations are a waste of time. Sixteen sherds call Kallias Kratiou 'the Mede', one depicting him in Persian dress, but even if this is an accusation of treachery at Marathon (contra, D. M. Lewis 1974) we do not know that only Alkmeonids were suspected.

²³ Five men called Megakles are named on ostraka (cf. Berti 2001; Brenne 2002): Megakles IV; the son of Kallisthenes (or of Kleisthenes?), 2 votes; 'Megakles Sosigenides Aigilieus' (1 vote, Brenne 2001, 169); Megakles of Acharnai, 3 votes (Brenne 168); and Megakles of Anaphlystos, 1 vote (the latter two may be voters' mistakes). The Menon son of Megakles in the large Kerameikos deposit (Brenne 2001, one sherd) may be a reflection of gossip about Megakles' adulterous affairs. Stamires and Vanderpool 1950 give a clear idea of the wide range of variations in spelling (cf. Lang 1982; *Agora XXV*); they argue that Kalisenos, Kalisthenos, Kallisthenes, and Klisenes, all named on ostraka as sons of Aristonymos, are merely variant spellings of Kallixenos, while Klalisenos Klestenos (*Agora XXV* 464) would be yet another attack on the same man. Megakles son of Kallisthenes (2 sherds) would then have to be regarded either as a son of Kallixenos or possibly as a reminder of the connections of Megakles IV with Kleisthenes or with the tyrant of Sikyon. See *APF* 9688 and p. 599. Xanthippos son of Hippokrates (1 sherd, Brenne no. 267) may be a spoiled vote against Perikles' father, or the archon of 479/8, or another man; such names will have been common among the archaic aristocracy.

Note: Names in italics are those named on ostraka.

TABLE 15.2. Ostracism, Alkmeonidai, *APF* 9688

spell; see for example *Agora XXV* 347, 360, 464, 568 for versions of the name of Kallixenos son of Aristonymos.²⁴

This evidence does not support the view that ‘the Alkmeonidai’ were an extensive clan with an identifiable political programme. Twenty-four years after expelling the tyrants the Athenians had ostracized one of their *syngeneis*, perhaps an affine;²⁵ Megakles IV was felt to be the kind of man who might aim at tyranny, and the hostility he aroused spilled over onto a few of his kin.

Other cases in which the prominence of a victim of ostracism campaigns led to votes being cast also against his kin are harder to find. The list of those whose names are found on ostraka (Brenne 2001) includes the brothers Diokles and Erasistratos sons of Asteios of Acharnai, and (later) Erasistratos’ son Phaiax; the brothers Aristaichmos and Kydrokles, sons of Timokrates of Krioia;²⁶ the brothers Olympiades and Philokydes sons of Pheideleos of Lamprai; the brothers Dicitrephes and Hermolykos sons of Euthoinos (of Skambonidai: W. Thompson 1974, 145); the demagogue Kleophon and his brother Philinos of Acharnai, both probably targets in 417 (and earlier their father Kleippides, cf. *SEG* 54. 90); Phalanthus son of Spintharos, Melanthios son of Phalanthos, and Spintharos son of Eu[—], may be somehow related, but the relationships cannot be reconstructed.²⁷ In the family of Andokides (IV) votes were cast against his FF Andokides III, perhaps his FFB Leogoras II B,²⁸ his FFF Leogoras I, and his MF Teisandros II, who was also connected by marriage to Perikles (*APF* 600 II–V; Table 13.2). Aristekides son of Xenophilos, who belonged to the tribe Antiochis and appears on one ostrakon in the large Kerameikos deposit, may have been related to Aristekides son of Lysimachos of Alopeke (*APF* 1695 V).

²⁴ [*Kall*]ischsenos[*bo pr*]odotés, Brenne 2002, T1/65 (*Agora XXV* 589). 110 sherds name Hippokrates Alkmeonidou; one in the large Kerameikos deposit names Megakles (IV) Hippokratous Alkmeonidou. *Agora XXV* no. 524 calls Kallixenos [*Alk*]meon[*idôn*?] | [*Kal*]lichsen[*os*] | [*Ar*]isto[*nymo*]. Three votes against Ariphron, the elder son of Xanthippos of Cholargos, in 471 (Brenne 2001, no. 28). On Attic spelling see Immerwahr 2007.

²⁵ Hipparchos son of Charmos (*A.P.* 22. 3–4), archon in 496/5; perhaps Hippias’ DS, *APF* 11793 IX, but I doubt if a DS could have stayed in Attika; it may be better to accept Jacoby’s emendation of Kleidemos *FGH* 323 F 15, which makes him Hippias’ brother-in-law (WB).

²⁶ Kerameikos 471 deposit: two votes for Diokles, one for Erasistratos. Phaiax son of Erasistratos of Acharnai (*APF* 13921), a candidate in (?) 417, may be a younger member of the family, but the gap is long (cf. Table 28.4). The same problem arises if Kleophon (8 votes) and Philinos (1 vote), candidates in 417, are considered (Vanderpool 1968, 120) to be the sons of Kleippides son of Deinias of Acharnai, general in 429/8, against whom more than 100 votes were cast in the 440s.

²⁷ M/L p. 41 suggest that this Melanthios is the one mentioned in Hdt. 5. 97 and that Spintharos is the son of Euboulos of Probalinthos; but the names are all common and attested in several demes (cf. Immerwahr 1982, 62).

²⁸ Leogoras Leogora; one sherd (Brenne 2001 no. 154, from 471). Ostraka name Leogoras Erchieus and L. Kollyteus as well as L. Andokidou and L. Kydathenaieus (Brenne 153–7).

The patterns found in the scatter vote in ostracism should be compared to those found on curse tablets. Although in an *ostrakophoria* only one target could be named, a campaign against a prominent man might trigger personal memories of quarrels with his kin or associates; more significantly, a potential victim who had successfully escaped ostracism one year by campaigning against a political rival had to find further targets in order to save himself in subsequent years. Kinship as a basis of association is relatively easy for us to identify. It was not the only possible basis; ties of *hetaireia* must have played a role which we can no longer detect. In any case (*pace* Eder 1997) we are dealing with campaigns against individuals and those linked to them by association of ideas, not against anything like a political party.

THE THIRTY

Ostracism was institutionalized in a period of reaction against tyranny, and some of the characteristics stigmatized by voters were linked to the construction of the stereotype of the tyrant. Athens had no tyrants after the Peisistratidai, until Demetrios of Phaleron came to power in 317, but oligarchs seized and held power briefly in 411 and in 404/3. Kinship does not figure particularly prominently in theoretical accounts of oligarchy, perhaps because Plato and Aristotle tended to be sympathetic to this form of government; but personal ties certainly played a significant role in the Athenian oligarchies.

This was partly due to their character as revolutionary movements; preparations had to be made in secret and new adherents recruited through personal contacts. Groups of young *hetairoi* were used to create a reign of terror in the city in 411; the four hundred councillors who took power were selected, according to Thucydides (8. 67. 3), by ‘electing’ five chairmen (*proedroi*) who then chose a hundred councillors, each of whom recruited three more.²⁹ Unfortunately their names are not preserved. In 404 ten of the thirty oligarchic rulers were selected by Theramenes, ten were chosen by the committee of five ‘ephors’ who had laid the preparations for the oligarchic coup, and ten more were picked from those who attended the assembly at which the junta was set up (Lysias 12. 76). Our knowledge of connections is limited, but some can be traced. Kritias son of Kallaischros was one of the Thirty; his cousin (FBS) and ex-ward Charmides son of Glaukon was appointed one of the ten officials in charge of Piraeus. Plato, who

²⁹ Latte 1936, 68–9 points out that this method of recruitment seems to be military in origin. Cf. Versnel 1980, 115.

was Charmides' nephew (ZS) and Kritias' cousin (FBDS), joined the oligarchs with enthusiasm, although according to the biographical or autobiographical seventh letter (324d) he was soon disillusioned. The Kallaischros who was a member of the Four Hundred in 411 (Lysias 12. 66) may have been Kritias' father or a kinsman.³⁰ Eratosthenes (*APF* 5035), a member of the Thirty, was said by Lysias to be a close friend of Theramenes (12. 50, 62) and was presumably selected by him. Leodamas, also a supporter of oligarchy though not one of the Thirty, was possibly the cousin of Erasistratos, another member of the junta (MBS: *APF* 13921 D–E). Charikles son of Apollodoros (see *APF* 13479), another of the Thirty, was according to Lysias (12. 55) a close associate of Kritias. He was the *kêdestês* (presumably brother-in-law, ?ZH) of Teisias son of Teisimachos of Kephale, who had been a close friend of Alkibiades until cheated by him over the purchase of a team for the Olympic races of 416. Charikles appeared in the following year, 415, as one of the investigators appointed to enquire into the profanation of the Mysteries and mutilation of the Herms—a post which gave him a chance to avenge his brother-in-law—and Teisias reappears as a councillor under the oligarchy in 404/3 (Isokrates 16. 43). Hagnodoros of Amphitrope, also associated with the Thirty, was *kêdestês* to Kritias, perhaps his ZH (Lysias 13. 55, *APF* 8792 VI B). According to Lysias (*ibid.*) he saved a fellow-demesman, Menestratos, who had been accused and imprisoned by the Thirty, by proposing that he should be granted immunity if he denounced others; this probably means that Menestratos' kin had appealed to Hagnodoros to negotiate with Kritias on their behalf.³¹

Using the evidence of court speeches written after the restoration of democracy to reconstruct relations between the oligarchs and their subjects is risky; kinship or affinity may have formed the basis for accusations. However, that fact in itself meant that the close kin of prominent oligarchs would find it hard to disassociate themselves. They had much to gain from exonerating their kin, and little chance of effective disengagement.

The Athenians in 403 swore an oath *mê mnêsikakein*, 'not to bear grudges', but the extent to which this was translated into formal legislation is controversial (Carawan 2002, 2013; Joyce 2014; Whitehead 2002; see however Scharff 2016 on other amnesty laws). In any case, a good deal of forensic activity contravened

³⁰ See however *APF* 8792 VI. The name Kallaischros is not uncommon (8 demes in the classical period). On Loeper's hypothesis that the Thirty were recruited by tribe and trittys see now Nemeth 2006; lists were arranged in the usual tribal order, but it is not certain that there were 3 men from each tribe, and the idea of trittys representation cannot be sustained.

³¹ Xenophon's list of the Thirty includes a Phaidrias (in tribe IV on Loeper's view); if this is Phaidimos of Phrearrhioi, (ch. 26 n. 83), he may have married a sister of Kritias.

the spirit of the oath. Lysias, having conspicuously attacked Erasistratos, a member of the Thirty, and Agoratos, one of their henchmen (12, 13), was also hired as a speechwriter by defendants accused of oligarchic sympathies (see Loening 1987; Todd 2000; Wolpert 2002). There was also plenty of exculpatory biographical writing, some of it forensic in form; whether the ‘Theramenes papyrus’ belongs to this genre or comes from a historical text is controversial.³²

³² Cf. Gribble 1999; J. L. Shear 2011, 217–24; Momigliano 1971 on the relation between speech writing and biography; Engels 1993 on the Theramenes papyrus, *PMich* 5982.

Ambassadors, Generals, Military Commands

The theory of the democracy was that candidates were elected on their merits—or so one might assume. It would perhaps be more accurate to say that in an ideally democratic system there would be no elections, and all government appointments would be made by lot. For some offices in Athens, however, election was tolerated. The reasons for this, as well as the results, need to be discussed; and this involves asking just how election differed from selection by lot.

In both cases candidates put themselves forward for election, or possibly were nominated by friends, which would not be very different. The size of the panel would have varied; in the fourth century the nine annual archons and their secretary were appointed from a panel of 100 *prokritoi* (*A.P.* 8. 1, 55. 1; on the figure 500 in *A.P.* 22. 5 see P. J. Rhodes 1981*a*, 273–4). Most Athenian officials were probably appointed from much smaller panels (on councillors see ch. 17). The panel was scrutinized to eliminate candidates who lacked the necessary qualifications for the office in question; it seems that objections could be made on the basis of a candidate's general reputation as well as on formal grounds (A. R. W. Harrison 1971, 201–3; Feyel 2009). The process of drawing lots was supervised by the Council; many of the offices filled by lot were filled from the Council's ranks. Elections were held at meetings of the Assembly; the term for election, *cheirotomia*, shows that voting was originally by a show of hands, and as far as we know this system was never changed (Staveley 1972, 88; M. H. Hansen 1987*a*, 127).

It is generally implied, by both ancient and modern sources,¹ that the offices for which election was retained were those in which special skills and experience were so important that the lot would not have produced satisfactory results. This is perhaps only part of the story. After 487, military offices filled by election could be held repeatedly, a feature also obviously related to questions of special qualifications and ability; other offices in the classical system could not, except that a man could be a councillor twice. The rule that the annual archonships—or

¹ Ancient: e.g. *Ar. Pol.* 1317b 18–27; [*Xen.*] *Ath. Pol.* 1. 3. Modern: e.g. P. J. Rhodes 1981*a*, 696. C. Taylor 2007 suggests that the lot gave more opportunity to those whose ancestors had registered in rural demes.

at least the three major posts—could not be held more than once (*A.P.* 62. 3) probably went back to the archaic period when archons were elected.²

The skills required by the holders of elected office were in fact quite widely distributed. Ambassadors had to be competent public speakers, but there were many of these. Generals had to be able to command and to plan strategy, but Athens seldom had more than one or two really gifted commanders at a time. The principle that all of the ten tribes should be represented on the board of generals seems to have been modified slightly to allow two representatives from the same tribe in periods when an outstanding man was enjoying a long run in office, but it was not felt necessary to abandon it completely.³ The financial supervisors who were elected in the fourth century, first to manage the fund from which distributions for festivals were made (*theôrikon*) and later to a post of general management (*epi tēi dioikêsei*), were policy-makers rather than accountants.

All these posts carried a high degree of responsibility, and the significance of elections was probably partly connected with this. A man who had stood for election could not claim that his mistakes were due to the chance that had appointed him. Carrying responsibility, they also carried power; and those who competed for the highest powers may well have been reluctant to have any of the kudos of victory taken from them. Power, success, and charisma formed a feedback system in which election played a crucial role; generals and financial supervisors were elected for their personal charisma, but this in turn was enhanced by success in elections. Elections were proof of the trust the demos placed in its leaders, and the leaders the demos trusted most were those who had succeeded most often in previous elections—provided, of course, that they had had no disastrous failures while in office.

AMBASSADORS

Personal ties with foreign leaders influenced the selection of both generals and ambassadors, but especially the latter. They had less direct relations with the

² See Kahrstedt 1936, 134–41. Forrest and Stockton 1987 argue that (before 487?) the ban on iteration applied only to the three named offices, individually, and that the post of thesmothes was a stepping-stone on the way to the higher positions (contra, P. J. Rhodes 1981*a*, 696). This makes good sense in general terms; it has implications for the size of the early Areiopagos, which should be put at between 100 and 150 members rather than the 300 sometimes assumed. Prohibitions on repeating office are typical of the archaic period (M/L 2, cf. Humphreys 1988, 470), though the pattern tended to continue later.

³ The procedure of election is still not fully understood; see Piérart 1974; P. J. Rhodes 1981*a* 146–7, 265–6; *AO* 3–4; Mitchell 2000. Fornara's view (1971) that the rule of tribal representation was frequently infringed in the 5th c. does not seem to have gained adherents; M. H. Hansen 1988 suggests that it was abandoned at some date (soon?) after 360/59.

demos, and personal charisma was a less important factor; personal and family history, however, were especially important.

In the Homeric world and in archaic Greece personal ties of friendship or affinity between leading men in different states had played a major role in diplomatic relations. We are told in the *Odyssey* (24. 102–19) that Agamemnon and Menelaos travelled in person to Ithaka to persuade Odysseus to join their expedition against Troy, staying in the house of Agamemnon's guest-friend (*xenos*) Amphimedon. The passage presumably corresponds to the practice of the poet's own time. The hereditary role of *xenos* evolved during the archaic period into a convention that one or more citizen families in a polis would act as hosts or *proxenoi* to any visitor from another city with which they had personal ties. At first such arrangements seem to have grown up on an informal basis, but in the fifth century it became customary to confirm or confer the title of *proxenos* by decree.⁴ The use of the title by Athens to single out loyal supporters in the subject cities of the empire and reward them with special privileges was probably the beginning of this incorporation of the relationship into the public sphere, which like many other Athenian institutions (cf. D. M. Lewis 1984*a*) was widely copied in the empire and beyond. In the same period Perikles' law restricting citizenship to those with Athenian mothers as well as fathers put a stop to marriages of members of the Athenian elite to the daughters of non-Athenian aristocrats and rulers, and thus eliminated one of the mechanisms by which personal ties with other states had been created or reinforced.⁵ In the cities of the Athenian empire the position of *proxenos* carried real responsibilities and, at times, risks; later there was an increasing tendency to bestow the title on powerful men in the hope of future services, which might not always materialize. The position lay somewhere between an office and an honour (two categories themselves not always very sharply distinguished); the recipient's interpretation of its implications depended on his status and on political circumstances.⁶

⁴ On the history of the institution see W. Wallace 1936, 1970; Gauthier 1972, 1985*a* ch. III; Kienast 1973, 532, 581–7; Gschnitzer 1973; Baslez 1984, 39–45, 111–22, 220–4; Mack 2015. Marek 1984 emphasizes the *proxenos*' function as representative (*pro-*) of his *xenoi* rather than host, but distinctions should not be too sharply drawn.

⁵ My suggestion (1974; 1983*a*/1993, 24) that Perikles disapproved in principle of private diplomacy and that one of the main aims of the law on citizenship was to stop such marriages has met with a mixed reception: see C. B. Patterson 1981, 99–100; Walters 1983; Baslez 1984, 94–7; Ogden 1996, 66–8. *Pace* Walters (329–30) the normal way to regulate marriage in Athenian law was by legislation concerning the status and rights of children. Penalties for cohabiting (*synoikeia*) with a foreign woman came later (cf. A. R. W. Harrison 1968, 26–9; ch. 19 n. 76).

⁶ See Gauthier 1985; he does not deal with the story of Alkibiades II 'renouncing' the proxeny of Sparta, which is unique (Daux 1937). There does not seem ever to have been an institutionalized procedure for terminating the relationship. However, hereditary proxeny might lapse after a time if relations were not energetically kept up.

Private ties with other states, whether formalized in the relation of proxenos or not, affected the choice of ambassadors and, at times, generals. The Akarnanians who had been fighting as allies of Phormion asked that a son or kinsman should be sent to replace him, in 428/7, after his death (Thucydides 3. 7; n. 32 below); and Iphikrates, Chares, and Charidemus all owed part of their success to their Thracian connections. The election of the historian Thucydides as general in 424/3, when the Athenians were fighting in Thrace, is also likely to have been due at least in part to his connections in the area (Thucydides 4. 105. 1; *APF* 7268 IV–VI). Konon's good relations with Persia in the early fourth century were even more decisive.

Ambassadors, in the ancient Greek world, did not hold a permanent office; a special commission of delegates, variable in size, was appointed whenever an embassy had to be sent to negotiate with another state. The election procedure at Athens was less formal than that for regular annual offices.⁷ Names were put forward, either in the Assembly or at the meeting of the Council of 500 in which the decree proposing the embassy was drafted; apparently anyone could put forward a nomination, and according to Demosthenes (19. 121–2) it was not even necessary to consult the nominee in advance. A vote in the Assembly followed, but may sometimes have been a mere formality, the number of names proposed being just sufficient for the size of embassy recommended by the Council. We do not hear of contested elections, although proposed names might be rejected.⁸

Personal ties were not the only consideration that motivated nominations. Support for the policy the embassy was to pursue was clearly taken into account, and it was normal for the men who proposed the embassy to serve on it (Mosley 1962; Briant 1968, 19). If views had diverged, the differences of opinion might be reflected in the choice of ambassadors.⁹ The men chosen had to be rich; the travel allowance paid by the city was small, usually about the same as a soldier's daily pay, but ambassadors were expected to make an impressive showing—especially at

⁷ Briant 1968 (perhaps too formalistic); Mosley 1972, 1973 ch. 8; Kienast 1973, 526; cf. the general survey of recent work on ancient diplomacy by Mosley in Olshausen and Biller 1979; Mitchell 1997, 192–8. Aischines' friend Nausikles of Oe (*APF* 10552) proposed Aischines as ambassador to Philip of Macedon in 346 and served also himself (Aisch. 2. 18, 184). Demosthenes was nominated for the same embassy by Philokrates, one of its leading members (ibid. 15, 18). Another ambassador was Philokrates' fellow-demesman Derkylos of Hagnous.

⁸ In 344/3 the Areiopagos intervened to substitute Hypereides for Aischines as spokesman for Athens before the Amphiktyonic Council (Dem. 18. 134); it is unclear whether it was on this same occasion that Demosthenes brought Aischines the news in Piraeus that his appointment as ambassador had been rescinded (Dem. 19. 209).

⁹ Xen. *Hell.* 6. 3. 2–17, discussed below and by Mosley 1962; Briant 1968, 22 doubts the intention to represent conflicting views.

foreign courts—and to use their own resources for this purpose.¹⁰ Eloquence became an increasingly important qualification from the fourth century onwards.

The importance of personal ties, however, was fully recognized. The men chosen as ambassadors to Dionysios of Syracuse in 393 were Dionysios' personal friend Eunomos, Aristodemos the son of Konon's lieutenant Nikodemos (*APF* 5951), and probably the rich Eurippides of Myrrhinous (*APF* 5 949).¹¹ The main speakers on the Athenian embassy to Sparta in 371, according to Xenophon (*Hell.* 6. 3. 2–17), were Kallias III son of Hipponikos of Alopeke, an elderly man whose family had been proxenoi of Sparta for at least two generations, an Autokles (perhaps the son of Strombichides, *APF* 4386) who was opposed to peace,¹² and Kallistratos of Aphidnai (*APF* 8157 IV), a leading politician who on this occasion favoured peace, and who had been in close contact with Athens' best general, Iphikrates (Xenophon *Hell.* 6. 2. 39, 3. 3). Kallias' speech gives a good example of the conventional rhetoric a proxenos would use on such occasions.¹³ Another member of the embassy was Melanopos son of Laches, whose father had been prominent in the peace negotiations between Athens and Sparta in 421, and whose *kêdestês*¹⁴ Diophantos proposed an honorary decree for Koroibos of Sparta in 368/7 (Tod 1948 no. 135).

Several leading Athenian families had special relations with Sparta. Habronichos son of Lysikles of Lamptrai (*APF* 20), ambassador to Sparta in (?) 479/8,¹⁵ had in 480 commanded the triakontor that carried messages between the Spartan king Leonidas, commanding the land force at Thermopylai, and the Athenian

¹⁰ Westermann 1910; L. Robert 1934, 282–3; Kienast 1973, 578–81; cf. Theophr. *Char.* 30. 7. The rich Apollodoros son of Pasion of Acharnai was selected to serve as trierarch for an embassy to Sicily in c.368 ([Dem.] 53. 5; Gernet 1959, 90). He gave Deinon 300 dr. to cover the expenses of a trip to Aigina to ransom his brother ([Dem.] 53. 7); this payment, separate from the ransom money, was much more generous than an ambassador's allowance, though admittedly ambassadors did not have to pay fares or lodgings.

¹¹ Lys. 19. 19f.; Ar. *Rhet.* 1384b 15–17 and Schol. Rabe 1896, 106–7. Konon's influence with the King of Persia was Athens' main resource at this point; the embassy had to include someone who could speak for him.

¹² Tuplin 1977 returns to the MS reading which makes Autokles and Strombichides separate members of the embassy. On Strombichides' family see Table 16.1; ch. 23 n. 8.

¹³ Kallias mentions previous occasions on which he had visited Sparta as ambassador; the dates are unknown and did not include the embassy of 392/1 on which his enemy Andokides had served (*FGH* 328 F 149). His grandfather (FF) was probably ambassador to Sparta in 446/5 (D. S. 12. 7; with Andokides' FF, Andok. 3. 6). *APF* 8429 XII suggests that the proxeny may have been acquired through the marriage of Kallias II to Kimon's sister, but this is not a necessary assumption. Spartan ambassadors staying in the house of Kallias III were arrested in 378 (Xen. *Hell.* 5. 4. 20).

¹⁴ WF? Cf. Table 29.16. Melanopos was also ambassador to Caria in 355 (Dem. 24. 12–13, 125–7).

¹⁵ A target for ostracism, presumably in the 470s; one sherd in the 471 Kerameikos deposit, surprisingly, attacks him as pro-Persian (Brenne 2001 no. 88). The authenticity of this embassy has been doubted (Burn 1962, 500 n. 34, 505 n. 49; Hignett 1963, 281–5); *HCT* I 309 suggests that it should be dated later, Habicht 1961*a* that the names were invented.

fleet at Artemision. Earlier ties with Sparta may well have qualified him for this post. Plutarch (*Aristeides* 10. 10) has Kimon also as one of the ambassadors of 479/8, when he would have been barely thirty; this has been doubted, but Kimon's eldest son Lakedaimonios was born by 470, and the name may well indicate that Kimon was already a proxenos of Sparta by that time.¹⁶ He led the Athenian force to help Sparta at Ithome in 461 and was sent to Sparta again to negotiate peace in the late 450s (*HCTI* 325, 409–413). Another son was called Thettalos;¹⁷ Kimon maintained the archaic aristocratic tradition of far-flung personal ties already to be seen in his grandfather (FF) Kimon Koalemos, who won the four-horse chariot race three times at Olympia and was connected by marriage with the tyrants of Corinth, and his father Miltiades, who had married a Thracian princess (*APF* 8429). This 'internationalism' periodically provoked gossip and criticism at Athens (Plutarch *Kimon* 4, 14–16),¹⁸ and Kimon's sons do not seem to have kept up the relation with Sparta. Other families were eager to take their place: those of Kallias, already mentioned, Alkibiades, and Andokides. Andokides III had gone to Sparta in 446/5 to conclude the Thirty Years' Peace; his grandson (SS) went as ambassador in 392/1 (*APF* 828, *FGH* 328 F 149). The family of Alkibiades, according to Thucydides (8. 6. 3), acquired this name from their Spartan *xenoi*; Alkibiades I must have been named c.550 (cf. perhaps *LGPV* III A Alkibiades 4). His grandson (SS), Alkibiades II, renounced the proxy of Sparta, probably c.460 (Thucydides 5. 43. 2, 6. 89. 2; *APF* p. 15), but *his* grandson Alkibiades III tried to revive the connection by attentions to the Spartans taken prisoner at Sphakteria in 425), and was offended at being passed over in the ensuing peace negotiations, although he was barely thirty at the time. When summoned back to Athens from Sicily to stand trial for parodying the Eleusinian Mysteries, in 415, he took refuge in Sparta with his family's guest-friend (*patrikos xenos*, Thucydides 8. 6. 3) the ephor Endios son of Alkibiades, who had himself served as ambassador to Athens several times (*FGH* 324 F 44; Usener 1871, 314–15).

Spartans attached considerable importance to such personal ties (Xenophon *Hell.* 5. 4. 24–33; Adcock and Mosley 1975, 156; D. M. Lewis 1977a, 29, 34–5, 64). Perikles feared that his *xenia* with King Archidamos of Sparta would lead the king to spare his land when the Spartans invaded Attika at the beginning of

¹⁶ Mosley 1971. Cf. Lakon, proxenos of Sparta in Plataia (Thuc. 3. 52. 5), and other examples quoted by S. Perlman 1958; Herman 1990. (Note that *LGPV* Lakon 7 has been eliminated by D. R. Jordan and Curbera 2008, *SEG* 58. 265.)

¹⁷ Raubitschek 1955, 288 n. 13 associates the name with the help given to Kimon in 477 by the Thessalian baron Menon of Pharsalos (cf. *APF* 8429 XII–XIII). Connor 1967 dates Kimon's Thessalian proxy late in his life.

¹⁸ Cf. Plat. *Laws* 642b–c, where the Spartan Megillos says that he was brought up to consider himself proxenos of Athens and was teased by other boys as being Athenian.

the Peloponnesian War, either out of respect for the obligations of *xenia* or to discredit him (Thucydides 2. 13. 1). Earlier, gossip said that Perikles had bribed Kleandridas, the adviser of Archidamos' colleague Pleistoanax, in 446 (Plutarch *Pericles* 22). When King Pausanias of Sparta was encamped outside Athens in 403 Diognetos, brother of the well-known general Nikias, took Nikias' orphan grandson (SS) and nephews, son of a third brother, who had lost their fathers under the rule of the Thirty, and asked Pausanias as their *xenos* to avenge them. Pausanias accepted Diognetos' gifts and refused those of the Thirty (Lysias 18. 10–12).

Personal relationships and gifts are even more prominent in Athenian relations with the kings of Persia and, later, Macedon. Kallias II of Alopeke, famed for his wealth, went as ambassador to the Persian court as well as to Sparta.¹⁹ Plato's great-uncle (MMB) and stepfather Pylilampes (*APF* 8792 VIII) had made numerous journeys to Persia as ambassador (*Charmides* 158a), bringing back peacocks and other gifts; his son Demos had a gold cup given him by the Persian king, a token entitling him to treatment as the king's friend wherever he travelled.²⁰ In Plato's *Meno* (78d) the eponymous character, a young Thessalian of noble family from Larissa, is teased as *patrikos xenos* of the Great King.

Andokides' father Leogoras had visited Macedon in 426/5 as ambassador (*IG* i³ 61. 51), and his son turned to King Archelaos of Macedon, as well as to King Evagoras of Salamis in Cyprus, for hospitality when in exile in the late fifth century.²¹ Aischines is said by Demosthenes to be a *xenos* of Philip of Macedon and this allegation, though somewhat suspect, may be supported by the fact that when Aischines excused himself from going on the third embassy to Philip in 346 one of his brothers (Aphobetos?) offered himself for election instead.²² The ambassadors in 346 also included Phrynon of Rhamnous, who had been taken to Macedon when captured by pirates and at some later date had sent his son to Philip's court (Demosthenes 19. 230); Iatrokles son of Pasiphon, an Athenian who had been captured when Philip took Olynthos; and the actor Aristodemos, who had been responsible for securing Iatrokles' release. Though Demosthenes fulminates against his fellow-ambassadors' backstage negotiations with Philip

¹⁹ See Badian 1993; Humphreys 1999.

²⁰ *Symbolon*, Lys. 19. 25; cf. Gauthier 1972, 71; Sherwin-White 1978*b*; Briant 1987, 23–4; id. 1985, 62–3. On archaeological evidence for the kind of gifts that might have been carried on diplomatic missions see Shefton 1982, 350–2; 2001.

²¹ MacDowell 1962, 4–5. On Jacoby's view that Andokides III was sent to Kerkyra in 433/2 as 'a kind of civil commissioner' because he belonged to a descent line which claimed mythical kinship with the Kerkyraians through the marriage of Telemachos to Nausikaa (*FGH* 4 F 170, 323a F 24) see *HCT* I 188–9; *APF* 828 V, 4551; ch. 20 n. 81.

²² Dem. 19. 124; Aisch. 2. 94. The date of Aphobetos' embassy to Persia (Aisch. 2. 149) is unknown.

(19. 175–6), it appears that a combination of public and private approaches was intended from the start.²³

We can see families building up connections with Macedon as the power of her kings increases. Nausikles of Oe was one of the ambassadors to Philip in 346; his son Klearchos went on an embassy to Nikanor, a personal friend, in 318 (Diodorus Siculus 18. 64. 5, *APF* 10552). Demades took his son Demeas with him on an embassy to Antipater in Macedon in 319.²⁴

Actors travelled widely and made friends in many cities; their names were known, and like athletes they were sometimes chosen as ambassadors for this reason. At the end of the fourth century we also see the beginning of the selection of ambassadors simply because they come from historically famous families. The embassy sent by the Athenians to Darius of Persia in 333 included Iphikrates II, son of the famous general (*APF* 7736); a Dropides, presumably claiming descent from the friend of Solon; and an Aristogeiton, probably a descendant of the tyrannicide.²⁵

Backstage advice and support were as necessary in dealing with city councils and assemblies as in negotiating with kings. Thucydides describes the help given by Alkibiades to Argive ambassadors when they came to negotiate alliance with Athens in 420 (5. 43. 3, 46. 5), and the way in which Alkibiades double-crossed Spartan ambassadors in the same year, promising support but instead attacking them when they came before the Assembly (5. 45. 2–4). There is a sequel to the Argive episode: Isokrates represents Argive friends as coming to support Alkibiades' son in court in 397, 16. 1.

Exiles, of course, regularly made use of such personal ties, which were cultivated by quietists as well as by public figures. Krito tells Sokrates that he will be looked after by Krito's friends in Thessaly if he escapes from prison (Plato *Krito* 45c). The speaker of Lysias F XXIV Gernet/Bizos 1926 (XX 78–9 Thalheim 1913, CXXXV/286–7 Carey 2007) is acting as *synēgoros* in an Athenian court for the son of a Theban xenos who sheltered him while he was in exile in Thebes;

²³ Cf. Starr 1974 ch. 3 for a discussion of the role of unofficial contacts in Greek interstate relations. De Ste. Croix 1963 emphasizes the limits; ambassadors could hold secret conversations but these did not bind their cities.

²⁴ See Kienast 1973, 528, 611–12; *APF* 3263. Matthaïou 1986 publishes a decree of 304/3 honouring an ambassador sent to Athens by Demetrios Poliorketes; the honorand's father was a proxenos of Athens. The arrangement of material in Olshausen 1974 makes it cumbersome to trace the influence of kinship on the selection of ambassadors in the Hellenistic period, but note e.g. nos. 30–1; *SEG* 29. 107. 55–64 (T. L. Shear 1978); *SEG* 34. 72–3; Vial 1984, 272. For Athenian families with Delphian connections see ch. 12 n. 72.

²⁵ On the problems of this embassy (or embassies) see Bosworth 1980, 233; W. Will 1983, 71. Sealey 1960 speculates on the identification of the ambassadors. A Dropides of Aphidnai is known from a mine lease of? 339/8 (*APF* 8792 VII A; *Agora* XIX P 28. 22). Thebes at about the same time sent Thessaliskos, son of the well-known Ismenias, and an Olympic victor called Dionysodoros (Arr. *Anab.* 2. 5. 2–4).

he had given a home to the family of his xenos when they came to Athens as exiles (cf. Plutarch *Pelopidas* 5–6).

Two points, however, should be stressed. The first is that all these private ties created opportunities of which states could choose to take advantage, rather than binding obligations. Foreign visitors to Athens would have a choice of several proxenoi, as we have seen in the case of Sparta; indeed, the growing number of grants of proxenia in the classical and Hellenistic periods indicates that new ties were constantly being established. A proxenos who was too young to be influential, too poor to provide hospitality, or not active in political affairs, would be ignored. The Spartans who came to Athens to negotiate peace in 421 ignored Alkibiades III and Kallias III, both of whom were young at the time, and carried on negotiations through the generals Nikias and Laches (Thucydides 5. 43. 2). Sons did not have to inherit their fathers' sympathies.²⁶ The second point to note is that at least in the fifth century proxeny tended to be regarded as a kind of hereditary office which passed from a father to one of his sons, rather than a hereditary status from which all sons could benefit. The institution did not create dynasties or clans of proxenoi, at least in Athens.

GENERALS AND OTHER MILITARY OFFICERS

Xenophon (*Memorabilia* 3. 4. 1) portrays an unsuccessful candidate for election as general complaining that although he has a solid record of experience in minor military commands he has been defeated by a richer man whose reputation is based only on his showy performance of non-military liturgies.²⁷ We should perhaps not let ourselves be too easily impressed by this example of socratic rationalism. In the fourth century Athenian generals needed independent financial resources; funds from the state often arrived late or were inadequate.²⁸ The Athenian army and fleet do not seem to have been strongly hierarchized, and assessments of the strategic and tactical alternatives available probably circulated widely; the speeches on battle plans which Thucydides puts in the mouths of generals no doubt contain more solid information and less rhetoric than those actually delivered, but allow us to

²⁶ Humphreys 2009 argues against Leonardos' identification of the pro-Macedonian general of 361/0, Leosthenes (*APF* 9142), with the father of the anti-Macedonian Leosthenes of Kephale. The general was exiled, his property presumably confiscated, and he apparently did not return to Attika. The name Leosthenes is attested in 6 demes in the 5th–3rd c.; and if Chares of Angele in 361/0 replaced Leosthenes after his condemnation one might think that L.'s deme was Kydathenaion (*APF* p. 344), Kytheros (*IG* ii² 2496), or Paiania (*IG* ii³ 4. 21. 11).

²⁷ Cf. [Xen.] *Atth. Pol.* 1–3, *Ar. Pol.* 1282a 31–2. The successful candidate had served in the cavalry, the loser was a hoplite; cavalry service too gave opportunities to demonstrate panache.

²⁸ Pritchett 1971, 24–9; 1974, 101–2, 113.

assume that generals actually did communicate their plans to the assembled troops, and not only to a few subordinates. Administrative tasks were minimal; there was no commissariat. It was important for a general to inspire confidence, and panache in the performance of liturgies might be one way to achieve that.

We need to distinguish between the factors that gave a man his first appointment and those which kept him repeatedly in office thereafter. In the long run, I see no reason to suppose that the system did not eliminate the incompetent effectively, though a mediocre performer who had no serious competitor in his tribe might acquire a better reputation than he deserved, merely because people were used to seeing him in command.²⁹ But the factors that gave a man his first electoral success were not necessarily linked to military ability. Sophokles was probably elected because he was well known as a poet. The relevant point in the present context is that the charisma of a successful general often spread to his close kin—a son or brother.³⁰ Both this contagiousness of charisma (cf. Max Weber 1978 I, 248–9) and the relevance of wealth, which was inherited—and which could be acquired as well as exhausted in military office (Pritchett 1974, 126–32)—thus favoured the formation of military dynasties, *oikoi estratêgotes* (J. K. Davies 1981, ch. 5). It is also likely that a successful general would have followers who canvassed for him and benefited from his patronage, who would be structurally predisposed to transfer their allegiance to another member of the same family if he seemed likely to have an equally successful career. The son of a rich and well-known general would have many *hetairoi* to support him. Nevertheless, the opportunities for patronage in the Athenian military system were restricted, as we shall see, and the spread and continuity of military dynasties was limited. Many of the most successful generals came from families with no military tradition.

Since generals were chosen by tribe (above, n. 3), the evidence for dynasties will be arranged on a tribal basis, although some matrilineal links between men in different tribes have to be considered. It should be emphasized that the evidence is far from complete (Table 16.1).

In **Erechtheis (I)** the family of Diotimos I son of Strombichos I, of Euonymon, can be traced in office for over a century (*APF* 4386). Diotimos I was general in 433/2, his son Strombichides in ?413/12, 412/11, and probably again in 405/4. Graham 1998 suggested that *IG* i³ 1032 was a dedication by Strombichides to Poseidon Erechtheus. The Diotimos who was general in 390/89, 388/7, and 387/6 may have been a grandson of Diotimos I, although the name is a common one; Autokles son of Strombichides I, general

²⁹ On prosecution of generals see Hamel 1998.

³⁰ For a Corinthian example see D. M. Lewis 1955, 4. On military command in Hellenistic Athens see Kralli 2006; G. J. Oliver 2007*a*.

Note: Dates are those of attested offices; we do not have full records. At *APF* p. 164 line 4 read Diotimos III (not II). On Autokles (ambassador to Sparta in 371/0) see Tuplin 1977; he may not belong to this family.

TABLE 16.1. Euonymon: Strombichos

in 368/7 and 362/1, was also a grandson. Another grandson, Eukrates son of Strombichos II, served as taxiarch in 356/5 (*IG* ii² 4. 246, *Agora XVIII* 150); his nephew (BS) Diotimos III son of Diopeithes was general in 338/7, 337/6, 335/4, 334/3, and again c.330 or soon after. Olympiodoros, general in the 300s and 280s and eponymous archon in both 294/3 and 293/2, may have been the son of Diotimos III (ch. 23 n. 8). These attested offices represent a minimum for the family; probably members of the group were actively engaged in holding or seeking office throughout the period from the 430s to the 280s. They appear frequently as trierarchs, especially in the well-documented second half of the fourth century; this service as captains of warships will in itself have added to their military experience and given them opportunities to demonstrate their generosity, courage, and ability to command. Influential trierarchs, especially those who were on friendly terms with the generals (cf. [Demosthenes] 50. 33) took part in councils of war; one would be acting as commander of the general's flagship (see below). Naval warfare, in which a man qualified for a subordinate position of command purely by wealth, was in this respect less democratic than hoplite fighting. On land only service in the cavalry gave the individual rich man a chance to shine. Alkimachos of Anagyrous (364/3, 357/6, 354/3?) is the only other attested general in the tribe.

In **Aegeis (II)** Nikias son of Nikeratos of Kydantidai served as general more or less continuously from 427 until his death in Sicily in 413.³¹ His younger brother Eukrates succeeded him in 412/11, and served again in 405/4; both he and Nikias' son Nikeratos II were prominent enough to be killed by the Thirty. Nikeratos III, grandson of the latter, was evidently a well-known figure in fourth-century Athens (Demosthenes 21. 165; cf. 54. 9 with D. M. Lewis 1955, 30; Humphreys 1985*a*, 331) but does not seem to have competed for military commands; his health was bad.

In **Pandionis (III)** Andokides III was general in 446/5 and 441/0. His son Leogoras and grandson Andokides IV served as ambassadors, as has already been mentioned, but were implicated in the scandals over the statues of Hermes and parodying of the Mysteries in 415; Leogoras had a reputation for frivolity (ch. 13 n. 38), and Andokides made more enemies than friends in Athens (*APF* 828 V–VI). Phormion, who possibly belonged to the deme Paiania, was general at least five times between 440/39 and 429/8; he was one of the able commanders who rose, so far as we know, from an undistinguished background. He was succeeded in office in 428/7 by his son Asopios; when Phormion died his Akarnanian allies sent a messenger to Athens asking that a son or kinsman should be sent to command them (Thucydides 3. 7. 1).³² Asopios too died in office, and the family is not attested thereafter. Hagnon of Steiria (*APF* 7234) was general in 440/39, 431/0, and 429/8; he was sent to found a colony at Amphipolis in 437/6, signed the peace treaty with Sparta in 421, and was appointed *proboulos*, member of a commission of elder statesmen set up to direct policy, in 413. His son Theramenes, born c.440, was general in 411, and remained prominent in Athenian political life until killed by the Thirty. In the later 420s Hagnon had to compete for election as general against his fellow-tribesman Kleon of Kydathenaion,³³ and this may have shifted the family's sympathies towards the right.

³¹ *APF* 10808; ch. 24 n. 95. Nikias is attested as general in 12 years during this period and no other general from Aigeis is recorded. His career may have begun earlier (Plut. *Nik.* 2. 2; but see *AO* 103). W. Thompson 1974 suggests that the Eukrates who was general during the Potidaia campaign might be Nikias' brother; this is not particularly likely, and Sokrates son of Antigenes of Halai (Thuc. 2. 23. 2, general 432/1, 431/0) may have represented Aigeis in those years (so Fornara 1971, 52–3; *AO* 102, 117).

³² An Akarnanian Phormion was given Athenian citizenship (*IG* ii³ 316); since Phormion's father was called Asopios (Thuc. 1. 64, etc.) and Asopos was a local river-god in Central Greece, the connection may go back for some generations (though the name Asopios is also attested in Agryle and Hermos). The tribal affiliation to Pandionis assumes that Pausanias' statement that Phormion lived in Paiania (1. 23. 10) is a deduction from his demotic; it is problematic for the general view that at least 9 tribes had to be represented on the board of *stratēgoi* (see Mattingly 1997; ch. 25 n. 38). If Eurymedon son of Thoukles, general from 427/6 to 425/4 and again in 414/13 and 413/12, was an ancestor of Eurymedon of Myrrhinous (*APF* 8792 XI), we would have yet another general from Pandionis to fit into these years; but prosopographical arguments should not be based on names given to commemorate public events (cf. Mattingly 1970, 137–8; Mitchell 2000).

³³ Kleon was general in 424/3, 423/2, and 422/1 (the command in 425/4 was extraordinary).

In the fourth century we have some well-known generals but no cases of dynastic succession. Demainetos of (?) Paiania (chs. 20 n. 88, 25 n. 22) was elected c.396 and again in 388/7 and 387/6; Chares of Angele held office more or less continuously from 367/6 until 339/8. The election of Dikaiogenes IV of Kydathenaion (ch. 7 Case 2) for (?) 330/29 (Humphreys 2009) and 323/2 may possibly have owed something to the service of his older cousin (FFBS) Proxenos of Aphidnai in (?) the later 350s (*IG* ii³ 295).

In **Leontis (IV)** Nikostratos son of Dieitrephes of Skambonidai is attested as general in 427/6, 425/4 through 422/1, and 418/17, in which year he died (Hermolykos II, *IG* i³ 883, may be a brother). Their uncle (FB) Hermolykos had fought conspicuously at Mykale in 479 (Herodotus 9. 105). Another Dieitrephes, probably Nikostratos' son or nephew (BS), had been elected phylarch and then hipparch in the cavalry when very young and was already general in 414/13; he served again in 412/11.³⁴ This family had to compete against Alkibiades, who may have become general in 420/19 probably soon after the minimum age of thirty (*APF* 600 VII), and perhaps held the office continuously until his exile in 415, was re-appointed on his return to Athenian service by the fleet in Samos in 411, and remained in command, de facto if not always de jure, until he fell out of favour again in 406 and retired to his land in the Thracian Chersonese.

Alkibiades may have owed his early election partly to the fact that he was the ward of Perikles; his father had died while serving as general at the battle of Koroneia in 447/6, and one of his forebears had fought at Artemision in 480 with a privately owned trireme.³⁵ Alkibiades got control of the family's wealth at the age of 20 and used it to make himself conspicuous with a talent as impressive as that which he displayed in military affairs. His friend and fellow-demesman Adeimantos son of Leukolophides of Skambonidai was general in 407/6, 406/5, and 405/4. His success presumably owed something to his association with Alkibiades.³⁶ The oligarch Phrynichos, also a member of Leontis, held the office in 412/11; again we have an oligarch who had been in competition for office against a charismatic favourite of the demos.

In the fourth century the tribe's main representative, if he is correctly ascribed to Potamos (ch. 26 n. 116) would have been Phokion; the Salaminios Diopeithes (ch. 26 n. 95) is attested as general from 343/2 through 341/0.

In **Akamantis (V)** Perikles' father Xanthippos was general in 479/8. Perikles himself is first recorded as general in 454/3, when he was at least 38 and quite

³⁴ Ar. *Birds* 799, cf. 1440; Thuc. 7. 29. Fornara (1971) suggested that Dieitrephes was also general in 413/12, but *AO* does not accept this.

³⁵ Hdt. 8. 17; Alkibiades' FFF.

³⁶ In 410/9 Alkibiades was elected by the fleet in Samos; another man from Leontis, Pasiphon of Phrearrhioi, was elected in the city. Archestratos of Phrearrhioi was elected for 406/5 (Xen. *Hell.* 1. 5. 16, Lys. 21. 8).

possibly over 40, and thereafter held office almost continuously³⁷ until his death in 429. His nephew (BS) Hippokrates son of Aripbron was general in 426/5 and 424/3, dying at the battle of Delion in the latter year; he may have held office in other years in the early 420s. Perikles' ward Alkibiades was, as we have just seen, elected in 420/19 and frequently thereafter. Perikles' son by Aspasia, Perikles II, was appointed general in 406/5 and may have served earlier. He was probably born by 444,³⁸ and would therefore have become eligible for the generalship at about the time of the scandal over the Hermai and the Mysteries; he may have been associated in voters' minds with Alkibiades, as well as with his father, and may have been affected by the fluctuations in Alkibiades' reputation. In the same tribe Glaukon of Kerameis (*APF* 3027) had been general at least twice in the period 441/0 to 433/2; his father Leagros had been general in 465/4.³⁹ In the fourth century it is often assumed that Leosthenes I of Kephale and his homonymous son were both generals, Leosthenes II achieving the position in spite of rather than because of the reputation of his father, disgraced and exiled *c.*361, but we have no evidence for the demotic of the earlier general (see n. 26). Phaidros I of Sphettos (*APF* 13964) is attested as general in 347/6, *c.*334, and in 323/2; his son Thymochares may have succeeded him *c.*321 and served again in (?) 315/14 and (?) 313/12; the family continued prominent into the third century. On Derkylos of Hagnous see chs. 27 n. 40, 30 n. 79.

In **Oineis (VI)** Miltiades had been general in 490/89, the hero of the city after the victory at Marathon, but had abruptly fallen from favour when his expedition against Paros failed. Nevertheless his son Kimon was elected in 479/8, probably at the earliest possible date, and thereafter seems to have served continuously until ostracized in 461. He was elected again on his return ten years later, and died in office in Cyprus in 451/0 or 450/49.⁴⁰ His son Lakedaimonios, born by 470, was commander of the cavalry (hipparch) in the 450s or 440s, and general in 433/2; contemporary gossip said that Perikles had deliberately kept the strength of the expedition (against Kerkyra) down, because of his hostility to

³⁷ *APF* 11811 III. Perikles was not elected in 444/3, and may have missed election in some earlier years also.

³⁸ Date of birth: Humphreys 1974, 94 n. 13 (ch. 14 n. 22). Perikles' two older sons predeceased him. Note the dismissal of the sons of Hippokrates son of Aripbron in Eupolis *Demes* (*PCG* 5 F 99) 112. Perikles II was perhaps general in 407/6, see *AO*. An Arcestratos, perhaps the general elected in 406 (*Xen. Hell.* 1. 5. 16) after the disaster at Notion, is said by Antisthenes the Socratic in his *Aspasia* (Athen. V 220d; F 34 Caizzi 1966) to have been a friend of Perikles' elder sons. But the context—which seems to concern Aspasia's hostility to Perikles' legitimate sons—makes it doubtful whether we can attribute his election to association with the family (cf. Wilamowitz 1893 I, 68–9).

³⁹ See W. Thompson 1971*e*. Glaukon was perhaps born *c.*480 (but see Francis and Vickers 1981, 101–11); and is attested as general 441/0, 433/2, perhaps also 439/8 and 435/4.

⁴⁰ Possible return before 451: *HCT* I on Thuc. 1. 112. 1.

the family.⁴¹ Another son, Oulios, perhaps held the post of *sitophylax*, in charge of corn supplies, c.425 (Schol. Aristophanes *Knights* 407); but on the whole Kimon's sons were considered disappointing (Aristotle *Rhetoric* 1390 b 30). Kimon's position as Perikles' main rival was inherited by Thoukydides son of Melesias of Alopeke (Antiochis X), an affine.⁴² Badian 1993 defends the tradition that Kallias II son of Hipponikos, also of Alopeke, Kimon's brother-in-law (ZH) was elected general after Kimon's death, for 449/8.

Lamachos, also of Oineis, was general in 425/4 and from 416/15 until his death in summer 414; his son Tydeus was general in 405/4, and is spoken of as having already been a leading figure among the remnants of the Athenian army that escaped capture in Sicily in 413 (Lysias 20. 26). Lamachos may have had a command already in the 430s; he was well known by 426/5 and the joking description of him as *neanias* in Aristophanes *Acharnians* 601 is not to be taken literally.⁴³ In the fourth century, Charidemos son of Philoxenos of Acharnai (APF 15380) may have owed his Athenian citizenship and his elections as general to the fact that he was the brother-in-law (ZH) of Kersobleptes, one of the heirs of King Kotys of Thrace.⁴⁴ Timomachos of Acharnai, general in 367/6 and 361/0 (APF 8157 IV) was the *kedestes*, probably son-in-law, of the politician Kallistratos I of Aphidnai (ch. 31 n. 30, Table 8.7).

Aischines' brother-in-law Philochares of Kothokidai was elected general for 345/4 and the two following years; Aischines' prominence as *rhetor* may have helped. Deinokrates of Acharnai, general in (?) 338/7, 336/5, and perhaps other years (chs. 28 n. 54, 31 n. 78) may have been affinally linked with the family of Lykourgos before his son Kleombrotos married Kallisto daughter of Lykophron II c.305 (APF 9251; ch. 4 n. 13, Table 4.6).

Sophilos son of Aristoteles of Phyle (Table 28.13) is now also attested as general in the Lykourgan period in an ephebic dedication at Panakton (1992–400, Humphreys 2009).

Kekropis (VII) has no markedly dominant family, but Archestratos son of Lykomedes I, general in 433/2, Chaireas his son (?), general in 410, and Kleomedes son of Lykomedes II, general in 417/6, may all have descended from Lykomedes I son of Aischraios of Phlya, who was famed for his bravery as trierarch at the battle of Artemision in 480 (APF 9238; see however Mitchell 2000). It is not certain that the Laches who was general in 364/3 (Diodorus Siculus 15. 79. 1), and perhaps taxiarch in 394/3, was a descendant of Laches of Aixone, general in 427/6 and 418/7; a Laches son of Laches of Steiria (III) owed money

⁴¹ Plut. *Per.* 29. 2–4, cf. *Kim.* 16. 1 (Stesimbrotos *FGH* 107 F 6); Thuc. 1. 45. 2 with *HCT* ad loc.

⁴² APF 7268 III; ch. 14 n. 20.

⁴³ 430s: Plut. *Per.* 20 with *HCT* I 368–9 n. 3. On the date of Lamachos' death see *HCT* IV 7–8.

⁴⁴ On the date of *IG* ii³ 295 see Lambert 2006, no. 2.

at Delos in the 370s (*IG* ii² 1635. 130–1), and the name occurs in several other demes. The restoration of [Melano]pos II in *IG* ii² 150 is unwarranted. The Laches son of Melanopos whose condemnation was rescinded at the request of Alexander (Whitehead 1986*a*, 419 no. 89) belongs to the Aixone family, but we do not know the background to this incident; ch. 29 nn. 99–101; Table 29.16.

For **Hippothontis (VIII)** we have very little information and no significant sequences for the fifth century. Archandros son of Kallippos (son of Moirokles) of Eleusis followed his father in the third century.⁴⁵ In **Aiantis (IX)** Demosthenes son of Alkisthenes of Aphidnai held the generalship repeatedly during the Peloponnesian War, but no distinguished ancestors or descendants are attested. In the fourth century Iphikrates was repeatedly elected;⁴⁶ in 356/5 his son Menestheus held office with his father and with his father-in-law Timotheos. Menestheus held office again *c.*333, and perhaps in other years (Plutarch *Phokion* 7). For the military career after the Chremonidean War of Demetrios, grandson of Demetrios of Phaleron (*IEleus* 194–5) see Oetjen 2000; ch. 31 n. 11.

In **Antiochis (X)** Autokles son of Tolmaios of Anaphlystos, general in 425/4 and 424/3, may have been related to Tolmides son of Tolmaios (deme unknown), who held the office several times with distinction in the late 450s and early 440s (*APF* 2717). The possibility that Kallias II son of Hipponikos of Alopeke was general in 449/8, elected immediately after the death of his brother-in-law (WB) Kimon, has already been mentioned; his son Hipponikos was general in 426/5, perhaps dying in office (*APF* 7826 IX). Another affine, Thoukydides son of Melesias, became Perikles' main rival after Kimon's death; he was general in 444/3 but was ostracized in the following year. His father Melesias had been well-known as a trainer of wrestlers for the Panhellenic games (Wade-Gery 1932). Thoukydides' son Melesias II is represented in Plato's *Laches* (179b) as a close friend of Lysimachos son of Aristides, also of Alopeke; they both feel inadequate because they have never held high office, despite their illustrious parentage. Melesias II joined the oligarchic Council of 400 in 411, and is not recorded as politically active earlier. His brother Stephanos was secretary to the Council of 500, probably in the late 420s.⁴⁷ Continuity between the fifth and the

⁴⁵ *IRh* 27–8, 131; *Ergon* 1993, 7–8 = *SEG* 52. 127; cf *IRh* 118 (*IRh* 27 perhaps 248/7).

⁴⁶ Iphikrates (Table 31.6) married the daughter of Kotys of Thrace, perhaps before Kotys acquired Athenian citizenship (*APF* 7737; ch. 14 n. 11), but unlike Kotys' other son-in-law Charidemos did not depend wholly on his Thracian connections for his influence at Athens; he had already established a solid reputation as a commander before his marriage. (For the possibility that he had earlier Thracian connections see *APF* loc. cit.) He fought for Kotys in Thrace *c.*386–75 (*CAH* 2nd ed. VI, 458, Archibald). Several of Kotys' sons-in-law, including Charidemos, served as generals for their wives' brothers (Dem. 23. 10).

⁴⁷ Polemon *ap.* Athen. VI 234c; Humphreys 1974, 88–9; Mattingly 1974, 92; Henry 1977, 8–9, 107. The election of Thucydides the historian, son of Oloros of Halimous (Leontis IV) as general for 424/3 was probably due to his Thracian connections, as already suggested, and not to kinship with Thoukydides

fourth centuries—rather rare in this field—is provided by Konon II son of Timotheos of Anaphlystos, probably grandson of the eponymous archon of 462/1, and his descendants. Konon II held office repeatedly between 414/13 and 405/4, continuing his career thereafter unofficially, and his son Timotheos II succeeded him as one of Athens' leading generals in the 370s to 350s. His son Konon III in turn was general in 334/3 and 333/2 (*APF* 13700). By this time he was at least in his early forties. Timotheos II married his daughter to Menestheus son of Iphikrates (ch. 14 n. 29).

Konon's family spans a long period of Athenian history. It probably begins (for us) with Konon I, eponymous archon in the year of Ephialtes' reforms. Konon II, one of the new generation of generals to take command after the Sicilian disaster, owed much of his influence in Athens in the early fourth century to his connections at the Persian court; he was a forerunner of the fourth-century generals who acted partly for Athens and partly on their own account as leaders of mercenaries. Timotheos' career showed the weakness on the Athenian side—failure to supply generals with adequate funds—that encouraged this double allegiance. Konon III takes us into the Lykourgan age, when names connected with Athens' earlier greatness began to acquire a charisma of their own. (On fourth-century generals see ch. 32 n. 18.)

On the whole, though, a name in itself did not mean much in our period. Perhaps some special cachet attached to the descendants of men who had played a particularly prominent and heroic role in the Persian wars; at least, if their descendants were ambitious, they made sure that the ancestor's exploits were remembered.⁴⁸ But usually inherited charisma was short-lived, though influential while it lasted. There seems no doubt that when a popular general died voters felt an impulse to fill the gap by electing his son, if old enough, or a brother. Even after an interval, the son of a well-known commander could probably count on election at an early age. But the successor would have to win his own laurels and acquire his own charisma if his hold on office was to last. Inherited wealth was an important factor here, and generals had unusual opportunities to acquire wealth,⁴⁹ though they might also incur heavy debts. Long-term success demanded a combination of wealth, ability, and charismatic personality, all of which tended in their turn to be increased by long-term success.

son of Melesias, perhaps his MF (*APF* 7268 IV–VI). The historian was an admirer of Perikles, and his older kinsman had been convicted in a lawsuit, which evidently had political implications, in 426/5 (*APF* 7268 II).

⁴⁹ Pritchett 1974, 126–32.

MINOR MILITARY OFFICE

Further consideration of the factors that brought a man to the top in the military sphere requires analysis of the way in which holders of minor commands were appointed.

The civil administration of Athens in the classical period shows a remarkable absence of hierarchy. Each function was carried out by an independent board, reporting to the Council and Assembly. Minor officials did not serve under holders of more important posts; there was no *cursus honorum*. Those familiar with the Roman system will immediately appreciate the elimination of opportunities for patronage which this implies. In the civil sphere only the elected financial posts of the fourth century, and the Council, offer scope for the present analysis (ch. 17). Hierarchy, however, could not be eliminated in the same way from military command, and generals had some influence over subordinate appointments.

The taxiarchoi and phylarchoi who respectively commanded the ten tribal infantry and cavalry regiments, like the two hipparchoi responsible for the cavalry as a whole, were elected. Phylarchoi, like the rest of the cavalry, seem sometimes to have been young; we have already met Kimon's son Lakedaimonios as a young hipparch.⁵⁰ The post gave a rich and well-mounted youngster the chance to begin to make a name for himself. Subordinate infantry officers, lochagoi, were selected by the taxiarchs (*A.P.* 61. 3); patronage could operate here in helping a young man to get his foot on the bottom rung of the military ladder.

As it happens, the only names which have survived occur in inscriptions of the corps of *ephēboi*, records from the two-year system of military training for boys of 18–20 formalized c.335.⁵¹ Epheboi had their own tribal units, taxiarchs, and lochagoi; we are not told how they were appointed. In the record of the ephebes of Leontis (IV) for 333/2/1 the taxiarch ('cadet colonel', Mitchel 1961) is the son of the *sôphronistês*, the elected tribal official in charge of the training programme (Reinmuth 1971 no. 9).⁵² In the same tribe the class of (?)

⁵⁰ *A.P.* 61. 4; cf. P. J. Rhodes 1981*a*, 510; ch. 21 n. 48. In Menander's *Samia* (15) the young Moschion has been phylarch, chosen apparently because of his adoptive father's generosity. There may however have been a tendency to show phylarchs as bearded on reliefs (cf. Tillios 2010). Data on age in such offices are rare, but we have Menon son of Menon of Kydathenaion, born 390/89 (*IG* ii³ 4. 33) as taxiarch in 349/8 (Aisch. 2. 169f.). Victories in the *anthippasia* won by Demainetos son of Demeas of Paiania and his sons Demeas II and Demosthenes (*APF* 3276), all serving as phylarchs, were commemorated by a tripod on a relief base, *IG* ii³ 4. 252 (ch. 12 n. 91). On *SEG* 21. 525 (hipparchs and phylarchs of 282/1) see Tracy 2003, 50; Table 8.7. Dedication by taxiarchs or phylarchs, ch. 21 n. 121. On *IG* ii² 1155 = ii³ 4. 260 see now Lambert 2015*b*.

⁵¹ On Autolykos of Thorikos, grandson of a famous boy athlete, whose grandfather's victory in the pankration in 422 provided the setting for Xenophon's *Symposium* and Eupolis' *Autolykos* (Mitchel 1976; *PCG* 5 F 63, 65), kosmetes in (?) 331/0 or 330/29, see ch. 27 n. 87.

⁵² R 9 = *SEG* 21. 513; Alipherè 2015; Appendix 1. A second stone set up by the same Leontis cohort, from Rhamnous (*SEG* 54. 227) names a kosmetes different from that of the Agora stone; this discrepancy

330/29/8 contained two pairs of brothers among the lochagoi and two other boys from their deme (Sounion, admittedly one of the largest in the tribe) in the same office.⁵³

A commander who wanted to appoint a temporary substitute or a leader for troops detached on some special duty seems to have been able to choose freely among the junior officers present, and could apparently even select a man with no commission.⁵⁴ (It must be remembered, however, that a general often had colleagues of his own standing with him in the field.) In 406 Alkibiades left the Athenian fleet under the command of Antiochos, the helmsman (*kybernêtês*) of his flagship.⁵⁵ Because Antiochos disobeyed orders, attacked the enemy fleet at Notion during Alkibiades' absence, and was defeated, Alkibiades was severely criticized for this decision; but if all had gone well there might have been no objection. We hear of taxiarchs, plus two trierarchs who had served in the past as generals, being given a subordinate command in the fleet (Xen. *Hell.* 1. 6. 35, 1. 7. 5, Arginoussai), and presumably a taxiarch would have been the conventional choice in this case.⁵⁶ A kybernetes was a skilled seaman whose expertise could make a great difference to a trierarch's command; rich men who served frequently as trierarchs probably tried to form stable relationships with reliable kybernetai and other officers.⁵⁷ Trierarchs offered extra wages to experienced seamen ([Demosthenes] 50) and thus, although rowers conscripted from the demes seem to have mustered in Piraeus by tribe and trittys (Traill 1986, ch. V),

is hard to explain (Humphreys 2009). Sekunda's view (1992) that ephebic lochagoi were drawn from young men who had already completed their service does not seem to fit the evidence.

⁵³ On the 'twins' in this list and on SEG 36. 155 see B. G. Robertson 2000; Humphreys 2009, 2010*a*. On its date see Humphreys 2009. Brothers from Kydathenaion in IG ii³ 4. 342 (Reinmuth 10), Antichares and Antikleides; related boys from Thria, Reinmuth 12 I 31–3.

⁵⁴ S. Johnstone 2011, 133–7, discusses the delegation of authority to subordinates at Arginoussai, but the book does not deal with the structure of military command in general. The status of the two *p[aredroi]* of Konon in *Hell. Oxy.* xi 12 (x 1) is unclear. Cf. Lys. 19. 40 (Konon's BS as tamias and aide); APF 13700 A on Timotheos accompanying his father; IRb 17 (235/4, arch. Ekphantos) on Dikaiarchos of Thria with his father, in Macedonian service. The appointment of an (Athenian) father and son to guard Harpalos (Dein. 1. 62) is unexplained. In Sparta, the regent Pausanias chose his cousin (FBS) Eurynax as colleague in command at Plataia (Hdt. 9. 10). See Hodkinson 2000, 358 on opportunities for patronage in minor military command. Note the suggestion of Sekunda 1994 that Iphikrates had a special relationship with a family of Milesian mercenaries.

⁵⁵ Xen. *Hell.* 1. 4. 11–17. This may imply that Alkibiades was acting as trierarch on his own ship, and that the other two generals who had set out from Athens with him (Xen. *Hell.* 1. 4. 21) had remained at Samos.

⁵⁶ See B. Jordan 1975, 132–3, 226–30. A taxiarch accompanies troops back to Athens and reports to the Assembly after Tamynai, Aisch. 2. 169. Aischines is interested only in his own tribe and it is not clear whether other officers and troops returned to Athens at the same time.

⁵⁷ Cf. [Dem.] 50. 18–19, 24–6. Plut. *Alk.* 10. 1 takes Alkibiades' patronage of Antiochos back to his youth; the story may be based on contemporary gossip even if untrue.

tribal organization was less salient in the fleet than in the army.⁵⁸ In the fifth century many of the rowers were metics or (probably) seasonal migrants from elsewhere in the Aegean, and this may well be true also of the fourth century (B. Jordan 1975, 101–3, 220). Individual ships were commanded by trierarchs whose service was determined by wealth and not by election; they had their own ties with each other and, as noted above, with generals. A general might either act as trierarch for his own flagship or select the ship of a friend.⁵⁹ Demosthenes' ship was chosen in 360/59 by his father's friend Kephisodotos (Aischines 3. 51–2, *APF* 3597 XXII; cf. Lysias 19. 12); the speaker of Lysias 21 (§ 6) claims that Alkibiades had chosen his vessel as flagship, though he was not a friend, kinsman, or fellow-tribesman (*philos, syngenês, phyletês*, evidently common motives) because of his lavish expenditure. The ship of Apollodoros son of Pasion was selected as flagship in 361/0 by the general Timomachos, likewise, because of Apollodoros' expensive equipment and well-paid crew. According to Apollodoros ([Demosthenes] 50. 44, 48; cf. *APF* 8157 IV), Timomachos abetted Polykles, who was supposed to take over the trireme at mid-year and failed to do so, because he owed Polykles money and was angry with Apollodoros for

⁵⁸ *IG* i³ 1032, 412 BCE? (see Graham 1998; Papazarkadas 2009*b*, *SEG* 58. 60) lists sailors by ship. In ll. 80–94 we have 10 marines (*epibatai*) from 9 different demes, the officers coming from yet other demes; 189–97 have a similar distribution. In 306–15, however, 7 sailors out of 9 come from Kephisia, followed by 2 from Kollytos. If some trierarchs took trouble over finding experienced men ([Dem.] 50. 7, 15–16, 35), others may have used their own deme contacts or left key members of the crew to recruit through their own networks (cf. Bakewell 2008). On the evidence of this list metic seamen seem more apt to group themselves by origin than Athenians. However, Athenian crews may contain a high proportion of men whose families had moved away from their deme of registration to Piraeus or other coastal settlements. B. Jordan's view (1975, 167–76) that the state trireme *Salaminia* was always crewed by members of the *genos* Salaminioi is not plausible. *SEG* 54. 226 (Bardane 2004) probably lists naval casualties by ship, *Erechtheis* being a ship name and not a tribal heading (triremes called *Leontis* and *Kekropis* are also attested, but it is not clear that there was a ship for every tribe). At least 9 of the 10 citizen *epibatai* on the *Erechtheis* came from the homonymous tribe; the deme of its trierarch [. . .] *isthe[n]es Kleisthen[os]* was either [*Agrylê[then]*] (I) or [*Ankylê[then]*] (II); a Kleisthenes of Erechtheis, deme unknown, appears in *IG* i³ 9, *APF* 8524; an Antisthenes of Agryle in the 3rd c., *Agora* XVII 28. Cf. ch. 23 nn. 25–6. The *Kekropis* had a Kekropid trierarch c.330, *IG* ii² 1626. 32, but its panel of co-trierarchs in 1622. 611, and the panel of the *Leontis* 1622. 656 (both between 356 and 346), did not contain any men from those tribes.

⁵⁹ Cf. Lys. 29. 3–4. *APF* 10552 suggests that in some year before 334/3 Nausikles son of Klearchos of Oe was general and principal trierarch on his flagship, with his son acting as syntrierarch; a different interpretation in Gabrielsen 1994, 63. The speaker of Is. 6 (1–2), making a supporting speech for Chairestratos, had sailed with him to Sicily when he was trierarch, at the request of the young man and his father; Chairestratos was apparently young and inexperienced, perhaps serving as trierarch in his father's place (ch. 5 n. 47). He and the speaker had been made prisoners together. On kin and friends as syntrierarchs see Gabrielsen 1994, 175. The history of the trierarchy system is complex and controversial (op. cit.), but it is fairly clear that the reforms of 358/7 and 340 decreased trierarchs' freedom of choice (ibid., especially 193). Apart from one case of privateering by brothers (Isokr. 18. 59–60, *APFD* 18–19), most examples of trierarchy shared by kin seem to be due to a lack of clarity over the division of property between father and son(s) or between brothers. See Gabrielsen 60–7.

refusing to fetch the general's exiled *kédestês* (WF) from the mainland to Thasos. It has also been suggested (APF 4386) that the —odoros who was put in charge of conveying the city's corn supply *c.*330 by the general Diotimos son of Strombichos of Euonymon (IG ii³ 339) was Diotimos' son Olympiodoros. Olympiodoros would presumably have been serving as a trierarch at the time.

Alkibiades and his entourage provide the best evidence for the working of patronage in the Athenian forces, although it is still meagre. The biographical tradition about Sokrates (Plutarch *Alkibiades* 7, cf. Chroust 1957) claimed that in the Potidaia campaign of 432 the prize for valour, which should have been given to Sokrates, was instead given by the generals to the young Alkibiades because of the distinction of his name; the story is not likely to be true, but it indicates one of the types of patronage generals could exercise and the sort of motive that gossip could attribute to them. In spring 408 Alkibiades sent his cousin Euryptolemos⁶⁰ to take an oath of truce from the Persian satrap Pharnabazos; later in the same year Euryptolemos was sent on an embassy to the Persian king, together with Mantitheos, in whose company Alkibiades had escaped from confinement in Sardis (Xenophon *Hellenica* 1. 1. 10, 1. 3. 12–13; Amit 1973).⁶¹ This Mantitheos is probably the one who had fled from Athens in 415 when accused of mutilating the Herms (PA 9670); it was presumably he who, with an unidentifiable Diodoros, was left in charge of the fleet in the Hellespont by Alkibiades when he sailed for Athens in 407.⁶² I am still inclined to wonder, too, whether the democratic taxiarch and later general Thrasylllos, who was prominent in the fleet from 411 to 406/5, is not the impoverished *betairoi* of Alkibiades, of that name, recorded in Athenaios 534 e–f.⁶³ Given the ambiguity of Alkibiades' position and relations with the demos after his return from exile, it is scarcely surprising that he should have preferred to have friends associated with him in command. The election of Adeimantos son of Leukolophides of Skambonidai as general for 407/6 has already been noted.

⁶⁰ MFFBSSS? APF 9688 VIII. W. Thompson 1969*a* separates Alkibiades' cousin (*anepsios*, Xen. *Hell.* 1. 4. 19) Euryptolemos III from Perikles I's *anepsios* (Plut. *Per.* 7. 5) Euryptolemos II, and makes Euryptolemos III Alkibiades' MZS, but the naming patterns postulated are very irregular. If the ambassador is the *anepsios* of Alkibiades who had returned to Athens ahead of him in 407 (Xen. *Hell.* 1. 4. 19) the statement that the embassy took three years (ibid. 7) must be rejected or emended. Cf. Andrewes 1953; Cawkwell 1979, 69–70; ch. 14 n. 43.

⁶¹ Another companion in exile was Alkibiades' homonym and perhaps cousin Alkibiades of Phegous (Harp. s.v. *Alkibiades*. MS *xenos* emended to *anepsios* by Naber and Sauppe, comparing Xen. *Hell.* 1. 2. 13).

⁶² D. S. 13. 68. 2 (*epimelétai*); Kahrstedt 1936, 128. Andrewes (*HCT* 5. 268) suggested that Diodoros and Mantitheos had been elected as generals by the fleet in Samos in 411/10 (Thuc. 8. 76. 2), and were still serving in this capacity, but see *AO* p. 171. The Mantitheos of Lys. 16 may well be this man's son.

⁶³ Andrewes (1953; *HCTV* 275) thinks that the taxiarch was an enemy of Alkibiades; but his opposition to oligarchy (Thuc. 8. 73. 4, 75. 2) does not necessarily imply that. Thrasyboulos, also opposed to oligarchy (Thuc. 8. 81. 1), was according to Diodoros (13. 69. 3) elected general for 407/6, with Adeimantos son of Leukolophides of Skambonidai, Alkibiades' fellow-demesman, at Alkibiades' wish.

Even in hoplite forces tribal organization, presumably adhered to when the army was drawn up in line of battle, does not seem to have been strictly enforced at other times. If we can believe Plato, Sokrates (Antiochis X) marched with Laches (Kekropis VII) in the retreat after Delion in 424 (Plato *Symposium* 221a, cf. *Laches* 181b), and ate with Alkibiades (Leontis IV) on the Potidaia campaign (*Symposium* 219c). As far as we know there were no formal rules governing the organization of Athenian military camps, in marked contrast to Roman practice. Arrangements for messing were informal, troops being expected to buy their own food from the nearest market or from the traders who attached themselves to large expeditions.⁶⁴ The sons of Konon shared a tent when on guard duty at Panakton in northwest Attika (Demosthenes 54. 3); no doubt fellow demesmen would often camp together, and this will have produced some conformity in camp to the tribal organization of the battleline.⁶⁵ Solidarities may even have flourished in camp between kin, fellow-demesmen, or neighbours who were structurally predisposed to quarrel in civil life. But friendships and relationships that crossed the boundaries of deme and tribe were also clearly influential.

War was dangerous; men who set off on military expeditions made wills, and their kin and affines came to see them off, to associate themselves with the enterprise and in fear that this might be the last meeting. It is no accident that Euktemon of Kephisia, though not serving himself, makes a will when his son-in-law Phanostratos is leaving on a campaign. Phanostratos' brother-in-law (WZH) was seeing him off (Isaios 6. 27); Piraeus was probably full of such groups making

⁶⁴ See Van Wees 2004, 107; J. W. I. Lee 2007. Crowley 2012 thinks that hoplites when fighting were grouped by deme, but does not discuss evidence. Low 2012, 21, notes the suggestion of G. Smith 1919, 358, that 'clusters of alphabetically ordered names' (small, and few) on casualty lists might represent military subunits. Alphabetic ordering (by first letter only) is not so far attested in Greece before the Hellenistic period (ch. 15 n. 14), and the process of reporting deaths could well have been influenced by association of ideas linking related names (cf. Humphreys 2010*b*).

⁶⁵ On call-up procedures see ch. 21 n. 44. It seems to have been the practice for a force sent out from Athens to contain members of all tribes; casualty lists are organized both by tribe and by field of battle (*IG* i³ 1162, M/L 48 (*SEG* 34. 45); cf. also i³ 1164, i³ 1190). *IG* i³ 1353, M/L 51, honours Pythion, a Megarian, for bringing the contingents of three tribes safely back to Athens from the Megarid through Boiotian territory; on this occasion it was obviously important to keep the troops in formation during the retreat. The *hippeis* who dedicated *IG* ii² 1955 came from different tribes, although the 20 names listed contain 2 probable pairs of cousins (5, 20 Xypete, Table 29.4; 9, 22 Euonymon). Other lists that have been thought to record soldiers lack headings, and we do not know their purpose (Dow 1983; Humphreys 2010*a*). *IG* ii² 2385 + 2431 is a list (possibly of kleruchs or colonists) organized by demes, with very high numbers coming from some demes, which has been classed as a list of soldiers; it contains many pairs of brothers listed consecutively or at brief intervals, and in ll. 101–2 Mnesikles son of Kiron of Pithos may be affinally linked with Teisamenos son of Pataikos of the same deme, whose name follows his, since a Teisamenos son of Kiros of Pithos was ephebe in 334/3/2 (*IG* ii² 1156. 24). See ch. 29 and *APF* 8443 (the date given there, 336–326, is too late: Teisamenos' father Pataikos was *tamias hierôn chrématôn* in 390/89, *IG* ii² 1400. 4 (Table 16.2). Elsewhere *APF* dates the text to the middle of the 4th c. Cf. Humphreys 2010*a*, 77).

Note: Depending on date, the Kiron P. of *Agora* XIX H 87 may be Kiron or a younger descendant.

TABLE 16.2. Pithos: Kiron

similar arrangements. On campaign too, in anxious moments on the eve of battle or in retreat, those who had left responsibilities behind them in Attika might want to stay close to kin or friends whom they could trust to help them if wounded or carry last messages.⁶⁶ Although the official structure of the army was modelled on that of the citizen body and its agnatic subdivisions,⁶⁷ in practice there seems to have been plenty of opportunity for voluntary grouping based on private ties.⁶⁸

This is not the place to pursue the subject of the use of kin ties in military command and military groupings in other Greek or barbarian societies in

⁶⁶ In Theophr. *Char.* 25. 5 the coward offers to look after the wounded, implying that arrangements are voluntary; but 25. 8 implies that members of one's own deme and tribe would be nearby. Cf. Sternberg 1999.

⁶⁷ On possible influence of military considerations on Kleisthenes' reorganization of the citizen body see Van Effenterre 1976; Siewert 1982; Frost 1984. Cf. however D. M. Lewis 1983*a*; Stanton 1984*b*; ch. 21 n. 29. Recruitment of kleruchs seems to have been voluntary, and economic interests might favour separation of brothers, but *IG* ii² 1952*a* has a pair of brothers from Upper Lamptraia, and *SEG* 51. 147, also perhaps kleruchic, a pair from Hamaxanteia (*LGP* II omits a number of kleruchs). Humphreys 2010*a* suggested that *Agora* XV 492 and *IG* ii² 1927 might also be kleruchic (and ii² 2385 + 2431, discussed above n. 65, part of a list of the colonists sent to the Adriatic in 325/4); ii² 1927 (*SEG* 32. 170) has brothers from Phlya in ll. 31–4, with perhaps the son of one of them 35–6, probably a father and son from Dekeleia in 93–4 and 97–8, brothers from Phaleron in 108–9 and 116–17, and perhaps cousins (FBS) from Oinoe (IX) in 134–7. *Agora* XV 492. 137, 140 has a father and son from Anakaia. ii² 1954, a dedication made by soldiers in 306/5, may have brothers from Eroiadai (VIII) in ll. 9–10 (Bayliss 2003; Humphreys, *ibid.*; one of them may be cursed in Wunsch 1897, 55/*SEG* 53. 257. 8–10). *Agora* XV 494 may be part of a list of *epilektoi* (Humphreys *ibid.*); it too contains brothers.

⁶⁸ The camping grounds of women at the Thesmophoria (*syskênêtriaí*, *Ar. Thesm.* 624) may not have been strictly organized by deme in the case of the festival held in the city. R. G. Osborne 1985*a*, 170–1, 178, seems convinced that all women went to the city; but we know of celebrations in Peiraios (*IG* ii² 1177), and it seems very unlikely that women travelled from all over Attika without their husbands (Lys. 1. 20). See Whitehead 1986*a*, 79–81; ch. 12 n. 31.

antiquity,⁶⁹ or in Athens in later periods. We should remember, however, that the rationalistic ideology of the Athenian democracy—in which citizens were interchangeable, or distinguished only by individual ability, and private feelings had to be subordinated to the interests of the public sphere—coexisted with older attitudes that put the role of kinship in war in a different perspective. It was assumed that men fought best in the company of those close to them; the principle had been expressed by Nestor in the *Iliad* (2. 362–8), in lines which if they did not correspond to the organization of early polis armies certainly had an influence on them. Implementing the principle, however, raised the problem that while ego-centred, bilateral kin networks could form the basis of the loosely structured army described by Homer (Van Wees 2004 Appendix 3), it could not provide a formal framework for the more rigid, symmetrically organized hoplite phalanx. Sparta jettisoned tribal structure and based the organization of the phalanx on self-recruiting men's houses and an intensive socialization of boys in age-sets. A Spartan hoplite had members of his *syssition* in front of and behind him in the phalanx, and members of his age-set on either side of him along the battle front, each with their own *syssition* mates; ties of kinship and affinity were subordinated, at least in theory, to these two major principles of identification.⁷⁰ Athens imposed an agnatic framework on the phalanx but relaxed the organization to allow informal groupings recruited on other principles to form in its interstices. The ephebic corps reinforced age-group solidarity, hitherto generated only in private contexts.

A strong belief that character and ability were hereditarily transmitted also has to be taken into account. Athens had been controlled by an aristocracy until the Peloponnesian War; the boundaries of the ruling elite were permeable, the fortunes of individual families rose and fell, but leaders lived in a different style from those they led, and everyone expected that sons of leaders would become leaders in their turn. Intellectuals defended the belief rationalistically by comparing men with racehorses. It was noticed, of course, that sons did not always inherit the talents of their sires, a problem occurring in horse-breeding also; but it was still worthwhile to give a well-bred youngster the chance to show his paces in office at an early age.

⁶⁹ Some examples: Spithrobatēs the satrap of Ionia, Darius' *gambros* (DH?), fights at the Granicus with 40 kinsmen (*syngeneis*), all cavalry, including his brother; *IPriene* 19. 8–11, rounds made in a garrison fort by the commander or his son (J. and L. Robert 1976); *IRh* 17, Antigonos appoints Dikaiarchos (of Thria) and his father to guard Rhamnous in 236/5. Sparta: Lazenby 1985, 23. Brothers serving as mercenaries quite often move together to Miletos: *Milet* I 3, nos. 34, 39–93. Brothers as mercenaries in Egypt, early 6th c., M/L 7.

⁷⁰ Assuming a relationship between *syssition* and *enómotia*; but see Singor 1999, 2002; Van Wees 2004 App. 2; J. W. I. Lee 2007. Recruitment of *syssition* members by cooptation and not kinship was logically required in order to distribute age sets equally among *syssitia*, but Spartan social structure also seems deliberately to de-emphasize kinship as an organizing principle. If we had prosopographical data on recruitment to *syssitia* the picture might look rather different.

Council and Assembly

From the archaic period only the personal names of eponymous archons are preserved, so we do not know whether sets of kin tried to get elected to hold office together. The lack of correspondence between number of tribes and number of major office-holders in Sparta (three tribes, two kings) and Athens (three, then nine offices; four tribes) suggests that this was a danger of which early poleis were conscious. In Crete bands of kosmoi were all chosen from a single clan (*startos*), and it was often difficult to compel a board to give up office and hand over power to another group.¹ The surviving fragment of (?) the list of eponymous archons from the 520s in Athens, during the period of Peisistratid rule, shows leading families holding the post in turn.²

By the time of Kleisthenes' reforms, the danger that tribes would become the basis for power struggles between rival leading families had receded; it was still felt necessary, however, to ensure that a single family did not monopolise a whole office-holding board, and this was done by distributing positions equally among the tribes.³ The archons lost their influence during the first half of the fifth century, and no civil position carried significant power until special posts in the management of the city's finances were created in the fourth century. The process by which the position of controller of the fund used for distributions at festivals (*epi to theōrikon*) became a power base in the hands of Euboulos are still obscure, but we know that after the battle of Chaironeia a new post of general manager (*epi tēi dioikēsei*) was created, to be held by a single man for a four-year term. The same man could hold it more than once, but not in successive quinquennia. Lykourgos held it from 336/5–333/2 and 328/7–325/4 (dying in office in the latter year), and had de facto controlled Athens' finances also in the

¹ *Ar. Pol.* 1272 a 27–b 13. In saying that kosmoi were chosen only from certain families, *ek tinōn genōn* (a 34) Aristotle may have slightly misunderstood the system, but should not be taken to be using *genos* in any specialized sense. The view taken here is based on the law code of Gortyn, col. V 5–6; cf. Willetts 1955, 28–9, 112–3. A *startos* would be the equivalent of one of the subdivisions of an Athenian tribe (cf. N. F. Jones 1987, 225–6).

² M/L 6 = *IG* i³ 1031. The holders are young, but this may be a feature introduced under the tyrants. [On]eto[rides], 527/6, may be the man who was *kalos* in the 530s (*APF* 11473). [M]iltiades, 524/3, was *kalos* after 520 (BArch 201526) and still active in 489 (*APF* 8429 VIII B).

³ Note Lys. 4. 3–4 on nominating friends as candidates for the position of judge at the Dionysia and expecting a favourable vote if they are appointed. On the procedure see Pickard-Cambridge 1968, 95–9.

intervening period, when the office was held by his friend Xenokles of Sphettos. Lykourgos' brother-in-law (WB) Kallias son of Habron of Bate had been treasurer of military funds in 338/7; Lykourgos' second son Habron was elected *epi tēi dioikēsei* in 307/6 and became treasurer of military funds in the following year. In the period of despondence, anxiety and famine (330/29) after Chaironeia, Athenians had been reassured by Lykourgos' ability to keep the city safe and solvent.⁴ 307/6 was the year in which Demetrios Poliorketes freed Athens from Macedonian military control and from the puppet tyranny of Demetrios of Phaleron; the election of Habron symbolized the return of better days, like the decree in honour of his father proposed by Stratokles, honouring Lykourgos as a constant champion of Athenian autonomy.⁵

Lykourgos' position anticipates Hellenistic developments which cannot be pursued here. In other cities, where the line dividing office-holding from the performance of liturgies was less clearly drawn, dynastic succession will have been more noticeable.⁶ Even in Athens we are told that when Theokrines' brother was serving on a board responsible for sacrifices, as *hieropoios*, and was murdered while in office, Theokrines took his place without being designated by lot; this may reflect a feeling that the financial burdens of the office should continue to be borne by the estate of the original appointee.⁷

We happen to know that two men who served together on a military board in 373/2 had children who married each other (Raubitschek 1942); a year's service on the same board could well form a basis for friendship, and kin, affines, neighbours, or friends who belonged to different tribes might have their names put forward as candidates for the same office in the hope of serving together. Only

⁴ Financial offices: P. J. Rhodes 1981*a*, 515–16; D. M. Lewis 1997, ch. 25. Some scholars date the beginning of Lykourgos' 12 years in charge of Athenian finances to 338/7 rather than 336/5: see *APF* 9251. Habron: *IG* ii² 463, 1492. 123–4; Merker 1986. Xenokles: *APF* 11234; Habicht 1988*b*. Deinokrates, general in 336/5 (ch. 16 n. 45) may have been Lykourgos' son-in-law. On connections among the Lykourgan group see Faraguna 2011, 69–70. It is interesting that Lykourgos' (?) brother Lykeias and his family (Matthaiou 1987*a*; Table 4.6) seem to have played no part in this political activity.

⁵ *IG* ii² 457; Gauthier 1985, 89–90; Lambert 2015*a* (cf. M. J. Osborne, 1981*c*, 172–4 on ii² 513; but see Humphreys 1985*a*, n. 72, 2004, 121 n. 36: would *sitēsis* and *proedria* be decreed for a dead man at this date?).

⁶ Humphreys 1983*a*/1993, 23; Van Bremen 1983; Vial 1984, 262–73.

⁷ [Dem.] 58. 29, *oute lachôn out' epilachôn*, evidently a standard formula (cf. Aisch. 3. 62). *Hieropoioi* will have had to account for the funds entrusted to them and it may well have been normal to make additional contributions from their own pockets. In Hellenistic Delos, when a treasurer died in office his responsibilities passed to his heirs (Vial 1984, 60); the appearance of heirs and kin as substitutes is a sensitive index to the degree of separation of public and private spheres. Kahrstedt's discussion of alternates and substitutes (1936, 124–34) is essential. It is necessary, however, to distinguish between the heir's obligation to give *euthynai* and the obligation to take on the office (Vial, 199–200). Chairias son of Euortios of Anaphlystos, amphiktyon on Delos in 342/1 (*ID* 42. 6; V. Chankowski 2008 no. 43), seems to have been replaced by his son Chair[eph]on (*IG* xii 5. 113).

chance enables us to detect such combinations in the record (cf. Vial 1984, 269–72 for a Delian case). Agnatic connections can, however, be traced in the case of councillors.

COUNCILLORS

Sterling Dow, the first scholar systematically to examine the opportunities afforded in Athenian public life to pass the time with ‘companionable associates’ of one’s own choice (1976), stressed particularly the division of the Council of 500 into thirty presiding trittyes (*trittyes tôn prytaneôn*)⁸ of sixteen or seventeen men, who for a total of ten days chaired meetings of the Council and Assembly and stayed in the Agora on permanent duty, eating and sleeping in the Tholos. It is thought that members of the same deme were usually grouped in the same presiding trittys, except where the deme contingent was too large (Acharnai had 22 councillors). Each deme had to produce a list of candidates, from which councillors and alternates were selected by lot;⁹ lists of councillors show that kin not infrequently served together or in successive years. This presumably reflects, as Dow suggested, a preference for congenial company while holding an office which for some men would represent the first and perhaps last experience of responsibility in the public sphere.¹⁰ In periods or demes where competition for Council membership was lively, candidates will have had to take active steps to become popular in the deme,¹¹ and this might result in a series of successful candidacies by members of the same family; it may have been normal for dominant men in

⁸ Cf. W. Thompson 1966, 1969*b*; P. J. Rhodes 1981*a*, 533; Traill 1986. Details of the relation between these trittyes and those defined by Kleisthenes still remain obscure and may have varied from tribe to tribe. Dow (1976 p. 77) thinks that the chairman (*epistatês*) for the day could choose his companions, Eliot (1967, cf. P. J. Rhodes 1972, 23) that he could choose a trittys (city, inland, or coast); we are never specifically told that each trittys served for ten consecutive days, and arrangements may have varied from tribe to tribe (ch. 21).

⁹ Traill 1975*a*, 2 suggested one alternate for every position; in 1981 he conjecturally identified *Agora* XV 492 as a list of councillors and alternates with approximately one alternate to two councillors (but it is hard to see why the latter should be recorded on stone; see Humphreys 2010*a*).

¹⁰ After 410/9 (*FGH* 328 F 140; P. J. Rhodes 1972, 33) seats in Council meetings were allocated by lot.

¹¹ Plato *Comicus* F 182 *PCG* 7 seems to imply that being a councillor was desirable; it was presumably a way into politics for those without a family tradition of activism. The attraction of being paid for a demanding post which required the holder to spend much time in the Agora will have varied according to the state of the Athenian economy and the distance between a man’s home and the city. It is normally assumed (e.g. Traill 1986) that small demes quite often had trouble filling their quota. Sokrates, who served in 406/5 (*PA* 13101, *AO* p. 180), was presumably an acquiescent rather than an eager candidate, in one of the larger demes (Alopeke). The number of attested cases of councillors serving twice is small (76 out of 3100 *bouleutai*, to the beginning of the Christian era, P. J. Rhodes 1984, but the chances of finding them in the existing distribution of lists have not been calculated and many of Rhodes’ identifications are problematic: see n. 16 below).

the deme to fill Council posts. Euboulides of Halimous was perhaps both demarch and councillor in 346/5 (Demosthenes 57; Whitehead 1986*a*, 411 no. 19; ch. 26 n. 15). In any case, in a small group with lifelong membership such as a deme, a man had to establish his claim to be considered a serious candidate (cf. P. J. Rhodes 1972, 4–6; Ruschenbusch 1979*b*, on the status and wealth of councillors). Candidates must have been nominated and not picked by lot from the whole list of deme members.¹² There are accusations of corruption (Aischines 3. 3, 62, 73); it could be important for a politician to serve on the Council, or have friends there, in a specific year (P. J. Rhodes 1972, 3–4). As members of Athens' main executive body councillors could exert influence over a wide range of issues: nomination of ambassadors, scrutiny of eighteen-year-old candidates for deme membership and citizenship, allowances for the disabled,¹³ and much besides. Any family that was making a bid for power in the deme would be likely to include Council membership among its objectives.

Lists of councillors often cover only a single tribe, are unevenly distributed chronologically, do not always include patronymics, and are sometimes difficult to date.¹⁴ We have no dated list between 328/7 (*IG* ii³ 360) and 304/3 (*Agora* XV 61), which means that we cannot assess the impact of the exclusion of poorer Athenians from citizenship in 321–307. We have unusually full lists for 304/3 and 303/2 (*XV* 61–2), which in combination with data from the Lykourgan period make it easier to identify kin serving together or in successive years, elderly councillors,¹⁵ and

¹² The size of the pool from which councillors were drawn is very controversial: see especially Ruschenbusch 1979*b*; P. J. Rhodes 1980; Burckhardt 1996; G. J. Oliver 2007*a*, 81–3. I consider it most unlikely that *ephēboi* or *diaitētai* were drawn only from those who figured both in their deme's list of members and in its (?) *katalogos* of hoplites (so also M. H. Hansen 2007). Quite apart from the lack of textual support for such a restriction, it seems natural that all those entering the deme would be passed forward for ephebic service, while since non-hoplites could serve as jurors there seems no reason to exclude them from being *diaitētai*. One should distinguish, in any case, between the 'Solonian census' category of hoplite/zeugite and men who possessed hoplite armour and served as hoplites. The Solonian census categories were no longer operative in the 4th c. (*A.P.* 7. 4, 47. 1); men who served in the cavalry and/or as hoplites could certainly be identified (though the two categories overlapped), but we have no evidence after 403 for attempts to use these categories in constitutional legislation (the oligarchies of the late 4th c. drew up new census classifications). It may be the case that some poorer Athenians did not come forward for service as epheboi, bouleutai, or diaitetai and were not pressed to do so (this was presumably the case at least for those potential epheboi who were physically disabled), but we have no evidence for formal exclusion. We also do not know whether ephebic service for the sons of kleruchs was (de facto) voluntary, nor whether kleruchies had their own diaitetai. On the procedure for appointing councillors and alternates see also Humphreys 2010*a*.

¹³ Aischines attacks Timarchos for his failure, when councillor, to support the application of his blind uncle (FB) Arignotos for a disability allowance (Aisch. 1. 104, cf. *A.P.* 43. 6; ch. 27 n. 30).

¹⁴ *Agora* XV 20 is particularly difficult to date; see Appendix 1.

¹⁵ Elderly councillors (cf. M. H. Hansen 2007): the best evidence comes from cases where councillors also appear in lists of diaitetai: Euetion of Sphettos serving at 61, Lykourgos of Melite (*IG* ii³ 4. 33) and Theokrines of Hybadai at 62. Stephanos (son of Demylos) of Probalinthos, diaitetes in 325/4 (*IG* ii³ 4. 35. 49), is listed as a councillor in ii³ 4. 26. 59, now dated c.330–317 (Tracy 1995, 131). If *IG* ii³ 4. 31

men serving a second term.¹⁶ It is impossible in the current state of the data to say whether the patterns we see here are specific to the period (heightened significance of kinship in deme affairs, renewed enthusiasm for Council service, and/or re-emergence of elderly Lykourgans after 307¹⁷) or would appear in all periods if we were better informed.

Brothers serve in the same year in eleven or twelve cases before *c.*320 and four or five cases *c.*307–300, and in adjacent years in another;¹⁸ father and

is a list of diaitetai from 343/2 or 336/5 (Humphreys 2010*a*, 81–2), the sons of two of them, councillors in 304/3, Ameinokles I son of Tachyllos I of Kydathenaion (*XV* 61. 64 with *IG* ii³ 4. 31. 14) and [Poly]-mnestos son of Polystratos of Gargettos (*XV* 61. 50 with *IG* ii³ 4. 31. 9), may well have been in their 60s. Three men named on both ii³ 4. 81–2 (? 334/3) and *Agora XV* 61 (304/3) should have been at least sixty on the second occasion: Epikrates son of Alexiades and Eratostratos son of Nausikydes, both of Anaphlystos, and Kephisostatos son of Archias of Besa. Sokrates (son of Pyr—) of Paionidai (*IG* ii³ 360 and *XV* 61) may be a similar case. Phanostratos son of Stratios of Oion Kerameikon (*IG* ii³ 4. 53), councillor in 371/0, will have been over 65 (chs. 7 Case 9; 26 n. 70). Stephanos son of Empedion of Cholleidai, councillor after 307(?; *XV* 56 = *SEG* 34. 127) and born before a half-brother who won a victory as *agen-eios c.*360 (*IG* ii³ 4. 583 = *CEG* 758, cf. ch. 12 n. 90) must also have been over 60. The Aristoteles son of Opsiades of (Upper) Potamos who served as councillor in 303/2 (*Agora XV* 62. 25) may be the A. son of O. (demotic not preserved) who (?) registered and leased a mine *c.*340 (*Agora XIX P* 26 [253], 259; *LGPN* II Opsiades 5 needs correction. See ch. 26 nn. 113–14). Any date for *XV* 20 will produce some elderly councillors. We can also, however, identify some possible cases where a son serves as councillor about 30 years after his father or a grandson 60 years after his grandfather, perhaps suggesting service for both shortly after the qualifying age of 30 had been reached: Theopompos of Kerameis in ?336/5 and his son Th[eo]kl[e]id[es] ? after 307 (*XV* 42, *SEG* 34. 127); Antiphanes and Kallaischros of Phrearrhioi in the late 5th c. (*IG* i³ 1040) and their homonymous grandsons *c.*333 (*SEG* 28. 52) and in ?336/5 (*XV* 42). Cf. perhaps Demokrates of Oa *IG* ii³ 4. 21, his son Demodokos ii³ 4. 55; Pausanias of Oa ii³ 4. 48, his son ii³ 4. 29, 348/7, Theophilos of Probalinthos *XV* 42, his son [Philis]tides *XV* 61; Menestratos son of Menekrates of Kolone (IV) ii³ 4. 25, his S or SS Menes son of Menestratos *XV* 61. Note also Nikostratos of Pallene, secretary in 366/5 (*IG* ii² 109–11), his son Philostratos *XV* 43. If the Philokrates of Halai Aixonides who was councillor in 304/3 (*XV* 61. 199) was the grandson of the Philokrates who was diaitetes in 325/4 (*IG* ii³ 4. 35. 110), he may have served at an early age.

¹⁶ On ‘repeating’ councillors see Rhodes 1972, 1980, 1981*b*, 1984. Antiphanes of Euonymon (ch. 23 n. 17) is another possible case, but the name is very common. Note that *IG* ii³ 467*a*, perhaps attesting a second term for [Soti]mides of Phegaia (after ii³ 4. 75 of ?? 343/2), is now dated probably in the 330s (Tracy 1995, 99; *SEG* 49. 99). Laches son of Charinos of Potamos of ii³ 4. 53 (371/0) will presumably be the father of Charinos son of Laches of ii³ 4. 25 (370/69), and the paternal grandfather of the Laches son of Charinos who served as an elderly man in 303/2 (*XV* 62).

¹⁷ Examples above (elderly men in *XV* 61–2); cf. the re-emergence of Xenokles of Sphettos as *agónothetês* in 307/6.

¹⁸ Brothers: *IG* ii³ 4. 23, 390–360, Leon and Astyphilos sons of Philagros of Halai Aixonides; ii³ 4. 25, 370/69, Antichares and Phileas sons of Philion of Phrearrhioi; ii³ 4. 55, *c.*360, [Dem]e[t]rios and [Kr]atinos sons of Demostratos of Kydathenaion; ii³ 4. 76, 341/0, Euthykles and Euthydikos sons of Ameinias of Philaidai, and Chaireas and Philarchos sons of Paramythos of Erchia; *Agora XV* 43, 335/4, Theogenes and Geneios sons of Pleistos of Acharnai; ii³ 4. 81, 330s, Kratinos and Kratios sons of Kratylos of Aigilia; ii³ 4. 83, *c.*330, Lysanias and Kleomedes sons of Aristokleides of Probalinthos; ii³ 4. 26, *c.*330–317 (Tracy 1995, 131), Euthoinos and Klearistos sons of Philarchides of Oa; *XV* 68, ? *c.*320 (Traill 1986, 142), Theophilos and Nikias sons of Echestratos of Acharnai (*APF* 11672 X needs revision; UP tombstone (?) of Theophilos, *SEG* 52. 200; Table 28.7); *XV* 55, *c.*321, two sons of Lysiades of ?Atene; *XV* 56 = *SEG*

son serve together five times and in successive years at least twice, perhaps five times.¹⁹

It is much more difficult to detect other relationships in the lists. However, Phanostratos son of Stratios of Oion Kerameikon served in 371/0 (*IG* ii³ 4. 53) and his grandson (DS) Glaukos son of Glauketes, also of Oion, in 370/69 (*XV* 13); perhaps there was some connection with the dispute over Hagnias' estate (ch. 7 Case 9). Demokles son of Antikles and Philoxenos son of Lysistratos of Upper Potamos, also councillors in 370/69, were probably cousins (FBS; *SEG* 28. 148, *APF* 1073). Meidias II son of Meidias I of Anagyrous (quota 6) was councillor in 304/3 (*Agora* *XV* 61. 177) and his nephew (BS) Euthydikos son of Kephisodoros in 302/1 (*APF* 9719, *Agora* *XVI* 123). Thoukydides son of Antidoros of Ikarion, also councillor in 304/3, was probably the cousin (FBS) of Charidemios son of Thoukydides of Ikarion, councillor in the same year (*Agora* *XV* 61. 44, 47). A Thoukydides of Ikarion, father of either Antidoros or Charidemios, was *diaitêtês* at the age of sixty in 330/29 (*IG* ii³ 4. 33. 17–18), and demarch at about the same time (Whitehead 1986*a*, 412 no. 30; ch. 24 n. 36). The two men called Arcestratos from Skambonidai who served together in ? 336/5 (*XV* 42. 221, 223) were probably cousins (FBS); the same may be true of Dionysios and Philon of Phaleron, serving together *c.*330 (*XV* 46, see Table 31.1). The son of an Arcestratos of Skambonidai perhaps served about 30 years later than his father (*XV* 56 = *SEG* 34. 127. 25, Theoxenos). Two brothers appear with the son of one of them in this last list: Olympion and Kleonostos sons of Mnesiades of Kerameis with Epikrates son of Olympion. Anytos and Anthemion of Euonymon, serving together in ? 336/5 (*XV* 42. 3, 7) will have been kin (*APF* 1324, ch. 23 n. 9). Such relationships cannot be deduced solely from lists of names; the case of Thoukydides and Charidemios is a warning that some of the examples classed above as showing father and son serving together may have other explanations.

Other examples are much more doubtful. Sophilos son of Sosias, Sophilos son of Antimachos and Sophilos son of Sostratos, all councillors of Peiraios (quota 10) in 303/2

34. 127, ? after 307, Olympion and Kleonostos sons of Mnesiades of Kerameis (with their FB); *XV* 61, 304/3, Morychides and Melanopides sons of Melanopides of Kephale, Aristokleides and Aristophon sons of Aristoteles of Phyle (Table 28.13), and Epikrates and Xenophon sons of Alexiades of Anaphlystos (perhaps with their FB Kallikrates). Doubtful cases: *XV* 11, 400–350, 2 sons of Hermo— of Keiriadai; *XV* 62. 95–6, 303/2, brothers in Kephale. Adjacent years: *IG* ii³ 4. 53, 371/0, Philokrates, ii³ 4. 25, 370/69, Amphiteles, sons of Amphitelides of Kettos. Note however Sopolis I of Kydathenaion serving *c.*360, ii³ 4. 55, and his brother Hippeus in ? 336/5, *XV* 42 (Table 5.6; ch. 25 n. 11).

¹⁹ Father and son: *IG* ii³ 4. 81, 330s, Gnathios Euphiletou and Euphiletos Gnathiou of Atene; *XV* 46, *c.*330, Kallikrates son of Hippo— and Kallikrates son of Kallikrates of Phaleron; *XV* 56 = *SEG* 34. 127, ? after 307, Epichares son of Mikon and Epichares son of Epichares of Cholleidai, Olympion son of Mnesiades and Epikrates son of Olympion of Kerameis; *XV* 61, 304/3 (cf. 59, 19, 25) Olympichos son of Pedieus and Pedieus son of Olympichos of Aphidnai. Adjacent years: Laches and Charinos of Potamos (n. 16); *XV* 61, 304/3, son of Mnesiergos of Eitea (X); *XV* 62, 303/2, Mnesiergos; perhaps also Polykles of Probalinthos and his son Poulytion, and Aristophon of Kolonai (IV) and his son Eumelos, *XV* 42 (? 336/5) and 43 (335/4); Antiphanes and Antiphates of Euonymon, *IG* ii³ 321–2, 337/6; *Agora* *XV* 42. 11, ? 336/5 (ch. 23 n. 17). Note also D[i]p[oli]s of Kropidai *XV* 42 ? 336/5, his son Nausistratos *c.*333, *SEG* 28. 52. In the Atene case, as with the brothers in Philaidai in *IG* ii³ 4. 76, kin filled two of only three available places.

(*Agora* XV 62 = *SEG* 24. 162. 253, 256–7) may be cousins (FBS), all named after the same grandfather (Table 30.1), although the deme is large and the name is common. The same applies to two men from Thria (quota 7) both called Nausikrates, councillors together in 360/59 (*IG* ii³ 4. 56. 28, 34). Still more dubious are two councillors with names beginning in Demo- from Teithras (quota 4) and two from Phegaia (quota 3) with names beginning in Theo-, all councillors in 341/0 (*IG* ii³ 4. 76. 55–6, 61–2). Some of the cases where a name occurs in two lists, but the patronymic is not present in both lists, among those classed by P. J. Rhodes (1980, 197–201; 1981*b*; 1984) as evidence for councillors serving twice, might be due to service by homonymous first cousins.

Finally, it is noteworthy that Dionysios son of Hephaistion of Philaidai (quota 3), elected in 341/0 with a pair of brothers from another family (*IG* ii³ 4. 76. 17), had already served not long before, in ? 343/2 (ii³ 4. 75. 4). It seems that this small deme either was dominated by a small faction or had trouble in finding men to serve.

At present the pattern of service by kin in successive years or within a short space of time can only be clearly documented after 338, due to the shortage of firmly dated lists in the earlier period, but since the evidence for kin serving together in the same year reaches back into the earlier period, it seems likely that the two patterns reflect the same play of familial influence in the deme. The choice to serve simultaneously or successively may have been influenced by a number of factors, from family size and the need to take care of other interests to the quality of personal relations; in some cases competing claims from other groups may have made simultaneous service impossible. And not all families will have been interested in pursuing such strategies. There are also cases in which a son appears as councillor about thirty years after his father, suggesting that both the family and its fellow-demesmen recognized a regular turn of Council service as its duty and due.

DECREES IN COUNCIL AND ASSEMBLY

It has frequently been noted that it was important for an Athenian politician to have friends in the Council of 500 to take care of his interests. Support was also needed in the Assembly. Recorded names of proposers of decrees, supported by a scatter of general comments, show that major political leaders did not always exercise their dominance over the Assembly by proposing one decree after another. Proposal was often left to minor figures, leaders intervening only if the debate took an awkward turn. Supporters also acted as claque, applauding their own man and heckling or drowning out opposing speakers. But though the use of such support groups is adequately documented, it is hard to find detailed evidence of the ties through which they were recruited. Until c.353 only the first name of the proposer of a decree was recorded, without patronymic or demotic, and this makes identification very conjectural. Thucydides' preoccupation with

demagogues and with presenting contrasting viewpoints gives a misleading impression of Assembly debates, which are not likely to have been so clear-cut. Aristophanes uses choral interludes in the *Thesmophoriazousai* (372–610) to represent the buzz of audience comment between speeches, and the speakers in the *Ekkleziiazousai* (130–267, 396–457) are frequently interrupted. In the same play, the women plan their campaign before the Assembly starts (130–267).²⁰ The gradual build up of support as various speakers express their opinions is better documented for debates in the Roman Senate (Aulus Gellius 14. 7; cf. Talbert 1984, 240–8). Senators moved around during the debate to show their support for speakers (Staveley 1972, 227–8). We do not know whether that was ever feasible in the Athenian Council or Assembly, but there is some evidence that those with similar views might try to sit together in a block. Thoudydides son of Melesias is said to have introduced this practice as a way of impressing voters in the Assembly (Plutarch *Pericles* 11. 2); from 410/9 seats in the Council were allocated by lot.²¹ The chairman of the Assembly was selected for each meeting by lot, so that it would not be possible to confer with him before the debate started.

Thoudippos of Araphen, who had a son called Kleon, has been identified with the Thoudippos who proposed the decree imposing much heavier tribute on Athens' allies in 425/4 (*IG* i³ 71), and it has been widely supposed that he had married a daughter of the demagogue Kleon of Kydathenaion, who was near the height of his power at the time and must have been largely responsible for the policy which the decree represented (*APF* 7252). The decree, which contains much complex detail, would have been first proposed in the Council, and it is assumed that Thoudippos was Kleon's henchman there. These assumptions have however recently been challenged.²² Kleonymos, who proposed a decree concerning tribute collection in the previous year (*IG* i³ 68) has also, on flimsy grounds, been identified as an associate of Kleon. Kleinias, proposer of the tribute decree of 448/7 (*IG* i³ 34; see P. J. Rhodes 2008), is usually assumed to be Perikles' affine (MBDH; *APF* 600 VI), the father of Alkibiades III; but here too we are dealing with a common name. Euryptolemos III's support for Perikles II in the Assembly in 406 (Xenophon *Hell.* 1. 7. 16f.) has already been discussed

²⁰ M. H. Hansen 1987, 69–72 gives an excellent account of the evidence for audience noise, heckling, and the use of minor *rhētores* as supporting speakers; cf. also P. J. Rhodes 1986, 138–41; R. Thomas 2011. Designation of proposers by name alone might suggest that in early days most were well known; but Plut. *Per.* 7. 7 (Kritolaos) attributes the use of straw men to Perikles, and 4th-c. sources do not treat it as a novelty (Aisch. 3. 159, [Dem.] 59. 4). Lykourgos used an expert to *draft* decrees (and/or *nomoi*? [Plut.] *Mor.* 842c) but liked to make his own proposals (Humphreys 1985a, 217; on L. and Demades see Lambert 2015a, n. 17). The only systematic study of proposers is Daverio 1968, but her identifications are not always reliable.

²¹ On seating in the Assembly see M. H. Hansen 1987, 77; Stanton and Bicknell 1987.

²² Ch. 8 n. 56.

(chs. 14 n. 44, 16 n. 60; Humphreys 1986*b*, 82–3), as has the procedure for nominating ambassadors.

With the fourth century we reach slightly more solid ground. *IG ii³ 503* (R/O no. 64, Lambert 2006 no. 3), a decree of 346 conferring honours on the rulers of the Bosporan kingdom in the Crimea, was proposed by the well-known politician and historian Androtion; a rider was added by Polyeuktos son of Timokrates of Krioia (*APF* 13772). His father Timokrates, like Androtion, had been attacked in court by Demosthenes (Demosthenes 24); Timokrates had served with Androtion on two commissions, and in 353/2 had proposed a law which according to Demosthenes (24. 26) was intended to protect Androtion from prosecution. Father and son seem to have been closely associated; both are named as appearing as witnesses for Meidias in Demosthenes' speech attacking him, *c.*348.²³

Euphiletos III son of Euphiletos II of Kephisia (*APF* 6067) proposed honours for Euphron of Sikyon in 323/2; his brother or son, Pamphilos son of Euphiletos, added a rider to his proposal and proposed a second decree for Euphron and his descendants in 318/17 (*IG ii² 448* = *Syll.*³ 310 + 317, M. J. Osborne 1981–3 D 38). The text mentions *philoi* and *oikeioi* of Euphron in Athens who are to see that the decrees are inscribed.²⁴

IG i³ 48 bis, a strange and fragmentary text dealing with a nameless man who seems to have a special relationship with Athena (or possibly Artemis),²⁵ provides a committee of five men, chosen by the beneficiary, apparently to watch out for his interests. Two of these may be brothers, sons of Theodoros.

In other cases we can see evidence of collaboration between fellow-demesmen. In one of the years of famine between 330 and 327 Telemachos of Acharnai proposed a decree in the Assembly asking the Council to suggest honours for the corn trader Herakleides of Salamis. His fellow-demesman Kephisodoros proposed the draft decree of the Council that followed, and Telemachos himself later proposed a second decree for Herakleides in the Assembly.²⁶ It seems that Telemachos, the trader's main champion, asked his fellow-demesman to look after matters in

²³ Dem. 21. 139; according to Aischines (3. 52) this case never came to court.

²⁴ On *IG ii³ 378* see Lawton 2003. She assumes that where honorary decrees for foreigners carried reliefs the sculpture was commissioned and paid for by the Athenian demos, but this seems to me doubtful. Euphron's relief may have been added by his friends; Lambert (2007*b* no. 97), following Henry 1977, thinks that of Rheboulas, *IG ii³ 351*, may have been due to private initiative; cf. also *ii³ 411 bc* (R/O 70, Lambert 2006 no. 4). On the proposer of *IG ii³ 1005* (Soteria at Delphi) see chs. 12 n. 89, 26 n. 22.

²⁵ The term *hierodoulos* does not occur until later, but some status of this kind seems to be in question (Peppa-Delmousou 1971 suggested *hier[on kai asylon]*). See Borgeaud 1979, ch. 5, Connor 1988*b*, Jim 2012, on possession.

²⁶ *IG ii³ 367*; R/O no. 95; Lambert 2006 no. 43, 2015*a*; cf. P. J. Rhodes 1972, 66–7. On Telemachos, ch. 28 n. 69. Honours for [Cha?]rias of Kydathenaion are proposed in the middle of the 3rd c. by a fellow-demesman, whose name is not preserved (*IG ii³ 991*).

the Council. However, Acharnai was a very large deme and the fact that two of its members concerned themselves with Herakleides may be coincidence; later honours for the same man, in 325/4, were proposed by two non-Acharnians, from different demes (*IG* ii³ 367. 6, 66).

When honorary citizenship was conferred on a foreigner it seems to have been a regular practice for the proposer of the decree also to sponsor the beneficiary in application for membership of his own deme.²⁷ In this case political patronage or sponsorship led to (quasi-)kinship, an interesting continuation of the practice which must have obtained in the incorporation of immigrants into tribes and phratries in the archaic period.

From the late fourth century onwards there seems to be an increasing tendency for honours to individual Athenian citizens to be proposed by fellow-demesmen or kin, although this is still far from being a regular rule. Ktesiphon, who proposed in 336 that Demosthenes should be honoured with a gold crown, and was prosecuted for doing so, may have belonged to Demosthenes' deme Paiania (D. M. Lewis 1955, 31). An earlier proposal for a crown had been made by Demosthenes' cousin (FBS) Demomeles II in 338 (Demosthenes 18. 223, [Plutarch] *Mor.* 846a). Demomeles II was probably the father of Demon II, whom Demosthenes had defended in a lawsuit *c.*340 (Demosthenes 32). In 323 the decree for Demosthenes' recall was proposed by his cousin (FBSS, *APF* 3597) Demon II (Plutarch *Demosthenes* 27. 6), and in 280/79 Demosthenes' nephew (ZS) Demochares (*APF* 3716) asked that he should be awarded a commemorative bronze statue in the Agora, with perpetual dining rights at the public table in the Prytaneion for his heirs ([Plutarch] *Mor.* 847d, 850f).²⁸ Demochares' son later, in 271/0, requested the same honours for his father ([Plutarch] *Mor.* 847d–e, 851d). Whereas Ktesiphon was taking a risk with his proposal to honour a man who was still a living force to be reckoned with, later members of Demosthenes' family were advertising their connection with orators seen, by the early third century, as heroes of a past age when Athens was still a great power (Humphreys 1985*a*, 220).

In 328/7 Prokleides son of Pantaleon of Kerameikos proposed honours for his fellow-demesman Androkles son of Kleinias, priest of Asklepios (*IG* ii³ 369, Schwenk 1985, no. 54; Lambert 2004*b* no. 11). Moschos son of Antiphanes of Anaphlystos, who proposed a cavalry decree honouring the phylarch Demetrios son of [Anti?]phanes of Alopeke (*SEG* 3. 115, cf. ch. 32 n. 14) may have been an affine. In 283/2 Nikeratos son of

²⁷ References are collected at *APF* 11672 IV. Savalli 1985 surveys practice in other cities. A freedman sometimes takes the name of his ex-owner (or of another patron) as patronymic (Babakos 1963, 55–8, Kalymnos).

²⁸ Table 4.7. On such proposals see E. A. Meyer 2013; M. J. Osborne 2013. If *IG* ii² 3207 belongs with ii² 457 and honours Lykourgos, four of its crowns were proposed by fellow-tribesmen (I learn from Adele Scafuro that the monument is discussed in a Padua dissertation, Tozzi 2014).

Phileas of Kephale proposed a gold wreath for the comic poet Pheidippides son of Philokles of the same deme (*APF* 14546; *IG* ii³ 877, *Syll.*³ 374; Paschidis 2008 A 52). In the same decade Kallistratos son of Glaukon, of Kropidai, proposed honours for the two officials responsible for the celebrations of the Eleusinian Mysteries (*epimelētai*), one of whom was his brother (*IG* ii³ 915, *Syll.*³ 384); this would perhaps hardly have been allowable before Chaironeia. Dromokles son of Arkesas of Oa proposed *SEG* 21. 525 in 282/1 in honour of a board of cavalry officers that included Nikogenes son of Arkesas of Euonymon; the two men may have been second cousins (FMBSS/FFZSS); chs. 23 n. 13, 25 n. 40.

In 247/6 or 246/5 Demostratos son of Aristophanes of Paiania (perhaps a Bouzyges: *APF* 3276) proposed honours for the priestess of Aglauros, following a report on her activities presented to the Council by her son Aristophanes (*IG* ii³ 1002). D. M. Lewis (1983*c*) suggests that Demostratos was ‘a loyal husband’, but in that case it seems a little odd that the priestess’s report should be presented by her son; and Demostratos would be praising her for spending money which had come from his own household. It is perhaps more likely that she was a widow, and that Demostratos was her deceased husband’s brother, making it clear that the family approved of her behaviour (Table 17.1).

Less surprisingly, when a committee is set up to ensure that provisions of an honorary decree are carried out we often find kin or associates of the honorand nominated to serve on it. Thymochares of Sphettos is to sit on the committee responsible for the statue of his father Phaidros, a well-known general of the early third century,²⁹ together with a fellow-demesman (Straton), and Menon

Notes: Lambert 2004*c*, 337.

Agora XV 59.15 [Polyni]kos Epik[ourou] of Aphidnai. 61.267 [P]oly[ni]kos Epikourou of Aphidnai.

TABLE 17.1. The priestess of Aglauros (*IG* ii³ 1002; *APF* 3276 Stemma II)

²⁹ *APF* 13964: *IG* ii³ 985, dated in the year of Philinos’ archonship, 259/8. Note also the prominent collaboration of Phaidros II in the *agōnothesia* of his son Thymochares II in 265/4 (*IG* ii³ 985. 56–60; M. J. Osborne 2004).

of Acharnai (*APF* 12143). The committee elected by the garrisons of Eleusis, Panaktos, and Phyle to collect money for a statue of Aristophanes of Leukonoe in the late third century (*IEleus* 196) was headed by a fellow-demesman, Hephaistodoros.

It should be noted that such honours, when granted to Athenians, are always granted to individuals and not to wider sets of kin, with the exception of the hereditary right to dine in the Prytaneion. Even in that case the right was only enjoyed by one descendant at a time, and it is not clear when hereditary grants became the rule.³⁰ Grants to foreigners were sometimes wider in scope. Honorary citizenship and proxenia were regularly granted to all legitimate descendants of the honorand (his *genos* or *ekgonoi*),³¹ and siblings may also be mentioned.

IG i³ 27 grants honours to a group of brothers, and their father, perhaps Delphians, c.450/49; *IG* i³ 28 a–b in the 440s grants proxenia to four brothers from (?) Abydos and their descendants; i³ 155 grants proxenia c.440–430 to Krison and (?) his brothers, and possibly to another man. i³ 73 grants privileges in 424/3 to Potamodoros of Orchomenos and his son Eurytion, who were perhaps already *proxenoi* (i³ 97. 6–7), and probably exiles, and money to Potamodoros, Eurytion, and (probably) Pythilles, whose relationship to the other two is not explained. Archestratos, who proposed riders to both the decrees on this stone, was presumably the family's patron in Athens. A decree of the late fifth century, *IG* i³ 228, honours Archonides of Erbita and his brother Damon, minor tyrants of towns in northern Sicily. *IG* i³ 165 (before 420?) grants proxenia to a father and son and invites the father's brother also to dinner in the prytaneion. Fathers are associated with honours granted to their sons in *IG* ii³ 468 ab (Lambert 2006 no. 44, c.333, Tyrians) and in *SEG* 36. 165/39. 101 (304/3). In *ID* 88 (*Syll.*³ 158)

³⁰ Hereditary rights were granted to the families of Harmodios and Aristogeiton, in the late 6th or early 5th c., because the 'tyrant-slayers' themselves were not alive to be honoured. Victors in Panhellenic games had earlier enjoyed lifelong rights, but these were not hereditary. Eventually lifelong rights and hereditary rights came to be combined (Humphreys 1985*b*, 220; 2004, 121; 2017*b*), but this may not have happened until the end of the 4th c.; it is safer to assume that they had originally been distinct.

³¹ *IG* ii³ 452. 18–21 (Lambert 2006 no. 8) specifically excludes a hostile descendant. No distinction was drawn in such grants between children born before or after the grant, and the requirement that children had to be born of two Athenian parents was de facto not applied in the case of new citizens (cf. Whitehead 1986*b*). *IG* i³ 178 (420–405) extends protection to the honorand's wife as well as his children. It may have been expected that only one descendant in each generation would inherit the commission of *proxenos*, at least in early times (when in any case the grant would lapse if descendants were inactive); but the privileges of the status soon came to outweigh its duties, and no limit is normally specified. In *IG* i³ 56 (c.430) the grant of proxyeny to the honorand's descendants (*paisi*) is added in a rider. See Gschnitzer 1973; Walbank 1978; Henry 1983.

the proxenia granted in 369/8 to Pythodoros of Delos is extended in 363/2 to his nephew (ZS).³²

Athenian practice may have been influenced by that of other cities perhaps more inclined to think in terms of households or small lineages rather than individuals. The Delians, in an interesting case of the late fourth century, granted proxeny to two Athenians who were brothers by birth but had evidently been separated by adoption (or were matrilinear half-brothers), Chairites son of Polymedes of Myrrhinous and his brother Antiphon son of Theodoros (*ID* I 74).³³ An early proxeny decree from Eretria (c.500–475, *LSAG* 88 no. 15) may honour two brothers (W. Wallace 1936); grants of freedom from harbour dues at Olbia (*ateleia*) mention brothers in indivision and also servants (*therapontes*) of the honorand.³⁴ Examples could easily be multiplied, especially from later periods.

³² V. Chankowski 2008, 252. Other cases are more doubtful. *IG* i³ 162 = *SEG* 32. 5 is restored by D. Rendić-Miočević (1977–8) as a proxeny-grant to an Epidamnian prince (?) and his two brothers (440–15). Walbank 1978 no. 48 restores *IG* i³ 81 (421/0) as a grant to Polystratos of Phleious and his brother, but the restorations have very little basis. Most of the conjectures in *SEG* 10. 76 have been justifiably rejected by *IG* i³ 70. Meritt 1941, 315–17 suggested restoring in *IG* i³ 28. 11–12 (see *SEG* 37. 7) a grant of freedom from military service to the honorands and their eldest descendants (*ekgonôn tois presbytatois aiei*) but there are no convincing parallels; see Henry 1983, 245. *IG* ii² 180 (before 353/2) is restored to give a grant of proxenia, *ateleia*, and *gês enktêsis* to two brothers and their descendants, with a third brother, but the restorations are problematic, as is the attribution of the family to Skyros. In *IG* ii² 52 (Walbank 1978 no. 63, Appendix) honours granted to the petitioner's grandfather are confirmed in the early 4th c. to him and his brothers; this is the normal working of a hereditary grant, but such requests may have encouraged the idea that a grant to a group of brothers was normal. Cf. Lambert 2012, 402 on *IG* ii³ 495, and Lambert 2006 no. 37 = *IG* ii³ 432 (Sopatros of Akragas).

³³ The grant of *ateleia* to Aristoph[ilos], his brothers, their descendants and their *oiketai* (c.400; *ID* 1 no. 71) may be made to a Delian.

³⁴ *ID* 74, Antiphon added later? Wilhelm 1913, 31–5, discussing *ID* 71, collects grants of privileges to groups of brothers, and to women; further examples in Wilhelm 1929, 163–8. See Dubois 1996 nos. 5–8; Bravo 1977; Erxleben 1974, 488.

PART FIVE

Corporate Groups

The Pre-Kleisthenic Tribes and Trittyes

INTRODUCTION

The purpose of this final section of the book is to consider the history, functions, and articulations with other aspects of Athenian social experience of groups in which kinship (patrification) acted as a constitutive structuring principle. These groups had corporate identity and organization and were, in one way or another, officially recognized by the Athenian state.¹ This does not mean that they—let alone their segmentary articulation—were ‘natural’ or primordial (cf. J. K. Davies 1997). While the terms for tribe (*phylê*) and phratry already occurred in the *Iliad*, *phylê* is probably used there in its general sense of ‘kind’; it will be argued here that the widespread diffusion of tribe names suggest a horizontal form of social classification of interest mainly to the elite, while phratries were local units linking the elite vertically with commoners, and the articulation of tribe and phratry may well have been a later development.

The question whether these units were ‘personal’ or ‘territorial’—a persistent theme of N. F. Jones 1987, which surfaces also elsewhere—is badly phrased. As the Kleisthenic demes in Attika show, a unit recruiting by patrification could also have a territory (at least roughly defined: ch. 22 n. 52). To associate affiliation to subdivisions of the citizen body firmly with residence would require a regular system of census taking, which is as yet first attested for the Roman empire (Bagnall and Frier 1994). It is possible that before Kleisthenes’ reforms an elite family could have had more than one local affiliation without being compelled to choose which to privilege.

Recruitment to tribes and their subdivisions by patrification affected the social experience of Athenian citizens and their interactions with kin, since agnates necessarily shared group membership. The system also had a wider ideological influence. Although belief in common descent from eponymous group ancestors was at best vague, and descent was not a salient principle of internal organization (as opposed to recruitment) at the lowest level (phratry and deme), the use of

¹ The position of the *genê* (ch. 20) differed from that of the tribes, trittyes, and phratries, but still implied a relation to the state. On rituals organized by tribes in later periods see Chaniotis 2006, 231–2.

descent groups (clans)² as subdivisions of the citizen body supported a tendency to link concepts of citizenship and cultural units to the ‘natural’ symbolism of procreation and ‘blood’, and to think of social organization in segmentary terms, in terms of affiliation to a series of descent groups—phratry and deme, trittys, tribe, city-state, nation—in which kinship ties became progressively more distant but were never totally eliminated. Such assumptions strengthened boundaries separating citizens from non-citizens, Dorians from Ionians, and Greeks from barbarians.

Tribes and their subdivisions also acted as intermediaries between the state and the individual household at the practical level. The conventions and mechanisms developed for conducting public business in city assemblies were imitated and employed by the smaller bodies (demes and phratries), and many Athenians got their first experience of the public sphere in deme or phratry assemblies. There were, however, some significant differences correlated with the change of level and with variations in group size. Especially in the smaller bodies, ties of kinship and marriage alliance could have a significant impact on local politics. On the other hand, the group’s right to acknowledge its members’ children as legitimate, or reject them, gave it a voice in disputes between kin.

Because they occupied this intermediate position between state and household, tribes and their subdivisions changed their functions and, on occasion, form as the state developed. The Athenians themselves took a more historical view of these groups than of the kindred or the family, and modern research has done the same. The chapters of this section thus have a more diachronic and less systematic structure than chs. 2–17.

The evolutionist schema inherited from the nineteenth century, in which it was assumed that Greek communities had since primordial times been divided into patrilineally recruited segmentary groups, gradually modified in the historical period by the development of the city-state, was difficult to reconcile with the picture of Greek states with centralized financial systems—and very little interest in kinship—that emerged after the decipherment of Linear B in 1952. The older view was to some extent salvaged by greater emphasis on a ‘Dark Age’ in which pre-Mycenaean forms of social organization might have re-emerged, but it was thoroughly criticized in 1976 both by Bourriot and by Roussel. It took a long time, however, for scholars to digest the implications of their arguments (T. Schneider 1991; Ulf 1996*b*); indeed, the ideas that early societies are more

² Anthropologists distinguish clans, which recruit their members by filiation but do not organize their internal structure by genealogical relationships, from lineages, whose members can map their relationship to each other by reference to common ancestors at varying levels. The term ‘descent group’ is sometimes restricted to systems of lineage type. From this point of view Greek tribes and their subdivisions formed systems of segmentary clans. The term ‘clan’, however, tends to have misleading associations for historians (on Scottish clans see e.g. Cathcart 2006).

rigid and ‘traditional’ than states, or that Greek democracy was *sui generis* whereas models drawn from comparative data can help to reconstruct its remoter antecedents, have not yet vanished.

The history of the ‘ethnic’ identities Ionians, Dorians, and Aeolians—marked by dialect, shared festivals and associated month names (Trümper 1997), and sets of tribe names—provides an example of this slow and unfinished process of rethinking. Intelligent questions had already been formulated about the construction of these identities c.1900 (see especially Wilamowitz 1906), but this did not impede the construction of the ‘Dark Ages’ as a period of depopulation and lack of movement—apart from ethnically labelled ‘migrations’—between c.1200 and c.800. Dialectal and ‘ethnic’ differences would have crystallized in this situation of isolation or limited contact.³ It has taken decades for the accumulation of archaeological evidence to bring realization that the ‘migrations’ eastward may have resembled continuous trickles of mixed origin rather than group expeditions (Lemos 1998, 2002, 2007*b*; C. B. Rose and H. Parker 2008), and that scattered communities may have maintained contact by meeting at sanctuaries (C. Morgan 1990; Polignac 2009, 430–9). It is also becoming clear that we cannot make a simple distinction between ‘myths’ and rituals transmitted from an unreflective age and more critically formulated ‘historiography’. Reflection on memories and identities was a continuous process that went on reshaping rituals and accounts of the past well into the fifth century (see especially Kowalzig 2007).

On the basis of this recent work we can remind ourselves that shared month names derived from festivals are unlikely to persist without some co-participation in festivals and travel between communities;⁴ and that the early emergence of ‘literary’ dialects, which contributed to the development of dialect consciousness (Morpurgo Davies 1987), rested on communication and not on isolation.

If only to shake off the lingering effects of models of evolution from naive simplicity and community *habitus* to rationality and ‘individualism’, which privilege units rather than their interrelations, we need to make the effort to imagine the prehistory of Greek states in interactive terms, as made up of overlapping

³ I. Morris 1997 traces the history of the construction of the ‘Dark Ages’, but with less attention to the problems caused for historians by the decipherment of Linear B. Cf. also Papadopoulos 1993.

⁴ Trümper 1997, 31–8 (cf. 2003) suggests a BA origin for at least some of the Ionian month names, but her argument is problematic (cf. Wenskus 1998). She does admit that month names may have varied locally, according to the siting of sanctuaries and prominence of festivals, until polis calendars were formalized. N. D. Robertson 2002 (an important contribution) suggests—as I do—a dialectical relation between the development of shared festivals and of conceptions of ethnic identity; he claims that names for winter months are more divergent than those for the months of the sailing season (but Knoepfler 1989 says the opposite). On the construction of Ionian identity see also Connor 1993. Trümper 1997, 35–6 points out that a period with more festivals may have more diversity in month names. Robertson also notes that Spartans were grouped by tribes and phratries at the Karneia (n. 42), but connects this with military organization. Apatourios now attested as month at Massalia, *SEG* 50. 1076.

patterns of classification and reflexive, situational response. One aspect of ‘the formation of the polis’ was the systematization and homogenization of these overlapping schemata.

PROCESSES OF CLASSIFICATION

Persons

I am concerned here specifically with classifications of persons, space, and time. Astronomical, climatic, and agricultural calendars had their own seasons and rhythms (harmonized by Hesiod in the *Works and Days*), marked by associated rituals; it was only when political communities began to appoint officials for one year only that each selected its own date for the community’s New Year’s Day. Central places had overlapping catchment areas linked to varying patterns of ritual or politico-judicial activity and of exchange (and their own metric systems). Members of the elite were linked to their peers in other communities by interaction in central places and to local neighbours by patterns of resource distribution (sacrifice, loans, part-time labour and its rewards);⁵ the elite and the commoners (*agathoi* and *kakoi*) might view their social worlds differently and vary in their norms of marriage, adoption, or inheritance (ch. 1 at nn. 73–82).

This does not mean that social strata were fixed and sharply bounded. If the elite was characterized culturally by spatial mobility and wider perspectives, its members needed young men to build and row ships, act as chariot drivers and squires, and perform other services; those successful in such roles might become incorporated into the elite. Conversely, older and less successful members of the elite might settle into a village-based pattern of life.

Archaeological evidence—which is admittedly biased towards the movements of those who had the resources to make valuable dedications⁶—suggests that the worldview of the elite would have been wider and more ‘amphiktyonic’ than that of the villager. Forrest 2000 recommended a focus on amphiktyonies as significant contexts for pre-polis interaction, using the term loosely (as I do here) to denote

⁵ See Polignac 1995 on the complementary uses of wealth for dedications at regional sanctuaries and for funerals at home; Schmitz 2004 on village norms.

⁶ For recent archaeological work on amphiktyonic sanctuaries see Lohmann 2002, 2004, Lohmann a. o. 2007 on the Panionion on Mt Mykale; C. Morgan 1994, 1999 on Isthmia and Perachora; C. Morgan 1997, 2003, Marchand 2015, 70 on Kalapodi; Schumacher 1993 and Mylonopoulos 2003 on Geraistos (also *BE* 2014 no. 227), Sounion, Kalaureia, and Tainaron; B. Wells 2010 on Kalaureia; Knoepfler 1988*b*, 2010*a*, K. G. Walker 2004, Knoepfler a. o. 2008, Krapf 2011, Marchand 2015, 68, *BE* 2014 no. 231, on Amarynthos; Huber 2003 on Artemis (?) at Eretria. (Brisart 2011 stresses polis-orientated uses of archaic art, and has little to say about sanctuaries.)

sanctuaries drawing worshippers from beyond the local community.⁷ Ethnic classifications would be a facet of amphiktyonic culture; comparison of dialects, cult practices, and myths would stimulate convergence and attempts at systemization (Hesiod) or more marked differentiation as in ‘literary dialects’. Poets contributed to all these processes. Amphiktyonic culture provided patrons and audiences for them; it encouraged the formulation of norms for the proper conduct of war and competitive sports, and it probably also facilitated inter-group marriage (visiting groups of young athletes being met by local choruses of singing and dancing girls? see Rutherford 2004*b*, Kowalzig 2007; *Hymn to Apollo* 157–64 on Deliades).

Thus there seem to be arguments for associating the development of ethnic identities with elite status, mobility, and amphiktyonic culture. Greek raiders and mercenaries in the eastern Mediterranean were known in the eighth century as ‘Ionians’ (Iaunana: from Euboea and the Cyclades? Luraghi 2006). The Homeric *Hymn to Apollo*, while stressing that Delos drew worshippers from the whole Greek world, also gives Ionians a privileged position among them (27–44, 146–52). The settlers who took over a Carian sanctuary on Mt Mykale, between Miletos and Samos, c.700 (n. 6) renamed it the Panionion, as if hoping to rival Delos. Anthela formulated amphiktyonic membership in ethnic terms, allocating two places to Ionians (cf. Sánchez 2001).

What is not clear, if we think of ethnic identities as gradually crystallizing out of patterns of repeated association rather than as fixed and primordial, is why recurring sets of tribe names should also have become associated with these identities.⁸ In the ethnographic record recurrent sets of names for social categories (descent groups, age sets) are thought to facilitate mobility and the formation of alliances. For social groups, genealogies provide wide-ranging social maps that justify

⁷ Any sanctuary is at some level amphiktyonic, and the range of catchment areas varied widely (see e.g. Chaniotis 1991 and Kowalzig 2007, 375–9 on L. Kopais, for small-scale examples; C. Morgan 1994, 1997 for changes in range over time). Sanctuaries of Poseidon, strung out along shipping routes, would be different in clientele from, for example, the Artemis shrines of the Euboian gulf (Aulis, Halai, Amarynthos, Brauron—linked in Attika also to Mounichia, Athmonon, and perhaps Myrrhinous; see S. G. Cole 2000; Huber 2003, 150–3)—although the Euboian channel was also an important route in the EIA, *AR* 2004/5, 1. It may be worth asking whether in some areas there were festival circuits producing penteteric or trieteric patterns of heightened celebration in individual sanctuaries. Another early archaic, amphiktyonic sanctuary of (?) Apollo on the Corinthian gulf near Pagai (Bouri/Dourako Alepochoriou), *AD* 55 B 1 [2009], 92–3; 60 B 1, 124–6; 61 B 1, 2006, 141–2.

⁸ See N. F. Jones 1987. Attestation is patchy and comes from the classical period or later, though the recurrence of metropolitan tribe names in colonies *may* go back to the date of foundation. Some names slip from the tribe level to that of sub-units. The Ionian tribes Boreis and Oinopes are attested only in Anatolia (and colonies); Delos is the only island that may have had the same 4 Ionian tribes as Athens (Vial 1984, ch. 2). Hellanikos *FGH* 4 F 125 makes Boros the great-great-grandfather (FFF) of Melanthos, and a distant descendant of Aiolos. The Dorian record is rather more consistent. In some forced migrations one male was taken from each household, which would have spread pre-existing tribe names (Thera, M/L 5; Heurgon 1956 for Rome), but this degree of formal organization was probably unusual in Greece.

friendship or rivalry; for the mobile individual, clans and age sets classify members of other communities as marriageable or not, senior, coeval, or junior. Greeks in the eighth and seventh centuries were clearly interested in genealogy as a way of organizing knowledge, and the use of genealogy as a basis for claiming alliance continued even into the Hellenistic period (Curty 1995; Giannisi 2006; L. E. Patterson 2010). But they had no rules of group exogamy, and the formalization of an age-class system at Sparta seems to have been a relatively late development. The names of the tribal eponyms—with the exception of the Dorian Pamphyloi, suggesting a residual category—were not etymologically transparent, and (apart from Hyllos, attracted into stories of Herakles) no mythical narratives were attached to them. A few straws in the wind might suggest connection to epithets of the gods, but there are hardly any later indications of a division of cultic responsibilities among tribes;⁹ in Attika, at least, the systematization of rights to appoint priests developed through the *genê* (ch. 20) and not the tribes. Perhaps all we can say is that a form of social organization that has amphiktyonic characteristics was thoroughly transformed by being adapted to the context of the emerging city-state.

Places

The process modern scholars call ‘the rise of the polis’ was not a simple matter of larger and more prestigious settlements subjugating smaller ones and establishing territorial boundaries. The boundaries of cultic and political catchment areas never wholly coincided, and this distinction of function was itself the product of the process of development of the polis. The foundation of new cities that had to assert claims to land use against non-Greek neighbours—first in Anatolia and later in the west, the northern coast of the Aegean, the Black Sea and the channels leading to it—clearly influenced concepts of the relation between community and territory.

On the mainland, poleis defined their identities and boundaries in a landscape that was already settled by gods as well as men (Jameson 2004). Here too the sites that prospered as amphiktyonic centres were sometimes poor in agricultural land.¹⁰

⁹ Dorian Hylleis possibly with Zeus Syllanios and Athena Syllania (Plut. *Lyk.* 6); Ionian Aigikoreis with Athena; Hopletes just conceivably with Arkadian/Achaian Zeus Hoplosmios and Hera Hoplosmia (Hoplodmia). Cf. Arena 1996 no. 19. On Zeus Geleon see n. 52 below. Separate sacrifices by the 3 Dorian tribes on Kos in *IG* xii 4. 1. 278 (R/O 62 C, *LS* 151 C, shortly after 366). Mantinea has tribe names related to cult (N. F. Jones 1987, 134), but they do not recur. On Dymanes in W. Lokris see Jones, 81.

¹⁰ See A. M. Miller 1986 on the explanation given by the Homeric *Hymn to Apollo* (51–60, 257–71, 529–30) of Apollo’s choice of infertile sites. The *Hymn* belongs to the 7th or 6th c. (Chappell 2011; the early 6th c. date in Janko 1982 for the Pythian section seems to be derived from the date for the First Sacred War, which did not necessarily mark the beginning of friction between the sanctuary and neighbouring towns); but see also N. Richardson 2010. The small island Despotiko (Kouragios 2005*a–b*, 2009; *AR* 2014–15, 20) is a new example. Cf. Jameson 2004 for a distinction between numinous and constructed sanctuary sites.

The island now called Poros, on the south side of the Saronic gulf, home to the Kalaurian amphiktyony with its cult of Poseidon, had a magnificent harbour but little else.¹¹ Delphi was a mountainside site. But other religious centres, such as Olympia and Eleusis, were set in fertile plains.

It was not obvious from the start that some sites were destined to become religious centres and others were destined for statehood. In the pre- or proto-polis stage, cult must have been in all settlements an important source of prestige and focus of social interaction.¹² The elite legitimized their power and privileges, at least in part, by providing victims for sacrifice and distributing meat to the rest of the community.¹³ They also competed with each other in games, at sanctuaries as well as on private occasions (funerals, weddings), and they dedicated cauldrons and tripods to the gods as well as giving them to their peers. Sacred sites marked levels of social organization along a scale ranging from local collaboration between small hill villages to the sanctuary that sent heralds far and wide to announce its festivals.¹⁴ The result was a pattern of overlapping circles of social interaction rather than a map in which land was unambiguously divided by the boundaries of territorial states.

There were two contradictory trends in the development of Greek communities. One was exclusive, tending towards a sharper distinction between insiders and outsiders and, eventually, the development of the concept of citizenship; the other was inclusive, aiming at attracting periodic visitors and, in its most developed form, leading to the concept of initiation. As ambitions grew, the tensions between these divergent trends became problematic. Attempts to resolve the contradictions took a variety of forms, depending on local circumstances.¹⁵ Where an amphiktyonic centre was strongly established in an area in which the surrounding settlements were relatively weak and approximately equal in size and resources, two local communities might compete for control (Elis), or more distant communities with an interest in preserving the extraterritorial neutrality of the sanctuary might intervene to prevent annexation by a rising local polis

¹¹ Cf. n. 6. T. Kelly's view (1966) that this was a political union based on fear of Argive expansion seems to me unlikely.

¹² Cult, myth, and material symbols of sacred power (natural features or Mycenaean remains: on the latter see Antonaccio 1994*b*, 1995) reinforced each other as sources of prestige. Success in war at both individual and community level must also have played a role, although Van Wees 1992 suggests that the Homeric poems exaggerate its salience.

¹³ Victims were also collected from the community: see *Od.* 3. 4–8, and below n. 71.

¹⁴ On village-level amphiktyonies in Attika (e.g. the Hekalesia) see ch. 22 at n. 91; on heralds, Giovannini 1969, Nachtergaele 1975. There is increasing evidence that smiths travelled to work at amphiktyonic festivals (see e.g. C. Morgan 1993).

¹⁵ The contradiction was never entirely resolved, and resurfaced in new forms in the Hellenistic period, when states that had lost political autonomy redefined themselves as centres for initiation into Greek culture. Cf. J. K. Davies 2008.

(Delphi).¹⁶ Where, however, an amphiktyonic centre was located close to a powerful and ambitious polis, a different kind of symbiotic relationship had to be established. This happened eventually in the case of the Argive Heraion,¹⁷ and probably earlier at Eleusis. Athens incorporated the inhabitants of the Eleusinian plain and the surrounding valleys into her tribal system and—perhaps more significantly—recognized the right of the Eleusinian aristocracy to hold office at Athens; but she left the sanctuary of Demeter and Kore in Eleusinian hands and did not interfere with (perhaps even supported) the embassies in which Eleusis invited all Greeks to attend the Mysteries, and requested other cities to observe a truce while the pilgrims were travelling.¹⁸

The polis was an ‘imagined community’ (B. Anderson 1983; cf. Chatterjee 1993). During the period in which polis identities were constructed and frontiers were defined, community leaders, with the help of poets, engaged in intensive dialogue about historical traditions¹⁹ and cultural boundaries. Genealogies and stories were used to map descent and alliances; mountain ranges that closed visual horizons and impeded communications became cultural as well as political frontiers, separating Dorians and Ionians from each other and from other, less sharply defined ethnic groupings. In the case of Attika, although there were certainly cultic continuities between Megara, Eleusis, and Salamis,²⁰ extension of the Parnes range to the sea between Eleusis and Megara formed a more impressive natural barrier than the ridge that separated the plain of Athens from that of Eleusis. The boundaries of Attika came to be seen as marking a division between Ionians and non-Ionians—although, as we shall see, problems of definition and

¹⁶ Hdt. 6. 127, *FGH* 70 F 118 on the struggle between Elis and Pisa over the Olympic sanctuary and games (cf. also Jeffery 1976, 166–9; Demand 1990, 64–5; C. Morgan 1993). The historicity of the First Sacred War over Delphi has been questioned (N. D. Robertson 1978; Polignac 2009, 440) but see J. K. Davies 1994*b*, 2007; Rousset 2002, esp. 285.

¹⁷ I cannot here deal with the complexities of the Heraion. It seems possible that the destruction of Asine *c.* 700, *after* which the site developed amphiktyonic functions (Kowalzig 2007), was due to amphiktyonic (Argolid) action. Amphiktyonies, in addition to promoting conditions for war and peace (Lelantine agreement set up at Amarynthos, Str. C 448/10. 1. 12; cf. reference to amphiktyonic sanctuaries in *IG* i³ 104. 28), could engage in war, as e.g. at the Panionion.

¹⁸ Cf. ch. 20 nn. 20, 33, 69, Sourvinou-Inwood 2003*b*; a boundary between Athens and Eleusis was recognized in ritual (more than one? cf. n. 68), but this does not imply that Eleusis had once been a fully developed autonomous polis. Myths of war between Athens and Eleusis translated the contradiction between ritual autonomy and political incorporation into diachronic and military terms. A closer relation was established at least by the mid 7th c. with the construction of the Eleusinion in Athens (*Agora XXXI*). Cf. Baines 2013 s.v. *waystations*.

¹⁹ Including memories of, or legends about, Mycenaean kingdoms.

²⁰ See *FGH* suppl. on 328 F 14–16, on Skiros and Skiras; Sourvinou-Inwood 2011, 172–4. It appears that when Athens established control over Salamis *c.* 600 the inhabitants were expelled as Megarians and the island resettled from Attika (Plut. *Sol.* 8–10). Athenian settlers retained their ancestral tribe and phratry affiliations.

of the integration of the local elite into the polis continued into the sixth century in the area north of Mt Pentelikon.²¹

The role of the poets in this process of identity construction favoured fluidity. They provided a panhellenic channel for the assertion of competing status claims, without having any final authority to adjudicate between them. Poets claimed their own right to modify traditional stories when inspired to do so; they were also accused of adding lines to traditional poems as a favour to this polis or that. Poems were political: the tyrant Kleisthenes of Sikyon, in the early sixth century, banned rhapsodic performances because the Homeric poems glorified Argos, and transferred the honours previously given to the Argive hero Adrastus to his traditional enemy Melanippos.²² The odes of Bacchylides and Pindar represent a late stage in this kaleidoscopic process of assertion and counter-assertion of claims to prestige (see Kowalzig 2007). New ingredients were also added to the mix in the kaleidoscope; after Drakon had formulated written rules for handling homicide disputes in the late seventh century, the Athenians evidently felt no incongruity in (as we would say) projecting their prestige in this legal sphere back into mythical times.²³

By the sixth century, however, tensions were beginning to appear. The stories told about Kleisthenes of Sikyon, if they date back so far, already indicated a less tolerant attitude.²⁴ By the end of the century prose writers, who claimed a new authority for their work, were attempting to reduce myths and genealogies to order and produce a single coherent narrative of Greek history from Deukalion and the Flood to their own time. It was a difficult task. They were asking questions that had not been raised before, and in doing so brought into focus conflicts and contradictions that had previously lurked unnoticed in the silences between narratives.²⁵

In the course of this process of rationalization historians of Attika had to date the introduction of the tribal system. Since it was a fundamental part of their conception of the state, and was known to be shared by other Ionian states, it was attributed to Ion, who probably had not played much part in Athenian conceptions of identity before the late sixth century. The tribes, it was supposed,

²¹ Eleutherai was not incorporated into the Athenian state (ch. 22 n. 12). On Aphidnai and the Tetrapolis see ch. 21 n. 4. The failure of Thebes to turn Boiotia into a polis-state (cf. Bintliff 1994*b*) presumably has some bearing on the permeability of the north-eastern sector of the Attic–Boiotian boundary. On the hardening of boundaries between dialects see Risch 1991, 237.

²² Hdt. 5. 67. The *Phoronis* presumably belongs to the same process of rivalry.

²³ Humphreys 1991, 32*f.*, 39–40.

²⁴ Models that postulate a period of fluidity and situational adaptation before evidence becomes sufficiently detailed to reveal conflict are always suspect. Nevertheless, the development of prose historiography introduced a new need to decide between conflicting stories, and new criteria of decision.

²⁵ R. Thomas 1989, ch. 3 is fundamental. The systematization of genealogies in writing uncovered discrepancies that were often reconciled by duplication of heroes (a process misunderstood by Broadbent 1968).

were named after his sons: Geleon, Aigikores, Argades, and Hoples.²⁶ As the founder of Athens' civic organization, Ion had to be closely associated with the city's founder-king Erechtheus. However, the connection of the Ionians with the sanctuary of Apollo on Delos and with celebration of the Apatouria, a festival of Apollo, had made Ion a son of Apollo. The two strands of tradition were reconciled by stories that Ion was a foreigner who came to Athens and married Erechtheus' daughter, or that he was son of Erechtheus' daughter by Apollo or Xouthos.²⁷ There were, however, further problems. Tradition, and the ritual of the Synoikia (see n. 43), associated the foundation of the Athenian state with Theseus rather than with Erechtheus and Ion. This problem was solved by the story that the four sons of Erechtheus' successor Pandion had quarrelled and divided their inheritance. Theseus had reunited three of the resulting kingdoms to give Attika its classical boundaries.²⁸

ANCIENT SCHEMES

The Athenaion Politeia

The author of the Aristotelian *Constitution of Athens* (*A.P.*) presents a later development in the relations between Ion and Theseus. He describes modifications introduced by Theseus, and then summarizes the structure which he probably attributed to Ion: four tribes, twelve 'trittyes and phratries', and 360 genê, to each of which thirty men were allocated (the term is *tetagmenous*). Theseus' contribution was to distinguish the Eupatridai (nobles), from two other status groups: *gêómoroi* or *gêórgoi* (landowners, farmers), and *dêmiourgoi* (craftsmen).²⁹

²⁶ This is the order given by Hdt. 5. 66 and seems to be the canonical Ionian order (N. F. Jones 1987), perhaps implying a connection of Hopletes to **hoplos*, young (*LSJ* s.v. *hoploteros* does not mention *methoplotatê* in M. Davies 1988, 146, *Carmen Naupactium* F 1). Eur. *Ion* 1575–81 has Geleon, Hoplos, Argades, Aigikores (perhaps influenced by metrical factors); Pollux 8. 108 has Teleontes, Hopletes, Aigikoreis, Argadeis; Plut. *Sol.* 5 has Hopletes, Argadeis, Teleontes, Aigikoreis. Folk etymologies that associated Geleontes (var. Teleontes) with divinity or priesthood, or with Ge, Hopletes with infantry, Aigikoreis with herding, and Argadeis with crafts (cf. Str. 383/8. 7. 1, and perhaps Pl. *Tim.* 24 a–b), may have influenced conceptions of ranking. A late Roman deme called Ergadeis, Traill 1975a, 114. Note cults of Zeus and of Hera Hoplosmios/ê in Arcadia, Jones 1987, 134 (above, n. 9). *Koinon* of Geleontes at Claros, 3rd c. BCE, Rousset 2014a, 2014b; *patra* of Geleontes on Thasos, Grandjean 2013, 258–61.

²⁷ Hdt. 8. 44; Eur. *Ion*; *FGH* 328 F 13 with comm; Wilamowitz 1893 II 136–8, 1926. Jacoby (on *FGH* 323 F 19) thinks that schol. Eur. *Medea* 19 is confused.

²⁸ Philochoros, *FGH* 328 F 107–8 with comm. This story included claims that Pandion had controlled the Megarid, which Nisos then lost to Minos of Crete. See below at nn. 43–51 on the Twelve Towns.

²⁹ Good discussion of this account (fr. 2–3) and its possible philosophical connections in Lambert 1993, Appendix 2; cf. Blok and Lambert 2009. N. D. Robertson 1992 takes the implausible view that tribes and trittyes were the same, and consisted of 3 phratries per unit. However, *A.P.* or its source might well have thought that the number of phratries had increased since the time of Ion/Theseus (it is most unlikely that there were only 12 phratries in the 4th c.).

I have argued above that *A.P.*'s source got his Theseian status groups from terms used in political conflict at the time of Solon's reforms, which had made their way into the archon list (ch. 1). Did he have any equally reliable source for his tribal system?

He did not derive it directly from experience. It is inconceivable that classical Athens had 360 *genê*, and almost certain that there were more than 12 phratries (Lambert 1993, 379). The evident relation of these numbers to the calendar is cause for suspicion. Moreover, it is rather unlikely that the equation of pre-Kleisthenic trittyes with phratries was widely accepted. Comparison with the Kleisthenic system was more likely to suggest an equation between phratries and demes.³⁰

Experience, however, was not likely to exercise much restraint over historical reconstruction in such matters. There were probably small sanctuaries in most parts of Attika which had once been controlled by now defunct *genê*, or had names suggesting *genos* ownership.³¹ Some phratries may have given their names to Kleisthenic trittyes (*Epakreis*). There were fewer phratries than demes, and thus phratries were larger than many demes, though not all. There may have been some fission or fusion of phratries after Kleisthenes' reforms, justifying speculation that their number had changed.³² While the pre-Kleisthenic tribes retained some ritual functions in the classical period, it is not clear that more than one trittys did so (below, n. 103). Disappearance of the other trittyes may well have favoured the view that tribe, phratry, and *genos* were the units of the pre-Kleisthenic system.

The question, then, is whether *A.P.*'s source had some evidence linked to the pre-Kleisthenic period, or drew his inspiration from another direction.

J. H. Oliver (1980) claimed that *A.P.* transmitted a scheme genuinely used in military organization in the sixth century. The idea of an army divided into four regiments, twelve companies, and 360 platoons, each consisting of 30 men, is in itself possible enough.³³ Indeed, one is immediately reminded of the Spartan army, which in the classical period seems to have been divided into *morai* and *enômotiai*, each of the latter containing about 40 men; the relation of the enomotiai to dining groups (*syssitia*) is uncertain.³⁴ This comparison, however, is cause for disquiet rather than reassurance, both because *genos* would be an unlikely

³⁰ We only know one pre-Kleisthenic trittys name, Leukotainioi, and there is little reason to suppose that it was also the name of a phratry (there was however a phratry G(e)leontis); ch. 19 n. 6.

³¹ Cf. ch. 20 n. 45 on the Sôtidai of Erchia, etc.

³² Cf. chs. 20 on Salaminioi, 19 nn. 171, 160, on Dyaleis and on the (probably Lykourgan) restrictions on admission of new citizens to phratries.

³³ Oliver's scheme is however more complex, with 30 *genê* distributed across tribes and trittyes, 30 members of each *genos* in each trittys.

³⁴ Singor (1999, 2002) suggests that the archaic enomotia contained 3 *syssitia* of about 15 men each, the classical enomotia one *syssitia* plus *perioikoi*. See Van Wees 2006b.

name for a group resembling the Spartan *enomotia*³⁵ and because claims that Athens' institutions in the remote past had resembled those of Sparta suggest utopian discourse rather than parallel development in the archaic period. Moreover, a tribal system and army organized along these lines would perhaps hardly have seemed to need reorganization in 508/7. Oliver did not explain how *A.P.* would have got its information, and his views have not attracted much support.

A more plausible interpretation of *A.P.* can be found by looking in a different direction. There is a striking coincidence between *A.P.*'s scheme and an account of a polis constitution found in a papyrus of c.270 BCE (*PHibeh* 28). The city of this text has 5 tribes, 6 demes (12 per tribe) and 720 phratries (12 per deme); two of the phratries performed some function, probably cultic, on each day of the year.³⁶ When the papyrus was first published, it was thought to provide a description of one of the Greek poleis in Egypt, but Stephanie West (1983) has formulated strong arguments for regarding it as part of an utopian text.

Speculation based on numbers found in contemporary Greek constitutions, constitutional reforms introducing new numerical proportions and symmetries, and utopian texts making use of such schemes, are all found in antiquity. The stoic philosopher Sphaيروس suggested that the Spartans elected 28 elders to their council because 28 is a perfect number;³⁷ Plato chose 5040 as the number of households in the utopian city of his *Laws* partly because it is divisible by all numbers up to 10 and by 12 (771c); several Greek cities introduced, at dates we cannot pin down, tribal subdivisions called 'thousands', 'hundreds', and 'fifties', which presumably at least at the time of introduction contained a corresponding number of members. Others gave their tribal subdivisions names of fractions (Kos had 'ninths'). Ehrenberg (1960, ch. I ii) considered such arrangements to be an early feature of the East Greek states, but reorganizations in the late sixth or early fifth century cannot be ruled out.³⁸

Plato's city, in the *Laws*, was to have twelve tribes, equal in size and wealth, each of which was to be responsible for the cult of one of the twelve Olympians (771d). They were to be subdivided into phratries, demes, and villages (*kômai*), which would serve as military units (746d), and would have their own patron gods, spirits, or heroes (738d). Each tribe will honour its own Olympian every

³⁵ *Genos* suggests filiation, which is not a suitable basis of recruitment for equal-sized units of c.30 men. An *enomotia* was an oath group.

³⁶ The editors suggested that the paired phratries provided prytaneis, which is possible on the Attic model (daily duty in the Tholos), but if the text is utopian the parallel with Plato's *Laws* suggests cult.

³⁷ Plut. *Lyk.* 5. 12–13; the point about perfect numbers is not printed as part of Sphaيروس F 629 SVF (I p. 142), but since it comes between the Sphaيروس quotation and Plutarch's own view it seems to belong to Sphaيروس.

³⁸ Details in N. F. Jones 1987. In the later 5th c. imitation of Athenian institutions perhaps became more common.

month,³⁹ and there are to be at least 365 festivals during the course of the year, to ensure that at least one public official is offering sacrifice every day (828 a–b).

It would not be difficult for an admirer of Plato who wanted to give his account of Attic prehistory an idealizing cast to move from this sketch to *A.P.*'s scheme. Plato had not explained in detail how his religious calendar would be worked out, and the fact that his mathematical interests committed him to a 365-day year would have created some difficulties had he tried to do so. But there was surely no problem in assuming that the length of the year had not been correctly ascertained in the days of Ion. *A.P.*'s source also had a less free hand than the author or source of *PHibeh* 28, since in reconstructing early Athenian institutions he was committed to the figure four for his tribes. But the three texts—Plato's *Laws*, *A.P.*, and *PHibeh* 28—seem to bear a strong family resemblance.

If we look for an Atthidographer who admired Plato and could have been used by *A.P.*, the name of Phanodemos immediately comes to mind. His account of early Athenian history was much fuller than that of his predecessor Androtion, whom *A.P.* certainly used; it probably appeared in the 330s, and could therefore have been used by *A.P.*, who was still working on his text in 329. Phanodemos was an associate of Plato's pupil Lykourgos; he was prepared to treat traditions in a cavalier fashion in order to produce a rational and edifying narrative; he was patriotic; there are other signs of interest in phratries and *genê* during the Lykourgan period.⁴⁰

If we reject the account given by *A.P.*, we must conclude that there was little valid historical tradition about the pre-Kleisthenic tribal system left in Athens by the fourth century. The man in the street may have known that *phylobasileis*, 'tribal kings', were still appointed to represent the four old tribes, and some may have known the tribes' names. Those interested in proverbial expressions may have known that *mê phylokrinein*, 'don't split hairs', was derived from criticism of those who continued to take an interest in membership of the old tribes after Kleisthenes' reforms;⁴¹ these would presumably have been men interested in

³⁹ Plato is probably here building on the idea that certain days of the month were sacred to particular deities: cf. Mikalson 1975.

⁴⁰ See Humphreys 1985*a*, 214–15; chs. 19–20. In Phanodemos *FGH* 325 F 5 the daughter of Hoples (tribal eponym, son of Ion) marries Theseus' father Aigeus; it is somewhat surprising that the link between Ion and Theseus is made through Hoples rather than Geleon, but the link shows an interest in relating the 'Ionian' tribes to the Synoikia, and Pl. *Krit.* 112 had conflated Geleontes and Hopletes into a single guardian class. The influence of Plato's versions of early Athenian history deserves further study. Phanodemos will have had to make some compromises between utopian theory and Attic tradition, which cannot be fully reconstructed on the basis of the *A.P.* fragments, and which may well have left some inconsistencies.

⁴¹ *A.P.* 21. 2, cf. ch. 20 n. 60; *exetazein ta genê* means 'examine descent'. It is not clear whether *A.P.* implies the interpretation suggested here. The suggestion of David 1986 (judgement *by* tribes) is philologically unacceptable; a reference to ethnicity (Strauss 1994) seems improbable. Brulé 1996 links the 4 oxen on the N side of the Parthenon frieze with the 4 old tribes, but see R. Parker 2005*a* ch. 12.

holding the office of *phylobasileus*, which probably came to be restricted de facto, if not *de jure*, to men who claimed Eupatrid status.⁴² One could perhaps have discovered even in the late fourth century, with some research, the tribal affiliation of each phratry in the old system; but no one was interested in doing so.

Before we take a more detailed look at the evidence for the pre-Kleisthenic system, such as it is, we should consider other Athenian ideas about Attic society in the archaic period.

The Twelve Towns

In the first place, the conception of Theseus' 'synoikism', preserved by the festival called *Synoikia* in which the tribal kings played a role, was associated with claims that the older Attic towns had been autonomous until Theseus unified them. By the early third century there was a list of twelve of these towns, given by Philochoros (*FGH* 328 F 94): Kekropia (Athens itself), Tetrapolis, Epakria, Dekeleia, Eleusis, Aphidnai, Thorikos, Brauron, Kytherros, Sphettos, Kephisia, and perhaps Tetrakomoi (Phaleron, Peiraios, Xypete, and Thymaitadai).⁴³

Attempts have been made to link the towns of this list with the distribution of Mycenaean remains in Attika, but they are not very persuasive. We cannot locate all the towns, and there are some obvious discrepancies; for example, Acharnai (Menidhi) and Aixone (Alike Glyphadas), both sites of tholos-tombs known in antiquity, do not appear on the list; nor does Lamptrai (Kiapha Thiti), where there was cult in classical times on the Mycenaean akropolis; it is not clear whether Perati, a substantial Mycenaean settlement on the east coast, should be linked with Brauron, Kytherros, or neither.⁴⁴

An attempt to link the Twelve Towns with Dark Age archaeological material fares no better. There may have been continuous settlement from Mycenaean times at Eleusis, Marathon, and Thorikos, as well as round the Akropolis; any

⁴² Pollux 8. 111 says that the phylobasileis were Eupatridai, Hsch. merely that they were chosen (*hairetoi*) from the tribes. The representation of the 30 Roman *curiae* in late Republican assemblies by 30 lictors (Cic. *de leg. agr.* 2. 12. 31) may provide a parallel to the continuing representation of the 4 pre-Kleisthenic tribes by phylobasileis (cf. Flament 2010; Cornell 1995, 114–18 on the early Roman tribes and curiae), as may the phratry representation at the Spartan Karneia as reported by Demetrios of Skepsis (Athen. 4. 141f., from the slightly older Sosibios *FGH* 595, c.250–150?). The tradition that Boutes was son of Teleon or Geleon (Wilamowitz 1893 II 136 n. 18) implies that the Eteoboutadai belonged to Geleontis.

⁴³ Tetrakomoi suggested, partly for palaeographic reasons, by Jacoby *FGH* III B ad loc. Wilamowitz 1893 II 143 suggested Mounichia. Some reference to the Phaleron area seems to be required (cf. N. D. Robertson 1992, 70). On Epakria see chs. 19 n. 16, 21 nn. 133, 137–9. Against Flament 2010 one must insist that the Synoikia united tribes, trittyes, and phratries, not city-based Eupatridai.

⁴⁴ Evidence for cult at prehistoric tombs in Attika is collected in Antonaccio 1995, 102–26, cf. Whitley 1988; for Lamptrai (Kiapha Thiti) see Hagel and Lauter 1987, Lohmann 2010a. On Kytherros, Traill 1986. In the Kleisthenic system the remains of Perati seem to have lain in the territory of Steiria.

Athenian asked about old towns, of any period, could have hit on these three names, for a variety of reasons.⁴⁵ Beyond this we are quickly in difficulties, due at least in part to lack of early archaeological interest in pottery without figured decoration.⁴⁶

The problem with the list is not so much what it includes as what it omits. We can understand that Brauron, with its prestigious sanctuary of Artemis, was felt to be old, though archaeological evidence does not seem to reach back beyond the ninth century. But why not Pallene, home of the league of Athena Pallenis? or Prasiai, from which the sacred embassies left to visit Delos? Why Kephisia rather than Phlya (more prestigious) or Acharnai (bigger)?⁴⁷ And so forth.

Dekeleia was the home of a phratry, and there may have been a phratry Epakreis (ch. 19 n. 16), but there were phratries based in Paiania, Myrrhinous, and Alopeke, none of which appear in the list.

Perhaps we should take the association with Theseus more seriously. Although the names do not appear in geographical sequence, the list could be divided equally between the three kingdoms unified by Theseus: Dekeleia, Epakria, Aphidna, and Tetrapolis north of Pentelikon; Brauron, Kytherros, Thorikos, and Sphettos south of Pentelikon and east of Hymettos; Kekropia, Kephisia, Tetrakomoi (?) and Eleusis west of Hymettos. Sources on Pandion's sons say that Lykos took the Diakria (northern Attika) as his share, Pallas the coast, and Aigeus Athens and its plain.⁴⁸ The coincidence of these descriptions with the list of Twelve Towns (which may have existed in more than one version) is not perfect, but in the case of the northern kingdom it is striking.

The story of Pandion's sons seems to be at home in the late seventh or early sixth century, when Athens was at war with Megara over Salamis and Athenian politics was dominated by rivalry between three factions, called the men of the plain, the men of the coast, and the men from beyond the hills.⁴⁹

⁴⁵ N. D. Robertson's attempt to identify the Twelve Towns with 12 phratries (1992) runs into serious difficulties. It is more likely that the number 12 came from the pre-Kleisthenic trittyes.

⁴⁶ Cf. ch. 10 at nn. 36–50, on subgeometric; D'Onofrio 1995; Mersch 1996; Lemos 2002 for 'Dark Age' data; Scheidel 2003 on the problems of using reported pottery finds as evidence for demography.

⁴⁷ There was a fairly prominent sanctuary of Kephisos at Phaleron (*IG* ii² 4547–8; A. Williams 2015), and it is just conceivable that Kephisia here stands for Phaleron, in view of the absence of other towns in the Attic plain. This type of reference, however, is characteristic of antiquarian poetry (Euphorion, Kallimachos), and it is usually assumed that the poets depend on Philochoros rather than vice versa.

⁴⁸ *FGH* 328 F 107. Schol. Ar. *Lys.* 58 says that Aigeus got the area round the city, as far as the Pythion; the westernmost Pythion known to us is that of the Kephallidai at Dafni, which would leave Eleusis in Megarian territory, a problematic view. N. D. Robertson 1992, 68–70, has a different distribution. For possible relations with Kleisthenic trittyes see ch. 21 n. 3. On Pandion and Megara see also Schachter 1998, 27–8.

⁴⁹ *FGH* 328 F 107–8. Hyperakrioi in Hdt. 1. 59. 3; Diakrioi in *A.P.* 13. 4 and Plut. *Sol.* 13. 2, 29. 1; Epakrioi in Plut. *Mor.* 763d. See *LGPn* s.v. for use of the name Pedieus in the 6th–5th c.

There is one major problem: the dialogue *Hipparchos* attributed to Plato and probably written in the early fourth century, which seems quite well informed, says that Peisistratos came from Brauron, which on my hypothesis belongs to the coast rather than the area ‘beyond the hills’.⁵⁰ However, epigraphic evidence now suggests very strongly that the term Diakria points to the northern area and cannot be interpreted as meaning ‘beyond Hymettos’.⁵¹ We might in any case suppose that Peisistratos’ link with the ‘men beyond the hills’ was forged after he had quarrelled with Megakles, leader of the coastal faction.

I suggest, then, that the list of the Twelve Towns was developed in connection with the story of Pandion’s sons, the division of Attika, and its reunification by Theseus. It was an appropriate story for Peisistratos, champion of the marginal areas of the north, and at least some of the towns may have been selected because he had connections or support in them, although others (Eleusis, Thorikos) figured because they were too obvious to be omitted. In any case, the list is not a reliable guide to earlier history.

Calendars

Our only first-hand evidence for the pre-Kleisthenic tribes and trittyes comes from two fragments of a sacrificial calendar inscribed during the codification of law undertaken in Athens during the period 410–399 (*SEG* 52. 48 + 57. 64).⁵² The principal fragment at least came from a section of the text devoted to festivals in which offerings were determined by a biennial cycle, and thus does not provide a complete picture of the state’s ritual activity for the period it covers. It shows, however, that the four tribal kings (phylobasileis), the tribe Geleontis, and the trittys Leukotainiai (White Ribbons), still had ritual functions at the end of the fifth century.

The codifying commission cited the sources from which it took its information: the sacrifices ‘listed by month’, those ‘not on a fixed day’, those ‘of the phylobasileis’, and finally ‘the *stélai*’. This suggests that it had access to one or more earlier sacrificial calendars, perhaps supplemented by a comprehensive list

⁵⁰ *Hipp.* 228 b ; cf. Plut. *Sol.* 10. 3. On the date of *Hipp.* see Souilhé 1930*a*, who thinks Thuc. contradicts *Hipp.* on the death of Hipparchos; the relationship may rather be the other way round, but a date close to the publication of Thuc. seems quite possible.

⁵¹ Chs. 19 n. 16, 21 n. 133 on Epakria; Traill 1986. An association of the Mesogeia with the coastal kingdom is indicated by the connections of Pallas, and his sons the Pallantidai, with Pallene, Sphettos (base of the Pallantidai in Plut. *Thes.* 3. 7. 13, etc.), Hagnous, and Gargettos. Theseus defeats the Pallantidai in the area of Pallene, where Peisistratos defeated his opponents, who included Megakles and the men of the coast.

⁵² Lambert 2002*b*. A priest of Zeus Geleon (and of Ares Enyalios and Enyo) from Hagnous (*LGPN* s.v. Maximos) in *IG* ii² 1072, 116/7 CE. On the view of Papazarkadas 2007*b* that the Epakreis of *IG* ii² 2490 were a pre-Kleisthenic trittys see ch. 21 n. 138.

of occasional rituals (performed, for example, to avert pollution or portents). Since the text is very fragmentary, there may have been additional sources. On present evidence, however, Athens does not seem to have made a systematic practice of recording the ritual duties and perquisites of magistrates.⁵³ It is possible, therefore, that the *phylobasileis*' list was drawn up at the time of Kleisthenes' reforms, or at some subsequent date when it was felt necessary to clarify the division of ritual responsibilities between old and new tribes.⁵⁴

The *phylobasileis* were concerned with the celebration of the *Synoikia* on *Hekatombaion* 15–16, and with a sacrifice to *Erechtheus*, on (?) *Thargelion* 5.⁵⁵ This was a period of transition from one year to another, *Thargelion* and *Skirophorion* being the last two months of the old year and *Hekatombaion* the first of the new year.

Written calendars imposed a linear timeframe reckoned in lunar months on ritual rhythms whose practical logic was orientated to social contexts, agricultural work, and star time (see Bourdieu 1980, II. 3). Ritual gave form to these rhythms, built on their self evidence, heightened their naturalness, re-presented them as matters of concern. The relation of ritual and practical activities is metonymic rather than metaphoric; parallel and dialogic, not causal.⁵⁶

⁵³ I.e. lists of obligations and perquisites are organized by month and deity, not by office; this is also the case in the demes. See R. Parker 1996, ch. 4.

⁵⁴ Cf. the stele recording the responsibilities of the *Areiopagos* in homicide cases (Lys. 1. 30), perhaps set up in 461 (Humphreys 1991, n. 54), and *IG* i³ 7 (ch. 20 n. 78).

⁵⁵ In *SEG* 52. 48 A fr. I col. III the sacrifice to *Erechtheus* on the 5th of an unknown month is followed by a sacrifice to *Athena* 'from the sacrifices without a fixed date' on the 6th; below a line on the stone, in a different hand (J. H. Oliver 1935), we have provisions for the *Pythais*. This embassy to consult the Delphic oracle (prompted by the omen of lightning 'over the *Harma*') could take place at any time during a three-month period; in 355, it left after *Thargelion* 7 and had not returned by the date at which the deme *Leukonoion* admitted new members (Is. 7. 15, 27–8), which may have been as late as *Metageitnion* 12 (ch. 22 n. 109; N. D. Robertson 1992, 111–12; A. Chankowski 2014. The speaker of Is. 7 was also appointed *gymnasiarch* for 355/4, § 36, but need not have been present in person when nominated). Boethius 1918 dates the *Pythais* to *Thargelion*, but we can really only say that on general grounds the year-transition period *Thargelion*–*Skirophorion*–*Hekatombaion* seems likely. The *ephors* in *Sparta* watched towards the end of the civil year (Plut. *Ages.* 11. 2–5); the *Tetrapolis* probably sacrificed to *Apollo Apotropaios* on *Hekatombaion* [7], which might suggest that their own signwatchers (n. 61; ch. 20 n. 49) ended (or held) their vigil on that date. Dates in Athens and the *Tetrapolis* need not have been exactly harmonized, but the rituals should belong to approximately the same time of year. However, the *Pythais* provisions extend over two columns, so their relation to the dates above them is unclear.

⁵⁶ I.e. the coincidence of rituals with turning points in the agricultural, stellar, and civil years is part of the way time is experienced and thought about. The coincidences of star movements, seasons, work rhythms, etc., confer naturalness on temporal categories, and innovations (in ritual or political institutions) seem 'right' when they fit, extend, and enrich the system of coincidences (cf. Baines 2013, 212–13 on Egypt). Although we may occasionally be able to date innovations, we should not assume that any one level of experience (stellar, agricultural, civic) has priority over others either in historical or in cultural terms. Cf. Humphreys 2004, ch. 6. N. D. Robertson 2010 has much interesting material on calendars but privileges agricultural dates. Rather than stressing that there is no 'natural' New Year (R. Parker

Starting from social categories and practical logic, we can deconstruct the year-end rituals of Athens into three parallel sequences, only loosely articulated with each other. One belongs to the whole community; one to the women who tend Athena on the Akropolis; the third to the male office-holders who represent the city.

If the sacrifice to Erechtheus on *SEG* 52. 48 is correctly dated to Thargelion 5, it starts the whole process. The representatives of the community, the phylobasileis, are involved in honouring the mythical king of the Akropolis and founder of the state.⁵⁷ On Thargelion 6 the eponymous archon, Erechtheus' living representative, purified the community by driving out two human scapegoats, 'one for the men and one for the women'.⁵⁸ On the same date there was a sacrifice to Athena; the watchers⁵⁹ took up station, perhaps on the 7th, in the shrine of Pythian Apollo. It was their duty to watch the sky over the saddle of Mt Parnes (the Harma) for three days and nights in each of three months; if they saw lightning, an embassy (the Pythais) was sent to Delphi. On the following day Apollo was honoured by tribal choruses singing in competition.⁶⁰

The meaning of these provisions is clarified by comparison with Sparta, where the tribal headmen may have got their name, *ephoroi*, from their duty to watch the sky for shooting stars once every eight years (Engelmann and Merkelbach 1971). If a star was seen, the two kings were suspended from office while an embassy was sent to Olympia or Delphi to ask how they had offended the gods, and what action should be taken.⁶¹ Driving out the *pharmakoi* was not enough. At the end of each period of office (or, where office was lifelong, each eight-year

2005*a*, 194–5)—the variation in Greek civic New Year dates would already show this—we need to think of the civic New Year, when introduced (in association with annual magistracies?), as gradually but never entirely superseding in importance other ritually marked annual cycles (cf. Sourvinou-Inwood 2011, 148–9). For comparative material see Proulx 2011, 164; Baines 2013, 212–13.

⁵⁷ The phylobasileis apparently get perquisites from the sacrifice to Erechtheus, although they do not pay for the victim. *IG* i³ 232 A *may* have references to Erechtheus, phylobasileis, and Dipolieia, but all are very uncertain.

⁵⁸ Burkert 1985, 82–4. His analysis of the year-end rituals (V 2. 2) starts only with the Arrhephoria.

⁵⁹ R. Parker 2005*a*, 85–6. We do not know who they were, and I hesitate to claim that in the classical period this was one of the responsibilities of the phylobasileis, although the parallel with the Spartan ephors supports the idea. In the Tetrapolis watching for omens was a *genos* responsibility (ch. 20 n. 49). N. D. Robertson 2010, much concerned with lightning, does not discuss these watchers.

⁶⁰ In the classical period tribes were paired for this competition, which might suggest that it existed in pre-Kleisthenic times: a change from 4 to 5 choirs rather than 4 to 10. However, since the Thargelia probably only lasted 2 days (R. Parker 2005*a*, 481), the pairing might be due to time constraints—or even conceivably shortage of auletai (tribes were paired for dithyrambic contests also at Eretria, Knoepfler 2010*a*).

⁶¹ Plut. *Agis* 11. 2–5; the solar and lunar calendars coincided every 8 years. The mention of Olympia alongside Delphi as a source of divine guidance suggests a date in the 8th c., when Delphi as the most authoritative oracle in Greece had not yet overtaken Olympia, sanctuary of Zeus, the source of signs from the sky. Etymology, Engelmann and Merkelbach 1971 (*LSJ* s.v. *ouros* B); the term is more usually interpreted as 'overseer' (Richer 1998 accepts that etymology but has a new interpretation of the 'star-watch').

solar cycle) the relation between the community and its office-holders had to be reaffirmed. Zeus judged (cf. Hesiod); but appeal against condemnation could be made to the oracle.

While the watchers took up station, Athenians on Thargelion 7 celebrated the Thargelia in their phratries, in honour of Apollo. They also honoured Demeter Chloe, goddess of the green corn shoots, and ate a vegetable stew made of green corn ears and other plants. They would remain in their villages, driving off birds and animals from the corn as the scapegoats had been driven off from the city,⁶² until the grain harvest was in. The Kronia, a rural festival of reversal and rejoicing, dated to Hekatombaion 12 in the sacrificial calendar, marked the end of the harvest;⁶³ after it farmers would converge on the city to celebrate the Synoikia.

Meanwhile, other rituals were carried out by women and magistrates. On the Akropolis, Athena's rites of transition began at the end of Thargelion with the Plynteria on the 25th, when her clothes and ornaments were washed,⁶⁴ and the Kallynteria at about the same time, when the temple was cleaned. The day of the Plynteria was sinister (Plutarch *Alkibiades* 34. 1). A new (or washed) robe was offered to the goddess, with clean white fleeces, on Thargelion 29, with sacrifices.⁶⁵ Shortly afterwards, perhaps on Skirophorion 2 (Lambert 2002*b*), there was a further sacrifice to Athena, accompanied by a piglet to Kourotophos (*SEG* 52. 48 A fr. 3 col. I 24–7); this may coincide with the Arrhephoria, in which two (or four) girls who had served Athena for a year⁶⁶ took something

Divination at Olympia seems to have been the responsibility of seers, the Iamidai and Klytiadai, who interpreted the way the sacrifice burned: Parke 1967; ch. 12 at n. 73.

⁶² Apollo's bow, as well as his association with purification, makes him an appropriate deity for this festival. Foxhall 1995*b*, Thargelion date for the fertilization of fig trees; Calame 1990, 308–10 links the scapegoat ritual to the transition from the dried-fig diet of winter to the fresh foods of spring. On the intense work of the harvest period see Petropoulos 1994.

⁶³ Kronos is armed with a sickle (Parke 1977, 29–30), but season, myth (castration of Ouranos), and ritual seem to have taken diverging paths. See also N. D. Robertson 2010.

⁶⁴ On whether this was a procession and ritual bath of the statue itself, see Burkert 1970*a*, Sourvinou-Inwood 2011.

⁶⁵ *LSS* 10. 5–15; evidently the cleaning process was finished by this time, so it is not problematic that assemblies could be held on this date (Mikalson 1975). This may be the robe put on the statue by the Praxiergidai (*IG* i³ 7, ch. 20 n. 78), who were responsible for the Plynteria (note also the reference to a fleece, *kôidion*, in line 17). The Panathenaia seem to duplicate this ritual. See Sourvinou-Inwood 2011.

⁶⁶ Paus. 1. 27. 3 says there were 2; the lexicographers (R. Parker 2005*a*, 220–3), starting with Harp., say 4, of whom 2 were responsible for beginning the weaving of Athena's *peplos*. They were of good family, and although they were elected the archon basileus had some say in their appointment. If the number 4 indeed played some role in the selection process, they might have been chosen from the pre-Kleisthenic tribes, at least in the 6th c. (Brulé 1987, 207). It was suggested on the basis of sacrifices at Erchia on Skirophorion 3 to Kourotophos, Athena Polias, Aglauros, Zeus Polieus, and Poseidon, that this was the day of the Arrhephoria; but Erchia like Thorikos may have celebrated the Plynteria in Skirophorion (N. D. Robertson 1983*a*; Sourvinou-Inwood 2011, 138–40). The latter argues (29, 36) that the arrhephoroi were associated with Pandrosos rather than Aglauros. See also Robertson 2005.

secret down from the Akropolis in a basket, at night, and brought back something else, equally secret. This marked the end of their period of service.⁶⁷

Women were still prominent in the Skirophoria or Skira, celebrated on Skirophorion 12. The priestess of Athena Polias and priest of Poseidon Erechtheus (both appointed from the *genos* Eteoboutadai) left the Akropolis and processed to Skiron, a place which seems to have marked a ritual boundary between Athens and Eleusis. They sacrificed there to Athena, Poseidon, Demeter, and Kore.⁶⁸ One of the three ritual ploughing ceremonies in Attika took place at Skiron, and threshed grain may have been carried back to the Akropolis in the Skira (N. D. Robertson 1983*a*; 1985, 234). There was also, probably, a relay race of adolescent boys representing their tribes, carrying vine branches with green grapes, from a sanctuary of Dionysos to Skiron; the winner drank a celebratory drink made of wine, flour, cheese, oil, and honey (the *Pentaploa*), and the teams returned to Athens in a joyful *kómos*, presumably accompanying the priest and priestess.⁶⁹ While the gods (represented by their priests) were absent from the city, women celebrated a secret ritual in which they took on the civic roles normally reserved for men. Like the Thesmophoria, the Skira belongs to a complex of rituals and myths in which a break in time is marked by *gynaiokratia*, rule by women, and a reversal of the normal state of affairs.⁷⁰

Two days later an ox was sacrificed to Zeus Polieus in a ritual (the Dipoleicia) in which the basileus, phylobasileis, and the *genê* of heralds attached to the Akropolis

⁶⁷ On the ritual see Burkert 1966; N. D. Robertson 1983*a*; Brulé 1987; Sourvinou-Inwood 2011, 42–6.

⁶⁸ Jacoby, *ad FGH* 328 F 14–16. By Pausanias' day the sacrifice may have been transferred to the sanctuary of the Phytalidai in Lakiadai, near the Sacred Way from Athens to Eleusis (Paus. 1. 37. 1–2; ch. 20 n. 69). Cf. Sourvinou-Inwood 2011, 172–4. Note that the suggested boundary-horos between Athens and Eleusis (*PAAH* 1937, 37, rediscovered *AD* 53 B 1, 77) is only an uninscribed stele base (ch. 22 n. 52).

⁶⁹ Jacoby, *loc. cit.*; the relation of Skira and Oskophoria is still controversial (Calame 1990, 144–7 attributes the race to the Oskophoria, without discussing Jacoby's objections; see ch. 19 n. 53). Several elements are common to the two festivals: vine branches, *óschoi* or *oschoi* (associated by lexicographers and perhaps folk etymology with *oschea*, testicles) were carried in procession at the Oskophoria by two adolescent boys dressed as girls (the runners at the Skira may have worn white masks, Ellinger 1978); the *pentaploa* drunk at the Skira resembles the primitive diet of the Pyanopsia, a feast associated with the incorporation of new members into phratries. It may be just worth suggesting that the race at the Skira was introduced or remodelled in response to Kleisthenes' reforms, making use of pre-existing associations between the Skira and the cult of Athena Skiras at Phaleron, to create a doublet of the Oskophoria–Pyanopsia sequence (before Kimon, peculiar to the *genos* Salaminioi? see below, chs. 19–20) situated not at the beginning of the phratry year (Apatouria) but at the beginning of the civil year, when youths of 18 were admitted to demes. N. D. Robertson 1985 postulates sacrifices to Athena and Erechtheus when the Skira procession returns to the city. On ritual ploughings see also N. D. Robertson 1996*b*; R. Parker 2005*a*, 198.

⁷⁰ Burkert 1970*a*; Aristophanes in *Ekkli.* builds on ritual, as in many other plays. In Peiraioi women celebrated the Skira in the Thesmophorion, *IG* ii² 1177. Brumfield 1981 suggests that at the Skira threshed grain is deposited in lime-lined pits, but see Foxhall 1995*b*. The restoration of the Skira in *IG* i³ 250. 6 (Paiania) is uncertain (Humphreys 2004, 154 n. 60). Foxhall, *ibid.*, links the plaster to threshing floors (but see R. Parker 2005*a*, 173–7).

played leading roles. The ox selected itself from a set of victims led round the altar (contributed by the four Ionian tribes?),⁷¹ by eating food from the altar. The role of sacrificer was divided between a number of officiants each of whom subsequently refused to take responsibility for the slaughter. The blame was laid on the sacrificial knife, which was solemnly condemned by the *basileus* and *phylobasileis*, sitting as a homicide court in the *Prytaneion*, and was thrown into the sea.

This ritual and the associated myth is, at one level, part of a complex of Greek speculations about the *raison d'être* and history of sacrifice, especially the sacrifice of man's helper the plough ox (Durand 1986). It also, however, stresses the collective character of the act of sacrifice; and in the trial scene, which is unlikely to be earlier than the seventh century (Humphreys 1991), it asserts the authority of the *basileus* and *phylobasileis* over the priestly personnel of the *Akropolis* cults.⁷² Whereas in the *Skira* it is the priest of *Poseidon* and the priestess of *Athena* who represent order in the city, in the *Dipolieia* judgement is given by city magistrates; and sacrifice is represented not as a transaction between community and deity mediated by priests who receive perquisites in recompense for their expertise, but as an unmediated encounter between a victim which selects itself and the deity. This occlusion of both the economic and the political implications of priesthood is noteworthy. It points to a contradiction in the practice of sacrifice which is also present in the myths about the sacrifice of the first plough ox. If sacrifice is to benefit the community, the community should provide the victims. This happened in Mycenaean *Pylos*, at least in some cases (PY Cn 3), at the Koan festival of *Zeus Polieus* (n. 71), and perhaps at the *Dipolieia*. But taxation for cult purposes was a minor element in Greek religion in the archaic and classical periods, overshadowed in most festivals by the competitive provision of victims by the elite.⁷³ The smallholder was not willing to give up his ox or even one of a pair of oxen (Durand, *op. cit.*). To refuse to do so, however, left the way open for the elite to install themselves in a privileged position as mediators between gods and men. The ritual and myth of the *Dipolieia* grappled with this contradiction.⁷⁴

⁷¹ Cf. the festival of *Zeus Polieus* and *Hestia* on *Kos* (n. 9), which has often been compared to the *Dipolieia*: here subdivisions of the citizen body provide oxen from which the victims are chosen by the priest and *hieropoioi*, who presumably base their judgement on crowd reactions. Cf. ch. 20 n. 28.

⁷² That the first sacrifice is dated in the reign of *Erechtheus*, in accordance with mythical chronology, lends support to the prominence of the *basileus*.

⁷³ Until the state took over. *Solon*, by specifying price and (?) number of victims in his calendar, begins the process by which acts of generosity are transformed into dues required by the state on behalf of the gods; the state probably took on a larger role in providing victims under *Peisistratos* (cf. also ch. 20 on parasites).

⁷⁴ Hostility to sacrifice is expressed much more clearly in the Zoroastrian *Gathas* (e.g. *Yasnas* 46, 51, M. L. West 2010 §§ 8. 13, 32. 14, 44. 20), and may also be present in *Isaiah* 1. 11–23. *Zachner* 1961, 84–8 suggests that it is competitive sacrifice in which large numbers of victims are killed, in order to feed a crowd, to which the Zoroastrian text objects.

Zeus was honoured again late in Skirophorion as Soter, with Athena, in Piraeus and in the city on the last day of the year, but these sacrifices may have been introduced only after the Persian wars (Mikalson 1975). The Hekatombaia, a festival of Apollo probably celebrated on Hekatombaion 7, was prominent in several Ionian cities but not at Athens, where it was perhaps replaced as New Year festival by the Synoikia of Hekatombaion 16.⁷⁵ At this festival the members of the Ionian tribes and phratries, who as we have seen probably celebrated the Kronia in their villages on Hekatombaion 12, were summoned to the city by the proclamation *deur' ite pantes leôî*, 'Come hither, all ye people'. In the pre-Kleisthenic period they perhaps attended an assembly at which new officials were elected and took office.⁷⁶ The festival supposedly commemorated Theseus' synoikism of the state.⁷⁷ According to the list of the phylobasileis (*SEG* 52. 48 A col. II), an elderly sheep was sacrificed on Hekatombaion 15 for⁷⁸ the trittys

⁷⁵ So also N. D. Robertson 1992. It is not clear whether the month-name Hekatombaion was derived from a large sacrifice offered by each community to its presiding deity at the summer solstice, or from a festival associated specifically with Apollo. The Marathon Tetrapolis sacrificed to Apollo on Hekatombaion [7] (*IG* ii² 1358, *LS* 20 A 26, *SEG* 50. 168), and the date Hekatombaion 8 for Theseus' return to Athens in Plut. *Thes.* 12. 2 might suggest a festival around this date (cf. N. D. Robertson 1992). E. Simon 1983 takes Athens' Hekatombaia to be an early form of the Panathenaia. Robertson 1980, 1992, interprets the Karneia, celebrated by Dorian cities in honour of Apollo, as a summer solstice festival, at which leadership is renewed (see Hölkeskamp 1993 on Kyrene; Petterson 1992 is mere speculation), but Plut. *Nik.* 28 and Thuc. 5. 54. 2, 75. 2–76. 1 imply a later date for the Spartan Karneia.

⁷⁶ Whether election and installation could take place at a single meeting depends on the nature of the *dokimasia* procedure in the pre-Kleisthenic period. I tend to think that the Areiopagos scrutinized candidates before election. N. D. Robertson 1992 suggests that *leôî* implies an assembly in arms, abolished by Peisistratos (who would however have allowed a representative show of armed citizens in the Panathenaic procession); we might conceivably link this to the assembly at the Lykeion of *IG* i³ 105.

⁷⁷ Sacrifices to Zeus Phratrios and Athena Phratría (not apparently, Theseus) should guarantee the antiquity of the festival; it may have become associated with Theseus only in the 6th c., under the influence of Peisistratos. Unification of Attika, especially the north, with which Theseus had well-established links, and continuation of regular elections (Thuc. 6. 54. 6), both figured in his programme; and the restructuring of the Panathenaia in 566 favoured a historicization of the neighbouring Synoikia. Theseus was credited with creation of a single council and *prytaneion*, i.e. the introduction of collegiate, elective office (*pace* Wade-Gery 1958 [1931] 91–7, a prytaneion is used by magistrates, not councillors; the myth of Theseus' abdication, noted *ibid.* 97 n. 2, should in my view be associated with the end of the magistrates' term of office). Some additional ritualization of elections under the Peisistratid tyranny is likely enough. However, the attribution to Theseus of the creation of the Eupatrid order can hardly be Peisistratid (the tyrants did not wish to undo Solon's reforms); it should be post-Kleisthenic, probably introduced by an Atthidographer in whose mind Synoikia, phylobasileis, and Eupatridhood were closely connected (above, n. 29). On the date of vase representations of Theseus see Shapiro 1989; the François vase proves that there was already interest *c.* 560.

⁷⁸ The dative seems to imply that the meat was distributed to the body in question (the smaller victim being assigned to a trittys not a tribe?). We do not know how the meat was distributed in post-Kleisthenic times (the prices in the calendar do not imply sale). On the meaning of *leipognómôn* see Rosivach 1994, 148–53. W. S. Ferguson 1936 suggested that the sacrifice on Hekatombaion 15 was added when the trittyes were created, but seems to consider this a pre-Solonian development.

Leukotainioi of the tribe G(e)leontis;⁷⁹ the phylobasileis got a share of the chine and the herald got meat from the shoulder, feet, and head. On Hekatombaion 16 two adult cattle were sacrificed to Zeus Phratrios and Athena Phratría and distributed to the tribe G(e)leontis. The phylobasileis got a leg and the herald's share came from the ribs, feet, and head. These mentions of a herald indicate that the festival was preceded by formal announcements, which may have been made in the Attic countryside (at phratry centres?) as well as in the city.⁸⁰

So far, so good. Disorder has been followed by the restoration of order on three levels: that of the citizen body divided into phratries, that of the tendance of Athena by women on the Akropolis, and that of the official representatives of the community. There is, however, yet another New Year festival to come: the Panathenaia (c. Hekatombaion 23–30).⁸¹

In the classical period 'lesser' Panathenaia were celebrated every year, while 'great' Panathenaia had been celebrated every fourth year since 566. The great Panathenaia included musical, athletic, and equestrian contests open to all comers, and was perhaps introduced to rival new panhellenic contests organized at Delphi, Nemea, and the Isthmos in the 580s and 570s.⁸²

It is not clear whether 'lesser' Panathenaia had existed before 566. As we have seen, Athena seems to have received new clothes after the Plynteria, so the offering of a *peplos* at the Panathenaia does not prove antiquity.⁸³ The festival name Pan-athenaia seems to combine two sources; it is formally equivalent to Pan-dia, the name of a festival of Zeus (held just after the City Dionysia in Elaphebolion), and thus denotes a festival of the deity attended by everyone

⁷⁹ On the form Gleontis see Threatte 1980, 398.

⁸⁰ Heralds often got tongues; feet were also important for their work. There had presumably earlier been more victims, shared by all the tribes, perhaps appearing in a standard ranking order which began with the tribe Geleontes, trittys Leukotainioi and (?) phratry G(e)leontis.

⁸¹ Mikalson 1975. The duration of the festival probably increased over the centuries (cf. N. D. Robertson 1985, 266).

⁸² Competitions at community religious festivals had a long history (ch. 19 n. 64). There were distinctions between 'private' (not only funerary) games, Panhellenic games at amphiktyonic centres, and, finally, the Panathenaia which combined aristocratic games and panhellenic ambitions with a ritual representation of the whole community in procession (Parke 1977, Connor 1993; Warner 1953 ch. 1 on American Memorial Day processions). Traditional dates of Panhellenic festivals perhaps too high, Polignac 2009, 439–40.

⁸³ On the *peplos* see now Sourvinou-Inwood 2011, 307–11. It is arguable that the ritual and mythical elements of the Panathenaia are either taken over from other Athenian festivals celebrated at the same time of year (Plynteria–Arrhēphoria–Synoikia) or imported from abroad (Lemnos, N. D. Robertson 1985, and the Panhellenic games). Only the race for *apobatai* remains problematic. In any case, Athens had a sequence of festivals honouring Athena at the turn of the year before 566. It is quite possible that the civic aspects of the Panathenaia became more prominent and those of the Synoikia less prominent after Kleisthenes' reforms.

(cf. *panēgyris*), yet also suggests a relation with the Synoikia as a gathering of all Athenians, *Athēnaioi*.⁸⁴

Conclusive evidence for the history of the festival cannot be derived from the events and participants included in the competitions and procession, since these evidently changed over time. There may have been an early competition for or display by *apobatai*, an Athenian speciality in which an armed man leapt off a chariot in motion, ran beside it, and remounted (cf. R. Parker 2005*a*, 263; Schultz 2007; Neils and Schultz 2012; Sourvinou-Inwood 2011, 169, 270–80), but it is far from clear that this practice had continued unbroken from the days when chariots were used in war (see Van Wees 2004, 59). There were competitions by Athenian tribal teams in ‘manliness’ (*euandria*),⁸⁵ perhaps in performing the Pyrrhic dance (in armour),⁸⁶ and in rowing. The Pyrrhic and *euandria* teams received an ox to sacrifice worth 100 drachmas; victors in the ship race received three oxen and a further 200 drachmas for feasting. It is possible that the Pyrrhic and *euandria* contests went back to the foundation of the Great Panathenaia in 566, or at least to the time of the tyrants, although this would imply a change from pre-Kleisthenic to Kleisthenic teams in 506, but there is no strong reason to date them earlier.

The festival also included a tribal torch race from the Academy to the Akropolis; N. D. Robertson has persuasively argued that it was modelled on a Lemnian festival in which new fire was brought to the island, whose principal deity was Hephaistos, and that the torch race in honour of Prometheus was modelled on that of the Panathenaia. The starting point of the race was (in classical times) an altar of Eros dedicated by Charmos, an associate of the tyrants who was about midway in age between Peisistratos and Hippias.⁸⁷

⁸⁴ Cf. above at nn. 7–8 on the Panionion. In the late 5th c. demes contributed to the Pandia (*IG* i³ 258, c.420), but by the early 4th c. the meaning of the name was forgotten (the festival was eclipsed by the adjacent City Dionysia) and the festival was in some sense adopted by the tribe Pandionis (ch. 21 n. 91). On the Pandia model Panathenaia would be a festival of Athena celebrated by everyone, on the Panionion model a festival of all Athenians; the name may have been understood as suggesting both meanings, and the name may have been new even if the festival was not.

⁸⁵ On tribal competition in festivals in general see N. F. Jones 1987, App. II i. The *euandria* team seems to have been made up of beautiful youths (Crowther 1985; Neils 2007; the prize in *IG* ii² 2311. 75 = *SEG* 53. 192 suggests 50); the event put a competitive, public, but also romantic-homosexual spin on the adolescent male chorus (cf. perhaps Winkler 1990*b*, 31). See Rutherford 2013 on *theoriai*; Herzfeld 2004 on re-institutionalization. On Boegehold 1996 see Appendix 3.

⁸⁶ It has been argued from the absence of reference to a tribe in *IG* ii² 2311. 72–4 that the pyrrhic competition was not tribal (see Ceccarelli 1998, 2004); but there are other errors in ll. 76 and perhaps 80 (for line 80 see Rosivach 1994, 156, but he is wrong on line 76) and the cutter may have wanted to save space.

⁸⁷ N. D. Robertson 1985, 259–62; 1992. Charmos’ age is fixed by the traditions that identify him either as Peisistratos’ *erōmenos* or Hippias’ *erastēs*, regardless of the truth of the rumours, and *pace* Robertson the phrase *poikiloméchanos Erós* in this context should refer to the love affairs of the gymnasium. The altar may well have been set up when the race was introduced, or shortly afterwards. Parke 1977

TRIBES

Tribal organization probably also determined the number of the eight *hieropoioi* (?) and eight *tamiai*, attested from the period of the early quadrennial festivals, and it has been suggested that the numbers of victims represented on the Parthenon frieze refer to the pre-Kleisthenic tribes.⁸⁸ It must be stressed, however, that the festival complex (both ritual and competitions) will have developed over time, and that it is impossible to determine the initial balance between Athenian and Panhellenic elements.⁸⁹ In the fifth century the dramatic festivals may have started to eclipse the Panathenaia as an attraction for non-Athenian visitors, and this may have encouraged a shift towards the local end of the spectrum in perceptions of the Panathenaia, which also became a vehicle for representations of Athens' relation to her 'colonies' around the Aegean.

It is not clear whether there were any tribal competitions at the City Dionysia in the pre-Kleisthenic period. The introduction of dithyrambic choral competitions for men, which were tribal in the classical period, is dated 509/8 by the *Marmor Parium*, but these were not necessarily the first choral performances at the festival.⁹⁰

denies that the race was tribal, but see Neils 1994 (who does not consider the possibility that it was pre-Kleisthenic) and ch. 21 nn. 58–9. Runners' headbands indicated tribal affiliation. The distance was approximately 2500m (Kyle 1992), probably run in short 50-m. sprints by a team of 50 (Rausa 1998).

⁸⁸ Eight (?) hieropoioi *IG i³ 507–8*; 8 tamiai *IG i³ 510* (c.550). 4 sheep, 4 cattle, and possibly 4 peplos weavers on the Parthenon frieze n. 41 above; in the 5th c. any tribal element in the festival would be Kleisthenic, but if the victims came in multiples of 10 the sculptor might have chosen 4 as a more manageable number carrying similar associations. See E. Simon 1983, ch. 4, esp. 65. There are also 4 flautists and 4 kithara players, but the musical competitions do not seem to have been tribal in the classical period (*IG ii² 2311*, cf. Shapiro 1992). On arrhephoroi see ch. 9 n. 25. See also Van Wees 2013a on kolakretai.

⁸⁹ It is also impossible to reconstruct the order of events (cf. Tracy 1991). *IG ii² 2311* is organized according to the type of prize awarded, not the order in which competitions took place. Connor 1987 n. 52 suggests a procession with first-fruit offerings of grain at pre-Solonian celebrations of the Panathenaia, but though the idea of relating Solon's census classes to ritual is attractive, such evidence as there is suggests that grain used in Akropolis festivals came from the area ploughed by the Bouzyges (ch. 20 nn. 32, 88); and the Eleusinian first fruits were offered at the end of the summer, when seedcorn had to be separated from the rest of the harvest, rather than immediately after threshing. The temporal rhythms of gifts to the gods are not necessarily those of the agricultural year (cf. Papazarkadas 2011, 167). Grain for meals in the prytaneion was in early times perhaps contributed by magistrates (cf. Sparta; later it would be purchased) and the etymology deriving prytaneion from *pyrou-tameion*, grainstore (S. G. Miller 1978, App. A 241, 258–9, 265–6) is of no historical value. N. D. Robertson's suggestion (1992) that Peisistratos introduced an ephebic oath taken in the sanctuary of Aglauros on the eve of the procession (by 16-year-olds? see ch. 19 n. 37) is not impossible, but does not rest on much evidence.

⁹⁰ See Pickard-Cambridge 1962. On Connor's suggestion (1989, 1993) that the City Dionysia were created after the end of the tyranny see Sourvinou-Inwood 1994a; Rausch 1998; Burnett 2003. We do not know how tragic choruses were selected in early times (it may possibly be significant that Kleisthenes of Sikyon reorganized both tribes and 'tragic choruses', Hdt. 5. 67–8). On the role of tribes in cult in other archaic cities see Sourvinou-Inwood 1990b, 312–13; possible tribal choirs of girls at Sparta, Calame 1977, s.v. *Dymainai*. On the Thargelia see n. 60; on the 'bears' of Brauron ch. 9 n. 22.

Although the details are controversial, it is clear that tribes played ritual roles in archaic Athens, and possible that they became more prominent under the tyrants (cf. Eder 1992). The existence of a list of the ritual obligations and perquisites of the phylobasileis (probably compiled at some date after Kleisthenes' reforms) implies that even after 507 their role was not confined to the Synoikia.

The phylobasileis also, as we have seen, sat in court with the archon basileus in the Prytaneion to judge homicide cases in which the blame was laid on an inanimate object. It is likely but not certain that they sat with the basileus also in other homicide trials.⁹¹ They had probably at one time led tribal regiments, though Herodotus' use of the term *phylarchoi* rather than phylobasileis to describe the system replaced by Kleisthenes (5. 69. 2) might imply that by the late sixth century tribal commanders were separately elected.⁹²

The lack of correspondence between number of tribes and number of leading officials may have been a general feature of city organization in the archaic period. Athens had four tribes but first three and then nine archons; Sparta had three tribes but two kings (who apparently both came from the same tribe); Argos had four tribes but nine or six *damiourgoi*. It may well have been felt to be undesirable that offices should be linked to tribal constituencies.⁹³ This would in any case have been a problematic arrangement in Athens, where the three principal elected magistrates—archon, basileus, and polemarch—had separate spheres of responsibility (Humphreys 2004, 231–3).

Athenians of the late fifth century and later believed that Solon had introduced a tribal council, to which each of the four pre-Kleisthenic tribes supplied 100 members every year. In my view the arguments against accepting their evidence remain strong. We have little idea what the functions of such a council could have been, in a period when assembly meetings must have been infrequent; even the Kleisthenic council of 500 only accumulated functions gradually, a significant group of responsibilities being transferred from the Areiopagos in 461, although the extent of public funds and public business evidently

⁹¹ Humphreys 1991, n. 15 suggested that in the pre-Solonian period the basileis who ruled on homicide may have been a self-selected elite group of nobles (basileis in the Homeric sense) rather than the archon basileus and phylobasileis.

⁹² Hdt. may however have chosen *phylarchos* as a generic term to cover both phylobasileis and strategoi.

⁹³ N. F. Jones 1987, 112 assumes an original correspondence in Argos between 3 (Dorian) tribes and the damiourgoi. Attempts have been made to find a third royal *genos* in Sparta, but genealogies imply that both royal clans belonged to Hylleis; the 5 ephors, however, probably represented the *ôbai* (ch. 20 n. 11). In Crete boards of *kosmoi* were appointed in turn by tribes, but this was an unstable system (Ar. *Pol.* 1272b 1–4, 7–16; evidence in Jones 1987; cf. Link 2003; Chaniotis 2005). Problems created by tribal representation in the *stratêgia* in 5th c. Athens (ch. 16) suggest some motives for earlier avoidance of coincidence between tribes and offices.

increased with the expulsion of the tyrants.⁹⁴ There is no parallel for a two-council system in the sixth century; Chios or Erythrai (M/L 8) had a tribal council c.550, but there is no evidence that it also had an aristocratic council of elders at that time.⁹⁵ Athenian views in the late fifth century were influenced by attempts to portray oligarchic reform as a return to the ‘moderate democracy’ of Solon (Fuks 1953); clearly a constitution without a council was unthinkable by this date.

NAUKRARIAI

A related question concerns the organization and functions of the *naukrariai*, which are solidly attested in early sources as units of the pre-Kleisthenic state. We are told that there were 48, 12 per tribe; each provided a ship; payments were made by officials from the naukraric funds, which suggest some kind of taxation system; and they also supplied *prytaneis*, who had a hand in state business.⁹⁶

⁹⁴ See below, n. 97, on the prytaneis of the naukrariai. Whereas the figure of 48 naukrariai links 4 tribes with 12 lunar months, the alleged council figure of 400 has no relation to either calendar or trittyes, and seems to have been reached by working back from the Kleisthenic figure 500, related to 10 tribes and 10 civic months. Since each Kleisthenic tribe only supplied 50 councillors, it is unlikely that in the earlier system each tribe supplied 100. If it were certain that Plut. *Sol.* 19 derives from a poem of Solon in which the two anchors of the state were named as two *boulai*, the question would be settled; but it is not certain. *A.P.* 8. 1 is not reliable evidence for the political functions of the pre-Kleisthenic tribes. F. X. Ryan 1994 supplies serious arguments for dating *IG* i³ 105. 34–43 before Kleisthenes but does not prove that these regulations originally applied to a Solonian council. The strongest argument for such a council is line 42 *bolésin*. Defenders of the Solonian council (e.g. P. J. Rhodes 1981*a*, 153–4; Ismard 2010, 87; Flaig 2011) rely mainly on Hdt. 5. 72–3, where a council opposes Kleomenes, but it remains possible that this is the Areiopagos.

⁹⁵ The name *dēmosiē boulē* does not imply contrast with another contemporary council (Werlings 2010, 158–65). One of the functions of this council was to hear appeals from magistrates’ judgments; in Solonian Athens the Assembly did this (Humphreys 1983*b*).

⁹⁶ Hdt. 5. 71. 2; *A.P.* 8. 3; *FGH* 323 F 8, 324 F 36. Provision of ships is implied by the name (Wallinga 2000, 134) and by Kleidemos’ comparison with the 4th c. symmories; his figure of 50 naukrariai after Kleisthenes is probably an inference from Hdt. 6. 89. Persistence of the naukraric system in fleet organization until 483 is likely enough, but we need not postulate a change in the number of naukrariai (Hdt.’s figure may be rounded). Pollux 8. 108 says that each naukraria also supplied two horsemen, but the source is unknown and this may be speculation. See also Van Effenterre 1979, 125–6; Kienast 2005, 78–81; Pébarthe 2006, 177–80; Papazarkadas 2011, 212–13. On the system of ship provision I agree with Wallinga (adding the Cinque Ports parallel); he has a different view of the prytaneis (so also Van Wees 2013*a*). My view implies that at some stage inland settlements were given naukraric status; Wallinga’s suggestion that Kleisthenes’ 50 (?) ‘coastal’ demes had been naukrariai ignores the fact that some of them had no coast. One might even suggest that the dispute between plainsmen and coast dwellers that preceded Peisistratos’ rise was concerned with naukraric obligations and status. There is no inconsistency between *A.P.*’s view (21. 5) that naukrariai were like demes and Kleidemos’ comparison with symmories, merely a selection of different features of the institution. The idea of Van Effenterre 1979 (cf. Ismard 2010, 303) that Laureion silver in the 490s might have been distributed through naukrariai seems implausible (through the Assembly? at a festival?). Cf. also ch. 21 n. 6.

It seems to me quite likely that the ‘prytaneis of the naukraroi’ were a commission of four men per month (one per tribe) who remained in the Prytaneion and represented the state during their period of office, as did the later prytaneis of the ten Kleisthenic tribes.⁹⁷

In Humphreys 2008 I suggested that the traces of contiguous organization orientated to road systems in the assignation of inland and coastal trittyes to Kleisthenic tribes (Siewert 1982) do not represent a new scheme designed for effective mobilization in the city of infantry, but the remains of the old naukraric system in which inland villages were linked to ports.⁹⁸ Linking of local naukrariai and phratries would come from the local bases of phratries. I take it that at commoner level a *phratēr* who changed his residence would seek admittance to the phratry based in the area of his new home. Naukrariai would be articulated more loosely with tribes through the local connections of rich shipowners. Evidence of a law concerned with procedure in cases where naukraric affiliation was disputed may be a sign that in the sixth century this looseness was becoming problematic.⁹⁹

There seem, therefore, to be solid grounds for accepting more or less the traditional view,¹⁰⁰ that an informal arrangement by which ships were maintained in ports around the coast of Attika, by leading families who could call on inland allies and villages to provide young men to serve as rowers, and labour and resources when a new ship had to be built, was transformed under the

⁹⁷ Cf. Humphreys 1991, n. 10. A similar suggestion was made (independently) by Lambert 1986 (cf. id. 1993); see also Gschnitzer 1973; Ostwald 1995; Develin 1986; Kienast 2005. The term *prytanis* on an ostrakon cast against Perikles’ father Xanthippos should be understood as a generic term for office-holders, with no reference to either naukraric or Kleisthenic prytaneis, *pace* Figueira 1986 and Van Wees 2013a (*Agora* XXV no. 1065, P 16873; *SEG* 34. 40b). N. D. Robertson 2010, 112, 148 thinks the prytaneis were in town for the Diasia, but this does not explain their role in the Kylon affair. Eliot 1967 suggested that *trittys* in *A.P.* 44. 1 meant a group of 3: cf. ch. 19 n. 5. Carawan 1998 suggested that the 51 ephetai were 48 tribal representatives (the prytaneis?) plus 3 archons (cf. F. R. Wüst 1957). P. J. Rhodes 1972, 16–19 thought the prytany commission was introduced by Ephialtes, but see Schmalz 2006; Kavvadias and Matthaïou 2014, *prytaneis* in a text of the 2nd ¼ 5th c.; see Erickson 2011 for comparative material.

⁹⁸ The naukraria is thus a territorial and not a descent group, being a ‘catchment area’ attached to a port, defined in terms of villages and hamlets and (above all) local property owners wealthy enough to supply resources and mobilize labour. Cf. Van Wees 1995, 169–70, on recruitment of rowers in Homer; id. 2013a, 44–61.

⁹⁹ Phot. s.v. *naukraria*; cf. Lambert 1993, Appendix 4. Wallinga 2000 points out that *amphisbêteō* here should mean ‘lay claim to’, i.e. ‘claim to be the head of’; in any case it would be the elite who had more than one local affiliation.

¹⁰⁰ De Sanctis 1898 (1975) 387–93 attributes the creation of the naukrariai to Peisistratos, which lands him in some difficulties; Hignett 1952, 67–74 is more cautious. The system of prytaneis may be Peisistratid; Hdt. 5. 71. 2 shows only that in his day it was considered early. It seems likely that there was some reorganization when coinage came into use (Van der Vin 2000; cf. Van Wees 2010 on Eretria).

Peisistratid tyranny into a more formal taxation system.¹⁰¹ The Sounieis who dedicated a statue in the sanctuary of Poseidon c.550 (*IG* i³ 1024 A) may have been a naukraria.

This system does not require us to believe that each of the four pre-Kleisthenic tribes had a separate region of Attika allocated to it.¹⁰² It is enough to assume that the phratry system and naukraric system were reconciled, i.e. each naukraria either was a phratry centre or was a subordinate settlement with a known phratry affiliation; and that phratry affiliation had a local basis, at least for commoners.

TRITTYES

It is thus unlikely that there was any correspondence between the naukraric system and the division of the pre-Kleisthenic tribes into trittyes. The only known trittys name, Leukotainioi (White Ribbons), does not suggest a local division. Nor do we know what functions the trittyes possessed in the pre-Kleisthenic system, except that they evidently played a role, as cadres in which phratries were grouped, at the Synoikia.¹⁰³

The main question to be asked is whether they also played a role in the early Athenian army. Homer thinks of armies as fighting by tribe (ethnic group) and phratry (cf. the use of *emphylos* as ‘fellow countryman’), and it might be argued that as city populations grew larger a level of organization below that of the tribe was felt to be necessary for military purposes—perhaps not so much in organization on campaign as in estimating army size. There is growing evidence that the Mycenaean state, in imposing tax burdens on the population, did not start by conducting

¹⁰¹ In my view, long-distance ships always carried a substantial crew of rowers until the introduction of large merchantmen in the (?) late 6th c. (Humphreys 1978, 165–9); at this point it may have been necessary to formalize arrangements for maintaining a fleet of pentekontors, some at least capable of holding 100 oarsmen (op. cit., 300 n. 10). Attic trade is also likely to have become more concentrated on the harbours of Phaleron and Piraeus during the 6th c. *Theōriai* by ship to Delos from ports in east Attika presumably provided a precedent for naukraric financing of the land theoria to Delphi (*FGH* 324 F 36). Many naukraric ports will also have been cult centres (cf. chs. 20 n. 45 on Kolias; 26 n. 99 on Sounieis). Steinhauer 2004, 171 suggests that the pentekostyes of Aixone (*SEG* 54. 214; ch. 29 n. 91) may have been connected with naukrariai, but I wonder if they were only crews of the *Paralos*.

¹⁰² If this had been the case one would expect the factions of the early 6th c. to be named for tribes and not regions.

¹⁰³ On *IG* i³ 255. 9 (*LS* 11 A 7) see ch. 21 s. ‘The Trittys’. Conceivably a name such as Leukotainioi might derive from markers worn in contexts where tribe and trittys affiliation would otherwise be unclear (as in the case of the feather or leaf headbands worn by runners in torch-races, above, n. 87). Trittys on Delos seem to have names derived from those of mortals: Thyestadaï, Okyneidai, Mapsichidai, ?Theandridai (Vial 1984, ch. 2), unless these are obscure local heroes. On the (Kleisthenic) trittys Epakreis of *IG* ii² 2490 and the (?) phratry Epakreis see chs. 21 n. 138, 19 n. 16.

a census and deciding how much each group could afford to pay, or levy a fixed percentage of produce, but first decided what it needed to collect and then imposed proportions of this quantity on divisions of the kingdom, dividing it into successively smaller fractions until the level of local administration was reached.¹⁰⁴ Perhaps the leaders of archaic states calculated in roughly the same way. There may even have been forms of demographic calculation based on equivalence between consumption of victims at festivals and military manpower. At present we can only speculate. But a comparative study of methods of calculation of population and produce in only partly literate societies might be a useful direction to take.¹⁰⁵

Most of this chapter, obviously, has been highly speculative. The speculation, however, is concerned more with models of early Greek organization than with fixing details by interpreting the very limited sets of sources. In general—unlike the author of *A.P.*—we should not be looking for elaborate schemes established once and for all at a date in the earliest history of the polis, but for a gradual development from overlapping units and distinctions used in different functional contexts to a more coherent and centralized system.¹⁰⁶ Thus, while it seems clear that phratry membership was the basic framework of every adult male's relation to a local community and thus for early regulation of homicide and legitimacy (Drakon and Solon, ch. 1), the tribal system may initially have been more salient in contexts of interaction between communities, and may perhaps therefore have been significant to the elite rather than to smallholders.¹⁰⁷ Naukrariai, in turn,

¹⁰⁴ Shelmerdine 1973; Lejeune 1979. If the Synoikia assembly was held in arms (N. D. Robertson 1992), this would establish a link between trittyes and army; but I still tend to think that the trittyes were introduced (in the 6th c.?) for festival rather than military purposes.

¹⁰⁵ I assume here that the Synoikia had once fed assembled members of all the tribes. Phratry probably did not keep written lists of members in the archaic period, and it may have been difficult to arrive at an estimate of average phratry size. Sources do not suggest that a level of organization between the small group of adjacent columns (phratry, *enômotia*) and the tribal regiment was prominent in Greek armies (on the post-Kleisthenic army of Athens see ch. 21 at nn. 34–56). The system of call up by age-sets seems to have been formalized by Kleisthenes, although organization of the phalanx by age groupings probably went back to early times (cf. Sparta). Lambert 1993, 256–7 and Van Wees 2004 connect the name Leukotainiai with military insignia, Van Wees (183) noting the practice of honouring units that fought especially well. Van Effenterre 1976 and Kienast 2005 doubt whether the pre-Kleisthenic units had military functions.

¹⁰⁶ Cf. Ismard 2010. As in ch. 1 n. 71 (cf. ch. 20 at n. 44), I find myself drawing on the model proposed by Momigliano (1989) for early Rome. P. J. Rhodes 1981*a*, 69 makes a rather similar suggestion.

¹⁰⁷ There may have been some attempt to use the tribal framework to mobilize support in elections, especially after Solon's reforms, but phratry is likely to have been more important; the Peisistratids seem to have been interested in linking elite families to the centre (cf. Macedonian *betairoi*; ch. 20 nn. 56, 130 on parasites) rather than in organizing commoners. At present there is no firm evidence that any pre-Kleisthenic tribe or trittys had its own cult (on *IG* i³ 255 see n. 103), and the later procedure of electing officials in full Assembly even in cases of tribal representation does not suggest any long-standing tradition of tribal elections. It seems rather unlikely that pre-Kleisthenic tribes or trittyes ever held their own meetings. The view of Manville 1990, 108 that tribes owned land in pre-Kleisthenic Athens is not supported by evidence and does not seem to me probable (on *IG* ii² 2490 see n. 103; ch. 21 n. 138). On the exclusion of Salamis and Eleutheraï from the Kleisthenic system see ch. 22 n. 12.

organized a further set of relationships, in which ships and their crews set off to trade with or fight against members of other states, or at least against communities with which there was no regular shared cultic relationship.¹⁰⁸ They were significant especially for the elite, who organized such expeditions, and for the young, who took part in them in the hope of gaining prestige and resources, and of adding an aura of danger and adventure to their identities (Humphreys 1978, 165–8). As with the festival calendar, so with these social units, systematization was a subsequent development, which probably should not be dated before the sixth century.¹⁰⁹

Before we turn to the best-known example of such systematization, however, the introduction of the Kleisthenic system at Athens, we need to take a closer look at the basic units of the pre-Kleisthenic system, the phratries, which survived into the classical period, and the elite priesthood-holding *genê*.

¹⁰⁸ Ships would also take competitors to the panhellenic games, *theoriai* to overseas festivals, etc.

¹⁰⁹ The reforms of Kleisthenes of Sikyon and Demonax of Mantinea (Hdt. 4. 161, Kyrene) show the interest of 6th c. cities in this type of reorganization.

The Phratries

ORIGINS AND LOCATIONS

It has been argued above (chs. 1, 18) that the phratry was (in most if not all parts of archaic Greece) the ordinary man's primary community.¹ Phratries gathered for religious festivals, among which the presentation of new members, celebrated by sacrifice or other offerings, had probably played a role from early times; fellow phrateres were expected to aid the kin of a homicide victim in pursuing the killer; manpower could be mobilized through phratries for military purposes.² Normally phratry membership was acquired by patrification, but a commoner who moved from one village to another, or an exile, would probably gain entry to the phratry of his new place of residence by marriage to the sister or daughter of a local man, or by becoming a hanger-on of a local aristocratic oikos. The distinction between *homogalaktes* and *orgeônes* that occurred in Philochoros' law on phratries and citizenship may possibly be based on consciousness that elite families retained allegiance to the same phratry even if they moved from one part of Attika to another, whereas commoners could not make the same claim; if so, the law was devolving responsibility for admission to phratry subgroups in general.³

¹ Since there have been two fairly recent systematic treatments of the Attic phratries (Hedrick 1984, Lambert 1993), the organization of this chapter will be mainly chronological. For phratries in other parts of Greece see Guarducci 1937–8; N. F. Jones 1987; n. 4. The references to phratries in Homer and in Drakon's homicide law guarantee the antiquity and wide distribution of the institution.

² This would be the informal mechanism, perhaps not formalized in the pre-Kleisthenic period: ch. 18 n. 105.

³ Philochoros *FGH* 328 F 35, with Theodorides 2002 (note however that we do not know how stable book divisions were (Feeney 2016, 193–4)); it does not seem to me either linguistically or politically likely that this law belongs to the 430s, as argued by Andrewes 1961 (see below n. 77. Ismard 2010, 104–6, thinks the law Kleisthenic, despite *A.P.* 21. 6). In uses of *kai... kai*, both terms carry equivalent weight or the second is stressed (Denniston 1934, 323–4); however, Philochoros' word order may have been determined by the need for a gloss on *homogalaktes*. The use of milk rather than blood as a metaphor for descent may derive from siblingship (cf. *homogastrios* in Homer, and *Ar. Pol.* 1252 b 15–18) or merely from co-residence (Jameson a. o. 1993, 20; cf. Wilgaux 2011, 222; perhaps *homochytrōi* on Lemnos, Culasso Gastaldi 2008, 273–7; 2010, 358). Alternatively, it is perhaps conceivable that *homogalaktes* and *orgeônes* were not terms for all members of aristocratic genê or of commoner *thiasoi* (feasting groups), but terms for outsiders admitted by them, *homogalaktes* being dependants attached to aristocratic oikoi and *orgeônes* those admitted to a share in sacrifices. The fact that the term *orgeônes* was later used mainly by relatively wealthy and exclusive groups tells us nothing about its use in the early 6th c. *Gennêtês* comes

It is possible that phratry organization had already been formally recognized by the state in the Mycenaean period, but if so the formalization is likely to have broken down in the Dark Ages.⁴ On reformation in the archaic period, as conceptions of citizenship crystallized, see ch. 18. It required an explicit articulation of phratries to tribes and trittyes, the latter possibly created in this process. There will previously have been at least an implicit articulation, based on the tribal affiliations of leading phratry families, but the idea that phratries as such were the base units of the citizen body may not have been explicitly formulated. There may have been some incorporation of representation of the phratries into city ritual at this time, perhaps at the Synoikia.⁵

We know the names of at least seven phratries, and have some other possible candidates, plus evidence for the existence of at least six more phratries to which we can attach no name. Therrikleidai may have been based in the city; Gleontis, which shared its name with one of the pre-Kleisthenic tribes, in the city or somewhere along the course of the river Kephisos; Thymaitis presumably in the deme Thymaitadai.⁶ There was a phratry based at Alopeke (Humphreys 1990*a*) which may also have had ties with Phaleron.

from *genna* (cf. *gennaïos*), not *genos*; it was well established in the technical sense by c.355 (Is. 7), but is perhaps most likely to have originated in the period of Theognis and Pindar, probably after Solon's abolition of the privileges of Eupatridai, perhaps even after Kleisthenes' reforms. In *Dig.* 47. 22. 4 I would read (with Guarducci 1935) *dēmos ē phratores ē hierōn orgiōn sunthutai ē sunsitoi ē homotaphoi ē thiasōtai*, but without inserting *ē nautai* after *thiasōtai* (ch. 1 n. 56 Paros, 6th c.; *IG* iv² 2).

⁴ The institution is widespread (no general study since Guarducci 1935; but see *BE* 1939, 28; J. K. Davies 1996*a*; Brulé 1998; Habicht 2010; *BE* 2011 nos. 307, 369); *SEG* 51. 1071, Paros, 6th c.; *IG* iv² 2. 2002–3 Aigina (cf. Guarducci II, 91–2); *SEG* 50. 1076 (Massalia); Malouchou 2006, Chios; Grandjean 2013, 258–61, Thasos; Kritzas 1992 + 2013, 291, Argos. See also Jacquemin a. o. 2012 no. 30 on the Labyadai at Delphi. *Tu-ma-i-ta* (Thymaitas) appears as a personal name at Knossos, AS 605. Migrating groups and colonies take the institution of the phratry with them, but do not seem to have taken phratry names from their metropoleis (for tribe names see ch. 18 n. 8).

⁵ For N. D. Robertson 1990, 1992, Synoikia as a phratry festival, see Jameson 1994*a*. The question put to an archon at his dokimasia, 'Do you have an Apollo Patroios and Zeus Herkeios, and where do you worship them?', presumably was not originally equivalent to 'Do you belong to a phratry?' although it was later understood in that sense. Some *genē* may have had their own cults of Apollo (Salaminiōi, Elaidai?), as may groups of orgeones (Eikadeis, see below, n. 152); others may have shared the cult with their phratry (Therrikleidai, Achniadai, the phratry of Is. 7; see Lambert 1993, 211–12). Any Apollo worshipped by a phratry would be 'ancestral'. The cult of Zeus Herkeios was perhaps originally a household cult of the large oikos, although Thorikos sacrificed to him in the 5th c., and might have taken over the cult from a phratry. The term trittys, 'a group of three', may suggest that phratry representatives processed in groups of three at the Synoikia, which would give us (probably) a total of 36 phratries (ch. 18 n. 29). Note that the Spartans did not incorporate phratries into their systematization of tribes and *ōbai*, which took place in or before the middle of the 7th c., but instead systematized smaller feasting groups, the *syssitia*, which corresponded to the Attic thiasoi in form, though not in function.

⁶ Therrikleidai: *Agora* XIX LA 1. 30 = *Agora* XVI 255 F, cf. below, nn. 130–1. Gleontis set up a horos at the end of the 5th c. on its sanctuary of Kephisos, which was found in the Agora (*Agora* XIX H 9), but horoi in the city do not necessarily imply that the original phratry base was there (cf. *IG* i³ 1057, Thymaitis). On *IG* ii² 4975 (Lambert 1993 T 25) see now Papazarkadas 2011, 164 n. 5. For duplication

Southeast Attika is well represented, with phratries based at Anaphlystos,⁷ Kephale (Achniadai), and Myrrhinous (Dyaleis). Sounion had a substantial contingent of residents from the *genos* Salaminioi, who perhaps belonged to the phratry based in Alopeke; the southeast tip of Attika may not have been thickly populated until its silver mines became important in the late sixth century.⁸ The Eikadeis, a group of *orgeones* (?), perhaps belonged to the Dyaleis.⁹ Thorikos is likely to have been a phratry centre, as is Lamptrai, although no evidence has yet been produced by either; the variety of the cults celebrated by the deme Thorikos in the fifth century (*IG* i³ 256 *bis*) suggests a long-established cultic tradition, and the *orgeones* of Zeus Epakrios, worshipped on Hymettos, had links with Lamptrai, whose Mycenaean akropolis was a cult centre in archaic and classical times.¹⁰

Further north in the Mesogeia plain there was a phratry based at Paiania, possibly called Demokleidai, and another perhaps in the area of Charvati. Erchia and Pallene are likely candidates as phratry centres, but have not so far produced evidence of phratry activity.¹¹ The area of Prasiai–Steiria–Brauron may have contained another phratry, Araphen–Halai a further one (cf. Isaïos 9).

of tribe names at lower levels of organization cf. perhaps the Argive tribe Dymanes and phratry Dymmadai (Piérart 1983); N. F. Jones 1999, 205–7; Geleontes at Klaros, Rousset 2014*a*, 2014*b*. It may suggest that the two levels of organization were not created and named simultaneously. We have a thiasos Etionidai from the Thymaitadai area in the early 5th c., *IG* i³ 1016 (ch. 20 n. 45). It is not clear how many city-based phratries we should envisage. Lambert 1996 suggests that there was a phratry Io[nidai], on slender evidence (*Agora* XIX H 118 with *SEG* 46. 229).

⁷ Anaphlystos: *IG* ii² 2723, see below, n. 149. The Halaieis who dedicated *IG* i³ 1013*a* (cf. *b–c*) to Apollo Zoster *c.*475 may be a phratry or *naukraria* rather than a deme; the *genos* Kolieis may have belonged to it, or to a phratry based at Halimous.

⁸ Dedication to Zeus Phratrion at Myrrhinous, *SEG* 53. 210 (Kakavogianne 2003), ch. 25 n. 44. Salaminioi: n. 173; ch. 20 at nn. 103–110; Humphreys 1990*a*. Their sacrifice to Apollo at the Apatouria strongly suggests to me that the whole *genos* belonged to a single phratry. For the move to Sounion cf. the move of a branch of the Lykomidai to Phrearrhioi. The Sounieis of *IG* i³ 1024*a* may be a *naukraria* (ch. 18 at n. 101). Achniadai: on *IG* ii² 2621 (Lambert 1993 T 1) see now Papazarkadas 2011, 163–4. Medontidai: see nn. 127, 153.

⁹ See below, nn. 152, 153 (Eikadeis) and 173.

¹⁰ Zeus Epakrios: *IG* ii² 1294 (*SEG* 50. 162; cf. Papazarkadas 2011, 195 n. 145) with Langdon 1973 (the text is of the 3rd c. and was found in Athens, in the Plaka, but this has no implication for earlier periods); on the Epigonos son of Endios of Lamptrai mentioned in this text see *APF* 4810; Papazarkadas 2005 n. 193; ch. 23 n. 82. Cult on Mycenaean akropolis, Hagel and Lauter 1989. Cf. ch. 18 nn. 43–5 on the ‘Twelve Towns’.

¹¹ *IG* i³ 1083, a *horos* of the Demokleidai, came from Katsoulierti, perhaps one of the Paiania deme sites (below, n. 116). *IG* ii² 1239 came from Charvati, but since the Charvati *çiftlik* was a collecting point for inscriptions it may have travelled. The deme centre at Charvati may have been Kydantidai or Ionidai (but see ch. 24 nn. 90–1); we do not know if *IG* i³ 247, perhaps a decree of a body called —ntidai, found at Spata, came from a phratry or some other group (Lambert 2000*b*). Erchia had its own cult of Apollo, with offerings i.a. on Thargelion 4, but there are few offerings in Pyanopsion and the local phratry perhaps sacrificed on Thargelion 7, date of the Thargelia.

In the plain of Athens there was clearly a phratry in the area of Kephisia in which the family of Euktemon of Kephisia was influential (Isaios 6); it may have been called Elasedai.¹² There must have been a phratry at Phlya, and presumably others at Acharnai and Athmonon. The Medontidai may have had a connection with Kypseli, perhaps the deme Erikeia (but see n. 153); the phratry to which Aischines belonged, which shared its altars with the Eteoboutadai, was presumably based in Boutadai (ch. 20 n. 115). The Philieis may have drawn members from the area of the southern part of Mt Aigaleos and the pass leading through Daphne (Kettos?) into the plain of Eleusis.¹³ No other evidence related to phratries has yet been produced from the plain of Eleusis, but the Eumolpidai and Kerykes¹⁴ should have belonged to a phratry based in the town. Some phratries containing major priestly genê may have allowed the leading members of these genê to run phratry business in a way that did not generate written records. In any case, however, the epigraphic evidence for phratry activity is extremely sparse and scattered and this may be due to the rarity of written record in phratries in antiquity as well as to accidents of preservation.¹⁵

In the area 'beyond the hills', Epakria and Diakria (ch. 18 n. 49), the phratry Demotionidai was based at Dekeleia; the Epakreis may have been another phratry covering the area of Plotheia and Anakaia,¹⁶ and Ikarion may have had its own phratry.¹⁷ Titakidai and Thyrgonidai, villages in the Aphidnai area which achieved

¹² *IG* ii² 2602, a horos of Apollo Patroios of the Elasedai, came from the Kephisia area and must have marked the shrine of a genos or phratry (cf. ch. 20 n. 45). *IG* ii² 1240, a phratry decree, found its way to Rangaves' house in Kephisia, but its provenance is unknown.

¹³ Lyk. F VII 2 Conomis 1970, 51 Blass 1880; the Philieis are associated with the deme Perithoidai and the genos Koironidai, which had claims to an Eleusinian priesthood (ch. 20 at nn. 121–2). On the appropriateness to a phratry of a cult of Zeus Philios cf. the Zeus Xenios of Thymaitis, and Jameson 1994b, 46–7. Restoration of a reference to [Apat]ouria at Panakton in *IEleus* 196. 29–30 (and *IEleus* 194. 22) is improbable; Êrosouria (or ?Prosouria, Lambert 2000b, 75 n. 31) were celebrated at Erchia (see also *IG* i³ 232. 20–1).

¹⁴ On the origin of the Kerykes see ch. 20 at nn. 21–7.

¹⁵ A high proportion of the epigraphic evidence was generated by economic activities (horoi on property, sale of land in the hekatostai records, claims made to the poletai, leases, etc), and as we shall see it is possible that phratry funds and land were sometimes held by subgroups (below, n. 148). For other possible phratry names see below at nn. 154–6, on the hekatostai records. 'Euergidai', Pyrrhakidai, and Zakyadai are discussed in ch. 20 nn. 45, 83, 145.

¹⁶ The Epakreis of *SEG* 32. 144 (cf. 36. 189), who honoured a member of the deme located at Mygdaleza (perhaps Anakaia, Traill 1986) for serving as archon at their Apollonia, are more likely to be a phratry or local cult unit than a Kleisthenic trittys (ch. 30 n. 57), and in *FGH* 328 F 206 Semachidai (in Antiochis) is said to belong to Epakria. The (Kleisthenic) trittys Epakreis of *IG* ii² 2490, a different unit, can hardly belong to Hippothontis (ch. 21 n. 138).

¹⁷ The Ikarieis of *IG* ii² 1178 may be residents of the village, not all of them demesmen, rather than a phratry (cf. Lasagni 2004), but the cult of Dionysos in Ikarion was certainly pre-Kleisthenic (ch. 24 n. 20). The question really is whether some early 'amphiktyonic' cults were independent of the phratry system. The Hekalesia, celebrated at Hekale in honour of Zeus Hekalesios, provide a relevant case in this area (Plut. *Thes.* 14. 2 = *FGH* 328 F 109, cf. Hsch. s.v. *Hekaleios Zeus*, St. Byz. *Hekale*).

deme status only in the Roman period, are mentioned by lexicographers as ‘obscure phratries and genê derided in comedy for their *euteleia*’ (poverty or corruption); this is perhaps a case where a major deme centre, Aphidnai, was not the centre of the local phratry.¹⁸ From the area of the Marathonian Tetrapolis, we have four horoi naming phrateres; it is hardly likely that the Tetrapolis itself was a phratry, but there should have been at least one in the plain. A phratry is now attested at Rhamnous.¹⁹

It is probably a reasonable guess in many cases that a deme which sent more than five councillors each year to the city was also a phratry centre, but there will have been exceptions: villages that had important sanctuaries serving the surrounding area situated in upland areas where no village was large (Anakaia?), areas that had become densely settled only at a relatively late date (Sounion?), or where a village that was not a phratry centre had grown in the sixth century at the expense of its neighbours (Aphidnai?). That fact that there were 48 naukrariai and probably only 36 phratries may be due in part to the numerical exigencies of the prytany system (ch 18 n. 97), and in part to the function in the naukraric system of port settlements that had not been phratry centres, but shifts in the distribution of population may also have played a role.²⁰

Archaeological evidence provides only patchy guidance, since many areas of the Attic countryside have never been systematically explored. The Dekeleia–Aphidnai region, for instance, has produced no archaic evidence apart from the colossal statue of Dionysos from Ikarion, yet clearly had phratries. Even for the sixth century many sites are represented on the archaeological map only because the discovery of sculpted grave monuments or large mounds called attention to them.

¹⁸ Magnes, producing in the 470s, is credited with a comedy called Pytakides (*PCG* 5, 631 F 6; Kock I 8–9, F 6); this has been emended to Titakides, but Pyrrhakides is also possible, and we have no clues to the content of the play. Jokes about the claim that Titakos restored Helen to the Dioskouroi, and the humble status of his putative descendants are certainly a possibility for the Kimonian era (see below, n. 39–40); on the other hand, jokes about the ease with which men of allegedly foreign origin could buy entry to phratries were common in the later years of the Peloponnesian War.

¹⁹ Rhamnous: *IRh* 186–7 (319/8, 314/3), *SEG* 51. 164, 52. 160 (the latter not in Papazarkadas 2011). Tetrakomoi presumably was not the name of a phratry, since there was a phratry Thymaitis and the deme Thymaitadai was one of the four settlements of Tetrakomoi (the horoi of its sanctuaries of Zeus Xenios and (?) Herakles came from the city area, re-used in later walls: *IG* i³ 1057, *Agora* XIX H 131). One could restore [*pro Apatouri*]ôn in *IG* ii² 1358 (*SEG* 50. 168) A 28, but a pregnant sheep seems an improbable victim; the Stenia or Thesmophoria (also in Pyanopsion) are perhaps more likely (*pro* elsewhere in this text is used of festivals which the local community does not celebrate in its own right, Skira and M[y]st[e]r[ia]). We should probably add Sphettos (one of the Twelve Towns) to the list of putative phratry bases.

²⁰ Lambert 1993 suggests 30 as the original number. Change in council quotas after the Peloponnesian War is possible (ch. 21); some of the changes of 307/6 were quite substantial. See ch. 10 n. 87 on the gap in archaeological evidence from Attika of the 7th c.

Part of the difficulty is that we do not know for certain when the list of phratries (let alone their tribal affiliation) became fixed; the fact that they appear as recognized units in Drakon's homicide law and probably in Solonian legislation need not imply a fixed list. Phratries evidently had local bases, and at least until Solon's legislation there was probably some movement of migrating persons between them, i.e. at least at commoner level a phratry was a spatially identifiable group. It is equally clear, however, that the pre-Kleisthenic tribes were not regional units (had they been, we would expect reference to them in the period of regional faction following Solon's reforms). There seem to be two possible explanations. The process more commonly assumed, though seldom spelt out in explicit detail, is that leading families moved out from Athens into the countryside over the course of the ninth to seventh centuries, taking with them or acquiring on arrival groups of dependants who became, in each of the main settlement centres, a phratry.²¹ The alternative is to assume a looser relation between phratry organization and class relationships, in which settlement in the countryside was not always organized or led by the elite, much of phratry life came from popular culture, some phratry bases were in marginal hilly areas in which the elite possibly had less interest, and relations between elite families and phratries were rather variable (see ch. 18). Did the formalization of Eupatrid status in the early seventh century (ch. 20 at n. 16) make it necessary for each of the *genê* crystallizing at the time to be drawn from a single phratry?²² In any case, the number of *genê* in a phratry and the amount of interest their members took in phratry business—apart from the essential presentation of new members at the Apatouria—may have varied from one phratry to another. The tribal affiliation of phratries may have been determined by the tribe, or the alliances with aristocratic families, of their leading members in the seventh or early sixth century.²³ The experience of rural phratry members who visited the city to take part in major urban festivals, where they were organized by tribe and by the *basileis* of their tribe, will have been very different from their experience of village festivals, even where the latter had come under the formal authority of elite families who supplied priests and (except at the Apatouria) sacrificial victims. Some of this latter development may have taken place only during the sixth century, when it was

²¹ The most explicit formulations of this model (based on European feudalism), though without reference to archaeological evidence for resettlement of the countryside after the Dark Ages, are Ed. Meyer 1893 and de Sanctis 1898; see more recently J. K. Davies 1996*a*, 626; D'Onofrio 1995 for a survey of archaeological data.

²² Implying that pedigrees would not cross phratry lines, and if aristocratic families attached to separate phratries claimed the same god or hero as ancestor they would in practice operate mostly as separate *genê*.

²³ All this is of course very hypothetical, and is put forward with the aim of stimulating comparison of alternative models. For differences in village organization resulting from variation in caste distribution in Bali see C. Geertz 1964, C. and H. Geertz 1975.

perhaps in the interest of candidates for office to build up voter support in the countryside (ch. 18 n. 107).

It was through phratry organization that the concepts of Athenianhood and citizenship were (eventually) mapped onto territory,²⁴ and it is therefore appropriate that the aitiological myth that became attached to the Apatouria concerned territorial boundaries as well as the introduction of adolescents and immigrants to citizenship. According to the story,²⁵ Athens and Boiotia were in conflict over their borders on Mt Parnes, and the Boiotian king Xanthos challenged the Athenian ruler Thymoites to a duel. Thymoites was reluctant to fight, and offered his kingdom to the man who would take his place. The offer was taken up by an immigrant from Pylos, Melanthos, who won by distracting his adversary's attention with the question, 'Who is the helper standing behind you?' Thus the kingship passed from the descendants of Theseus—in Demon's version of the story (*FGH* 327 F 1), Thymoites was an illegitimate son who had killed his brother Apheidas in order to get the throne²⁶—to the family of Kodros. The story may have been influenced by a riddle—'Black Killing Yellow got the Blacklands'²⁷—and employs symbolism associated with the transformation of the adolescent who fights alone, in the dark, by stratagem, and wears a black cloak, into the hoplite.²⁸ It makes use of phratry names: Thymaitis was a phratry,²⁹ Apheidantidai a genos, and Melanthos' grandson was Medon, eponym of the phratry Medontidai. On the other hand, it also has Homeric overtones; a Thymoites appears in the *Iliad* (3. 146) and the fictitious accomplice of Xanthos reminds one of Athena's deception of Hektor, leading him to believe that he would have the support of his brother Deiphobos in his duel with Achilles (22. 226–99).

²⁴ See ch. 18 at nn. 12–18 on the divergent tendencies of proto-poleis and amphiktyonic centres, and on the views of Polignac 1984.

²⁵ The main source is Hellanikos *FGH* 323a F 23; on Thymoites and Apheidas see *FGH* 327 F 1 (Demon), and 90 F 48 (Nic. Dam.).

²⁶ This seems to imply that the genos Apheidantidai (ch. 20 nn. 127, 142) claimed to be superior in status to commoners in the phratry Thymaitis.

²⁷ Polyain. *Strat.* 1. 19 calls it an oracle, but it may be a riddle about night and day or winter and summer (cf. Usener 1898); in either case it would refer to a Pyrrhic victory. The duel is located either at Melainai, a hamlet on the eastern end of Parnes which is mentioned in the hekatostai records (Lambert 1997a, 196 no. 34) and in Euphorion's *Dionysos* (19e 25–6 Van Groningen 1977), and acquired deme status in the Roman period (Traill 1975a), or at the western end of Parnes in the area of Oinoe and Panakton, where there was conflict between Athens and Boiotia during the Peloponnesian War (M. H. Munn 1989; M. C. Taylor 1997, 260–2). The position of Melainai in the hekatostai records would put it either in tribe IX with Aphidnai or in X (so Lambert) with Kolonai and Eitea; St. Byz. s.v. *Melaineis* puts it in X. As a (late) deme it belonged to Ptolemais, to which Kolonai-X was transferred (D. M. Lewis 1973a n. 15). Cf. ch. 32 n. 35.

²⁸ Vidal-Naquet 1981; cf. also Winkler 1990b, 35 n. 43; Lambert 1993, 150–1.

²⁹ Lambert connects Thymaitis' cult of Zeus Xenios with this myth, but see Rolley 1965; above, n. 13. Zeus Xenios had a *trapeza* in Cretan men's houses, *FGH* 467 F 1 (Athen. 143c).

Melanthos' son Kodros was also a trickster who saved Athens by his cunning; the story is made up of diverse elements, some popular and some learned (N. D. Robertson 1988). It probably did not acquire its connection with Mt Parnes and the phratry before the sixth century, when Athens became interested in Eleutherai,³⁰ and some of the elaborations that made it seem true—the explanation of the riddle, the etymology connecting the festival name Apatouria with *apatê*, deceit,³¹ the explanation of the change of dynasty—may belong to the speculations of local historians in the fifth century. The story developed its own dynamic: the more details it contained, the greater its explanatory power, and the more it could explain, the more persuasive it became.³²

THE SIXTH CENTURY

Solon's legislation, it has been suggested here, encouraged ambitious families to take more interest in their phratry by allowing rich non-Eupatridai to hold office and defining the right of all phratry members, *qua* citizens, to vote. The phratry (and/or naukrariai? ch 18 n. 96) were presumably the cadre in which the regionally defined factions Diakrioi and Paralioi mobilized. Whatever the precise meaning of the law on *homogalaktes* and orgeones (n. 3 above), it is improbable that phratry voted in the sixth century on the eligibility of boys for whom the koureion was being offered,³³ or had written lists of members. If no one 'led the lamb away from the altar', sacrifice would constitute admission; any objection to sacrifice would come from kin or other members of the phratry who knew the boy and his sponsor, and these would normally be members of the same banqueting group;³⁴ a banqueting group whose lamb or lambs had been

³⁰ A Homericized version of a story about the Kodridai could have appealed to the Peisistratids, whose own family claimed Neleid descent (Hdt. 5. 65. 3; cf. N. D. Robertson 1988). On the treatment of Dionysos Melanaigis, Eleutherai, and the City Dionysia in Connor 1989 see Sourvinou-Inwood 1994*a*. For Kodros see also Steinbock 2011.

³¹ This enabled Athens to claim to have founded a pan-Ionian festival (Hdt. 1. 147), a claim which was particularly apt in the period of empire, but might have been developed earlier (cf. Solon F 4a West and Peisistratos' activities at Delos, Hdt. 1. 64. 2, Thuc. 3. 104. 1). The form Apatouria is Ionic and not Attic (Threatte 1980, 239–40), so there was presumably a period when the Ionian character of the festival was stressed even on the mainland. The interpretation of the name as meaning 'festival of those who have the same fathers' is given by Schol. Ar. *Ach.* 146.

³² See Calame 1990, 35–6, on 'intellectual elaboration round a stimulus experienced as part of reality'; the verbal coincidence *Apatê*/*Apatouria* was experienced as 'real'.

³³ Even later there was no vote at *meion* and *gamelia*; see below, n. 79. C. B. Patterson 2005, 283, suggests that phratry norms may have varied.

³⁴ *Genos*, *orgeones*, *thiasos*; we do not know exactly what the 6th c. terminology was, and it may have varied from one phratry to another, but the form of the festival, in which phratry members contributed victims more or less in rotation, favoured division into smallish units, perhaps of about 30 men if we can

sacrificed would settle down to the business of cooking and sharing the meat rather than paying close attention to the sacrifices of other groups. Solon's laws excluded *nothoi* (bastards) and temporary immigrants from formal phratry membership, but they were probably policed by those who had an interest in enforcing them rather than by phratry authorities; the latter would judge disputes rather than examine all candidates' credentials.

Peisistratos' local judges (*dikastai kata dêmons*; cf. Humphreys 1983*b*; ch. 21 n. 101) may have played some role in such disputes, but on the whole the tyrants do not seem to have been interested in phratry activities; they favoured city festivals in which they could take the role of patrons of the whole community. By the time of Kleisthenes' reforms in 507, the phratries will have enjoyed forty years of relative freedom from involvement in elite rivalry, during which local ambitions and local affairs will have occupied most of their attention.

As usually happened after a change of regime, there were attempts to pay off old scores by accusing opponents of having gained entry to the phratries illegitimately. There had been immigration to the city during the sixth century both from the Attic countryside and, probably, from outside Attika. Whether migrants within Attika travelled back to their villages of origin for the Apatouria or sought entry to phratries in the city area, other phratry members would know less about their wives and children than about those of village residents. A general feeling that phratry affiliation and residence in many cases no longer coincided, and that this situation led to loss of control over the composition of the citizen body, was very probably one of the motives for Kleisthenes' reforms, though perhaps not the only one.³⁵

It is unlikely that Kleisthenes made any change in the number of phratries, or indeed legislated explicitly on them at all.³⁶ The traditional ritual of sacrifice at the Apatouria was left in place, but the function of admitting boys to citizenship

judge from *A.P.* fr. 3 (but *triakas* in Pollux 8. 111 does not seem to have any independent standing), and the Spartan syssition (ch. 18 n. 34; see also Steinhauer 2004, 168–70 with ch. 29 n. 91). At the Apatouria lambs would be 8 to 9 months old, and a lamb would feed 30 to 50 people (Holly Wolff, pers. comm.; cf. Rosivach 1994, 157–8).

³⁵ In *A.P.* 13. 5 (see P. J. Rhodes 1981*a*) Sandys emended *d(ia)phēmismo(n)* to *diapsēphismōn*. It does not seem to me impossible that corruption of a phrase containing *phēmē* lies behind the papyrus text; if *diapsēphismōn* is the correct reading I would take it as a reference to the new registration in demes, not to a separate procedure (ch. 22 n. 19). Boardman 1974, ch. 2–3, is inclined to minimize the number of vase painters immigrating to Athens in the 6th c.; construction of the Olympicion will have brought in other craftsmen. Cf. ch. 20 n. 47 on the Gephyraioi.

³⁶ O. Murray 1987 (1990*b*, 14–15) revives the interpretation of Ar. *Pol.* 1319b 19–26 as evidence that Kleisthenes standardized the phratries, brought them under state control, and increased their number, but this part of the passage may refer only to Kyrene (cf. N. F. Jones 1987, 216–9; Hölkeskamp 1993; G. Anderson 2003). It seems to me that Solon must have dealt with phratries; the fact that the Athenian settlement on Salamis was not incorporated into the deme system might suggest that it had already been given a peculiar status under the phratry system because it was not felt possible to create new phratries.

was transferred to the newly created demes. The decision to set entry to the demes two years later than entry to the phratries³⁷ may have been taken with the aim of separating the two procedures more clearly, but if so the calculation misfired; it was the fact that phratries pronounced on a boy's legitimacy and right to citizenship earlier than demes which gave phratry admission continuing importance.

The process of determining which settlements would become demes (ch. 21) may have had a greater impact on the phratries, both immediately and in the long run, than the loss of their formal right to confer citizenship.³⁸ A complex of myths from the Dekeleia–Aphidnai area perhaps gives us a glimpse of the passions aroused. Dekelos, eponym of the local genos of the phratry Demotionidai, and Titakos, eponym of the phratry or genos Titakidai, were said to have helped the Dioskouroi in their search for Helen when Theseus had snatched her and hidden her at Aphidnai. Dekelos told them where she was, and Titakos betrayed Aphidnai to them (Herodotus 9. 73).

The story is hostile both to Theseus and to Aphidnai. Theseus appears in a bad light; Helen was only seven and he had taken her without the knowledge or permission of her kin.³⁹ Resentment of Kimon's exploitation of the Theseus legend in the 470s may be involved.⁴⁰ The hostility to Aphidnai, however, is likely to go back to the years round Kleisthenes' reform. Aphidnai was the home of the Gephyraioi, who had emerged into prominence as a result of the killing

³⁷ Cf. Labarbe 1953 (doubted by Lambert 1993). Hyp. F LXV/192 Blass 1894 seems to imply a two-year period of latency between admission to the phratry and full adulthood, attested by the phrase *epi dietes hēbēsai* in early law, which would have been reduplicated in the deme system (*A.P.* 42. 5); but if this interpretation is correct, Didymos (Harp. s.v. *epi dietes*) misunderstood the phrase (n. 47). Note that in Plat. *Laws* 785a–b phratries are to keep registers of citizens (though the city also had demes); children are to be registered from their first year, with archon dates.

³⁸ For the role of deme affiliation in determining internal lines of cleavage within phratries cf. ch. 22 n. 71.

³⁹ Cf. ch. 20 n. 46. Helen's age varies: she is 7, and Theseus is 50, in Hellanikos *FGH* 323a F 18–19; she is 10 in D. S. 4. 63, 12 in Apollod. *Epit.* 1. 23. The detail that the Dioskouroi captured Theseus' mother Aithra was introduced to explain the presence of an Aithra among Helen's servants in *Il.* 3. 144 (*FGH* 323a F 20–1). The story was told in the *Cypria* and by Alkman (F 21 Page 1951). Paus. 1. 41. 4 ff., who quotes Alkman, has a Megarian version in which the Dioskouroi were accompanied to Aphidnai by Timalkos son of Megareus. There are some possible versions of the seizure or liberation in the early 7th c. (the liberation was portrayed on the chest of Kypselos), and quite a cluster of representations on Attic vases in the late 6th/early 5th. Dekelos, Titakos, and Aphidnos (king of Aphidnai, who wounded Kastor in the right thigh) do not appear (*LIMC*, s.v. *Helen*). In Plut. *Thes.* 32 it is Akademos who helps the Dioskouroi.

⁴⁰ However, a Demotion son of Kydas (cf. Kydantidai) appears among the companions of Theseus in schol. Verg. *Aen.* 6. 21 (ch. 20 n. 127), which might suggest that Kimon had some friends among the Demotionidai; but this list may well be a later construction. The name Demotion (borne by the archon of 470/69) is attested in the classical period in Acharnai, Aphidnai (*IG* ii² 5736 + 7038), Lamprai, Phegous, Phrearrhioi (*APF* 3738), and Prospalta; cf. also *CAT* 3. 373a. It may however have been used merely as a convenient variant of other names based on the root Demo-.

of Peisistratos' son Hipparchos by two of their members in 514 (ch. 20 n. 48). Their deed was turned into a heroic exploit of resistance to tyranny, especially by those who resented the claims of the Alkmeonidai that it was they who had rid Athens of tyrants. The Gephyraioi were sufficiently popular locally to persuade the inhabitants of a large number of local hamlets to register as demesmen in Aphidnai, which became in consequence the second-largest deme in Attika, with sixteen councillors. It would be hardly surprising if leading families in local phratry centres were resentful. There was no doubt already a local cult of the Dioskouroi,⁴¹ and other legends linked Theseus to northern Attika (Hekale, the Marathonian bull); but the use made of the story of the rape of Helen by the groups claiming descent from Dekelos and Titakos probably belongs to the late sixth and early fifth century.

This was a period of very active work on 'mythical' history and genealogies, and it may be rash to assume that all myths concerning phratry eponyms are, in the versions we have, substantially pre-Kleisthenic. The linking of Thymoites, Apheidas, and Melanthos in the founding myth of the Apatouria indicates familiarity with the names of phratries and *genê*, but this familiarity was not lost overnight; and the idea of identifying phratry eponyms as kings of Attika who had not been incorporated into the group of ten tribal eponyms established by Kleisthenes may well belong to the period after his reforms.

A third early king who was also a phratry eponym, Medon, has a peculiar status. The term *medôn* means 'ruler', so the phratry name Medontidai is parallel to the name Basilidai attested for Ephesos and Erythrai, in both cities supposedly denoting a hereditary oligarchy that held power in early times.⁴² Both the stories attached to king Medon concern kingship. In the first, his right to rule is challenged by his brother Neleus because Medon is lame; when the Delphic oracle supports Medon, Neleus leaves to lead migrants to Ionia. In the second story, Medon gives up his kingship and takes instead the position of 'archon for life'.⁴³ The first story belongs to the context of Athens' claims to be the metropolis of

⁴¹ Plotheia contributed to a festival Anakia (*IG* i³ 258). Cf. ch. 24 n. 50.

⁴² Suda s.v. *Pythagoras Ephesios*; Ar. *Pol.* 1305b 18–22. The Attic Medontidai were taken to be a *genos* until *Agora* XIX P 5 showed them to be a phratry (cf. nn. 127, 153); since Thymaitis also had a king as eponym, we do not need to postulate a *genos* Medontidai in addition to the phratry. On Medon see Carlier 2005. It is not necessary to attribute either Solon or Peisistratos to the Medontidai (comm. *FGH* 323a F 23, nn. 16, 70). Wilhelm 1940*b* restored [Me]donti[dou] in *IG* ii² 2411, but Traill (*Agora* XV 72) reads —AONTI—; there is a Medontis in *IG* ii² 12050, 4th c.

⁴³ Hellanikos *FGH* 323a F 11, 23, with comm.; Paus. 7. 2. 1, Ael. *V.H.* 8. 5. Neleus was worshipped in Attika with Kodros and Basile, *IG* i³ 84 (the shrine was called the Neleion); possibly the colonization story explained his absence from the king list, but there seems to have been an independent tradition about him at least at Miletos (Jacoby, *FGH* loc. cit.). On the Ionian migration see ch. 18 at nn. 3–4. Jacoby attributes the second story to Kleidemos (it seems to have been known to Ephoros, D. S. 8. 22, *FGH* 90 F 49, comm. *FGH* 323a F 23, p. 46), but Hellanikos should not be excluded. On the archon's oath, *A.P.* 3. 3, see P. J. Rhodes 1981*a*, 100–1; it evidently contained Akastos' name, and a variant attributes

Ionia, and is therefore not likely to be much, if at all, earlier than the sixth century; the second may be a rationalization of the name Medon, and is also related to the tradition that the Athenian archons' oath was first sworn by or in the reign of Medon's son Akastos.

One might say, then, that whereas Solon's legislation on citizenship had given the phratries new, modern functions by incorporating them into the machinery of the state, Kleisthenes' reform reorientated them towards conceptions of history and tradition. The Apatouria became one of Athens' major public holidays; not, like the Panathenaia or City Dionysia, an occasion for watching organized events in the city, but a vacation period in which city dwellers took to the roads and returned to villages with which their families had past ties, for three days of informal, rustic jollity.⁴⁴ There will also have been other local religious festivals for which phratry officials and priests were responsible, and the process by which these passed into deme control must have varied considerably as a function of the relations between phratry and deme boundaries, whether leading families of the phratry were still resident in its centre, were distributed among two or more demes in the area of the phratry, or had moved to the city, etc. In the early years after Kleisthenes' reforms, leading families now registered in city demes may have concentrated on deme rather than phratry affairs (cf. ch. 20 n. 69 on Kimon).

FUNCTIONS

Since almost all our evidence for local cults comes from the post-Kleisthenic period, it will be easier to consider the question of the transfer of cults from phratry to deme in the analysis of demes, in chs. 23–32. It should be stressed here, however, that there is growing evidence from other areas in the Greek world for the variety of cults attached to phratries and their shrines. The list of festivals celebrated by the Labyadaï at Delphi, which included cults of Hera, the Dioskouroi, and Herakles, in addition to Apollo (*CID* 9 D; cf. R/O no. 1, Jacquemin a. o. 2012 no. 30), provides a good example. The sanctuary used by

the life archonship to him. All this is sophistic erudition. In addition, the *Certamen* (§ 16) makes Homer a guest of King Medon in Athens.

⁴⁴ N. F. Jones 1999, 207–8 (followed by Papazarkadas 2011, 164) thinks that it became common for urban residents to celebrate phratry festivals in the city (as some Demotionidai appear to have done c.413–397; cf. Xen. *Hell* 1. 7. 8) even in peacetime; but the provisions for travel time at the Apatouria (n. 63) do not support this view. Travel may also be implied by the provision of *IG* ii² 1237 B 59–64 (Demotionidai) for 5 days' notice of a change of venue for sacrifices; though the provision in B 71–8 for cases in which fewer than 3 members of the sponsor's *thiasos* are present may suggest some reluctance to travel. (Ismard 2010, 324 wrongly cites Lambert 1993 as suggesting that not all phratries celebrated the festival on the same date.)

the *patrai* of Thasos, plausibly identified with the Thesmophorion (Rolley 1965; cf. Grandjean 2013), was used for sacrifices to Zeus, Athena, Artemis, and the Nymphs. The Samian Apatouria included a sacrifice by women to Kouroutrophos, at the crossroads, which men were not allowed to attend.⁴⁵ Women must certainly have celebrated festivals in Attika before Kleisthenes' reforms; possibly, since women who married outside their own phratries would change phratry at marriage, and decisions about responsibility for festivals would be made by men, women's festivals may have been taken over by demes at a relatively early stage.

The only cultic function that phratries undoubtedly retained throughout their existence was responsibility for the Apatouria and the *gamêlia*, *meion*, and *koureion* offered at this festival. At least one phratry continued to meet for the Thargelia (Isaios 7. 15), but we do not know that this was true of all phratries (perhaps more likely for those with a base in or near the city?). Papazarkadas 2011, 167 suggests that Dyaleis held a meeting in Elaphebolion. Nor do we know that all phratries required members to sacrifice the *meion* for newly born children and to offer *gamêlia* in the year of their marriage. There will however have been some pressure from members of feasting groups (*thiasoi*) to claim contributions on these occasion if they were aware of births and marriages, and some concern on the part of phratry members whose affairs might be suspected of some irregularity to ensure that they had witnesses to the acceptance of these offerings.

It seems by now solidly established that *gamelia* were offered by a husband introducing his wife to fellow phrateres. The *meion* was sacrificed for a child in its first year,⁴⁶ and the *koureion* was sacrificed for boys at sixteen (Labarbe 1953; Lambert 1993, 165 is doubtful). At the time when the *koureion* was sacrificed for a boy he also cut his hair, but this does not seem to have been a prominent element in the phratry ritual. A wine offering, however, was probably required

⁴⁵ *Vita Homeri* 29–30. There seems also to have been variation in the deities associated with the Apatouria: Phanagoreia, a colony of Teos, had a cult of Aphrodite Apatouria (Guarducci 1937–8 I, p. 76); Athena Apatouria was worshipped at Troizen, with offerings from girls about to be married (Paus. 2. 33. 1, Schmitt-Pantel 1977). On Apollo Patroios in Athens see n. 126.

⁴⁶ Evidently the *meion* could be sacrificed late: n. 82 below), cf. Ar. *Frogs* 422, Andok. 1. 126–7. The term might mean 'the lesser sacrifice' (compared to the *koureion*; cf. Chantraine 1968, Frisk 1960, s.v., but see R. Parker 2005a, 459 n. 12), and there seems to have been some process of inspection of the lambs (ch. 9 nn. 18, 54). It may however have been Aristophanes (in the *Dramata*, F 299 PCG, cited by schol. *Frogs* 798, and in this passage of *Frogs*) who introduced the idea of a weighing connected specifically with the *meion*. In *Dram.* the speaker is worried that his lamb will be judged too light; the text may be corrupt (PCG F 299: see Lambert 1993, 168–9 n. 146). Apollod. *Peri theôn*, FGH 244 F 108, says that at the inspection the phrateres would call for a lamb to be weighed if it appeared too small; this view seems preferable to the claim (going back to Eratosthenes' *Peri kômôidias*) that all lambs were weighed, but both explanations are probably speculative. Calame 1990, 323, confuses the Choes with the *meion*, which seems to me a mistake (cf. also Burkert 1985, 255). All references to sacrifices at the Apatouria are to lambs, except the pig of the Salaminioi, *Agora* XIX L 4a 92, so the pig-sacrifice relief discussed by Palagia 1995 (cf. Vikela 1997 n. 26) must commemorate a different occasion.

and may have been supervised by the *oinoptai*.⁴⁷ We do not know whether the gamelia required a sacrifice or merely wine and food to be consumed by fellow phrateres,⁴⁸ nor whether the meion was required for daughters as well as sons.⁴⁹

For further information on phratry ritual we have to turn to two problematic sources: the Oschophoria as (in my view) reorganized by Kimon c.476, and Aristophanes' *Peace*.

It was argued in ch. 18 that Athens had a conglomeration of rituals associated with different groups and contexts which all clustered around the summer solstice, and which were given calendar dates and a fixed sequence only when the city's festival calendar was set down in writing, probably at the time of Solon. The phratries' share in this complex of rituals consisted of perhaps the Thargelia, which farmers would celebrate in their villages at the beginning of the harvest season, and the Synoikia, for which they would congregate in Athens after the intensive work of the grain harvest was done.

The phratry year, however, like the agricultural year, began in Pyanopsion (October–November) and not in midsummer. The fruit harvests were completed, and newly adult boys whose testicles had swelled like the fruit⁵⁰ were admitted to

⁴⁷ A. Chankowski 2010, 72–81, accepts 16 as the age of phratry admission, but with a complicated and unpersuasive argument linking the expression *epi dietes hēban/hēbēsai* to his belief in a more-or-less formal ephebate introduced in the early 4th c. (115–42); cf. id. 2014. *Koureion* is probably derived from *keiro* rather than *kouros/koros*; *koureion* appears as a shearing sacrifice in LSAM 39 (Thebes-by-Mykale, 4th c.). In Gleontis boys may have offered their hair to the Kephisos; although the procedure envisaged in *Il.* 23. 144–8 is irregular (Achilles has promised to offer a lock of hair and 50 fullgrown rams to Spercheios if he returns safely from Troy; it seems to be assumed that he will reach manhood during the campaign), the association between haircutting and rivers may be derived from a regular ritual for adolescents. Cf. Burkert 1975, 18; ch. 9 n. 29; S. F. Schröder 1986; Diggle 2004, 406. Wine offering to Herakles, see Lambert 1993, 163; n. 69 below.

⁴⁸ Sacrifice in Hsch. s.v. *gamēlia*; Ar. *Peace* (see below at nn. 60–73) has a sacrifice, but he may be combining elements from more than one of the Apatouria rites; game and special breads are also mentioned. The priest of the Demotionidai got no perquisites from gamelia. The Labyadai (*CIDI* 9 = R/O 1) offered *darata*, apparently a form of bread, for weddings and the birth of children (*gamela* and *paidēia*), and sacrificed only for the introduction of new members (*apellaia*); all these offerings had to be formally approved by the phratry. Wives are introduced to the group in *IG* xii *suppl.* 303 = R/O 61 (Tenos, late 4th/early 3rd c.). If gamelia had in early times been directly linked to weddings, as in the *Peace*, dispersal of phratry members to live at a distance from the centre will have made gamelia problematic (cf. ch. 9 at n. 47).

⁴⁹ Is. 3. 73 shows that the idea of offering the meion for a daughter was not unthinkable (cf. Plat. *Laws* 785a–b), but the statement there that meion and gamelia were required by the law of Pyrrhos' phratry suggests that the requirement was not universal. Lambert's idea (1993) that the meion was required only for epikleroi is untenable, and incompatible with Is. 3. 73, since a girl was not technically epikleros until her father's death. Pace S. G. Cole 1984, 237, it is not difficult to assume that at least some women passed from attachment to their father's phratry to that of their husband.

⁵⁰ The words *ōschos* (vine-branch with grapes on) and *oschea* (testicles) seem to have been felt to be related, and the suggestion of LSJ that we should read *ōschon* in Ar. *Ach.* 995 for MSS *kladon* is attractive (the chorus' visions of peace include suggestions of sexual pleasure as well as replanting the farm). Cf. *Et.* M. 619. 32 (s.v. *oischos*): *klēma botruas pherōn orgōntas kai gennaious*. Calame 1990, 325 thinks the pun

the phratries; in the same month, women celebrated the Thesmophoria and new seed was placed in the ground; the Apatouria was also a time for marriages.

THE OSCHOPHORIA

The ritual calendar for Pyanopsion began with the Oschophoria on the sixth of the month,⁵¹ the Pyanopsia on the seventh, and the Theseia on the eighth. Women's celebrations began with the Stenia on the ninth and continued through the Thesmophoria on the eleventh to thirteenth. The torch race in honour of Prometheus may also have taken place about this time, perhaps on the fourteenth.⁵² The Apatouria were celebrated over three days some time between the nineteenth and the twenty-fourth, or the twenty-sixth and the twenty-eighth; the Chalkeia, in honour of Athena and Hephaistos, were celebrated on the last day of the month.

The Oschophoria and Pyanopsia seem to use related sets of symbols drawn from the domain of food preparation to represent the transition from primitive life to civilization: at the Pyanopsia, from the boiled pulses which gave the festival its name to the figs, bread, honey, oil, and wine cup hung from the eiresione branch which boys carried from house to house, and at the Oschophoria from the grapes carried in the procession to the bread, meat, and (probably) wine provided by the *deipnophoroi*.⁵³

was invented by lexicographers (but *orchon* has similar connotations in the same passage, Henderson 1975, 125, 162). Pouilloux 1954*a*, Knoepfler 1989, and Salviat 1992 all put the beginning of the Thasian year in Apatourion (Trümper 1997, 68–9 disagrees). Cf. discussion of the ritual in Koutsoubou 2012.

⁵¹ The Salaminioi sacrificed an ox to Theseus on the 6th (*Agora XIX L 4a*), and it seems likely that this was their contribution to the Oschophoria, to which the state also contributed; the state's Theseia were celebrated on the 8th and the Oschophoria can hardly have been later. Thorikos sacrificed to Neanias in Pyanopsion, probably at the Pyanopsia. On all these dates see Mikalson 1975. Calame 1990 dates the Oschophoria on the 7th; N. D. Robertson 1992 (followed by Jameson 1994*c*) puts the festival in Boedromion, when the Salaminioi sacrificed to Poseidon Hippodromios, Phaiax, Teukros, and Nauseiros.

⁵² This date is suggested by N. D. Robertson 1985. The resemblance of the Thesmophoria to the festival of new fire at Lemnos (Burkert 1970*b*) might provide some support for dating one of the Athenian torch-races to Pyanopsion, but the race for Hephaistos is usually associated with the Chalkeia, and two torch races within three weeks is perhaps unlikely. Even the assumption that [Xen.] *A.P.* 3. 4 lists the races (Panathenaia, Prometheia, Hephaistia) in calendar order is not certain; a reference to gymnasiarchs may have dropped out (J. K. Davies 1967), and Polemon F 6 Preller 1838 has Panathenaia–Hephaistia–Prometheia.

⁵³ Calame 1990. He thinks there was a race with vine branches as well as a procession at the Oschophoria, but the arguments of Jacoby (*FGH III B suppl. ad 328 F 14–16*) are not seriously addressed here, nor in R. Parker 2005*a*, 173–7, Pilz 2011. Calame therefore includes the *pentaploa* drunk by the victor in the race (in Jacoby's view at the Skira) in the food symbolism of this festival. In pre-Kimonian times, at least, a race at the Oschophoria could hardly have been a tribal relay race, and I do not think we have evidence of individual races in which the runners had to carry something fragile (torches blow out,

There also seem to me to be close links between the Oshophoria and Apatouria. The procession from a temple of Dionysos in Athens to the sanctuary of Athena Skiras at Phaleron was led by two adolescent boys dressed as girls and carrying grape branches. When the participants had arrived at Phaleron there was a ritual supper; the following day, the procession back to Athens was accompanied by mixed shouts of joy and mourning, 'Eleleu, Eleleu!' and 'Iou, Iou!' In the Kimonian interpretation, the disguise of the Oshophoroi and the ritual supper were associated with the departure of Theseus for Crete⁵⁴ and the ruse of disguising some of the young men taken as tribute for the Minotaur in female clothing; the return procession was associated with Theseus' return and the story that he failed to change the black sail of his ship for a white one, and thus caused his father's death. Theseus' legend was in any case full of initiatory tests and exploits, but the expedition to Crete counts among these; it included the episode in which Poseidon acknowledged that he was Theseus' father.

My suggestion is that before the reinterpretation of the festival by Kimon the Oshophoria was a ritual carried out by the *genos* Salaminioi as a prelude to the Apatouria. After processing from Athens to Phaleron, they ate the supper on the evening of the feast, the Dorpeia, in their own sanctuary of Athena Skiras at Phaleron,⁵⁵ and on the following day proceeded to Alopeke (their candidates for phratry admission wearing black cloaks? n. 28) for the phratry sacrifice to Zeus Phratrios and Athena Phratia.⁵⁶ The Oshophoria and Apatouria may have become separated even before Kimon's day, although it is also possible that the choice of a date for the Theseia required rescheduling of the Oshophoria. Thesmophoria and Apatouria seem to belong to a single turn-of-the-year complex; at the Thesmophoria men left the city and women took over, and the festival was associated with the sowing of new seed; at the Apatouria the phratries began a new year. The process of mapping local sequences of Proerosia/ploughing—Thesmophoria/sowing—Apatouria onto a single calendar sequence which gave

Frogs 1087–98, vine branches break; cf. R. Parker 2005*a*, 213 n. 95). A tribal race introduced by Kimon (in imitation of the Skira?) is possible; it might be considered aptly to symbolize the anxieties of the transition to adulthood, and would prefigure the games of the Apatouria. Note Calame's analysis of the links between the Thargelia and Pyanopsia.

⁵⁴ Note that according to Kleidemos (*FGH* 323 F 17; cf. 328 F 111) Theseus assembled his fleet for the attack on Crete at Thymaitadai, i.e. St. George's Bay; this detail forms part of a rationalizing criticism of the whole myth attached to the Oshophoria, but phratry rivalry may also be involved. Cf. M. C. Miller 1999 on transvestism; Waldner 2000, ch. IV.

⁵⁵ The *deipna* were, or included, loaves offered in the shrine of (Athena) Skiras, and subsequently distributed (R. Parker 2005*a*, 215). Deipnophoroi for the Kekropidai, Philoch. *FGH* 328 F 164a; Dorpophoroi as minor deities, associated with nymphs, on Paros, Tiverios 1975.

⁵⁶ For Alopeke see Humphreys 1990*a*, and below at nn. 173ff. I wonder whether the practice of wreathing the herald's staff might be linked to some early method of spreading the news through Attika that the time had come to celebrate the Apatouria (the Salaminioi, however, had their own herald).

a special place to celebrations in Eleusis and Athens may well have produced a spacing out of rituals that had once been more closely linked.⁵⁷

Kimon, in any case, took a *genos* ritual which had lost some of its importance as a result of Kleisthenes' reforms, gave it a new interpretation, and placed it in a new ritual sequence as prelude to the Theseia. Details of correspondence between myth and rite were no doubt worked out only gradually, both in the oral tradition of festival explanation and by the Attidographers, and contradictions remained: for example, the compression of the whole of Theseus' expedition and return into a two-day festival was problematic, and generated an alternative view in which the departure was commemorated by the offering of a suppliant branch to Apollo and Artemis on Mounychion 6.⁵⁸ Kimon's choice was no doubt multiply determined; he had brought the bones of Theseus back from Skyros at the end of his campaign, which orientated the search for Theseian elements in ritual towards autumn; concern with his own family's mythical ancestry would have aroused his interest in the Salaminioi, who also claimed descent from Ajax; Theseus' expedition to Crete provided a mythical charter for Athenian seapower. There is no suggestion that his choice was made in a cynical and rational calculation; rather, his practical and mythical preoccupations would make him receptive to signs that the Oschophoria was 'really' a commemoration of Theseus' journey to Crete.⁵⁹

As usual (Humphreys 1999; cf. Stein-Hölkeskamp 1999) Kimon acted with a brilliant flair for the use of political symbolism. Kleisthenes' reforms, rather than excluding the phratries and *genê* from the symbolic repertory and milieu of Athenian politics, opened up opportunities for restructuring the control of ritual power.

⁵⁷ The official announcement of the Proerosia was sent out from Eleusis on Pyanopsion 5, but the date of deme celebrations remained variable even in the classical period (ch. 22 n. 108; Mikalson 1975; R. Parker 2005a, 479). The Eumolpidai in 152/1 held a *genos* meeting on Pyanopsion 5 *kat' archonta*, 16 *kata theon*, possibly in connection with this announcement (*Hesp.* 1942, 293–8 no. 58; on dates *kata theon* see Roesch 1982, 60–8; Pritchett 2001, 88–91). In Ionian cities that have a month Apatouria, it often follows Pyanopsion, which suggests that the Apatouria were celebrated late in that month.

⁵⁸ Mikalson 1975; the association with Apollo Oulios and Artemis Oulia may go back to Kimon's own day (Pherekydes *FGH* 3 F 149; ch. 20 n. 65); on Kimon's use of Theseus, and claims made in his time that Ajax was Theseus' son, see Barron 1980. It may even be relevant that the ritual calendar of the Salaminioi began in Mounichion; however, the first sacrifice that the *genos* itself financed concerned Herakles.

⁵⁹ Calame 1990 rejects the interpretation of Theseus' voyage as an initiation, but I am not clear that we are in serious disagreement. Oddly, the Apatouria do not figure in his analysis. Note p. 320 on Apollo Delphinios' association with citizenship. On Theseus' voyage see also N. D. Robertson 2005. The mental process envisaged here is what Gernet (1948) called 'composer dans le fil de l'imagination légendaire' (cf. Humphreys 1978, 91); preformed cultural associations (links between the Oschophoria symbolism and the transition to adulthood, Theseus as the quintessential *ephebos*) laid the ground for an elaboration experienced as recognition of what was already implicit in the ritual.

ARISTOPHANES' *PEACE*

Our best guide to the ritual of the Apatouria is Aristophanes' *Peace* (421), which contains an extended parody of the festival lasting from Trygaios' return from Heaven with Peace, Harvest-Time, and Public Holiday (Theoria) in line 819 to the wedding song at the end of the play.⁶⁰ Trygaios arrives late in the evening of Dorpeia, he has had a long journey, his legs are tired, and the village seems small and primitive after his travels, as it might to a city dweller returning to his rural phratry base.⁶¹ Some of the richer phrateres are making their way home by lantern light after the communal *deipnon* to spend a comfortable night in bed; these are the shooting stars he passed on his way through the sky, and there may be an allusion to the procession of grandly dressed persons carrying lamps in honour of Hephaistos which Istros (FGH 334 F 2) attributes to the Apatouria.⁶² Trygaios himself, with a new bride, is happy to fuck and sleep soundly in the fields with the rest. First, however, he must give Public Holiday to the Council⁶³ so that they can get her legs up in the air and celebrate Anarrhysis—the second day of the festival—with everyone else. As he hands her over he describes the joys in store: you will be able to organize a competition tomorrow (on Anarrhysis) in wrestling and boxing, and the next day horse-racing and chariot-races.⁶⁴

⁶⁰ The first reference may even come with the herald's proclamation in 550–1. A. M. Bowie 1993, Olson 1998, and Scullion 2005 miss these references, though Bowie notes possible links to the Hermaia (adolescents) and the Demeter–Kore myth (Thesmophoria?). Lambert 1993, 158–61 deals with only some of them (not without misunderstandings). On Aristophanes' parody of rituals see also Habash 1997. The seasonal indications in 1140–70 are vague, beginning with the autumn sowing but then looking back to the ripening of the first grapes and figs (Oschophoria, Pyanopsia; note the beans of line 1144). In the second version of the play Opora (or Theoria) was replaced by Georgia (PCG F 305). Trygaios' name refers to the grape harvest.

⁶¹ 'The place looked small from up there—and, I must say, pretty unpolished. And now I'm here, you look coarser still' (820–3).

⁶² As Jacoby (ad loc.) points out, Istros' conception here of Hephaistos as fire-bringer and Athens as the place where fire was introduced is late; if Istros' procession is to be dated to Dorpeia there may have been some changes between Aristophanes' day and his (cf. ch. 9 n. 31).

⁶³ In 323/2 or 366/5 the Council and other officials got 5 days of holiday (Athen. 171a–e; we should of course, *pace* Lambert 1993, 156, accept Wilamowitz' emendation of *boulai* to *archai*); in 421, the year of the Peace, probably only 3 days. The holiday always began on Dorpeia (the statement of the Prologue of Philyllios' Herakles, PCG 7 F 7, 'I am Dorpeia of the *protenthai*', does not mean, *pace* Lambert 155–7, that their day of service was the day preceding the Dorpeia); an extra day for phratry business after Koureotis may have been added at some time in the 4th c. (cf. below, s.v., on the Demotionidai and the tendency to separate ritual from business). It is also possible that the Chalkeia, a festival which increased in importance from the later 4th c. (Humphreys 1985a = 2004, 102, n. 61) was the 5th day of the holiday.

⁶⁴ Did the games take place while the victims were cooking? On Koureotis the participants would be young men from rich horse-owning families, whose victims would no doubt be sacrificed first. I return below to the question when phratry business was done. Trygaios' day ends with wine drinking, perhaps the *oinistéria*.

The second day starts with a sacrifice, described as ‘settling Peace in with pots’ (line 923). *Hidruô*, ‘settle’, was used of sacrifices made at the consecration of a new altar or foundation of a new cult, *chytroi* were the pots used to boil the soups eaten at the Thargelia and Pyanopsia; Aristophanes may be thinking of a reconsecration of rural phratry altars after the period of war, and of a return to the simple diet of village festivals. There are also however, clear references to the sacrifices of the Apatouria.⁶⁵ Trygaios supplies his own lamb; he is celebrating the gamelia. The reference to women getting their share of *krithê* (barley/penis) when their husbands bring it home in the evening is problematic for our understanding of the Apatouria as well as the theatre; at a festival at which brides and babies were ‘introduced’ to the phrateres women must surely have been present, but it is possible that they were expected to remain on the margins of the group and either did not receive a share of meat or often had occasion to complain that they were served very late.⁶⁶

On Koureotis, the third day of the festival, many lambs were cooked and the phrateres would divide into separate feasting groups, for each of which the member or members who had sacrificed at the festival would act as hosts. Pedlars and scroungers would wander from one group to another, hoping for a share of innards or meat; Trygaios is pestered by a religious expert and subsequently by salesmen. He adds further items to the feast—choice types of bread, and game⁶⁷—and listens to two boys rehearsing the songs they will sing at the party, as Plato tells us boys did on Koureotis (*Timaios* 21b).⁶⁸ Finally, he and his bride are escorted home by a crowd of wedding guests singing a hymenaion.

Aristophanes tells us nothing about the conduct of phratry business, which may have been a rather brief affair in the fifth century: the only essential items were to elect a phratriarch for the coming year, and to conduct *enthynai* of outgoing officials if they had managed phratry funds. This may have been done on the second day of the festival; as we shall see, the Demotionidai at the beginning of the fourth century find it necessary to set up new arrangements for voting on candidates for admission and settling disputed cases.

⁶⁵ A reference to games, line 950. Aristophanes did not of course have to follow a single ritual item by item (ch. 9 n. 47), but a fairly close correspondence deepened the audience’s appreciation of the parody. In Aristoph. *Danaides* (PCG F 256) the altar of Zeus Herkeios has been founded with *chytroi*; this may be a reference to phratry practices (see PCG comm.; A. Bowie 1993).

⁶⁶ On women in theatre audiences see Goldhill 1994, Spineto 2005. See also S. G. Cole 1984 on women and phratres (n. 48); Lambert 1993. R. Parker 2005a, 458 doubts whether they took part in the Apatouria.

⁶⁷ These may have been the typical gamelia offerings in phratres where there was no sacrifice for the gamelia (cf. the *darata* of the Labyadai, *CID* I 9); Aristophanes may here be combining the sacrifice of the koureion with other contributions made for the gamelia.

⁶⁸ Cf. *Eccl.* 677–8, perhaps another reference to the same custom.

Trygaios does not encounter two boards of phratry officials attested for the Apatouria, the *protenthai*, ‘foretasters’, and the *oinoptai*, wine supervisors, although Aristophanes made a joke about the one-day office of the protenthai in the first version of his *Clouds*. Since they served on Dorpia only, they were perhaps responsible for providing some of the food or religious offerings set out on that date. Athenaios thinks of them as ‘a kind of group (*syntēma*) like parasitoi’ (171c–e); they may have provided *trapezai* for the phratry gods and dined in state themselves. The oinoptai may have served on the same occasion; both were surely phratry liturgists and not state officials.⁶⁹

Even at the time of Kleisthenes’ reforms, if there were only thirty-six phratries, they will have been large bodies, containing on average about 800 adult male members;⁷⁰ there is some evidence in any case that phratry boundaries tended to be more extensive than those of demes.⁷¹ Given the decentralized mode of sacrifice, members contributing victims according to their family circumstances, it is likely that the division into thiasoi attested in the fourth century was an early feature. Whatever the original name given to the groups, it is likely that phratries were divided into smaller sets of fellow feasters whose members habitually clustered together to share meat. Kin will normally have feasted together, unless they were on bad terms, but there will have been some freedom of movement, some coalescence of those with a shared deme affiliation, close affinal ties, or other interests in common.⁷² In the *Iliad*, Andromache imagines Astyanax, after his

⁶⁹ Cf. the material collected in Jameson 1994b. *Protenthai*: note *tenthēs* l. 1120. A connection with the weighing or inspection of lambs (above, n. 46) is perhaps doubtful, given the insistence that the duties of the protenthai began and ended on Dorpia. *Oinoptai*: Athen. 425a–b (Eupolis *Poleis* F 219 PCG 5, Lykourgos F VII 5 Conomis 1970, Phot. s.v. = Didymos p. 38 Moritz Schmidt 1854). The three oinoptai of the Krokonidai, who had a cheap liturgy (Lykourgos F VII S Conomis 1970, *ibid.*), and had to provide lamps and wicks (as well as wine?) may have served at the Theoinia (ch. 20 n. 119), and thus may not represent regular phratry practice. It is possible that each phratry thiasos had its own master of ceremonies, as dining parties usually did. Pace Lambert (1993, 154–5) Eupolis’ contrast between generals and oinoptai does not imply that the latter were state officials. The *oinistēria* seem to be associated with Herakles and hair-cutting rather than being a formal part of the Apatouria; there may well have been local variations (Van Straten 1979), and the companions who shared the wine may at least in some cases have been other young men, gymnasium associates, rather than fellow-phrateres (though Pollux calls it an *epidosis* to the phratry). See Hsch., Phot. s.v. *oinistēria*; Pollux 3. 51–3, 6. 22; Eust. *Il.* 907. 18; Athen. 494 f (= Eupolis F 146 PCG 5, Pamphilos’ lexicon, 1st c. CE). The term *ephēboi* in these entries does not show that the institution was later than the demes or the ephebate.

⁷⁰ The stock figure in ancient texts for the citizen population at the time of the Persian wars was 30,000 (Hdt. 5. 97, 8. 65). I do not know whether we should imagine that very uneven numbers in phratries made it easier for the Athenians to accept uneven size in demes. Cf. n. 174.

⁷¹ The Demotionidai had at least one member from Oion Dekeleikon in addition to those from Dekeleia; the phratry based at Alopeke had members also from Agryle, Kedoi, Euonymon, and Paiania (below, s. *IG* ii² 2345); the Medontidai had members from Gargettos, Melite, and Xypete, and were perhaps based at Kephale (below, n. 127).

⁷² Kinship might of course be combined with other factors.

father's death, wandering forlornly from group to group at a festival and being chased away by another boy because 'Your father does not dine with us';⁷³ the poet may have had groupings like the phratry thiasos in mind.

THE FIFTH CENTURY

The whole atmosphere of Aristophanes' scene is far removed from the formalities of public life. Nevertheless there was legislation on entry to phratries in the fifth century. Perikles' law on citizenship of 451/0 specified that from henceforth only the legitimate children of Athenian parents on both sides were entitled to the status of citizen or (in the case of women) *astê*,⁷⁴ woman of the city; technically this law only applied to demes, but a law quoted by Krateros (*FGH* 342 F 4) specified that anyone exercising phratry rights who was of foreign parents on both sides could be prosecuted in the court of the *nautodikai* (who dealt with cases concerning foreigners), on the last day of the month.⁷⁵ The logic of this ruling may be that it was preceded by a clause stating that Perikles' law was not to be applied retrospectively: phratry members with foreign mothers were to continue in their rights, but if anyone who had a foreign father as well as foreign mother was enjoying phratry membership he could be prosecuted in an equivalent of the *graphê xenias* used against those who exercised citizen rights illegally.⁷⁶ The natural assumption is that this rule is part of Perikles' law or of additional legislation passed in the next few years to clarify disputed points that had arisen since its passage, possibly at the time of the controversies over rights to citizenship generated by the gift of corn from Egypt in 446/5.⁷⁷ The concepts of valid

⁷³ The picture is presumably exaggerated, since Astyanax had kin. Cf. also Aesch. *Eum.* 656; Is. 9. 33.

⁷⁴ On this term see C. B. Patterson 1981.

⁷⁵ Prosecution was restricted to 'those with legal capacity', i.e. adult citizens not subject to any form of *atimia*.

⁷⁶ *Xenias*: Is. 3. 37. One cannot assume that the son of an Athenian mother and a foreign father was entitled to enter a phratry before this law was passed (*pace* Sealey 1987, sons of *epikleroi* would hardly come into question). The passage quoted is not concerned with defining the criteria of eligibility for citizenship, but with procedure. It has of course no bearing on the (hypothetical) question whether bastards who claimed to have two Athenian parents could become citizens, on which see Humphreys 1974; P. J. Rhodes 1978; C. B. Patterson 1990; Ogden 1996; ch. 22 n. 45. The *nautodikai* existed by 444 and continued to function until c.350. They were evidently created to take over part of the polemarch's load of cases concerning non-citizens, and hence were in existence at the time of the decree for Phaselis (*IG* i³ 10), which implies that there was an alternative to the polemarch's court. However, that decree may well belong to the period after c.454 (*SEG* 51. 27), when Athens was anxious about her position in the E Mediterranean; it is not necessary to assume that it preceded Ephialtes' reforms, since the presiding magistrate continued to declare the court's verdict (*dikazein*) even after the introduction of jury courts (Thür 2004).

⁷⁷ Andrewes (1961), who assumed that Perikles' law applied only to those born after it was passed, thought that disputes would become problematic only c.435, when sons of non-Athenian mothers born

marriage, legitimacy, and citizenship had been related since Solon defined citizenship; because Perikles' law restricted valid marriage to Athenian couples, and offering gamelia in the phratry was still the most formal means of securing public recognition of a marriage, Perikles' law (unlike those of Kleisthenes, which had not affected conceptions of marriage and legitimacy),⁷⁸ must have had an impact on the phratries. The introduction of courts manned by large jury panels in 461 (Humphreys 1983*b*) meant that legal disputes got a wider airing, and points of ambiguity in law rapidly became evident.

Problems arose in the Peloponnesian War, not so much because the law was ambiguous as because the life of rural communities was disrupted. For a number of reasons, it may have been relatively easy for children whose credentials were doubtful to gain entry to phratries, and then use their phratry membership as an argument that they were entitled to deme membership and citizenship also. Controls on sacrifice of the meion seem never to have been strictly exercised; in a society with a high child mortality rate, kin would hesitate before embarking on major quarrels over the status of an infant.⁷⁹ Before the war, a formal vote on eligibility may have been rare; even later, the procedure of settling disputes on eligibility by challenging the sponsor to take an oath, attested in two cases, may have been widespread.⁸⁰ Traditionally, entry to the phratry had been controlled by the interest of kin in preventing recognition of illegitimate children, and the effect of shame on a man caught in a ridiculous or embarrassing situation. There

about 451 reached the age of phratry entry; he dated both Krateros' law and Philochoros' law (*FGH* 328 F 35; above, n. 3) to that period. My own view (Humphreys 1974) is that the law covered all those who were not already deme members when it was passed, and that the question of eligibility for phratry membership, if not already covered in the law, would rapidly be seen to be relevant. Modifications of oaths taken in phratries, to include the assurance that the candidate's mother was *asté* as well as married, may have been introduced independently. The fact that when the law was reformulated in 403 it only applied to those born after that year is not evidence for 451; Athenians were more aware of technical problems in legal drafting by 403 (Humphreys 1988).

⁷⁸ Kleisthenes probably put an end to the limited concession of citizenship to permanent immigrants granted by Solon, and perhaps defined the status of metic, resident alien (but see Bakewell 1997; J. Watson 2010).

⁷⁹ The Demotionidai (below), very punctilious about the koureion, did not vote on the eligibility of children for whom the meion was sacrificed. Lysias *Against Theozotides* (F LXIV 128–50 Carey 2007) argues against an attempt to exclude bastards from the subsidy which orphans received until they reached maturity (chs. 1 n. 102; 29 n. 69), but he seems to be quibbling; de facto the issue of their status was only resolved at 18, but kin would not claim for them unless strongly committed to their support (Carawan 2008 misunderstands the situation).

⁸⁰ Kallias III of Alopeke rejected a child presented to his genos as his for sacrifice of the meion, but later changed his mind and sponsored the boy; the Kerykes challenged him to take an oath, and allowed the sacrifice when he did so (Andokides' exposure of this story, 1. 126–7, probably made it impossible for Kallias to legitimize the child, if he still wanted to do so, when the boy reached adolescence; cf. n. 138 below). When Mantias of Thorikos' elder son by Plangon pressed for introduction to his father's phratry, Mantias challenged Plangon to take an oath, and accepted the result (Dem. 39; Humphreys 1989).

were, however, in the late fifth century, many Athenians who had too little property for their kin to concern themselves with questions of legitimacy; pupils of the sophists who did not care for shame or the sanctity of oaths; groups who would welcome a generous contributor without scrutinizing his credentials or those of his children. Even shame could work two ways, encouraging kin to settle their problems by illegal private compromise if the alternative was confrontation in the courts (ch. 7 at nn. 122–4). Phratryies were large bodies whose members had in many cases become residually dispersed in the course of the centuries; phratry membership was manifest only at phratry meetings, where members spent most of their time in small feasting groups. Whereas candidates admitted by demes were also subject to public inspection, and demesmen frequently had to state their affiliation in public, there were no such controls on phratry membership.

Comic poets, in the war period, play on this laxity. The demagogue Archedemos ‘hadn’t got his phrateres yet when he was seven years old’ (*Frogs* 420–4).⁸¹ Such delays could be excused. A client of (?) Isaïos explains that he was introduced to his father’s phratry at the age of three to four, probably because he was born out of Attika.⁸² Kleruchs must have been a problem for phratryies, as they were for demes. The tradition that law was relaxed in the later years of the war, to allow an Athenian man to beget legitimate children on a woman other than his wife, is problematic,⁸³ but the re-enactment of Perikles’ law in 403, to apply to all children born thereafter, but not retrospectively, indicates a consciousness that the situation had got out of hand in the war years.

THE DEMOTIONIDAI

The same feeling is revealed by the decree passed by the phratry Demotionidai in 396/5 (*IG* ii² 1237, *SEG* 49. 14, R/O no. 5), although there were special

⁸¹ Cf. *Birds* 764–5, and further material collected by Lambert 1993.

⁸² *POxy* 31. 2538, Lysias F A 3a Carey 2007; ch. 9 n. 19 (cf. *Lys.* 30. 2). The parents married in Selymbria, in the Black Sea, perhaps in the last decade of the 5th or the first decade of the 4th c., and the implication that the couple returned immediately to Athens, before their sons were born, may be false. The father was probably dead by the time of the speech, but may have been alive when the koureion was sacrificed; he had remarried after the death of the speaker’s mother and sired another son, who testified for his half-brother. For the possibility that Iphikrates sacrificed the meion late for his son Menestheus see *APF* 7737.

⁸³ Such concessions—known in a variant form in Sparta, Plut. *Lyk.* 15—were made for the sake of the childless men, but with an eye also to the needs of the state for military manpower. Women whose kin accepted such unions on their behalf, in Athens, were perhaps more likely to be metic than Athenian. The tradition is entangled in the question whether Sokrates had two wives (*D. L.* 2. 26); cf. C. B. Patterson 1981, 142–3; 2005, 284; ch. 32 n. 11.

circumstances in their case, since the phratry base Dekeleia had been occupied by a Spartan garrison from 413 to 404. The Spartan choice of this site, though perhaps principally motivated by its position on a defensible hill commanding one of the routes from Boiotia into Attika,⁸⁴ was perhaps also influenced by the presence of a local *genos*⁸⁵ which claimed descent from the hero Dekelos, who had helped the Dioskouroi find Helen when Theseus had seized her and hidden her at Aphidnai; descendants of Dekelos had privileges at Sparta, and in the early years of the war Spartan invaders had refrained from raiding or doing damage in Dekeleian territory.⁸⁶

Much has been written about the regulations of the Demotionidai, and they have recently been the subject of several very full discussions.⁸⁷ Rather than recapitulating previous debates, I shall give my own interpretation with a minimum of supporting analysis.⁸⁸

The legislating body is a phratry, Demotionidai, in which in 396/5 a smaller group calling itself ‘the *oikos* of Dekeleians’ occupied a special position. The *oikos* appointed the phratry priest, and this position may in the early fourth century have been restricted, *de facto* if not *de jure*, to a single lineage;⁸⁹ priest and *oikos* seem to have played a leading role in the campaign for reform. They were probably the beneficiaries of the privileges enjoyed by descendants of Dekelos at Sparta, and some at least seem to have remained in the deme during the period of Spartan occupation.⁹⁰ The priest set up the stele bearing the inscription at his

⁸⁴ See McCredie 1966, Ober 1985, 141–2, ch. 30 n. 45; the wall at Palaiokastros may have been built by the Spartans.

⁸⁵ I.e. a group holding rights to a local priesthood and/or (in this case) other hereditary privileges (see ch. 20). We do not know whether they claimed to be Eupatridai. (A similar view in Lambert 1993, 106, cf. 113–14, 117–18, but he thinks that this group passed the decrees.)

⁸⁶ Hdt. 9. 73, 6. 92; above, nn. 39–40. The privileges need not have dated from time immemorial, nor even from the sixth century. Sophanes, who belonged to the *oikos* of Dekelos and had a panhellenic reputation (Humphreys 1999; cf. Lambert 1993, 113–14), may have inspired the grant himself, or it may have been awarded to some other distinguished member of the *oikos*.

⁸⁷ Hedrick 1990; Lambert 1993; P. J. Rhodes 1997 (cf. R/O no. 5, still taking the *oikos* as the phratry), Lambert 1999b; Ismard 2010, 110–17 (*oikos* a group from the demes of Dekeleia and Oion Dekeleikon). A very good account in Carawan 2010, except for over-emphasis on contested adoptions, as opposed to issues of legitimacy and impostorhood. The *diadikasia* surely did not decide between rival heirs (a phratry could not do this), but between two views of the phratry candidate’s eligibility. Of course challenges would often be motivated by property interests—though not, apparently, in the similar case over deme membership in D. 57—but a victorious challenger would have to pursue these in the courts.

⁸⁸ The problems were essentially solved by Schoell (1889) and Lipsius (1894), but both articles contain eccentricities.

⁸⁹ See Hedrick 1990. Priests’ names were updated twice. The priest in office when the third decree was passed, perhaps c.360 (below, n. 106) was Theodoros son of Euphantides, and his predecessor’s patronymic began with the letters *EUPHA*—; the name Euphantides might be considered related to those of Phantias and Phanodemos in the family of Nikodemos (below, n. 105).

⁹⁰ It is unlikely that the priest left, and Nikodemos (below) may have buried his parents in the deme during the last decade of the 5th c. The Spartans may have encouraged landowners to stay and produce

own expense, and inscribed on it, before the first decree, the perquisites due to him from sacrifices of the *meion* and *koureion*; he presumably managed the phratry's finances, since he bore a major part of the responsibility for collecting fines, which were to be paid to Zeus Phratrios. The provision at the end of the first decree (52–8) that henceforth *meion* and *koureion* were only to be sacrificed at Dekeleia unless circumstances (i.e. war) prevented this, in which case he was to fix an alternative venue, was in his interests.

The proposer of the first decree, Hierokles, is otherwise unknown. His decree lays down that anyone who has not yet had his case decided (*diadikazein*) according to the law of the Demotionidai is to be heard immediately; anyone who loses his case is to have his name deleted from both copies of the phratry register,⁹¹ and his sponsor is to be fined 100 drachmas, the fine to be collected by priest and phratriarch. (In future, *diadikasiai* of candidates for phratry membership are to be held in the year after the sacrifice of the *koureion*, on the third day of the Apatouria.) There is, however, to be an appeal (referral) procedure for those subject to immediate vote in the present year. They may demand *epheis* to the Demotionidai, i.e., reconsideration of their credentials in a less summary procedure; the house of Dekeleians is to select five men over thirty to speak for the phratry at this hearing, under oath. The penalty for unsuccessful appeal is a fine of 1000 drachmas, to be collected by the priest, or by anyone else who wishes.

We may pause at this point. The phratry has a backlog of controversial cases that have not yet been settled; they arise either from a general re-scrutiny of all members, which some have hitherto avoided by absence or excuses of various kinds, or more probably from challenges to some *soi-disant* phrateres whose credentials are considered irregular.⁹² The probability is that conflict broke out after the end of the war between phrateres returning from the city, who accused those who had stayed in the phratry centre of collaboration, oligarchic sympathies, etc.⁹³ and the priest's party, who counterattacked by refusing to recognize

food for them. My view has points in common with Lambert's argument (1993) that the *oikos* is a phratry subgroup engaged in a process of fission; I think however that the decrees (of phratry, not *oikos*) represent an effort to halt this process.

⁹¹ Presumably one was kept by the priest, at Dekeleia, and the other by the phratriarch, who need not have been a local resident. The Dekeleians who had left the deme may have continued to elect phratriarchs during the Spartan occupation.

⁹² It is unlikely that there is a difference of meaning in this text between *diadikazô* and *diapsêphizô*. Both imply that the voter chooses between two alternatives: X is a phrater, or he is not. Strictly, *diadikasia* might imply a full trial process with time for argument, whereas *diapsêphisis* could be a vote without preliminaries, but all that can be said here is that where *diapsêphizô* is used there is more emphasis on the vote itself.

⁹³ Such accusations were rife in the early years after the war, despite the formal amnesty accorded to all but the leaders of the junta of the Thirty: see Loening 1987; ch. 14 at n. 39; 15, s.v. There may also have been Dekeleian oligarchs in the city; the Aristarchos who was appointed general by the 400 could have been the Dekeleian APF 1663, although Sypalettos (PA 1669, Is. 10) is another strong possibility.

the validity of sacrifices performed in the city. In either case, Hierokles' decree is designed to deal with a residue of hard cases and/or evasive defendants. No further delay is to be permitted; ready or not, present or not, their status is to be settled. They may, however, appeal, but under threat of a swingeing fine if they fail. The priest takes personal responsibility for collection of this fine, for which the current phratriarch and his potential successors are not required to engage themselves. The *oikos* of the Dekeleians is to play an active role in appeal cases, and its representatives will be under oath to maintain the purity of the phratry.

This interpretation convincingly explains peculiarities in procedure: appeal 'from Demotionidai to Demotionidai',⁹⁴ the special role of the Dekeleian *oikos* not in all future disputes but for one special occasion,⁹⁵ and the excessively large fine for unsuccessful appeal, which contrasts strongly with the fine of 100 drachmas for unsuccessful appeal from *thiasos* to phratry in Nikodemos' decree (below), passed only a few years later.

Hierokles continues: these provisions, however [that follow]⁹⁶ are to be valid from Phormion's archonship (396/5). The phratriarch is to put the question to the vote every year 'concerning those subject to *diadikasia*',⁹⁷ and if he does not he is to be fined 500 drachmas, to be exacted by the priest and anyone else who wishes. In future, *meion* and *koureion* are to be sacrificed on the altar at Dekeleia, and if anyone does not sacrifice there he is to be fined 500 drachmas, to be exacted

Among the deme's and very probably also the phratry's democrats we may count Oinobios, elected general by the restored democracy for 410/9. Pausanias' statements that there was a statue of him on the Akropolis, and that he proposed a decree inviting the historian Thucydides to return (1. 23. 9), are problematic; clearly the information about the decree was not derived from the statue base unless it was post-classical. See Hitzig and Blümner 1896 ad loc.; Schoell 1878. *AO* 186 dates the decree to the rule of the Thirty, which seems to me improbable. Cf. ch. 30 n. 49.

⁹⁴ *Ephesis* within a state always takes the litigant from a less sovereign to a more sovereign body, and the sovereign body in this case is the phratry (cf. Van Wees 2011a, 133–4). Hierokles may have adopted the term from deme procedure, in which appeal could be made to the city's courts, and the deme elected five representatives to speak for it (*A.P.* 42. 1). A sponsor whose candidate was rejected by a *genos* or phratry, if he wished to take the issue to court, apparently had to bring a private suit, perhaps a *dikê blabês* (cf. [Dem.] 59. 60 and chs. 7 at nn. 134–6, 24 nn. 75–7 on Is. 12).

⁹⁵ As Wilamowitz (1893) saw, if the appeal was to be part of regular procedure Nikodemos' decree (below) would represent a major change.

⁹⁶ *Tauta* (44–5) can be used for 'the following', as well as 'the preceding', but is less emphatic than *tade* (Kühner-Gerth 1955 II, 646). Hierokles' choice of word may have been motivated by the greater significance in his mind of the provisions for dealing with immediate problems, and by the wish to add *de* to *tauta* to mark a new section of his decree.

⁹⁷ The phratriarch is probably only obliged to arrange the hearing of cases in which objections had been raised when the lamb was led forward (and had not been subsequently settled by compromise). Determined opponents would certainly raise objections at that time. Other phratries voted 'while the sacrifice was burning' ([Dem.] 43. 14, cf. Is. 7. 16–17).

by the priest⁹⁸ . . . if for any of the foregoing reasons (lost) sacrifice at Dekeleia is impossible, the priest is to put up a notice specifying an alternative venue, in the place where Dekeleians congregate in the city, five days before Dorpia.

Hierokles' provisions for future years have the effect of separating argument from ritual;⁹⁹ they are no doubt motivated in a general way by the post-war crisis, which has introduced conflict and rancour into the holiday atmosphere of the sacrificial part of the Apatouria. Sacrifices are not to be held up while sponsors and their opponents argue over a single boy's lamb; objections will be registered and the problem will then be shelved for a year while the two parties mobilize witnesses, or the sponsor is persuaded to drop the candidacy.¹⁰⁰ An effort is being made to separate ritual from the more secular aspects of phratry business.

A second decree inscribed on the same stone, by the same hand, was evidently passed soon after the first, although under a different priest. The second to sixth lines, which contain a reference to earlier decrees, are inscribed *in rasura*, either because the stone cutter made a mistake or because the proposer, Nikodemos, had been responsible for a rider to Hierokles' decree.¹⁰¹ An earlier decree had specified that a candidate was to provide three witnesses at his *anakrisis*, a term commonly used of a preliminary hearing by a magistrate; conceivably here it refers to a brief hearing of objections at the time of sacrifice.¹⁰² Nikodemos specifies that these witnesses are to come from the sponsor's own thiasos and are to testify under oath, answering specific questions. If there are not enough *thiasôtai* present,¹⁰³ however, the sponsor may produce other phratry members as witnesses. At the diadikasia, the members of the sponsor's thiasos are to vote, by secret ballot, before the rest of the phratry, and the result of this vote is to be

⁹⁸ It is the sponsor (not, as Lambert 1993, 121, and P. J. Rhodes 1997 suppose, the phratriarch) who pays the fine; cf. R. Parker 2005*a*, 96 on the use of *thuein*. Dekeleia was c.20 km from Athens, 27 from Piraeus, and some of the phrateres resident in the city area who had become accustomed to meeting there might well be reluctant to make the journey, especially if they were not demesmen of Dekeleia.

⁹⁹ Dem. 39. 4, *eiségagen, epoiésato, hina ta'n mesôi syntemô, engraphei tois Apatouriois*, may imply that in Mantias' phratry too there was a delay when controversy arose.

¹⁰⁰ However, the sponsor cannot re-present the lamb in the following year without debate, as seems to have happened in the case of Euktemon of Kephisia (Is. 6; ch. 7 case 1; below, at n. 136). *Pace* Carawan 2010, a candidate whose lamb has been rejected has not been admitted to the phratry.

¹⁰¹ For epigraphic details see Hedrick 1990. Since there is not much room on the stone for an earlier text containing the specification about witnesses, it seems that these had been published elsewhere (Lambert 1993, 138 n. 138), and the *rasura* covers an error by the cutter.

¹⁰² It seems to me improbable that the phratriarch would hold a formal *anakrisis*, but Carawan (2010) disagrees.

¹⁰³ It is unlikely that Nikodemos is providing for cases in which a thiasos contains less than four men; more probably there were cases in which members not resident in Dekeleia decided not to attend the Apatouria. One might imagine a sizeable kin group that formed the core of a thiasos deciding not to attend the festival because it preferred to avoid controversy, thus leaving marginal members isolated.

announced before the other vote.¹⁰⁴ If the thiasos votes to accept the candidate and the phratry rejects him, the thiasos is liable to a fine of 100 drachmas, from which only members who made their opposition clear are exempt. If the thiasos rejects the candidate he can appeal to the phratry but must pay a fine of 100 drachmas if he fails.

Nikodemos was evidently a well-known local resident. The tomb monuments of his parents, himself, his wife, and three children have all been found at the deme site.¹⁰⁵ The name of the father, Phantias, may suggest a relationship with the family of the priest Theodoros son of Euphantides, whose son was called Ekphantides.¹⁰⁶ Nikodemos himself was evidently named in a mood of enthusiasm for the achievements of Periklean Athens, perhaps around the time of victory over Samos in 439,¹⁰⁷ and his eldest son's name Phanodemos neatly combines family tradition with an assurance of loyalty, perhaps to the restored democracy of 403;¹⁰⁸ but the name of the second son, 'Blameless', suggests that the family may have been under attack. Nikodemos is clearly a local resident, very likely a member of the oikos of the Dekeleians, but anxious to reestablish his reputation as a loyal democrat.

A third decree, proposed by Menexenos, probably another member of the deme Dekeleia, who had mining interests,¹⁰⁹ is perhaps to be dated c.360. It shows continuing problems of communication between the phratry base and the Dekeleians (demesmen) living elsewhere; henceforth intention to sacrifice the koureion is to be announced to the phratriarch during the year preceding the sacrifice,¹¹⁰ and the phratriarch and priest are to post notices in the Dekeleian

¹⁰⁴ Nikodemos' idea resembles that of Solon's law on stasis (ch. 1 n. 25); members of the sponsor's thiasos, if present, are forced to take a stand for or against the candidate.

¹⁰⁵ *IG ii² 12865* (+ *SEG* 18. 134), 5983, 5980, 10607; see Willemsen 1974. Phantias and Philoumene I, Nikodemos' parents, were commemorated by a relief stele (of 5th c. style in Willemsen's view); Nikodemos, his wife (from a Phegousian family), and their son Phanodemos, by a stele crowned with a loutrophoros; Anenkletos, another son, by a relief loutrophoros portraying him with his father (ch. 11 n. 18); Philoumene II, a daughter, by a lekythos showing her (?), holding a baby, with her mother. All 3 children seem to have died young.

¹⁰⁶ Ekphantides registered and leased a *palaion anasaximon* mine, which to judge from the prices of similar concessions may have cost him 150 dr., c.340 (*Agora XIX* P 30. 11–12, 17); see *APF* 6029 (where the date of Theodoros' priesthood should be corrected to c.360). The priest's relationship, if any, to Theodoros son of Stratokles of Dekeleia, his brother Sannios, and the latter's son Python, all of whom appear on *IG ii² 1927* (see Humphreys 2010a) is unclear, as is the identity of the Theodoros of Dekeleia who appears as creditor on the horos *IG ii² 2725* (Finley 1952, no. 11) in 315/4.

¹⁰⁷ I am of course aware of the possibility that his grandfather (FF) was already called Nikodemos.

¹⁰⁸ The monuments of Nikodemos and his children are dated c.380–70; the sons died unmarried.

¹⁰⁹ A Menexenos son of Metaxenos of Dekeleia registered and leased a mine and new cutting (*kainotomia*) for 150 dr. c.342/1, *Agora XIX* P 26. 236, 242.

¹¹⁰ *Prôtôi ê* for *proterôi ê* is not otherwise attested in texts before the Christian era, but a colloquialism would not be problematic here; cf. Ar. *Ekk.* 618 (the translation in R/O 5 is clumsy). Lipsius' interpretation (1894), 'in the candidate's first year (of life) or whenever the koureion is offered', rested on the

meeting place in Athens and in the phratry sanctuary. The reason is, 'so that the phrateres may know who is going to be introduced'; it seems that members of scattered families are nervous that an illegitimate child may gain admission to the phratry when they are not present to protest. Menexenos himself may be one of the non-resident phrateres.

A fourth decree, on a separate stone, probably also belongs to the Demotionidai since it was found in the same area and may concern the cult of Leto, worshipped by them. It was proposed by a Theodotos and is dated to the late fourth or early third century. It seems to distinguish between resident and non-resident members, but is known only from a rather unsatisfactory transcript of a fragmentary stone, now lost.¹¹¹

The area of ancient Dekeleia has also produced a boundary stone of the second quarter of the fifth century marking a sanctuary belonging to the Komadai, who may have been another local *genos*.¹¹²

Nikodemos' decree seems to imply that such groups could be subsumed from the point of view of the entry of new phratry members under the general category of *thiasos*; if they were entitled to special privileges under the Solonian law quoted by Philochoros, they no longer claimed them. In any case Nikodemos was probably making explicit a feature of phratry organization implied in the relation between sacrifice and entry, namely that the group which would share the sacrificial meat took the main responsibility for deciding whether the sacrifice and candidate should be accepted or rejected. The *oikos*¹¹³ of the Dekeleians owed its position in the late fifth and early fourth century not to Solon or to mythical traditions of descent but to an adaptation of local traditions associated with the cult of the Dioskouroi, first to the rise to prominence of Aphidnai, in Kleisthenes' deme system, and of Theseus, in Kimon's innovations in cult, and subsequently to Athenian relations with Sparta. Although the group may have controlled the phratry priesthood, its coherence in the fifth century was perhaps defined more by the hereditary privileges granted to its members by Sparta.

There are some signs of conflict in other phratries in the troubled period immediately following the Peloponnesian War. The prosecution of another

assumption that the normal time for the *koureion* was the first year of life, which is unacceptable. It is not clear whether Menexenos referred to phratry years or civil years.

¹¹¹ *IG* ii² 1242 (Lambert 1993, T 4; the restoration of *orgeônes* in l. 8–9 is rejected); cf. also ii² 1295 (very fragmentary), and Lambert 294–8. Reference to Leto is not certain, and the text could be a deme decree. *Epid[êmeucin]*? in l. 3 preceded by the name of a festival?

¹¹² Ch. 20 n. 46. *IG* i³ 1086 *bis*. No connection with Zeus Parnesios, *pace IG*. The name of the group may be related to *kômos*.

¹¹³ Cf. the use of *oikiê* in Hdt. 6. 125 for the Alkmeonidai, and Bourriot 1976, 380–7. The technical use of the term *genos* for office-holding groups may not have become established until the 4th c. (cf. ch. 20 nn. 1–2).

Nikodemos by a fellow phrater for falsely claiming the right to citizenship, in which he allegedly got off by only four votes, probably belongs to this period and may have been part of a general or at least large-scale process of rescrutiny like that of the Demotionidai.¹¹⁴

PAIANIA

Further evidence comes from a phratry based in Paiania. A stone containing a list of twenty names, headed ‘Zeus Phratrios and Athena Phratia. These are phrateres’,¹¹⁵ dated by its lettering to the early years of the fourth century, was found at Kapsospiti, south of Liopesi (*IG* ii² 2344). The Liopesi area has also produced a later phratry decree (*SEG* 3. 121), and it is natural to suppose that the two texts came from the same phratry.¹¹⁶ The names in the list can be grouped into three lineages of varying size, with one odd man out, Philodemos son of Philodemos. The names were all cut on one occasion; room was left for additions, but no names were added. The list seems to be arranged by age and was probably therefore taken from a phratry register (see Table 19.1).¹¹⁷

If all the members of the group belonged to the deme Paiania, which seems likely, they were not among its wealthiest and most distinguished members. Sostratos son of Sosippos may perhaps be linked to Sostratos son of Teisandros; one of the two may be the father of —doros, who served as councillor for Upper

¹¹⁴ Is. 3. 37; the speech probably belongs to the 360s (Diophantos of Sphettos and Dorotheos of Eleusis, mentioned in § 22, were both active early in the decade, *IG* ii² 106–7, *APF* 4610), and about 30 years had elapsed since the betrothal of Nikodemos’ sister, which the speaker implies took place after the prosecution (*suggestio falsi* is possible). Cf. also F 9 *PCG* 4 of the *Cheiron* of the younger Krates: the speaker, returning from the war, has trouble finding phrateres and demotai (*sc.* who recognize him), but manages to ‘enrol in the drinks cupboard’, i.e. make his way into a group by contributing wine.

¹¹⁵ It is not clear whether the names of the deities, in the genitive case, depend on an understood ‘sacred to’ (Hedrick 1989) or on ‘phrateres’, which often takes the genitive (cf. *Ar. Eq.* 255, *ph. tou triobolou*; *Dem.* 57. 67, *Apollonos Patrōiou kai Dios Herkeiou gennētai*).

¹¹⁶ On *SEG* 3. 121 see also Peek and Kyprisiss 1941, 219–21 no. 2; the exact provenience is unknown. The horos of the Demokleidai, *IG* i³ 1083, came from Katsoulierti, a small hill about 1 km SSW of Kantza (*KvA* VII Kadschu-liefert, Hatzesoteriou 1973, 175 Katsoulierti), perhaps the deme site (see Vanderpool 1967). Traill, however, locates the deme site west of Liopesi (1975a). Petropoulakou and Pentazos 1973 place Kapsospiti south of Liopesi, *AGC* 21 X7/Y4, no. 31, on a hill on the slopes of Hymettos, which seems possible for Upper Paiania. See also Kakavogianne 2010; chs. 20 n. 130, 25 n. 18.

¹¹⁷ Philodemos may have been linked affinally with the So- family, among whom the name Philon occurs, or with Xenophilos; see also ch. 25 n. 27). Hedrick 1989 remarks on the absence of three-generation lineages, but since men marry at over 30 (ch. 5, s. ‘Age of Marriage’) a father will be over 46 when his son joins the phratry, a grandfather (FF) over 76. Cf. Saller 1987, and note *IG* xii *Suppl.* 303 (n. 48) where a son cannot be introduced until his father is over 50, unless he is an orphan; *homopatrimon* here seems to mean a full son as opposed to a stepson. In *IG* ii² 1326, c.176/5, it seems to be exceptional that the priest’s family is allowed to introduce a second member to the group; ch. 12 n. 65). If the list of ii² 2344 is taken from a thiasos register, it would have been kept separately since c.450 at least.

Note: Only the provenance of the stone links these groups to Paiania; the only names that recur with that demotic are Sostratos and Epichares, both too common to be significant in a large deme.

TABLE 19.1 *IG* ii² 2344

Paiania in 348/7, and of Polykrates, buried in the Liopesi area.¹¹⁸ The family whose names are based on the root *Mnesi-* may be linked to Mnesiboulos son of Aristoteles, councillor for Upper Paiania *c.* 360. There is thus a possibility that the stone records a list of (some?) phratry members who lived in Upper Paiania, who decided to assert their right to phratry membership at a time when relations between the small hamlet of Upper Paiania and the larger village in the plain were strained.¹¹⁹

The phratry contained at least one family that had some difficulties after the end of the war. One of the two honorands on *SEG* 3. 121¹²⁰ is a descendant of Rhinon, who was a member of the Committee of Ten responsible for negotiating the transition from oligarchy to democracy in 403. He was sufficiently trusted by the returning democrats to be elected general for 403/2 and appointed as one of the treasurers of Athena for 402/1, but he was a controversial figure. He seems to have been a member of the Sokratic circle (one of the dialogues of

¹¹⁸ *IG* ii³ 4. 29. 15; *IG* ii² 7080. The tombstone of Sostratos son of Teisandros, ii² 7090 (*CAT* 1. 825) may have come from Salamis (*CAT*; M. C. Taylor 1997, 306). Epichares son of Mnesikleides may have been named in recognition of a affinal tie with the Epichares of Paiania whose son Agonochares was buried in the deme about the middle of the 4th c. (ii² 7020), and whose grandson Epichares II served on the organizing board of the Amphiaraia in 329/8 (*IG* ii³ 355); below at n. 191.

¹¹⁹ A Philodemos served as councillor for Paiania in (?) 336/5 (*Agora* XV 42; Table 25.3); the list does not distinguish the Upper and Lower sections of the deme. A connection with the family of *APF* 14625 seems doubtful.

¹²⁰ On the date of this text and identification of the honorands see below, n. 146.

Aischines the Sokratic is named *Rhinon*), and Archippos' comedy of the same name, produced in 402, has jokes about getting a 'wiggler's crown' for wrestling and 'giving back the chiton and getting off scot-free'; *A.P.* 38. 4 has a reference to honours granted to Rhinon, and its claim that there were two boards of ten, one pro-Spartan and the other more democratic, Rhinon being a member only of the second, seems to come from a defence of his career.¹²¹ The phratry thus contained at least one wealthy family that could be considered contaminated by its involvement with oligarchy. It seem quite possible that, as at Dekeleia, there was conflict when phratry members gathered again in Paiania after the war, which involved both accusations of profiting from oligarchy and questioning of some members' credentials.¹²² The men whose names are recorded on *IG* ii² 2344 are probably asserting, 'we are phrateres (and have now been recognized as such, despite the doubts cast on our claim)'.¹²³

RURAL PHRATRIES AND THE CITY

The question where members of rural phratries celebrated the Apatouria during the war years was clearly important. After 413, even hoplites and horse-owners, to say nothing of poorer and more defenceless members, would not risk a journey back to a rural phratry centre for the Apatouria; Aristophanes' choice of the Apatouria to symbolize peace implies that many phrateres had not travelled outside the city for the festival even in the first decade of the war. Whereas a deme, to admit new members, only had to hold an assembly, a phratry needed

¹²¹ *PCG* 2 pp. 552–3, F. 42 (Kock I 687–8, F 40). P. J. Rhodes 1981*a* suggests that *A.P.* may draw on a speech or decree of the period; Isokr. 18. 5–6 knows nothing of a second Board of Ten. The fact that Rhinon passed his euthynai does not imply that he had no enemies, as this Isokr. passage shows. See also *APF* 2254, Krentz 1982. Rhinon may have served as secretary of the hellenotamiai in 417/6 (*IG* i³ 370. 26); for his service in 402/1 see ii² 1370–1 + Add., with *SEG* 23. 81. The son of a Rhinon whose tombstone was found in the Agora excavations 'east of the civic offices' (*SEMA* 2366, 4th c.), may have belonged to Akamantis (i³ 1190. 163). The Arrheneides who served in 442/1 as secretary of the board supervising payments for the gold and ivory statue of Athena (i³ 457. 2) may be an older relative (but the name occurs in the early 4th c. in Kropidai).

¹²² There will also have been conflicts over land, accusations that boundary markers had been moved, etc.; phrateres who had spent the war years in the city and fleet will have been less willing to defer to local landed gentry than in the prewar period...

¹²³ The record had an unwritten context that was of crucial importance to those who made it; they could not imagine that this context would be forgotten, and the implications of the heading lost. This is a good example of a written record that depends on oral information for its interpretation (cf. R. Thomas 1992, 2005). Note the suggestion in Theophr. *Char.* 28 that a Sosias of (by implication) slave origin would change his name to Sosistratos and then Sosidemos: our inscription was set up by Sosippos son of Sosipolis. Cf. Dem. 18. 129–30.

an altar.¹²⁴ A variety of solutions to this problem can be imagined. A lineage or small set of lineages that had ties with members of a city-based phratry, either through their own affiliation to city demes or through affinal links, might be temporarily allowed to join the city group and use its altars at the Apatouria. A phratry might also, through the generosity of a rich, city-based member, acquire land on which to build an altar and a small room for storage and dining.¹²⁵ Some groups may have used the area on the west side of the Agora where temples of Apollo Patroios and of Zeus Phratrios and Athena Phratia were built in the fourth century, if there was already an open-air sanctuary and altar in this area in the fifth century.¹²⁶ The sacrifices to Zeus Phratrios and Athena Phratia at the Synoikia were carried out in the city, and this altar may have been used also for the Apatouria.

It is not surprising, therefore, that a relatively high proportion of phratry markers comes from the city, and that several of them cluster in the war period. The Medontidai, whose main base in the fourth century may have been at Kephale, set up a horos marking their [*?ago*]*ra* at some time in the second half of the fifth century, which was found near the entrance to the Akropolis.¹²⁷ Thymaitis, presumably based at Thymaitadai, which lay outside the Long Walls and may have seemed exposed in the later years of the war when Athenian seapower weakened, set a marker on an area sacred to its Zeus Xenios, perhaps near the Pnyx, about the turn of the century.¹²⁸ Gleontis set up a marker on the property of Kephisos, found in the Agora excavations, at about the same period.¹²⁹

The phratry with the strongest claim to have had its base in the city from early times is perhaps Therrikleidai, but the evidence is very problematic. *IG* i³ 243, a very fragmentary text of 480–450 found in the Agora, seems to refer to a

¹²⁴ On the view of N. F. Jones 1999 that phratry altars found in the city which do not name a specific group may have been provided by the state see n. 44.

¹²⁵ If Aischines' deme Kothokidai is correctly located in the plain of Eleusis, his phratry may have come to share the altars of the Eteoboutadai (an odd turn of phrase?) through some such arrangement. However, the location of Kothokidai is far from certain, and Aischines' ancestors may have moved at some date before Kleisthenes' reforms. *IG* ii² 2622, *horos oikias phraterôn*, has no provenance or date.

¹²⁶ Hedrick 1988*a* has doubts (see also Cromey 2006); the earlier history of the area is discussed by Francis and Vickers 1988. H. Thompson 1937 suggested that *IG* i³ 138 referred to a temenos in this area, but Jameson 1980 relates it to the Lykeion. The temple of Apollo Patroios is now dated after 313 (Lawall 2009): Demetrios of Phaleron, or restored democracy?

¹²⁷ *IG* i³ 1062; on ii² 1233 see below, n. 153. The (?) offering table *IG* i³ 1383 gives the Medontidai a connection with Prospalta or Kephale in the 5th c. (cf. ch. 27 n. 45). Achniadai was based at Kephale and it seems unlikely that two phratres were based in the same village (unless we assume fission, which I would hesitate to do).

¹²⁸ *IG* i³ 1057 = *Agora* XIX H 131. For *SEG* 38. 172 (quoted ad loc. in i³) see Hedrick 1988*a*; it is not clear whether this stone is a simple property marker or a mortgage horos on property against which the phratry had lent money. On Zeus Xenios see above, n. 29.

¹²⁹ *Agora* XIX H 9; on the cult of Kephisos see above, n. 47.

Ther[ik]leion, a shrine of an otherwise unattested hero, Ther(r)ikles;¹³⁰ we also have a sanctuary marker of the phratry Therrikleidai from the fourth century, for its sanctuary of Apollo Patroios, but its provenance is unknown. [Therrik]leidai can be restored in a phratry decree of the first half of the third century, found in the same part of the Agora as *IG* i³ 243, but other restorations are possible.¹³¹

An altar of Zeus Phratrios and Athena Phratrion has been found *in situ* north of the Agora, in (?) the deme Skambonidai; it is dated to the late fourth or early third century.¹³²

The Demokleidai, perhaps a local genos based in Paiania, set up a marker on their shrine of Artemis Orthosia c.420, perhaps during the period of the short-lived peace of Nikias; Artemis Orthosia was also worshipped by a *patra* in Thasos, and in the Kerameikos and Piraeus.¹³³ The rural markers of the Achniadai at Kephale, one on their sanctuary of Apollo Hebdomaios, belong to the fourth century, or later.¹³⁴

DISPUTES

Between c.390 and 338 there is little evidence of anything other than routine activities in the phratries. It is worth noting that when demes were required in 346/5 to conduct a general scrutiny of their members, we hear nothing of a parallel scrutiny in the phratries; and the fourth-century law penalizing any citizen who married a foreign woman or gave a foreign woman in marriage to another citizen, and the women involved in such unions, seems to have focused on formal betrothal (*engûê*), rather than gamelia, as the decisive act.¹³⁵

¹³⁰ *Agora* XIX L A I 30. Kearns points out that we have no other evidence for a phratry with a hero cult, but our knowledge of phratry cults is poor, and some deme heroes may originally have been worshipped by phratries (cf. Lauter 1985*b* on Tourkovouni; below n. 167). Ther(r)ikles might have been etymologized as ‘famous in hunting’, which would make him a hero suitable for adolescents at the age of entry into the phratry; for what it is worth, Athen. 502*b* explains *khonnoi* as a kind of Cretan cup, like the *therrikleion*, which a lover gives to the boy he carries off, according to Hermonax.

¹³¹ *IG* ii² 4973; *SEG* 32. 150, discussed by Hedrick 1983 and Lambert 1993 T 12, and attributed by them to Therrikleidai. However, —leidais need not be restored as a phratry name; [Herak]leidais is an obvious possibility. We could also restore [Demok]leidais or envisage groups named after e.g. Dioklos/Diokles or Menelaos/Meneleos.

¹³² *Agora* Inv. I 6709; Hedrick 1991, Lambert 1993 T 22; cf. Kostake 2008, 154.

¹³³ *IG* i³ 1083 (above, n. 116). Thasos: Rolley 1965. The Kerameikos cult is known only from schol. Pind. *Ol.* 54*a*, that in Piraeus from a late dedication, *IG* ii² 5012. Cf. the better-known association of Artemis Orthia with the initiation of adolescents at Sparta. A 4th c. horos of Apollo Patroios of the Elaidai (phratry or genos?) was found near Kephisia, *IG* ii² 2602.

¹³⁴ *IG* ii² 4974, known only from a Fourmont sketch; ii² 2621, dated by Guarducci 1937 to the 3rd/2nd c.

¹³⁵ [Dem.] 59. 16, 52; if the order of events in this speech is accurate, Phrastor’s *graphê* against Stephanos under this law should probably belong to the 350s. Nikippos of Kephale (*APF* 10833) and

Evidence from the orators, however, provides information both about phratry procedure and about the microdynamics of phratry society. As in all Greek groups in which communal revenue barely sufficed to meet routine commitments, the rich were treated deferentially. When Euktemon of Kephisia tried to sacrifice the koureion for a boy whom his family did not recognize as his son, his legitimate son Philoktemon opposed the sacrifice; however, a compromise was agreed, and in the following year the sacrifice proceeded without objections. Evidently the other phrateres were unwilling to interfere.¹³⁶ Mantias of Thorikos introduced sons by two different women to his phratry, probably in successive years; there was gossip,¹³⁷ but both were accepted. Kallias III of Alopeke had brazened out genos objections to his sacrifice of the meion for a boy he had previously rejected, swearing an oath that contradicted his earlier oath; the sacrifice was accepted.¹³⁸ On the other hand, the genos Brytidai refused to accept Phrastor's child by the daughter of the well-known *hetaira* Neaira, after he had sent the girl away and repudiated the marriage; Phrastor took them to court, but dropped the case when challenged to take an oath.¹³⁹ Phrastor is not otherwise attested, and may not have had the resources or personality to stand up to social pressure.

Apollodoros of Leukonoion was able to persuade his phrateres to recognize his adoption of Thrasylos III, son of his matrilineal half-sister, at the Thargelia of 355, rather than waiting for the Apatouria. Apollodoros was a wealthy man, his only son had died six months earlier, and he himself was ill. The admission was carried out in due form, with a vote of the whole phratry after the sponsor had taken an oath on the sacrificial victim.¹⁴⁰

[Demosthenes] *Against Makartatos* (43. 14, 81) provides further information on procedure, again in the case of an adoption. The speaker presented his second

Eualkos of Phaleron (*IG* ii³ 324; the MS reading is Eualkes), who testified concerning the rejection of Phano's child by the Brytidai, were still active in 322. One would like to connect the law with the diapsephsis of 346/5, but I doubt if the history of Phano can be fitted into this chronology. Cf. ch. 20 at n. 113.

¹³⁶ Is. 6. 21–6. Possibly decisions in this phratry were taken in the thiasos, with no vote of the whole phratry?

¹³⁷ Dem. 39–40, with Humphreys 1989. The affair was *periboétos* (40. 11, a pun?).

¹³⁸ Andok. 1. 126–7; above, n. 80. Andok. may have invented the first oath. Kallias was acting as priest for the Kerykes, and perhaps for the phratry as a whole. Hedrick 1984 and Lambert 1993 both introduce unnecessary complications into the interpretation of this text (see *APF* 7826 XI–XII).

¹³⁹ [Dem.] 59. 50–61; cf. above, n. 135.

¹⁴⁰ Is. 7. 15–17 (*APF* 1395; cf. chs. 2 IV 1–2). It has been suggested that Apollodoros' phratry was Achniadai, which had a cult of Apollo Hebdomaios, but the meeting may have been held in the city, and we do not even know the location of his deme Leukonoion. It is not clear whether he sacrificed a koureion lamb for Thrasylos or took his oath on the victim(s) offered by the phratry for the Thargelia. The procedure apparently constituted admission to both genos and phratry, probably because the genos de facto operated like any other phratry thiasos.

son to the phratry of Hagnias, whose estate he was claiming on the boy's behalf, as posthumously adopted son of the boy's grandfather (MF) Euboulides II, whose daughter had married the speaker as an epikleros. He tries to make capital out of the fact that his opponent, Makartatos, had not 'led the lamb away from the altar',¹⁴¹ although he had 'asked the phrateres to violate their oath'; a vote had been taken while the gods' portion of the victim was burning on the altar, and had been favourable. Makartatos had even shared the meat of the sacrifice.

Makartatos may well have been in a difficult position. Even if we accept the speaker's claim that his son was introduced 'not to my phrateres but to those of his grandfather' (§ 81), it is quite likely that he belonged to another thiasos in the same phratry. In any case he was a kinsman of his wife and had support among her agnates. The boy undoubtedly met the criteria required for citizenship; the only objection that could be made was that the posthumous adoption may not have been supported by firm evidence that Euboulides II had requested it. It was, however, normal for an epikleros' son to be adopted by or to her father, and objections were liable to appear mean-spirited.¹⁴²

The law allowing an adopted son to return to his own oikos if he left a son in his place was particularly likely to lead to dubious manoeuvres. Whereas the requirement that phratries should only admit boys who were legitimately born of two Athenian parents was clearly laid down by law, it was much less clear whether they had any obligation to police adoptions. The speaker of [Demosthenes] 44 claims that his opponent, in his attempts to retain an estate acquired through the posthumous adoption of his father, had managed to get his son accepted by *d.c.*'s deme and had subsequently 'persuaded one of the phrateres' to inscribe him on the phratry register; this was again a case in which outsiders might well sympathize with the man whose family had held the estate, who had just lost one of his two sons, rather than with the remote kin who were challenging his claims.¹⁴³

¹⁴¹ [Dem.] 43. 14; the phrase was evidently formulaic, cf. Is. 6. 22 The occasion (*pace* Lambert 1993, 173) is the koureion, sacrificed at the normal age; a demand for Hagnias' estate is made in the boy's name immediately afterwards (§ 15). A boy was admitted to a phratry when the koureion was sacrificed for him, and not before; he might change phratry later, if adopted, and phratry procedures for recognizing candidates adopted as adults may have varied.

¹⁴² See ch. 7 Case 5 and Humphreys 1986*a*. Is. 10. 8–9 claims that posthumous adoption is only allowed if specified in the will of the deceased, but it is unlikely that the law on adoption was clear on such procedural points.

¹⁴³ [Dem.] 44. 41; *APF* 5638; ch. 7 Case 12. The phratry register was presumably kept by the phratriarch or phratry priest, and the speaker probably exaggerates the irregularity of the procedure. A sacrifice may have been made, or promised for the next Apatouria.

FINANCES

Phratries got no funds from the state, and any phratry shrine that had succeeded in building up capital before Kleisthenes' reforms would be a tempting acquisition for the local deme, unless dedicated to deities specifically associated with the Apatouria.¹⁴⁴ Income came from fines, which probably were not set very high; from rents on phratry land, consisting of the *temenos* itself and any other parcels that might have been acquired through default on fines or loans; from interest on any capital available for loan, if interest was charged.¹⁴⁵ Since phrateres themselves provided most of the victims at the Apatouria, expenses were also low, but phratries would rely on their richer members for additional contributions to festivals and for meeting any extraordinary costs, such as building expenses.

SEG 3. 121, from Paiania, praises Euktemon (?) and an Arrheneides for contributing 200 drachmas for building work (repairs?) on the phratry temple of Zeus Phratrion and Athena Phratra.¹⁴⁶ *IG* ii² 2345 seems to be a list of contributions for some collective enterprise, perhaps again building work, set up by a phratry based in Alopeke; recorded sums range from 5 to 150 drachmas, and a norm of 10 drachmas may have been set.¹⁴⁷

Some mortgage *horoi* record loans from phratry groups, but these seem to have been made by *thiasoi* rather than by the phratry as a whole, and it is not clear whether the loans come from *thiasos* funds or from individual contributions made in a phratry context.¹⁴⁸ In *IG* ii² 2723, probably of the Lykourgan

¹⁴⁴ See ch. 31 at nn. 73–4 on the cult of Nemesis at Rhamnous.

¹⁴⁵ Fines of the Demotionidai range from 1000 dr. for unsuccessful appeal (see above), and 500 dr. for delinquent phratriarchs, to 100 and 50 dr. See the discussion of landholding by corporate bodies in Papazarkadas 2011. A god might 'own' property of two types: an inalienable *temenos*, and other (alienable) income-producing parcels, managed by an association of worshippers. In the latter case the capital value was inalienable, the property not.

¹⁴⁶ *SEG* 39. 150; Peek and Kyprisiss 1941, no. 2 suggested restoring [*oikodomian*] or [*kataskuên*] in l. 9. To identify the second contributor with the wealthy and well-known Arrheneides son of Charikles (*APF* 2254) requires an aberrant spelling of his father's name (Charikleious instead of Charikleous), but this does not seem a major problem in a local inscription; I would therefore date the text to the Lykourgan period (cf. n. 192 below) rather than postulate an otherwise unattested Arrheneides II son of Kallikles (as suggested by Lambert 1993). There is no reason to suppose that (?) Eu[kt]e[mon] (for the possibilities see Peek and Kyprisiss loc. cit.), the other contributor, was son of an [Arrhene]ides; about 100 other Athenian names could be restored here, including that of Philippides II of Paiania, *APF* 14670 (note also the trierarch(s) from Paiania Euboulos and Eu... in 323/2 and 322/1, *APF* 5368). A son would not be named before his father in such a text, and it is not unknown for two donors to be thanked jointly in a text that does not specify the amount contributed by each to the total sum recorded (e.g. *IG* ii² 1177).

¹⁴⁷ Humphreys 1990*a*, Lambert 1999*a*. A standard subscription of 10 dr. (rejected by Lambert) would have produced more than 1000 dr. from the names we have, and the list is incomplete. This was a substantial operation. See further below, n. 174.

¹⁴⁸ A loose parallel for the management of collective funds by subgroups is perhaps provided by *IG* i³ 258 (Plotheia), where separate funds are managed by various officials; see ch. 24 at n. 47. For *eranos* loans raised by groups see ch. 12 n. 48. Cf. *IG* ii² 2730; Finley 1952 no. 43, where the creditor may be a

period, a *chôrion* is mortgaged to Kephisodoros of Leukonoion for 1500 dr., to 'the phrateres with Eratostratos of Anaphlystos' for 1200, to the Glaukidai for 600, to the Epikleidai for 150, and to 'the phrateres with Nikon of Anaphlystos' for 100. Probably we have here two phratry thiasoi named for their leading members and two local *genê* belonging to the same phratry.¹⁴⁹ In 367/6 Kichonides son of Diogeiton of Gargettos, acting perhaps in an official capacity as phratriarch of the Medontidai, put in a claim for 100 drachmas on a house in Alopeke that was being sold after confiscation from its current owner, the perhaps inaptly named Theosebes of Xypete. The phratry had lent this money to Theosebes' father; another claim was made by Aischines of Melite on behalf of an association of orgeones, perhaps belonging to the same phratry, for 24 dr., also lent to Theosebes' father, probably on the same occasion.¹⁵⁰

Calling in debts and collecting rent and fines cannot have been easy, and several texts thank men for representing phratries and similar bodies in court. *IG* ii² 1238 thanks the honorand [...]jeiton son of Eukles of Phaleron, for helping the phratry in a case that it had perhaps previously lost through failure of its representatives to appear.¹⁵¹ The Eikadeis of Myrrhinous, perhaps a group of phratry orgeones, praise Polyxenos son of Diodoros in 324/3 because he has denounced members of the group for bearing false witness against it in a suit concerning the collective property from which the group's sacrifices are financed; three other members of the group are elected to support Polyxenos in the forthcoming perjury suit, and he is to receive a gold crown. These Eikadeis may well be a group of phratry orgeones, since Pollux 8. 107 explicitly associates orgeones who sacrifice on a fixed day of the month—in this case the twentieth—with rural centres. They had a sanctuary of Apollo Parnessios, in which the decree was to be set up, but also worshipped other gods; their eponymous hero Eikadeus was credited with a set of curses, no doubt recited annually by the incoming archons

phratry thiasos named for an Isodemos; however, we should possibly read *thiasotais[is] Demoto* (Lambert 1996). On *IG* ii² 2621 see Papazarkadas 2011, 163–4 n. 4.

¹⁴⁹ Eratostratos son of Nausikydes appears as councillor for Anaphlystos in 334/3 and 304/3; this is probably the same man, perhaps acting as phratriarch (the spelling *o* for *ou* does not require an early 4th c. date for such texts, *pace* Lambert 1993, cf. id. 1996). D. M. Robinson, who first published the stone (1907), was told that it was found near the Agora; this is not incompatible with a phratry base in Anaphlystos. See also n. 19 on similar horoi from Rhamnous. On the Glaukidai and Epikleidai see ch. 20, n. 125.

¹⁵⁰ *Agora* XIX P 5 (Lambert T 10).

¹⁵¹ *SEG* 38. 128 (Lambert T 16), with the textual revisions of Hedrick 1988c; M. Meyer 1989a, A 160, dates the relief to the second half of the 4th c. (c.330, Tracy 1995, 100). Note that restoration of a patronymic in line 2 is not mandatory, and that the text is technically probably a dedication rather than a phratry document. Part of the stone was found on the Akropolis, which may suggest that the honorand dedicated his gold crown there (with a relief showing him being crowned by a female figure, perhaps Athena Phratria) rather than in the phratry sanctuary, although presumably if he was a member (ch. 31 n. 18) the phratry would have preferred the gold to come home.

and/or on other occasions when members took oaths; they owned property near a temple of Artemis, perhaps that of Artemis Kolainis at Myrrhinous.¹⁵² A prominent member of the phratry Medontidai, perhaps praised for his *d[ik]a[iosynē]*, justice, may also have acted for the phratry in court, although the term can be used of anyone who handles public money.¹⁵³

Evidence of ownership of land by phratries, and perhaps of problems in administering it, is provided also by the *hekatostai* records and by a lease, *IG* ii² 1241. The *hekatostai* stelai record the sale of land by demes, phratries, and other groups, apparently on the state's initiative; a tax of 1% was collected. The sale dates to the

¹⁵² The term *archôn*, which can be used generically, does not prove that the Eikadeis are not a phratry, but we already have two phratries in this area (Dyaleis, Achniadai). Bishop Wordsworth (1836, 219–24) reports seeing this text, *IG* ii² 1258, at Markopoulo in the Mesogeia, and though Loeper 1892, 397–8, n. 3 made a strong argument for associating it with the Markopoulo in Oropian territory, the Mesogeia location is supported by two horoi found at Markopoulo-Mesogeia and at Koropi, both in the same hand, marking land of the Eikadeis which is not to be used as security (*IG* ii² 2631–2) and by reference to the Eikadeis in *Agora* XIX P 26. 384, 395 (c. 340), in a context that may belong to the Hagnous-Myrrhinous area (*SEG* 60. 197; ch. 25 n. 44) and certainly cannot be Oropian. The hero Eikadeus is missing from Kearns 1989; on curses see Jameson 1951 and ch. 20 n. 88. There are *dekadistai* on a *prasis epi lysei* horos from Spata (ii² 2701, Finley 1952 no. 32; cf. Theophr. *Char.* 27. 11), and *hebdomaistai* in Ikarion, on a dedication in the Pythion c.330–325 (*SEG* 32. 244). See below, n. 155, and Lambert 1997a, 199–201 (followed by Papazarkadas 2011, 183–6, who thinks that they may be a genos), on the Eikadeis of Salamis, probably in my view a different body (Epicurus' friends also called themselves Eikadistai, Athen. 298d). For the temple of Artemis Kolainis at Myrrhinous see *IG* ii² 1182 (which had presumably travelled from Merenda to Markopoulo) and Paus. 1. 31. 4. On the sale of the property of Philokrates son of Pythodoros of Hagnous (*Agora* XIX P 26) see ch. 27 n. 41. The proposer of ii² 1258, Epameinon son of Ameinias, may be related either to Ameinias son of Sokles of Hagnous, syntrierarch in some year before 325/4 (*APF* 676) or to Epameinon son of Kephisodoros of Myrrhinous (*SEG* 21. 893, late 4th c.); the absence of demotics suggests local men. Zeus Parnessios was worshipped in the city (*IG* i³ 1057 *bis*, 480–60, from the corner of Argous and Monastiriou).

¹⁵³ *IG* ii² 1233; recent discussions do not make it clear that this stone is a square or rectangular base reused in the corner wall of a church. It will probably have had crowns on at least three sides (cf. *IG* ii³ 4. 85, 89, and see K. Keil 1866, 249), and belongs to the common class of dedications that cite honorary decrees (ch. 12 n. 25). The name Medontidai and *ho dêmos* can hardly have been inscribed in the same crown. The spelling [*hipp*]ees suggests a date not too late in the 4th c.; the fashion of setting up monuments recording multiple crownings flourished into the 3rd c. (*IG* ii² 3201–14). The best parallel to ii² 1233 is ii² 3202 (*Agora* XV 33), found on the western slopes of Hymettos and therefore perhaps set up in the deme which (together with the council of 344/3, fellow prytaneis, the cavalry, fellow-tribesmen on two occasions, and others whose names are lost) had honoured the dedicant with at least 12 crowns (surely awarded to an individual and not to a whole board of prytaneis as assumed in *Agora* XV). The obvious candidate from the demes of the area is Diotimos III of Euonymon (*APF* 4386, Table 16.1, ch. 23 n. 8), though Pythokles of Kedoi (*APF* 12444, n. 35) may be another possibility if Kedoi is to be located in this area (Traill 1986). Cf. R. G. Osborne 1990a on similar instances of reference in a local context to honours awarded elsewhere, and *Agora* XVI 68 (Inv. I 5212), on which see Whitehead 1986a, 383 no. 71; ch. 24 n. 89, 25 n. 10. *IG* ii² 1233 was found at Kypsele, which also produced ii² 1215, a decree of the deme Erikeia (the area may have been a collecting point for stones?). Since the Medontidai had a connection with Kephale (above, n. 127), it is perhaps worth noting that one of the rich Athenians of the period whose name could be restored here is Are[sias son of Aresippos of Kephale], *APF* 1598.

330s or 320s and perhaps indicates that the Lykourgan administration, aware that such bodies acquired odd pieces of land in piecemeal fashion and did not always collect rents regularly, had decided to offer them an occasion for disburdening themselves of unwanted plots and acquiring instead cash that could be lent out at interest.¹⁵⁴ A phratry whose name is lost sold an *eschatía*, a hill plot or piece of otherwise marginal land; the other sellers in this section of the record are —akinidai, Apheidantidai, Dipoliastai, Eikadeis, Melaineis, and Oikatai. The Apheidantidai and Dipoliastai were probably *genê*; the Eikadeis of this text were based on Salamis and were probably, in my view, not connected with those of Myrrhinous.¹⁵⁵ The Melaineis were the inhabitants of the hamlet Melainai (above, n. 27), or perhaps a cult group based there. There is no evidence in these texts for a phratry Miltieis.¹⁵⁶

The lease, *IG ii*² 1241, from Myrrhinous, was granted by the phratry Dyaleis in 300/299, for ten years. The land leased was planted with vines and had a building on it; the tenant is to tend the vines, keep the building in repair, and sow wheat on half the plot, leaving the other half fallow or sowing pulses on it. The lessee has the right, up to the period of expiry of the lease, to purchase the land outright for 5000 drachmas, which makes the rent of 600 drachmas per year a little less than 12% of capital value.¹⁵⁷ The Dyaleis are responsible for taxes on the property; the tenant sells the crops, and pays rent in two instalments, in Elaphebolion (March–April) and Boedromion (August–September), perhaps from the proceeds of the new wine in the first case and the sale of grain and pulses in the second (but see Papazarkadas 2011, 167).

The Dyaleis have two phratriarchs, but it is uncertain that their name implies that the phratry is split into two parts or is a union of two previously independent

¹⁵⁴ Lambert 1997*a*; see Humphreys 2004, 125–6; Faraguna 1992; ch. 22 at n. 82. The regular prices, mostly multiples of 12½ dr., are in my view due to the calculation of fair prices at 12½ times annual rent; many of the purchasers are officials or members of the selling body, very possibly the men who had previously leased the land, who were under some pressure, given the public character of the sale, to make fair bids; Appendix 2.

¹⁵⁵ Plut. *Camillus* 19. 6 dates the battle of Salamis to Boedromion 20. Their official might possibly have been titled *boul[utês]*, or some other name derived from sacrifice, rather than *boul[archos]* (Lambert 1997*a* suggests *boul[eutês]*).

¹⁵⁶ In Lambert 1997*a* F 13 A 1–4 Miltieis may be the name of a hamlet in the territory of Alopeke (so also Lambert, 198 no. 40), perhaps named because it had red earth or produced *miltos*, red lead (cf. the personal name Miltiades). The entry comes in the section of the record concerned with the demes and komai.

¹⁵⁷ See Behrend 1970; Lambert 1993; Papazarkadas 2011, 166–9. The expectation is perhaps that the lessee will have some difficulty in raising cash for an outright purchase, and will prefer to work his lease nearly to the end, gaining in the process a reliable estimate of the returns that can be expected from the land in a variety of climatic conditions. The concern of the Dyaleis is that he should make up his mind before the lease expires; the question whether it would be more rational for him in monetary terms to purchase earlier may not have occurred to them.

bodies. Both phratriarchs come from the same deme, Myrrhinous, and the office may have been duplicated in order to lessen its financial burdens or guard against misconduct in office.¹⁵⁸

THE LYKOURGAN PERIOD AND LATER

The revival of the *genê* in the Lykourgan period does not seem to have had much impact on the phratries; our evidence comes from records of independent action by *genê*. However, the Philieis mentioned in speeches written for the dispute between the *genê* Krokonidai and Koironidai, over an Eleusinian priesthood, may be the phratry to which the Koironidai belonged; *oinoptai* were mentioned in the speech for the Krokonidai.¹⁵⁹

There was also legislation in the Lykourgan period restricting the phratries to which foreigners granted honorary citizenship could be admitted. We do not know the purpose of the legislation, which is regularly mentioned in citizenship grants between 334 and 304, sporadically thereafter until 229. The main possibilities seem to be either that some phratries were considered too traditionally Athenian to accept foreigners, or that phratry numbers had become very unequal and new citizens were being directed away from large phratries towards smaller ones. Neither of these explanations is really satisfactory.¹⁶⁰ A restriction to (or

¹⁵⁸ 'Dyaleis' is not Greek for 'members of a dual group', although this etymology might have occurred to some Greek speakers once the name was in existence. Philologists consider the epithet of Dionysos Dyalos to be Illyrian (Chantraine 1968, s.v.), which leaves the phratry name unexplained. Possibly only one of the two phratriarchs was required to live locally (cf. Humphreys 2004; ch. 24 n. 70, on the Erchian demarches). If there was a major division within the phratry one would expect revenues to be divided, as in the Salaminioi (ch. 20).

¹⁵⁹ Lyk. fr. VII 2, 5 Conomis 1970 (51, 54 Blass 1880); above nn. 13, 69.

¹⁶⁰ M. J. Osborne 1981–3 vol. 4, 176–81, cf. id. 2013; cf. A. S. Henry 1983, 72–3; Lambert 1993, 50–3; Ismard 2010, 132–3; Walbank 2010. See also *Agora XVI* 163 = *IG* ii³ 846. We do not really have any evidence that some phratries had special religious functions that would make it inappropriate to admit foreigners to them (such functions were normally the monopoly of *genê*; no restriction to specific *triakas* and *pentekostys* on Kos, *IG* xii 4. 1. 26, 40, *pace* N. F. Jones 1987, 238). Dow 1963*b* suggested that too many new citizens had thronged into some phratries; cf. J. and L. Robert 1983, 213 no. 26. 7–8 (Amyzon, Caria, late Hellenistic), new citizens to be assigned by lot to the three smallest tribes; *Milet I* 3. 33 d 5, 2nd c. (mass enrollment of Cretans). Note that when Athens made mass grants of citizenship to the Plataians and Samians they were allocated to demes by lot (but apparently left to make their own arrangements, if they wished, with phratries; cf. Vial 1984, 40 no. 84, Andros); Osborne op. cit. In Osborne D 2 (410/9, *IG* i³ 102. 16–17) institutional logic requires the reading [*dêmon te k*]ai *phratrias* rather than [*phylês*], since deme membership presupposes tribe membership, while the reverse is not the case, but the space is too long for the expected spelling *dêmo*; in D 8 reference to a phratry may have been accidentally omitted, or procedure was not yet fixed. Foreigners to whom citizenship was granted en bloc in the late 5th c. were perhaps distributed only among demes and tribes (refugee Plataians) or among tribes alone (Samians, participants in the Phyle campaign of 403), although if they established residence in Athens they should have acquired demotics (see R/O no. 4 comm.). The scheme of *A.P.* fr. 3 (ch. 18

even exclusion from) twelve phratries considered to be originally created by Ion (*A.P.* fr. 3) is just conceivable.

Phratries continued to produce records in the early part of the third century; they thus remained active (epigraphically) as long as most demes.¹⁶¹ Apart from the lease of the Dyaleis, discussed above, we have the end of an honorary decree from Charvati, of the end of the fourth century, and a decree of the first half of the third century found in the Agora, possibly set up by the [Therrik]leidai, which seems to deal with the procedure for admitting new phratry members, since it refers to oaths, voting, and the main meeting of the year (*kyria* [*agora*]).¹⁶²

PHRATRY SUBDIVISIONS

It seems possible that there was a drift towards the coalescence of those phratry members interested in cult into smaller groups—*genê*, *orgeones*, *thiasoi*—which took over responsibility for those cults that had not been transferred to demes, and popularized the use of the terms *orgeones* and *thiasos* for small cult groups of all kinds.¹⁶³ However, this usage makes it difficult for us to distinguish the *orgeones* and *thiasoi* of phratries from other associations of the same name. In some texts worship of recently introduced deities, or the presence of women and/or non-Greeks in lists of members, makes it clear that the group is not part

n. 40) indicates an interest in phratry numbers in the Lykourgan period, but grants of honorary citizenship were too few to have any significant impact. Plat. *Laws* 785a–b uses phratries as units of civic registration. It is not impossible that by this time some metic groups had unofficial ‘phratries’ in Athens: cf. Seyfarth 1955.

¹⁶¹ See ch. 22 at n. 35 on depopulation of the countryside. Only ‘garrison demes’ (Whitehead 1986a) continue to pass decrees after c.250.

¹⁶² Charvati: *IG* ii² 1239 (cf. Goette 1997). On the basis of Lambert’s report of Velsen’s notes (1993, T 19) the patronymic of the honorand may have been S[a]t[y]ro[s] rather than the rare Strombylion suggested by Köhler. It seems unlikely that the phratriarch is ordered both to have the decree inscribed and to pay for it; we should perhaps read [*g*]ramm[*ate*a] in line 25. [Therrik]leidai (above, n. 131): *SEG* 32. 150, Lambert T 17, 3rd c.? In line 6 *me[n]* is not particularly likely; we need a verb, and punctuation after *kata[d]eétai* in line 7; a new sentence begins with *tôn phratriarchôn*. This may be a ‘split’ phratry with more than one phratriarch. Fission might have become more common in the 3rd c.; for a suggestion that *SEG* 3. 121 (Paiania) is to be dated to the 3rd c. see above, n. 146.

¹⁶³ On the term *orgeones* see ch. 12 at nn. 42–3; Herda 2006, 35–7. In the Hom. *Hymn to Apollo* *orgiōnes* acquire hereditary cultic responsibilities, 388–93. *IG* ii² 1316 calls members of the same group both *orgeones* and *thiasotai* (as does ii² 1246 +, Dow and Gill 1965, text 1). It does not seem to be a decree of the *orgeones* of the Magna Mater, since it is passed in Hekatombaion and their preserved decrees are dated in Mounichion; the Magna Mater *orgeones* give crowns of olive, whereas this text awards a gold crown; the *orgeones* of this text (who worship a goddess, in Piraeus) are divided into 4 *thiasoi*, whereas there is no evidence for such a division among the Magna Mater *orgeones*; the latter’s decrees provide for the announcement of honours at festivals, whereas this text does not.

of a phratry; but many cases are doubtful, and we should remember that phratry groups might acquire new cultic interests.¹⁶⁴

In Isaios 2. 14–16 it is not really clear whether the orgeones to whose association Menekles is introduced by his adoptive father are a segment of his phratry or an independent body. In §14 he speaks of introduction to the phratry and registration in the deme and with orgeones; in §16, however, he announces that he will produce phrateres, orgeones, and demesmen as witnesses of his adoption.¹⁶⁵ It is also possible that in Isaios 9. 30 the thiasos of Herakles to which Astyphilos was introduced by his stepfather—certainly a member of the same phratry—was a phratry thiasos. The reference follows mention of festivals to which Astyphilos was taken as a child, and the speaker's insistence that Astyphilos never associated or shared meat with Kreon and his other agnates at festivals (§§ 21, 33) may include reference to the Apatouria.¹⁶⁶

On the evidence for orgeones and thiasoi, which cannot be systematically reviewed here, see Arnaoutoglou 2003.¹⁶⁷

Inscriptions, which provide the bulk of our evidence, probably give an inadequate picture of phratry activities, representing the periods of assembly business—often probably short and formal, occasionally heated and controversial—in which the procedures of the city, the tribes, and the demes were imitated, rather than the festivities that gave phratries their specific character. We have no phratry decree earlier than 396/5, whereas there are several earlier texts from the demes. We do not know when phratries began to elect phratriarchs and vote formally on candidates for admission,¹⁶⁸ and they evidently moved only slowly towards developing quasi-judicial procedures for settling disputes about admission. The traditional method of settling such disputes seems to have been to require an oath from the sponsor; before the influence of deme procedure began to make itself felt,

¹⁶⁴ New cult groups of kleruchs on Lemnos call themselves *orgeōnes*, presumably cutting across phratry and deme affiliations; see ch. 12 n. 43; Culasso Gastaldi 2010, 358; they also use the term *homochytroi* (n. 3; ch. 12 n. 45, cf. Papazarkadas 2011, 201–2).

¹⁶⁵ The terms used are *eisagei*, *engraphēi* (§ 14); did the subgroups in this phratry keep separate registers? Orgeones who held to the legal privileges granted to them by Solon (n. 3) might well do so. Cf. ch. 12 n. 46.

¹⁶⁶ Cf. chs. 7 Case 8; 22 at n. 58 on cults of Herakles; *APF* 7252; n. 174.

¹⁶⁷ Decrees are grouped in *IG* ii² 1249–1355 (add *SEG* 21. 530), lists in 2343–61 (add *SEG* 24. 223, 54. 235), leases 2499, 2501 (add *SEG* 24. 205). On *IG* ii² 1242 (Lambert 1993, T 4) see n. 111). On ii² 1294 see Langdon 1973; *APF* 4810; since the shrine of Zeus Epakrios on Hymettos was in use in the early archaic period (Langdon 1976), these could well be phratry orgeones. On ii² 2343 see Dow 1969; Golden 1979; Welsh 1983; Storey 1989; D. Gill 1991. On heroes worshipped by orgeones see Kearns 1989. The Tourkovouni shrine (Lauter 1985*b*), used in the 7th c., neglected in the 6th, sporadically visited in the 5th and revived in the 4th, may have belonged to such a group. The question of local cults of Herakles needs rethinking. (On *IG* ii² 2355 see Humphreys 2007.)

¹⁶⁸ Cf. above, n. 79. We do not in fact know when demes began to vote formally on candidates for admission.

sacrifice of the koureion without objection being raised was probably all that was required for entry. There is no evidence that a vote was ever taken in connection with the gamelia or meion.

Phratry organization had perhaps always had strong acephalous tendencies, because members contributed their own sacrificial victims and divided into relatively small feasting groups to consume them. A phratry festival thus resembled an *eranos*, a potluck dinner; discrepancies in wealth between thiasoi would be to some extent concealed if thiasos recruitment did not cross class lines.¹⁶⁹ If, as suggested above, the protenthai were phratry liturgists who made additional contributions to the festival, the restriction of their activities to the first day (before the sacrifices) may be significant.

Recognizing that division into subgroups is inherent in the character of the Apatouria, we should ask more questions about the degree of independence enjoyed by thiasoi, as well as *genê*. It was suggested above that in many phratries, at least until the fourth century, acceptance of the koureion sacrifice by the sponsor's thiasos may have been sufficient to ensure a boy phratry membership. Emphasis in orators' speeches on the importance of sharing or not sharing sacrificial meat¹⁷⁰ perhaps suggests that to many Athenians the authority of the phratry as a whole was only vaguely conceived. The Demotionidai may not have voted as a phratry before the crisis that produced the decrees of 396/5, and Nikodemos' revision of the procedure introduced in that year restored a measure of privilege to the thiasos. Rather than asking whether individual phratries had undergone fission or fusion at some point in their history,¹⁷¹ it might be more productive to think of the phratry as an institution with a built-in tendency to dissolve into smaller groupings, against which centralizing influences—the village pattern of settlement, Solon's laws on citizenship, the political ambitions of

¹⁶⁹ Compare the tendency of early Christian communities (and contemporary pagan groups) to split into separate tables for eating, at which the rich ate better than the poor: Theissen 1974; Meeks 1983, 67–9, 159. For *eranos* meals see *Ar. Pol.* 1281 a 42–b 3, cf. 1286a 29–30; Theophr. *Char.* 30. 18; ch. 12 n. 48. Possibly in some phratries or groups of *orgeones* officials and their friends ate in a building equipped for dining? cf. *IG ii²* 2499; Lambert 1993, s.v. *oikos*.

¹⁷⁰ *Is.* 9. 33, [Dem.] 43. 82. Cf. *Ar. Peace* 1111–15.

¹⁷¹ See Lambert 1993, 106–12; in my view the position of the *oikos* of Dekelos in the Demotionidai (above, n. 90) and the plural phratriarchs of the Dyaleis and *SEG* 32. 150 are to be explained otherwise. The split between the *orgeones* of Echelos and those of the shrine near Kalliphanes' property (*SEG* 21. 530) may have been a temporary affair; the publication of a consolidated list of debtors and *archaia psêphismata* suggests reconciliation after conflict (ch. 12 n. 60). The fission of the Salaminioi (ch. 20) is accompanied by division of property, of which there is no sign in the case of the Dyaleis. The author of the scheme of *A.P. F* 3 may have assumed, if he thought about the question, that 12 initial phratries had undergone fission since the time of Ion (ch. 18 n. 29), but this does not imply that the process could be observed in the 4th c.

dominant families, the influence of deme organization and procedures—made only partial and intermittent headway.¹⁷²

The subdivision of phratry into thiasoi also offers us some insights into the dynamics of kinship at phratry level. As noted above (nn. 116–17) *IG ii² 2344* is a list of phratry members, belonging probably to a single thiasos and possibly to the small subdeme of Upper Paiania, who can be grouped in three lineages (Table 19.1). More precisely: Mnesikleides I, Mnesiphilos I, and Mnesigenes I, ancestors of nine members of the group, are likely to have been related, given the repeated use of the root *Mnesi-* in their names and those of their descendants; they were perhaps brothers. Sosippos son of Sosipolis and Sosippos son Sosistratos, who with their sons account for another five members, were probably cousins (FBS), descended from and named after a common grandfather (FF). Menekleides son of Xenokleides may well have been affinally related either to the descendants of Mnesikleides I (use of the ending *-kleides*), or, less probably, to the third lineage, consisting of Poseidippos son of Xenotimos and his two sons Xenotimos and Lysias. Philodemos son of Philodemos, the last member of the group may have had an affinal link with the Sosippos lineage, in which the name *Philon* occurs.

IG ii² 2345

IG ii² 2345 (*SEG* 49. 188), a list of names subdivided into thiasoi ranging from thirteen to at least twenty-five members in size, does not divide so neatly into lineages, but nevertheless contains some groupings clearly based on kinship, and signs also of the influence of affinity.¹⁷³ This list, if it is indeed a phratry list,¹⁷⁴ was

¹⁷² It is therefore still an open question whether loans made by phratry subgroups to individuals are *eranos* loans organized in a phratry context and given additional protection by the assertion of a corporate identity, or loans of collective funds, secured on land, to provide income for the subgroup (cf. above, n. 148).

¹⁷³ The case for a phratry origin is argued in Humphreys 1990*a* (n. 4, read ‘phratry centre’ for ‘deme centre’, p. 245 line 4, read *Nautes* for *Nantes*). Lambert 1999*a* (*SEG* 47. 187) came round to the view that the majority of those listed belong to *Alopeke*. He points out that the name *[Ak]ryptos* (8) is known otherwise only in *Anagyrous*, but it might derive from the prominence of the pregnancy; arguments from the distribution of joking names may be rash, and it is not certain that all three of the other occurrences of the name come from the same family and deme. I repeat here that the *Kaineus* son of *Hierokles* whose *loutrophoros* from the *Kerameikos* was published by Willemssen 1970 (*SEMA* 1998) is carefully distinguished by Willemssen (102, no. 4) from the family of *Halai* (*Araphenides*?) whose monuments were subsequently published in Peppas-Delmousou 1975. I would now date *ii² 2345* between *c.*359 (*Demophilos*’ father *Leostratos* was still active) and *c.*350, but the lower date depends on the absence of younger brothers (n. 176). Lambert 1999*a* says *c.*365–330, with a preference for the earlier end.

¹⁷⁴ Lambert’s argument that the common factor linking the thiasoi was worship of *Herakles* does not persuade me (on connections with the *Salaminioi* and (?) *Praxiergidai*). He suggests a total of *c.*150 names distributed among 7 or 8 thiasoi containing around 10 to 30 members each. This would be a small total for a complete phratry, but not for an *epidosis* list. Lambert thinks that the absence of numerals

set up by the phratry itself rather than any subgroup, and it probably records financial contributions to a phratry enterprise.¹⁷⁵ Thus, whereas *IG* ii² 2344 seems to be a complete listing of a subgroup produced in a moment of strong cohesion, ii² 2345 may well omit dependent sons and younger brothers in some families.¹⁷⁶ The division into thiasoi may suggest that the business of fundraising was delegated to them, but even if that was the case, the lists represent an image of the thiasos presented to an outside body rather than one produced for internal consumption, with the emphasis on generosity, a class-inflected field of behaviour, rather than inclusion and membership.¹⁷⁷ If dependent young (adult) males are under-represented in these lists, the thiasoi will have been larger than the two we have previously considered.

The first names we can read in Thiasos I belong to two pairs of brothers: [– ope?]ithes and [Kephi]sodoros sons of Antigenes, and —opeithes and Kephisophon sons of Kephisodotos. The two families may have been kin or affines. Sixth and seventh on the list of this thiasos are another pair of brothers, Pythokles and Theodotos sons of Ameinichos.

Hagnotheos' thiasos (II) is led by Hagnotheos, his son Hagnon, and his brother Ε[u]xithe[o]s. The eleventh member listed, Phainippides may be linked to nos. 20–2, [D]iphilos, Anti[?]ates, and Phainippides, sons of Dionides; he may be their maternal grandfather. Two other groups, Kteson son of Kallistratos and his sons [K]allistratos II and [K]tesikleides (15–17), and Ktesikleides and Kephisodoros sons of Kephisophon (13–14), may be affinally linked. In Antiphanes' thiasos (III), Antiphanes son of Aresias and Antiphanes of Euo[nymon] (Lambert 1999*a*), may be cousins (FZS/MBS), with whom Aresias II is associated. Antiphilos (line 52) may well be the father of Pantaretos (line 57), and may be related to Antiphon son of Nautes (line 51). In Diogenes' thiasos, Euphranor son of Euphranor and the son/boy of Euphronios may be brothers or other kin of Kephisios Euphro<niou?>, added late to the list.

Demareteos of Agryle, line 83, is probably the father of Demon (line 79).¹⁷⁸ In Thiasos V, from which few names are preserved, the fourth and fifth members, Philocha[re?] and Euchar[es], may be related.

against many of the names implies a complete listing of members; in my view either a standard contribution (10 dr.?) was requested (n. 147) and only larger or smaller sums were recorded, or some men made contributions in kind.

¹⁷⁵ For new readings of the sums contributed see Lambert, *op. cit.*

¹⁷⁶ Missing brothers (who might just conceivably have appeared in other thiasoi): Kleochaes brother of Glauketes of Kephisia (l. 36, *APF* 2952) may have been a younger brother still at this time sharing undivided property; Pos[ei]d[o]nios, ? brother of Diogenes (l. 59), may have been dead (see n. 198 below).

¹⁷⁷ See ch. 15 for examples of the sporadic inclusion of dependants in epidosis lists.

¹⁷⁸ Humphreys 1990*a*; ch. 23 n. 7.

Patronymics are not consistently recorded on this list, and this no doubt deprives us of some further possibilities of identification. Only the evidence elsewhere that a Pantaretos (I) son of Antiphilos (I) of Alopeke served as amphiktyon on Delos in 390/89–389/8 allows us to link the Pantaretos and Antiphilos in Thiasos III.¹⁷⁹ The postulated relationship between Demaretos (?) and Demon of Agryle is based on additional information from *Agora XIX L 4a*, a text of the genos Salaminioi (ch. 20 n. 107).

There are, nevertheless, some disconcerting possibilities of linkage between members of different thiasoi. We have a Eucharides in Thiasos I (l. 12), Euchar— and Philocha[r] — in IV (ll. 88–9),¹⁸⁰ Klesikleides, Kteson, and their kin in II, but a Ktesias in IV (ll. 31–5, 69); —opeithes son of Kephisodotos in I and Theopeithes in IV (ll. 6, 70); names formed from Kephisos, admittedly a common root, occur in I, II, and IV; Glaukippos, again a common name, in I, II, and V; Diphilos son of Dionides in II, Diphilos son of Diokles in IV, and a Diokles in III; Leptines son of Olympiodoros (ch. 32 n. 26) in II, and an Olympiod[oros] in V (ll. 22, 90). We may even add that Archestratos son of Spoudides, *ex hypothesi* a member of Alopeke, belongs to Thiasos II, Archestratos of Agryle to IV. Some of these recurrences may be due to pure chance, others perhaps to affinal connections that were not strong enough to detach either of two families linked by marriage from an earlier thiasos allegiance; some may even be due to quarrels that had driven a sublineage to change thiasos. If a woman married twice within the same phratry, her son might join the thiasos of his stepfather rather than that of his patrikin, as seems to have happened in the case of Astyphilos of Araphen (Isaios 9).¹⁸¹

In any case, kinship and affinity were not the only possible bases of thiasos affiliation, even though the interest of kin and matrikin in questions of legitimacy and inheritance gave them a motive for maintaining close association. Thiasos IV has a cluster of members all of whom belonged to the nearby deme Agryle, and at least three of these belonged to the genos Salaminioi. Theaios¹⁸² and [Eu]phrosynos (ll. 13–14) seem to be demesmen of Paiania. Membership of a deme other than that in which the phratry centre was located would clearly provide a basis of common experience, as well as more specific jural interests, that could encourage continued association in the phratry context. If however the Salaminioi all belonged to this phratry, which seems likely, it is improbable that they were all grouped in the same thiasos. Thiasos IV would have been very large if it had contained every member of a genos whose two subdivisions were each represented

¹⁷⁹ *ID 97. 3, IG ii² 1634. 3*; Pantaretos II, the man of our text, may appear as leader of an *cranos* in *IG ii² 2743* = Finley 1952, no. 70.

¹⁸⁰ The names in ll. 85–91 are separated by a blank line from those of Diogenes' thiasos, but there is no new heading.

¹⁸¹ Men without brothers or cousins are more likely to have changed thiasos than those attached to a sibling group or lineage.

¹⁸² See Lambert 1999*n*.

by seven oasttakers in 363/2. We might perhaps guess that the Salaminioi of Sounion, none of whom can be recognized in *IG ii² 2345*, were solidly grouped in one or more thiasoi that may not have contributed to the epidosis recorded in this text, while the Salaminioi of the Seven Tribes were perhaps more scattered in clusters corresponding to their deme affiliation. Apparently the genos did not insist on conducting its own vote on admissions, or else it voted before the Apatouria.¹⁸³

The linkage between this text and the records of the Salaminioi raises the question whether phratry meetings provided members with opportunities to interact with a wide range of Athenians from demes other than their own. The Medontidai seem to have had a broad range of recruitment: in the poletai record for 367/6 (*Agora XIX P 5*) the phratry is represented by Kichonides son of Diogeiton of Gargettos, and a group of orgeones that probably belonged to it was represented by Aischines of Melite; both claimed debts secured on the property of Theophilos of Xypete, situated in the deme Alopeke. The phratry seems also to have had associations with a sanctuary in Kephale.¹⁸⁴ Phratries based in or close to the city may have had a rather different pattern of relationship to demes from phratries based in remoter rural areas. A phratry in the city area would have a core of members based in the home deme and neighbouring demes, with a more random scatter of members whose ancestors had moved out into various parts of the countryside, the move into mining demes in the period between Solon's and Kleisthenes' reforms perhaps accounting for most of the larger migrant groups; a rural phratry would have a substantial component of members whose ancestors had emigrated before Kleisthenes' reforms to the city area, as well as members of neighbouring local demes. The Demotionidai clearly had many city-based members in addition to those resident in Dekeleia and Oion Dekeleikon.

The thiasoi of *IG ii² 2345* take their names from their current leaders, and we should assume that thiasoi were relatively fluid groups. There would be no formal impediment to a change of membership, although the need for sponsors and witnesses who could attest the legitimacy of candidates for membership with authority would favour continuity. It would not in any case be problematic for an over-large thiasos to divide, or for two small groups whose members had common ties to unite.

Whether we should assume that whole phratries divided or fused seems more doubtful. The name Dyaleis provides no solid justification for claiming that this

¹⁸³ If, as suggested above at n. 55, the Oschophoria had once been celebrated immediately before the Apatouria, the two festivals had been separated for more than a century by the time of this text. Demesmen who lived in their deme and belonged to a phratry centred elsewhere would have travelled and perhaps camped together for the Apatouria.

¹⁸⁴ Cf. above, nn. 127, 153 on the Medontidai.

phratry had been created by fusion of two others, and the appointment of two phratriarchs to serve simultaneously can be otherwise explained. There is no other certain case of a phratry with more than one phratriarch (nn. 162, 171). As long as the status of citizen continued to matter to the great majority of those entitled to claim it, celebration of the Apatouria in the traditional manner and place will have exerted a considerable compulsion. The years of the Peloponnesian War probably represented the greatest threat in the classical period to phratry cohesion, and it is possible that some phratries split or moved to a base in the city area at that time. However, the grant to the Council and other state officials of a five-day holiday for the Apatouria in 323/2 (if that is the correct date; n. 63) indicates that a substantial proportion of Athenians still left the city to celebrate the festival. It is only after the disenfranchisement and emigration of many citizens in 322 and subsequent years (ch. 22 at n. 35) that we can perhaps see a gradual drift away from phratry allegiance towards attachment to smaller cult groups, *genê*, *orgeones*, and *thiasoi*, some of which perhaps detached themselves from phratries, while others were formed, for non-citizens as well as citizens, by extension of a model that had first come into existence under the umbrella of the phratry.¹⁸⁵ Because processes of phratry subdivision were negotiated around the boundaries of social, residential, civic, and sacred geography—kinship, neighbourhood, deme affiliation, cooperation in cult, all these themselves interrelated—the privileging of the Apatouria and of shared sanctuaries of phratry deities, while citizenship remained significant, would provide a centripetal attraction tending to keep phratry subgroups in a loose union round each sanctuary. It is quite possible, however, that such loose unions were accompanied by diverging attachments to other cults and by separate management of at least some funds, which would prepare the way for eventual dissolution.

PRACTICES AND PROSOPOGRAPHY

References to phratry ‘laws’, *nomoi*, in orators’ speeches indicate that litigants were concerned to present the practices by which their status and relationships had been legitimized as those of a body with a recognized position in the structure of the state, the phratry, sometimes linked to subgroups, *gennetai* or *orgeones*, whose names seemed to imply an additional degree of legitimacy. One phratry might have different *nomoi* from another, but the concept *nomos* belonged to the level of the phratry rather than the *thiasos*, as did the practice of publishing decrees. The Demotionidai had passed a *nomos* concerning the

¹⁸⁵ In some parts of the Greek world the term phratry is used for such groups in the Hellenistic period: Seyfarth 1955.

scrutiny of candidates for membership; the phratry of Pyrrhos had a *nomos* requiring *gamelia*, and sacrifice of the *meion* for girls as well as boys;¹⁸⁶ in the phratry of Apollodoros of Leukonoion it was *nomos* for the sponsor of a candidate for admission to swear on a sacrificial victim that the boy was the legitimate son of citizen parents, and for this oath to be followed by a vote of the whole phratry; in the phratry of the speaker of Isaios 8 *nomoi* required bridegrooms to celebrate their weddings with an offering of *gamelia* in the phratry.¹⁸⁷ The term *nomos* belongs, of course, to the rhetoric of the courts; but the phratry too had its place in the world of law, though perhaps a marginal place. It was important to assert that phratries had *nomoi*, something which in the case of *demes* went without saying.
